Memorandum RE: Jaeger Ranch Traffic Impact Study, Draft Other Considerations

Kimley»Horn

Memorandum

To: Olga Sciorelli, P.E., QSD, QSP
Land Planning Manager
K. Hovnanian® Homes of California, Inc.

From: Chris Gregerson, P.E., T.E.

Re: Jaeger Ranch Traffic Impact Study
DRAFT *Other Considerations*

Date: August 28, 2018

Rancho Cordova Parkway Widening Trigger Analysis

The need to widen Rancho Cordova Parkway from two lanes to four lanes along the project extents was analyzed between Existing and Cumulative plus Proposed Project conditions. This trigger analysis incorporated not only the development assumptions that would increase traffic along this roadway segment, but also the connection of the roadway south to Grant Line Road and north to US 50. The analysis resulted in the need for the roadway to be widened by 2034. This would equate to approximately 570 SFR and 566 AAR dwelling units that can be constructed before the roadway segment is required to be widened.

Peak-Hour Traffic Signal Warrant Evaluation

The need for traffic signalization was assessed based on the peak-hour warrant methodologies noted in Section 4.C of the *California Manual on Uniform Traffic Control Devices (CMUTCD)*, *2014 Edition with April 2017 revisions* (CaMUTCD). The peak-hour traffic signal warrant analysis was performed for the two unsignalized intersections in the Existing (2017) scenario, including the side street stop controlled (SSSC) intersection at Jackson Road and Eagles Nest Road (Intersection #3), and the all-way stop controlled (AWSC) intersection at Grant Line Road and Kiefer Boulevard (Intersection #8). In both cases, the speed limit on the major street is greater than 40 miles per hour, indicating that the 70% reduction factor option is appropriate and thus, a signal is warranted for both intersections. Figure 4C-4 of the CMUTCD is included in Appendix G for reference. For the Rancho Cordova Parkway intersection with Chrysanthy Boulevard (Intersection #6), while a signal is assumed for the Cumulative and Cumulative plus Proposed Project scenarios, it is not warranted using the peak-hour traffic signal warrant. Thus, there is no development trigger that would require a signal be installed at the intersection.

Bicycle and Pedestrian Facilities Evaluation

The project applicant is proposing constructing greater than two miles of bicycle facilities throughout the project including several connections to existing and proposed regional trails. The project is proposing to construct one 10-foot to 12-foot wide Class I bike trail connecting to an existing trail in the northeastern portion of the project and two recreational trails connecting to pedestrian and bicycle facilities on the eastern and western portions of the project. The project application is proposing that these facilities shall be incorporated into the City's bikeway master plan. In addition, the project will include sidewalks, stop signs, standard pedestrian crossing warning signs, lane striping to provide a bicycle lane along applicable roadways, bicycle parking, signs to identify pedestrian and bicycle paths, and pedestrian signal heads. Sidewalks will be constructed as part of the frontage improvements along all new roadway construction for Jaeger Road/Rancho Cordova Parkway and Chrysanthy Boulevard in conformance with City and County design standards. Circulation and access to all proposed public spaces will include sidewalks that meet Americans with Disabilities Act standards.

Kimley»Horn

Site Plan, Access, and On-site Circulation Evaluation

The site plan for the proposed project (Error! Reference source not found.) was qualitatively reviewed for general access and on-site
circulation. According to the site plan, primary access to the site will be provided from Chrysanthy Boulevard at the intersection of Rancho Cordova Parkway/Jaeger Road. The combination of these access points, as well as the on-site circulation system appears to provide adequate access to/from Chrysanthy Boulevard, Rancho Cordova Parkway and the surrounding transportation network. Additional access will be provided in the future, as Chrysanthy Boulevard, Rancho Cordova Parkway and Americanos Boulevard are constructed and extended.

Vehicle Miles Traveled (VMT) Analysis

As a part of the traffic impact study performed for the Jaeger Ranch development, Kimley-Horn prepared a project-related Vehicle Miles Traveled (VMT) analysis using Sacramento Area Council of Government's (SACOG) SACSIM travel demand model. Consistent with the City's expectations and our Scope of Services, this VMT analysis is reported in speed bins as well as for an average trip distance. Please note that this analysis was always intended to be provided as information only, and was not to be included in the formal study report nor as a part of the project's environmental review process. This memorandum transmits the subject VMT data for the proposed project.

The VMT analysis was completed for two plus project analysis scenarios, Existing (2017) and Cumulative (2040) Conditions. Table 1 below summarizes the results of this analysis. This analysis was completed using SACOG's SACSIM TDM and summarizes the number of vehicles traveling to and from the project site. The VMT is divided into 5 mph speed bins which correspond to the average speed on roadways in the surrounding area. The total VMT is a summation of the VMT in each speed bin for the two analysis scenarios, white the average trip length is calculated by dividing the total VMT by the number of trips produced in the model.

Table 1 – VMT Analysis Results for Existing (2017) and Cumulative (2040) Conditions

Speed Bin (mph)	VMT	
	Existing	Cumulative
0 - 5	40	25
6 - 10	660	553
11 - 15	525	595
16 - 20	1,940	1,028
21 - 25	2,399	2,038
26 - 30	7,211	4,071
31 - 35	6,295	15,432
36 - 40	23,250	20,857
41 - 45	20,934	8,065
46 - 50	5,325	6,512
51 - 55	10,296	8,192
56 - 60	7,361	2,848
61 - 65	1,285	329
66+	160	48
Total	**87,680**	**70,593**
Average Trip Length (mi.)	***14.2***	***11.2***

Existing conditions include Chrysanthy Boulevard only built to the project's northwest corner, and all trips accessing the surrounding network via Chrysanthy Boulevard. Rancho Cordova Parkway is not constructed to Douglas Road in Existing Conditions and all other assumptions are consistent with Existing (2017) conditions in the surrounding area. As shown, both the total VMT and average trip length are greater in Existing Conditions than Cumulative Conditions.

APPENDIX I.3

Memorandum RE: Jaeger Ranch Supplemental Traffic Analyses, Draft Traffic Impact Analysis Services

Kimley»Horn

Memorandum

Kelly Andrews, E.I.T.

Re: Jaeger Ranch Supplemental Traffic Analyses
DRAFT *Traffic Impact Analysis Services*

Date: December 3, 2018

Per your request and authorization, we have prepared this traffic evaluation for the above referenced project.

Project Understanding

This memorandum documents the results of a supplemental transportation impact analysis completed for Jaeger Ranch (the "proposed project" or "project"). The vacant project site is located along Rancho Cordova Parkway/Jaeger Road, south of Douglas Road in Rancho Cordova, California. Kimley-Horn previously completed a traffic impact analysis for the Jaeger Ranch[1] project. The significant findings of the previous study are summarized below:

- The proposed project is estimated to generate 10,266 new daily trips, with 721 new trips occurring during the AM peak-hour, and 934 new trips occurring during the PM peak-hour.
- The addition of the proposed project to the Existing (2017) Conditions results in a significant impact at four (4) study intersections and one (1) roadway segment. With the application of mitigation measures recommended in the previous study, the impacts to intersections can be mitigated to be *less than significant*. The proposed project results in one significant and unavoidable impact to the roadway segments for Existing (2017) Conditions, as defined by the applicable jurisdictions.
- The addition of the proposed project to Cumulative (2040) Conditions results in a significant impact at three (3) intersections and one (1) roadway segment. Two of the impacted intersections would be mitigated to less than significant. One location does not have a feasible mitigation. The significant impact to the roadway segments for Cumulative (2040) Conditions does not have a feasible mitigation, as defined by the applicable jurisdictions.

The project applicant now proposes to include 723 single-family detached residential units, 250 multi-family residential units, 743 Active Adult Residential (AAR) units, and approximately 32,000 square-feet of commercial uses.

The purpose of this impact analysis is to identify additional impacts to transportation facilities due to the increased number of units and propose appropriate mitigations (as determined by the City of Rancho Cordova) for those impacts. This study was performed in accordance with the County of Sacramento's traffic study guidelines[2] and standards established by the Circulation Element of the City of Rancho Cordova's General Plan [3].

Kimley»Horn

Study Facilities and Analysis Scenarios

This analysis was limited to those intersections that were previously mitigated to less than significantly impacted conditions, and those intersections that fall within 5 seconds of delay of becoming impacted. The following transportation facilities are included in this evaluation:

Existing (2017) Study Intersections:

1. Jackson Rd/SR-16 @ Bradshaw Rd
2. Jackson Rd/SR-16 @ Excelsior Rd
3. Jackson Rd/SR-16 @ Eagles Nest Rd
4. Jackson Rd/SR-16 @ Sunrise Blvd
5. Jackson Rd/SR-16 @ Grant Line Rd
9. Grant Line Rd @ Sunrise Blvd
11. Douglas Rd @ Sunrise Blvd
13. Mather Field Rd @ Folsom Blvd
19. Zinfandel Dr @ US-50 Eastbound Ramps
21. Sunrise Blvd @ White Rock Rd
25. Sunrise Blvd @ Zinfandel Dr

Cumulative (2040) Study Intersections:

1. Jackson Rd/SR-16 @ Bradshaw Rd
4. Jackson Rd/SR-16 @ Sunrise Blvd
5. Jackson Rd/SR-16 @ Grant Line Rd
9. Grant Line Rd @ Sunrise Blvd
10. Douglas Rd @ Zinfandel Dr
11. Douglas Rd @ Sunrise Blvd
13. Mather Field Rd @ Folsom Blvd
17. Zinfandel Dr @ International Dr
19. Zinfandel Dr @ US-50 Eastbound Ramps
21. Sunrise Blvd @ White Rock Rd
25. Sunrise Blvd @ Zinfandel Dr
27. White Rock Rd @ Prairie City Rd

Exhibit 1 depicts the locations of these study intersections. Please note that the intersection ID's are consistent with the original Jaeger Ranch Transportation Impact Study[1].

This traffic impact analysis was conducted for the study facilities for the following scenarios:

A. Existing (2017) plus Proposed Project Conditions
B. Cumulative (2040) plus Proposed Project Conditions

Kimley»Horn

Regulatory Setting and Thresholds of Significance

Sacramento County

The Circulation Element of the latest County of Sacramento General Plan[4] includes the following relevant provisions:

> *CI-9. Plan and design the roadway system in a manner that meets Level of Service (LOS) D on rural roadways and LOS E on urban roadways, unless it is infeasible to implement project alternatives or mitigation measures that would achieve LOS D on rural roadways or LOS E on urban roadways. The urban areas are those areas within the Urban Service Boundary as shown in the Land Use Element of the Sacramento County General Plan. The areas outside the Urban Service Boundary are considered rural.*
>
> *CI-35. The applicant/developer of land development projects shall be responsible to install bicycle and pedestrian facilities in accordance with Sacramento County Improvement Standards and may be responsible to participate in the fair share funding of regional multi-use trails identified in the Sacramento County Bicycle Master Plan.*

Sacramento County's traffic study guidelines[2] provide guidelines for the implementation of the General Plan provisions: "The County defines the minimum acceptable operation level for its roadways and intersections to be LOS D for rural areas and LOS E for urban areas. The urban areas are those areas within the Urban Service Boundary as shown in the Land Use Element of the Sacramento County General Plan. The areas outside the Urban Service Boundary are considered rural."

All of the Sacramento County study facilities are within the Urban Services Boundary. Therefore, LOS E is the minimum acceptable LOS for all County facilities.

Thresholds of Significance

Roadways/Signalized Intersections: A project is considered to have a significant effect if it would:

- Result in a roadway or a signalized intersection operating at an acceptable LOS to deteriorate to an unacceptable LOS; or
- Increase the V/C ratio by more than 0.05 at a roadway or at a signalized intersection that is operating at an unacceptable LOS without the project.

Unsignalized Intersections: A project is considered to have a significant effect if it would:

- Result in an unsignalized intersection movement/approach operating at an acceptable LOS to deteriorate to an unacceptable LOS, and also cause the intersection to meet a traffic signal warrant; or
- For an unsignalized intersection that meets a signal warrant, increase the delay by more than 5 seconds at a movement/approach that is operating at an unacceptable LOS without the project.

[4] *Sacramento County General Plan of 2005-2030,* Sacramento County Community Planning & Development Department, November 9, 2011.

Kimley»Horn

City of Rancho Cordova

The Circulation Element of the City of Rancho Cordova's General Plan 2030 includes the following relevant provisions:

> *Policy C.1.2 - Seek to maintain operations on all roadways and intersections at Level of Service D or better at all times, including peak travel times, unless maintaining this Level of Service would, in the City's judgment, be infeasible and/or conflict with the achievement of other goals. Congestion in excess of Level of Service D may be accepted in these cases, provided that provisions are made to improve traffic flow and/or promote non-vehicular transportation as part of a development project or a City-initiated project. Please see Policy C.1.3 for additional policy guidance related to this issue.*
>
> *Examples of system improvements which may be accepted when Level of Service D cannot be maintained include the following, where the improvement or funding is in excess of standard City requirements:*
> *• Development of on- or off-street bicycle or pedestrian circulation (not including sidewalks that are constructed as part of roadway improvements);*
> *• Providing or funding public transportation facilities or services;*
> *• Other features as determined appropriate by the City.*
>
> *Policy C.1.3 - Recognize that regional traffic beyond the City's control, as well as circulation system decisions made prior to incorporation or by other agencies, will make it infeasible to achieve the City's desired Level of Service on all roadways. Subject development projects which affect these roadways to the provisions of Policy C.1.2 to provide offsetting improvements to the vehicular and/or non-vehicular transportation system.*

LOS D is the minimum acceptable LOS for all facilities within the City of Rancho Cordova.

Existing (2017) Conditions

As documented in the previous Jaeger Ranch Traffic Impact Analysis[1], new weekday AM (7-9 a.m.) and PM (4-6 p.m.) peak-period intersection turning movement traffic counts were collected on September 28, 2017. Existing (2017) peak-hour turn movement volumes are presented in Exhibit 2

Assessment of Proposed Project

Trip Generation

The number of trips anticipated to be generated by the proposed project are approximated using data included in *Trip Generation, 9th Edition*, published by the Institute of Transportation Engineers (ITE).

The land use considered for this analysis included 723 market rate single family detached units (SFR), 250 multi-family multifamily housing units and 743 AAR units for the project site. Active Adult Residential (AAR) refers to detached senior housing units. This land use type is understood to have trip characteristics that generate fewer daily trips when compared to non-age restrictive land use types. In fact, as described in Trip Generation, the daily trip rate for AAR is 61 percent less than the daily trip rate for SFR. In addition, the AM and PM peak-hour trip rates for AAR are 71 percent and 73 percent less than the AM peak-hour and PM peak-hour trip rates for SFR, respectively.

To represent this development, ITE Land Use Codes 210 (Single Family Detached Housing), 220 (Apartment), 251 (Senior Adult Housing - Detached) and 820 (Shopping Center) were applied. Internal capture rates of 2.84 percent and 8.92 percent were applied to the AM and PM peak-hours, respectively. For the commercial uses, a pass-by reduction of 34% was applied for the PM peak-hour, in accordance with the Trip Generation Handbook. The anticipated trip generation characteristics for the proposed project are presented in Table 1.

Kimley»Horn

Table 1 – Proposed Project Trip Generation Characteristics

Land Use (ITE Code)	Size (DU/KSF)	Daily Trips	AM Peak Hour			PM Peak Hour		
			Total	In	Out	Total	In	Out
Single Family Detached Housing (210)	723	6,685	538	134	404	705	444	261
Apartment (220)	250	1,425	123	25	98	133	86	47
Senior Adult Housing - Detached (251)	743	2,540	159	55	104	183	111	71
Shopping Center (820)	32.000	956	22	14	9	81	39	42
Total		**11,606**	**843**	**228**	**615**	**1,102**	**681**	**421**

As shown in Table 1, the proposed project is estimated to generate approximately 11,606 new daily trips, with 843 and 1,102 trips occurring during the A.M. and P.M. peak-hours, respectively. Relative to the previously completed analysis, this represents an increase of 1,340 new daily trips, with 122 and 168 additional trips occurring during the A.M. and P.M. peak-hours, respectively.

Existing (2017) Plus Proposed Project Conditions

As previously discussed, the number of trips anticipated to be generated by the proposed project was derived using the *Trip Generation Manual, 9th Edition,* published by the Institute for Traffic Engineering (ITE). These trips were assigned to the roadway network based on existing traffic volumes, output from the SACSIM travel demand model, and professional judgment. The project trip distribution percentages are provided in Exhibit 3 and the assignment of project trips are depicted in Exhibit 4.

Using these volumes, levels of service were determined at the study facilities. Existing (2017) plus Proposed Project peak-hour turning movement volumes are presented in Exhibit 5. Levels of service (LOS) were then determined at the study facilities. Analysis worksheets for this scenario are provided in Appendix A.

Table 2 presents the intersection operating conditions for this analysis scenario. As indicated in Table 2, the study intersections operate from LOS C to LOS F.

Kimley»Horn

Table 2 – Existing (2017) plus Proposed Project Intersection Levels of Service

ID	Intersection	Control	Peak Hour	Existing		Existing plus Project	
				Delay	LOS	Delay	LOS
1	Jackson Rd/SR-16 @ Bradshaw Rd	Signal	AM	122.2	F	126.1	F
			PM	79.1	E	80.1	F
2	Jackson Rd/SR-16 @ Excelsior Rd	Signal	AM	74.1	E	59.1	E
			PM	51.8	D	43.2	D
3	Jackson Rd/SR-16 @ Eagles Nest Rd	SSSC	AM	17.2 (89.1 NB)	F	18.0 (95.3 NB)	F
			PM	20.1 (253.1 NB)	F	19.1 (*ECL NB)	F
4	Jackson Rd/SR-16 @ Sunrise Rd	Signal	AM	66.0	E	69.3	E
			PM	44.3	D	47.0	D
5	Jackson Rd/SR-16 @ Grant Line Rd	Signal	AM	113.8	F	114.1	F
			PM	136.4	F	136.9	F

			PM	51.7	D	51.1	D
19	Zinfandel Dr @ US-50 Eastbound Ramps	Signal	AM	85.1	F	88.7	F
			PM	23.2	C	25.7	C
21	Sunrise Blvd @ White Rock Rd	Signal	AM	35.7	D	33.2	C
			PM	56.5	E	61.9	E
25	Sunrise Blvd @ Zinfandel Dr	Signal	AM	112.8	F	117.7	F
			PM	58.6	E	70.2	E

Note: Pink shading indicates new impacts not previously identified in the previous Jaeger Ranch Impact Analysis. Orange shading indicates impacts previously identified.

Cumulative (2040) Conditions

Future traffic estimates were prepared using the modified SACSIM travel demand model developed by the City of Rancho Cordova for the 2040 General Plan. The difference between the resulting traffic estimate and the 2012 baseline model results (the growth) was then added to Existing (2017) traffic volumes to establish Cumulative (2040) traffic estimates for this study. The Cumulative (2040) study intersections are depicted in Exhibit 6. Peak-hour traffic volumes for Cumulative (2040) Conditions are presented in Exhibit 7.

Cumulative (2040) plus Proposed Project Conditions

As previously discussed, the number of trips anticipated to be generated by the proposed project was derived using the *Trip Generation Manual, 9th Edition*, published by the Institute for Traffic Engineering (ITE). The project trips were assigned to the future roadway network based on modified SACSIM travel demand model, as provided by the City of Rancho Cordova. Using these volumes, levels of service were determined at the study facilities.

The Cumulative Scenario Project Trip distribution and trip assignment are shown in Exhibit 8 and Exhibit 9, respectively. Cumulative plus Proposed Project peak-hour turning movement volumes are presented in Exhibit 10. Analysis worksheets for this scenario are provided in Appendix B

Kimley»Horn

Table 3 presents the peak-hour intersection operating conditions for this analysis scenario. As indicated in Table 3, the study intersections operate from LOS D to LOS F during the AM and PM peak-hours.

Table 3 – Cumulative (2036) plus Proposed Project Intersection Levels of Service

ID	Intersection	Control	Peak Hour	Cumulative		Cumulative plus Proposed Project	
				Delay	LOS	Delay	LOS
1	Jackson Rd/SR-16 @ Bradshaw Rd	Signal	AM	146.9	F	147.6	F

			PM	157.0	F	171.0	F

Note: Pink shading indicates new impacts not previously identified in the previous Jaeger Ranch Impact Analysis. Orange shading indicates impacts previously identified.

Impacts and Mitigation

Project impacts were determined by comparing conditions with the proposed project to those without the project. Impacts for intersections are created when traffic from the proposed project forces the LOS to fall below the specified threshold.

Existing (2017) plus Proposed Project Impacts

As reflected in Table 2, the addition of the proposed project results in the five (5) significant impacts to study intersections. The following is a discussion of each impact and its associated mitigation. Analysis worksheets for the mitigations for this scenario are provided in Appendix C. Please note that the impact at Sunrise Boulevard and White Rock Road (Intersection #21) is an impact not identified in the previous Jaeger Ranch Traffic Impact Analysis[1].

Kimley»Horn

Intersection Impacts:

I1. *Intersection #3, Jackson Road @Eagles Nest Road*
As shown in Table 2, this intersection operates at unacceptable LOS F during the AM and PM peak-hours without the project, and the project adds more than 5 seconds of delay to the northbound left turn movement during the AM and PM peak-hours. ***This is a significant impact***.

I2. *Intersection #9, Grant Line Road @ Sunrise Boulevard*
As shown in Table 2, this intersection operates at unacceptable LOS F during the AM peak-hour without the project, and the project adds more than 5 seconds of delay to the intersection. ***This is a significant impact***.

I3. *Intersection #11, Douglas Road @ Sunrise Boulevard*
As shown in Table 2, this intersection operates at LOS D during the PM peak-hour without the project, and the project results in LOS E. ***This is a significant impact***.

I4. *Intersection #21, Sunrise Boulevard @ White Rock Road*
As shown in Table 2, this intersection operates at unacceptable LOS E during the PM peak-hour without the project, and the project adds more than 5 seconds of delay to the intersection. ***This is a significant impact***.

I5. *Intersection #25, Sunrise Boulevard @ Zinfandel Drive*
As shown in Table 2, this intersection operates at unacceptable LOS E during the PM peak-hour without the project, and the project adds more than 5 seconds of delay to the intersection. ***This is a significant impact***.

Mitigations:

M1. *Intersection #3, Jackson Road and Eagles Nest Road*
The significant impact at this intersection during the AM and PM peak-hours can be mitigated by converting the intersection from side street stop control to signalized. As shown in Table 4, with this mitigation the intersection operates at LOS C or better during the AM and PM peak-hours. Therefore, ***this impact is less than significant***. However, the identified improvement falls under the jurisdiction of the County; therefore, neither the City nor the project applicant would have control over their timing or implementation. Thus, this impact would remain ***significant and unavoidable***. If the County allows the improvement to move forward, the impact would be classified as significant in the short term but eventually would be reduced to a less-than-significant level in the long term.

M2. *Intersection #9, Grant Line Road @ Sunrise Boulevard*
The significant impact at this intersection during the AM peak-hour can be mitigated by changing the southbound approach to include a right turn lane and an all-purpose lane. This mitigation includes restriping the southbound approach to move the bicycle lane from its existing location between the two travel lanes to the right shoulder and add hatching for the right turns, consistent with the Optional Through Right and Right-Turn-Only lane configuration included in Figure 9C-4a (CA) of the CaMUTCD[5]. As shown in Table 4, this mitigation measure results in the intersection operating at LOS E or better during the AM and PM peak-hours. Therefore, ***this impact is less than significant***. However, the identified improvement falls under the jurisdiction of the County; therefore, neither the City nor the project applicant would have control over their timing or

[5] California MUTCD 2014 Edition. Chapter 9C-Markings: Part 9 Traffic Control for Bicycle Facilities. November 2014

implementation. Thus, this impact would remain ***significant and unavoidable***. If the County allows the improvement to move forward, the impact would be classified as significant in the short term but eventually would be reduced to a less-than-significant level in the long term.

M3. Intersection #11, Douglas Road @ Sunrise Boulevard

The significant impact at this intersection during the PM peak-hour can be mitigated through signal timing optimization and the addition of a right-turn overlap signal phase for the eastbound right-turn, overlapping with the northbound left-turn movement. As shown in Table 4, this mitigation measure results in the intersection operating at LOS D during the AM and PM peak-hours. Therefore, ***this impact is less than significant***.

M4.Intersection #21, Sunrise Boulevard @ White Rock Road

The significant impact at this intersection during the PM peak-hour can be mitigated by optimizing the signal timings. As shown in Table 4, this mitigation measure results in the intersection operating at LOS D or better during the AM and PM peak-hours. Therefore, ***this impact is less than significant***

M5. Intersection #25, Sunrise Boulevard @ Zinfandel Drive

The significant impact at this intersection during the PM peak-hour can be mitigated by restriping the eastbound and westbound approaches to include a left turn lane and through-right lane. As shown in Table 4, this mitigation measure results in the intersection operating at LOS D or better during the PM peak-hour. Therefore, ***this impact is less than significant***

Table 4 – Existing (2017) plus Proposed Project Mitigated Intersection Level of Service

ID	Intersection	Control	Peak Hour	Existing plus Project		Existing plus Project (Mitigated)	
				Delay	LOS	Delay	LOS
3	Jackson Rd/SR-16 @ Eagles Nest Rd	Signal	AM	**18.0 (95.3 NB)**	**F**	20.0	C
			PM	**19.1 (*ECL NB)**	**F**	15.8	B
9	Grant Line Rd @ Sunrise Blvd	Signal	AM	**120.9**	**F**	61.9	E
			PM	54.9	D	32.1	C
11	Douglas Rd @ Sunrise Blvd	Signal	AM	35.0	D	35.0	D
			PM	**63.7**	**E**	53.2	D
21	Sunrise Blvd @ White Rock Rd	Signal	AM	33.2	C	33.2	C
			PM	**61.9**	**E**	54.3	D
25	Sunrise Blvd @ Zinfandel Dr	Signal	AM	**117.7**	**F**	**89.0**	**F**
			PM	**70.2**	**E**	54.5	D

<u>Cumulative plus Proposed Project Impacts</u>

As reflected in Table 3, the addition of the proposed project results in five (5) significant impacts to study intersections. The following is a discussion of each impact and its associated mitigation. Analysis worksheets for the mitigations for this scenario are provided in Appendix D. Please note that the impacts at Sunrise Boulevard and White Rock Road (Intersection #21) and Sunrise Boulevard and Zinfandel Drive (Intersection #25) were not identified in the previous Jaeger Ranch Traffic Impact Analysis[1].

Kimley»Horn

Intersection Impacts:

I1. *Intersection #10, Douglas Road @ Zinfandel Drive*
As shown in Table 3, this intersection operates at unacceptable LOS F during the AM peak-hour without the project, and the project adds more than 5 seconds of delay to the intersection during the AM peak-hour. This is a significant impact.

I2. *Intersection #11, Douglas Road @ Sunrise Boulevard*
As shown in Table 3, this intersection operates at unacceptable LOS F during the AM peak-hour without the project, and the project adds more than 5 seconds of delay to the intersection during the AM peak-hour. ***This is a significant impact***.

I3. *Intersection #21, Sunrise Boulevard and White Rock Road*
As shown in Table 3, this intersection operates at unacceptable LOS F during the AM peak-hour without the project, and the project adds more than 5 seconds of delay to the intersection during the AM peak-hour. ***This is a significant impact***.

I4. *Intersection #25, Sunrise Boulevard and Zinfandel Drive*
As shown in Table 3, this intersection operates at unacceptable LOS F during the AM peak-hour without the project, and the project adds more than 5 seconds of delay to the intersection during the AM peak-hour. ***This is a significant impact***.

I5. *Intersection #27, White Rock Road @Prairie City Road*
As shown in Table 3, this intersection operates at unacceptable LOS F during the AM and PM peak-hour without the project, and the project adds more than 5 seconds of delay to the intersection during the PM peak-hour. ***This is a significant impact***.

Mitigations:

M6. *Intersection #10, Douglas Road @ Zinfandel Drive*
The significant impact at this intersection during the AM peak-hour can mitigated by the conversion of the westbound right turn from permitted to a free right turn with a receiving lane. As shown in Table 5, this mitigation measure results in the intersection operating at LOS D during the AM and PM peak-hours. Therefore, this impact is less than significant. However, the identified improvement falls under the jurisdiction of the County; therefore, neither the City nor the project applicant would have control over their timing or implementation. Thus, this impact would remain significant and unavoidable. If the County allows the improvement to move forward, the impact would be classified as significant in the short term but eventually would be reduced to a less-than-significant level in the long term.

M7. *Intersection #11, Douglas Road @ Sunrise Boulevard*
The significant impact at this intersection during the AM peak-hour cannot be feasibly mitigated. The intersection of Douglas Road and Sunrise Boulevard is fully built out according to the City's General Plan. As shown Table 5, signal timing optimization is not enough to mitigate the project impacts to acceptable conditions. Therefore, ***this impact is significant and unavoidable***. However, as described in the Rio Del Oro Specific Plan DEIR/DEIS[6], there is potential to improve conditions through additional connectivity along Sunrise Boulevard and further build out of the City's General Plan network.

[6] Rio del Oro Specific Plan Project DEIR/DEIS. City of Rancho Cordova and USACE. April, 2008

Kimley»Horn

M8.Intersection #21, Sunrise Boulevard @ White Rock Road

The significant impact at this intersection during the PM peak-hour cannot be feasibly mitigated. The intersection of Sunrise Boulevard and White Rock Road is fully built out according to the City's General Plan. As shown in **Table 5,** signal timing optimization is not enough to mitigate the project impacts to acceptable conditions. Therefore, ***this impact is significant and unavoidable***.

M9.Intersection #25, Sunrise Boulevard @ Zinfandel Drive

The significant impact at this intersection during the AM peak-hour cannot be feasibly mitigated. The intersection of Sunrise Boulevard and Zinfandel Drive is fully built out according to the City's General Plan. As shown in **Table 5**, signal timing optimization is not enough to mitigate the project impacts to acceptable conditions. Therefore, ***this impact is significant and unavoidable***.

M10.Intersection #27, White Rock Road @ Prairie City Road

The significant impact at this intersection during the PM peak-hour can be mitigated with the addition of a second southbound right-turn lane and the addition of a right-turn overlap signal phase for the southbound right-turn. As shown in **Table 5**, this mitigation measure results in the intersection operating at LOS D or better during the AM and PM peak-hours. Therefore, ***this impact is less than significant***.

Table 5 – Cumulative (2040) plus Proposed Project Mitigated Intersection Level of Service

ID	Intersection	Control	Peak Hour	Cumulative plus Proposed Project		Cumulative plus Proposed Project (Mitigated)	
				Delay	LOS	Delay	LOS
10	Douglas Rd @ Zinfandel Dr	Signal	AM	**161.7**	**F**	51.7	D
			PM	43.9	D	43.0	D
11	Douglas Rd @ Sunrise Blvd	Signal	AM	**114.5**	**F**	**114.5**	**F**
			PM	**109.6**	**F**	**109.6**	**F**
21	Sunrise Blvd @ White Rock Rd	Signal	AM	**66.8**	**E**	**66.8**	**E**
			PM	**125.9**	**F**	**125.9**	**F**
25	Sunrise Blvd @ Zinfandel Dr	Signal	AM	**215.0**	**F**	**215.0**	**F**
			PM	**101.3**	**F**	**101.3**	**F**

			PM	**171.0**	**F**	31.8	C

Conclusions

The following are the primary conclusions based on the analyses discussed herein:

- The proposed project is estimated to generate 11,606 new daily trips, with 843 new trips occurring during the AM peak-hour, and 1,102 new trips occurring during the PM peak-hour.
- The addition of the proposed project to the Existing (2017) Conditions results in a significant impact at five (5) study intersections. Four (4) of these impacts and mitigations were previously identified in the Jaeger Ranch Traffic Impact Analysis[1]. This analysis identified one additional impact to the intersection of Sunrise Boulevard with White Rock Road (Intersection #21). With the application of mitigation measures recommended herein, the impacts to all five (5) intersections can be mitigated to be *less than significant*.

Kimley»Horn

- The addition of the proposed project to Cumulative (2040) Conditions results in a significant impact at five (5) intersections. Three (3) of these impacts and mitigations were previously identified in the Jaeger Ranch Traffic Impact Analysis[1]. Two (2) of the impacts to intersections would be mitigated to *less than significant*. Three (3) locations do not have a feasible mitigation including the two (2) newly identified mitigations.

Memorandum RE: Jaeger Ranch Supplemental Traffic Analyses, Draft Trip Generation Memorandum

Kimley»Horn

Memorandum

To: Olga Sciorelli, P.E., QSD, QSP
Land Planning Manager
K. Hovnanian® Homes of California, Inc.

From: Chris Gregerson, P.E., T.E., PTP, PTOE

Re: Jaeger Ranch Supplemental Traffic Analyses
DRAFT *Trip Generation Memorandum*

Date: June 12, 2019

Per your request and authorization, we have prepared this trip generation memorandum for the above referenced project.

Project Understanding

This memorandum documents the results of a trip generation comparison completed for Jaeger Ranch (the "proposed project" or "project"). The vacant project site is located along Rancho Cordova Parkway/Jaeger Road, south of Douglas Road in Rancho Cordova, California. Kimley-Horn previously completed a traffic impact analysis[1] for the Jaeger Ranch project. Subsequently, Kimley-Horn also completed a supplemental traffic impact analysis for a new land use mix submitted by the applicant for the proposed project[2]. However, since the publication of these reports, the project applicant has further modified the land use mix of the proposed project. The purpose of this memorandum is to document the trip generation characteristics of the proposed project's published land use mix, the current land use mix, and a comparison between the two showing that the current land use mix does not result in more trips being generated compared to the published land use mix.

Project Trip Generation (Published)

As documented in the supplemental traffic impact analysis[2], the number of trips anticipated to be generated by the proposed project were approximated using data included in *Trip Generation, 9th Edition*, published by the Institute of Transportation Engineers (ITE). The land use considered for the supplemental analysis included 723 market rate single family detached units (SFR), 250 multi-family housing units, 743 Active Adult detached units (AAR), and 32,000 square-feet (s.f.) of commercial. Active Adult Residential (AAR) refers to detached age-restricted housing units. This land use type is understood to have trip characteristics that generate fewer daily trips when compared to non-age restrictive land use types. In fact, as described in Trip Generation, the daily trip rate for AAR is 61-percent less than the daily trip rate for SFR. The trip generation characteristics included in the Supplemental Analysis for the proposed project are presented in **Table 1**.

As shown in **Table 1**, the proposed project was estimated to generate approximately 11,606 new daily trips, with 843 and 1,102 trips occurring during the A.M. and P.M. peak-hours, respectively.

Kimley»Horn

Table 1 – Proposed Project Trip Generation Characteristics (Supplemental Analysis)

Land Use (ITE Code)	Size (DU/KSF)	Daily Trips	AM Peak Hour			PM Peak Hour		
			Total	In	Out	Total	In	Out
Single Family Detached Housing (210)	735	6,796	547	136	411	716	451	265
Apartment (220)	215	1,225	105	21	84	114	74	40
Senior Adult Housing - Detached (251)	737	2,519	158	55	103	181	110	71
Senior Adult Housing - Attached (252)	38	112	8	3	5	10	6	4
Shopping Center (820)	32.000	954	23	14	9	81	39	42

Project Trip Generation (Proposed)

The number of trips anticipated to be generated by the proposed project with the proposed land use mix were approximated using data included in ITE's Trip Generation Manual. The currently proposed land use mix includes 735 market rate single family detached units (SFR), 215 multi-family housing units (MFR), 737 Active Adult detached units (AAR), 38 Active Adult attached units (AAMFR), and 32,000 s.f. of commercial. The trip generation characteristics for the currently proposed land use mix for the proposed project are presented in Table 2. Consistent with all previously completed analyses, internal capture and pass-by reductions were applied as applicable.

Table 2 – Proposed Project Trip Generation Characteristics (Proposed Land Use Mix)

Land Use (ITE Code)	Size (DU/KSF)	Daily Trips	AM Peak Hour			PM Peak Hour		
			Total	In	Out	Total	In	Out
Single Family Detached Housing (210)	735	6,796	547	136	411	716	451	265
Apartment (220)	215	1,225	105	21	84	114	74	40
Senior Adult Housing - Detached (251)	737	2,519	158	55	103	181	110	71
Senior Adult Housing - Attached (252)	38	112	8	3	5	10	6	4
Shopping Center (820)	32.000	954	23	14	9	81	39	42
Total		**11,606**	**841**	**229**	**612**	**1,102**	**680**	**422**

As shown in Table 2, the proposed project is estimated to generate approximately 11,606 new daily trips, with 841 and 1,102 trips occurring during the A.M. and P.M. peak-hours, respectively. In comparison to the number of trips generated for the land use mix documented in the Supplemental Analysis, the proposed land use mix generates no additional daily or PM peak-hour trips, and generates 2 fewer AM peak-hour trips.

INTRODUCTION

OVERVIEW

The Ranch development project is a proposed 1,300 senior residential development over 530 acres within the City of Rancho Cordova. The proposed project is defined on the Small Lot Tentative Subdivision Map, THE RANCH, prepared by Wood Rodgers, dated February 2018. See **Figure 1**.

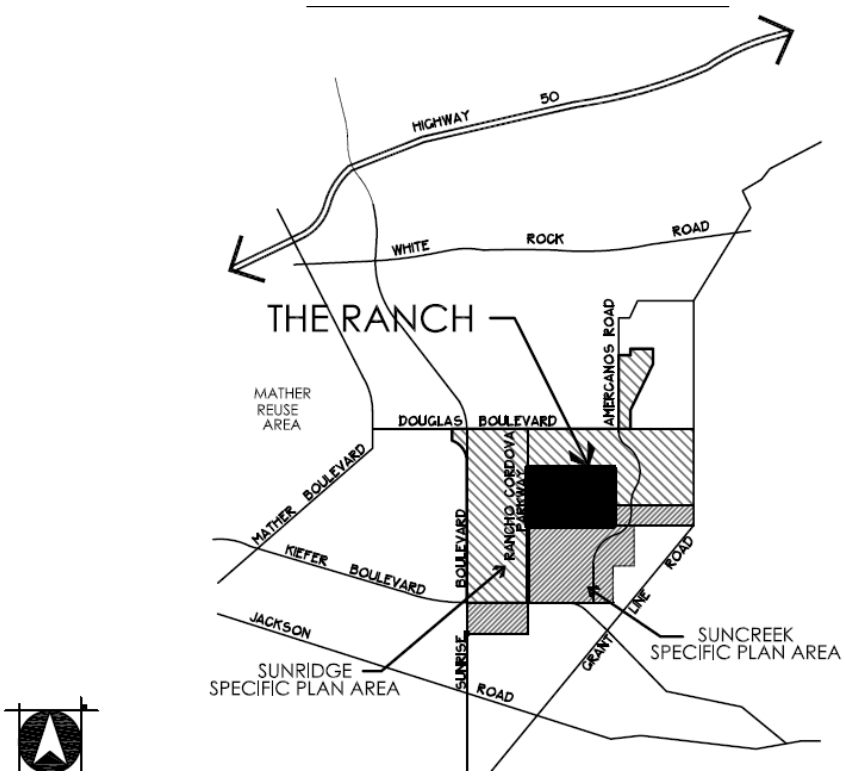

Figure 1. Vicinity Map

The project consists of two development areas at the northwest and southeast quadrants, with the remaining area as open space and an environmental corridor for the Lower Morrison Creek South. The northwest quadrant will drain to the Lower Morrison Creek South, and the southeast quadrant will drain to both the Lower Morrison Creek South and Kite Creek.

The open spaces will also include detention basins that will provide stormwater management. The management includes capture and treatment of summer irrigation flows, hydromodification of storm runoff, and attenuation of very large storms so that post-project flow rates are equal to or less than existing conditions. There will be three basins to manage runoff from the northwest quadrant development and two basins to manage the southeast quadrant stormwater runoff.

Current land use is cattle grazing. The topography is irregular and uneven, with gently rolling terraces, numerous hills, and depressions. The Lower Morrison Creek South meanders down the middle, generally from the northeast to southwest.

With the exception of a major road crossing (Crysanthy Boulevard) and four outflows from the respective detention basins, the South Branch of Morrison will remain as a meandering channel within an open space corridor. The outfall for the southern portion of the Southeast quadrant into Kite Creek is tentatively planned to be part of a larger outfall that will serve the proposed SunCreek Specific Plan.

PREVIOUS STUDIES

1. The "Drainage Study for The Preserve at Sunridge", County of Sacramento, March 2006, was prepared by Wood Rodgers. This study provided information for on-site and off-site drainage facilities for Ultimate Conditions and provided a solution for Interim Conditions. The development layout and environmental constraints have been significantly changed, and this study is no longer applicable.
2. The "Final Master Drainage Study, Sunrise-Douglas Community Plan Area, Sacramento, CA", dated October 16, 1998 by the Spink Corporation was available as a reference document for comparison of existing and developed conditions, flow volumes, and detention basin volumes.
3. The Montelena Drainage Study, including sections for Anatolia I and II, dated September 2007 by Wood Rodgers, is a compilation of drainage analyses prepared for several developments within the Sunrise-Douglas Community Plan. The studies focused on the Sunrise-Douglas Community Plan area but also included analyses of impacts to Laguna Creek.
4. The Master Drainage Study for Anatolia III, dated June 2004 by Wood Rodgers, provided the analysis and design information for the facilities to manage Anatolia III stormwater. The analysis and facilities information were used as presented for this study.
5. SunCreek Master Drainage Study, November 15, 2017, prepared by Watermark Engineering, Inc. for the SunCreek owners group. The study was for approximately 1,270 acres of mostly residential development east and mostly south of The Ranch property. The southeast quadrant of The Ranch drains to Kite Creek, which is also where most of the proposed SunCreek development drains.

This updated study relies on much of the basic data gathered and created by Wood Rodgers including land use information and topography mapping used for the cross-section data for the backwater analysis. It also relies on development information currently being prepared by CTA Engineering and Surveying.

DEFINITIONS

1. For this study, a shed or subshed, coupled with a number (#), is a portion of or an entire tributary area that drains to a specific location, either directly into a creek or into a basin (#).
2. A basin is the complete facility that will provide the stormwater management, including the permanent pool for water quality, storage for hydromodification and peak flow attenuation, and the outflow facilities.
3. Hydromodification is the change in watershed characteristics as a result of land use changes (development in this instance).
4. Lower Morrison Creek South Branch is identified as MCSB within this document.

DESIGN CRITERIA

GENERAL REQUIREMENTS

This study is prepared under the same criteria used for the SunCreek drainage study. Specifically, a drainage study must be submitted to the City to demonstrate that:

a. The proposed detention basins are appropriately sized in compliance with the SSQP's NPDES Permit and Hydromodification Management Plan to mimic existing conditions;
b. The stormwater basins will drain by gravity;
c. The basins can be designed to minimize long-term maintenance, especially the outlet structures.

Per additional city requirements:

d. The existing-conditions 100-year floodplain of Lower Morrison Creek South Branch has to be defined;
e. Developed flows leaving The Ranch shall not create significant impacts to downstream properties.

Topographic mapping and this analysis are based on the National Geodetic Vertical Datum of 1929 (NGVD29).

WATER QUALITY

Through coordination with City officials, the proposed water quality treatment will utilize both dry basins and wet basins that include a permanent pool. The basins will be designed per the "Stormwater Quality Design Manual for the Sacramento and South Placer Regions, July 2018, Water Quality Detention Basins".

Three basins are designed with a permanent pool located below the lowest elevation of the outfall facilities. This configuration and the design were based on Table DB-1 of the Stormwater Manual. The remaining two basins are designed as dry basins because of their relatively small size. It would be difficult to keep a small permanent pool healthy, and one of the dry basins is under PG & E power lines where water bodies are not allowed.

HYDROMODIFICATION

The hydromodification was completed using the SAHM (Sacramento Area Hydrology Model) dated December 2013, developed by Clear Creek Solutions, Inc. The computer program provides pre-project peak flows for 2- through 25-year recurrence intervals storms. The program then analyzes the proposes facilities and compares pre-project and post-development flows, ranging from 25 to 40% of the 2-year peak flow through the 10-year peak flow, to demonstrate that post-project flows are similar to pre-project flows.

HIGH FLOW ATTENUATION

There is a requirement to attenuate the 100-year storm to approximate pre-project conditions. The XP-SWMM software was used for that analysis as well as for the selected lesser storms as described later. Both the SAHM and XP SWMM software were used to size and configure the basin and corresponding outfall facilities.

METHODOLOGY

EXISTING CONDITIONS

The first major task was to select and analyze existing subsheds to determine runoff characteristics (hydrographs) and peak flows for the selected recurrence-intervals storms. SacCalc was used to generate the subshed hydrographs. The hydrographs were then added and routed using the XP-SWMM software. This software is approved by FEMA for Flood Insurance Studies and mapping revisions, so this information will also be used for the LOMR submittal.

DEVELOPED CONDITIONS

The Ranch was subdivided into five drainage areas and five corresponding basins based on topographic constraints and proximity to Lower Morrison Creek South and Kite Creek.

Where appropriate, existing conditions subsheds were used for developed conditions. However, the post-project subsheds are based on both development boundaries and topography. Development grading will redirect a small portion of the southeast quadrant development area to Kite Creek rather than to MCS, mainly due to grading constraints.

The southwest portion of The Ranch will remain as open space. This area currently drains to MCS but will be directed south to Kite Creek as part of the nearby SunCreek development. This specific area is not part of this drainage study.

The decision to convey this area to Kite Creek was made as part of Appendix D, Regional Master Drainage Study for SunCreek Specific Plan, prepared by Makay and Somps, dated August 22, 2011. An excerpt of page 24 of that document is show below.

The 102.3+/- acre Open Space Preserve (Sub-shed KCOS-05) located east of Rancho Cordova Parkway and north of the SunCreek Plan Area has been modeled in a similar fashion as the Morrison Spill. The storm related runoff from this sub-shed is from an undeveloped open space area and does not require water quality treatment or detention within the SunCreek Plan Area. The runoff from sub-shed KCOS-05 naturally drains towards the northeast corner of the Rancho Cordova Parkway-North Campus Drive intersection. An inlet structure will be constructed at this location and the storm runoff from sub-shed KCOS-05 is routed through a 48-inch diameter pipe located in Rancho Cordova Parkway. The 48-inch diameter pipeline is sized to convey the higher peak flow of 84 +/- cfs generated by the 100-year, 24-hour storm rather than the peak flow rate of 50 +/- cfs generated by the 100-year, 10-day storm. The 48-inch pipeline will follow Rancho Cordova Parkway to the south where it drops into a 72-inch diameter pipe. The drop into the 72-inch diameter pipeline will help to dissipate the velocity energy generated in the 48-inch pipeline before discharging into the preserve/open space area just upstream of the Rancho Cordova Parkway box culverts. Additional energy dissipation measures prior may be needed to discharge into the preserve/open space to prevent erosion of the streambed.

HYDROLOGIC ANALYSIS

LAND USE

The Ranch is undeveloped. The land may have been used for some dry farming in the past, but is currently used for cattle grazing.

SOILS

The soil classifications for this study were based on information available from Natural Resources Conservation Service (NRCS). The soils are mostly classified as Hydrologic Soils Group D with the remaining classified within Group C. Selected soils information is provided as **Attachment A**.

GROUNDWATER

Information from the nearby SunCreek Specific Plan Project DEIR/DEIS indicated that "groundwater is located from 20 to 100 feet below the ground surface depending on when and where the measurement was taken."

A preliminary geotechnical report prepared by WallaceKuhl entitled Jeager Ranch Property, dated Sept 26, 2016, stated that "groundwater is anticipated to vary between 150 and 240 feet below existing surface grades". As such, groundwater has not been considered in the analysis of the basins and drainage corridors.

There are two monitoring wells within The Ranch, but data collection and availability are not known at this time.

SURFACE WATER

The two sources of water that flow into the basins are rainfall runoff and runoff from excess landscaped irrigation. There are no other sources of surface water that could impact flows into and out of the proposed basins.

EXISTING CONDITIONS

MCSB generally flows from the northeast corner to the west central property boundary of The Ranch. The total tributary area of MCS entering The Ranch is 1,120 acres and the 100-year, 12-hour natural flow was estimated to be 678 cfs per Wood Rodgers (Reference 1). This hydrograph was used as model input at the northeast corner of the development site. Local inflow was added to the model at three locations along MCS as it meanders through The Ranch. Additional information of the flows along MCSB is provided later in this document.

DEVELOPED CONDITIONS

The Ranch was subdivided into five sheds: three sheds that represent the developed areas north of MCS; two development areas south of MCS; and the sixth shed representing the MCS corridor.
Drainage sheds were reconfigured based on land use, topography, and availability of suitable detention sites. The basins will be designed as wet basins except for the basins PG and SN. The permanent pool will be eight feet deep. The actual configuration of the basins has not been determined. Additional information about the basins is provided later in this document under Basin Details. The five sheds are shown on **Figure 2.**

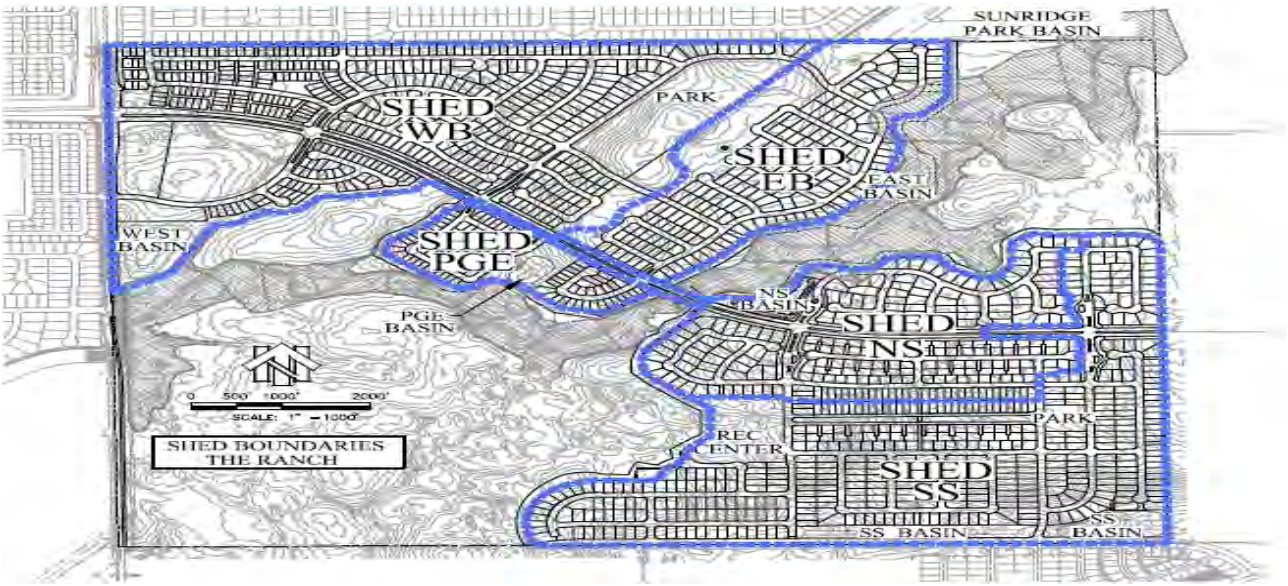

Figure 2. Sheds within The Ranch

A brief description of each shed and the corresponding detention basin facilities follows:

- **West Basin (WB):** The shed includes the northwest development area, and the basin is located just south of the tributary shed area and just east of Rancho Cordova Parkway. The outfall from this basin will enter MCS where it turns south and parallels the parkway in a man-made channel.

- **East Basin (EB)**: The EB shed includes the central and eastern portion of The Ranch development just north of MCS. The detention basin is adjacent to MCS near the middle of the development site. Outfall from this basin will be directly to MCS or conveyed south and discharged into the creek at the proposed Crysanthy Boulevard crossing.

- **PGE Basin (PGE):** This shed is located south of Crysanthy under the PG&E transmission lines. The shed area was minimized to comply with PG&E constraints for drainage facilities under their high-voltage power lines. The basin will be designed to create and maintain as much infiltration as can be reasonably achieved. An outflow will discharge south or west directly into MCS.

- **North South Basin (NS)** This shed is located along the left bank of MCS, generally along both sides of Crysanthy Boulevard east of the MCS crossing. The basin will be a dry-extended basin with an outflow to MCS upstream of the Crysanthy crossing. Note the modeling map shows SN rather than NS.

- **South-South Basin (SS):** All of the developed area south of MCS will drain to this linear basin that is located along the southern boundary of The Ranch. The permanent pool is at the southeast corner and will drain to Kite Creek. Its outfall will be part of a larger outfall that will also serve SunCreek and will become the new headwaters of Kite Creek.

  It is expected that the storm drains discharging into the wet basins will be below the water level of the permanent pool. This eliminates the need for access control at the outfalls. Manholes just upstream of the basin will include a slide gate so that the deep pipe can be isolated and cleaned as necessary.

Maps 1 and 2, folded in the back of this document, provide a detailed layout of the subshed areas, the proposed storm drain network, and the proposed detention basins. **Attachment B** provides a summary of imperviousness and peak flows for the 2-, 10-, and 100-year storms at the selected subsheds for post-project conditions. There is no comparative analysis for existing conditions because the subshed boundaries are not the same between existing and the post-project conditions.

HYDRAULIC ANALYSIS

OVERVIEW

The design of The Ranch of the three stormwater management wet basins can be described as three storage areas in a vertical stack. The lowest portion will be the permanent pool and will be below the lowest outfall. This permanent pool provides the water quality per the wet detention basin criteria.

The storage component to meet the hydromodification criteria is "stacked" in the middle and larger than the permanent pool. This hydromodification component also includes outflow facilities. For simplicity, the outflow facilities for each basin are designed to include a single orifice and a single weir.

The top area is the storage area needed to store and attenuate extreme storms up to the 100-year storm. The orifice and weir are designed to release flows to less than the pre-project flows. Trial and error model runs were used to determine the basin size, the size of the orifice, and the shape and size of the weir.

Each basin and corresponding outflow facility has to meet three distinct design criteria. The criteria were the size of a permanent pool for water quality, flow attenuation to meet the hydromodification protocol, and flow attenuation for extreme flows. To satisfy these criteria, a simple calculation and two computer models were used.

The basin under the PG&E transmission lines and the NS basin will be dry basins, designed to drain within 48 hours per water quality criteria. In addition, the basin bottom will be configured and constructed to improve and maintain infiltration. The design has not started, but concepts being considered to improve infiltration include pre-treatment areas, gravel beds, and excavation through the duripan layer, then backfilled with permeable material. Please note that infiltration has not been considered for sizing or flow control for these two dry basins. Rather, the design of the dry basins will include infiltration enhancements to reduce ponding time and reduce the chance of outflow from summer irrigation runoff.

MODELING

The computer model SAHM was used to determine the peak flows for the 2-, 5-, 10-, and 25-year events for each of the basins assuming existing conditions. These flows were used as "targets" within the XP-SWMM analysis. Peak 100-year target flows were available from the existing conditions subsheds but are not available because there are no "existing conditions" watershed parameters to use to compute flow. The developed conditions subshed boundaries are based on development boundaries, not watershed boundaries. As a result, basin parameters normally used to determine 100-year flows are not available.

A separate analysis was completed. The 100-year flows from the existing conditions subsheds were used to develop a regression equation to estimate 100-year flows from the man-made areas. The equation is:

$$Q_{100} = 3.06\ DA^{0.75},\ \text{where:}$$

Q_{100} = the 100-year flow in cubic feet per second (cfs), and
DA = drainage area in acres.

Table 1 provides a summary of the shed areas that includes estimates of natural flow from each shed. The flow estimates are used only as guides for the detention basin analyses.

Table 1. Summary of Existing Conditions Subsheds

Shed ID	Shed Area (ac)	100-yr Peak Flow (cfs)[a]
West	104.2	100
East	46.0	56
PGE	14.7	23
North-South	50.2	58
South-South	95.7	94
Remainder	218.7	na
Total	530	na

a: Estimated from regression equation developed for the SunCreek. See Modeling section for details.

The target flows were then used as a general guide to configure and evaluate various basin sizes and outfall facilities. They were used only as target flows and not specifically for design or compliance.

In addition to sizing the basin and outfall facilities, the upstream storm drain facilities were also modeled to provide preliminary pipe sizing based on containment of the 10-year flow. Note that the storm drain alignments are probably accurate but the pipe inverts and other design details are not yet available. As such, the hydraulic analysis of the pipe network is at the master drainage study level only. **Attachment C** provides additional information concerning design flows, preliminary pipe sizes, and information concerning basin and basin outfall parameters.

PERMANENT POOL

The permanent pool was sized based on the Sac County Water Quality manual (July 2018). While the actual design of the basins is not yet available, design guidelines and sizing information for each basin is provided later in this document. The wet basins are expected to be healthy, attractive, and maintain a fish population more than just mosquito fish.

All basins should be designed with side slopes of 4:1 or flatter. In addition, it is strongly recommended that soft curves be used for the shore line and basin perimeter. Clayey soils need to be stockpiled for the three wet ponds during excavation and nearby construction. Those soils will then be used to line the bottoms of the wet basins to minimize infiltration. The dry basins should not be lined.

The permanent pools will be eight feet deep or greater. The pan evaporation at the Folsom Lake weather station is about 52 inches for the months of May through October. Using a conversion

of 0.75, the loss during the summer would be about 39 inches. Assuming a full pool in late April, no summer inflow, and minimum infiltration, the pools should have about four feet of water remaining at the end of the summer. As a minimum, the pools are expected to have sufficient volume and depth to maintain suitable temperature and habitat for mosquito fish. Note that summer inflows would also help maintain minimum water levels during the summer. Also note that summer inflows are not expected to exceed evapotranspiration, causing spill during the summer.

HYDROMODIFICATION AND HIGH FLOW ATTENUATION

The following steps were used to size and configure the basins and outflow facilities. The SAHM model was set up, starting with the footprint of the permanent pool. A trial and error procedure was then used to determine a storage basin, a single orifice, and a rectangular notch that met the hydromodification criteria.

That proposed facilities information was then used as input for the XP-SWMM (XP) model. An outfall to Kite Creek was added to the facilities to evaluate backwater conditions into the analysis. Note that the SAHM model is not dynamic, so backwater cannot be evaluated within that model.

Trial and error was again used to confirm and/or modify the proposed storage capacity and outflow facilities to meet the 100-year attenuation criteria. After the outflow requirements were met within the XP model, the revised facilities were then reloaded into the SAHM model to ensure that the hydromodification criteria were met.

The basin and outfall features were then reloaded into the SAHM model using the SSD Table option. If the hydromodification criteria were not met, then the XP model was reworked. This whole process was required to be able to include the outflow rating using different weir configurations, to be able to account for backwater, and accurately represent a basin that has varied side slopes. Typically, the generic basin has mild side slopes above the permanent pool that rapidly increase storage, then steeper slopes near the top. The SAHM is not designed for complex basin configurations.

The results of the SAHM analyses for the five basins are provided in **Attachment D**. Please note that the SAHM analysis focuses on flows from 25% of the 2-year storm through the 10-year storm and does not analyze storms smaller or larger than this range. Therefore, the permanent pool information and the upper portions of the storage and outfall facilities are not needed and have generally not been included in the data input. As such, the basin stage-area-storage information and outfall information do not represent the complete facility. Please refer to the Basin Details section for complete information.

The existing tributary area of Shed SS is less than the post-project area. The SAHM models for Shed SS reflect this relatively small increase and the capacity and outfall facilities for Basin SS reflect these differences. Also note that the SAHM analysis showed failure between 40 and 43 cfs but passed above and below this relatively small range.

DISCUSSION OF APPROACH

There were several reasons for the trial and error approach. Both models were needed to meet the design criteria, but either model could control the basin size and shape and the outflow facilities.

Also, the criteria could have been easily met without the trial and error effort if the modeler did not consider basin size to be an important consideration. As an example, when backwater was considered in the XP model, the outflow was less compared to the SAHM model. In other words, the SAHM model overestimated the outflow. The backwater-controlled outflow was actually less which meant more storage (land) was needed if only the SAHM data were used. Hence the need to recycle the SAHM model with the XP data to gain a more efficient facility.

Another reason for the trial-and-error approach is the versatility of the XP-SWMM model. Any basin shape and configuration and a variety of outfall facilities can be quickly evaluated for compliance. In addition, the 100-year storm cannot be modeled within the SAHM model.

BASIN DETAILS

The stage-storage of each basin and the corresponding outfall facilities have been coordinated to meet water quality and hydromodification criteria as well as attenuation requirements along the creeks and downstream of the confluence of MCSB and Kite Creek.

Please note that the actual configuration can be modified without further analysis as long as the stage-storage-discharge relation remains similar to what is shown. If significant changes are proposed, then additional modeling may be needed to evaluate basin performance and downstream impacts. The entire basin may also be moved vertically, dependent on grading.

A basin might be reconfigured when the land use plan shows a larger footprint. That would accommodate a shallower basin with a larger, more freeform footprint. Conversely, a deeper basin may be desired. Either change could affect the size of the orifice, as well as the configuration and elevation of the weir. Any revised configuration or footprint would be addressed when there is more detailed development information.

Table 3 provides key parameters of each basin. The basins typically have an eight-foot depth for the permanent pool and an operating depth of 4 to 5 feet above the permanent pool. The top elevations of the basins are generally 1+ foot above the 100-year water surface elevation. An access road around each basin has not been included as part of the determination of needed basin area because there are too many unknowns at this time. However, the basin design will include access that is acceptable to the city. The additional area needed for a perimeter road would be in the range of up to one-half acre in addition to the basin areas shown in the summary table.

Detention/WQ basins and open channels shall be designed per Section I.8.5 of the SunCreek Specific Plan and per Section 7.4 and Section 8 of the City of Rancho Cordova Open Space Guidelines, dated December 2, 2013. Per the Open Space guidelines, consideration shall be given to designing detention basins to look natural with natural landscaping, to have gentle side-

slopes, and to have terraced areas with a variety of plants and trees. Where feasible, basin perimeters shall incorporate trails and bike paths. These natural features shall not interfere with normal function and maintenance.

Table 3. Basin Parameters and Hydraulic Information

Parameter	Basin ID

Q100 WSE (ft) after 2yr, 24-hr	173.6	186.5	181.8	185.3	175.9

The proposed drainage facilities are shown on folded **Maps 1 and 2**. Hydraulic information and basin stage-area-volume information, taken from the XP model output, is provided in **Attachment C.** Copies of the SAHM output are provided at **Attachment D**.

The outflow facilities for the West, NS, and SS basins consisted of one orifice and one weir. The outflow for the PG&E basin is a single orifice. The outflow facility for the East Basin is a compound weir. **Table 4** provides a summary of the outfall facilities at each of the basins.

Table 4. Description of Basin Outfall Facilities

Basin ID	Orifice (in)	Flowline Elev (ft)[a]	Description of Weir	Flowline of Weir (ft)[b]	Comments
West	Rect-0.5'h x 1.7'w	168	One foot wide at base (elev 170) and 6 ft wide at top at elev 175.	170	The weir is also considered the emergency spillway.
East	na	na	Compound weir, 0.6' BW @ elev 184, then 1.5' wide @elev 185.0, then 2.5'w @elev 185.01, and then sloping to 6' wide @ elev 188 (top).	184	The weir is also considered the emergency spillway.
PGE	6-in round	176	4' standpipe that will act as emergency weir. Open top will have Cooley type access cover.	182	Outfall pipe to be 12-in dia. Orifice connected to 4' standpipe.
NS	12" round	181	Weir: 1' w at base (elev 182.5), then 5.5' w at top at elev 187.	181	The weir is also the emergency spillway.
SS	12" round	170	Weir: 1' w at base (elev 172.5), then 4.0' w at top at elev 176.5.	172.5	The weir is also the emergency spillway.

a: All orifices assumed to be set 8 feet above basin bottom.

b: All weirs assumed to be set 10 feet above basin bottom unless otherwise noted.

Figures 2 and 3 provide a conceptual view of the basin configuration and proposed outfall facilities. These were taken from the SunCreek Drainage Study but are representative of the facilities planned for The Ranch.

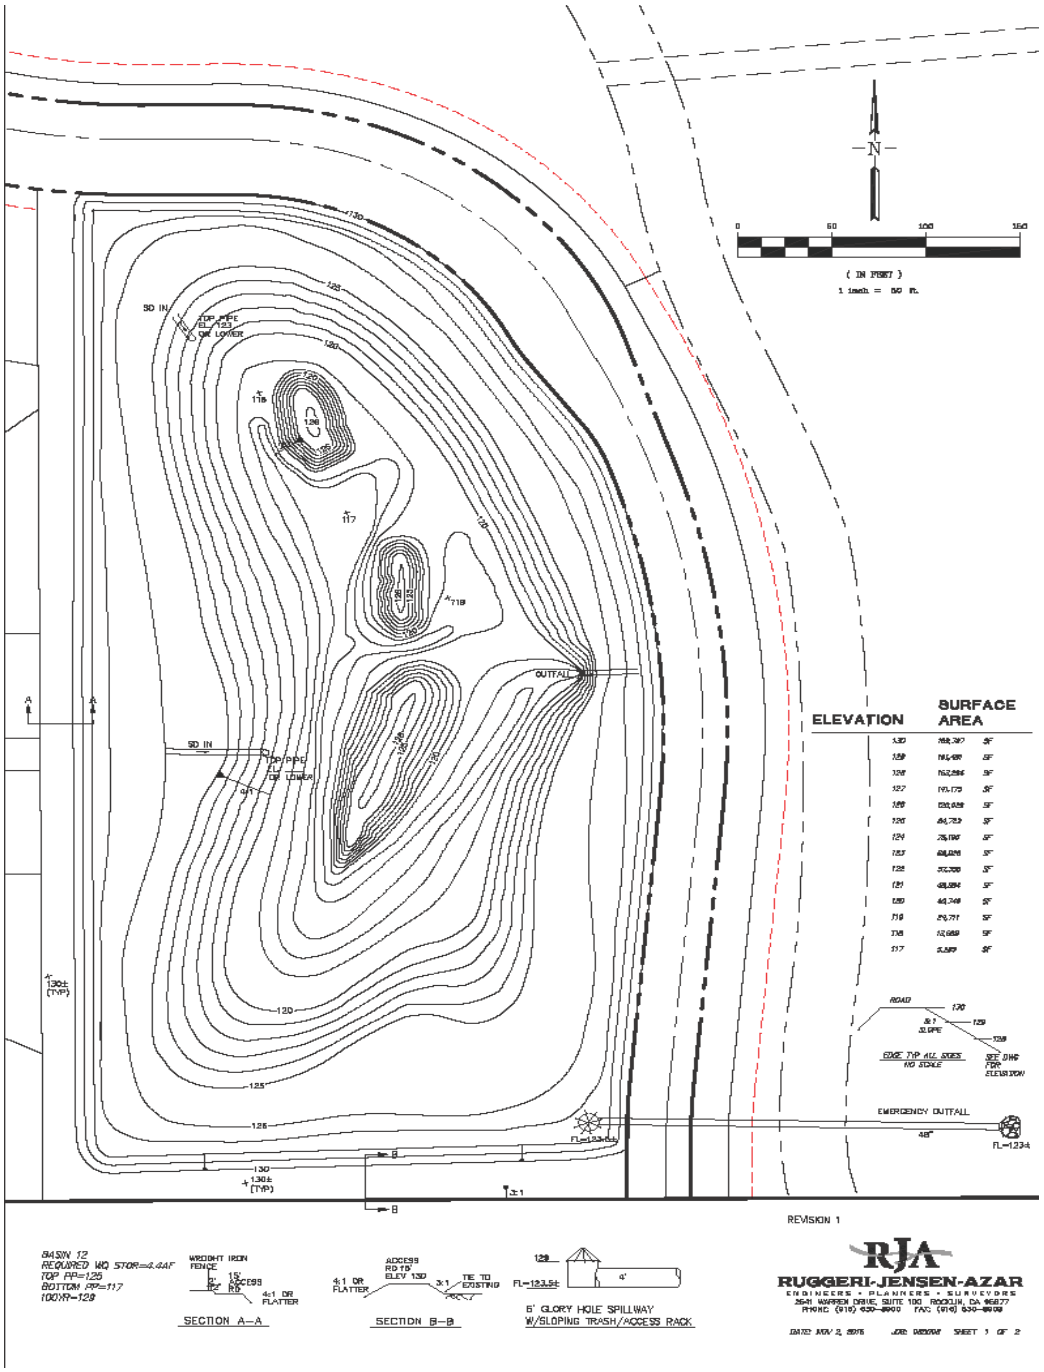

Figure 2. Preliminary Layout of Basin 9

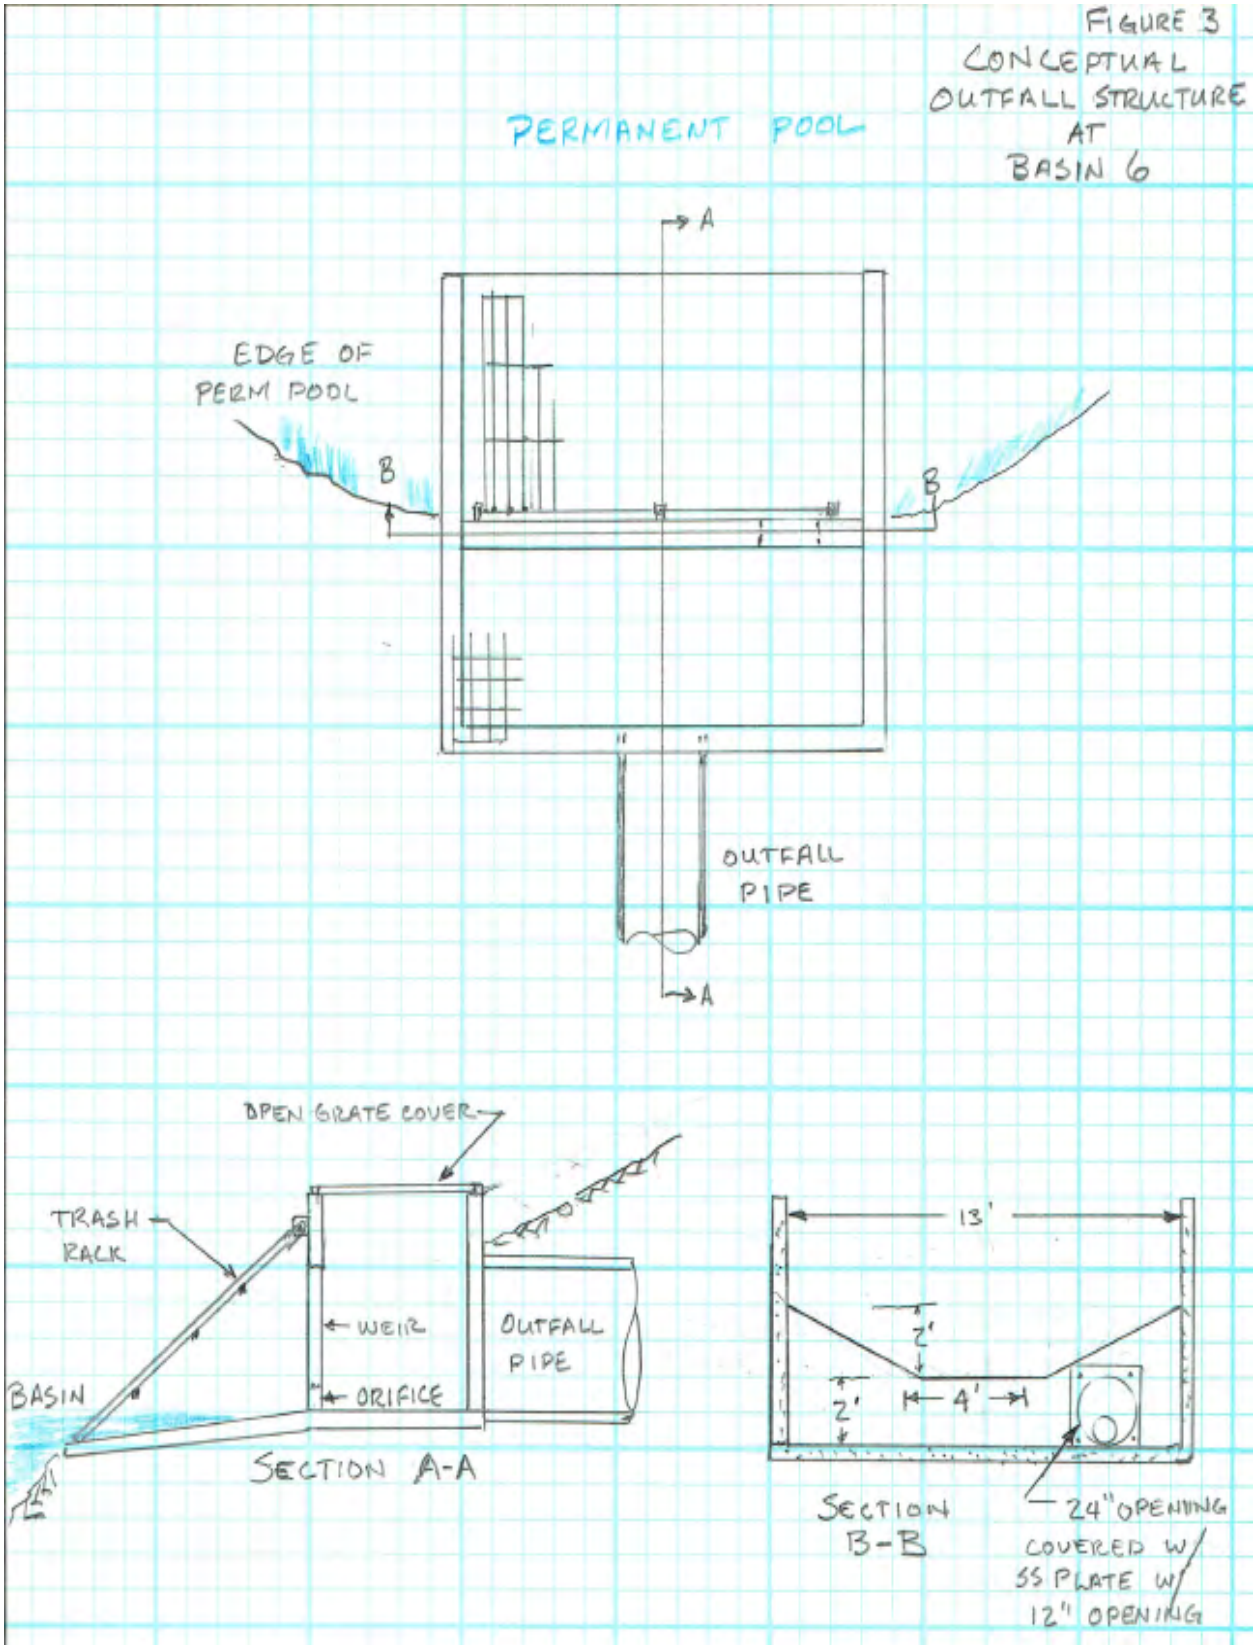

Figure 3. Preliminary Outfall from Basin 4, Typical of All Outfalls

OUTFALLS

The basins are sited up to several hundred feet from the channel with varied topography between the basin and the channel flow line. Releasing the basin outflow at the edge of the environmental corridor would generate erosion as a new channel would be cut into the native soils. This erosion is contrary to the purpose of attenuating peak flows.

For this study, it is recommended that an outfall pipe or armored channel be constructed so that runoff from the basins is released into or very near the stream flowline or thalweg. In addition, erosion protection at the outfalls is also recommended.

To minimize the disturbances within the preservation area, outfalls will be constructed as part of crossings where possible. **Table 5** provides a summary of existing and design flows and provides a preliminary description of the proposed outfalls.

Table 5. Locations of Basin Outfalls

Basin ID	Location and Description of Outfall
East	Outfall piped from the basin along Rancho Cordova Parkway right-of way and discharged into MCS at the constructed channel east of the parkway.
West	Discharged directly into MCS or piped southwest and discharged into MCS at the Chrysanthy Boulevard crossing.
PG	Discharged directly into MCS. Preliminary location west of Basin.
NS	Discharged to MCS upstream of Chrysanthy crossing
SS	Outfall piped to Kite Creek at the same location of the SunCreek Basin 2 outfall. The two or combined structure will become the headwaters of Kite Creek when that area of SunCreek is developed.

EXISTING AND POST-PROJECT FLOWS

Overview

A review comment from the first submittal was to include an analysis of potential impacts to upstream, adjacent, and downstream properties.

An XP model was used to evaluate the potential impacts along Morrison Creek South Branch (MCSB). To set up the analysis, the following steps were completed for the "existing conditions" model:

- Recreated the numerical hydrograph shown on Figure 4 provided by the Wood Rogers report entitled *Drainage Study for The Preserve at Sunridge*. The hydrograph with a peak flow of 678 cfs for the 100-year flow was applied at cross-section 96+00 near the upstream boundary of The Ranch.

- Forty cross-sections of the South Branch Morrison Creek were taken from available topographic information.
- Three existing sheds within The Ranch corridor and tributary to MCSB were then added to the existing conditions model.

The Post-Project (PP) information was then added to the model as a Scenario. Key components of the PP scenario were as follows:

- The inflow hydrograph at the upstream end of MCSB was not changed.
- The natural tributary subsheds along MCSB were turned off.
- The four tributary sheds (WB, PG, EB, and NS) that represent The Ranch development were added.
- The local remaining natural subsheds along MCSB were added at five locations.
- Encroachment along the MCSB cross-sections was added per the proposed development.
- The proposed Contech arch at the Crysanthy Boulevard crossing was added.

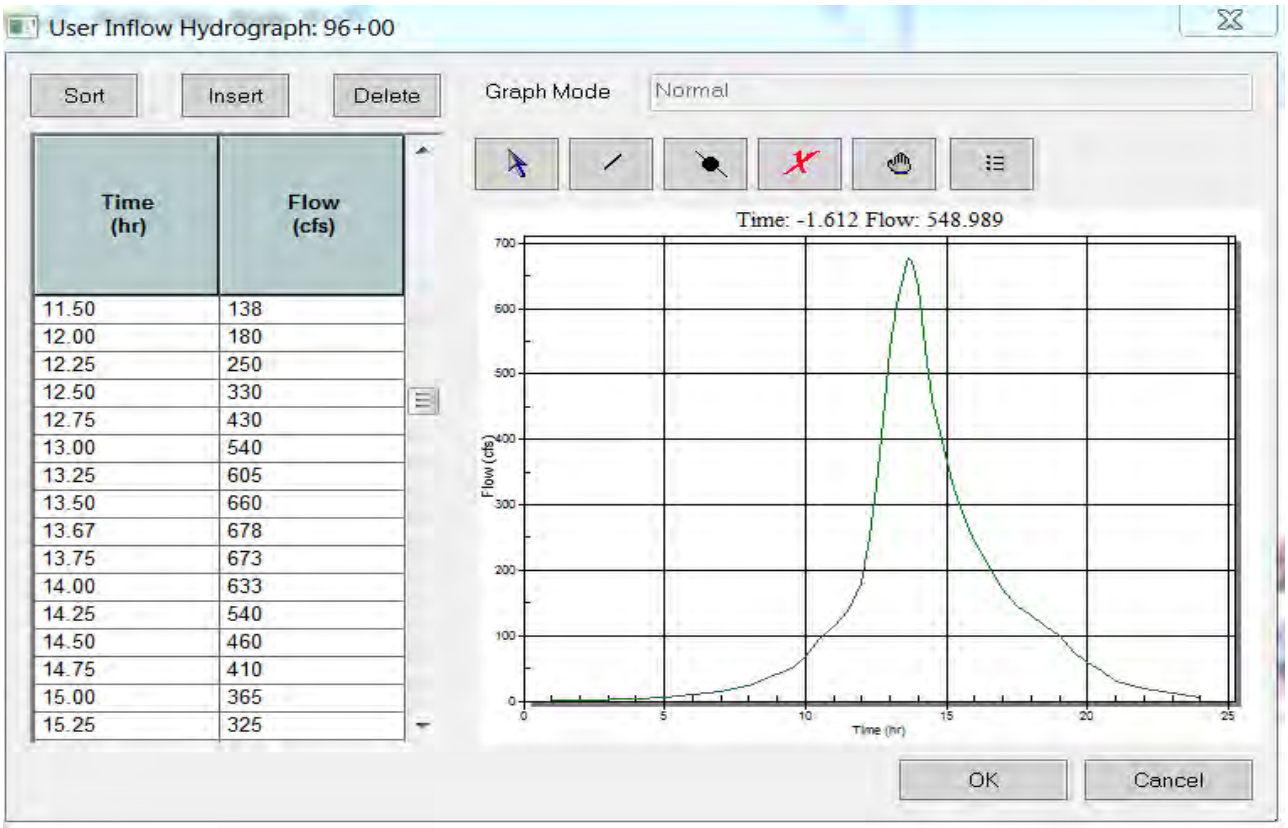

Figure 4. Inflow Hydrograph of Morrison Creek South Branch into The Ranch

Upstream Impacts

There is encroachment that will raise the water level within The Ranch property. However, the backwater effect is insignificant (0.02 ft) at Section 96+00 which is near the upstream property line. The impact is less at the property line.

Adjacent Property Impacts

Both the flow and water level along MCSB varied because of the changed conditions and the slight changes where local flows were added to the model. There are impacts along MCS where there will be encroachment from development. The maximum changes were + 15 cfs and -18 cfs. Maximum water elevation changes were +0.03 and -0.48 feet. The Ranch development is on both sides of the South Branch of Morrison Creek, so no other properties are affected. It is the responsibility of developers to protect their own property and is part of the design considerations.

Downstream Impacts

At the downstream end, downstream of Rancho Cordova Parkway, the model results indicate a slight decrease in flow (15 cfs) and a slight decrease of the water level (-0.06 ft) for post-project conditions compared to existing conditions. **Figures 5** and **6** show the flows and water surface elevations just downstream of Rancho Cordova Parkway. **Attachment E** provides additional modeling details for the comparative analysis. The cross-section locations are shown on **Maps 1** and **2**. **Attachment E** provides more detailed information from the comparative analysis.

EXECUTIVE SUMMARY

The purpose of this Level 1 Sewer Study is to identify trunk main sewer facilities for proposed The Ranch Special Planning Area project. This study will demonstrate the ability of the proposed gravity sewers to serve The Ranch and offsite areas from the east.

The Ranch SPA encompasses 530.06 acres in the City of Rancho Cordova. The project is situated at eastern terminus of Chrysanthy Boulevard on the easterly side of Rancho Cordova Parkway, and approximately one half mile to the south of Douglas Boulevard. The proposed SPA development consists of mixed land uses and densities. There are proposed lots of low and medium density residential, private and public parks, private recreation center, private and public landscape lots, open spaces, public protected areas, commercial, and water quality/detention basins. Protected areas and a portion of roadway adjacent to protected areas, not subject to future development, account for 227.21 acres of the gross project area. The net developable area is 302.85 acres. The project is planned to be constructed in several phases.

Proposed sewer system improvements will serve The Ranch project needs, as well as the proposed Arista Del Sol to the east. Development of The Ranch will result in 1817 ESDs resulting in PWWF of 1.35 mgd. The upstream project to the east, Arista Del Sol, is 243.7 acres. ADS will result in 1462 ESD's and 1.14 mgd. Therefore, the total ESD's and PWWF are 3279 ESD's and 2.49 mgd exiting the site at Ranch Cordova Parkway.

The proposed trunk main will exit into existing 24" sewer line stubbed at the intersection of Rancho Cordova Parkway and Chrysanthy Boulevard. The existing 24" sewer line discharges into Aerojet Interceptor 1B (36" trunk main) flowing westerly into SASD facility S-132 lift station. The SASD system capacity plan shows The Ranch will sewer to the west.

Interim facilities or pump station are not expected to be required for The Ranch SPA.

INTRODUCTION

Level of Study - The Ranch sewer study is a Level 1 report which focuses on the design of Major Trunk and sewer facilities serving The Ranch SPA and potential upstream sewer sheds.

Location - The Ranch is located in Rancho Cordova, east of Rancho Cordova Parkway, between Douglas Blvd, Kiefer Road, and Grant Line Road. See the Vicinity Map, Figure 1.

Topography – Lower Morrison Creek South traverses The Ranch, generally along a southwesterly flow path, joined by lesser tributary channels entering the site on the northern and eastern boundaries. Existing site topography is undulating, ranging from approximately 168.5 feet to 200 feet in elevation (NGVD 1929). Adjacent property to north and west are developed residential while the properties to the south and east are similar rolling agricultural land uses. Adjacent offsite area may drain into the natural channel network.

Project Description - The Ranch is a residential subdivision consisting of 1374 single family lots, neighborhood park sites, and open space lots. Proposed site grading enables gravity sewer service throughout the project. The proposed in-tract collection system will discharge at a single point into off-site sewer in Rancho Cordova Parkway at the location shown on the Sewer Study Map.

Land Use and Zoning – The current land use is vacant, agricultural grazing land. The existing zoning is AG-80. Proposed zoning is Special Planning Area Current zoning consisting of General Plan uses (LDR, MDR, RMU, CMU, P/QP, P/OS, NR). The gross project area is 530.06 acres; protected areas/adjacent roadway comprises of 227.21 acres.

DESIGN

Assumptions – The Ranch sewer study is premised upon the following assumptions:

- There will be no future connections into the proposed on-site sewer system. Property east of the project will sewer to the west through future Chrysanthy. Property south of the project will swer to the south. Adjacent parcels north and west of The Ranch are already sewered or will remain as open space.
- There is adequate capacity in existing, downstream sewer facilities. (Please see attached email from SASD regarding downstream Aerojet 2 Interceptor has capacity without surcharge conditions as verified by SASD and SCRSD. (This section is being verified by SASD at time of draft report)
- Groundwater will be confirmed through future Geotechnical studies for the project. Recent information from monitoring wells in the area suggests groundwater is 140 below ground surface.

Approach – Design of the proposed The Ranch sewer system followed the sequence described as follows.

- Sewer sheds reflect project layout shown on the accompanying Sewer Shed Map.
- Design flows, summarized in Table A-1, Appendix A, adhere to SASD Design Standards, dated July 24, 2013.
- Pipe sizes and slopes meet applicable design criteria.

Design Criteria - Design of the proposed The Ranch sewer system is based on the following criteria.

- Sewer flow is calculated on the basis of 6 ESD (Equivalent Single-Family Dwelling) per acre, or the actual count within a shed, whichever is greater.
- Park areas use a design flow of 6 ESD per acre.
- Design flows are computed using formulas from Section 201.2.2 of SASD standards and specifications:
    - PWWF (mgd) = ADWF *PF +I/I
    - ADWF (mgd) = (310 GPD/ESD)*(ESD/ac)*(ac)/1,000,000
    - PF = 3.5 - 1.8*Q^0.05, where Q=ADWF, PF= 1.2 minimum
    - I/I = 1,400 gpd/ac (new pipeline)
- Design of gravity sewers adheres to the following, from Section 203 of SASD standards and specifications:
    - The minimum pipe size (diameter) is 8 inches.
    - The minimum velocity is 2 fps when the pipe is ½ full or full.
    - The ‘n’ value is 0.013.
    - The minimum slope for a collector serving fewer than 6 ESDs is 0.007.
    - The minimum slope for an 8” sewer is 0.0035.

SEWER FLOW INFORMATION

On-site flow from The Ranch SPA totals 1817 ESDs, resulting in PWWF of 1.35 mgd. There would be off-site contribution from proposed Arista Del Sol project of approximately 1462 ESD’s and 1.14mgd.

SEWER ALIGNMENT & FACILITIES

- No interim facilities are required for The Ranch project. All pipes are sized for ultimate PWWF.
- Ultimate facilities consist of the following:
    - 8-inch in-tract gravity sewer pipe
    - 15-inch to 21-inch truck main sewer pipe in Chrysanthy Blvd
    - 24-inch offsite gravity sewer located in Rancho Cordova Parkway, west from the project entry to the existing manhole in Rancho Cordova Parkway as shown.

CONCLUSIONS

The Level 1 Sewer Study for The Ranch demonstrates the ability of the proposed gravity system to serve the project. System components are sized for ultimate conditions. According to SASD staff, there is adequate capacity in existing downstream sewer facilities to serve project needs.

SASD 2010 SYSTEM CAPACITY PLAN EXPANSION TRUNK SHEDS

BR EAST RANCHO TRUNK SHED – *2015 AMENDMENT*

Introduction

This amendment summarizes the new BR East Rancho near-term and buildout expansion trunk shed plans. Due to recent development activity, SASD has proceeded with an update to the BR East Rancho Expansion Trunk Shed Plan, ahead of the scheduled 2020 System Capacity Plan (SCP) update.

The information in the 2010 SCP BR East Rancho Expansion Trunk Shed Plan was used as a starting reference for this 2015 update. The latest approved sewer study information was included in the update, along with the most recent land use information from the City of Rancho Cordova and Sacramento County. Significant changes to the 2010 SCP were made in areas that were previously planned to be served by future interceptors.

Area Description

The BR East Rancho Trunk Shed encompasses a large area located in the eastern part of Sacramento County, south of Folsom Boulevard. The western half of the shed lies in the City of Rancho Cordova, east of Sunrise Boulevard. The shed extends east to the Urban Services Boundary. The southern boundary includes Grant Line Road and the Urban Services Boundary.

Trunk System Facilities

The BR East Rancho **buildout** expansion trunks are planned to drain to either of two locations which are referred to as Location #1 Outfall and Location #2 Outfall. Location #1 Outfall is located at the S132 Chrysanthy Pump Station (PS), and it will serve the developments in the southern portion of the BR East Rancho shed. Location #2 Outfall is located adjacent to White Rock Road, approximately one-half mile east of Sunrise Boulevard, and it will serve the developments in the northern portion of the BR East Rancho shed. Flows at the two outfall locations are planned to be conveyed by future Regional interceptor facilities.

For the **near-term** conditions, initial flows from the developments in the northern portion of BR East Rancho (Rio Del Oro and Westborough) will drain to the S070 Sunrise White Rock PS system on the interim basis. Ultimately these developments will discharge to Location #2 Outfall. Flows from the developments in the southern portion of BR East Rancho (Anatolia, Arista Del Sol, Cordova Hills, Montelena, North Douglas, Sunridge Lot J, Sunridge Park, and SunCreek) will be conveyed to the S132 Chrysanthy PS.

The BR East Rancho Trunk Shed near-term expansion trunk facilities will be presented first, followed by the buildout summary. The planning trunk facilities are summarized for each of the development areas. The development areas are defined by the sewer studies names, and the areas without sewer studies have been given a name in most cases.

Please refer to the **BR East Rancho Planned Development Areas** map (**Figure A.3-1)** when reviewing the trunk shed plan descriptions below.

A. BR East Rancho Near-Term Expansion Trunk Facilities (Figure A.3-2)

Anatolia, Montelena, Sunridge Lot J, Sunridge Park, and North Douglas – These sheds discharge to the existing trunk system. Their flows are conveyed to S132 PS.

Arista Del Sol – The shed is served by an interim PS. The interim force main will convey flow northward and connect to the existing Douglas Trunk.

Cordova Hills – Phase 1 development will be served by a new permanent PS. Its force main will convey flow northward and connect to the existing Douglas Trunk on an interim basis. The upstream portion of the force main between the PS wet well and Chrysanthy Boulevard will be permanent. The downstream portion of the force main from Chrysanthy Boulevard to the existing Douglas Trunk will be interim until the permanent force main is extended west along Chrysanthy Boulevard and discharges to the Location #1 Outfall.

SunCreek – The Phase 1 development will be served by a new permanent PS. Its force main will convey flow northward and connect to the existing Aerojet Interceptor 1 on Chrysanthy Boulevard.

Rio Del Oro – The Phase 1 development will discharge to existing collectors on White Rock Road, and its flow will be conveyed to S070.

Westborough – The Phase 1 development will be served by an interim pump station. The interim force main will convey flow west along White Rock Road and discharge into the existing 10-inch S070 force main.

B. BR East Rancho Buildout Expansion Trunk Facilities (Figure A.3-3)

Aerojet Lands – This area currently does not have an approved sewer study. The proposed sewer system of the northern portion of this area has been redirected to drain to the Folsom East Interceptor; therefore, it is no longer a part of the BR East Rancho Trunk Shed. The southern portion of the Aerojet Lands area is planned to be served by a trunk that discharges to the Location #2 Outfall.

Anatolia – The trunk system that serves this area has been constructed, and no new trunks are required.

Arboretum – This area is planned to be served by a pump station and two trunk branches. The pump station will be located near the intersection of Jackson Highway and Sunrise Boulevard. The force main will convey flow to the north along Sunrise Boulevard and discharge to the Location #1 Outfall.

Arista Del Sol – Arista Del Sol is planned to be served by a trunk that will be constructed across The Ranch development. The connection point to this future trunk is located in the southwest corner of the development, near the shared boundary with The Ranch development.

Cordova Hills – Cordova Hills will be served by two trunk pump stations situated near each other in the southwest portion of the development. The north pump station will have two contributing trunks while the south pump station will have one contributing trunk. The south pump station will also serve significant areas that lie outside of the Cordova Hills development, known as South Cordova Hills. The pump station force mains convey flow northward to Chrysanthy Boulevard where they follow the right of way west and discharge to the Location #1 Outfall.

Douglas 98 – This area will drain to a future trunk extension of the existing Douglas Trunk.

Douglas 103 – This area requires no additional trunk facilities. Local collectors will discharge to the existing Douglas Trunk.

Grantline 208 – This area requires no additional trunk facilities. Local collectors will discharge to the existing Douglas Trunk.

Montelena – The trunk system that serves this development has been constructed. No additional trunk facilities are required.

North Cordova Hills – North Cordova Hills and the area located to the west currently have no sewer studies. The North Cordova Hills area is proposed to be served by two trunk pump stations located on Glory Lane. Both pump stations' force mains convey flow west along Glory Lane and Douglas Road to the Location #1 Outfall. Each pump station is served by a primary trunk and its minor trunk branches. The area to the immediate west of North Cordova Hills will be served by a trunk that discharges to the extension of the existing Douglas Trunk. The area to the northwest of North Cordova Hills and east of Rio Del Oro will be served by a trunk system that conveys flow to the west along White Rock Road and drains to the Location #2 Outfall.

North Douglas – The sewer system that serves this area has been constructed, and no new trunks are required.

Rio Del Oro – Rio Del Oro will be served by several trunks and a pump station. The proposed pump station located in the southwest corner of the development will serve the southern portion of the development. The pump station force main conveys flow south, adjacent to Sunrise Boulevard, to the Location #1 Outfall. The trunks serving the northern portion of Rio Del Oro will drain to the Location #2 Outfall.

South Cordova Hills – This area is located south of the Cordova Hills development, and it does not have a sewer study. This area is planned to be served by one of the Cordova Hills pump stations.

SunCreek – SunCreek will be served by two trunk pump stations. One proposed pump station is located approximately in the center of the development and will capture flow from the northern portions of the shed area via two trunks. Its force main will convey flow to the north along Rancho Cordova Parkway and discharge to the existing Aerojet Interceptor 1B located in Chrysanthy Boulevard. The second proposed pump station is located in the southwest corner of the development, and it serves the remainder of the shed. This pump station will also provide service to the Anatolia 3 development, which currently is draining to an interim pump station. The ultimate buildout force main of the second proposed pump station will convey flow to the north, along Sunrise Boulevard, and discharge to the Location #1 Outfall.

Sunridge Lot J – The trunk system that serves this development has been constructed. No additional trunk facilities are required.

Sunridge Park – The trunk system that serves this development has been constructed. No additional trunk facilities are required.

The Ranch – The Ranch development is planned to be served by a future trunk that connects to the Aerojet Interceptor 1B located in Chrysanthy Boulevard.

Westborough – The Westborough development will be served by a trunk that discharges to the Location #2 Outfall.

Attribute data and model results for the BR East Rancho **buildout** expansion trunks are presented in the table below. The BR East Rancho Trunk Shed is subdivided into five smaller sub areas as shown in **Figure A.3-4**. **Figures A.3-5** through **A.3-9** display the details of each sub area which include the proposed trunk sewers, modeled manholes, and the contributing area to each manhole.

EXECUTIVE SUMMARY

The purpose of this Level 2 Sewer Study is to identify trunk main sewer facilities for proposed "The Ranch" Special Planning Area project. This study will demonstrate the ability of the proposed gravity sewers to serve The Ranch (Project) and offsite areas from the east.

The Project SPA encompasses 530.06 acres in the City of Rancho Cordova. The Project is situated at eastern terminus of Chrysanthy Blvd. on the easterly side of Rancho Cordova Parkway, and approximately one half mile to the south of Douglas Blvd.. The proposed SPA development consists of mixed land uses and densities. There are proposed lots of low and medium density residential, multi-family, private and public parks, private recreation center, private and public landscape lots, open spaces, public protected areas, and water quality/detention basins. Protected areas and a portion of roadway adjacent to protected areas, not subject to future development, account for 229.16 acres of the gross project area. The net developable area is 300.9 acres. The project is planned to be constructed in several phases.

Proposed sewer system improvements will serve the Project needs, as well as the proposed Arista Del Sol and Cordova Hills Phase 1 to the east. Development of the Project will result in 1,967.6 ESDs resulting in PWWF of 1.613 mgd. The upstream project to the east, Arista Del Sol, is 137.2 acres. ADS will result in 899.1 ESD's and 0.697 mgd. An additional upstream project to the east is Cordova Hills, Phase 1 is approximately 342.0 acres. CHP1 will result in 3290 ESD's and 2.50 mgd (per Cordova Hills Pump Station and Force Main Design Report, Page 7-Table 2). Therefore, the total ESD's and PWWF are 6156.7 ESD's and 4.8101 mgd exiting the site at Rancho Cordova Parkway.

The proposed trunk main will exit into existing 24" sewer line stubbed at the intersection of Rancho Cordova Parkway and Chrysanthy Blvd.. The existing 24" sewer line discharges into Aerojet Interceptor 1B (36" trunk main) flowing westerly into SASD facility S-132 lift station. The SASD system capacity plan shows The Ranch will sewer to the west.

Interim facilities or pump station are not expected to be required for the proposed trunk main in Chrysanthy Boulevard or in-tract development for the Project SPA. However, SASD will require the Project SPA project provide appropriate upgrades to SASD facility S-132 lift station. The project scope and timing of S-132 lift station upgrades will be determined by SASD in the near future.

INTRODUCTION

Level of Study - The Project sewer study is a Level 2 report which focuses on the design of Major Trunk and sewer facilities serving The Ranch SPA and potential upstream sewer sheds.

Location - The Project is located in Rancho Cordova, east of Rancho Cordova Parkway, between Douglas Blvd., Kiefer Road, and Grant Line Road. See the Vicinity Map, Figure 1.

Topography – Lower Morrison Creek South traverses the Project, generally along a southwesterly flow path, joined by lesser tributary channels entering the site on the northern and eastern boundaries. Existing site topography is undulating, ranging from approximately 168.5 feet to 200 feet in elevation (NGVD 1929). Adjacent property to north and west are developed residential while the properties to the south and east are similar rolling agricultural land uses. Adjacent offsite area may drain into the natural channel network.

Project Description - The Project is a proposed residential subdivision consisting of 1,472 single family lots, commercial/multi-family (253 units), neighborhood park sites, and open space lots. Proposed site grading enables gravity sewer service throughout the project. The proposed in-tract collection system will discharge at a single point into off-site sewer in Rancho Cordova Parkway at the location shown on the Sewer Study Map.

Land Use and Zoning – The current land use is vacant, agricultural grazing land. The existing zoning is AG-80. Proposed zoning is Special Planning Area Current zoning consisting of General Plan uses (LDR, MDR, RMU, CMU, P/QP, P/OS, and NR). The gross project area is 530.06 acres; protected areas/adjacent roadway comprises of 229.16 acres.

DESIGN

Assumptions – The Project sewer study is premised upon the following assumptions:

- Property east of the project will sewer to the west through future Chrysanthy Blvd. Property south of the project will sewer to the south. Adjacent parcels north and west of The Ranch are already sewered or will remain as open space.
- There is adequate capacity in existing, downstream sewer facilities. Please see the copy of a September 17, 2018 e-mail from Yadira Lewis, included with the attachments, there is sufficient capacity in the Aerojet Interceptor under existing conditions. Assuming the S132 pump station will be replaced by a Regional San facility that will not cause back-ups to the Aerojet Interceptor, the model predicts minor surcharging in the Aerojet Interceptor under buildout conditions.
- Groundwater will be confirmed through future Geotechnical studies for the project. Recent information from monitoring wells in the area suggests groundwater is 140 below ground surface.
- "Protected Areas" will be preserved in perpetuity per South Sacramento HCP requirements, and granted to a third party. Since Protected Areas will not be developed, ESD's have not been assigned to these lands as it is not practical to demonstrate capacity in the downstream sewer collection systems for these areas.

Approach – Design of the proposed Project sewer system followed the sequence described as follows.

- Sewer sheds reflect project layout shown on the accompanying Sewer Shed Map.
- Design flows, summarized in Table A-1, Appendix A, adhere to SASD Design Standards, dated March 29, 2019.
- Pipe sizes and slopes meet applicable design criteria.

Design Criteria - Design of the proposed Project sewer system is based on the following criteria.

- Sewer flow is calculated on the basis of 6 ESD (Equivalent Single-Family Dwelling) per acre, or the actual count within a shed, whichever is greater. Multifamily sewer flow is calculated at 75% per ESD unit.
- Commercial and Park areas use a design flow of 6 ESD per acre.
- Design flows are computed using formulas from Section 201.2.2 of SASD standards and specifications:
    - PWWF (mgd) = ADWF *PF +I/I
    - ADWF (mgd) = (310 GPD/ESD)*(ESD/ac)*(ac)/1,000,000
    - PF = 3.5 - 1.8*Q^0.05, where Q=ADWF, PF= 1.2 minimum
    - I/I = 1,400 gpd/ac (new pipeline)
- Design of gravity sewers adheres to the following, from Section 202 of SASD standards and specifications:
    - The minimum pipe size (diameter) is 8 inches.
    - The minimum velocity is 2 fps when the pipe is ½ full (collector) or full (trunk).
    - The 'n' value is 0.013.
    - The minimum slope for a collector serving fewer than 6 ESDs is 0.007.
    - The minimum slope for an 8" sewer is 0.0035.

SEWER FLOW INFORMATION

On-site flow from The Ranch SPA totals 1,967.6 ESDs, resulting in PWWF of 1.613 mgd. There would be off-site contribution from proposed Arista Del Sol project of approximately 899.1 ESD's and 0.697 mgd (12" gravity trunk main, and Cordova Hills Phase 1 project of approximately 3290 ESD's and 2.50 mgd (20" FM),

SEWER ALIGNMENT & FACILITIES

- No interim facilities are required for the Project. All pipes are sized for ultimate PWWF.
- Ultimate facilities consist of the following:
    - 8-inch in-tract gravity sewer pipe
    - 12-inch to 21-inch trunk main sewer pipe in Chrysanthy Blvd.
    - 24-inch offsite gravity sewer located in Rancho Cordova Parkway, west from the project entry to the existing manhole in Rancho Cordova Parkway as shown.

CONCLUSIONS

The Level 2 Sewer Study for the Project demonstrates the ability of the proposed gravity system to serve the project. System components are sized for ultimate conditions. According to SASD staff, capacity upgrades will be required at SASD facility S-132 pump station. However, the cost, scope, and timing of the necessary upgrades are not determined as of this date.

SASD 2010 SYSTEM CAPACITY PLAN EXPANSION TRUNK SHEDS

BR EAST RANCHO TRUNK SHED – *2015 AMENDMENT*

Introduction

This amendment summarizes the new BR East Rancho near-term and buildout expansion trunk shed plans. Due to recent development activity, SASD has proceeded with an update to the BR East Rancho Expansion Trunk Shed Plan, ahead of the scheduled 2020 System Capacity Plan (SCP) update.

The information in the 2010 SCP BR East Rancho Expansion Trunk Shed Plan was used as a starting reference for this 2015 update. The latest approved sewer study information was included in the update, along with the most recent land use information from the City of Rancho Cordova and Sacramento County. Significant changes to the 2010 SCP were made in areas that were previously planned to be served by future interceptors.

Area Description

The BR East Rancho Trunk Shed encompasses a large area located in the eastern part of Sacramento County, south of Folsom Boulevard. The western half of the shed lies in the City of Rancho Cordova, east of Sunrise Boulevard. The shed extends east to the Urban Services Boundary. The southern boundary includes Grant Line Road and the Urban Services Boundary.

Trunk System Facilities

The BR East Rancho **buildout** expansion trunks are planned to drain to either of two locations which are referred to as Location #1 Outfall and Location #2 Outfall. Location #1 Outfall is located at the S132 Chrysanthy Pump Station (PS), and it will serve the developments in the southern portion of the BR East Rancho shed. Location #2 Outfall is located adjacent to White Rock Road, approximately one-half mile east of Sunrise Boulevard, and it will serve the developments in the northern portion of the BR East Rancho shed. Flows at the two outfall locations are planned to be conveyed by future Regional interceptor facilities.

For the **near-term** conditions, initial flows from the developments in the northern portion of BR East Rancho (Rio Del Oro and Westborough) will drain to the S070 Sunrise White Rock PS system on the interim basis. Ultimately these developments will discharge to Location #2 Outfall. Flows from the developments in the southern portion of BR East Rancho (Anatolia, Arista Del Sol, Cordova Hills, Montelena, North Douglas, Sunridge Lot J, Sunridge Park, and SunCreek) will be conveyed to the S132 Chrysanthy PS.

The BR East Rancho Trunk Shed near-term expansion trunk facilities will be presented first, followed by the buildout summary. The planning trunk facilities are summarized for each of the development areas. The development areas are defined by the sewer studies names, and the areas without sewer studies have been given a name in most cases.

Please refer to the **BR East Rancho Planned Development Areas** map **(Figure A.3-1)** when reviewing the trunk shed plan descriptions below.

A. BR East Rancho Near-Term Expansion Trunk Facilities (Figure A.3-2)

Anatolia, Montelena, Sunridge Lot J, Sunridge Park, and North Douglas – These sheds discharge to the existing trunk system. Their flows are conveyed to S132 PS.

Arista Del Sol – The shed is served by an interim PS. The interim force main will convey flow northward and connect to the existing Douglas Trunk.

Cordova Hills – Phase 1 development will be served by a new permanent PS. Its force main will convey flow northward and connect to the existing Douglas Trunk on an interim basis. The upstream portion of the force main between the PS wet well and Chrysanthy Boulevard will be permanent. The downstream portion of the force main from Chrysanthy Boulevard to the existing Douglas Trunk will be interim until the permanent force main is extended west along Chrysanthy Boulevard and discharges to the Location #1 Outfall.

SunCreek – The Phase 1 development will be served by a new permanent PS. Its force main will convey flow northward and connect to the existing Aerojet Interceptor 1 on Chrysanthy Boulevard.

Rio Del Oro – The Phase 1 development will discharge to existing collectors on White Rock Road, and its flow will be conveyed to S070.

Westborough – The Phase 1 development will be served by an interim pump station. The interim force main will convey flow west along White Rock Road and discharge into the existing 10-inch S070 force main.

B. BR East Rancho Buildout Expansion Trunk Facilities (Figure A.3-3)

Aerojet Lands – This area currently does not have an approved sewer study. The proposed sewer system of the northern portion of this area has been redirected to drain to the Folsom East Interceptor; therefore, it is no longer a part of the BR East Rancho Trunk Shed. The southern portion of the Aerojet Lands area is planned to be served by a trunk that discharges to the Location #2 Outfall.

Anatolia – The trunk system that serves this area has been constructed, and no new trunks are required.

Arboretum – This area is planned to be served by a pump station and two trunk branches. The pump station will be located near the intersection of Jackson Highway and Sunrise Boulevard. The force main will convey flow to the north along Sunrise Boulevard and discharge to the Location #1 Outfall.

Arista Del Sol – Arista Del Sol is planned to be served by a trunk that will be constructed across The Ranch development. The connection point to this future trunk is located in the southwest corner of the development, near the shared boundary with The Ranch development.

Cordova Hills – Cordova Hills will be served by two trunk pump stations situated near each other in the southwest portion of the development. The north pump station will have two contributing trunks while the south pump station will have one contributing trunk. The south pump station will also serve significant areas that lie outside of the Cordova Hills development, known as South Cordova Hills. The pump station force mains convey flow northward to Chrysanthy Boulevard where they follow the right of way west and discharge to the Location #1 Outfall.

Douglas 98 – This area will drain to a future trunk extension of the existing Douglas Trunk.

Douglas 103 – This area requires no additional trunk facilities. Local collectors will discharge to the existing Douglas Trunk.

Grantline 208 – This area requires no additional trunk facilities. Local collectors will discharge to the existing Douglas Trunk.

Montelena – The trunk system that serves this development has been constructed. No additional trunk facilities are required.

North Cordova Hills – North Cordova Hills and the area located to the west currently have no sewer studies. The North Cordova Hills area is proposed to be served by two trunk pump stations located on Glory Lane. Both pump stations' force mains convey flow west along Glory Lane and Douglas Road to the Location #1 Outfall. Each pump station is served by a primary trunk and its minor trunk branches. The area to the immediate west of North Cordova Hills will be served by a trunk that discharges to the extension of the existing Douglas Trunk. The area to the northwest of North Cordova Hills and east of Rio Del Oro will be served by a trunk system that conveys flow to the west along White Rock Road and drains to the Location #2 Outfall.

North Douglas – The sewer system that serves this area has been constructed, and no new trunks are required.

Rio Del Oro – Rio Del Oro will be served by several trunks and a pump station. The proposed pump station located in the southwest corner of the development will serve the southern portion of the development. The pump station force main conveys flow south, adjacent to Sunrise Boulevard, to the Location #1 Outfall. The trunks serving the northern portion of Rio Del Oro will drain to the Location #2 Outfall.

South Cordova Hills – This area is located south of the Cordova Hills development, and it does not have a sewer study. This area is planned to be served by one of the Cordova Hills pump stations.

SunCreek – SunCreek will be served by two trunk pump stations. One proposed pump station is located approximately in the center of the development and will capture flow from the northern portions of the shed area via two trunks. Its force main will convey flow to the north along Rancho Cordova Parkway and discharge to the existing Aerojet Interceptor 1B located in Chrysanthy Boulevard. The second proposed pump station is located in the southwest corner of the development, and it serves the remainder of the shed. This pump station will also provide service to the Anatolia 3 development, which currently is draining to an interim pump station. The ultimate buildout force main of the second proposed pump station will convey flow to the north, along Sunrise Boulevard, and discharge to the Location #1 Outfall.

Sunridge Lot J – The trunk system that serves this development has been constructed. No additional trunk facilities are required.

Sunridge Park – The trunk system that serves this development has been constructed. No additional trunk facilities are required.

The Ranch – The Ranch development is planned to be served by a future trunk that connects to the Aerojet Interceptor 1B located in Chrysanthy Boulevard.

Westborough – The Westborough development will be served by a trunk that discharges to the Location #2 Outfall.

Attribute data and model results for the BR East Rancho **buildout** expansion trunks are presented in the table below. The BR East Rancho Trunk Shed is subdivided into five smaller sub areas as shown in **Figure A.3-4**. **Figures A.3-5** through **A.3-9** display the details of each sub area which include the proposed trunk sewers, modeled manholes, and the contributing area to each manhole.

Subject: Sewer Studies

Good afternoon Mr. Cassera,

I have provided a link below to the following sewer studies:

- Montelena
- Cordova Hills
- Arista Del Sol

Please let me know if I can assist you further. Thank you.

Yadira Lewis, P.E.

Subject: RE: The Ranch level 1 - RE: Sewer Studies

Hi Tom,

Thank you for the follow-up email. SASD's modeling section has confirmed there is available capacity in the Aerojet Interceptor under existing conditions. Assuming the S132 pump station will be replaced by a Regional San facility that will not cause back-ups to the Aerojet Interceptor, the model predicts minor surcharging in the Aerojet Interceptor under buildout conditions. Thank you.

-Yadira

Subject: RE: The Ranch level 1 - RE: Sewer Studies

Good morning Tom,

Allow me to verify this with SASD's modeling department. I will let you know what they say as soon as possible. Thank you.

Subject: The Ranch level 1 - RE: Sewer Studies

Hi Yadira,

I working on Level 1 sewer Study for The Ranch.

In review of the reports you forwarded, ADS sewer study based assumptions on "downstream Aerojet 2 Interceptor has capacity without surcharge conditions as verified by SASD and SCRSD".

Is that assumption still valid?

Thanks,

Tom Cassera, PE, QSD
CTA Engineering & Surveying

INTRODUCTION

BACKGROUND

The California Water Code (Water Code) requires coordination between land use lead agencies and public water purveyors. The purpose of this coordination is to ensure that prudent water supply planning has been conducted, and that planned water supplies are adequate to meet both existing demands and demands of planned development.

Water Code Sections 10910 – 10915 (inclusive) require land use lead agencies: 1) to identify the responsible public water purveyor for a proposed development project, and 2) to request a "Water Supply Assessment" (WSA) from the responsible purveyor. The purpose of a WSA is to demonstrate the sufficiency of a purveyor's water supplies to satisfy the water demands of a proposed development project while still meeting the current and projected water demands of existing customers. Water Code Sections 10910 – 10915 delineate the specific information that must be included in a WSA.

THE PROPOSED DEVELOPMENT PROJECT

The Ranch at Sunridge Project (Project) is a 530.2-acre area comprising a portion of the Sunrise Douglas Community Plan located within the City of Rancho Cordova (City). See Figure 1 for project location. The City has identified the Sacramento County Water Agency (SCWA) as the responsible water purveyor for the Project and has requested that SCWA prepare a WSA in accordance with Water Code Sections 10910 – 10915.

WATER SUPPLY ASSESSMENT OBJECTIVE

The objective of the Ranch at Sunridge WSA is to demonstrate that the planned water supplies of SCWA are sufficient to meet the demands of the Project in addition to the existing and projected water supply obligations of SCWA.

OVERVIEW OF THE RANCH AT SUNRIDGE WSA

The Project lies entirely within the boundaries of SCWA's Zone 40. Figure 2 shows the boundaries of the Project. The water demands associated with the Project have been included and addressed in the latest Zone 41 Urban Water Management Plan (UWMP) (SCWA, 2011)[1] and in the development of the Zone 40 "conjunctive use" program[2] as described in the Zone 40 Water Supply Master Plan (WSMP) (SCWA, February 2005)[1].

[1] This document, as well as all other documents referenced in this WSA, are on file at the County of Sacramento, Municipal Services Agency, Department of Water Resources, 827 7th Street, Room 301, and are available for review upon request.

[2] Conjunctive use entails the combined use of groundwater and surface water to meet demand, with the intent of providing 100 percent reliability. In "dry" years, the use of groundwater is maximized (although some surface water is delivered). In "wet" years, surface water diversions are maximized, while groundwater extractions are reduced. Such a program maximizes environmental benefits to surface water streams in "dry" years, while providing an opportunity for the groundwater basin to recover through natural recharge in "wet" years.

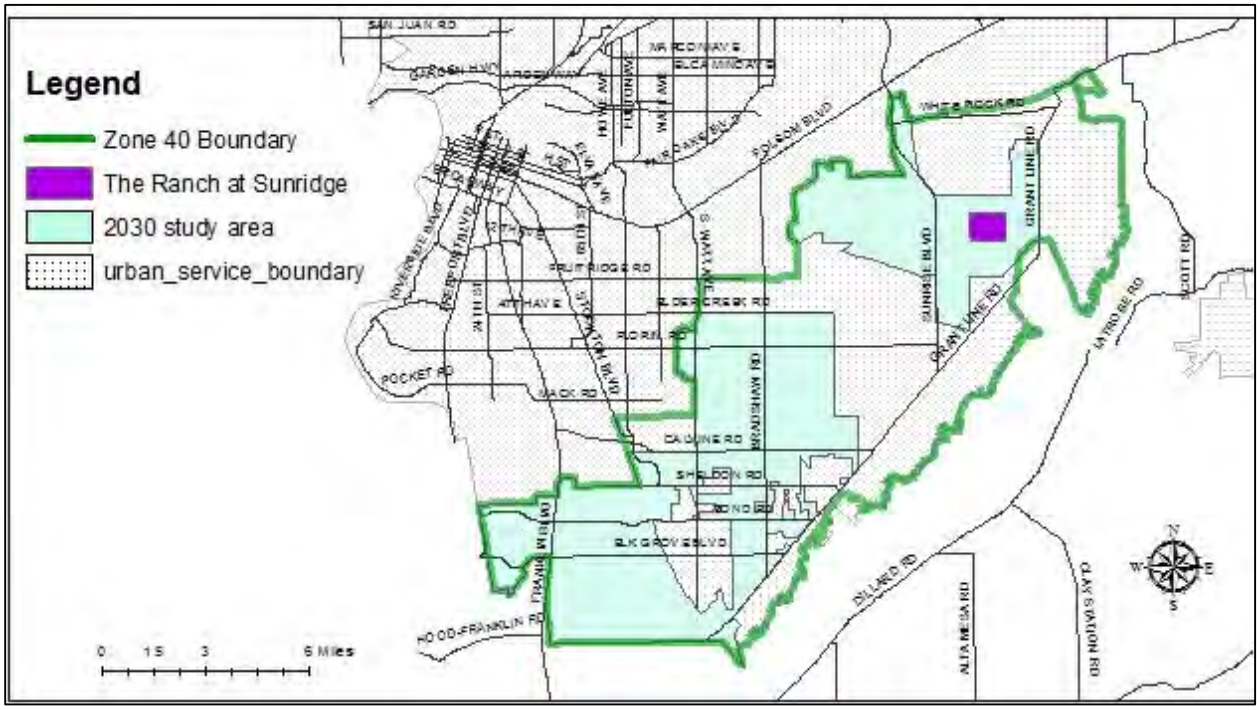

Figure 1 The Ranch at Sunridge Location Map

Accordingly, the WSA for the Project contains information derived from the UWMP[1] and other various water supply planning documents prepared in support of the Zone 40 conjunctive use program including:

- The Zone 40 Water Supply Master Plan (WSMP), (SCWA, February 2005)[1];
- The Zone 40 Water System Infrastructure Plan (WSIP), (SCWA, April 2006)[1];
- The Central Sacramento County Groundwater Management Plan (MWH/SCWA, February 2006)[1];
- The Final Environmental Impact Report (FEIR) for 2002 Zone 40 Water Supply Master Plan (EDAW, December 2004)[1];
- The FEIR for the Water Forum Proposal (FEIR – WFA), Sacramento City-County Office of Metropolitan Water Planning, October 1999[1]; and
- The Water Forum Agreement (WFA)[3], Sacramento City-County Office of Metropolitan Water Planning, January 2000[1].

[3] Begun in 1993, the Sacramento-Area Water Forum (Water Forum) is comprised of representatives from the business, environmental, public interest, and water purveyor communities (including the Cooperating Agencies). The co-equal objectives of the group are:

- To provide a reliable and safe water supply for the region's economic health and planned development through year 2030
- To preserve the fishery, wildlife, recreational, and aesthetic values of the lower American River.

After a six-year, consensus-based, stakeholder process, the Water Forum Action Plan (referred to after its adoption as the Water Forum Agreement), which prescribes a regional conjunctive use program for the lower American River and the connected groundwater basin. In addition, the Water Forum completed an Environmental Impact Report (EIR) for the Water Forum Proposal was completed (State of California Clearinghouse Number 95082041). The document was certified by the two lead agencies (the City of Sacramento and the County of Sacramento) in 1999.

WSA FOR THE RANCH AT SUNRIDGE PROJECT

Water Code Sections 10910 – 10915 delineate the specific requirements of a WSA. The WSA for the Project is structured according to those requirements.

DETERMINE IF PROJECT IS SUBJECT TO CEQA [Section 10910 (a)]

The City has made the determination that the Project is subject to CEQA.

IDENTIFY RESPONSIBLE PUBLIC WATER SYSTEM [Section 10910(b)]

The City has identified SCWA as the responsible public water provider for the Project.

DETERMINE IF UWMP INCLUDES WATER DEMANDS [Section 10910(c)]

The total area for the Project is estimated to be 530.2 acres. The projected annual water demand for the project is 1,101.2 acre-feet per year (AF/year), including system losses. The proposed land use and projected water demand for the Project is provided in Table 1. Table 2 shows the water demand projection over the next 20 years in five-year increments.

Table 1 Proposed Land Use and Water Demands Estimate for the Project

Land Use Description	Land Use Classification[1]	Area (acres) [1]	Unit Water Demand Factor[2] (AF/acre/year)	Water Demand (AF/year)
Single Family Low Density	Single Family	142.3	2.89	411.25
Single Family Medium Density	Multi-Family Low Density	105.4	3.70	389.98
Multi Family High Density	Multi-Family High Density	12.2	4.12	50.26
Commercial	Commercial	13.5	2.75	37.13
Parks	Public Recreation	38.0	3.46	131.48
Major Roads	Right-of-Way	20.5	0.21	4.31
Wetland Preserve	Vacant	174.0	0.0	0.0
Detention Basin	Vacant	24.3	0.0	0.0
Subtotal		**530.2**		**1,024.4**
System Losses 7.5%				76.8
Total Demand				**1,101.2**

Note(s): (1) The land use classification and acreage information were provided by the project proponent in May 2011, and (2) The unit water demands provided in this table are consistent with the WSMP.

Table 2 Water Demand Growth Projection in Five-Year Increments for the Project

Year	2010	2015	2020	2025	2030
Water Demand (AF/year)	0	330.4	881.0	1,101.2	1,101.2

Inspection of Figure 1-1 in the WSMP indicates that the Project is located within the 2030 Study Area as defined in the WSMP, and in the SCWA's Service Area as defined in the UWMP.

The projected water demands associated with the Project is contained in the WSMP. During the development of the WSMP, there was no detailed land use information available for the Project except that it was projected to be "mixed land uses". The WSMP uses a unit demand factor of 2.51 AF/year/acre for "mixed land uses" to estimate the water demands for the Project area and other areas with the same land use classification for overall planning purpose.[4] Based on this unit demand factor, the WSMP projected a total water demand for the Project of 1,330.8 AF /year. The projected demand WSMP is greater than the water demand calculated for the currently proposed Project shown in Table 2 above (1,330.8 AFY/year as compared to 1,101.2 AFY/year). Accordingly, the water demands associated with the Project are accounted for in the WSMP.

The projected water demands associated with the Project is also accounted for in the UWMP. The water demands shown in the UWMP through 2035 are an estimated gallons per capita per day (GPCD) target chosen by SCWA and are based on the projected population. Establishing a GPCD target is a new requirement for the UWMP in accordance with Senate Bill (SB) x7-7, adopted in November 2009. Because the population projection for the Project area is included in the total population projection for SCWA, the water demand associated with the Project is considered accounted for in the UWMP. Therefore, it is reasonable to conclude that the data from the UWMP can be relied upon to meet current and projected demands (see Water Code Section 10910 (c)(2)).

The UWMP has identified SCWA's Zone 40 water demand in normal, single dry, and multiple dry years in 5-year increments for the 25-year projection (2010 to 2035), as shown in Tables 7-1, 7-2, and 7-3 of the UWMP. As indicated above, the Project's water demands are included as part of the Zone 40 demands in these tables. A summary of the pertinent data from these tables is presented in Table 3 below.

Table 3 SCWA Zone 40 Water Demands in Five-Year Increments

Water Year	2010	2015	2020	2025	2030	2035
Normal Year (Table 7-1, UWMP) (1)	34,511	44,425	50,662	57,583	67,565	77,712
Single Dry Year (Table 7-2, UWMP) (2)	34,511	44,425	50,662	57,583	67,565	77,712
Multiple Dry Year (3) (Table 7-3, UWMP)	34,511	44,425	50,662	57,583	67,565	77,712
Multiple Dry Year (3) (Table 7-3, UWMP)	34,511	44,425	50,662	57,583	67,565	77,712
Multiple Dry Year (3) (Table 7-3, UWMP)	34,511	44,425	50,662	57,583	67,565	77,712

Notes:
(1) Normal/Average year is a year in the historical sequence that most closely represents median runoff levels and patterns. Average is defined as the median runoff over the previous 30 years or more. By this definition, 1993 is a normal/average year for the Sacramento River watershed.
(2) Single-dry year is generally considered to be the lowest annual runoff for a watershed since the water year beginning in 1903. 1977 is a single-dry year for the Sacramento River watershed.
(3) Multiple-dry year period is generally considered to be the lowest average runoff for a consecutive multiple year period (three years or more) for a watershed since 1903. 1989-1992 is a multiple-dry year period for the Sacramento River watershed.

[4] This unit water demand factor represents a weighted average demand for a typical mixed land uses area that includes residential, commercial, recreation, and open space. Without detailed land use information, it is a relatively reliable method for water demand estimation for general water supply planning purposes.

IDENTIFY EXISTING WATER SUPPLIES FOR THE PROJECT [Section 10910(d)]

SECTION 10910(d)(1)

Section 10910(d)(1) requires identification of existing water supply entitlements, water rights, or water service contracts relevant to the identified water supply for the proposed Project and a description of the quantities of water obtained by SCWA pursuant to these water supply entitlements, water rights, or water service contracts in previous years.

Use of Groundwater

The Project water demands will ultimately be met by a combination of groundwater and surface water. Initial demands for the Project will likely be met by groundwater extracted from the North Vineyard [a.k.a. Excelsior] Well Field (NVWF) south of Mather Field and possibly the Mather Housing wells located at Mather Field. Groundwater from NVWF will be conveyed to and treated at the Anatolia Water Treatment Plant (WTP) located to the northwest of the project area. After treatment, the groundwater will be distributed to the Project area through the existing and future water distribution system. Surface water will not be available to the Project and surrounding areas until the North Service Area (NSA) pipeline and terminal storage tanks are constructed. The NSA pipeline is the transmission pipeline that will convey treated surface water from SCWA's Vineyard Surface Water Treatment Plant (VSWTP) to the NSA.

SCWA currently exercises, and will continue to exercise, its rights as a groundwater appropriator to extract groundwater from the groundwater basin (Central Basin) underlying Zone 40 for delivery to its customers[5]. The UWMP has identified Zone 40 current and projected groundwater pumping in normal, single dry, and multiple dry years in 5-year increments for the 25-year projection (2010 to 2035), as shown in Tables 4-11 through 4-16 of the UWMP. A summary of the pertinent data from these tables is presented in Table 4 below.

Table 4 Zone 40 Current and Projected Groundwater Pumping in Five-Year Increments

Water Year	2010 (Table 4-11, UWMP)	2015 (Table 4-12, UWMP)	2020 (Table 4-13, UWMP)	2025 (Table 4-14, UWMP)	2030 (Table 4-15, UWMP)	2035 (Table 4-16, UWMP)
Normal Year (1)	35,000	20,000	15,000	20,000	25,000	15,000
Single Dry Year (2)	39,930	46,300	48,800	61,300	64,500	68,600
Multiple Dry Year (3)	36,232	32,500	30,500	38,500	37,200	36,800
Multiple Dry Year (3)	37,464	35,000	33,500	42,000	41,200	41,300
Multiple Dry Year (3)	38,080	36,250	35,000	43,750	43,200	43,550

Notes:
(1) Normal/Average year is a year in the historical sequence that most closely represents median runoff levels and patterns. Average is defined as the median runoff over the previous 30 years or more. By this definition, 1993 is a normal/average year for the Sacramento River watershed.
(2) Single-dry year is generally considered to be the lowest annual runoff for a watershed since the water year beginning in 1903. 1977 is a single-dry year for the Sacramento River watershed.
(3) Multiple-dry year period is generally considered to be the lowest average runoff for a consecutive multiple year period (three years or more) for a watershed since 1903. 1989-1992 is a multiple-dry year period for the Sacramento River watershed.

[5] The groundwater basin underlying Zone 40 has not been adjudicated.

For the Zone 40 portion of the Central Basin, a long-term average annual yield of 40,900 AF/year has been identified in both the WFA and WSMP. Additionally, as a signatory to the WFA and a member of the Sacramento Central Groundwater Authority (Groundwater Authority), SCWA recognizes the Water Forum-defined long-term sustainable average annual yield of the underlying groundwater basin of 273,000 AF/year.

Use of Surface Water

The SCWA conjunctive use program includes the delivery of surface water within the Zone 40 boundaries as part of a comprehensive program to maintain the long-term, regional balance of the groundwater basin (see WSMP). Currently SCWA has obtained two sources of surface water supplies totaling up to 75,751 AF/year available on a long-term average:

- Appropriative Water

  In February 2008, the State Water Resources Control Board (SWRCB) approved SCWA's appropriative right permit application to divert water from the American and Sacramento Rivers (Permit 21209). Water under this permit is considered "intermittent water" that is typically available during the winter months of normal or wet years. These flows could range up to 71,000 ac-ft/yr. The long-term average availability of this supply is 21,700 AF/year. Note that the long-term availability for appropriative water in WSMP and UWMP is updated.

- CVP Water

  CVP water is described under three different contracts, as follows.

  - SMUD 1 Assignment - 15,000 AF/year of SMUD's CVP contract water has been assigned to SCWA under the terms of an agreement with SMUD. The long-term availability of SMUD1 water is 13,000 AF/year.
  - SMUD 2 Assignment - 15,000 AF/year of SMUD's CVP contract water has been assigned to SCWA under the terms of an agreement with SMUD. The long-term availability of SMUD2 water is 13,000 AF/year.
  - CVP Water Public Law 101-514 ("Fazio" Water)
    SCWA has entered into a contract with the U.S. Bureau of Reclamation (USBR) for 22,000 AF/year of Central Valley Project (CVP) supplies from the American River pursuant to Public Law (PL) 101-514 (often referred to as "Fazio water"). Of this 22,000 AF/year, 7,000 AF/year has been subcontracted to the City of Folsom for diversion from Folsom Lake. The remaining 15,000 AF/year will be diverted by SCWA from the Sacramento River. The long-term average availability of this supply is 13,551 AF/year.

There are two future surface water supplies, POU water and water transfers, planned for in the WSMP to meet build-out water demand. The timing for acquiring these two surface water supplies will be determined by demand growth in Zone 40.

- POU water refers to surface water obtained through a water wholesale agreement with the City of Sacramento (City) whereby the City will sell surface water to SCWA for use in the portion of Zone 40 that lies within the City's American River POU. The amount of water required to serve the POU area is estimated to be 9,300 ac-ft/yr.
- Water transfers refers to surface water obtained through a water purchase and transfer agreement that SCWA would enter into with other entities that currently hold surface water rights upstream of SCWA's points of diversion. According to the WSMP, the amount of water needed is estimated to be 5,200 ac-ft/yr.

Contract documents, agreements, and applications for appropriative water and CVP water supplies are available for review (see footnote 1). Table 5 (or Table 4-3 in UWMP) shows all the surface water entitlements, water rights, and water services contracts to meet the build-out water demand in Zone 40.

Table 5 Water Supply Entitlements, Water Rights, and Water Service Contracts to Meet Zone 40 Build-out Water Demand

Water Supply Sources	Wholesaler Supplied Volume (Yes/No)	Status of Contract, Permit, and Agreement	Availability in Wet Years	Availability in Dry Years	Long-term Average	Reliability
Supplier-produced groundwater to serve Zone 40 [1]	no	Existing	27,300	Up to 69,900	40,900	High
Wholesaler – (City of Sacramento) to serve portion of Zone 40 in City of Sacramento's American river POU[1]	yes	Planned	9,300	9,300	9,300	High
Supplier-produced surface water to Serve Zone 40: U.S. Bureau of Reclamation – CVP Supply (SMUD 1, SMUD 2, and Fazio Water) [1]	yes	Existing	45,000	8,700	38,000	Moderate
Supplier-produced surface water to Serve Zone 40: Appropriative Water – SWRCB Permit 21209 [1]	no	Existing	Up to 71,000	0	21,700	Low
Other Water - Water Transfer [1]	no	Planned	0	9,600	5,200	Moderate to High
Recycled water for Zone 40 [1]	yes	Existing	4,400	4,400	4,400	High
Remediated groundwater to serve Rio del Oro in Zone 40	no	Existing	8,900	8,900	8,900	High
Zone 40 Subtotal			165,900	110,800	128,400	

Notes:

1. *Source: The Zone 40 Water Supply Master Plan. Groundwater pumping rates in wet and dry years are modeling results determined by the build-out demand and the availability of surface water. Groundwater pumping rates can be lower or higher than the numbers identified in the table as long as the long-term average is maintained below 40,900 ac-ft/yr.*

Table 6 presents the quantities of surface water supply pursuant to these water rights and contract entitlements in five-year increments beginning in the year 2010 through 2035 under normal, single dry, and multiple dry years.

Table 6 Zone 40 Current and Projected Surface Water Supply in Five-Year Increments

Water Year	2010 (Table 4-11, UWMP)	2015 (Table 4-12, UWMP)	2020 (Table 4-13, UWMP)	2025 (Table 4-14, UWMP)	2030 (Table 4-15, UWMP)	2035 (Table 4-16, UWMP)
Normal Year (1)	12,320	35,000	42,500	50,000	66,800	81,200
Single Dry Year (2)	7,390	8,700	8,700	8,700	18,000	27,600
Multiple Dry Year (3)	11,088	22,500	27,000	31,500	45,300	59,400
Multiple Dry Year (3)	9,856	20,000	24,000	28,000	41,300	54,900
Multiple Dry Year (3)	9,240	18,750	22,500	26,250	39,300	52,650

Notes:
(1) Normal/Average year is a year in the historical sequence that most closely represents median runoff levels and patterns. Average is defined as the median runoff over the previous 30 years or more. By this definition, 1993 is a normal/average year for the Sacramento River watershed.
(2) Single-dry year is generally considered to be the lowest annual runoff for a watershed since the water year beginning in 1903. 1977 is a single-dry year for the Sacramento River watershed.
(3) Multiple-dry year period is generally considered to be the lowest average runoff for a consecutive multiple year period (three years or more) for a watershed since 1903. 1989-1992 is a multiple-dry year period for the Sacramento River watershed.

SECTION 10910(d)(2)

Section 10910(d)(2) requires SCWA to demonstrate that water supplies required to serve the Project actually exist. Section 10910(d)(2) defines what constitutes "proof".

Section 10910(d)(2)(A)

This subsection requires written contracts or other proof of entitlement to the water supplies identified for the Project. The contracts and agreements for the surface water supplies are available for review at the offices of the County of Sacramento, Municipal Services Agency, Department of Water Resources (see footnote 1).

Initial water demands in the Project will likely be met with groundwater. SCWA will exercise its right as a groundwater appropriator to extract groundwater from the basin for delivery to the Project. In the long-term, the water demands of the Project will be met in accordance with the conjunctive use program described in the WSMP.

Section 10910(d)(2)(B)

This subsection requires a copy of the capital outlay program for financing the delivery of the identified water supply to the Project. The documents described below are available for review at the offices of the County of Sacramento, Municipal Services Agency, Department of Water Resources (see footnote 1).

A financing plan for the construction of groundwater and surface water facilities needed to realize the conjunctive use program identified in the WSMP has been approved by SCWA's Board of Directors (Board). The financing plan, as outlined in Chapter 7 of the WSMP, identifies the necessary water facility projects and estimated costs associated with implementation of said conjunctive use program (Capital Improvement Program or CIP).

In addition to the WSMP, the Feasibility Report for Sacramento County Water Financing Authority Series 2007 Revenue Bonds (Sacramento County Water Agency Freeport Project) (MWH, April 2007), and the Sacramento County Water Agency FY 2009/10 Water Rate Study Report (FCS Group) evaluated and updated the total cost and fee requirements of the Zone 40 conjunctive use program incorporating all future Zone 40 expenditures for major capital facilities (i.e., surface water treatment plants, groundwater treatment plants, major transmission mains, etc.) and annual operation and maintenance costs associated therewith. Funding to meet SCWA's capital and annual funding requirements was then implemented by the Board through the issuance of revenue bonds for certain projects and the adoption of user fee and development fee increases over time (most recently in 2009).

SCWA's capital outlay program includes the means for financing facilities to deliver the identified water supply to the Project. Specifically, all facilities needed to serve the Project are included in the CIP that was financed through the above described revenue bonds, user fee and development fee. The development fee and user fee, as described in Titles 3 and 4 of the Sacramento County Water Agency Code, will continue to provide revenue to finance all aspects of the Zone 40 conjunctive use program (including repayment of debt financing). Both fee programs are evaluated annually and adjusted, if necessary, to accommodate changes in the service area, water demands, needed capital projects, and required debt financing.

Section 10910(d)(2)(C)

This subsection requires identification of any federal, state, and local permits required for construction of the facilities identified for delivering the water supply to the Project.

Since adoption of the WSMP, SCWA has made significant progress in the development of its conjunctive use water supply program. SCWA, in cooperation with East Bay Municipal Utility District (EBMUD), has completed the Freeport Regional Water Project (FRWP). SCWA's portion of the project consists of participation in a large diversion facility on the Sacramento River just north of the community of Freeport, and a recently completed transmission pipeline that will convey surface water to:

1. SCWA's new VSWTP that is currently nearing completion at the northeast corner of the intersection of Florin Road and Knox Road for treatment prior to delivery to SCWA's customers, and
2. The Folsom South Canal where EBMUD will discharge their flows for conveyance to their service area in the East Bay.

The VSWTP is anticipated to be on line in late 2011. In order to deliver treated surface water to the Project and other surrounding projects, SCWA will need to construct a major water transmission pipeline, the NSA pipeline. SCWA approved an initial study/mitigated negative

declaration for this project pursuant to CEQA in September 2010. It is SCWA's intent to secure approval of the necessary permits and construction documents for this project so that it can be constructed prior to demand for water within the NSA exceeding the capacity of the groundwater system currently serving customers in this area. The timing of construction of the NSA pipeline cannot be precisely predicted at this time, as it will be dependent on demand growth in the NSA.

The various federal, state, and local permits for the construction of the FRWP and the VSWTP have been obtained. Copies of these permits are available for review at the offices of the County of Sacramento, Municipal Services Agency, Department of Water Resources (see footnote 1). Construction of the NSA pipeline and related facilities required for the delivery of surface water to the Project will also require a variety of permits as necessary. Additional site-specific environmental review and approval may also be needed for water storage tanks and other appurtenances that will be constructed in conjunction with the NSA pipeline. Any additional conveyance pipelines needed to complete the treated water system will be constructed within existing and future public right-of-way and easements. At this time, SCWA does not foresee any regulatory or legal impediments to completing any necessary further environmental review and obtaining those permits when the need arises.

Section 10910(d)(2)(D)

This subsection requires identification of any regulatory approvals required for delivery of the water supply to the Project.

Water production, treatment, and storage facilities will be added to SCWA's public water system permit issued by the California Department of Public Health (DPH) and the design of these facilities will require review and approval by DPH. No other regulatory approvals are anticipated.

IDENTIFY PARTIES DEPENDENT UPON PROPOSED SUPPLY [Section 10910(e)]

SECTION 10910(e)

Section 10910(e) states:

"If no water has been received in prior years by the public water system…, under the existing water supply entitlements, water rights, or water service contracts [identified to serve the proposed project], the public water system,…shall also include in its water supply assessment pursuant to subdivision (c), an identification of the other public water systems or water service contract holders that receive a water supply or have existing water supply entitlements, water rights, or water service contracts to the same source of water as the public water system,…, has identified as a source of water supply within its water supply assessments."

The intent of this section is to identify any potential conflicts that may arise from the exercise of a water supply entitlement, water right, or water service contract to serve a proposed project if such water supply entitlement, water right, or water service contract has not been previously exercised.

Use of Groundwater

The water demands of the Project will be met with groundwater and surface water. SCWA has previously exercised its rights as a groundwater appropriator to meet the water demands of its customers and will continue to exercise those rights to provide treated groundwater supplies to the Project.

Use of Surface Water

The surface water supplies associated with SCWA's conjunctive use program fall into four categories:

1) Water supplies available through a current USBR CVP contract.
2) Water supplies available through SWRCB Permit 21209.
3) Water available through the City of Sacramento for use within the American River Place of Use (POU).
4) Surface water transfers identified in the WSMP.

The source of supply for surface water is the USBR CVP and SWRCB Permit 21209. Thus, the parties that could most directly be affected are other CVP contractors. Additionally, until such time as the SWRCB Bay Delta Water Rights Hearings are concluded, other parties that could be affected include: CVP contractors, State Water Project (SWP) contractors, water rights holders subject to Term 91 conditions, and riparian diverters downstream of SCWA's point of diversion. The point of diversion is at a site near the community of Freeport on the Sacramento River.

The source of supply for that portion of SCWA that lies within the POU is the City of Sacramento. Delivery of this water to customers within the POU has been included in the City of Sacramento's long-range plan for perfecting their American River water rights. The diversion location, timing, and volume of delivery are currently under negotiation.

Surface water transfers would require SCWA to enter into purchase and transfer agreements with other entities that currently hold surface water rights upstream of SCWA's points of diversion. According to the WSMP, the amount of water needed is estimated to be 5,200 AF/year. The timing for the acquisition of this water supply is yet to be determined.

DOES SUPPLY FOR PROJECT INCLUDE GROUNDWATER? [Section 10190(f)]

SECTION 10910(f)

The water demands of the Project will partially be met with groundwater extracted from the Central Basin. Consequently, Section 10910(f) requires additional information about groundwater to be presented in this WSA.

Section 10910(f)(1)

Section 10910(f)(1) requires a review of groundwater information contained in the UWMP relevant to the identified water supply for the Project. The appendix section of the UWMP includes a copy of the Central Sacramento County Groundwater Management Plan (CSCGMP, or Central Basin GMP) for the groundwater basin from which SCWA extracts groundwater; the Central Basin GMP was adopted by the Sacramento Central Groundwater Authority

(Groundwater Authority) in November 2006. The Central Basin GMP contains detailed information about the groundwater basin underlying the Central Basin (including Zone 40), groundwater supplies, and basin management objectives.

Section 10910(f)(2)

Section 10910(f)(2) requires a description of the groundwater basin and the efforts being taken to prevent long-term overdraft.

For the Project, SCWA would pump groundwater from the South American Sub-basin as defined by the California Department of Water Resources (DWR) Bulletin 118. According to Bulletin 118, the South American Sub-basin is defined as the area bounded on the west by Interstate 5 and the Sacramento River, on the north by the American River, on the south by the Cosumnes and Mokelumne rivers and on the east by the Sierra Nevada. The Central Basin covers a major portion of this basin.

Groundwater in the Central Basin is generally classified as occurring in a shallow aquifer (Laguna or Modesto Formation) and in a deep aquifer (Mehrten Formation). The Laguna or Modesto Formation consists of older alluvial deposits of loosely to moderately compacted sand, silt, and gravel deposited in alluvial fans. These deposits are moderately permeable and have a thickness of about 100 to 650 feet. The deeper Mehrten Formation is a sequence of fragmented volcanic rocks which crops out in a discontinuous band along the eastern margin of the basin. It is composed of black volcanic sands, stream gravels, silt, and clay inter-bedded with intervals of dense tuff breccia. The sand and gravel intervals are highly permeable and the tuff breccia intervals act as confining layers. The thickness of the Mehrten Formation is between 200 and 1200 feet. Groundwater is located from 20 to 100 feet below the ground surface depending on when and where the measurement is taken. The base of the potable water portion of the deep aquifer is located approximately 1,400 feet below the ground surface.

Intensive use of groundwater over the past 60 years has resulted in a general lowering of groundwater elevations. Over time, isolated groundwater depressions have grown and coalesced into a single cone of depression that is centered in the southwestern portion of the basin, approximately 15 miles southwest of the project site. Groundwater level trends through much of the basin have generally declined consistently from the 1950s and 1960s to about 1980 by 20 to 30 feet. From 1980 through 1983, water levels recovered by about 10 feet and remained stable until the beginning of the 1987-1992 drought; however, wells in the vicinity of Rancho Cordova appear to have recovered less than other wells in the basin since 1995 (generally less than 10 feet). From 1995 to 2003 most groundwater levels recovered to levels that were generally higher than levels prior to the 1987 through 1992 drought. Much of this recovery can be attributed to the increased use of surface water in the Central Basin, and the fallowing of previously irrigated agricultural lands transitioning into new urban development areas. In the central portion of the Central Basin, where the Project site is located, groundwater level trends observed in California Department of Water Resources monitoring wells generally vary between 40 feet above to 40 feet below mean sea level over the period of the 1950's through the 2000's.

Recharge of the aquifer system occurs along active river and stream channels where extensive sand and gravel deposits exist, particularly along the American, Cosumnes, and Sacramento

rivers. Additional recharge occurs along the eastern boundary of Sacramento County at the transition point from the consolidated rocks of the Sierra Nevada to the alluvial-deposited basin sediments. This recharge is classified as subsurface recharge along with underground flow into and out of the basin with adjacent groundwater basins. Other sources of recharge include deep percolation from applied surface water and precipitation.

As mentioned previously, the estimated long term annual sustainable yield of groundwater from the Central Basin is 273,000 AF/year. Currently, groundwater extractions are estimated to be 250,000 acre-feet per year (excluding remediation).

The determination of the sustainable yield of the Central Basin (273,000 acre-feet per year) was negotiated by the Water Forum Groundwater Negotiating Team (GWNT) and involved a complex process that developed the long-term average annual pumping limit of the basin. The long-term average annual pumping limit is described as the hydro-geologic process under which groundwater can be pumped and not exceed average natural recharge over a long-term period of time. Under sustainable conditions, natural recharge is said to be able to make up for variations in the amount of pumping that occurs over the long-term, given wet and dry periods in the hydrologic record.

First, the GWNT developed future land and water use projections. Then the impacts associated with increased water demands, assuming that demand is met solely by groundwater, were described. These results were then compared with 1990 baseline conditions to provide the level of impact that could be expected if groundwater pumping were increased beyond baseline conditions.

Four quantifiable factors were used to determine the level of impact:

- Water quality degradation
- Dewatering of wells
- Higher cost of pumping
- Ground subsidence

Based on these four factors, a series of groundwater model runs quantified each condition in 10-year increments, beginning in 1990 and ending in 2030. Each model run was set up to reflect future land and water use conditions; then 70 years of historical hydrology were applied to each model run to determine how the aquifer might behave under wet and dry conditions.

After comprehensive review and analysis of the resulting data, the GWNT concluded that using 2005 levels of groundwater pumping (interpolated from the 2000 and 2010 modeling results) would provide the highest quantity of groundwater yield from the basin while minimizing impacts associated with the four factors of concern. Accordingly, the GWNT determined the 2005 pumping rates equated to a long-term pumping average annual pumping limit of approximately 273,000 acre-feet per year for the Central Basin.

Section 3.2 and Appendix E of the WSMP provide detailed descriptions of the Zone 40 conjunctive use program (see footnote 1). SCWA's operational approach for preventing overdraft of the groundwater basin underlying Zone 40 and optimizing the use of both

groundwater and surface water is discussed in detail in these sections. The FEIR for 2002 Zone 40 Water Supply Master Plan (see footnote 1) includes an extensive analysis of the effects of the Zone 40 conjunctive use program on the groundwater basin and on various recharge sources. A summary of the conjunctive use program is as follows:

SCWA's conjunctive use program is a coordinated approach to manage surface water and groundwater supplies to maximize the yield of available water resources. The conjunctive use program for SCWA includes the use of groundwater, surface water, remediated water and recycled water supplies. The program also includes the construction of a surface water diversion structure, a surface-water treatment plant, water conveyance pipelines; and groundwater extraction, treatment and distribution facilities.

This conjunctive use program relies on an abundance of surface water in wet years when as much surface water as possible will be diverted, within entitlement limitations, minimizing the use of groundwater. During these years the groundwater aquifer will be allowed to naturally replenish. In dry years, when surface water availability is reduced, SCWA will pump more groundwater from the replenished aquifer. Using surface water and groundwater conjunctively makes it easier for SCWA to meet demands in a single dry year or in multiple dry years. The goal of the conjunctive use program is to meet all demands during wet and dry years.

SCWA has adopted policies to insure systematic, incremental implementation of its conjunctive use program. These policies are also consistent with the terms of the WFA, which is intended to maintain a long-term sustainable groundwater supply. The policies are included in the SCWA's UWMP and WSMP, which include specific action items to assure implementation, specifically, development of additional surface water supply and treatment facilities to provide water during wet years, development of groundwater facilities to provide groundwater during dry years, in-lieu "banking" of groundwater during wet years, development and implementation of demand management and water conservation strategies, development of water reclamation facilities to meet non-potable demands, and development of a financing plan to implement these action items.

As a part of the Groundwater Authority, SCWA has committed to the implementation of the Central Basin GMP. The Central Basin GMP contains five basin management objectives (BMO) designed to maintain a safe, sustainable and high quality groundwater resource within the Central Basin. These BMOs, in conjunction with the program component action items, focus on managing and monitoring the basin to benefit all groundwater users in the basin and are intended to be specific enough to result in numerical criteria for the basin, but also flexible enough to be modified or adapted to new information on groundwater basin behavior over time. The five BMOs are summarized below:

1. Maintain the long-term average groundwater extraction rate at or below 273,000 acre-feet per year.
2. Maintain specific groundwater elevations within all areas of the basin consistent with the Water Forum "solution."
3. Protect against any potential inelastic land surface subsidence by limiting subsidence to no more than 0.007 feet per 1 foot of drawdown in the groundwater basin.

4. Protect against any adverse impacts to surface water flows in the American, Cosumnes and Sacramento rivers.
5. Water quality objectives:
    a. Total dissolved solids (TDS) concentration of less than 1,000 milligrams per liter (mg/l).
    b. Nitrate (NO_3) concentration of less than 45 mg/l.
    c. Volatile organic compounds (VOC).

The Groundwater Authority intends to achieve these objectives by implementing the following program component action items:

1. Stakeholder involvement; including public outreach, involving other agencies inside and adjacent to the basin, developing relationships with state and federal agencies, and pursuing partnership opportunities.
2. Monitoring program; including groundwater elevation monitoring, groundwater quality monitoring, land surface elevation monitoring, surface water/groundwater interaction monitoring, establishing protocols for collection of groundwater data, and establishing a data management system.
3. Groundwater resource protection; including well construction policies, well abandonment and destruction policies, wellhead protection measures, protection of recharge areas, control of the migration and remediation of contaminated groundwater, and control of saline water intrusion.
4. Groundwater sustainability; including demand reduction.
5. Planning integration; including existing integrated planning efforts, urban water management planning, DWSAP program, land use planning, and integrated groundwater and surface water modeling.

The Central Basin GMP also has an implementation plan that defines specific actions or trigger points and associated remedy activities linked with each of the BMOs. Once a trigger point has been reached, the Groundwater Authority must decide on a course of action.

Water quality analysis of the aquifers underling the Central Basin has shown that groundwater quality found in the upper aquifer system is of higher quality than that found in the lower aquifer system. This is principally because the lower aquifer system (specifically the Mehrten Formation) contains higher concentrations of iron and manganese, and higher concentrations of total dissolved solids (TDS). Notwithstanding these findings, the lower aquifer typically meets water quality standards as a potable water source. Water from the upper aquifer (specifically the Laguna Formation) generally does not require treatment (unless high arsenic values are encountered), other than disinfection for public drinking water systems.

The UWMP addresses water supply and demand issues, water supply reliability, water conservation, water shortage contingencies, and recycled-water usage for the areas within Sacramento County where SCWA provides retail water services, including the Project site. Together, the WSMP and UWMP outline a comprehensive conjunctive use program. Many of the facilities required to implement this conjunctive use program are now, or soon will be, complete and operational.

Section 10910(f)(3)

Section 10910(f)(3) requires a description of the volume and geographic distribution of groundwater extractions from the basin for the last five years.

Table 7 identifies past volumes of groundwater extracted by SCWA in Zone 40 between 2000 – 2010.

Through the water supply master planning process, SCWA identified a system of sixteen separate well fields throughout Zone 40. A distributed groundwater extraction strategy was selected because it would minimize drawdown effects of pumping by spreading extraction over a wide geographic area. The spatial distribution of the SCWA's current and future well fields is shown in Figure 3.

Table 7 Historical Groundwater Pumping in Zone 40, 2000 – 2010

Year	(Acre-Feet)
2000	20,022
2001	22,306
2002	22,949
2003	22,745
2004	25,790
2005	29,184
2006	31,162
2007	31,249
2008	34,225
2009	34,249
2010	32,171

Section 10910(f)(4)

Section 10910(f)(4) requires a description of the projected volume and geographic distribution of groundwater extractions from the basin.

Groundwater use is projected to decrease from the current level once the VSWTP comes online, but it will increase over time as water demand continues to grow in Zone 40. In wet and normal years, groundwater pumping will be minimized because surface water becomes the major water supply source. In dry years, groundwater pumping will increase significantly as surface water availability is considerably reduced. Table 4 identifies projected groundwater pumping necessary to meet Zone 40's water demands from 2015-2035 in normal, single dry, and multiple dry years. Reduction in projected pumping in wet/normal years between 2010 and 2035 reflects the phasing and availability of surface water facilities and supplies from the VSWTP. Over time, groundwater production will stabilize as SCWA's conjunctive use program is fully implemented.

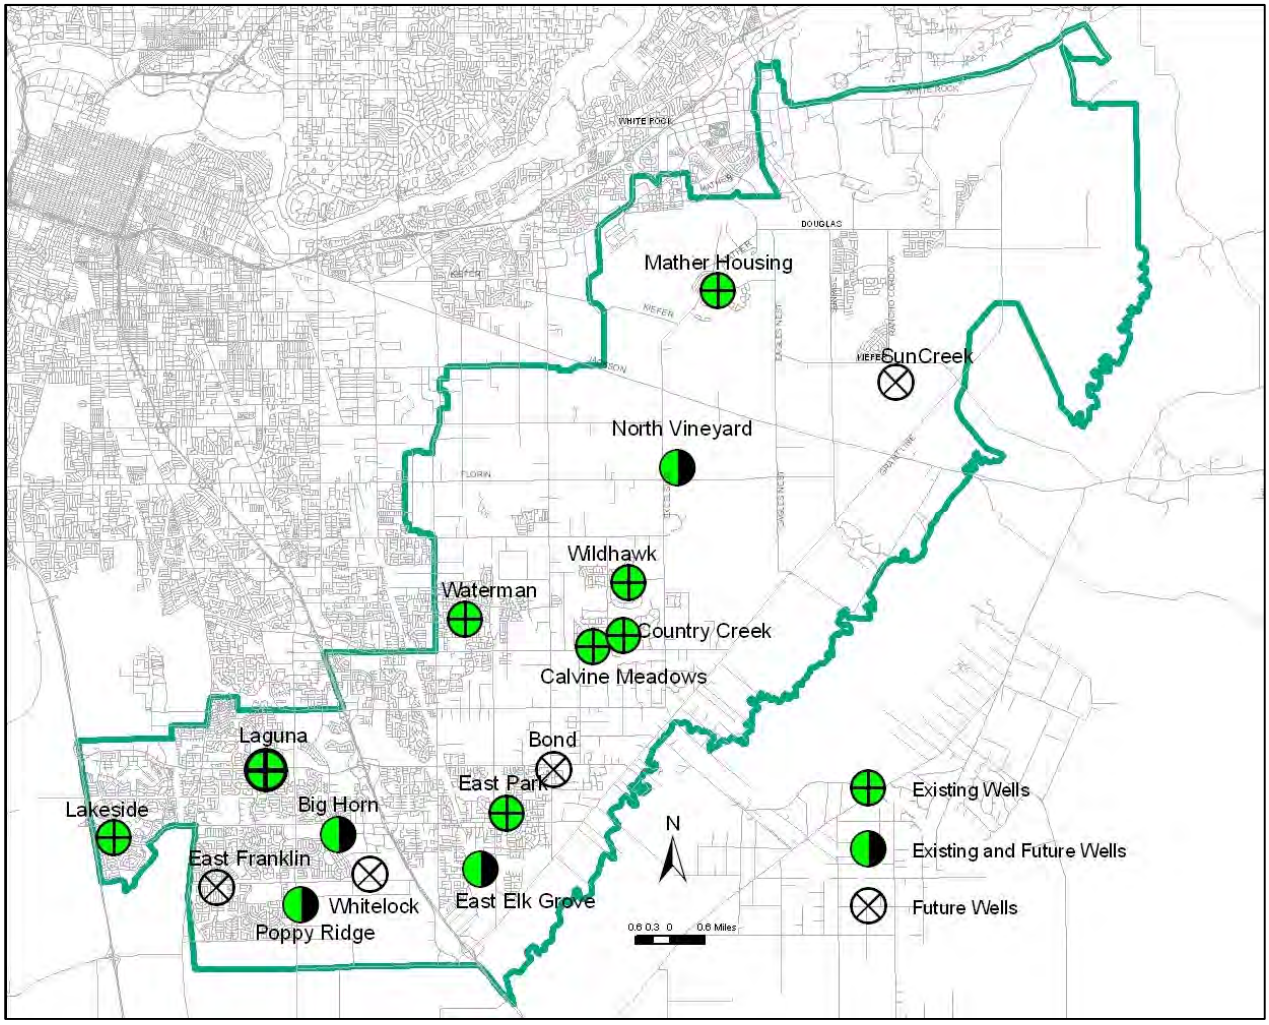

Figure 3 Spatial Distribution of SCWA's Existing and Future Well Fields

Section 10910(f)(5)

Section 10910(f)(5) requires an analysis of the sufficiency of the groundwater basin to meet the demands associated with the Project.

The WFA defined a long-term sustainable average annual yield of 273,000 AF/year for the Central Basin and provided for SCWA's groundwater needs as identified in the WSMP. The WSMP describes a conjunctive use program that identifies and projects a long-term sustainable average annual yield of 40,900 AF/year to meet identified water demands (including the demand associated with the Project).

SCWA's conjunctive use program has been extensively analyzed and documented in the WSMP, the FEIR for 2002 WSMP, certified in February 2006, the FEIR – WFA, certified in 1999, and the WFA (See footnote 1). All referenced documents have been subjected to thorough technical peer review and public scrutiny.

DETERMINATION OF SUFFICIENCY

SCWA determines that it has identified sufficient water supplies to meet the water demands of the Project.

SCWA makes this determination based on the information provided in this WSA and on the following specific facts:

- SCWA's conjunctive use program is a sustainable water supply program that provides a 100-percent reliable water supply while protecting environmental values and stabilizing the groundwater basin underlying Zone 40.
- SCWA's conjunctive use program has been extensively analyzed and documented in the WSMP, the FEIR for 2002 WSMP, certified in February 2006, the FEIR – WFA, certified in 1999, and the WFA (See footnote 1). All referenced documents have been subjected to thorough technical peer review and public scrutiny.
- The Project will be served by water supplies made available through SCWA's conjunctive use program.
- A financing plan for SCWA's conjunctive use program for constructing facilities required for delivering groundwater and surface water to the Project has been approved by the Board through its adoption of the WSMP, Bond Feasibility Reports, and the Sacramento County Water Agency Code.

The UWMP quantifies SCWA's total projected water supplies during normal, single dry, and multiple dry water years over a 25-year projection in five-year intervals. A summary of the pertinent data from these tables as it applies to Zone 40 is presented in Table 8.

Table 8 Zone 40 Water Supply in Five-Year Increments (AF/year)

Water Year	2010	2015	2020	2025	2030	2035
Normal Year (Table 7-1, UWMP)	48,320	58,000	64,400	79,400	103,700	109,500
Single Dry Year (Table 7-2, UWMP)	48,320	58,000	64,400	79,400	103,700	109,500
Multiple Dry Year (1) (Table 7-3, UWMP)	48,320	58,000	64,400	79,400	103,700	109,500
Multiple Dry Year (2) (Table 7-3, UWMP)	48,320	58,000	64,400	79,400	103,700	109,500
Multiple Dry Year (3) (Table 7-3, UWMP)	48,320	58,000	64,400	79,400	103,700	109,500

Notes:
(1) Normal/Average year is a year in the historical sequence that most closely represents median runoff levels and patterns. Average is defined as the median runoff over the previous 30 years or more. By this definition, 1993 is a normal/average year for the Sacramento River watershed.
(2) Single-dry year is generally considered to be the lowest annual runoff for a watershed since the water year beginning in 1903. 1977 is a single-dry year for the Sacramento River watershed.
(3) Multiple-dry year period is generally considered to be the lowest average runoff for a consecutive multiple year period (three years or more) for a watershed since 1903. 1989-1992 is a multiple-dry year period for the Sacramento River watershed.

The UWMP demonstrates that the total projected water supplies for Zone 40 under normal, single dry, and multiple dry years meet the proposed water demands (including existing and other projected future demands) over the next 25 years. A summary of the pertinent data from these tables is presented in Table 9.

Table 9 Zone 40 Water Supply Sufficiency Analysis in Five-Year Increments (AF/year)

Water Year	2010	2015	2020	2025	2030	2035
Normal Year						
Total Supply (Table 7-1, UWMP)	48,320	58,000	64,400	79,400	103,700	109,500
Total Demand (Table 7-1, UWMP)	34,511	44,425	50,662	57,583	67,565	77,712
Sufficiency (Supply Minus Demand)	13,809	13,575	13,738	21,817	36,135	31,788
Single Dry Year						
Total Supply (Table 7-2, UWMP)	48,320	58,000	64,400	79,400	103,700	109,500
Total Demand (Table 7-2, UWMP)	34,511	44,425	50,662	57,583	67,565	77,712
Sufficiency (Supply Minus Demand)	13,809	13,575	13,738	21,817	36,135	31,788
Multiple Dry Year (1)						
Total Supply (Table 7-3, UWMP)	48,320	58,000	64,400	79,400	103,700	109,500
Total Demand (Table 7-3, UWMP)	34,511	44,425	50,662	57,583	67,565	77,712
Sufficiency (Supply Minus Demand)	13,809	13,575	13,738	21,817	36,135	31,788
Multiple Dry Year (2)						
Total Supply (Table 7-3, UWMP)	48,320	58,000	64,400	79,400	103,700	109,500
Total Demand (Table 7-3, UWMP)	34,511	44,425	50,662	57,583	67,565	77,712
Sufficiency (Supply Minus Demand)	13,809	13,575	13,738	21,817	36,135	31,788
Multiple Dry Year (3)						
Total Supply (Table 7-3, UWMP)	48,320	58,000	64,400	79,400	103,700	109,500
Total Demand (Table 7-3, UWMP)	34,511	44,425	50,662	57,583	67,565	77,712
Sufficiency (Supply Minus Demand)	13,809	13,575	13,738	21,817	36,135	31,788

This Final Environmental Impact Report (Final EIR) was prepared in accordance with the California Environmental Quality Act (CEQA) and the State CEQA Guidelines (Section 15132). The City of Rancho Cordova (City) is the lead agency for the environmental review of The Ranch Project (Project) and has the principal responsibility for approving the Project. This Final EIR assesses the expected environmental impacts resulting from approval of the Project and associated impacts from subsequent development and operation of the Project, as well as responds to comments received on the Draft Environmental Impact Report (Draft EIR).

1.1 PURPOSE AND INTENDED USES OF THE EIR

CEQA REQUIREMENTS FOR A FINAL EIR

This Final EIR for the Project has been prepared in accordance with the State CEQA Guidelines. State CEQA Guidelines Section 15132 requires that a Final EIR consist of the following:

- the Draft EIR or a revision of the draft;
- comments and recommendations received on the Draft EIR, either verbatim or in summary;
- a list of persons, organizations, and public agencies commenting on the Draft EIR;
- the responses of the lead agency to significant environmental concerns raised in the review and consultation process; and
- any other information added by the lead agency.

In accordance with State CEQA Guidelines Section 15132(a), the Draft EIR is incorporated by reference into this Final EIR.

An EIR must disclose the expected environmental impacts, including impacts that cannot be avoided, growth-inducing effects, impacts found not to be significant, and significant cumulative impacts, as well as identify mitigation measures and alternatives to the Project that could reduce or avoid its adverse environmental impacts. CEQA requires government agencies to consider and, where feasible, minimize environmental impacts of proposed development, and an obligation to balance a variety of public objectives, including economic, environmental, and social factors.

PURPOSE AND USE

The City, as the lead agency, has prepared this Final EIR to provide the public and responsible and trustee agencies with an objective analysis of the potential environmental impacts resulting from approval, construction, and operation of the Project. Responsible and trustee agencies that may use the EIR are identified in Sections 1.0 and 2.0 of the Draft EIR.

The environmental review process enables interested parties to evaluate the Project in terms of its environmental consequences, to examine and recommend methods to eliminate or reduce potential adverse impacts, and to consider a reasonable range of alternatives to the Project. While CEQA requires that consideration be given to avoiding adverse environmental effects, the lead

agency must balance adverse environmental effects against other public objectives, including the economic and social benefits of a project, in determining whether a project should be approved.

This EIR will be used as the primary environmental document to evaluate all aspects of construction and operation of the Project. The details and operational characteristics of the Project are identified in Chapter 2.0, Project Description, of the Draft EIR (August 2019).

1.2 ENVIRONMENTAL REVIEW PROCESS

The review and certification process for the EIR has involved, or will involve, the following general procedural steps:

NOTICE OF PREPARATION AND INITIAL STUDY

The City circulated an Initial Study and NOP of an EIR for the Project on July 6, 2018 to trustee agencies, the State Clearinghouse, and the public. A public scoping meeting was held on July 26, 2018 to present the Project description to the public and interested agencies, and to receive comments from the public and interested agencies regarding the scope of the environmental analysis to be included in the Draft EIR. Concerns raised in response to the NOP were considered during preparation of the Draft EIR. The NOP and responses to the NOP by interested parties are presented in Appendix A of the Draft EIR.

NOTICE OF AVAILABILITY AND DRAFT EIR

The City published a public Notice of Availability (NOA) for the Draft EIR on August 16, 2019 inviting comment from the general public, agencies, organizations, and other interested parties. The NOA was filed with the State Clearinghouse (SCH # 2019029106) and the County Clerk, and was published in a local newspaper pursuant to the public noticing requirements of CEQA. The Draft EIR was available for public review and comment from August 16, 2019 through September 30, 2019.

The Draft EIR contains a description of the Project, description of the environmental setting, identification of Project impacts, and mitigation measures for impacts found to be significant, as well as an analysis of Project alternatives, identification of significant irreversible environmental changes, growth-inducing impacts, and cumulative impacts. The Draft EIR identifies issues determined to have no impact or a less-than-significant impact, and provides detailed analysis of potentially significant and significant impacts.

RESPONSE TO COMMENTS/FINAL EIR

The City received several comment letters regarding the Draft EIR from public agencies. These comment letters on the Draft EIR are identified in Table 2.0-1, and are found in Section 2.0 of this Final EIR.

In accordance with CEQA Guidelines Section 15088, this Final EIR responds to the written comments received on the Draft EIR, as required by CEQA. This Final EIR also contains minor edits

to the Draft EIR, which are included in Chapter 3.0, Revisions. This document, as well as the Draft EIR as amended herein, constitute the Final EIR.

CERTIFICATION OF THE EIR/PROJECT CONSIDERATION

The City will review and consider the Final EIR. If the City finds that the Final EIR is "adequate and complete," the Rancho Cordova City Council may certify the Final EIR in accordance with CEQA and City environmental review procedures and codes. The rule of adequacy generally holds that an EIR can be certified if:

1) The EIR shows a good faith effort at full disclosure of environmental information; and

2) The EIR provides sufficient analysis to allow decisions to be made regarding the proposed project which intelligently take account of environmental consequences.

Upon review and consideration of the Final EIR, the Rancho Cordova City Council may take action to approve, revise, or reject the Project. A decision to approve the Project, for which this EIR identifies significant environmental effects, must be accompanied by written findings in accordance with State CEQA Guidelines Sections 15091 and 15093. A Mitigation Monitoring and Reporting Program, as described below, would also be adopted in accordance with Public Resources Code Section 21081.6(a) and CEQA Guidelines Section 15097 for mitigation measures that have been incorporated into or imposed upon the project to reduce or avoid significant effects on the environment. This Mitigation Monitoring and Reporting Program has been designed to ensure that these measures are carried out during Project implementation, in a manner that is consistent with the EIR.

1.3 ORGANIZATION OF THE FINAL EIR

This Final EIR has been prepared consistent with Section 15132 of the State CEQA Guidelines, which identifies the content requirements for Final EIRs. This Final EIR is organized in the following manner:

CHAPTER 1.0 – INTRODUCTION

Chapter 1.0 briefly describes the purpose of the environmental evaluation, identifies the lead, agency, summarizes the process associated with preparation and certification of an EIR, and identifies the content requirements and organization of the Final EIR.

CHAPTER 2.0 – COMMENTS ON THE DRAFT EIR AND RESPONSES

Chapter 2.0 provides a list of commenters, copies of written and electronic comments made on the Draft EIR (coded for reference), and responses to those written comments.

CHAPTER 3.0 – REVISIONS

Chapter 3.0 consists of minor revisions to the Draft EIR in response to comments received on the Draft EIR.

CHAPTER 4.0 – FINAL MMRP

Chapter 4.0 consists of a Mitigation Monitoring and Reporting Program (MMRP). The MMRP is presented in a tabular format that presents the impacts, mitigation measure, and responsibility, timing, and verification of monitoring.

2.1 INTRODUCTION

No new significant environmental impacts or issues, beyond those already covered in the Draft EIR for The Ranch Project (Project), were raised during the comment period. Responses to comments received during the comment period do not involve any new significant impacts or add "significant new information" that would require recirculation of the Draft EIR pursuant to CEQA Guidelines Section 15088.5.

CEQA Guidelines Section 15088.5 states that: *New information added to an EIR is not "significant" unless the EIR is changed in a way that deprives the public of a meaningful opportunity to comment upon a substantial adverse environmental effect of the project or a feasible way to mitigate or avoid such an effect (including a feasible project alternative) that the project's proponents have declined to implement.*

Sections 2.0 and 3.0 of this Final EIR include information that has been added to the EIR since the close of the public review period in the form of responses to comments and revisions.

2.2 LIST OF COMMENTERS

Table 2.0-1 lists the comments on the Draft EIR that were submitted to the City of Rancho Cordova (City) during the 45-day public review period for the Draft EIR. One comment letter was submitted after the close of the Draft EIR comment period (Letter J). The assigned comment letter or number, letter date, letter author, and affiliation, if presented in the comment letter or if representing a public agency, are also listed. Letters received are coded with letters (A, B, etc.).

TABLE 2.0-1 LIST OF COMMENTERS ON DRAFT EIR

RESPONSE LETTER	*INDIVIDUAL OR SIGNATORY*	*AFFILIATION*	*DATE*
A	Alex Fong	California Department of Transportation, District 3	9-23-2019
B	Laura Taylor	Cordova Recreation & Park District	9-30-2019
C	Plan Review Team	Pacific Gas & Electric Company	8-16-2019
D	Keith Goodrich	Sacramento County Department of Waste Management & Recycling	9-21-2019
E	Matthew Darrow	Sacramento County Department of Transportation	9-13-2019
F	Molly Wright	Sacramento Metropolitan Air Quality Management District	9-30-2019
G	Nicole Goi	Sacramento Municipal Utility District	9-27-2019

RESPONSE LETTER	INDIVIDUAL OR SIGNATORY	AFFILIATION	DATE
H	Gene Whitehouse	United Auburn Indian Community of the Auburn Rancheria	9-10-2019
I	Chris Holm	WALKSacramento	9-30-2019
J	Kim Williams	Elk Grove Unified School District	9-27-2019

2.3 MODIFICATIONS TO THE PROJECT

The tentative subdivision map for The Ranch Project was modified after the Draft EIR was released to the public. In coordination with staff from the City, the Project applicant team made refinements and minor revisions to the tentative subdivision map, SPA Handbook, and technical materials. None of these minor modifications to the Project would result in new significant impacts or mitigation measures, or increase the severity of an impact. The minor changes made to the Project since the Draft EIR was released for public review are reflected in Chapter 3.0, Revisions, of this Final EIR. The changes in Chapter 3.0 are provided in revision marks with underline for new text and ~~strike out~~ for deleted text. The figures which required revising as a result of the recent changes, Revised Draft EIR Figures 2.0-4, 2.0-5, and 2.0-6, are also shown in Chapter 3.0.

Under the revised tentative subdivision map, development was reduced from 1,725 residential units to approximately 1,690 residential units, including 705 age restricted single-family units, 732 non-age restricted single-family units, and up to 253 multifamily units (38 of which would be age-restricted), two commercial parcels totaling 5.33 net acres, a community clubhouse, a park and trail system, open space, and supporting infrastructure. There has also been a small increase in the right-of-way required for Rancho Cordova Parkway, which reduced Lot E by up to 0.35 acres.

See Table 2.0-2 for the land use summary, which is consistent with the most recent tentative subdivision map for the Project.

TABLE 2.0-2: LAND USE SUMMARY

PROPOSED USE	GROSS ACRES	NET ACRES	DWELLING UNITS	NON-RESIDENTIAL (SQUARE FEET)	GROSS DENSITY (DU/AC)	NET ACREAGE AS % OF TOTAL
Single Family Residential – Non-Age Restricted						
Village 1 (60x105)	19.58	14.10	86	-	4.4	2.7%
Villages 2, 3 (50x105)	22.48	15.94	114	-	5.1	3.0%
Village 4 (45x105)	19.05	14.73	116	-	6.1	2.8%
Villages 5, 6, 7 (45x85)	16.57	11.51	113	-	6.8	2.1%
Village 8 (36x78.5)	14.02	8.53	130	-	9.3	1.6%
Villages 9, 10, 11 (35x78)	23.37	13.70	173	-	7.4	2.6%
Subtotal	*115.07*	*78.51*	*732*	-	*6.4*	*14.8%*
Single Family Residential – Age Restricted

Private Right-of-Way (Lots 23-24)	-	32.30	-	-	-	6.1%
Minor Right-of-Way	-	21.30	-	-	-	4.0%
Major Right-of-Way	17.41	17.41	-	-	-	3.3%
Subtotal	*17.41*	*72.11*	-	-	-	*13.6%*
TOTAL	**530.1**	**530.1**	**1,690 (1,437 SF, 253 MF)**	**53,000**	**6.65**	**100.0%**

NOTE: THE GROSS ACREAGES SHOWN HERE EXCLUDE RANCHO CORDOVA PARKWAY AND CHRYSANTHY BOULEVARD ONLY. VILLAGE NET ACREAGE EXCLUDES THE PROTECTED AREA/LANDSCAPE LOTS, PRIVATE AND PUBLIC LANDSCAPE LOTS, PRIVATE DRIVES, AND PRIVATE AND PUBLIC RIGHT-OF-WAYS.

Additionally, as a result of the changes to the tentative subdivision map, the resulting population projections have also changed. Table 2.0-3 summarizes the population projections (using both the American Community Survey [ACS] household sizes and the City's Quimby parkland household sizes used by the City in accordance with Rancho Cordova Municipal Code (RCMC) Chapter 22.40, including factors determined to be appropriate for age-restricted housing:

TABLE 2.0-3: POPULATION PROJECTIONS

	UNITS	*HOUSEHOLD SIZE*	*POPULATION*
ACS Population Projections			
Single Family – Non-Age Restricted	732	2.84	2,078
Multi-Family – Non-Age Restricted	215	2.89	621
Single Family – Age Restricted	705	2.08	1,466
Multi-Family – Age Restricted	38	2.05	77
TOTAL	**1,690**	**--**	**4,242**
Quimby Population Projections			
Single Family – Non-Age Restricted	732	2.95	2,159
Multi-Family – Non-Age Restricted	215	1.54	331
Single Family – Age Restricted	705	2	1,410
Multi-Family – Age Restricted	38	1.04	40
TOTAL	**1,690**	**--**	**3,940**

As shown in the table, the revised Project would result in up to 4,242 persons (or 3,940 persons using the City's Quimby parkland household sizes) compared to 4,319 residents assumed in the Draft EIR. Because the number of proposed units and associated population growth has decreased since the Draft EIR was released, the impacts associated with housing and population would also decrease. For example, the amount of water demand, wastewater generation, automobile trips, and electricity use would decrease compared to what is disclosed within the Draft EIR. The change to the tentative subdivision map would not change the overall development footprint of the Project. The residential villages, commercial lots, and park lots would remain within the development footprint analyzed in the Draft EIR. No changes to the aesthetics, biological resources, cultural and tribal resources, geology and soils, greenhouse hazards and hazardous materials, hydrology and water quality, land use, noise, population and housing, public services and recreation, transportation, and utilities analyses are warranted as potential impacts would slightly decrease, in general, in association with the changes and there would be no appreciable increase in impacts associated with the changes.

As a result of the changes to the Project and public comments, modifications have been made to the Draft EIR, particularly those associated with Draft EIR Section 3.2 (Air Quality), Section 3.6 (Greenhouse Gases, Climate Change, and Energy), and Section 3.13 (Transportation and Circulation) as shown in Chapter 3.0 of this Final EIR

As a result of a comment on the Draft EIR, as well as the changes to the tentative subdivision map, the Quimby parkland requirement has also been recalculated, as shown in Table 2.0-4:

TABLE 2.0-4: QUIMBY PARKLAND REQUIREMENT

	UNITS	*HOUSEHOLD SIZE*	*POPULATION*	*REQUIRED PARKLAND (ACRES)*
Quimby Population Projections				
Single Family – Non-Age Restricted	732	2.95	2,159	10.80
Multi-Family – Non-Age Restricted	215	1.54	331	1.66
Single Family – Age Restricted	705	2	1,410	7.05
Multi-Family – Age Restricted	38	1.04	40	0.20

TOTAL	**1,690**	**--**	**3,940**	**19.7**

Further, as a result of the changes to the tentative subdivision map, the construction schedule for the Project slightly changed. The Project Applicant Team has indicated that the Project will be constructed in a series of four phases, with construction anticipated to commence in January 2020 and conclude in December 2035:

Phase1 (January 2020 – August 2023)

- Site preparation for Phases 0, 1, and 2 components: January 1, 2020 – March 30, 2020
- Grading for Phases 0, 1, and 2 and improvements for Chrysanthy Boulevard and Phase 1: April 1, 2020 – November 1, 2020.
- Paving backbone infrastructure Phase 0 and Phase 1: November 1, 2020 – January 30, 2020
- Building construction: February 1, 2021 – May 1, 2023
- Architectural coating: May 1, 2021 – August 1, 2023
- This phase includes the following:
    - Phase 1 Clubhouse and associated landscaping (Lot A) – 7,000 s.f. of the clubhouse complex and approximately 1/3 of lot improvements
    - Community garden (Lot C)
    - 270 single family residential units
    - 211 single family residential units – age restricted

Phase 2 (April 2022 – November 2026):

- Improvements for Phase 2: April 2022 – September 2022
- Paving: October 2022 – December 2022
- Building Construction: April 2023 – July 2026
- Architectural Coating: August 2023 – November 2026
- This phase includes the following:
    - 197 single family residential units
    - 199 single family residential units – age restricted
    - Phase 2 Clubhouse and associated landscaping (Lot A) – 7,000 s.f. of the clubhouse complex and approximately 1/3 of lot improvements
    - Neighborhood Park (Lot T) – 2.19 acres

Phase 3 (March 2025 – December 2030):

- Site Preparation for Phase 3: February 2025 – April 2025
- Grading: April 2025 – October 1, 2025
- Paving: October 1, 2025 – December 31, 2025
- Building Construction: January 2026 – September 2030
- Architectural Coating: April 2026 – December 2030
- Site Preparation for Rancho Cordova widening: January 2027-October 2027
- Paving for Rancho Cordova widening: October 2027-January 2028
- This phase includes the following:

- 265 single family residential units
- 295 single family residential units – age restricted
- 16 senior multifamily residential units
- Phase 3 Clubhouse and associated landscaping (Lot A) – 7,000 s.f. of the clubhouse complex and approximately 1/3 of lot improvements
- Park (Lot D) - 10.78 acres
- Open Space (Lots Q-S) – 12.97 acres
- Passive Park (Lot B) – 1.58 acres
- Passive Park (Lot U) – 1.21 acres

Phase 4 (March 2030 – December 2035):

- 4A Multifamily - Site preparation for multifamily residential (7.14 acres): March 2030 – April 2030
- 4A Multifamily - Grading and improvements: April 2030 – August 2030
- 4A Multifamily - Paving: August 2030 –October 2030
- 4A Multifamily - Building Construction: April 2031 – January 2033
- 4A Multifamily - Architectural Coating: January 2033 – May 2033
- 4B Commercial - Site preparation for commercial (5.33 acres): March 2034 – April 2034
- 4B Commercial - Grading and improvements: April 2034 – July 2034
- 4B Commercial - Paving: August 2034 –September 2034
- Commercial - Building Construction: April 2034 – August 2035
- Commercial - Architectural Coating: September 2035 – December 2035
- This phase includes the following:
  - 215 multifamily residential units
  - 22 senior multifamily residential units
  - Commercial center

Lastly, as a result of the changes to the tentative subdivision map, the requested General Plan amendment acreages have also been slightly revised. Table 2.0-5 summarizes the proposed General Plan land use designations, as shown on Revised Figure 2.0-6 (revised figures are included in Chapter 3):

TABLE 2.0-5: GENERAL PLAN LAND USE DESIGNATIONS

LAND USE DESIGNATION	*EXISTING*	*PROPOSED*
Planning Area	530.1	--
Low Density Residential (LDR)	--	31.93
Medium Density Residential (MDR)	--	228.96
High Density Residential (HDR)	--	8.40
Commercial (C)	--	5.61
Parks and Open Space (P/OS)	--	38.33
Natural Resources (NR)	--	199.48
Right-of-Way	--	17.41

2.4 COMMENTS AND RESPONSES

REQUIREMENTS FOR RESPONDING TO COMMENTS ON A DRAFT EIR

CEQA Guidelines Section 15088 requires that lead agencies evaluate and respond to all comments on the Draft EIR that regard an environmental issue. The written response must address the significant environmental issue raised and provide a detailed response, especially when specific comments or suggestions (e.g., additional mitigation measures) are not accepted. In addition, the written response must be a good faith and reasoned analysis. However, lead agencies need only to respond to significant environmental issues associated with the project and do not need to provide all the information requested by the commenter, as long as a good faith effort at full disclosure is made in the EIR (CEQA Guidelines Section 15204).

CEQA Guidelines Section 15204 recommends that commenters provide detailed comments that focus on the sufficiency of the Draft EIR in identifying and analyzing the possible environmental impacts of the project and ways to avoid or mitigate the significant effects of the project, and that commenters provide evidence supporting their comments. Pursuant to CEQA Guidelines Section 15064, an effect shall not be considered significant in the absence of substantial evidence.

CEQA Guidelines Section 15088 also recommends that revisions to the Draft EIR be noted as a revision in the Draft EIR or as a separate section of the Final EIR. Chapter 3.0 of this Final EIR identifies all revisions to The Ranch Project Draft EIR.

RESPONSES TO COMMENT LETTERS

Written comments on the Draft EIR are reproduced on the following pages, along with responses to those comments. To assist in referencing comments and responses, the following coding system is used:

- Each letter is lettered or numbered (i.e., Letter A) and each comment within each letter is numbered (i.e., comment A-1, comment A-2).

Ms. June Cowles
Senior Planner
City of Rancho Cordova
Planning Department
2729 Prospect Park Drive
Rancho Cordova, CA 95670

Dear Ms. Cowles:

The Ranch – Draft Environmental Impact Report

Thank you for including the California Department of Transportation (Caltrans) in the application review of the project referenced above. Caltrans' new mission, vision, and goals signal a modernization of our approach to the California's transportation system. We review this local development for impacts to the State Highway System (SHS) in keeping with our mission, vision and goals for sustainability/livability/economy, and safety/health. We provide these comments consistent with the state's mobility goals that support a vibrant economy and build communities.

The Ranch project (Project) is located approximately 4.62 miles southeast of Sunrise Boulevard and U.S. Highway 50 (US 50) interchange, approximately 2.74 miles northwest of the Sunrise Boulevard and State Route 16 intersection, also known as Jackson Highway, and approximately 2 miles west of Grant Line Road, part of the Planned Capitol Southeast Connector.

A-1

The Project includes a general plan amendment special planning area, rezone, development agreement, and a tentative subdivision map for residential and commercial land use developments.

The Project, approximately 530 acres, proposes to create 1,725 residential units, including 737 age restricted single family units, 735 non-age restricted single family units and 253 multi-family units. Of the 253 multi-family units, 38 will be age-restricted. There will be a clubhouse for the age-restricted community, a neighborhood shopping area of 32,000 square feet and recreational opportunities. There will be a dedication of 8.43 acres for multi-family residential units in accordance with the City of Rancho Cordova's Affordable Housing Plan.

The following comments are based on the information provided in the Draft Environmental Impact Report (DEIR) for the Project. Our comments are consistent with the Caltrans comment letter submitted on September 18, 2019, regarding the Application for Rezone for the Project.

"Provide a safe, sustainable, integrated and efficient transportation system to enhance California's economy and livability"

Ms. Cowles
September 23, 2019
City of Rancho Cordova
Page 2

Traffic Forecasting/Operations

- Based on Figure 3.13-3: Existing (2017) Peak Hour Traffic Volumes (page 3.13-41) and Figure 3.13-6: Existing (2017) Plus Proposed Peak Hour Traffic Volumes (page 3.13-47) in the DEIR, there will be significant impact on the State Route 16 and Sunrise Boulevard intersection. However, the State Route 16 and Sunrise Boulevard Intersection is not listed as significantly impacted; therefore, no mitigations are being proposed. Please evaluate this intersection and provide mitigation(s) as the intersection already operates at or near capacity. A-2
- In reviewing the Application for Rezone and DEIR applications for the Project, we noticed the Existing (2017) Plus Project Roadway Segment Level of Service (LOS) threshold are different between the two applications, specifically, Table 3.13-8 in the DEIR (page 17) and Table 7 in the Application for Rezone (page 3.13-21). As the information presented in both tables are consistent, please verify which LOS threshold is correct. If the Level of Service exceeds the Level of Service threshold, please evaluate this segment and provide mitigation(s) to improve Level of Service. A-3
- The Project will generate approximately 12,646 daily trips, 864 in the AM peak hour and 1,157 trips in the PM peak hour. Since there will be significant number of trips generated, the closest routes, US 50 and State Route 16 will be affected. A-4
    - Please provide a Queue Length Analysis for State Route 16 and Sunrise Boulevard intersection and State Route 16 and Grant Line Road intersection.
    - Please provide a Queue Length Analysis for all off-ramps from US 50 to Sunrise Boulevard, US 50 to Zinfandel Drive, and US 50 to Mather Field Road.
    - Please provide a Merge and diverge analysis for US 50 and Sunrise Boulevard, US 50 and Zinfandel Drive, and US 50 and Mather Field Road.
- This Project is a large project. We recommend instead of using the existing (2017) plus proposed project conditions, the DEIR should reflect existing traffic conditions on project opening day plus proposed project conditions. A-5
- Please provide the Project completion year (full build out) in the DEIR. If the Project is going to be built in phases, please provide the build out year for each phase. A-6
- Please provide detailed maps showing pedestrian facilities (page 3.13-11), bicycle facilities (page 3.13-12), transit facilities (page 3.13-13) and the tunnel crossing for Class I trail on Chrysanthy Boulevard (page 3.13-15). A-7
- Please provide more information and maps about the Signature Service transit service and the Signature Transit Station (page 3.13-33). A-8

Table 3.13-5: Proposed Project Trip Generation, in the DEIR (page 3.13-15) shows a Trip Generation Table in which estimated trips are lower compared to the Trip Generation Table below, using trip generation rates from the Trip Generation Manual, 9th edition. We have concerns that the daily trips are lower by 1,040 trips and the PM trips are less by 55 trips. Please check the trip generation numbers stated in the DEIR with the table we generated below. If you accept this discrepancy, please update the DEIR to reflect the new numbers. A-9

"Provide a safe, sustainable, integrated and efficient transportation system to enhance California's economy and livability"

Description/ITE Code	Units	Expected Units	Total Generated Trips						
			Daily Trips	AM Peak Hour			PM Peak Hour		
				Total	AM In	AM Out	Total	PM In	PM Out
Single Family Homes - 210	DU	723	6,883	542	136	407	723	455	268
Apartment - 220	DU	250	1,663	128	26	102	155	101	54

		Total	12,646	864	231	623	1,157	716	441

A-9 cont'd

Please provide our office with copies of any further actions regarding this Project. We would appreciate the opportunity to review and comment on any changes regarding this development.

If you have any questions regarding these comments or require additional information, please contact Stuart Mori, Intergovernmental Review Coordinator for the City of Rancho Cordova, by phone (530) 634-7606 or via email to stuart.mori@dot.ca.gov.

A-10

Sincerely,

Alex Fong, Branch Chief
Office of Transportation Planning
Regional Planning Branch -- South

"Provide a safe, sustainable, integrated and efficient transportation system to enhance California's economy and livability"

Response to Letter A: California Department of Transportation, District 3

Response A-1: This comment summarizes the Project location, Project entitlements, and Project description. This comment serves as an introduction to the comment letter. The commenter is referred to Section 2.3, Modifications to the Project, in this chapter regarding changes to the Project. No further response is necessary.

Response A-2: The commenter indicates that based on Figure 3.13-3 and Figure 3.13-6 in the Draft EIR, there will be a significant impact on the State Route 16 and Sunrise Boulevard intersection and further notes that the State Route 16 and Sunrise Boulevard intersection is not listed as significantly impacted; therefore, no mitigations are being proposed. It is noted that Figure 3.13-6 had some minor errors and has been revised as shown in Chapter 3.0, Revisions, of this Final EIR. The intersection referenced by the commenter is referred to as intersection #4 throughout the Draft EIR Section 3.13 (Transportation and Circulation). Intersection #4 is located in unincorporated Sacramento County. As stated in the DEIR on page 3.13-14, the threshold of significance for intersections within the unincorporated area of Sacramento County is LOS E. As shown in Table 3.13-6 on page 3.13-17, of the Draft EIR the Sunrise Boulevard intersection with State Route 16 (Intersection #4) operates at LOS E or better for AM and PM peak-hours for Existing plus Project Conditions. Therefore, the project was not determined to significantly impact the intersection and no change to the analysis or conclusions in the Draft EIR is necessary.

Response A-3: The commenter notes that after reviewing the Application for Rezone and the Draft EIR for the Project, they noticed the Existing (2017) Plus Project Roadway Segment Level of Service (LOS) thresholds are different between the two documents, specifically, Table 3.13-8 in the DEIR (page 17) and Table 7 in the Application for Rezone (page 3.13-21). The referenced tables were reviewed and several minor errors were identified in Table 3.13-8 (the LOS for the Existing Plus Project condition was incorrect for Segments 11 through 17 and the LOS threshold was incorrect for Segments 3, 4, 12, and 13). Draft EIR Table 3.13-8 is updated as shown in Chapter 3.0, Revisions, to correctly reflect the Existing plus Project LOS and the appropriate LOS Threshold for each roadway segment.

Response A-4: The commenter identifies the number of trips they anticipated to be generated based on the calculations described in Response A-9 below. The commenter indicates that State Route 16 and US Highway 50 will be affected and request the following analysis: a Queue Length Analysis for the State Route 16 and Sunrise Boulevard and the State Route 16 and Grant Line Road intersections, a Queue Length Analysis for all off-ramps from US 50 to Sunrise Boulevard, US 50 to Zinfandel Drive, and US 50 to Mather Field Road, and a merge and diverge analysis for US 50 and Sunrise Boulevard, US 50 and Zinfandel Drive, and US 50 and Mather Field Road.

Each of the interchange intersections referenced by the commenter was analyzed in the Draft EIR (see Tables 3.13-6 and 3.13-9) and the Project was determined to not exceed the LOS thresholds at any of the referenced intersections. The City's Public Works Department and transportation engineering staff has reviewed these conclusions and determined that additional analysis of these locations as requested by the commenter is not necessary in relation to the Project. Therefore, no revisions to the Draft EIR are warranted.

It is noted that, apart from the Project, the City will work with Caltrans when improving intersections as part of the City's Capital Improvement Plan, including improvements funded through the Community Facility Fee Impact Fee Program and the Traffic Mitigation Impact Fee

Program. The City will include the requested analyses as part of any design of improvements for the referenced intersections as part of future CIP projects.

Response A-5: The commenter recommended that instead of using the Existing (2017) plus Proposed Project conditions, the Draft EIR should reflect existing traffic conditions on project opening day Project conditions. We understand Caltrans' desire to study conditions of opening day of the project but have not included that scenario as a part of this analysis. The Draft EIR reflects the effect of the Project on the existing environment related to traffic. However, it is noted that the expected completion date of the proposed project is December 2035 and that the analysis does include a cumulative Year 2040 scenario, which reflects cumulative and cumulative plus Project conditions only five years removed from this assumed Project completion date. No revision to the Draft EIR is necessary in response to this comment.

Response A-6: The commenter requests the Project completion year (full build-out) and the build-out year for individual phases. The Project is anticipated to be built-out in 2035. Project phasing is described above in Section 2.3, Modifications to the Project, and in Chapter 3.0, Revisions, of this Final EIR which shows modifications to Draft EIR Chapter 2.0, including Project phasing.

Response A-7: The commenter requests detailed maps showing the pedestrian, bicycle, and transit facilities, including the tunnel crossing for the Class I trail on Chrysanthy Boulevard. The commenter is referred to Draft EIR Figure 2.0-4, as revised in Chapter 3.0, Revisions, of this Final EIR. The tentative subdivision map provided in Figure 2.0-4 identifies the road standards that will be used for the project, including the associated bicycle and pedestrian facilities, depicts the tunnel crossing at Chrysanthy Boulevard, and identifies pedestrian push-button locations for crossing facilities on Chrysanthy Boulevard, Rancho Cordova Parkway, and North Campus Road. The transit stop is addressed under Response A-8.

Additional information regarding the City's planned facilities can be viewed on the City's website (https://www.cityofranchocordova.org/government/public-works/plans-and-projects) in the City of Rancho Cordova's Pedestrian Master Plan (Figure 4.1 identifies regional and local transit stations, routes, and stops within the City, as well as pedestrian overcrossings and parkway access points and Figure 5.1 shows planned pedestrian improvements throughout the City) and in the City of Rancho Cordova's Bicycle Master Plan (Figure 2-1 shows the Existing Bicycle Network with the City, Figure 2-2 shows bicycle parking and support facilities, and Figure 4-3 shows the City's long-range vision of the regional trail system, and Figure 4-4 shows the City's existing bicycle system and proposed improvements).

Response A-8: The commenter requests more information and maps about the Signature Service transit station. The future transit station, located at Rancho Cordova Parkway and Chrysanthy Boulevard intersection, will provide public transit opportunities. The City's Mobility Master Plan (June 2019) addresses the City's need for safe, coordinated, responsive, efficient and flexible public transportation and shared mobility services and acknowledges that transportation preferences are changing. The Mobility Master Plan identifies the need for enhanced bus stops, expanding transit frequency, improving CordoVan service, and providing mobility hubs that provide access to a variety of transportation modes in a single location. The Mobility Master Plan identifies Rancho Cordova Parkway as one of eight priority corridors that should be designed to support multi-modal transportation choices. The future transit station provided by the Project could provide for extension of a bus route, which would accommodate an expansion of traditional transportation, such as a bus route or CordoVan route, or accommodate new mobility services, such as dynamic

transit or future technologies as envisioned by the City's Mobility Master Plan. e. The transit stop is described in the SPA Handbook, which can be viewed online at: https://www.cityofranchocordova.org/government/planning or at the City of Rancho Cordova Planning Department, located at City Hall, 2729 Prospect Park Drive in Rancho Cordova. While the transit stop is not shown on a figure, the intersection of Rancho Cordova Parkway and Chrysanthy Boulevard is located adjacent to Lot NN (north of the intersection) and Village 24 (south of the intersection), as shown on Revised Draft EIR Figure 2.0-4 in Chapter 3, and it is anticipated that the transit stop would be located on or in the immediate vicinity of these lots.

Response A-9: The commenter indicates concern that the daily trips projected for the Project as shown on Draft EIR p. 3.13-15 are lower than the trip rates associated with the Project based on the Trip Generation Manual, 9th Edition. The commenter has calculated trips based on the Trip Generation Manual, 9th Edition and has provided a table identifying trips by ITE code. The commenters calculations total 12,646 daily trips, 864 total AM peak hour trips, and 1,157 total PM peak hour trips. The commenter indicates that the daily trips shown in the Draft EIR are lower by 1,040 trips and the PM trips are lower by 55 trips than the trips calculated by the commenter.

The trip generation rates used to develop the traffic volumes for the Project reflected Section 3.13, Transportation and Circulation, of the Draft EIR are based on the average rates provided in the Trip Generation Handbook, 9th Edition published by the Institute of Transportation Engineers (ITE). The ITE rates were used to determine the number of trips for daily and the AM and PM peak-hours. The initial trip calculation totals are shown below in Table 2.0-6. It is noted that this initial calculation is similar to the daily trips identified by the commenter.

TABLE 2.0-6: PROJECT TRIP GENERATION – INITIAL RATES

Land Use Description	Units	Original Rates Used			Trips Before Reductions		
		Daily Rate	AM Rate	PM Rate	Daily Trips	AM Trips	PM Trips
Single-Family Detached Housing	735	9.52	0.75	1.00	6,997	551	735
Apartment	215	6.65	0.51	0.62	1,430	110	133
Senior Adult Housing-Detached	737	3.68	0.22	0.27	2,712	162	199
Active Adult Apartment	38	3.44	0.20	0.26	112	8	10
Shopping Center	32	42.70	0.96	3.71	1,366	31	119
Total	*1,757*	-	-	-	*12,618*	*862*	*1,196*

Once the initial trips were calculated as shown in Table 2.0-6, reductions were taken for internal capture and pass-by trips as shown in Table 2.0-7.

TABLE 2.0-7: PROJECT TRIP GENERATION – NET RATES (INITIAL RATES WITH REDUCTIONS FOR PASS-BY AND INTERNAL TRIPS)

Land Use Description	Units	Trips Before Reductions			Reduction Percentages			Final Trips Used in Report		
		Daily Trips	AM Trips	PM Trips	Daily	AM	PM	Daily Trips	AM Trips	PM Trips
Single-Family Detached Housing	735	6,997	551	735	97%	99%	97%	6,796	547	716
Apartment	215	1,430	110	133	86%	95%	86%	1,225	105	114
Senior Adult Housing-Detached	737	2,712	162	199	93%	98%	91%	2,519	158	181
Active Adult Apartment	38	112	8	10	100%	100%	100%	112	8	10
Shopping Center	32	1,366	31	119	70%	74%	68%	954	23	81
Total	*1,757*	*12,618*	*862*	*1,196*	-	-	-	*11,606*	*841*	*1,102*

The net trips identified in Table 2.0-7, and reflected in the Draft EIR, better represent the interactions between the residential and retail land uses expected within the Project as well as trips already on the network. The reductions taken for internal capture represent internal trips

between Project land uses and reductions taken for pass-by trips represent trips already on the network making a pass-by stop. The reduction percentages and resultant trips are shown in Table 2.0-7. The reductions used are consistent with ITE methodology; pass-by percentages are consistent with those listed in the Trip Generation Handbook, 3rd Edition published by ITE and the internal capture reductions are consistent with the methodologies shown in Chapter 7 of the Trip Generation Handbook, 2nd Edition published by ITE. The trip rates used in the Draft EIR correctly reflect the anticipated trips associated with the Project. No revisions to the Draft EIR are necessary.

Response A-10: This comment is noted. This comment serves as a conclusion to the comment letter. Any future actions regarding this Project will be forwarded to Caltrans. No further response is necessary.

Cordova Recreation & Park District

September 30, 2019

June Cowles, Senior Planner
City of Rancho Cordova Planning Department

Regarding: The Ranch – Draft Environmental Impact Report
Public Review Period August 16 – September 30, 2019

Reviewed by: Cordova Recreation and Park District
Laura Taylor, CRPD Park Planning and Development Manager
Lisbet Gullone, CRPD Contract Planner

ENVIRONMENTAL REVIEW

As a part of the entitlement process for The Ranch, the City of Rancho Cordova circulated a Notice of Availability regarding the Draft Environmental Impact Report (DEIR) for The Ranch on August 22, 2019. The Cordova Recreation and Park District (CRPD or 'the District'), has previously submitted preliminary comments on August 3, 2018, in response to the Notice of Preparation (NOP).

BACKGROUND

The Ranch project has been subject to many modifications and some issues regarding the development of Quimby parkland have not yet been resolved. CRPD has recently reviewed the 4th submittal package, including the following plans and documents: B-1

- Large Lot Tentative Subdivision Map (revised March 2019)
- Small Lot Tentative Subdivision Map (revised July 2019)
- Special Planning Area Handbook (dated August 2019)

The project description in the DEIR does not match the above listed documents. CRPD recommends that the Final Environmental Impact Report (FEIR) should include some of the recent project changes.

CHAPTER 2 - PROJECT DESCRIPTION

Land Use

The latest Tentative Subdivision Map (revised July 2019) is proposing minor adjustments of the unit counts in both the standard villages and the age-restricted villages that have not been reflected in the DEIR. These changes will have little impact on the environmental review. However, the DEIR also provides conflicting information regarding park land. B-2

The 2.19 acre Neighborhood Park in the Parkview Neighborhood has been identified as a passive park in Table 2.0-1 (Land Use Summary) and in the text on page 2.0-8 (under 'RECREATION'). In addition, the description under 'OPEN SPACE' and 'RECREATION' (on page 2.0-7) does not provide the same park information as the recently revised Tentative Subdivision Map (dated July, 2019). The following table illustrates the latest park proposal:

NEIGHBORHOOD	TYPE OF PARK	AREA (Acres)
Parkview (Public Development)	Community Park (Lot D)	10.78
	Neighborhood Park (Lot T)	2.19
	Parking Lot Credit (Lot R)	0.25
Four Seasons (Private Development)	Recreational Center (Lot A)	4.26
	Community Garden (Lot B)	1.58
	Linear Park (Lot C)	1.40
TOTAL		**20.46**

B-3

CRPD recommends that the Final Environmental Impact Report (FEIR) should include an updated Land Use Summary (Table 2.0-1 in the DEIR) and an expanded description of park land (page 2.0-7 in the DEIR).

Project Construction

CRPD and the applicant have not reached an agreement regarding the timeline for construction of the public parks. An updated Phasing Schedule (page 2.0-12 in the DEIR) may therefore need to be included with the Final EIR (FEIR).

B-4

General Plan Amendment

CRPD has not previously reviewed the proposed General Plan Amendment (Figure 2.0-5). In the graphic titled 'Proposed General Plan', the area of the Neighborhood Park has the General Plan Designation 'Low Density Residential' (LDR) and the area of the Community Park has the General Plan Designations; 'Low Density Residential' (LDR) and 'Medium Density Residential' (MDR)..

Before CRPD can take ownership of the two park sites, both properties will need to have the General Plan Designation 'Park and Open Space' (P/OS). CRPD also recommends that the private parks (including the Recreational Center, the Community Garden and the Linear Park) should have the General Plan Designation P/OS.

Figure 2.0-5 (Existing and Proposed General Plan) will need to be revised to reflect these changes. CRPD recommends that an updated General Plan Map should be included with the FEIR.

B-5

CHAPTER 3.1 – AESTHETICS

The DEIR has determined that lighting of sports fields and parking lots (as regulated by Rancho Cordova's Zoning Code and CRPD's Design and Construction Standards), will be a less than significant impact. No further analysis will be required.

Note: This issue was originally raised in CRPD's response to the NOP on August 3, 2018.

B-6

CHAPTER 3.2 – AIR QUALITY

CRPD has noted that the park areas listed on page 3.2-26 need to be updated to reflect the recent project modifications and the Community Park will need to be included with the Construction Phasing Schedule on page 3.2-28.

B-7

CHAPTER 3.3 – BIOLOGICAL RESOURCES

2

Figure 3.3-3 (California Natural Diversity Database) does not provide detailed information regarding the location of protected, endangered or threatened plants and animals. As a result, CRPD has not been able to determine if the future park sites are subject to special mitigation requirements or if biological resources at the park sites will affect the timeline for park construction. CRPD recommends that the FEIR should include maps of existing biological resources at the project site. As an alternative, Mitigation Measure 3.3-3 through 3.3-11 could include a requirement that additional biological resource studies should be completed prior to any site disturbance. B-8

CHAPTER 3.5 – GEOLOGY AND SOILS
As shown on Figure 3.5-1 (Project Site Soils) in the DEIR, the soil at the Quimby park sites is Redding Gravelly Loam. This soil type would generally not present problems for park development. CRPD will require additional soil testing before the park sites are delivered to the District (as specified in the Districts Design and Construction Standards Manual, Section 2.01). B-9

Note: This issue was originally raised in CRPD's response to the NOP on August 3, 2018.)

CHAPTER 3.6 – GREENHOUSE GASES, CLIMATE CHANGE AND ENERGY
CRPD has noted that the construction phases on Table 3.6-3 (Summary of Construction Greenhouse Gas Emissions) is not consistent with the Phasing Plan in the Special Planning Area Handbook (dated August 2019). B-10

CHAPTER 3.7 – HAZARDS AND HAZARDOUS MATERIALS
Since before 1993, the project site has been divided by two power line easements (a 200-foot-wide SMUD easement next to a 75-foot-wide PG&E easement). Both easements include transmission towers and 230 kV overhead lines. The DEIR has addressed development within the power line easements, but has not considered the potential for Electric and Magnetic Field (EMF) radiation.

Even if recent studies have been inconclusive regarding the effect of exposure to overhead power lines, earlier studies have shown that especially children may be negatively affected. As a result, EMF radiation is still part of the public debate. CRPD recommends that this concern is addressed. B-11

CRPD suggests that the FEIR could demonstrate that the issue has been considered by outlining some of the latest scientific studies. The final report could also refer to the earlier actions by the California Public Utilities Commission to mitigate public exposure.

Note: This issue was originally raised in CRPD's response to the NOP on August 3, 2018.

CHAPTER 3.8 – HYDROLOGY AND WATER QUALITY
The DEIR has determined that the project site is not located in the 100-year flood hazard area and that the Sacramento County Water Agency (SCWA) will be able to meet the future water demands of The Ranch development. No further analysis will be required. B-12

Note: This issue was originally raised in CRPD's response to the NOP on August 3, 2018.

CHAPTER 3.9 – LAND USE
The Tentative Parcel Map for The Ranch project has recently been modified (as shown on the Tentative Subdivision Map, revised July, 2019). CRPD therefore recommends that an updated version of Table 2.0-1 (Land Use Summary) on page 2.0-5 in the DEIR should be included with the FEIR. B-13

CHAPTER 3.10 – NOISE

3

The DEIR has determined that (if properly monitored and mitigated), playground noise will be a less than significant impact. No further analysis will be required. B-14

Note: This issue was originally raised in CRPD's response to the NOP on August 3, 2018.

CHAPTER 3.11 – POPULATION AND HOUSING

The DEIR has listed household sizes for different categories of residential land use (Persons Per Household) based on the California Department of Finance and the 2013-2017 American Community Survey. B-15

CRPD recommends that the numbers for Persons Per Household adopted by Rancho Cordova (and applied to the Ranch project) should also be described under 'Persons Per Dwelling Unit' (on page 3.11-2 in the DEIR).

CHAPTER 3.12 – PUBLIC SERVICES AND RECREATION

The Tentative Parcel Map for The Ranch project has recently been modified (see the Tentative Subdivision Map, revised July, 2019). The following table shows the latest unit counts and population projections for the project:

NEIGHBORHOOD	RESIDENTIAL LAND USE	UNITS	POPULATION
Parkview & Gateway	Single Family Residential	732	2,159
	Multi Family Residential	215	331
Four Seasons	Active Adult Single Family	726	1,452
	Active Adult Multi Family	38	39
TOTAL		**1,711**	**3,981**

B-16

Based on the population projections (as specified in Rancho Cordova's Municipal Code), The Ranch project is now required to provide an overall of 19.91 acres of Quimby Parkland (or 10.35 acres of community parks and 9.56 acres of neighborhood parks).

CRPD recommends that the FEIR should include an updated table for park land dedication (Table 3.12-4 in the DEIR) that has been coordinated with the latest Tentative Subdivision Map (revised July, 2019).

FINAL ENVIRONMENTAL IMPACT REPORT

CRPD recommends that the following information should be included with the Final Environmental Impact Report (FEIR):

1. A Land Use Summary (Table 2.0-1 in the DEIR) and description of park land (page 2.0-7 in the DEIR) that has been updated to reflect the latest Tentative Subdivision Map (revised July, 2019).
2. A Phasing Schedule (page 2.0-12 in the DEIR) that is consistent with the Phasing Plan in the latest Special Planning Area Handbook (dated August, 2019) and that also reflects any agreement between CRPD and the property owner. B-17
3. The graphic representation of the proposed General Plan Amendment (Figure 2.0-5) that designates all public and private park land as 'Park and Open Space' (P/OS).
4. Site specific maps of all existing Biological Resources on the project site (including plants and animals) that are subject to mitigation. (As an alternative, a requirement for future Biological

Resource Studies could be added to Mitigation Measures 3.3-3 through 3.3-11.)

5. A report to address public concerns regarding Electric and Magnetic Fields (EMF's) around high voltage power lines or evidence that such concerns are unwarranted.

6. Information regarding the numbers for 'Persons Per Household' that has been adopted by Rancho Cordova (and applied to the Ranch project (shown on page 3.11-2 in the DEIR).

7. A Table that shows 'Parkland Dedication Requirements' (Table 2-12-4 in the DEIR) based on the latest Tentative Subdivision Map (revised July, 2019).

B-17 cont'd

Please contact the District if you have any questions or comments regarding these review comments.

Respectfully,

Laura L. Taylor, ASLA

Response to Letter B: Cordova Recreation & Park District

Response B-1: The commenter notes that the Cordova Recreation & Park District (CRPD) submitted preliminary Notice of Preparation (NOP) comments regarding the Project. The comment also provides background information regarding the modifications to the Project submittal packages (from March 2019 to August 2019), and notes that the Project description in the Draft EIR does not match the listed documents. The commenter further notes that the Quimby parkland has not yet been resolved, and concludes that the Final EIR should include some of the most recent Project changes. This comment is noted. Please see Section 2.3, Modifications to the Project, regarding changes to the Project and associated modifications to Draft EIR Chapter 2.0, Project Description, including changes to the proposed land uses, park land dedication requirements, and and park land dedication.

Response B-2: The commenter notes that the latest tentative subdivision map (revised July 2019) proposes minor adjustments to the unit county that have not been reflected in the Draft EIR. The commenter also notes that these changes will have little impact on the environmental review. This comment is noted. Please see Section 2.3, Modifications to the Project, regarding further modifications to the tentative subdivision map and the associated revised unit count and updated parkland calculations.

Response B-3: The commenter provides a table which illustrates the park proposal shown in the July 2019 tentative subdivision map. The commenter also recommends that the Final EIR include an updated land use summary (Table 2.0-1 of the Draft EIR) and an expanded description of parkland. Please see Section 2.3, Modifications to the Project, regarding the changes to the land use summary table as a result of the latest tentative subdivision map. The revised land use summary table is shown in Table 2.0-2 of this chapter and updated parkland calculations are provided in Table 2.0-4.

Response B-4: The commenter notes that the CRPD and applicant have not reached an agreement regarding the timeline for construction of the public parks. The commenter notes that an updated phasing schedule may therefore need to be included within the Final EIR. Please see Section 2.3, Modifications to the Project, regarding revisions to the Project phasing schedule.

Response B-5: The commenter notes that before CRPD can take ownership of the two park sites (Neighborhood Park and Community Park), both properties will need to have a General Plan designation of Park and Open Space (P/OS). The CRPD also recommends that the Recreation Center, Community Garden, and Linear Park have the P/OS designation. Further, the commenter notes that Figure 2.0-5 (Existing and Proposed General Plan) will need to be revised to reflect the requested changes. This comment is noted. Please see Section 2.3, Modifications to the Project, regarding the updated General Plan land use map; the proposed General Plan land use designations are P/OS on the proposed park sites (Lots A, B, C, D, T, and U) and select open space lots (Lots Q, R, and S).

Response B-6: The commenter notes that the Draft EIR concludes that lighting of sports fields and parking lots will be less than significant and that no further analysis will be required. The commenter has correctly cited the text of the Draft EIR. No further response is necessary.

Response B-7: The commenter notes that the park areas listed on page 3.2-26 of Chapter 3.2, Air Quality, will need to be updated to reflect the recent Project modifications and the Community Park will need to be included within the Construction Phasing Schedule on page 3.2-28. This comment is noted.

The air quality modeling has been reflected to update the changes to the Project description. Please see Chapter 3.0, Revisions, of this Final EIR for changes to Chapter 3.2 of the Draft EIR.

Response B-8: The commenter notes that Figure 3.3-3 does not provide detailed information regarding the location of protected, endangered, or threatened plants and animals. The commenter recommends that the Final EIR include maps of existing biological resources at the project site. As an alternative, the commenter suggests that Mitigation Measures 3.3-3 through 3.3-11 include a requirement that additional biological resource studies should be completed prior to any site disturbance.

According to the California Natural Diversity Database (CDFW, 2019), the following special-status species have been documented on or within one-mile of the Project site: American badger, Boggs lake hedge-hyssop, California linderiella, legenere, Sacramento Orcutt grass, slender Orcutt grass, valley elderberry longhorn beetle, vernal pool fairy shrimp, vernal pool tadpole shrimp, and western spadefoot. Figure 3.3-3 of the Draft EIR does not show the detailed species at the project site because the California Department of Fish and Wildlife (CDFW) advises against showing the exact data and locations in publicly available documents. The City will provide the CRPD with the California Natural Diversity Database search results that identifies the location of species, but due to the CDFW's guidance, the information requested will not be provided within this Final EIR. It is also noted that Figure 3.3-4 on page 3.3-85 of Chapter 3.3 shows the biological community and aquatic resources found on-site.

Due to the transient or seasonal nature of some of the species, it is possible that while their presence has not been documented on the Project site, the species may be present on the Project site in the future if the habitat on the Project site would provide appropriate conditions for the species. Tables 3.3-1 and 3.3-2 address the potential of special-status species to be present on the Project site. Potential environmental impacts associated with each special-status species that has potential to be present on the Project site are addressed under Impact 3.3-1 (invertebrates), 3.3-2 (reptile and amphibian), 3.3-3 (fish), 3.3-4 (birds), 3.3-5 (mammals), and 3.3-6 (plants) in Chapter 3.3 of the Draft EIR and, where appropriate, mitigation measures are provided to reduce potential impacts to special-status species. In Chapter 3.3, the Draft EIR addresses the potential for various special-status species and sensitive habitats to be found on-site, including the park areas. Where appropriate, the Draft EIR includes appropriate mitigation measures to reduce impacts to special-status species, including species and site-specific surveys, where appropriate. All mitigation measures should be implemented for the proposed park sites. It is noted that of the mitigation measures referenced by the commenter, Mitigation Measures 3.3-3 through 3.3-9 and 3.3-11 are applicable Avoidance and Mitigation Measures (AMMs) identified in the South Sacramento Habitat Conservation Plan (SSHCP) and Mitigation Measure 3.3-10 was provided to address the potential for American badger to occur on the Project site.

It is anticipated that CRPD will apply as a Participating Special Entity to the SSHCP. The City and the South Sacramento Conservation Agency will assist CRPD in understanding the application process and AMM requirements as park designs are developed. The City and Project application will share SSHCP application materials for the Project with the CRPD. No revision to the Draft EIR is necessary in response to this comment.

Response B-9: The commenter notes that the soils at the Quimby park site would generally not present problems for development. The commenter also notes that the CRPD would require additional soil testing before the park sites are delivered to the CRPD. Laboratory soil tests were completed as part of

the Geotechnical Engineering Report (Wallace-Kuhl, 2016). The commenter has correctly summarized the text of the Draft EIR. No further response is necessary.

Response B-10: The commenter notes that the construction phase on Table 3.6-3 of Chapter 3.6, Greenhouse Gases, Climate Change, and Energy, is not consistent with the Phasing Plan in the Special Planning Area Handbook. This comment is noted. The air quality and greenhouse gas modeling has been reflected to update the changes to the Project description. Please see Chapter 3.0, Revisions, of this Final EIR for changes to Chapter 3.2 of the Draft EIR.

Response B-11: The commenter provides information regarding the SMUD and PG&E easements which cross the project site. The commenter notes that the Draft EIR has addressed development within the power line easements, but has not considered the potential for electric and magnetic field (EMF) radiation. The commenter also suggests that the Final EIR demonstrate that EMF radiation has been considered by outlining some of the latest scientific studies, and earlier actions by the California Public Utilities Commission (CPUC) to mitigate public exposure.

On January 15, 1991, the CPUC began an investigation to consider the CPUC's potential role in mitigating health effects, if any, of EMFs created by electric utility power lines and by cellular radiotelephone facilities. By this investigation, all interested parties were notified that the CPUC would take appropriate action on EMFs in response to a conclusion, based on scientific evidence, if it indicates that a health hazard actually exists, and that a clear cause and effect relationship between utility property or operations and public health is established.

Due to the lack of scientific or medical conclusions about potential health effects from utility electric facilities and power lines, the CPUC issued Decision 93-11-013, establishing EMF policy for regulated utilities, which included consideration of no-cost and low-cost magnetic field reduction measures on new and upgraded projects. The interim EMF requirements apply to PG&E, Southern California Edison, San Diego Gas & Electric, Sierra Pacific Power, and Pacific Power & Light. Municipal utilities, like the SMUD and the Los Angeles Department of Water and Power, are not under CPUC jurisdiction, although they may voluntarily follow the same measures.

The CPUC Decision 06-01-042, issued on January 27, 2006, affirmed that the CPUC's November 1993 decision on low-cost/no-cost policy to mitigate EMF exposure for new utility transmission and substation project should be continued. However, this decision does not apply to existing facilities and does not establish any numeric standards or thresholds, rather the policy encourages low-cost and no cost EMF mitigation, using a recommended benchmark of 4% of total project cost. Methods for reducing magnetic fields described in the CPUC's 2006 EMF Design Guidelines include increasing the distance from electrical facilities, reducing conductor spacing, and phasing circuits to reduce magnetic fields. Further, the 2006 decision re-re-affirmed that health hazards from exposures to EMF have not been established and that state and federal public health regulatory agencies have determined that setting numeric exposure limits is not appropriate.

The CPUC has not identified a significant scientifically verifiable relationship between EMF exposure and negative health consequences. However, the January 2006 decision directs the Commission's Energy Division to pursue and review all available studies regarding EMF, and to review scientific information and report on new findings. Should such studies indicate negative EMF health impacts, the Commission will reconsider its EMF policies, and open a new rulemaking if necessary.

In 2016, the CPUC conducted an EMF investigation to independently measure EMF levels along the San Diego Gas & Electric Company (SDG&E) Sunrise Powerlink underground 230-kilovolt (kV) transmission line located under Alpine Boulevard within the community of Alpine in unincorporated San Diego County. The Sunrise Powerlink 230-kV circuits in Alpine Boulevard pass in the vicinity of Alpine Elementary School and EMF levels at the elementary school have been a specific area of concern to the community. The results of this investigation are summarized in the CPUC's Electromagnetic Field Investigation: Alpine Boulevard – Sunrise Powerlink report (Alpine Report) dated dated June 6, 2016). The Alpine Report found that numerous laboratory, clinical, and epidemiological studies have been conducted over several decades to evaluate the public health impacts of EMF exposure and that laboratory studies on EMF exposures do not support a conclusion of health impacts from EMF exposure, and clinical studies have found that EMF exposure does not appear to affect general physiology. The Alpine Report further found that while epidemiological research indicates there is a weak association between childhood leukemia and certain levels of magnetic field exposure, there is no consensus among scientists about the level of magnetic field exposure that could constitute a health risk. There are no adopted federal, state of California, or local regulatory standards that provide any guidance regarding public exposures to EMF or guidelines for setbacks from transmission lines that apply to the Project. The CPUC has undertaken extensive studies of this issue since the 1990s and is the preeminent source on this subject in California and has determined that health hazards from exposures to EMF have not been established. The Alpine Report affirms that there is no scientific consensus that EMF exposure is actually hazardous to health, nor is there an accepted standard of exposure.

Neither the CPUC, PG&E, nor SMUD stipulate requirements for any setbacks from the edge of transmission line rights-of-way, nor have they established any limitations for land uses adjacent to the right of ways in order to maintain public safety. Based on the above information, the proposed open space, drainage areas, and protected preserve areas that would be located below the existing on-site PG&E and SMUD facilities would not pose a hazard to public safety or health associated with EMF exposure.

Further, the California Supreme Court held that, as a general rule, CEQA does not apply to impacts of the environment on a project, with several statutory exceptions including "how a project might exacerbate existing environmental hazards." (California Building Industry Assoc. v. Bay Area Air Quality Management District (2015) 62 Cal. 4th 369). The existing transmission lines are not a hazard as health hazards associated with exposures to EMF have not been established, as determined by the CPUC in 1993 and 2006 and affirmed in the 2016 Alpine Report. The Project would not exacerbate any existing condition relative to the transmission lines that would make the transmission lines hazardous. No changes to the impact analysis or significance conclusions in the Draft EIR are warranted.

This information has been incorporated in Section 3.7 (Hazards and Hazardous Materials) of the Draft EIR. See Chapter 3.0, Errata, of this Final EIR for the revisions and inserted text.

Response B-12: The commenter notes that the Draft EIR has determined that the Project site is not within the 100-year flood hazard area and the Sacramento County Water Agency (SCWA) will be able to meet the future demands of the Project. The commenter notes that no further analysis is required. The commenter has correctly summarized the text of the Draft EIR. No further response is necessary.

Response B-13: The commenter notes that the Land Use Summary table on page 2.0-5 of the Draft EIR should be updated to reflect the modified tentative subdivision map. This comment is noted. Please see

Section 2.3, Modifications to the Project, for the updated Land Use Summary Table. The changes to this table are also shown in Chapter 3.0 of this Final EIR.

Response B-14: The commenter notes that the Draft EIR has determined that playground noise will be a less than significant impact. The commenter notes that no further analysis is required. The commenter has correctly summarized the text of the Draft EIR. No further response is necessary.

Response B-15: The commenter notes that the Draft EIR has listed household sizes for different categories of residential land use based on the California Department of Finance and the 2013-2017 American Community Survey. The comment recommends that the numbers for Persons Per Household adopted by Ranch Cordova should also be described under "Persons Per Dwelling Unit" (on page 3.11-2 of the Draft EIR). This comment is noted.

The Draft EIR identifies two approaches for calculating the population resulting from the Project. The ratios used for the Quimby parkland calculation are based on the ratios prescribed by RCMC Chapter 22.40, Park and Recreation Dedication and Fees, as applied by the City to address the Quimby requirement (see also Section 2.3, Modifications to the Project,). As discussed on page 3.11-2 of Section 3.11 (Population and Housing), the average number of persons residing in a dwelling unit in Rancho Cordova is 2.84 (California Department of Finance, 2018). The 2013-2017 American Community Survey 5-Year Estimates data provides more detail regarding household sizes in the City, reporting average household sizes of 2.84 persons per owner-occupied households, 2.89 persons per renter-occupied households, 2.08 persons per owner-occupied householders 60 years and older, and 2.05 persons per renter-occupied householders 60 years and older. These rates were applied to the Project for use in the Draft EIR in order to provide a conservative estimate of the Project's potential population that is consistent with the recent ACS data, which is a more recent source than the household sizes identified in RCMC Chapter 22.40.

As a result of the recent changes to the tentative subdivision map, the population projections have been recalculated. Please see Section 2.3, Modifications to the Project, for the population estimates. The Quimby population projections and ACS population projections are shown in Table 2.0-3 of this chapter. The Draft EIR has also been revised to reflect the updated population projections.

Response B-16: The commenter notes that the revised Project is required to provide an overall of 19.1 acres of Quimby Parkland. The commenter also recommends that the Final EIR include an updated table for park land dedication. This comment is noted. Please see Section 2.3, Modifications to the Project, for the population estimates. The Quimby population projections and American Community Survey population projections are shown in Table 2.0-3 of this chapter. The Draft EIR has also been revised to reflect the updated population projections. As shown, the total Quimby population would be 3,940 persons, which corresponds to a Quimby parkland requirement of 19.7 acres. Table 2.0-4 summarizes the Quimby parkland requirement for each component of the Project.

Response B-17: The commenter lists information which should be included in the Final EIR, including: (1) an updated land use summary and park land description; (2) an updated phasing schedule that reflects any agreement between CRPD and the property owner; (3) a graphic of the proposed General Plan amendment that designates all public and private park land as P/OS; (4) site- specific maps of existing biological resources that are subject to mitigation; (5) a report to address EMFs around high voltage lines or evidence that such concerns are unwarranted; (6) information

regarding persons per household that has been applied to the project; and (7) a table that shows parkland dedication requirements based on the latest tentative subdivision map. This comment is noted and serves as a summary and conclusion to the comment letter. Please see Section 2.3, Modifications to the Project, as well as Responses B-8, B-11, B-15, and B-16.

Pacific Gas and Electric Company

Plan Review Team
Land Management

PGEPlanReview@pge.com

6111 Bollinger Canyon Road 3370A
San Ramon, CA 94583

August 16, 2019

June Cowles
City of Rancho Cordova
2729 Prospect Park Dr
Rancho Cordova, CA 95670

Ref: Gas and Electric Transmission and Distribution

Dear Ms. Cowles,

Thank you for submitting the Ranch DEIR plans for our review. PG&E will review the submitted plans in relationship to any existing Gas and Electric facilities within the project area. If the proposed project is adjacent/or within PG&E owned property and/or easements, we will be working with you to ensure compatible uses and activities near our facilities.

C-1

Attached you will find information and requirements as it relates to Gas facilities (Attachment 1) and Electric facilities (Attachment 2). Please review these in detail, as it is critical to ensure your safety and to protect PG&E's facilities and its existing rights.

Below is additional information for your review:

1. This plan review process does not replace the application process for PG&E gas or electric service your project may require. For these requests, please continue to work with PG&E Service Planning: https://www.pge.com/en_US/business/services/building-and-renovation/overview/overview.page.

C-2

2. If the project being submitted is part of a larger project, please include the entire scope of your project, and not just a portion of it. PG&E's facilities are to be incorporated within any CEQA document. PG&E needs to verify that the CEQA document will identify any required future PG&E services.

3. An engineering deposit may be required to review plans for a project depending on the size, scope, and location of the project and as it relates to any rearrangement or new installation of PG&E facilities.

Any proposed uses within the PG&E fee strip and/or easement, may include a California Public Utility Commission (CPUC) Section 851 filing. This requires the CPUC to render approval for a conveyance of rights for specific uses on PG&E's fee strip or easement. PG&E will advise if the necessity to incorporate a CPUC Section 851filing is required.

C-3

This letter does not constitute PG&E's consent to use any portion of its easement for any purpose not previously conveyed. PG&E will provide a project specific response as required.

Sincerely,

Plan Review Team
Land Management

PG&E Gas and Electric Facilities Page 1

Pacific Gas and Electric Company

Attachment 1 – Gas Facilities

There could be gas transmission pipelines in this area which would be considered critical facilities for PG&E and a high priority subsurface installation under California law. Care must be taken to ensure safety and accessibility. So, please ensure that if PG&E approves work near gas transmission pipelines it is done in adherence with the below stipulations. Additionally, the following link provides additional information regarding legal requirements under California excavation laws: http://usanorth811.org/wp-content/uploads/2017/05/CA-LAW-English.pdf

1. Standby Inspection: A PG&E Gas Transmission Standby Inspector must be present during any demolition or construction activity that comes within 10 feet of the gas pipeline. This includes all grading, trenching, substructure depth verifications (potholes), asphalt or concrete demolition/removal, removal of trees, signs, light poles, etc. This inspection can be coordinated through the Underground Service Alert (USA) service at 811. A minimum notice of 48 hours is required. Ensure the USA markings and notifications are maintained throughout the duration of your work.

2. Access: At any time, PG&E may need to access, excavate, and perform work on the gas pipeline. Any construction equipment, materials, or spoils may need to be removed upon notice. Any temporary construction fencing installed within PG&E's easement would also need to be capable of being removed at any time upon notice. Any plans to cut temporary slopes exceeding a 1:4 grade within 10 feet of a gas transmission pipeline need to be approved by PG&E Pipeline Services in writing PRIOR to performing the work.

3. Wheel Loads: To prevent damage to the buried gas pipeline, there are weight limits that must be enforced whenever any equipment gets within 10 feet of traversing the pipe.

Ensure a list of the axle weights of all equipment being used is available for PG&E's Standby Inspector. To confirm the depth of cover, the pipeline may need to be potholed by hand in a few areas.

Due to the complex variability of tracked equipment, vibratory compaction equipment, and cranes, PG&E must evaluate those items on a case-by-case basis prior to use over the gas pipeline (provide a list of any proposed equipment of this type noting model numbers and specific attachments).

No equipment may be set up over the gas pipeline while operating. Ensure crane outriggers are at least 10 feet from the centerline of the gas pipeline. Transport trucks must not be parked over the gas pipeline while being loaded or unloaded.

4. Grading: PG&E requires a minimum of 36 inches of cover over gas pipelines (or existing grade if less) and a maximum of 7 feet of cover at all locations. The graded surface cannot exceed a cross slope of 1:4.

5. Excavating: Any digging within 2 feet of a gas pipeline must be dug by hand. Note that while the minimum clearance is only 12 inches, any excavation work within 24 inches of the edge of a pipeline must be done with hand tools. So to avoid having to dig a trench entirely with hand tools, the edge of the trench must be over 24 inches away. (Doing the math for a 24 inch wide trench being dug along a 36 inch pipeline, the centerline of the trench would need to be at least 54 inches [24/2 + 24 + 36/2 = 54] away, or be entirely dug by hand.)

Pacific Gas and Electric Company

Water jetting to assist vacuum excavating must be limited to 1000 psig and directed at a 40° angle to the pipe. All pile driving must be kept a minimum of 3 feet away.

Any plans to expose and support a PG&E gas transmission pipeline across an open excavation need to be approved by PG&E Pipeline Services in writing PRIOR to performing the work.

6. Boring/Trenchless Installations: PG&E Pipeline Services must review and approve all plans to bore across or parallel to (within 10 feet) a gas transmission pipeline. There are stringent criteria to pothole the gas transmission facility at regular intervals for all parallel bore installations.

For bore paths that cross gas transmission pipelines perpendicularly, the pipeline must be potholed a minimum of 2 feet in the horizontal direction of the bore path and a minimum of 12 inches in the vertical direction from the bottom of the pipe with minimum clearances measured from the edge of the pipe in both directions. Standby personnel must watch the locator trace (and every ream pass) the path of the bore as it approaches the pipeline and visually monitor the pothole (with the exposed transmission pipe) as the bore traverses the pipeline to ensure adequate clearance with the pipeline. The pothole width must account for the inaccuracy of the locating equipment.

7. Substructures: All utility crossings of a gas pipeline should be made as close to perpendicular as feasible (90° +/- 15°). All utility lines crossing the gas pipeline must have a minimum of 12 inches of separation from the gas pipeline. Parallel utilities, pole bases, water line 'kicker blocks', storm drain inlets, water meters, valves, back pressure devices or other utility substructures are not allowed in the PG&E gas pipeline easement.

If previously retired PG&E facilities are in conflict with proposed substructures, PG&E must verify they are safe prior to removal. This includes verification testing of the contents of the facilities, as well as environmental testing of the coating and internal surfaces. Timelines for PG&E completion of this verification will vary depending on the type and location of facilities in conflict.

8. Structures: No structures are to be built within the PG&E gas pipeline easement. This includes buildings, retaining walls, fences, decks, patios, carports, septic tanks, storage sheds, tanks, loading ramps, or any structure that could limit PG&E's ability to access its facilities.

9. Fencing: Permanent fencing is not allowed within PG&E easements except for perpendicular crossings which must include a 16 foot wide gate for vehicular access. Gates will be secured with PG&E corporation locks.

10. Landscaping: Landscaping must be designed to allow PG&E to access the pipeline for maintenance and not interfere with pipeline coatings or other cathodic protection systems. No trees, shrubs, brush, vines, and other vegetation may be planted within the easement area. Only those plants, ground covers, grasses, flowers, and low-growing plants that grow unsupported to a maximum of four feet (4') in height at maturity may be planted within the easement area.

11. Cathodic Protection: PG&E pipelines are protected from corrosion with an "Impressed Current" cathodic protection system. Any proposed facilities, such as metal conduit, pipes,

Pacific Gas and Electric Company

service lines, ground rods, anodes, wires, etc. that might affect the pipeline cathodic protection system must be reviewed and approved by PG&E Corrosion Engineering.

12. Pipeline Marker Signs: PG&E needs to maintain pipeline marker signs for gas transmission pipelines in order to ensure public awareness of the presence of the pipelines. With prior written approval from PG&E Pipeline Services, an existing PG&E pipeline marker sign that is in direct conflict with proposed developments may be temporarily relocated to accommodate construction work. The pipeline marker must be moved back once construction is complete.

13. PG&E is also the provider of distribution facilities throughout many of the areas within the state of California. Therefore, any plans that impact PG&E's facilities must be reviewed and approved by PG&E to ensure that no impact occurs which may endanger the safe operation of its facilities.

Pacific Gas and Electric Company

Attachment 2 – Electric Facilities

It is PG&E's policy to permit certain uses on a case by case basis within its electric transmission fee strip(s) and/or easement(s) provided such uses and manner in which they are exercised, will not interfere with PG&E's rights or endanger its facilities. Some examples/restrictions are as follows:

1. Buildings and Other Structures: No buildings or other structures including the foot print and eave of any buildings, swimming pools, wells or similar structures will be permitted within fee strip(s) and/or easement(s) areas. PG&E's transmission easement shall be designated on subdivision/parcel maps as "**RESTRICTED USE AREA – NO BUILDING.**"

2. Grading: Cuts, trenches or excavations may not be made within 25 feet of our towers. Developers must submit grading plans and site development plans (including geotechnical reports if applicable), signed and dated, for PG&E's review. PG&E engineers must review grade changes in the vicinity of our towers. No fills will be allowed which would impair ground-to-conductor clearances. Towers shall not be left on mounds without adequate road access to base of tower or structure.

3. Fences: Walls, fences, and other structures must be installed at locations that do not affect the safe operation of PG&'s facilities. Heavy equipment access to our facilities must be maintained at all times. Metal fences are to be grounded to PG&E specifications. No wall, fence or other like structure is to be installed within 10 feet of tower footings and unrestricted access must be maintained from a tower structure to the nearest street. Walls, fences and other structures proposed along or within the fee strip(s) and/or easement(s) will require PG&E review; submit plans to PG&E Centralized Review Team for review and comment.

4. Landscaping: Vegetation may be allowed; subject to review of plans. On overhead electric transmission fee strip(s) and/or easement(s), trees and shrubs are limited to those varieties that do not exceed 15 feet in height at maturity. PG&E must have access to its facilities at all times, including access by heavy equipment. No planting is to occur within the footprint of the tower legs. Greenbelts are encouraged.

5. Reservoirs, Sumps, Drainage Basins, and Ponds: Prohibited within PG&E's fee strip(s) and/or easement(s) for electric transmission lines.

6. Automobile Parking: Short term parking of movable passenger vehicles and light trucks (pickups, vans, etc.) is allowed. The lighting within these parking areas will need to be reviewed by PG&E; approval will be on a case by case basis. Heavy equipment access to PG&E facilities is to be maintained at all times. Parking is to clear PG&E structures by at least 10 feet. Protection of PG&E facilities from vehicular traffic is to be provided at developer's expense AND to PG&E specifications. Blocked-up vehicles are not allowed. Carports, canopies, or awnings are not allowed.

7. Storage of Flammable, Explosive or Corrosive Materials: There shall be no storage of fuel or combustibles and no fueling of vehicles within PG&E's easement. No trash bins or incinerators are allowed.

8. Streets and Roads: Access to facilities must be maintained at all times. Street lights may be allowed in the fee strip(s) and/or easement(s) but in all cases must be reviewed by PG&E for

Pacific Gas and Electric Company

proper clearance. Roads and utilities should cross the transmission easement as nearly at right angles as possible. Road intersections will not be allowed within the transmission easement.

9. Pipelines: Pipelines may be allowed provided crossings are held to a minimum and to be as nearly perpendicular as possible. Pipelines within 25 feet of PG&E structures require review by PG&E. Sprinklers systems may be allowed; subject to review. Leach fields and septic tanks are not allowed. Construction plans must be submitted to PG&E for review and approval prior to the commencement of any construction.

10. Signs: Signs are not allowed except in rare cases subject to individual review by PG&E.

11. Recreation Areas: Playgrounds, parks, tennis courts, basketball courts, barbecue and light trucks (pickups, vans, etc.) may be allowed; subject to review of plans. Heavy equipment access to PG&E facilities is to be maintained at all times. Parking is to clear PG&E structures by at least 10 feet. Protection of PG&E facilities from vehicular traffic is to be provided at developer's expense AND to PG&E specifications.

12. Construction Activity: Since construction activity will take place near PG&E's overhead electric lines, please be advised it is the contractor's responsibility to be aware of, and observe the minimum clearances for both workers and equipment operating near high voltage electric lines set out in the High-Voltage Electrical Safety Orders of the California Division of Industrial Safety (https://www.dir.ca.gov/Title8/sb5g2.html), as well as any other safety regulations. Contractors shall comply with California Public Utilities Commission General Order 95 (http://www.cpuc.ca.gov/gos/GO95/go_95_startup_page.html) and all other safety rules. No construction may occur within 25 feet of PG&E's towers. All excavation activities may only commence after 811 protocols has been followed.

Contractor shall ensure the protection of PG&E's towers and poles from vehicular damage by (installing protective barriers) Plans for protection barriers must be approved by PG&E prior to construction.

13. PG&E is also the owner of distribution facilities throughout many of the areas within the state of California. Therefore, any plans that impact PG&E's facilities must be reviewed and approved by PG&E to ensure that no impact occurs that may endanger the safe and reliable operation of its facilities.

Response to Letter C: Pacific Gas & Electric Company

Response C-1: This comment serves as an introduction to the comment letter. The attachments provided in this comment letter have been forwarded to the City and Project applicant for their information. This comment is noted. No further response is necessary.

Response C-2: The commenter notes that: the Pacific Gas & Electric (PG&E) plan review process does not replace the application process for PG&E gas or electric service that maybe required for the Project; if a project is being submitted as part of a larger project, the entire scope and PG&E facilities should be included in the CEQA document; and, an engineering deposit may be required to review plans for a project. While this comment does not address the adequacy of the Draft EIR, the commenter is referred to Draft EIR Chapter 2.0 (Project Description), which identifies existing conditions, including known PG&E facilities on the Project site, and Section 3.9 (Land Use), which addresses the Project's consistency with various land use regulations, including regulations associated with electrical transmission lines, under Impact 3.9-1. This comment letter and the associated attachments have been provided to the City and Project applicant for their information. This comment does not address the adequacy of the Draft EIR. No further response is necessary.

Response C-3: The commenter notes that any proposed uses within the PG&E fee strip and/or easement, may include a CPUC Section 851 filing. This requires the CPUC to render approval for a conveyance of rights for specific uses on PG&E's fee strip or easement. PG&E will advise if the necessity to incorporate a CPUC Section 851 filing is required. This comment letter and the associated attachments have been provided to the City and Project applicant for their information. This comment does not address the adequacy of the Draft EIR. No further response is necessary.

DWMR
SACRAMENTO COUNTY
DEPARTMENT OF WASTE MANAGEMENT & RECYCLING
DOING WHAT MATTERS, RESPONSIBLY.

County of Sacramento
Public Works & Infrastructure
Department of Waste Management & Recycling

Doug Sloan, Director

Date: September 21, 2019

To: June Cowles, City of Rancho Cordova Planning Department

From: Dave Ghirardelli, County of Sacramento Department of Waste Management & Recycling (DWMR)

SUBJECT: DWMR Comments on The Ranch DEIR

Please find below DWMR's comments regarding this Draft Environment Impact Report. D-1

Section 3.14.3 Solid Waste

This section contains incorrect information. The first three paragraphs of the Existing Settings subsection indicate Rancho Cordova's waste is transported to Kiefer Landfill. It is not. Republic Services transports Rancho Cordova's residential solid waste to Elder Creek Transfer Station in south Sacramento where it is transferred and hauled an additional 51 miles to Forward Landfill in San Joaquin County. Section 3.6 (Greenhouse Gases, Climate Change, and Energy) and Section 3.13 (Transportation and Circulation) should be reviewed for potential recalculations or reconsiderations. D-2

While Kiefer Landfill currently operates below its permitted maximum, Rancho Cordova has not secured any current or future disposal capacity at Kiefer Landfill. The Impacts and Mitigation Measures subsection needs to be revised to accurately reflect current practices in consideration of the capacity provision in Threshold of Significance number 1.

Lastly, the California Green Building Standards Code (CalGreen) diversion requirement is now 65%, not 50%.

Proximity of Kiefer Landfill

DWMR owns and operates Kiefer Landfill approximately two miles from the proposed development. Kiefer Landfill has served the waste disposal needs of residents and businesses in Sacramento County since 1968 and will continue to do so until approximately 2070 when the permitted capacity is projected to be completed. Kiefer Landfill is a highly engineered, state-of-the-art facility that is strictly regulated and professionally operated. Waste is tipped, set in place, compacted, and covered on a daily basis. As the waste decomposes the landfill gas that is generated is collected and delivered to a 15 megawatt power plant on-site which delivers D-3

9850 Goethe Road, Sacramento CA, 95827 Phone: (916) 875-6789 Fax: (916) 854-8901

electricity to approximately 10,000 homes in Sacramento. Even with the best technology and practices, the management of solid waste has the potential to produce odors, noise, and dust.

DWMR strongly recommends this development include as a condition of entitlement that all parcels, existing and subsequent, be accompanied by a Kiefer Landfill Disclosure, signed by the seller and the buyer. The Disclosure must be recorded on all deeds and written to the following effects: (1) Acknowledging the preexistence and proximity of Kiefer Landfill; (2) Solid waste disposal is a permitted activity at Kiefer Landfill; and (3) Solid waste management practices will sometimes unavoidably create odors, noise, and dust. Sample Disclosures can be provided upon request. D-3 cont'd

Per the comment submittal instructions in the Notice of Availability for this DEIR, a printed copy of this memorandum has been mailed via US Mail to the address indicated.

Thank you for the opportunity to comment on The Ranch DEIR and please keep me informed of events, especially comment deadlines, throughout the process of entitlement for The Ranch. D-4

C: Doug Sloan, Director
Keith Goodrich
Tim Israel

Response to Letter D: Sacramento County Department of Waste Management & Recycling

Response D-1: This comment serves as an introduction to the comment letter and does not warrant a response. This comment is noted. No further response is necessary.

Response D-2: The commenter provides updated information regarding the information in Section 3.14.3 of the Draft EIR. The commenter also requests that the impacts and mitigation measures subsection be revised to reflect the current practices in consideration of the capacity provisions. This comment is noted. The information in Draft EIR Section 3.14.3 has been revised, including the impacts and mitigation measures section, to reflect the information provided by the commenter. Please see Chapter 3.0 of this Final EIR for the revised text.

Additional revisions to other sections of the Draft EIR are not warranted as a result of this comment. Construction waste and debris resulting from the Project would likely go to the nearest landfill, regardless of which landfill is currently used by the City's residential waste collection provider. As such, a change in construction traffic would likely not occur as a result. Because modeled air quality and greenhouse gas emissions for construction are directly related to the number of construction trips, the construction-related air quality and greenhouse gas emissions would also not occur.

For operation of the Project, the transportation analysis completed for the Draft EIR does not include analysis for solid waste disposal that is based on a specific landfill location. Instead, the hauling of waste is embodied within the trip generation rate for various land uses published by the Institute of Transportation Engineers (ITE) Trip Generation Manual. In addition to trip generation rates, the air quality and greenhouse gas analysis also includes average fleet mixes (i.e., ratio of automobiles, heavy duty trucks, medium duty trucks, etc.) for various land uses, including both residential and non-residential. The fleet mixes in the air quality and greenhouse gas emissions modeling software (CalEEMod) are provided by the EMFAC Web Database, which is published by the California Air Resources Board. As such, the hauling of waste, and the associated medium duty trucks (classified as Heavy-Heavy Duty Diesel Solid Waste Collection Trucks by the EMFAC Vehicle Categories) required to haul the waste is not dependent on the location of the landfill, and the hauling of waste from the site is built into the transportation, air quality, and greenhouse gas analysis completed for the Project.

Response D-3: The commenter notes various facts regarding the Kiefer Landfill, which is owned and operated by the County Department of Waste Management & Recycling. The comment also recommends that the Project include as a condition of entitlement that all parcels, existing and subsequent, be accompanied by a Kiefer Landfill Disclosure, signed by the seller and the buyer. According to the commenter, the Disclosure must be recorded on all deeds and written to the following effects: (1) Acknowledging the preexistence and proximity of Kiefer Landfill; (2) Solid waste disposal is a permitted activity at Kiefer Landfill; and (3) Solid waste management practices will sometimes unavoidably create odors, noise, and dust. The commenter's concerns related to Kiefer Landfill operations address impacts of the environment on the Project. As a general rule, CEQA does not apply to impacts of the environment on a project but rather addresses a project's impact on the environment (California Building Industry Assoc. v. Bay Area Air Quality Management District (2015) 62 Cal. 4th 369). Therefore, the Draft EIR is not required to address exposure of the Project to existing sources of odors. It is noted that impacts associated with particulate matter caused by

dust are addressed in Section 3.2, Air Quality, of the Draft EIR and impacts associated with Project exposure to noise are addressed in Section 3.10, Noise, of the Draft EIR. This comment does not address the adequacy of the Draft EIR and no further response is required.

Response D-4: This comment is noted. This comment serves as a conclusion to the comment letter. No further response is necessary.

City of Rancho Cordova
2729 Prospect Park Drive
Rancho Cordova, CA 95670

SUBJECT: COMMENTS ON THE RANCH DRAFT ENVIRONMENTAL REPORT

Ms. Whitman:

The County of Sacramento, Department of Transportation has reviewed the Draft Environmental Impact Report (DEIR) for The Ranch project. We appreciate the opportunity to review the DEIR, and have following comment.

1. The County would ask the City of Rancho Cordova to enter into a reciprocal funding agreement to pay fair share cost for the cross jurisdictional impacts.

Response to Letter E: Sacramento County Department of Transportation

Response E-1: The commenter requests that the City of Rancho Cordova enter into a reciprocal funding agreement with the County to pay fair share costs for the cross-jurisdictional impacts. The City has a Master Operations Agreement with the County and will enter into a reciprocal funding agreement with the County to address the improvements identified in Draft EIR Section 3.13, particularly the fair-share of improvements identified in Mitigation Measures 3.13-1 and 3.13-2.

SACRAMENTO METROPOLITAN AIR QUALITY MANAGEMENT DISTRICT

September 30, 2019

SENT VIA EMAIL

June Cowles, Senior Planner
City of Rancho Cordova Planning Department
2729 Prospect Park Drive
Rancho Cordova, California 95670

RE: The Ranch – Draft Environmental Impact Report

Dear Ms. Cowles,

The Sacramento Metropolitan Air Quality Management District (SMAQMD) thanks the City of Rancho Cordova for the opportunity to evaluate The Ranch Draft Environmental Impact Report (DEIR). We have reviewed the project in a manner consistent with the California Health and Safety Code Section 40961 requirement that the District "represent all the citizens of the Sacramento District in influencing the decisions of other public and private agencies whose actions may have an adverse impact on air quality." We offer the following comments. F-1

Operational Emissions

Greenhouse Gas Emissions

Mitigation measures for Impact 3.6-2 should be quantified in the DEIR text, to demonstrate that they reduce emissions to a less–than–cumulatively–considerable level. Further for all mitigation measures, descriptive text should be as detailed as possible, as stated in SMAQMD's *Guide to Air Quality Assessment in Sacramento County* (Guidance), available on our website. Mitigation measures should clearly identify who is responsible for implementation, funding, monitoring, enforcement, and any required maintenance activities. Most of the measures in the DEIR are from CalEEMod but are not detailed or specific enough to ensure that they provide the same emission reductions assumed for the measure in the model. F-2

Many of the measures are listed as "included in project design," and this should be clarified, since the DEIR project description is unspecific and does not guarantee their implementation. Mitigation measure text should clearly describe where the measures are designated for implementation and monitoring, for example whether they would be included in the *Ranch Special Planning Area Handbook*, or whether they would be included as conditions of approval for all projects built in the Ranch planning area.

CalEEMod guidance refers users to the California Air Pollution Control Officers Association (CAPCOA) guidance, *Quantifying Greenhouse Gas Mitigation Measures* for more detail on the measures. Both CalEEMod and this guidance are resources for fully quantifying

777 12th Street, 3rd Floor | Sacramento, CA 95814-1908
916/874-4800 | 916/874-4899 fax
www.airquality.org

measures. SMAQMD staff would be happy to assist with the process of quantifying measures and providing appropriate specificity. F-2 cont'd

Criteria Pollutant Emissions
Mitigation measures that are incorporated into the DEIR's CalEEMod run should be included in the DEIR as mitigation measures for operational criteria pollutant emissions. This will help ensure that mitigated impacts that are projected in the DEIR reflect actual conditions to the greatest extent possible. *This is particularly important because the mitigation measures greatly affect whether operational NOx emissions exceed the SMAQMD threshold.* Because these measures would largely be the same measures that would be used for operational GHG emissions, this should be a straightforward process. F-3

Additionally, because internal capture rate is applied to the trip rates used in the "Operational-Mobile" portion of the CalEEMod run, the CalEEMod run must also reflect that these trips are all primary trips and not diverted or pass-by trips. Also because of the internal capture rate application, the "Increase Diversity" mitigation measure in CalEEMod should not be included, as it appears to double-count trip reductions. F-4

Moreover, the DEIR CalEEMod run for this project uses 50 g/L, and cites Rule 442 as justification. Rule 442 covers flat coatings only, while other coatings have higher volatile organic compound (VOC) content. The average VOC content for architectural coatings in our district is approximately 75 g/L, and a CalEEMod override of 75 g/L may be an appropriate number to use for architectural coatings in our district; however, to ensure a conservative and fully defensible estimate, you may wish to use the 100 g/L CalEEMod default for the DEIR. F-5

Further, the DEIR CalEEMod override for the consumer products general emission factor is not adequately documented. It is unclear how exactly the 29.10% reduction identified in the CalEEMod parameters was determined. Please note that the general emission factor is based on 2008 statewide VOC emissions data divided by statewide square footage (see Appendix E3 of the *CalEEMod User Guide*). In the absence of a valid, fully documented general emission factor modification, the CalEEMod default should be used. F-6

SMAQMD staff ran CalEEMod for the project, using the higher numbers for VOC content in architectural coatings, removing redundant trip capture settings, and without the general emission factor override for consumer products. Outputs showed project emissions that exceed the SMAQMD threshold of significance for reactive organic gas (ROG) or VOC emissions, even when mitigation measures were incorporated into the CalEEMod run. This run otherwise used project settings as described in Appendix B.1 of the DEIR. With these revised settings, CalEEMod outputs show that this project exceeds SMAQMD thresholds for criteria pollutants, and the DEIR should provide for mitigation accordingly. F-7

Construction Emissions
Because construction greenhouse gas (GHG) emissions will exceed SMAQMD thresholds, the measures in SMAQMD's *Guidance for Construction GHG Emissions Reductions* should be F-8

included as mitigation. It is true that the SMAQMD guidance on CEQA review references amortizing the construction emissions along with the operational emissions prior to applying mitigation. Operational GHGs are significant, however, and including the guidance on construction GHG emissions reductions as mitigation would provide for more solidly admissible GHG impact mitigation. F-8 cont'd

Further, SMAQMD's *Basic Construction Emission Control Practices* (BCECP), available on our website, should be explicitly included as mitigation for construction criteria pollutant emissions. Construction criteria pollutant emissions were modeled incorporating best management practices, and including BCECP will help ensure that emissions that are projected in the DEIR reflect actual conditions to the greatest extent possible. F-9

Toxics and Sensitive Receptors
The analysis of potential to expose sensitive receptors to toxic air contaminants references the California Air Resources Board (CARB) *Air Quality and Land Use Handbook*. We recommend that the DEIR also reference more recent guidance, CARB's 2017 *Strategies to Reduce Air Pollution Exposure Near High-Volume Roadways*. F-10

Conclusion
Thank you for your consideration. All projects are subject to SMAQMD rules and regulations at the time of construction. A list of the most common rules that apply at the construction phase of projects is available on our website. If you have questions about these comments, please contact me at mwright@airquality.org or 916-874-4207 F-11

Sincerely,

Molly Wright

Molly Wright, AICP
Air Quality Planner / Analyst

c: Paul Philley, AICP, Program Coordinator

Response to Letter F: Sacramento Metropolitan Air Quality Management District

Response F-1: This comment serves as an introduction to the comment letter and does not warrant a response. This comment is noted. No further response is necessary.

Response F-2: The commenter recommends that mitigation measures for Impact 3.6-2 should be quantified in the DEIR text, to demonstrate that they reduce emissions to a less-than-cumulatively—considerable level and that descriptive text for all mitigation measures should be as detailed as possible, as stated in SMAQMD's Guide to Air Quality Assessment in Sacramento County (Guidance). The commenter further states that mitigation measures should clearly identify who is responsible for implementation, funding, monitoring, enforcement, and any required maintenance activities and addresses providing adequate detail to support the use of the mitigation measures. The commenter also indicates that measures listed as "included in project design" should be clarified since the Draft EIR project description is unspecific and does not guarantee their implementation. The commenter indicates that mitigation measure text should clearly describe where the measures are designated for implementation and monitoring, for example whether they would be included in the SPA Handbook, or whether they would be included as conditions of approval for all projects built in The Ranch Planning Area. The commenter further indicates that CalEEMod guidance refers users to the California Air Pollution Control Officers Association (CAPCOA) guidance, Quantifying Greenhouse Gas Mitigation Measures for more detail on the measures, indicating both CalEEMod and the CAPCOA guidance are resources for fully quantifying measures.

Based on this comment, more detail is provided regarding the assumptions associated with Project features (see revisions to Draft EIR pages 3.6-25 and 3.6-26 in Chapter 3, Revisions). Project features that have been identified as measures that reduce potential air pollutant or greenhouse gas emissions are features that are shown on the tentative subdivision map, specified in the SPA Handbook, or are a calculation based on the location of the Project. As plans for subsequent phases of the Project are submitted to the City, each set of plans will be reviewed for consistency with the tentative subdivision map, SPA Handbook, and the Project Description provided in the Draft EIR.

Table 3.6-7 in Draft EIR Section 3.6, is revised as identified in Chapter 3, Revisions, of this Final EIR to include the numerical GHG emissions estimate for the Project emissions and Project emissions after mitigation to demonstrate the reduction in emissions associated with application of the proposed mitigation measures. The revisions to Table 3.6-7 also address the amount of carbon offset required to meet the SMAQMD's 1,100 MT CO_2e/year threshold (i.e. reduce emissions to a less-than cumulatively considerable level).

Regarding quantification of individual mitigation applied in CalEEMod, CalEEMOD (v.2016.3.2) is the modeling tool utilized to develop the quantification of Project emissions estimates (including for both the unmitigated and mitigated scenarios). The reductions in GHG emissions that occur from implementation of the Project mitigation measures (as provided in Draft EIR Section 3.6 (Greenhouse Gases, Climate Change, and Energy) have been performed using CalEEMOD based on the SMAQMD Guidance document (i.e. SMAQMD's *Guide to Air Quality Assessment in Sacramento County*) as well as the *SMAQMD's Sacramento Metropolitan Air Quality Management District Tips for Using CalEEMod* and through early discussion with the SMAQMD (Molly Wright, Air Quality Planner Analyst). Quantification of each individual mitigation measure separately is not feasible, given that the modeling tool (CalEEMod) quantifies the impact of each mitigation measure internally within the model, and modeling outputs do not provide results identifying the individual

reduction associated with each mitigation measure. Rather, emission results are provided by CalEEMOD for each scenario in aggregate. The impact analysis in Draft EIR Section 3.6 identifies anticipated emissions associated with the Project and the effect of implementation of mitigation to reduce Project emissions, based on the CalEEMOD tool. This analysis is adequate to provide decision-makers with information regarding the effect of the mitigation measure identified in the Draft EIR.

The results of the CalEEMod modeling for the mitigated scenario is provided in Draft EIR Table 3.6-6 and Table 3.6-7 and detailed GHG emissions modeling results for each modeling scenario are provided in Appendix B of the Draft EIR, as shown in Chapter 3.0, Revisions, of this Final EIR.

Table 3.6-8 in Draft EIR Section 3.6 (Greenhouse Gases, Climate Change, and Energy) lists each GHG Reduction Measure (as part of Mitigation Measure 3.6-3) that is required to be implemented by the Project applicant, as applicable. Table 3.6-8 includes the name of the GHG Reduction Measure, its applicability to the Project, and implementation details. Funding and maintenance of each applicable GHG Reduction Measure is the responsibility of the Project applicant, and the monitoring and enforcement is the responsibility of the City (the lead agency). Moreover, the Mitigation Monitoring and Reporting Program (MMRP) included as part of this Final EIR details all of the requirements for each of the applicable GHG reduction measures included as part of Mitigation Measure 3.6-3.

Mitigation Measure 3.6-3 includes 1) Project features that are already incorporated into Project design, 2) additional measures that are applied to the Project, and 3) the purchase of carbon offsets to reduce Project GHG emissions to below the applicable SMAQMD threshold of 1,100 MT CO_2e/year. Each measure that is considered a Project feature and is incorporated into the Project description is reflected on the Project application materials, which include the Tentative Subdivision Map and the SPA Handbook. The revisions to Draft EIR Table 3.6-8, as provided in Chapter 3, Revisions, include additional details where necessary to identify how the measure is incorporated into the Project (e.g., included in the SPA Handbook, shown on the tentative subdivision map, or how the measure will be applied when applicable as the Project is developed). As described in the MMRP and in the language of the mitigation measure, it is the responsibility of the Project applicant to implement and demonstrate compliance with the measure and the City is responsible for monitoring and enforcing the measures. In addition, the SPA Handbook has been updated to identify the incorporation of applicable project components into the Project design, consistent with the CalEEMod GHG Reduction Measures contained within Mitigation Measure 3.6-3.

Lastly, with regard to CAPCOA guidance – the CAPCOA's *Quantifying Greenhouse Gas Mitigation Measures* calculation methodology for the applicable GHG Reduction Measures is incorporated into the CalEEMod model. Therefore, a separate calculation of the quantification of the GHG Reduction Measures included in Mitigation Measure 3.6-1 following CAPCOA guidance would be redundant to the quantification that CalEEMod already provides as shown within the Draft EIR in Section 3.6 (Greenhouse Gases, Climate Change, and Energy). No further response is required.

Response F-3: The commenter recommends that mitigation measures that are incorporated into the Draft EIR CalEEMod run should be included in the Draft EIR as mitigation measures for operational criteria pollutant emissions, helping to ensure that mitigated impacts projected in the Draft EIR reflect actual conditions to the greatest extent possible. The commenter indicates that this is particularly important because the mitigation measures greatly affect whether operational NOx emissions

exceed the SMAQMD threshold. Because these measures would largely be the same measures that would be used for operational GHG emissions, this should be a straightforward process.

The commenter correctly identifies that Project features that are already incorporated into Project design are considered under the unmitigated scenarios within Section 3.6 (Greenhouse Gases, Climate Change, and Energy). However, as stated within the Draft EIR, and as previously stated in Response F-2, a number of project features that are considered as "mitigation measures" by CalEEMod are in fact already incorporated into Project design. The features are proposed as part of the Project and while CalEEMOD uses the term "mitigation" in relation to determining reductions in emissions associated with these features, the Project components are not mitigation but are part of the Project Description, as identified in Chapter 2.0 of the Draft EIR and as revised in Chapter 3, Revisions, of this Final EIR. Additional information regarding these Project features has been provided in Sections 3.2 and 3.6 of the Draft EIR, as revised in Chapter 3.0 of this Final EIR. The additional information includes references to the component of the Project that includes or depicts the features, such as features shown on the Tentative Subdivision Map or features identified in the SPA Handbook. An 'unmitigated' CalEEMOD scenario that does not include all features that are proposed as part of the Project would provide incorrect data and information regarding the potential effects of the Project and is not an appropriate scenario to use as such a scenario would not accurately depict the Project, as proposed by the applicant. Therefore, to ensure that actual conditions are reflected to the greatest extent possible, Project features that are already incorporated into Project design, as described in Draft EIR Chapter 2.0, Project Description, are considered to be included under the 'unmitigated scenario', which reflects emissions associated with the Project as proposed by the applicant, as opposed to the 'mitigated scenario', which reflects mitigation measures identified by the City through the CEQA process to further avoid, minimize, or reduce the potential impact.

The Project, as proposed, would not generate emissions that exceed the thresholds for criteria pollutants as discussed under Draft EIR Impact 3.2-1. All Project components that reduce Project emissions are identified in Draft EIR Chapter 2.0, as well as Draft EIR pages 3.2-29 and 3.2-30. As individual phases or components of the Project move forward, each phase and component will be reviewed for consistency with the Project as addressed in the Draft EIR. Should the Project propose a change to the Project features, the City will determine whether the requested modification requires additional analysis and will proceed with reviewing the modification consistent with the requirements of CEQA. As discussed under Response F-2, Project features that reduce potential impacts are either shown on the Tentative Subdivision Map, identified in the SPA Handbook, or are standards required by SMAQMD. As previously described, the Project as proposed and described in the Project Description, would not exceed the SMAQMD thresholds for criteria pollutants. No mitigation is required and no changes to the Draft EIR are warranted in response to this comment.

Response F-4: The commenter indicates that because an internal capture rate is applied to the trip rates used in the "Operational-Mobile" portion of the CalEEMod run, the CalEEMod run must also reflect that these trips are all primary trips and not diverted or pass-by trips. Also because of the internal capture rate application, the "Increase Diversity" mitigation measure in CalEEMod should not be included, as it appears to double-count trip reductions.

Based on this comment, we have updated the CalEEMod modeling to remove the extraneous calculation of applying the internal capture rate to the Project's operational mobile emissions. Additionally, we have removed the "Increase Diversity" mitigation measure, to ensure that the

model would not double-count trip reductions from this measure. See the updated CalEEMod modeling results provided in Chapter 3.0, Revisions, for further detail.

Response F-5: The commenter indicates that while the Draft EIR CalEEMod run for the project uses 50 g/L, and cites Rule 442 as justification for volatile organic compound (VOC) content associated with architectural coatings, Rule 442 covers flat coatings only, while other coatings have higher VOC content. The commenter indicates that the average VOC content for architectural coatings in the district is approximately 75 g/L, and a CalEEMod override of 75 g/L may be an appropriate number to use for architectural coatings in the district. The commenter states that to ensure a conservative and fully defensible estimate, "you may wish to use the 100 g/L CalEEMod default for the Draft EIR" but does not provide any details substantiating the use of 100g/L as an assumption.

Based on this comment, the CalEEMod modeling was revised to reflect an average architectural coating VOC content level of 75 g/L, consistent with the average rate for architectural coatings within the SMAQMD jurisdictional boundaries. See the updated CalEEMod modeling results provided in Chapter 3.0, Revisions, for further detail.

Response F-6: The commenter states that the CalEEMod override used in the Draft EIR for the consumer products general emission factor is not adequately documented, noting that it is unclear how exactly the 29.10% reduction identified in the CalEEMod parameters are determined and also notes that the general emission factor is based on 2008 statewide VOC emissions data derived by statewide square footage (citing Appendix E3 of the CalEEMod User Guide) and recommends that, in the absence of a valid, fully documented general emission factor modification, the CalEEMod default should be used.

The Draft EIR CalEEMod override for the consumer products general emission factor was reviewed to determine if adjustments were required. This factor was derived based on the combination of two adjustments, which were made consistent with the guidance provided with the CalEEMod User's Guide Appendix E: Technical Source Documentation. First, an adjustment to this factor was made to reflect updated consumer products general emission values. Specifically, the default consumer products general emission factor for California within CalEEMod relies on outdated (year 2008) data from CARB. More recent data (for year 2016) for this factor is available from CARB.[1] This data demonstrates that the State of California has seen a reduction in VOC products emission rates from 2008 to 2016, from 239.6 g/L to 208.7 g/L. This is equivalent to a reduction of approximately 12.9% for consumer products VOC emission rates and it is appropriate to reflect this more recent data. The second adjustment to this factor was made because the Project has a substantially lower persons per dwelling unit value as compared with the factor used within the CalEEMod default factor (which refers to a factor relevant for the State of California as a whole). Specifically, the State of California persons per dwelling unit factor used by CalEEMod is 2.97 for Year 2018.[2] However, the person per dwelling unit factor for the Project is approximately 2.50; the lower average persons per dwelling unit is a result of the age-restricted component of the Project, which will have smaller household sizes than non-restricted units. The reduction in the Project population (or average persons per dwelling unit) results in a reduction in the VOC emissions that

[1] See CARB's 2016 Emissions Projection data here: https://www.arb.ca.gov/app/emsinv/2017/emssumcat_query.php?F_YR=2012&F_DIV=-4&F_SEASON=A&SP=SIP105ADJ&F_AREA=CA#5

[2] See California Department of Finance, E-5: Population and Housing Estimates for Cities, Counties, and the State.

would occur with the Project. The difference between the Project's average persons per household compared to the default CalEEMod rate equates to a reduction of 18.6%. These two factors, which are documented and substantiated, provides sufficient information to reduce the default CalEEMod consumer general products emission factor by a combined reduction of 29.1%.[3] The application of this reduction to the default CalEEMod factor of 0.0000214 g/L provides a reduced factor of 0.000015173 g/L (applicable specifically to the Project), which was applied within the CalEEMod model. No revision to the Draft EIR is warranted and further response is required.

Response F-7: The commenter states that SMAQMD staff ran CalEEMod for the project, using higher numbers for VOC content in architectural coatings, removing redundant trip capture settings, and without the general emission factor override for consumer products and indicated that the outputs showed project emissions that exceed the SMAQMD threshold of significance for reactive organic gas (ROG) or VOC emissions, even when mitigation measures were incorporated into the CalEEMod run and that the run otherwise used project settings as described in Appendix B.1 of the DEIR. The commenter indicates that, with their revised settings, CalEEMod outputs show that the Project exceeds the SMAQMD threshold for criteria pollutants, and the DEIR should provide for mitigation accordingly.

As previously identified, Project emissions have been remodeled to reflect an updated tentative subdivision map, as well as updates in response to comments provided during the public comment period (including this comment letter provided by the SMAQMD). Based on the revised settings, the remodeled CalEEMod outputs do not show that reactive organic gas (ROG) or VOC emissions exceed the SMAQMD thresholds of significance. This difference in results between the SMAQMD's modeling and the modeling included in this Final EIR is likely primarily due to the use of the average regional VOC content for architectural coating as described in Response F-5 and the continued use of the 29.1% reduction in the consumer products emissions factor as described in Response F-6 differences. See the updated CalEEMod modeling results provided in Chapter 3.0, Revisions, for further detail.

Response F-8: The commenter recommends that the measures in SMAQMD's Guidance for Construction GHG Emissions Reductions should be included as mitigation because construction GHG emissions will exceed SMAQMD thresholds, the measures in SMAQMD's Guidance for Construction GHG Emissions Reductions should be included as mitigation, noting that operational GHGs are significant including the construction GHG emissions guidance would provide for more solidly admissible GHG impact mitigation.

Based on this comment, SMAQMD's *Guidance for Construction GHG Emissions Reductions* and SMAQMD's Basic Construction Emission Control Practices (BCECP) have been incorporated as mitigation under Draft EIR Section 3.6, Impact 3.6-1 (see Chapter 3.0, Revisions, for further detail).

[3] It should be noted that two reduction adjustments are multiplicative. That is, the total reduction of 29.1% was derived by reducing the default consumer general products emission factor of 0.0000214 g/L by the first factor of 12.9% (this results in a partially modified factor of 0.00001864 g/L), and then reducing this partially modified factor of 0.00001864 g/L by the second factor of 18.6% (ultimately resulting in a factor of final adjusted factor of 0.000015173 g/L). This multiplicative approach is appropriate because the two reduction factors 12.9% and 18.6% are dependent on each other. This is because the reduced VOC consumer general products emissions factor, which reduces emissions per person by 12.9%, relies on a reduced number of assumed persons – by 18.6% - as provided by the second factor, when compared to the CalEEMod default consumer general products emission factor).

Moreover, Mitigation Measures 3.6-1 and 3.6-2 requires the Project to follow best management practices (BMPs) for reducing GHG and criteria air pollutant emissions from construction projects, which would also reduce criteria pollutant emissions. This would further reduce construction related emissions beyond what was reported in the DEIR. No further comment is warranted.

Response F-9: The commenter indicates that SMAQMD's Basic Construction Emission Control Practices (BCECP), available on their website, should be explicitly included as mitigation for construction criteria pollutant emissions, noting that construction criteria pollutant emissions were modeled incorporating best management practices, and including BCECP will help ensure that emissions that are projected in the Draft EIR reflect actual conditions to the greatest extent possible.

The construction emissions discussed under Draft EIR Section 3.2, Impact 3.2-1 were modeled incorporating best management practices as discussed on page 3.2-34 of the Draft EIR. To ensure that the best management practices, including the recommended BCECP, are adhered to throughout Project construction, Mitigation Measure 3.6-2 has been added to the Draft EIR, as shown in Chapter 3.0, Revisions, of this Final EIR. It is noted that SMAQMD's BCECP include measures beyond those modeled in CalEEMOD and would further reduce construction-related emissions beyond what was reported in the Draft EIR.

Response F-10: The commenter requests that more recent guidance is referenced under the analysis of the Project's potential to expose sensitive receptors to toxic air contaminants. The commenter states correctly that the analysis within the DEIR references the California Air Resources Board (CARB) *Air Quality and Land Use Handbook*. The commenter requests that that the DEIR also reference the CARB's 2017 *Strategies to Reduce Air Pollution Exposure Near High-Volume Roadways*. Therefore, we have updated the Drat EIR to include a reference to the more recent CARB document (the CARB's 2017 *Strategies to Reduce Air Pollution Exposure Near High-Volume Roadways*). It is noted that the Project is not located near a high-volume roadway. See Chapter 3.0, Revisions, for detail on the specific changes made to reflect this comment.

Response F-11: The commenter provides closing remarks and indicates that all projects are subject to SMAQMD rules and regulations at the time of construction. This comment is noted and does not necessitate any revision to the Draft EIR.

Powering forward. Together.

SMUD®

June Cowles
City of Rancho Cordova
2729 Prospect Park Drive
Rancho Cordova, CA 95670

Subject: The Ranch / DEIR / 2018072011

Dear June Cowles,

The Sacramento Municipal Utility District (SMUD) appreciates the opportunity to provide comments on the Draft Environmental Impact Report (DEIR) for the Carli Expansion Mining Use Permit Amendment (Project, SCH 2018072011). SMUD is the primary energy provider for Sacramento County and the proposed Project area. SMUD's vision is to empower our customers with solutions and options that increase energy efficiency, protect the environment, reduce global warming, and lower the cost to serve our region. As a Responsible Agency, SMUD aims to ensure that the proposed Project limits the potential for significant environmental effects on SMUD facilities, employees, and customers. G-1

It is our desire that the Project DEIR will acknowledge any Project impacts related to the following:

- Overhead and or underground transmission and distribution line easements. Please view the following links on smud.org for more information regarding transmission encroachment:
  - https://www.smud.org/en/Business-Solutions-and-Rebates/Design-and-Construction-Services
  - https://www.smud.org/en/Corporate/Do-Business-with-SMUD/Land-Use/Transmission-Right-of-Way G-2
- Utility line routing
- Electrical load needs/requirements
- Energy Efficiency
- Climate Change
- Cumulative impacts related to the need for increased electrical delivery
- The potential need to relocate and or remove any SMUD infrastructure that may be affected in or around the project area

SMUD CSC | 6301 S Street | P.O. Box 15830 | Sacramento, CA 95852-0830 | 1.888.742.7683 | smud.org

More specifically, SMUD would like to have the following details related to the electrical infrastructure incorporated into the project description:

- The DEIR acknowledges the need for electricity. Infrastructure, specifically, transformers that will service this project in addition to neighboring buildings will be required and any existing infrastructure will need to be maintained if areas are developed/redeveloped.
- There are plans of the area to be developed; therefore, there are existing SMUD distribution (12kV), sub-transmission (69kV), and transmission (230kV) facilities within The Ranch project that will need to be maintained if areas are developed/redeveloped.
- Service to this project will require underground facilities throughout the development and may require temporary closure for installment.
- Distribution substations are anticipated in the vicinity of this project.
- No additional sub-transmission routes are anticipated.
- Existing transmission, sub-transmission and distribution line traverses the project site.
- Name correction on page 3.7-1, Section 4.7, from "Sacramento Metropolitan Utilities District" to "Sacramento Municipal Utility District."

G-3

SMUD would like to be involved with discussing the above areas of interest as well as discussing any other potential issues. We aim to be partners in the efficient and sustainable delivery of the proposed Project. Please ensure that the information included in this response is conveyed to the Project planners and the appropriate Project proponents.

Environmental leadership is a core value of SMUD and we look forward to collaborating with you on this Project. Again, we appreciate the opportunity to provide input on this DEIR. If you have any questions regarding this letter, please contact SMUD's Environmental Management Specialist, Jerry Park, at jerry.park@smud.org or 916.732.7406.

G-4

Sincerely,

Nicole Goi

Response to Letter G: Sacramento Municipal Utility District

Response G-1: This comment serves as an introduction to the comment letter and does not warrant a response. This comment is noted. No further response is necessary.

Response G-2: The commenter requests that the Draft EIR acknowledge any Project impacts related to the following:

- Overhead and or underground transmission and distribution line easements.
- Utility line routing
- Electrical load needs/requirements
- Energy Efficiency
- Climate Change
- Cumulative impacts related to the need for increased electrical delivery
- The potential need to relocate and or remove any SMUD infrastructure that may be affected in or around the project area

The overhead and underground transmissions and distribution line easements are discussed throughout the Draft EIR, including but not limited to, Chapter 2.0 (Project Description), Section 3.7 (Hazards and Hazardous Materials), and 3.9 (Land Use). Electrical usage, energy efficiency, and climate change are discussed in Section 3.6 (Greenhouse Gases, Climate Change, and Energy). It is noted that the materials referenced by the commenter related to transmission encroachment were reviewed as part of the preparation of Section 3.9 (Land Use) of the Draft EIR, with the requirements of the SMUD Transmission Guide identified in the Regulatory Framework discussion and analysis of the Project's consistency with the Guide discussed under Impact 3.9-1 (see Electrical Transmission Line Regulations discussion on Draft EIR pages 3.9-13 and 3.9-14).

All cumulative impacts are discussed in Chapter 4.0, Other CEQA-Required Topics. As discussed on pages 4.0-4 through 4.0-6, the Project does not have any peculiar or unique components that would result in a contribution to cumulative impacts that would be greater than those analyzed for the Project site as part of the General Plan EIR; the Project proposes fewer residential units and comparable developed acreage when compared to the assumptions for the Project site evaluated in the General Plan EIR. The Rancho Cordova General Plan EIR determined that implementation of the General Plan, including buildout of the General Plan Planning Area, would result in less than cumulatively considerable cumulative impacts related to electrical, telephone, and cable services. Because the Project does not have any peculiar or unique components that would result in a contribution to cumulative impacts that would be greater than those analyzed for the Project site as part of the General Plan EIR, and because the Project proposes fewer residential units and comparable developed acreage when compared to the assumptions for the Project site evaluated in the General Plan EIR, the Project would not result in increased impacts to this cumulative topic.

The Project is not anticipated to require the relocation or removal of any SMUD infrastructure. No revision to the Draft EIR is warranted in response to this comment.

Response G-3: The commenter requests the following details related to the electrical infrastructure:

- The DEIR acknowledges the need for electricity. Infrastructure, specifically, transformers that will service this project in addition to neighboring buildings will be required and any existing infrastructure will need to be maintained if areas are developed/redeveloped.

- There are plans of the area to be developed; therefore, there are existing SMUD distribution (12kV), sub-transmission (69kV), and transmission (230kV) facilities within The Ranch project that will need to be maintained if areas are developed/redeveloped.
- Service to this project will require underground facilities throughout the development and may require temporary closure for installment.
- Distribution substations are anticipated in the vicinity of this project.
- No additional sub-transmission routes are anticipated.
- Existing transmission, sub-transmission and distribution line traverses the project site.
- Name correction on page 3.7-1, Section 4.7, from "Sacramento Metropolitan Utilities District" to "Sacramento Municipal Utility District."

Infrastructure for electricity, including electrical lines and transformers, would be provided and maintained on-site. Underground facilities and/or distribution substations that are or would likely be required for the Project would be provided in coordination with Project construction. The existing SMUD transmission facilities will be maintained in areas that would be developed as part of the Project and are shown on the Tentative Subdivision Map. The proposed uses in the immediate vicinity of the existing SMUD facilities include the protected preserve area, drainage areas, and open space areas, including open space areas proposed for passive recreation uses. As previously described, the overhead and underground transmissions and distribution line easements are discussed throughout the Draft EIR, including but not limited to, Chapter 2.0 (Project Description), Section 3.7 (Hazards and Hazardous Materials), and 3.9 (Land Use). The Project's need for electricity, as well as energy-efficiency and potential impacts associated with climate change, are addressed in Chapter 2.0 (Project Description) and Section 3.6 (Greenhouse Gases, Climate Change, and Energy) of the Draft EIR.

Additionally, the requested name correction is shown in Chapter 3.0 of this Final EIR.

Response G-4: The commenter notes that SMUD would like to be involved in discussing the areas of interest outlined in Comments G-2 and G-3, and that information included in this response is conveyed to the SMUD project planners and appropriate project components. This comment is noted. As requested, the information in this response letter will be conveyed to SMUD. This comment serves as a conclusion to the comment letter. No further response is necessary.

MIWOK MAIDU United Auburn Indian Community of the Auburn Rancheria

Subject: Notice of Availability of the Draft Environmental Impact Report for The Ranch Residential Development, Rancho Cordova, California

Dear June Cowles,

Thank you for providing notification of the Draft Environmental Impact Report regarding the above referenced project. The United Auburn Indian Community (UAIC) of the Auburn Rancheria is comprised of Miwok and Southern Maidu (Nisenan) people whose tribal lands are within Placer County and whose areas of interest based on past lifeways extend into El Dorado, Nevada, Placer, Sacramento, Sutter, and Yuba counties. The UAIC is concerned about development within its traditional territory that has potential to impact the lifeways, cultural sites, and landscapes that may be of historic, ceremonial, or tribal significance. We appreciate the opportunity to comment on this and other projects in UAIC's geographic area of cultural affiliation.

The Cultural and Tribal Cultural Resources section of the DEIR indicates that no Native American resources were observed in the Project area and that UAIC closed consultation, requested that the Tribe be informed of any changes to the Project, and to be contacted if any tribal cultural resources are discovered in the Project area during ground disturbing activities.

H-1

After reviewing the Draft Environmental Impact Report (DEIR), the following portion of Mitigation Measure 3.4-2 is incorrect and should be revised: *Mitigation Measure 3.4-2: The coroner shall make a recommendation to the landowner or the person responsible for the excavation work, for means of treating or disposing of, with appropriate dignity, the human remains and any associated grave goods, which may include obtaining a qualified archaeologist or team of archaeologists to properly excavate the human remains.*

Pursuant to **California Code of Regulations (CCR), Title 14, Chapter 3, 15064.5 (e),** the coroner does not make recommendations for the treatment or disposing of human remains and associated grave goods. **The most likely descendent may make recommendations to the landowner or the person responsible for the excavation work, for means of treating or disposing of, with appropriate dignity, the human remains and any associated grave goods as provided in Public Resources Code (PRC) Section 5097.98 (CCR 15064.5 (e) (3)).**

H-2

Tribal Office 10720 Indian Hill Road Auburn, CA 95603 (530) 883-2390 FAX (530) 883-2380

MIWOK MAIDU United Auburn Indian Community of the Auburn Rancheria

Gene Whitehouse, Chairman | John L. Williams, Vice Chairman | Calvin Moman, Secretary | Jason Camp, Treasurer | Gabe Cayton, Council Member

Please refer to the cited chapter above in the CCR and the PRC for the legal language and actions to take if Native American Human Remains are encountered. Thank you again for taking these matters into consideration, and for involving the UAIC in the planning process. Please contact Anna M. Starkey, Cultural Regulatory Specialist, at (916) 251-1565 or email at astarkey@auburnrancheria.com if you have any questions. H-3

Sincerely,

Gene Whitehouse,
Chairman

CC: Matthew Moore, Tribal Historic Preservation Officer

Tribal Office 10720 Indian Hill Road Auburn, CA 95603 (530) 883-2390 FAX (530) 883-2380

Response to Letter H: United Auburn Indian Community of the Auburn Rancheria

Response H-1: This comment serves as an introduction to the comment letter. This comment is noted. The commenter also notes that the Cultural and Tribal Resources section of the Draft EIR indicates that no Native American resources were observed in the Project area, and that the United Auburn Indian Community closed consulting, requested that the Tribe be informed of any changes to the Project, and requested to be contacted if any tribal cultural resources are discovered during Project construction. These requirements are included in Mitigation Measure 3.4-1 in Section 3.4 (Cultural and Tribal Cultural Resources) of the Draft EIR. No further response is necessary.

Response H-2: The commenter includes requested revisions to Mitigation Measure 3.4-2 of the Draft EIR pertaining to who makes the recommendation for treatment and disposal of human remains and grave goods. See Chapter 3.0, Revisions, of this Final EIR for the requested revisions to this mitigation measure. It is noted that an additional revision was made to Mitigation Measure 3.4-2 to clarify that both the Native American Heritage Commission and the Shingle Springs Band of Miwok Indians shall be contacted if human remains are discovered that are Native American in origin.

Response H-3: This comment serves as a conclusion to the comment letter and no further response is necessary. This comment is noted.

WALKSACRAMENTO

Rancho Cordova, CA 95670

RE: Draft Environmental Impact Report for The Ranch Project (SCH # 2018072011)

Dear Ms. Cowles:

Thank you for providing WALKSacramento with the opportunity to comment on the Draft Environmental Impact Report for The Ranch project. We have reviewed the DEIR for its analysis of walking and biking impacts and mitigations. I-1

Impact 3.6-2: The Project has the potential to generate operation-related GHGs, either directly or indirectly, that may have a significant effect on the environment (Less than Significant with Mitigation)

The DEIR concludes that the sustainability features and other details of the Project mitigate GHG emissions to a less than significant level. The DEIR states that the sustainability features and Project details that contribute to the GHG emission reductions are detailed in Chapter 2.0, Project Description. There are nine sustainability features listed in the chapter and there are sections describing land uses and circulation, but there doesn't seem to be any sustainability features or project details that explain the efficacy of the mitigations. The individual contributions to GHG emissions reduction for each measure are also not stated. I-2

Mitigation Measure 3.6-1 The Ranch GHG Reduction Plan

LUT-9 Improve Walkability Design: Walkable Street Network This reduction measure states the project "is designed with a walkable street pattern, 123.53 intersections per square mile, multiple bicycle/pedestrian connections, an off-street trail system, and bicycle lanes to encourage walkability." The DEIR indicates that intersections per square mile was the only parameter used to model the project's reduction in GHG emissions. We question whether intersections per square mile figure that was used is appropriate and if it accurately reflects a walkable and bikeable street pattern, though. I-3

The Ranch is composed of three major areas – the single-family residential Parkview, the gated active-adult single-family and multi-family Four Seasons, and the commercial and multi-family Gateway. The street patterns in Parkview and Four Seasons are similar, but the I-4

909 12th Street, Suite #203 • Sacramento, CA 95814 • 916-446-9255
www.walksacramento.org

gating of Four Season will have a significant impact on vehicular and pedestrian circulation. While residents of Four Seasons will have be able to walk throughout both the Four Seasons and Parkview communities, residents of Parkview will be unable to use the street and trail network within Four Seasons. Further, Parkview residents and all other people outside of Four Seasons will be able to walk or bike around only three sides of the Four Seasons community. I-4 cont'd

The difference in connectivity and street network for the two groups of people, those living in Four Seasons and those not living in Four Seasons, suggests that a single measurement of walkable design, i.e. intersections per square mile, will not accurately model the GHG emissions reduction resulting from reduced VMT and corresponding increase in walking and biking.

LUT-4 Improve Destination Accessibility: Project close to regional employment or destination center

This reduction measure is based on the expected reduction of GHG emissions due to fewer miles driven to a downtown or major job center as compared to a typical ITE suburban development. The contribution of replacing auto trips with bicycling will be reduced by the diminished connectivity that results from gating nearly half of the project. The LUT-4 modeling should take this into account and the DEIR should include an explanation of the calculations. I-5

SDT-1 Improve Pedestrian Network: On-site pedestrian access network links all of project internally and externally

The DEIR makes the same statement of applicability for improving the pedestrian network as it does for improving the walkable design. As with LUT-9, the measure's efficacy is diminished by the two different project-wide pedestrian/bike networks – one for Four Seasons residents and one for all others. Barriers are increased, rather than minimized, by the gated community. I-6

SDT-2 Provide Traffic Calming Measures: Projects streets and intersections feature traffic calming features

The DEIR doesn't provide the percentage of streets and intersections with traffic calming improvements, nor does it identify the improvements. I-7

Mitigation Measure 3.13-2: Intersection #9, Grant Line Road at Sunrise Boulevard

This measure would restripe the southbound approach at the intersection. The restriping is described as having hatching and being consistent with Optional Through Right and Right-Turn-Only lane configuration included in Figure 9C-4a (CA) of the California MUTCD. The referenced configuration doesn't have any hatching and may be inappropriate for all but the most experienced and fearless bicyclists. We suggest that the I-8

909 12th Street, Suite #203 • Sacramento, CA 95814 • 916-446-9255
www.walksacramento.org

configuration on sheet 2 of Figure 9C-4a would provide a safer environment for bicyclists as it has a hatched buffer between the bike lane and one travel lane. I-8 cont'd

WALKSacramento is working to support increased physical activity such as walking and bicycling in local neighborhoods as well as helping to create community environments that support walking and bicycling. The benefits include improved physical fitness, less motor vehicle traffic congestion, better air quality, and a stronger sense of cohesion and safety in local neighborhoods. I-9

Sincerely,

Chris Holm
Project Analyst

909 12th Street, Suite #203 • Sacramento, CA 95814 • 916-446-9255
www.walksacramento.org

Response to Letter I: WALKSacramento

Response I-1: This comment serves as an introduction to the comment letter and does not warrant a response. This comment is noted. No further response is necessary.

Response I-2: The commenter notes that there are nine sustainability features and Project details that contribute to the greenhouse gas (GHG) emissions reductions. The commenter also notes that the efficacy of the features and Project details are not explained, and the individual contributions to GHG emissions reduction for each measure are not stated.

See Response F-2 regarding Project features that reduce or minimize impacts and quantification of individual measures.

As described under Response F-2, the California Emissions Estimator Model (CalEEMod) (v.2016.3.2) is the modeling tool utilized to develop the quantification of Project emissions estimates (including for both the unmitigated and mitigated scenarios). The reductions in GHG emissions that occur from implementation of the Project features and additional mitigation measures (as described in Draft EIR *Section 3.6 (Greenhouse Gases, Climate Change, and Energy*) and listed in Draft EIR Table 3.6-8) have been calculated using CalEEMod based on the SMAQMD Guidance document (i.e. SMAQMD's *Guide to Air Quality Assessment in Sacramento County*) as well as the *SMAQMD's Sacramento Metropolitan Air Quality Management District Tips for Using CalEEMod*, and through early phone correspondence with the SMAQMD (Molly Wright, Air Quality Planner Analyst).

CalEEMod relies on calculations from a guidance document entitled *Quantifying Greenhouse Gas Mitigation Measures* (2010), developed by the California Air Pollution Control Officers Associated (CAPCOA). CAPCOA is an Association of Air Pollution Control Officers representing all thirty-five local air quality agencies throughout California. The calculations provided within this guidance document provide the basis for the calculations utilized by CalEEMod when modeling project emissions reductions based on project features and/or via mitigation. The following project features were included in the emissions modeling (via CalEEMod) for the Project, with parameters for modeling identified, and with the specific CAPCOA measure identified in the *Quantifying Greenhouse Gas Mitigation Measures* (2010 identified in brackets:

- Density to 6.66 dwelling units per acre (1,690 dwelling units divided by 253.87 residential acres (gross). [Traffic Mitigation, LUT-1];
- Improve walkability design (a ratio of 144.9 intersections per square mile, as shown on the Tentative Subdivision Map.) [Traffic Mitigation, LUT-9];
- Increase transit accessibility (Project site would include on-site transit facilities for the City's Signature Transit Route as identified in the SPA Handbook) – average distance to transit for Project residents would be approximately 0.25 miles.) [Traffic Mitigation, LUT-5];
- Improve pedestrian network (Project site and connecting off-site. The Project would include pedestrian improvements that provide connectivity between the internal components of the Project, as well as to adjacent existing and future developments. The Project would provide for future connections to an extension of Chrysanthy Boulevard and planned development east of the Project site, a connection to an existing trail located north of the site, connections south of the site via a pedestrian connection at North Campus Road, and connections to the existing and future uses to the west of the site.) [Traffic Mitigation, SDT-1];

- Provide traffic calming measures (50% of streets and intersections with improvements as shown on the Tentative Subdivision Map and identified in the SPA Handbook. Traffic calming features incorporated into the Project include street design features, such as narrower streets, limited single-loaded streets, parking on both sides of the street, posted speed limit signs, planter strips with street trees, and horizontal shifts (lane centerline that curves or shifts), and intersection traffic calming features, including marked crosswalks, count-down signal timers where appropriate, curb extensions, channelization islands, median islands, and tight corner radii.) [Traffic Mitigation, SDT-2];
- Install electric vehicle (EV) charging stations throughout the Project site, such that at least 50% of single-family residences and 5% of parking spaces within the commercial, park and recreation, and multi-family land uses will have EV charging stations, as identified in the SPA Handbook. [Traffic Mitigation SDT-3];
- Expand transit network; the Project will provide a transit stop as provided in the SPA Handbook. [Traffic Mitigation, TST-3];
- Plant a minimum of 2,240 new trees throughout the Project site [4.11.2-Sequestration];
- No hearths, as recommended by the SMAQMD in the *SMAQMD Tips for Using CalEEMod* (February 2019.) [Area Mitigation];
- Use low-VOC paint for architectural coatings (75 EF g/L) (Note: this VOC value represents the average VOC level for architectural coatings in the SMAQMD jurisdiction, as provided via correspondence with the SMAQMD.);
- Install energy efficient (i.e. LED or better lighting) for all outdoor lighting, as identified in the SPA Handbook [Energy Mitigation, LE-1];
- Generate 95% or more of electricity via renewable energy (on-site energy generation and/or contract with SMUD) [Energy Mitigation, AE-1, AE-2, AE-3], as identified in the SPA Handbook.;
- Install energy efficient *(i.e. Energy Star)* appliances [Energy Mitigation, BE-4] , as identified in the SPA Handbook.;
- Install low-flow appliances (bathroom faucet, kitchen faucet, toilet, and shower) [Water Mitigation, WUW-1] , as identified in the SPA Handbook.;
- Use water-efficient irrigation systems (automatic rain shut-off, maximum gallon per minute restriction, WiFi connectivity), as identified in the SPA Handbook [Water Mitigation, WUW-4]; and
- Minimize turf for residential uses to 70% less than the maximum allowed turf area, as identified in the SPA Handbook. [Water Mitigation, WUW-5].

Furthermore, the following additional mitigation measures were incorporated into mitigation within the modeling:

- Implement Trip Reduction Program (100% of employees eligible; voluntary) [Traffic Mitigation, TRT-1 and TRT-2];
- Exceed Title 24 (2% improvement) [Energy Mitigation, BE-1]; and
- Apply Water Conservation Strategy (25% reduction in outdoor water consumption) [Water Mitigation WUW-2].

The efficacy of the sustainability features and Project components described in Draft EIR Chapter 2.0 (Project Description) is quantified in aggregate in Section 3.2 (Air Quality) and Section 3.6 (Greenhouse Gases, Climate Change, and Energy) of the Draft EIR. Quantification of individual GHG reduction measures is not feasible, given that the modeling tool (CalEEMod) quantifies the impact of each mitigation measure internally within the model, and modeling outputs do not provide

results identifying the individual reduction impact of each mitigation measure. Rather, emission results are provided for each scenario in aggregate.

See Chapter 3.0, Revisions, of this Final EIR for further detail on the revisions made to the modeling of emissions to reflect public comments as well as the update to Project description, including modifications to the tentative subdivision map and SPA Handbook, since publication of the DEIR as well as additional information provided regarding the various Project features and mitigation applied to the Project under Mitigation Measure 3.6-2. No further response is required.

Response I-3: The commenter questions if the LUT-9 reduction measure is appropriate for the Project and whether the Project reflects a walkable and bikeable street pattern. The commenter also notes that the Draft EIR indicates that intersections per square mile was the only parameter used to model the Project's reduction in GHG emissions.

As shown on page 3.6-31 of the Draft EIR, LUT-9 applies to the Project because the Project is designed with a walkable street pattern, with 144.9 intersections per square mile, multiple bicycle/pedestrian connections, including bicycle/pedestrian-only connections between streets (i.e., at the end of cul-de-sacs) and to trails, an off-street trail system, and bicycle lanes. Intersections per square mile (144.9) is used as one of the CalEEMod inputs (also known as "mitigation" in CalEEMod). This measure corresponds to LUT-9/3.1.9 (Improve Design of Development) identified in the California Air Pollution Control Officers Association's Quantifying Greenhouse Gas Mitigation Measures (CAPCOA Quantification Guide), which provides the methodology used to determine the appropriate reductions for this measure and identifies intersections per square mile as the appropriate input for determining reductions. The only possible input that corresponds to the "Improve Walkability Design" (LUT-9) mitigation in CalEEMod is to enter the number of proposed intersections per square mile, which is consistent with the CAPCOA Quantification Guide's supporting methodology. While the only parameter used to model the LUT-9 GHG reduction available is the intersections per square mile parameter, the Project receives credit for the LUT-9 reduction measure due to the walkable street pattern, off-street trail system and bike lanes, in addition to the CalEEMod-required input of intersection per square mile.

Response I-4: The commenter notes that the Project has three major areas – single-family, age-restricted, and commercial and multifamily. The single-family area and age-restricted non-gated area have similar street patterns, while the gating of Four Seasons would result in significant impacts on circulation. The commenter also notes that residents of the single-family Parkview area would not be able to use the street and train network within Four Seasons and would not be able to walk or bike around one of the four sides of the Four Seasons community. The commenter concludes that the difference in street network suggests that intersections per square mile will not accurately model the GHG emissions reduction resulting from reduced vehicle-miles-travelled (VMT) and corresponding increase in walking and biking.

The commenter is referred to the tentative subdivision map (Draft Figure 2.0-4 as shown in Chapter 3.0, Revisions, of this Final EIR). As shown on the tentative subdivision map, the villages associated with the age-restricted neighborhood will not serve as a barrier between the non-age-restricted community and the various features of the Project, such as the public parks, public open space, and public trail, nor would the age-restricted community separate the non-age-restricted community from off-site community services or amenities, as lands to the south and east of the

Project are currently undeveloped. It is also noted that the pedestrian gates for the age-restricted community are not proposed to be limited to use by the residents of the age-restricted community.

Please see Response I-3. As stated, LUT-9 applies to the Project because the Project is designed with a walkable street pattern, with 144.9 intersections per square mile, multiple bicycle/pedestrian connections, an off-street trail system, and bicycle lanes to encourage walkability. While the only parameter used to model the LUT-9 GHG reduction available is the intersections per square mile parameter, both the age-restricted and non-age-restricted component have a range of walkable features, including a high ratio of intersections as well as many pedestrian connections, such as pedestrian-only connections at the end of cul-de-sacs to either adjoining streets or trails, alleys that provide direct connection to landscaped areas and pathways, the bicycle/pedestrian undercrossing allowing the open space trail users to go under Chrysanthy Boulevard rather than crossing the road, and pedestrian-activated push button crossings along Chrysanthy Boulevard and Rancho Cordova Parkway. Further, as described previously, the age-restricted community does not serve as a barrier to the non-age-restricted components of the Project in terms of accessing public Project destinations and off-site destinations. LUT-9 is appropriately applied to the Project and no revision to the Draft EIR is warranted.

Response I-5: The commenter notes that the LUT-4 reduction measure is based on the expected reduction of GHG emissions due to fewer miles driven to downtown or a major job center. The commenter also notes that the contribution of replacing auto trips with bicycling will be reduced by the diminished connectivity that results from gating nearly half of the Project. The commenter concludes that the LUT-4 modeling should take this into account and the Draft EIR should include an explanation of the calculations.

According to the CAPCOA Quantification Guide, measure LUT-4 applies to areas with high accessibility to destinations. The CAPCOA Quantification Guide also notes that this reduction measure is appropriate for residential, retail, office, industrial, and mixed use projects in urban and suburban contexts. However, we have updated the CalEEMod modeling to remove inclusion of measure LUT-4. Therefore, the updated modeling results no longer reflect inclusion of LUT-4 in air quality and greenhouse gas emissions and energy modeling. No further response is required.

Response I-6: The commenter notes that the effectiveness of the SDT-1 reduction measure is diminished by the two project-wide pedestrian and bicycle networks (one for Four Seasons residents and one for all others). The commenter notes that barriers would be increased, rather than minimized, by the gated community. Please see Responses I-3 through I-5. SDT-1 is used for projects which provide a pedestrian access network to link areas of the Project site encouraging people to walk instead of drive. Project residents of the non-gated and gated areas would be able to walk to nearby commercial and retail opportunities (existing and planned, on and off-site). Residents of the non-age-restricted villages would be able to access lands (when developed in the future) beyond the age-restricted component via Chrysanthy Boulevard, which provides a direct pedestrian connection to the east, via the public trail adjoining the age-restricted community, which provides additional off-site points of access to the south and east. This reduction measure is appropriate for residential, retail, office, industrial, and mixed use projects in urban, suburban, and rural contexts. The Project would provide pedestrian network improvements on-site and connecting to the existing and future pedestrian network of the southern Rancho Cordova area. Therefore, this measure is appropriate for the Project and no changes to the Draft EIR are warranted.

Response I-7: The commenter notes that the Draft EIR does not provide the percentage of streets and intersections with traffic calming improvements, nor does it identify the improvements. As noted on page 3.6-25, 50 percent of the Project streets and intersections are proposed with traffic-calming measures. As discussed on pages 3.6-31 and 3.6-32 of Section 3.6 of the Draft EIR, the Project has been designed to include a range of traffic-calming street design features, such as narrower streets, limited single-loaded streets, parking on both sides of the street, posted speed limit signs, planter strips with street trees, bulb-outs, and horizontal shifts (lane centerline that curves or shifts), and intersection traffic calming features, including pedestrian push-buttons at three intersections, marked crosswalks, count-down signal timers where appropriate, curb extensions, channelization islands, median islands, and tight corner radii. Many of these measures (street widths, planter strips, medians, bulb-outs, and horizontal shifts) are associated with the Project design as shown on the tentative subdivision map and traffic-calming measures are also described in the SPA Handbook. Therefore, this measure is appropriate for the Project and no changes to the Draft EIR are warranted.

Response I-8: The commenter notes that Mitigation Measure 3.13-2 (Intersection #9, Grant Line Road at Sunrise Boulevard) would restripe the southbound approach at this intersection, which is described as having hatching and being consistent with Optional Through Right and Right-Turn-Only lane configurations. According to the commenter, this configuration does not have any hatching and may be inappropriate for all but the most experienced and fearless bicyclists. The commenter suggests that the configuration on sheet 2 of Figure 9C-4a would provide a safer environment for bicyclists as it has a hatched buffer between the bike land and one travel lane. See Chapter 3.0, Revisions, of this Final EIR. The term "hatching" has been revised to be consistent with Figure 9C-4a, which shows that striping (not hatching) should be provided at the bike lane area for right-turn automobile lanes. It is also noted that the Project applicant did not propose this improvement/mitigation measure. Instead, this improvement is planned by the City, and the applicant would pay the fair share for this planned improvement as described in Mitigation Measure 3.13-2 as revised.

Response I-9: The commenter provides closing remarks. This comment serves as a conclusion to the comment letter and does not require a response.

September 27, 2019

June Cowles, Senior Planner
City of Rancho Cordova Planning Department
2729 Prospect Park Drive
Rancho Cordova, CA 95670

Dear Ms. Cowles:

The Elk Grove Unified School District (EGUSD) appreciates the opportunity to review and comment on the Draft Environmental Impact Report (DEIR) for The Ranch Project.

The Ranch Project would entail development of residential and commercial land uses on approximately 528 acres south of Douglas Road and west of Grant Line Road, within the city of Rancho Cordova. The entire project is within the boundaries of the EGUSD. The project requires approval by the City of Rancho Cordova City Council of the following documents: a Project EIR, General Plan Amendment and a Rezone Amendment for a Special Planning Area, a Development Agreement, a Large and Small Lot Map, and a Tentative Subdivision Map. J-1

EGUSD requests that the following comments be considered and included in the Final Environmental Impact Report (EIR).

Correction to Page 3.7-20:
Please note that Impact 3.7-3 has an incorrect statement. This section states "The Project is not located within one-quarter mile of an existing or proposed school…". However, EGUSD has a proposed 70-acre high school/middle school campus directly to the south of this Project. North Campus Road will run along the southern boundary of the age-restricted community-portion of this project and the high school/middle school will be on the other side of this road. J-2

Correction to Page 3.12-4:
Please note that the first paragraph in the section states the EGUSD "has been in existence for over 41 years. EGUSD has been in existence since 1959, over 60 years. J-3

Corrections to Page 3.12-5 and 6:
The paragraph at the bottom of page 3.12-5 and at the top of page 3.12-6 contains several inaccuracies. The paragraph follows with corrections/clarification in red. J-4

Elk Grove Unified School District—Excellence by Design

The EGUSD building program is funded by approximately 50% state and 50% local sources. The district ~~can receive~~ receives local funding through developer impact fees, and tax revenues from a Mello-Roos special tax ~~districts,~~ and General Obligation bonds. Developer impact fees provide approximately 40%~~are the major source of funding~~ for ~~the~~ district building projects resulting from growth. Based on its facility needs assessment, EGUSD demonstrated the need to levy Level II developer fees that are higher than the statutory fee. As of ~~July 2018~~ April 2019, Level II fees for residential construction are ~~$5.65~~ $5.94 per square foot and $0.56 per square foot for commercial construction. Developer fees may be used to finance new schools and equipment, and to reconstruct existing facilities to maintain adequate housing for all the district's students. ~~Mello-Roos districts are defined tax areas usually associated with new residential subdivisions, which are often used for additional school taxes.~~ EGUSD's Mello-Roos District covers the entire 320 square miles of the district and proceeds are used throughout the district to help build new schools and modernize older schools.

J-4 cont'd

Correction to Page 3.12-15:
Please correct the second sentence of the last paragraph as follows:
As required by state, law the Project applicant would pay the state-mandated school impact fees to EGUSD. As of ~~August 2018~~ April 2019, Level II fees for residential development are ~~$5.65~~ $5.94 per square foot.

J-5

EGUSD appreciates the City of Rancho Cordova's consideration of the comments and requests in this letter. EGUSD shall coordinate with the City and The Ranch property owners and developers to ensure the future residents of the area are provided with quality school facilities to meet their educational needs.

J-6

Regards,

Kim Williams

Kim Williams
Planning Manager

Elk Grove Unified School District—Excellence by Design

Response to Letter J: Elk Grove Unified School District

Response J-1: This comment serves as an introduction to the comment letter and does not warrant a response. This comment is noted. No further response is necessary.

Response J-2: The commenter notes that Impact 3.7-3 has an incorrect statement, and notes that the Elk Grove Unified School District (EGUSD) has a proposed 70-acre high school/middle school campus south of the Project site. See Chapter 3.0, Revisions, of this Final EIR for the requested revisions to this impact discussion.

Response J-3: The commenter notes that the first paragraph on page 3.12-4 of the Draft EIR states that the EGUSD has been in existence for over 41 years. The commenter notes that EDUSD has been in existence since 1959, over 60 years. See Chapter 3.0, Revisions, of this Final EIR for the requested revisions to this page.

Response J-4: The commenter notes that the paragraph at the bottom of page 3.12-5 and the top of page 3.12-6 contains several inaccuracies. The commenter also includes clarifications regarding this text in red font with strike-through formatting. See Chapter 3.0, Revisions, of this Final EIR for the requested revisions to these pages.

Response J-5: The commenter notes that the second sentence of the last paragraph on page 3.12-15 should be corrected with the April 2019 Level II fees for residential development. See Chapter 3.0, Revisions, of this Final EIR for the requested revisions to these pages.

Response J-6: This comment serves as a conclusion to the comment letter. The City, Project applicant, and School District will continue to coordinate regarding the proposed Project. This comment is noted. No further response is necessary.

This section includes minor edits and changes to the Draft EIR. These modifications resulted from responses to comments received during the public review period for the Draft EIR, as well as City staff initiated edits to clarify the details of the project.

Revisions herein do not result in new significant environmental impacts, do not constitute significant new information, nor do they alter the conclusions of the environmental analysis that would warrant recirculation of the Draft EIR pursuant to State CEQA Guidelines Section 15088.5.

In coordination with staff from the City of Rancho Cordova, the Project applicant team continues to make refinements and minor revisions to the tentative subdivision map. Modifications are described in the revisions to Draft EIR Chapter 2.0, Project Description. None of these minor modifications to the Project would result in new significant impacts or mitigation measures, or increase the severity of an impact. The minor changes made to the Project since the Draft EIR was released for public review are also addressed in the Master Response in Chapter 2.0 of this Final EIR.

Other minor changes to various sections of the Draft EIR are also shown below. These changes are provided in revision marks with underline for new text and ~~strike out for deleted text~~.

3.1 REVISIONS TO THE DRAFT EIR

1.0 INTRODUCTION

No changes were made to Section 1.0 of the Draft EIR.

2.0 PROJECT DESCRIPTION

The following changes were made to pages 2.0-2 and 2.0-3 of Chapter 2.0 of the Draft EIR:

> Consistent with California Environmental Quality Act (CEQA) Guidelines Section 15124(b), a clear statement of objectives and the underlying purpose of the Project shall be discussed. The principal objective of the Project is the approval and subsequent implementation of The Ranch Project. The quantifiable objectives of the Project include development of the approximately 530-acre site with: 1,690~~725~~ residential units, including 705~~37~~ age restricted single-family units, 732~~5~~ non-age restricted single-family units, and up to 253 multifamily units, 38 of which would be age-restricted multifamily units, with a club house for the age-restricted senior community, and other recreational opportunities; dedication of 5.33~~16~~ net acres for commercial use for development of a neighborhood-serving shopping center of approximately 32,000 square feet (s.f.); and dedication of 8.40~~3~~ net acres for multi-family residential uses in accordance with the City of Rancho Cordova's Affordable Housing Plan.

The following changes were made to pages 2.0-4 through 2.0-9 of Chapter 2.0 of the Draft EIR:

> The Project proposes an approximately 530-acre residential community. Development would include approximately 1,690~~725~~ residential units, including 705~~37~~ age restricted single-family units, 732~~5~~ non-age restricted single-family units, and up to 253 multifamily units (38 of which would be age-restricted), two commercial parcels totaling 5.33~~16~~ net acres, a community clubhouse, a park

and trail system, open space, and supporting infrastructure. Figure 2.0-4 depicts the Project characteristics and Table 2.0-1 summarizes the proposed uses.

TABLE 2.0-1: LAND USE SUMMARY

PROPOSED USE	*GROSS ACRES*	*NET ACRES*	*DWELLING UNITS*	*NON-RESIDENTIAL (SQUARE FEET)*	*GROSS DENSITY (DU/AC)*	*NET ACREAGE AS % OF TOTAL*
Single Family Residential – Non-Age Restricted

TOTAL	**530.10**	**530.10**	**1,690725 (1,43772 SF, 253 MF)**	**53,000**	**6.6677**	**100.0%**

[1]THE TENTATIVE SUBDIVISION MAP (OCTOBER 2019) ACREAGES WERE AMENDED AS FOLLOWS: MAJOR RIGHT-OF-WAY CATEGORY WAS INCREASED BY 0.35 ACRE AND LOT E ACREAGE WAS DECREASED BY 0.35 ACRE TO REFLECT ADDITIONAL RIGHT-OF-WAY FOR RANCHO CORDOVA PARKWAY ANTICIPATED TO BE REQUIRED OF THE PROJECT.

NOTE: THE GROSS ACREAGES SHOWN HERE EXCLUDE RANCHO CORDOVA PARKWAY AND CHRYSANTHY BOULEVARD ONLY. VILLAGE NET ACREAGE EXCLUDES THE PROTECTED AREA/LANDSCAPE LOTS, PRIVATE AND PUBLIC LANDSCAPE LOTS, PRIVATE DRIVES, AND PRIVATE AND PUBLIC RIGHT-OF-WAYS.

RESIDENTIAL

The Project includes three primary residential components: an unrestricted single-family community, an age-restricted community with both single family and multifamily components, and a non-age restricted multifamily parcel.

Single Family – Unrestricted

The single-family community, comprised of Villages 1 through 11, is located in the northwest area of the Project site, abutting residential neighborhoods to the north and Rancho Cordova Parkway to the west. This area would include 7325 single family residences within 11 residential neighborhoods. Village 1 would have 86 residential lots with a typical dimension of 60' by 105'. Villages 2 and 3 would have 114 residential lots with a typical dimension of 50' by 105'. Village 4 would have 116 residential lots with a typical dimension of 45' by 105'. Villages 5, 6, and 7 would have 113 residential lots with a typical dimension of 45' by 85'. Village 8 would have 1302 residential lots with a typical dimension of 36' by 78.5'. Villages 9, 10, and 11 would have 1734 residential lots with a typical dimension of 35' by 78'.

Multifamily – Unrestricted

An 7.147-acre multifamily lot (Village 23) is designated High Density Residential and would accommodate approximately 215 multifamily units.

Single Family and Multifamily – Four Seasons Age-Restricted

The Four Seasons age-restricted single-family community is located in the southeast portion of the Project site, and borders the approved Sunridge Specific Plan to the south and east. The Four Seasons community is separated from the unrestricted single-family community by the wetlands preserve that traverses the Project site from the northeast to the southwest. Village 12 would have 1172 residential lots with a typical dimension of 60' by 105'. Village 13 would have 3943 residential lots with ~~varying lot sizes~~a typical dimension of 60' by 105'. Villages 14, 15, and 17~~, and 19~~ would have 21056 residential lots with a typical dimension of 50' by 105'. Villages 16, 18, and 19 would have 14464 residential lots with a typical dimension of 430' by 105'. ~~Village 18 would have 43 residential lots with a typical dimension of 40' by 110'.~~ Villages 20 and 22 would have 14555 residential lots with a typical dimension of 56' by 70'. Village 21 would have ~~68~~ 50 residential lots with a typical dimension of 4435' by 110'. ~~Village 22 would have 96 residential lots with a typical dimension of 56' by 70'.~~ Additionally, a 21,000 s.f. community clubhouse would be developed in this area. Lot A near the community clubhouse would also allow for 38 multifamily residential units.

COMMERCIAL

Two commercial parcels (Villages 24 and 25) are located in the northwest portion of the site along Rancho Cordova Parkway, near the entrances to the unrestricted single-family community with primary access from from Rancho Cordova Parkway. The parcels are approximately 1.00 and 4.33~~16~~ net acres and would accommodate approximately 32,000 s.f. of commercial uses.

POPULATION AND EMPLOYMENT

The Project would accommodate a population of approximately 4,~~3~~242~~19~~ residents and 106 employees. The Project residents estimate was calculated using the following persons per housing unit rates: 2.84 persons per non-age restricted single-family unit, 2.89 persons per non-age-restricted multifamily unit, 2.08 persons per age-restricted single-family units, and 2.05 persons per age-restricted multifamily units.[1] The Project employees estimate was calculated using a rate of one employee per 500 s.f.[2]

OPEN SPACE

The Project would preserve approximately 199.1~~5~~ acres as a nature preserve that would be deeded to a third-party conservation entity. The Project includes approximately 14.8 acres of existing aquatic resources, including 1.85 acres of depressional seasonal wetlands, 9.97 acres of vernal pools, 1.15 acres of riverine seasonal wetlands, 1.53 acres of intermittent drainages, and 0.30 acres of drainage basin outfalls. The Project applicant would incorporate protections for the preservation of wetland resources within the preserve, including preserve fencing, long-term funding and management of the preserve in perpetuity, and protection of the preserve from drainage and runoff generated from development areas through the construction of several detention basins throughout the site.

RECREATION

Park and recreation facilities totaling ~~20.05~~21.78 acres (7.60~~17~~ net acres of private facilities provided in Lots A, B, and C and 1~~4~~2.1~~8~~8 net acres of public parks provided in Lots D, ~~and~~ T, and U) would be provided by the Project. The Project would use a combination of land dedication and in-lieu fees to comply with the requirements of Chapter 22.40 of the City of Rancho Zoning Ordinance. In addition to the proposed park lots, the Project would provide parks and recreation facilities on approximately 0.2575 acres within Village 23 to serve the proposed multifamily use.

Approximately 2.5 miles of public trails would be developed throughout the Project site, as described below under Pedestrian and Bicycle Connectivity. Trails along the preserve boundaries would be designed in accordance with the South Sacramento Habitat Conservation Plan (SSHCP) standards.

As part of the public recreational facilities, a public park (10.78 net acres) would be provided within the single family (unrestricted) community. The utility corridor would be located along the eastern boundary of the park and would provide an additional 12.97~~7.86~~ net acres of public open space

[1] The persons per housing unit rates are based on the persons per household rates from the 2013-2017 American Community Survey 5-Year Estimates data for the City of Rancho Cordova, California, Table S0102. The American Community Survey includes average household size based on tenure for both the general population and the 60+ year old cohort.

2 Table LU-6 of the General Plan projects 15,026 employees associated with 7,513,133 s.f. of commercial uses under General Plan buildout conditions; these projections yield a rate of 1 employee per 500 s.f. (15,026 divided by 7,513,133 s.f.).

(Lots Q through S) that would include passive uses that would complement the park site. A 2.19-acre ~~passive~~ neighborhood park (Lot T) and 1.21-acre passive park (Lot U) would also be developed in the single family (unrestricted) community.

Within the age-restricted portion of the Project, approximately 7.6017 acres would be dedicated for recreational purposes. The recreation center (4.6219 net acres) would include a clubhouse serving as a recreation, community gathering, activity, and information hub for residents. A separate 1.58-acre community garden (Lot B) and a 1.4-acre linear park (Lot C) would be provided within the age-restricted community. In addition, multiple paseos would be provided throughout the age-restricted community to provide connectivity and off-road walkability.

The following changes were made to pages 2.0-12 through 2.0-15 of Chapter 2.0 of the Draft EIR:

GENERAL PLAN AMENDMENT

The Project site is currently designated Planning Area by the General Plan Land Use Map and is identified as part of the Suncreek/Preserve Planning Area by the City's General Plan. Table 2.0-2 summarizes the proposed General Plan land use designations:

TABLE 2.0-2: GENERAL PLAN LAND USE DESIGNATIONS

LAND USE DESIGNATION	*EXISTING*	*PROPOSED*
Planning Area	530.1	--
Low Density Residential (LDR)	--	31.937
Medium Density Residential (MDR)	--	228.963.85
High Density Residential (HDR)	--	8.4081
Commercial (C)	--	5.6110.16
Parks and Open Space (P/OS)	--	38.3303
Natural Resources (NR)	--	199.485
Right-of-Way	--	17.418

The existing and proposed land use designations are shown in Figure 2.0-5.

REZONE

The Project site is currently zoned Agriculture, 80-Acre Minimum (AG-80). The entire Project site would be rezoned from AG-80 to Special Planning Area (SPA). The Ranch SPA ~~zoning~~ Handbook will establish development standards and design guidelines to ensure quality and consistency in the design and implementation of the Project. The SPA document is regulatory in nature and will serve as zoning for the Project site. Development plans, subdivision maps, and site plans for the Project must be consistent with both the SPA and the City of Rancho Cordova General Plan.

SPECIAL PLANNING AREA HANDBOOK

The purpose of The Ranch SPA Handbook is to guide future development within The Ranch Project site and allow for a more creative implementation of the General Plan. Chapter 2, Regulatory Framework, describes the Project's relationship to the existing regulatory framework, including the City's General Plan and Zoning Code. Sections 3.1 and 3.2 address land use designations and zoning, respectively. Section 3.3 addresses permitted land uses, density, and establishing design requirements for each neighborhood area (Gateway Neighborhood, Parkview Neighborhood, and

Four Seasons Neighborhood). Section 3.4, Architectural Styles, describes architectural styles permitted by the SPA Handbook. Section 3.5, Development Standards, addresses lot size, width, depth, and coverage, coverage, building heights, and setbacks for single family, multifamily, and commercial uses. Section 3.6 describes the Project's sustainability features. Section 3.7 establishes construction and operational noise standards. Section 3.8~~6~~, Circulation Design Standards, establishes the circulation plan, including street sections, transit, and sections. The Parks + Open Space Design Program, Section 3.9~~7~~, establishes the overall park and open space plan, as well as addressing requirements and design for public and private parks, landscape standards, and signage and entry monumentation. Section 3.10~~8~~, Wetland Preserve, establishes standards and requirements related to the open space and wetland area proposed for preservation. Section 3.11~~9~~, Infrastructure, addresses provision of sanitary sewer, water service, and drainage, and phasing of the SPA.

PROJECT CONSTRUCTION

The Project Applicant Team has indicated that the Project will be constructed in a series of four~~ive~~ phases, as outlined below, with construction anticipated to commence in January 2020 and conclude in December 2035.

Phase 1 (January 2020 – August 2023)

- Site preparation for Phases 1 and 2 components: January 1, 2020 – March 30, 2020
- Grading for Phases 1 and 2 and improvements for Chrysanthy Boulevard and Phase 1: April 1, 2020 – November 1, 2020.
- Paving backbone infrastructure and Phase 1: November 1, 2020 – January 30, ~~2020~~2021
- Building construction: February 1, 2021 – May 1, 2023
- Architectural coating: May 1, 2021 – August 1, 2023
- This phase includes the following:
    - Phase 1 Clubhouse and associated landscaping (Lot A) – 7,000 s.f. of the clubhouse complex and approximately 1/3 of lot improvements
    - Community garden (Lot C)
    - 270 single family residential units
    - 211~~32~~ single family residential units – age restricted

Phase 2 (April 2022 – November 202~~5~~):

- Improvements for Phase 2: April 2022~~1~~ – September 2022
- Paving: October 2022 – December 2022
- Building Construction: April 2023 – July 2026~~5~~
- Architectural Coating: August 2023 – November 2026~~5~~
- This phase includes the following:
    - 197 single family residential units
    - 199~~210~~ single family residential units – age restricted
    - Phase 2 Clubhouse and associated landscaping (Lot A) – 7,000 s.f. of the clubhouse complex and approximately 1/3 of lot improvements
    - Neighborhood Park (Lot T~~C~~) – 2.19~~1.4~~ acres
    - ~~Open Space (Lot Q) – 2.1 acres~~

Phase 3 (March 2025 ~~– April 2029~~ December 2030):

- Site Preparation for Phase 3: February 2025 – April 2025
- Grading: April 2025 – October 1, 2025
- Paving: October 1, 2025 – December 31, 2025
- Building Construction: January 2026 – September 2030~~28~~
- Architectural Coating: April 2026 – December 2030~~28~~
- Site Preparation for Rancho Cordova widening: January 2027-October 2027
- Paving for Rancho Cordova widening: October 2027-January 2028
- This phase includes the following:
  - 265~~6~~ single family residential units
  - 295~~8~~ single family residential units – age restricted
  - 16 senior multifamily residential units
  - Phase 3 Clubhouse and associated landscaping (Lot A) – 7,000 s.f. of the clubhouse complex and approximately 1/3 of lot improvements
  - Park (Lot D) - 10.78 acres
  - Open Space (Lots Q-S) – 12.97 acres
  - Passive Park (Lot B) – 1.58~~9~~ acres
  - Passive Park (Lot ~~T~~U) – 1.21 acres

Phase 4 (March 2030 – ~~June~~ December 2035~~3~~):

- 4A Multifamily - Site preparation for multifamily residential (7.14~~2~~ acres): March 2030 – April 2030
- 4A Multifamily - Grading and improvements: April 2030 – August 2030
- 4A Multifamily - Paving: August 2030 –October 2030
- 4A Multifamily - Building Construction: April 2031 – January 2033
- 4A Multifamily - Architectural Coating: January 2033 – May 2033
- 4B Commercial - Site preparation for commercial (5.33 acres): March 2034 – April 2034
- 4B Commercial - Grading and improvements: April 2034 – July 2034
- 4B Commercial - Paving: August 2034 –September 2034
- Commercial - Building Construction: April 2034 – August 2035
- Commercial - Architectural Coating: September 2035 – December 2035
- This phase includes the following:
  - 215 multifamily residential units
  - 22 senior multifamily residential units
  - Commercial center

~~Phase 5 (March 2034 – December 2035):~~

- ~~Site preparation for commercial (5.2 acres): March 2034 – April 2034~~
- ~~Grading and improvements: April 2034 – July 2034~~
- ~~Paving: August 2034 –September 2034~~
- ~~Building Construction: April 2034 – August 2035~~
- ~~Architectural Coating: September 2035 – December 2035~~
- ~~This phase includes the following:~~
  - ~~Commercial center~~

3.0 REVISIONS

Figures 2.0-4, 2.0-5, and 2.0-6 are revised as shown on Revised Draft EIR Figure 2.0-4, Revised Draft EIR Figure 2.0-5, and Revised Draft EIR Figure 2.0-6.

3.1 AESTHETICS AND VISUAL RESOURCES

No changes were made to Section 3.1 of the Draft EIR.

3.2 AIR QUALITY

The following changes were made to pages 3.2-26 and 3.2-27 of the Draft EIR:

Operational Emissions

Full buildout of the Project is expected to occur by 2035. The land use inputs for CalEEMod were derived from the Project Description (see Chapter 2.0), which includes information provided by the Project Applicant[3]. The CalEEMod land use inputs include:

- Retail:
  - Regional Shopping Center (32,000 square feet) (5.~~16~~ 33 acres)
- Residential:
  - Apartments Mid Rise (215 Dwelling Units) (~~7.17~~ 7.14 acres)
  - Retirement Community (38 dwelling units) (1.26 acres)
  - Retirement Community (~~737~~ 705 dwelling units) (~~90.91~~89.49 acres)
  - Single Family Housing (~~735~~ 732 dwelling units) (~~77.87~~78.51 acres)
- Recreational:
  - City Park (Lot D - ~~9.1~~10.78 acres) (including an 8,000 square foot restroom) (~~9.28~~10.78 acres)
  - City Park (Lot A - ~~3.07~~4.62 acres) (including a 21,000 square foot clubhouse) (~~3.69~~4.62 acres)
  - City Park (0.5 acres)
  - City Park (Lot T - 2.19 acres)
  - Parking – Other Asphalt Surfaces (3.5 acres)
  - Parking – Parking Lot (1.5 acres)

Vegetation change was modeled to estimate the reduction in carbon accumulation provided by the existing biomass (e.g. grasses) that would be removed upon Project buildout. It was assumed that, out of the approximately 530.1 acres within the project site, approximately 278.~~76~~62 acres within the Project site would remain ~~undeveloped~~ as open space, grass, or vegetated areas, upon project buildout. Areas identified as residential, commercial, and rights-of-way in Table 2.0-1 are not included in the vegetated lands calculation. The Grassland vegetation land use subtype was used a proxy for the current land type within the Project site.

Carbon sequestration was also modeled from the planting of new trees within the Project site. Based on information provided by the Project applicant, it was assumed that 2,240 new trees would be planted within the project site.

Separately, minor adjustments were made to several of the default emission factors provided by CalEEMod. These are as follows:

- Consumer products:

[3] Passive park uses are treated as open space and therefore and not modeled.

- The "general category" emission factor was adjusted from default value (reduced by a total of 29.10%), based on the following differences between Project attributes and the inputs used to develop the default value (the default value utilizes statewide factors from year 2008):
  - The Project is estimated to have a persons per dwelling unit (persons/du) value of 2.504, versus the current statewide average of 2.97[4]. This is a difference of 18.60%.
  - The CARB estimated total statewide year 2016 ROG emissions of 208.71 tons/year, which is 12.89% less than the amount estimated for year 2008 (239.6 tons/year).

- Architectural Coatings:
  - The residential and non-residential interior and ~~non-residential interior~~exterior emission factors were reduced from 100 g/L to ~~50~~ 75 g/L, based on the SMAQMD guidance that the average overall VOC content of architectural coatings in the SMAQMD jurisdiction is approximately 75 g/L ~~Rule 442 that provides a maximum VOC limit of 50 g/L for flat coatings. It was assumed that flat coatings are used for interior coatings~~.

The following changes were made to pages 3.2-28 and 3.2-29 of the Draft EIR:

As provided by the Project applicant, approximately 152,708 cubic yards of soil (net) would be exported from the Project site. Additionally, it was assumed that ~~278.76~~approximately 330.4 acres of the Project site would be graded (this includes all of the residential and commercial portions of the Project site, as well as right-of-way).

The Project is anticipated to be developed in approximately four~~ive~~ phases, according to the Project applicant, as described in Chapter 2.0, Project Description, and summarized below~~follows~~:

- Phase 1 (January 2020 – August 2023):
  - Phase I Clubhouse and associated landscaping (Lot A) – 1/3 of the building complex (about 7000 sf);
  - 270 single family residential units;
  - ~~232~~ 211 single family residential units – age restricted.
  - Community garden (Lot C) – 1.4 acres

- Phase 2 (April 2022 – November ~~2025~~2026):
  - 197 single family residential units
  - ~~210~~ 199 single family residential units – age restricted.
    - ~~Neighborhood Park 2.2 ac (lot Q)~~
    - Neighborhood Park (Lot T) – 2.19 acres~~Liner Park Lot C (1.4ac)~~
    - Phase 2 Clubhouse building (~7000 sf)
- Phase 3 (February 2025 – ~~April 2029~~December 2030):
  - ~~268~~ 265 single family residential units
  - 295 single family residential units – age restricted

[4] California Department of Finance, Table 2: E-5 City/County Population and Housing Estimates (1/1/2018).

- 16 senior multi-family residential units
- Park (Lot D) - 10.78 acres
- Open Space (Lots Q-S) – 12.97 acres
- Passive Park (Lot B) – 1.58 acres
- Passive Park (Lot U) – 1.21 acres

- ~~Open Space (Lot T) – 1.2 acres~~
- ~~Rancho Cordova Parkway Widening~~
- ~~Phase 3 clubhouse (~7000 sf)~~

- ~~Lot B (Park)~~
- Phase 4 (March 2030 – ~~June 2033~~December 2035):
  - 215 multi-family residential units
  - 22 senior multi-family residential units
- ~~Phase 5 (March 2034 – December 2035)~~
  - Commercial Center

CalEEMod was used to estimate the construction emissions from construction activities. Based on construction phasing and schedule, the default off-road construction equipment types, amount, and characteristics provided by CalEEMod were used to model Project off-road construction equipment.

The following changes were made to pages 3.2-29 and 3.2-30 of the Draft EIR:

Specifically, the Project would include the following operational project characteristics that would reduce Project operational emissions below the applicable thresholds as provided in Table 3.2-7 through Table 3.2-9. As stated, these represent Project characteristics rather than mitigation. For further detail, see the list of sustainability features and other Project details as provided in Chapter 2.0: Project Description. A summary of the Project characteristics is provided below (note: the associated CalEEMod measure is provided in brackets below):

- Density to 6.~~86~~ 66 dwelling units per acre (1,690 dwelling units divided by 253.87 residential acres (gross). [Traffic Mitigation, LUT-1];

- ~~Increase diversity through single family residential, multi family residential, commercial, parks and recreation, and senior uses [Traffic Mitigation, LUT-3];~~

- Improve walkability design (a ratio of ~~123.53~~144.9 intersections per square mile~~s~~, as shown on the Tentative Subdivision Map.) [Traffic Mitigation, LUT-9];

- ~~Improve destination accessibility (12.3 miles) [Traffic Mitigation LUT-4];~~

- Increase transit accessibility (Project site would include on-site transit facilities for the City's Signature Transit Route as identified in the SPA Handbook) – average distance to transit for Project residents would be approximately 0.25 miles) [Traffic Mitigation, LUT-5];

- Improve pedestrian network (Project site and connecting off-site. The Project would include pedestrian improvements that provide connectivity between the internal components of the Project, as well as to adjacent existing and future developments. The Project would provide for future connections to an extension of Chrysanthy Boulevard and planned development east of the Project site, a connection to an existing trail located north of the site, connections south of

the site via a pedestrian connection at North Campus Road, and connections to the existing and future uses to the west of the site.) [Traffic Mitigation, SDT-1];

- Provide traffic calming measures (50% of streets and intersections with improvements as shown on the Tentative Subdivision Map and identified in the SPA Handbook. Traffic calming features incorporated into the Project include street design features, such as narrower streets, limited single-loaded streets, parking on both sides of the street, posted speed limit signs, planter strips with street trees, and horizontal shifts (lane centerline that curves or shifts), and intersection traffic calming features, including marked crosswalks, count-down signal timers where appropriate, curb extensions, channelization islands, median islands, and tight corner radii.) [Traffic Mitigation, SDT-2];

- Install electric vehicle (EV) charging stations throughout the Project site, such that at least 50% of single-family residences and 5% of parking spaces within the commercial, park and recreation, and multi-family land uses will have EV charging stations, as identified in the SPA Handbook. [Traffic Mitigation SDT-3];

- Expand transit network; the Project will provide a transit stop as provided in the SPA Handbook. [Traffic Mitigation, TST-3];

- Plant a minimum of 2,240 new trees throughout the Project site [4.11.2-Sequestration];

- No hearths, as recommended by the SMAQMD in the *SMAQMD Tips for Using CalEEMod* (February 2019). [Area Mitigation];

- Use low-VOC paint for architectural coatings (75~~50~~ EF g/L) (Note: this VOC value represents the average VOC level for architectural coatings in the SMAQMD jurisdiction, as provided via correspondence with the SMAQMD.);

- Install energy efficient (i.e. LED or better lighting) for all outdoor lighting, as identified in the SPA Handbook. ~~(for outdoor lighting)~~ [Energy Mitigation, LE-1];

- Generate 95% or more of electricity via renewable energy (on-site energy generation and/or contract with SMUD, as identified in the SPA Handbook.) [Energy Mitigation, AE-1, AE-2, AE-3];

- Install energy efficient *(i.e. Energy Star)* appliances, as identified in the SPA Handbook. [Energy Mitigation, BE-4];

- Install low-flow appliances (bathroom faucet, kitchen faucet, toilet, and shower), as identified in the SPA Handbook. [Water Mitigation, WUW-1];

- Use water-efficient irrigation systems (automatic rain shut-off, maximum gallon per minute restriction, WiFi connectivity), as identified in the SPA Handbook. [Water Mitigation, WUW-4]; and

- Minimize turf for residential uses to 70% less than the maximum allowed turf area, as identified in the SPA Handbook. [Water Mitigation, WUW-5].

The following changes were made to pages 3.2-31 to 3.2-32 of the Draft EIR:

Since the SMAQMD operational thresholds for ROG and NOx are only provided in pounds per day, annual operational emissions for these pollutants are provided for informational purposes only. Detailed CalEEMod emissions calculations are presented in Appendix B.

It should be noted that the Project has been designed and planned to incorporate a substantial amount of available mitigation options in CalEEMod. In addition to the CalEEMod mitigation options described above, Mitigation Measure 3.6-2 includes additional requirements that would further reduce air pollutant emissions. However, it is noted that the Project's unmitigated emissions, as shown in Tables 3.2-7 through 3.2-9 below do not exceed SMAQMD thresholds for criteria pollutants, so greenhouse gas Mitigation Measure 3.6-2 is not required to address this impact. Mitigation Measure 3.6-2 requires the Project to include the additional CalEEMod measures identified by SMAQMD as appropriate for reducing emissions, which include:

- Implement Trip Reduction Program (100% of employees eligible; voluntary) [Traffic Mitigation, TRT-1 and TRT-2];
- Exceed Title 24 (2% improvement) [Energy Mitigation, BE-1]; and
- Apply Water Conservation Strategy (25% reduction in outdoor water consumption) [Water Mitigation WUW-2].

The results of the unmitigated and mitigated Project scenarios are provided in Table 3.2-7 through Table 3.2-9, below.

SOURCE: CALEEMOD (V.2016.3.2)

The following changes were made to pages 3.2-32 to 3.2-33 of the Draft EIR:

PROJECT CONSTRUCTION

Construction activities associated with construction and implementation of the Project would result in temporary short-term emissions associated with vehicle trips from construction workers, operation of construction equipment, and the dust generated during construction activities. These temporary and short-term emissions would generate additional ozone precursors (ROG and NO_x) as well as PM_{10} and $PM_{2.5}$. Below is an estimated phasing construction schedule for the Project, broken down into ~~five~~ four phases (as provided by the Project applicant)[5]:

- Phase 1:
  - Site Preparation: 1/1/2020 – 3/30/2020
  - Grading: 4/1/2020 – 11/1/2020
  - Paving: 11/1/2020 – 1/30/2021
  - Building Construction: 2/1/2021 – 5/1/2023
  - Architectural Coating: 5/2/2021 – 8/1/2023
- Phase 2:
  - Building Construction: 4/1/2022 – 9/30/2022
  - Paving: 10/1/2022 – 12/31/2022
  - Building Construction: 4/1/2023 – 7/31/2026~~5~~
  - Architectural Coating: 8/1/2023 – 11/30/2026~~5~~
- Phase 3:
  - Site Preparation: 2/1/2025 – 4/27/2025
  - Grading: 4/28/2025 – 10/1/2025
  - Paving: 10/2/2025 – 12/31/2025
  - Building Construction: 1/1/2026 – 9/30/~~2028~~2030
  - Architectural Coating: 4/1/2026 – 12/31/~~2028~~2030
  - Site Preparation and grading for Rancho Cordova widening: 1/1/2027 – 10/1/2027
  - Paving for Rancho Cordova widening: 10/2/2027 – 01/31/2028
  - ~~Site Prep (note: for park – Lot D): 4/1/2028 – 4/1/2029~~
- Phase 4:
  - Site Preparation for ~~Commercial and MFR~~multifamily residential: 3/1/2030 – 4/~~27~~1/2030
  - Grading ~~and Improvements~~for multifamily residential: 4/~~28~~2/2030 – 8/1/2030

[5] Note: Site preparation and grading activities for Phases 1 and 2 are anticipated to be conducted during Phase 1, as provided by the Project applicant.

- Paving for multifamily residential: 8/2/2030 – 10/~~31~~1/2030
- Building Construction for multifamily residential: 4/1/2031 – ~~1~~1/~~1~~1/~~2033~~2033
- Architectural Coating for multifamily residential: 1/~~2~~1/~~2033~~ 2033 – ~~6~~5/~~1~~1/2033

~~• Phase 5:~~

- Site Preparation for commercial ~~center~~: 3/1/2034 – ~~4~~3/~~27~~31/2034
- Grading and Improvements for commercial: 4/2~~8~~/2034 – ~~7~~9/~~31~~28/~~2024~~2034
- Paving for commercial: 8/1/2034 – 9/~~1~~28/2034
- Building Construction for commercial: ~~10~~4/1/2034 – 8/~~3~~1/2035
- Architectural Coating for commercial: 9/1/2035 – ~~12~~11/~~31~~30/2035

The following changes were made to pages 3.2-34 to 3.2-35 of the Draft EIR:

Table 3.2-10 shows the maximum daily and annual construction emissions that would result from the Project. The emissions provided in Table 3.2-10 represent emissions inclusive of the above-specified measures that would reduce Project-related construction emissions consistent with the SMAQMD construction-related best management practices. It should be noted that most components of the mitigation measures provided in Mitigation Measure 3.6-2 (see Section 3.6: Greenhouse Gas Emissions, Climate Change, and Energy) were not modeled, since CalEEMod does not provide the ability to model the emissions reductions from most of the components these measures. Mitigated and unmitigated emissions were nearly equivalent; therefore, Table 3.2-10 provides the results of the unmitigated emissions. Table 3.2-11 provides a summary of the construction emissions for those years with concurrent phases (i.e. for years where construction activities from more than one phase will overlap).

The SMAQMD has established construction emissions threshold of significance of 85 pounds per day for NOx, 80 pounds per day and 14.6 tons per year for PM_{10}, and 82 pounds per day and 15 tons per year for $PM_{2.5}$. The SMAQMD utilizes a screening process and separate model for CO impacts. There is no construction threshold for ROG. As shown in Tables 3.2-10 and 3.2-11, construction emissions of NOx would be at its maximum in year 2020, with a maximum of approximately ~~68.2~~76.5 pounds per day, which is below the 85 pounds per day threshold for NOx. Year 2027 would be the peak year for PM_{10} with a maximum of approximately 36.3 pounds per day and 2027 would be the peak year~~s~~ for ~~PM_{10} and~~ $PM_{2.5}$, with a maximum of approximately 15.7 pounds per day. However, emissions for PM would also be below the applicable daily and annual thresholds for PM as provided by the SMAQMD. As such, Project construction emissions would not be expected to contribute a significant level of air pollution such that regional air quality within the SVAB would be degraded and no mitigation is required. Therefore, Project construction emissions would result in a ***less than significant*** impact.

TABLE 3.2-10: SUMMARY OF MAXIMUM UNMITIGATED CONSTRUCTION DAILY AND ANNUAL EMISSIONS

YEAR	ROG (LBS/DAY)	NOX (LBS/DAY)	PM_{10} (LBS/DAY)	$PM_{2.5}$ (LBS/DAY)	PM_{10} (TONS/YEAR)	$PM_{2.5}$ (TONS/YEAR)

The following changes were made to page 3.2-38 of the Draft EIR:

CONCLUSION

As shown in Tables 3.2-~~11~~7 through 3.2-~~13~~9, modeled Project characteristics demonstrate that the Project's operational emissions to levels would be below the SMAQMD thresholds. The Project would have a ***less than significant*** impact relative to project operational emissions. Additionally, as shown in Tables 3.2-~~11~~10 and 3.2-11, implementation of the SMAQMD construction-related best management practices (as required) would reduce Project-related construction emissions during the construction timeframe and emissions would be below SMAQMD thresholds. ~~Therefore, Project construction emissions would have a ***less than significant*** impact.~~ Lastly, the Project would not generate significant health impacts associated with exposure to increases in criteria pollutant levels, based on the tools that are currently available and SMAQMD's interim guidance. This Project would have a ***less than significant*** impact relative to this topic.

The following changes were made to pages 3.2-40 to 3.2-41 of the Draft EIR:

Impact 3.2-3: The Project has the potential for expose sensitive receptors to substantial toxic air contaminants (Less than Significant)

A TAC is defined as an air pollutant that may cause or contribute to an increase in mortality or in serious illness, or that may pose a hazard to human health. TACs are usually present in minute quantities in the ambient air. However, their high toxicity or health risk may pose a threat to public health even at very low concentrations. In general, for those TACs that may cause cancer, there is no concentration that does not present some risk. This contrasts with the criteria pollutants for

which acceptable levels of exposure can be determined and for which the state and federal governments have set ambient air quality standards.

The CARB published the *Air Quality and Land Use Handbook: A Community Health Perspective* (~~2007~~2005) to provide information to local planners and decision-makers about land use compatibility issues associated with emissions from industrial, commercial and mobile sources of air pollution. The CARB Handbook indicates that mobile sources continue to be the largest overall contributors to the State's air pollution problems, representing the greatest air pollution health risk to most Californians. The most serious pollutants on a statewide basis include diesel exhaust particulate matter (diesel PM), benzene, and 1,3-butadiene, all of which are emitted by motor vehicles. These mobile source air toxics are largely associated with freeways and high traffic roads. Non-mobile source air toxics are largely associated with industrial and commercial uses. Table 3.2-11 provides the California Air Resources Board minimum separation recommendations on siting sensitive land uses.

The CARB recommends avoiding placing new sensitive land uses within 500 feet of a freeway, urban roads with 100,000 vehicles/day, or rural roads with 50,000 vehicles per day. The Project site is not within 500 feet of any highway or interstate (the closest highway, CA-16, is located more than 2.5 miles to the south of the Project site). Moreover, the Project site is not located adjacent to any major roadways, and Project sensitive receptors would not be located within 500 feet of roadways with traffic volumes of 50,000 vehicles/day or greater. Therefore, the site lies beyond the CARB-recommended buffer area, and future receptors would not be negatively affected by toxic air contaminants generated on nearby roadways.

Separately, the CARB published a technical supplement to the *Air Quality and Land Use Handbook: A Community Health Perspective* (2005) in 2017, entitled *Strategies to Reduce Air Pollution Exposure Near High-Volume Roadways* (2017). This technical supplement provides planners and stakeholders involved in land use planning and decision-making with information on scientifically based strategies to reduce exposure to traffic emissions near high-volume roadways. Development of the Project would not preclude land use planners and decision-makers from incorporating emissions reduction strategies as contained within this technical supplement.

The Project is primarily a residential development, with some light commercial and recreation land uses. These land uses are not typically known to expose the public to substantial concentrations of TACs. In addition, there are no distribution centers, rail yards, ports, refineries, chrome platers, dry cleaners, or gasoline dispensing facilities located in the vicinity of the Project site. There are no major stationary sources of toxic air contaminants identified in the vicinity of the development site that could potentially affect future on-site sensitive receptors, and the Project would not be a large generator of diesel truck trips during Project operation. Therefore, development of the Project would not cause a substantial increase in exposure of sensitive receptors to localized concentrations of TACs. This Project would have a ***less than significant*** relative to this topic.

TABLE 3.2-~~11~~12 CARB MINIMUM SEPARATION RECOMMENDATIONS ON SITING SENSITIVE LAND USES

SOURCE CATEGORY	*ADVISORY RECOMMENDATIONS*
Freeways and High-Traffic Roads	• Avoid siting new sensitive land uses within 500 feet of a freeway, urban roads with 100,000 vehicles/day, or rural roads with 50,000 vehicles/day.
Distribution Centers	• Avoid siting new sensitive land uses within 1,000 feet of a distribution center (that accommodates more than 100 trucks per day, more than 40 trucks with operating transport refrigeration units (TRUs) per day, or where TRU unit operations exceed 300 hours per week). • Take into account the configuration of existing distribution centers and avoid locating residences and other new sensitive land

	uses near entry and exit points.
Rail Yards	• Avoid siting new sensitive land uses within 1,000 feet of a major service and maintenance rail yard. • Within one mile of a rail yard, consider possible siting limitations and mitigation approaches.
Ports	• Avoid siting of new sensitive land uses immediately downwind of ports in the most heavily impacted zones. Consult local air districts or the CARB on the status of pending analyses of health risks.
Refineries	• Avoid siting new sensitive land uses immediately downwind of petroleum refineries. Consult with local air districts and other local agencies to determine an appropriate separation.
Chrome Platers	• Avoid siting new sensitive land uses within 1,000 feet of a chrome plater.
Dry Cleaners Using Perchloro- ethylene	• Avoid siting new sensitive land uses within 300 feet of any dry cleaning operation. For operations with two or more machines, provide 500 feet. For operations with 3 or more machines, consult with the local air district. • Do not site new sensitive land uses in the same building with perc dry cleaning operations.
Gasoline Dispensing Facilities	• Avoid siting new sensitive land uses within 300 feet of a large gas station (defined as a facility with a throughput of 3.6 million gallons per year or greater). A 50 foot separation is recommended for typical gas dispensing facilities.

SOURCE: AIR QUALITY AND LAND USE HANDBOOK: A COMMUNITY HEALTH PERSPECTIVE" (CARB, 2007)

3.3 BIOLOGICAL RESOURCES

No changes were made to Section 3.3 of the Draft EIR.

3.4 CULTURAL AND TRIBAL RESOURCES

The following changes were made to pages 3.4-15 and 3.4-16 of Section 3.4 of the Draft EIR:

> ***Mitigation Measure 3.4-2:*** *If human remains are discovered during the course of construction during any phase of the Project, work shall be halted at the site and at any nearby area reasonably suspected to overlie adjacent human remains until the Sacramento County Coroner has been informed and has determined that no investigation of the cause of death is required. If the remains are of Native American origin, ~~either of~~ the following steps will be taken:*
>
> - *The coroner shall contact the Native American Heritage Commission in order to ascertain the proper descendants from the deceased individual. The most likely descendent~~coroner~~ shall make a recommendation to the landowner or the person responsible for the excavation work, for means of treating or disposing of, with appropriate dignity, the human remains and any associated grave goods, which may include obtaining a qualified archaeologist or team of archaeologists to properly excavate the human remains.*
> - *The Shingle Springs Band of Miwok Indian shall be consulted to go over the process to protect any human remains, particularly if located along the on-site aquatic resources.*
>
> *The landowner shall retain a Native American monitor, and an archaeologist, if recommended by the Native American monitor, and rebury the Native American human remains and any associated grave goods, with appropriate dignity, on the property and in a location that is not subject to further subsurface disturbance when any of the following conditions occurs:*
>
> - *The Native American Heritage Commission is unable to identify a descendent.*
> - *The descendant identified fails to make a recommendation.*
> - *The City of Rancho Cordova or its authorized representative rejects the recommendation of the descendant, and the mediation by the Native American Heritage Commission fails to provide measures acceptable to the landowner.*

3.5 GEOLOGY AND SOILS

No changes were made to Section 3.5 of the Draft EIR.

3.6 GREENHOUSE GASES, CLIMATE CHANGE, AND ENERGY

The following changes were made to pages 3.2-22 through 3.2-37 of the Draft EIR:

Construction-related activities that would generate GHGs include worker commute trips, haul trucks carrying supplies, materials, and cut and fill to and from the Project site, and off-road construction equipment (e.g., dozers, loaders, excavators). Construction of the land uses on the Project site is expected to occur over several years. Annual unmitigated and mitigated construction emissions are summarized in Table 3.6-2, in units of metric tons per year (MT/year). It is noted that the benefit of the construction mitigation is negligible and provides a small reduction that is only shown at the hundredth or thousandth decimal place, as shown in the modeling results in Appendix B, so the difference is not discernible in the emissions presented in Table 3.6-2. Table 3.6-3 provides a summary of the construction emissions for those years with concurrent phases (i.e. for years where construction activities from more than one phase will overlap). ~~Table 3.6-2 represents both unmitigated and mitigated construction-related GHG emissions, since the measures provided within Mitigation Measure 3.6-1 would not affect the Project construction GHG emissions directly.~~

SOURCE: CALEEMOD (V.2016.3.2); DE NOVO PLANNING GROUP, 2019

It is noted that construction phases would overlap in 2022, 2023, ~~and~~ 2025, 2026, and 2030 and emissions during these years would reflect concurrent development of multiple phases, as shown in Table 3.6-3.

The GHG emissions would be the greatest during year ~~2027~~2026 because that is the year when a large amount of building construction and architectural coatings for Phases 2 and 3~~, site~~

~~preparation, and grading for Phases 3 and 4, as well as grading and paving for the Rancho Cordova Parkway widening,~~ would occur. The GHG emissions threshold would also be exceeded during years ~~2022,~~ 2025, 2026, and 2030 (with Phases ~~1 and 2~~ combined), and during years 2027, 2028, and 2029~~2025, with Phases 2 and 3 combined, 2028, and 2029~~. Refer Section 3.2, Air Quality, for additional details on the construction schedule. Refer to Appendix B.1 for a detailed summary of the CalEEMod modeling assumptions, inputs, and outputs.

As presented in the table, short-term construction emissions of GHG associated with the Project are estimated to be a maximum of approximately ~~1,587.7~~1,644.7 MT CO_2e in a single year (year ~~2027~~2026). Construction GHG emissions are a one-time release and are, therefore, not expected to generate a significant contribution to global climate change in the long-term. Emissions from construction are above the SMAQMD construction phase threshold of 1,100 MT CO_2e/year. The SMAQMD recommends implementation of the mitigation measures in SMAQMD's Guidance for Construction GHG Emissions Reductions, as well as the SMAQMD's Basic Construction Emission Control Practices (BCECP), as reflected in Mitigation Measure 3.6-1 and Mitigation Measure 3.6-2, respectively. However, reductions associated with many of the components of Mitigation Measure 3.6-1 and Mitigation Measure 3.6-2 are not quantifiable by CalEEMod (CalEEMod does not provide the option to mitigate many components of these measures). As previously described, the reductions associated with construction mitigation measures modeled are negligible; nevertheless, SMAQMD-recommended GHG mitigation measures would result in a slight reduction in construction GHGs and quantifiable reductions (which occur at the hundredth and thousandth decimal places and thus are not reflected in Tables 3.6-2 and 3.6-3) are shown in Appendix B.

CONCLUSION

~~Therefore, d~~During the construction phase, the Project would be required to implement mitigation to reduce emissions to less than the SMAQMD construction phase threshold of 1,100 MT CO_2e/year. Separately, ~~T~~the SMAQMD *Guide to Air Quality Assessment in Sacramento County* allows for construction emissions to be amortized over the expected (long-term) operational life of a project. Therefore, construction emissions are amortized (as provided under Impact 3.6-2, below) and are also subject to Mitigation Measure 3.6-3~~1~~ (as provided under Impact 3.6-2). With implementation of Mitigation Measures 3.6-1 and 3.6-2, as provided below, and Mitigation Measure 3.6-3, as provided under Impact 3.6-2)~~Mitigation Measure 3.6-1,~~ the Project would have a ***less than significant*** impact relative to this topic.

MITIGATION MEASURE(S)

Mitigation Measure 3.6-1: *The Project applicant shall implement the following best management practices (BMPs) for reducing GHG emissions from construction projects, as feasible. The City of Rancho Cordova shall be responsible for monitoring implementation of these measures:*

- *Improve fuel efficiency from construction equipment:*
  - *Minimize idling time either by shutting equipment off when not in use or reducing the time of idling to no more than 3 minutes (5 minute limit is required by the state airborne toxics control measure [Title 13, sections 2449(d)(3) and 2485 of the California Code of Regulations]). Provide clear signage that posts this requirement for workers at the entrances to the site.*

- *Maintain all construction equipment in proper working condition according to manufacturer's specifications. The equipment must be checked by a certified mechanic and determined to be running in proper condition before it is operated.*
- *Train equipment operators in proper use of equipment.*
- *Use the proper size of equipment for the job.*
- *Use equipment with new technologies (repowered engines, electric drive trains).*

- *Perform on-site material hauling with trucks equipped with on-road engines (if determined to be less emissive than the off-road engines).*
- *Use alternative fuels for generators at construction sites such as propane or solar, or use electrical power, as feasible.*
- *Use an ARB approved low carbon fuel for construction equipment. (NOx emissions from the use of low carbon fuel must be reviewed and increases mitigated.), as applicable.*
- *Encourage and provide carpools, shuttle vans, transit passes and/or secure bicycle parking for construction worker commutes.*
- *Reduce electricity use in the construction office by using compact fluorescent bulbs, powering off computers every day, and by using efficient heating and cooling units.*
- *Recycle or salvage non-hazardous construction and demolition debris (goal of at least 75% by weight).*
- *Use locally sourced or recycled materials for construction materials (goal of at least 20% based on costs for building materials, and based on volume for roadway, parking lot, sidewalk and curb materials). Wood products utilized should be certified through a sustainable forestry program.*
- *Minimize the amount of concrete for paved surfaces or utilize a low carbon concrete option.*
- *Produce concrete on-site if determined to be less emissive than transporting ready mix.*
- *Use SmartWay certified trucks for deliveries and equipment transport.*
- *Develop a plan to efficiently use water for adequate dust control.*

Mitigation Measure 3.6-2: *The Project applicant shall implement the following Basic Construction Emissions Control Practices (BCECP) BMPs for reducing emissions from construction projects, as feasible. The City of Rancho Cordova shall be responsible for monitoring implementation of these measures:*

- *Control fugitive dust as required by District Rule 403 and enforced by District staff.*
- *Water all exposed surfaces two times daily. Exposed surfaces include, but are not limited to soil piles, graded areas, unpaved parking areas, staging areas, and access roads.*
- *Cover or maintain at least two feet of free board space on haul trucks transporting soil, sand, or other loose material on the site. Any haul trucks that would be traveling along freeways or major roadways should be covered.*
- *Use wet power vacuum street sweepers to remove any visible trackout mud or dirt onto adjacent public roads at least once a day. Use of dry power sweeping is prohibited.*
- *Limit vehicle speeds on unpaved roads to 15 miles per hour (mph).*
- *All roadways, driveways, sidewalks, parking lots to be paved should be completed as soon as possible. In addition, building pads should be laid as soon as possible after grading unless seeding or soil binders are used.*

- *For diesel-powered fleets working at the construction site:*
  - *Provide current certificate(s) of compliance for CARB's In-Use Off-Road Diesel-Fueled Fleets Regulation [California Code of Regulations, Title 13, sections 2449 and 2449.1]. For more information contact CARB at 877-593-6677, doors@arb.ca.gov, or* www.arb.ca.gov/doors/compliance_cert1.html

Impact 3.6-2: The Project has the potential to generate operation-related GHGs, either directly or indirectly, that may have a significant effect on the environment (Less than Significant with Mitigation)

The Project is anticipated to be fully developed (i.e. achieve buildout) by approximately 2035. However, partial buildout (completion of Phase 1) could occur as soon as 2023. The long-term operational GHG emissions estimate for the Project incorporates the Project's potential area source and vehicle emissions, and emissions associated with utility and water usage, and wastewater and solid waste generation. The modeling also reflects a loss of carbon sequestration from the loss of existing trees and vegetation, as well as the benefits of carbon sequestration from the installation of new trees within the Project site.

Project Operational Characteristics

CalEEMod was used to estimate operational emissions for the Project. As described in Section 3.2, Air Quality, the CalEEMod model only allows some Project characteristics to be modeled as "mitigation" for the purposes of the model; therefore, the "mitigated" Project scenario modeled in the unmitigated CalEEMod run represents reductions associated with Project characteristics that reduce emissions.

A summary of the Project characteristics that reduce GHG emissions is provided below (note: the associated CalEEMod measure is provided in brackets). For further detail, see the list of sustainability features and other Project details as provided in Chapter 2.0, Project Description.

- Density to 6.~~86~~ 66 dwelling units per acre (1,690 dwelling units divided by 253.87 residential acres (gross). [Traffic Mitigation, LUT-1];
- ~~Increase diversity through single family residential, multi-family residential, commercial, parks and recreation, and senior uses [Traffic Mitigation, LUT-3];~~
- Improve walkability design (a ratio of 144.9~~123.53~~ intersections per square miles, as shown on the Tentative Subdivision Map.) [Traffic Mitigation, LUT-9];
- ~~Improve destination accessibility (12.3 miles) [Traffic Mitigation LUT-4];~~
- Increase transit accessibility (Project site would include on-site transit facilities for the City's Signature Transit Route as identified in the SPA Handbook) – average distance to transit for Project residents would be approximately 0.25 miles.) [Traffic Mitigation, LUT-5];
- Improve pedestrian network (Project site and connecting off-site. The Project would include pedestrian improvements that provide connectivity between the internal components of the Project, as well as to adjacent existing and future developments. The Project would provide for future connections to an extension of Chrysanthy Boulevard and planned development east of the Project site, a connection to an existing trail located north of the site, connections south of the site via a pedestrian connection at North Campus Road, and connections to the existing and future uses to the west of the site.) [Traffic Mitigation, SDT-1];

- Provide traffic calming measures (50% of streets and intersections with improvements as shown on the Tentative Subdivision Map and identified in the SPA Handbook. Traffic calming features incorporated into the Project include street design features, such as narrower streets, limited single-loaded streets, parking on both sides of the street, posted speed limit signs, planter strips with street trees, and horizontal shifts (lane centerline that curves or shifts), and intersection traffic calming features, including marked crosswalks, count-down signal timers where appropriate, curb extensions, channelization islands, median islands, and tight corner radii.) [Traffic Mitigation, SDT-2];
- Install electric vehicle (EV) charging stations throughout the Project site, such that at least 50% of single-family residences and 5% of parking spaces within the commercial, park and recreation, and multi-family land uses will have EV charging stations, as identified in the SPA Handbook. [Traffic Mitigation SDT-3];
- Expand transit network; the Project will provide a transit stop as provided in the SPA Handbook. [Traffic Mitigation, TST-3];
- Plant a minimum of 2,240 new trees throughout the Project site [4.11.2-Sequestration];
- No hearths, as recommended by the SMAQMD in the *SMAQMD Tips for Using CalEEMod* (February 2019.) [Area Mitigation];
- Use low-VOC paint for architectural coatings (7550 EF g/L) (Note: this VOC value represents the average VOC level for architectural coatings in the SMAQMD jurisdiction, as provided via correspondence with the SMAQMD.);
- Install energy efficient (i.e. LED or better lighting) for all outdoor lighting, as identified in the SPA Handbook ~~(for outdoor lighting)~~ [Energy Mitigation, LE-1];
- Generate 95% or more of electricity via renewable energy (on-site energy generation and/or contract with SMUD) [Energy Mitigation, AE-1, AE-2, AE-3], as identified in the SPA Handbook.;
- Install energy efficient *(i.e. Energy Star)* appliances [Energy Mitigation, BE-4] , as identified in the SPA Handbook.;
- Install low-flow appliances (bathroom faucet, kitchen faucet, toilet, and shower) [Water Mitigation, WUW-1] , as identified in the SPA Handbook.;
- Use water-efficient irrigation systems (automatic rain shut-off, maximum gallon per minute restriction, WiFi connectivity), as identified in the SPA Handbook [Water Mitigation, WUW-4]; and
- Minimize turf for residential uses to 70% less than the maximum allowed turf area, as identified in the SPA Handbook. [Water Mitigation, WUW-5].

Furthermore, as discussed in Section 3.2, Air Quality, the Project would implement all feasible SMAQMD BMPs for particulate matter emissions from land use development projects. The SMAQMD BMPs are required by existing regulations. The following list identifies the BMPs for operational PM emissions for land use development projects that would also contribute to a reduction in GHGs:

- Compliance with the mandatory measures in the California Building Energy Efficiency Standards (Title 24, Part 6) that pertain to efficient use of natural gas for space and water heating and other uses at residential or non-residential land uses.

- Compliance with mandatory measures in the California Green Building Code (Title 24, Part 11). Current mandatory measures related to operational PM include requirements for bicycle parking, parking for fuel-efficient vehicles, electric vehicle charging, and fireplaces for non-residential projects. Residential project measures include requirements for electric vehicle charging and fireplaces.

- Compliance with anti-idling regulations for diesel-powered commercial motor vehicles (greater than 10,000 gross vehicular weight rating). This BMP focuses on non-residential land use projects (retail and industrial) that would attract these vehicles.

Unmitigated Project Emissions

For Table 3.6-4, two mobile source scenarios are provided: the first scenario shows mobile source emissions inclusive of all Project trips, whilst a second scenario for the mobile emissions category ("Mobile Emissions Category Excluding Car and Light-Duty Truck Trips") shows Project mobile category emissions without emissions from car and light-duty truck trips (consistent with the SB 375 CEQA streamlining benefit for "Mixed-Use Residential Projects", for which the Project qualifies).

SOURCE: CALEEMOD (V.2016.3.2)

As shown in Table 3.6-4 the Project's operational GHG emissions would equal approximately ~~5,748.6~~5,851.2 MT CO_2e/year, when removing the emissions from car and light-duty truck trips, per the SB 375 CEQA streamlining benefits.

In addition to the emissions shown in Table 3.6-4, the CalEEMod results also identify the sequestration loss from existing vegetation as well as the benefits of ~~of~~ carbon sequestration from the installation of new trees within the Project site. As a conservative estimate, the loss of existing vegetation (annual grasslands) was estimated to generate a one-time loss (from carbon sequestration) of approximately 1,083.3 MT CO_2e.[6] If amortized over a 30-year period, this loss represents an approximate carbon sequestration loss of 36.11 MT CO_2e/year. However, installation of new trees within the Project site is expected to sequester approximately 1,585.9 MT CO_2e. If amortized over a 30-year period, this represents an approximate carbon sequestration gain of 52.86

[6] Note: for the purposes of modeling, it was assumed that the Project site currently consists of "Grassland". The proposed project was assumed to remove an amount of "Grassland" representative of the land area to be developed (not including the open space areas that would be preserved upon proposed project buildout).

MT CO_2e/year. Combined with the loss from existing vegetation, the net change to carbon sequestration due to development of the Project at full buildout is expected to be approximately 502.6 MT CO_2e, or 16.8 MT CO_2e/year. This carbon sequestration gain (i.e. net reduction in Project GHG emissions) is in addition to the Project unmitigated operational GHG emissions provided in Table 3.6-3.

Separately, as provided under Impact 3.6-1, construction emissions as modeled by CalEEMod would total approximately ~~12,014.9~~14,359.4 CO_2e/year over the life of the Project. If amortized over a 40-year period (consistent with SMAQMD guidance)[7], total amortized construction emissions would be equivalent to ~~200.4~~359.0 CO_2e/year.

When carbon sequestration and amortized construction emissions are included in the calculation, the Project's net annual unmitigated GHG emissions would equal ~~5,446.46~~6,205.9 MT CO_2e/year, as shown in Table 3.6-5, which exceeds the SMAQMD threshold of 1,100 MT CO_2e/year. Therefore, the Project is required to implement all feasible mitigation to reduce Project operational GHG emissions to a below the applicable threshold of significance.

TABLE 3.6-5: UNMITIGATED OPERATIONAL GHG EMISSIONS AT PROJECT BUILDOUT (~~METRIC TONS/YEAR~~WITH NET CARBON SEQUESTRATION AND NET CONSTRUCTION AMORTIZATION INCLUDED)

CATEGORY	*MT CO_2E/YEAR*
Total Area, Energy, Mobile, Waste, and Water Emissions (Table 3.~~4~~6-3)	5,851.2~~5,748.6~~
Net Carbon Sequestration (Reduction)[1]	<~~502.6~~16.8>
Net Construction Amortization (Gain)[2]	~~200.4~~359.0
Total	**~~5,446.46~~6,193.4**

[1] ONE-TIME LOSS OF APPROXIMATELY 1,083.3 MT CO_2E AMORTIZED OVER A 30-YEAR PERIOD REPRESENTS AN APPROXIMATE CARBON SEQUESTRATION LOSS OF 36.11 MT CO_2E/YEAR ASSOCIATED WITH REMOVAL OF EXISTING VEGETATION DUE TO PROJECT CONSTRUCTION. INSTALLATION OF NEW TREES AS PART OF THE PROJECT WOULD SEQUESTER APPROXIMATELY 1,585.9 MT CO_2E, REPRESENTS AN APPROXIMATE CARBON SEQUESTRATION GAIN OF 52.86 MT CO_2E/YEAR IF AMORTIZED OVER A 30-YEAR PERIOD. WHEN COMBINED, THIS REPRESENTS A NET GAIN OF APPROXIMATELY 16.8 MT CO_2E/YEAR.

[2] CONSTRUCTION EMISSIONS WOULD TOTAL APPROXIMATELY ~~12,014.9~~14,359.4 CO_2E/YEAR OVER THE LIFE OF THE PROJECT (SEE IMPACT 3.6-1). WHEN AMORTIZED OVER A 40-YEAR PERIOD, TOTAL AMORTIZED CONSTRUCTION EMISSIONS WOULD BE EQUIVALENT TO ~~200.4~~359.0 CO_2E/YEAR.

SOURCE: CALEEMOD (V.2016.3.2)

Mitigated Project Emissions

The Project has been designed and planned to incorporate a substantial amount of available mitigation. As shown in the Project's GHG Reduction Plan (see Mitigation Measure 3.6-~~1~~3), which addresses both Project features that provide~~d~~ GHG reductions as well as additional mitigation measures to reduce GHG emissions, the Project has been designed to incorporate the majority of CalEEMod measures identified by SMAQMD as appropriate for reducing GHG emissions. These measures are described previously under the Project Operational Characteristics heading. In reviewing GHG reduction measures identified by SMAQMD as included in CalEEMod and appropriate for reducing GHG emissions, an additional three measures were identified as applicable to the Project, as described below:

- Implement Trip Reduction Program (100% of employees eligible; voluntary) [Traffic Mitigation, TRT-1 and TRT-2];
- Exceed Title 24 (2% improvement) [Energy Mitigation, BE-1]; and

[7] As provided on page 6-14 of the SMAQMD's Guide to Air Quality Assessment in Sacramento County (2018).

- Apply Water Conservation Strategy (25% reduction in outdoor water consumption) [Water Mitigation WUW-2].

The following reduction measures were reviewed and were determined to not be applicable to the Project, as described below, and were not selected as part of the CalEEMod modeling:

- Increase Density [LUT-1[: Not applicable; the Project is under minimum density required (eight units per acre).
- Increase Diversity of Land Uses [LUT-3]: The Project provides single family residential, multifamily residential, commercial, senior community clubhouse, parks and recreation, and open space land uses; the VMT reduction associated with these land uses is reflected in the trip reductions included in Section 3.13, Transportation and Circulation.
- Increase Transit Accessibility [LUT-5]: While Project would provide a transit stop for the planned regional transit line, transit is currently limited in the area.
- Integrate Below Market Rate Housing [LUT-6]: Not applicable. The Project includes two multifamily components, but does not include affordable housing.
- Limit Parking Supply [PDT-1]: The suburban context of the Project is not appropriate for this measure.
- Unbundle Parking Costs [PDT-2]: Not applicable. Project design incorporates garages into the single family residential units and does not have significant opportunities for unbundled parking costs.
- Provide a Bus Rapid Transit (BRT) System [TST-1]: Not applicable; while the Project will provide for an expanded transit system through providing a transit stop in accordance with the City's transit plan, it will not create an independent funding source for transit.
- Expand Transit Network [TST-3]: Not applicable; while the Project will provide for an expanded transit system through providing a transit stop in accordance with the City's transit plan, it will not create an independent funding source for transit.
- Increase Transit Frequency [TST-4]: Not applicable; while the Project will provide for an expanded transit system through providing a transit stop in accordance with the City's transit plan, it will not create an independent funding source for transit that would reduce headways.
- Use Reclaimed Water [WSW-1]: Not applicable; nonpotable water is not available to the Project site.
- Use Grey Water [WSW-2]: Not applicable; the Project does not have significant opportunities to reuse onsite water.
- Institute Recycling and Composting Services [SW-1]: The Project will comply with the City's recycling requirements. Credit is not taken for this measure.

Table 3.6-6 provides the mitigation operational GHG emissions at project buildout in year 2035.

TABLE 3.6-6: ~~UNMITIGATED~~ MITIGATED OPERATIONAL GHG EMISSIONS AT PROJECT BUILDOUT (METRIC TONS/YEAR)

MOBILE EMISSIONS CATEGORY EXCLUDING CAR AND LIGHT-DUTY TRUCK TRIPS						
Mobile	0	~~2,987.7~~3,124.6	~~2,982.3~~3,119.0	0.2	0	~~2,982.3~~3,119.0
Total	**~~292.6~~288.2**	**~~5,249.2~~5,353.2**	**~~4,956.6~~5,065.0**	**~~15.3~~15.1**	**~~0.1~~0.1**	**~~5,668.5~~5,766.5**

SOURCE: CALEEMOD (V.2016.3.2)

As shown in Table 3.6-6, the Project's operational GHG emissions would equal approximately 5,~~668.5~~766.5 MT CO_2e/year, when removing the impact from car and light-duty truck trips, per the SB 375 CEQA streamlining benefits.

In addition to the emissions shown in Table 3.6-6, the CalEEMod results also identify the sequestration loss from existing vegetation as well as the benefits of carbon sequestration from the installation of new trees within the Project site. As a conservative estimate, the loss of existing vegetation (annual grasslands) was estimated to generate a one-time loss (from carbon sequestration) of approximately 1,083.3 MT CO_2e.[8] If amortized over a 30-year period, this loss represents an approximate carbon sequestration loss of 36.11 MT CO_2e/year. However, installation of new trees within the Project site is expected to sequester approximately 1,585.9 MT CO_2e. If amortized over a 30-year period, this represents an approximate carbon sequestration gain of 52.86 MT CO_2e/year. Combined with the loss from existing vegetation, the net change to carbon sequestration due to development of the Project at full buildout is expected to be approximately 502.6 MT CO_2e, or 16.8 MT CO_2e/year. This carbon sequestration gain (i.e. net reduction in Project GHG emissions) is in addition to the Project ~~un~~mitigated operational GHG emissions provided in Table 3.6-~~3~~6.

Separately, as provided under Impact 3.6-1, construction emissions as modeled by CalEEMod would total approximately ~~12,014.9~~14,359.4 CO_2e/year over the life of the Project. If amortized over a 40-year period (consistent with SMAQMD guidance)[9], total amortized construction emissions would be equivalent to ~~200.4~~359.0 CO_2e/year.

When carbon sequestration and amortized construction emissions are included in the calculation, the Project's net annual mitigated GHG emissions would equal ~~5,336.3~~6,108.7 MT CO_2e/year, as shown in Table 3.6-7. Additionally, with the mitigation to purchase carbon offsets applied, the proposed project would reduce emissions below the 1,100 MT CO_2e threshold (to 1,099.9 MT CO_2e). Therefore, the Project is required to implement all feasible mitigation to reduce Project operational GHG emissions to a below the applicable threshold of significance.

[8] Note: for the purposes of modeling, it was assumed that the Project site currently consists of "Grassland". The proposed project was assumed to remove an amount of "Grassland" representative of the land area to be developed (not including the open space areas that would be preserved upon proposed project buildout).

[9] As provided on page 6-14 of the SMAQMD's Guide to Air Quality Assessment in Sacramento County (2018).

TABLE 3.6-7: ~~UNMITIGATED~~ MITIGATED OPERATIONAL GHG EMISSIONS AT PROJECT BUILDOUT (~~METRIC TONS/YEAR~~WITH NET CARBON SEQUESTRATION AND NET CONSTRUCTION AMORTIZATION INCLUDED)

WHEN AMORTIZED OVER A 40-YEAR PERIOD, TOTAL AMORTIZED CONSTRUCTION EMISSIONS WOULD BE EQUIVALENT TO 200.4 CO_2E/YEAR.~~*

SOURCE: CALEEMOD (V.2016.3.2)

CONSISTENCY WITH THE DRAFT RECOMMENDED LAND USE OPERATIONAL GHG THRESHOLDS

The following discussion provides an analysis of the Project's compliance with the draft recommended land use operational GHG thresholds that are currently under consideration by the SMAQMD.

The Project includes both residential and non-residential components, and is not expected to achieve full buildout until approximately 2035. Therefore, the GHG per service population threshold for year 2036 (as provided in Table 3.6-1) was selected the purposes of comparing Project operational GHG emissions to the new draft recommended land use thresholds of significance for GHG emissions. As provided in Table 3.6-1, the proposed project would need to reach a GHG per capita threshold of 2.94 MT CO_2e/year or a service population threshold of 2.05 MT CO_2e/year in 2036. Operational emissions for 2035 are used as a proxy for year 2036 (carbon efficiency is expected to improve in California over time, so this serves as a conservative estimate).

The residential population of the Project is expected to be ~~4,319~~4,242 persons and the number of employees within the Project at buildout is estimated at 106 employees, as described in Chapter 2.0, Project Description. Therefore, the service population for the Project would be 4,425. With total operational emissions for the Project at approximately 6,108.7 ~~5,336.3~~ MT CO_2e/year, as shown in Table 3.6-7, the GHG per service population thresholds would equal approximately 1.~~21~~ 44 MT CO_2e/year. Therefore, the Project would achieve the year 2036 GHG/capita thresholds of 2.05 MT CO_2e/service population under the mitigated scenario. Additionally, the Project would comply with the per capita threshold of 2.94 MT CO_2e/year. Nevertheless, since the SMAQMD's recommended Land Use Operational Thresholds of Significance ~~GHG/service population thresholds~~ are not yet final, the existing 1,100 MT CO_2e thresholds for operational GHG emissions that is currently in place is used as the basis for the analysis of the Project's operation-related GHGs emissions.

CONCLUSION

Even with inclusion of the aforementioned Project characteristics, the Project would not meet the operational level emissions threshold as currently provided by the SMAQMD. Therefore, the Project would be required to implement Mitigation Measure 3.6-~~1~~3, which requires the Project applicant to implement additional features in the Project that would reduce GHG emissions, including membership of Project components (residential communities, commercial uses, and parks and recreation uses), in a Transportation Management Association, increased efficiency beyond the minimum requirements of Title 24, use of native and drought-tolerant landscaping and trees, and purchasing carbon offsets. With implementation of Mitigation Measure 3.6-~~1~~3, the Project would have a ***less than significant*** impact relative to this topic.

MITIGATION MEASURE(S)

Mitigation Measure 3.6-~~1~~3: *The Project shall comply with the GHG Reduction Plan for The Ranch throughout all phases of Project construction and operation.*

The Ranch GHG Reduction Plan

The Project shall implement all measures shown in the table below that are identified as ~~"Incorporated into Project Design" or~~ "Mitigation Measure" in order to reduce the Project's net operational emissions, including amortized construction emissions, to an emissions level that meet the SMAQMD threshold for GHG emissions. It is noted that incorporation of the three SMAQMD-Recommended CalEEMod Measures to Reduce GHGs that are identified specifically as "Mitigation Measures" in the below table, would reduce the Project's net operational emissions, including amortized construction emissions, to approximately ~~5,336.3~~1,099.9 MT CO_2e, as shown ~~in Table 3.6-7 of the Draft EIR. Implementation of the required carbon offset purchase, as described in the below table, will ensure that the Project meets SMAQMD thresholds as it ensures the Project will purchase adequate carbon offsets to reduce all remaining emissions over SMAQMD thresholds to a level that meets the threshold~~below. It is noted that the CalEEMod measures incorporated into the Project design are also included in the GHG Reduction Plan to ensure that these measures are carried forward and reflected in all phases of the Project.

TABLE 3.6-8: GHG REDUCTION PLAN

GHG REDUCTION MEASURE	*APPLICABILITY*	*IMPLEMENTATION*
SMAQMD-RECOMMENDED CALEEMOD MEASURE TO REDUCE GHGS[1]		
~~LUT-1 Increase Density: Project more dense than typical developments~~	~~Not applicable. Project is under minimum density required (eight units per acre).~~	~~Not applicable.~~
~~LUT-3 Increase Diversity of Land Uses: Different types of land uses are near each other~~	~~Incorporated into Project Description. Project provides single family residential, multifamily residential, commercial, senior community clubhouse, parks and recreation, and open space land uses.~~	~~Included in Project design as described in the Project Description. No additional implementation required.~~
LUT-9 Improve Walkability Design: Walkable street network	Incorporated into Project Description. Project is designed with a walkable street pattern, with a ratio of ~~123.53~~144.9 intersections per square mile, multiple bicycle/pedestrian connections, an off-street trail system, and bicycle lanes to encourage walkability.	Included in Project design as described in the Project Description and based on intersections identified on TSM and in the TSM and site plan figures shown in the SPA Handbook. No additional implementation required.
~~LUT-4 Improve Destination Accessibility: Project close to regional employment or destination center~~	~~Incorporated into Project Description. Project is located 12.3 miles from a regional employment center in downtown Sacramento.~~	~~Included in Project design as described in the Project Description. No additional implementation required.~~
~~LUT-5 Increase Transit Accessibility: Project near high-quality transit~~	~~Not applicable. While Project would provide a transit stop for the planned regional transit line, transit is currently limited in the area.~~	~~Not applicable.~~
~~LUT-6 Integrate Below Market Rate Housing: Incorporates affordable housing~~	~~Not applicable. The Project includes two multifamily components, but does not include affordable housing.~~	~~Not applicable.~~
SDT-1 Improve Pedestrian Network: On-site pedestrian access network links all of project internally and externally	Incorporated into Project Description. Project is designed with a walkable street pattern, with a ratio of 144.9~~123.53~~ intersections per square mile, multiple bicycle/pedestrian connections, an off-street trail system, and bicycle lanes to encourage walkability.	Included in Project design as described in the Project Description based on pedestrian amenities shown on the TSM as well as those identified in the SPA Handbook. No additional implementation required.
SDT-2 Provide Traffic Calming Measures: Projects streets and intersections feature traffic calming features	Incorporated into Project Description. Project has been designed to include a range of traffic-calming street design features, such as narrower streets, limited single-loaded streets, parking on both sides of the street, posted speed limit signs, planter strips with street trees, bulb-outs, and horizontal shifts (lane centerline that curves or shifts), and intersection traffic calming features, including pedestrian push-buttons at three intersections, marked crosswalks, count-down signal timers where appropriate, curb extensions, channelization islands, median islands, and tight corner radii. Traffic calming street design features would be located on at least 50% of internal Projects streets and intersections.	Included in Project design as described in the Project Description and based on the features of the TSM and identified in the SPA Handbook. No additional implementation required.
SDT-3 Implement a Neighborhood Electric Vehicle (NEV) Network: Project provides a viable NEV network	Incorporated into Project Design. While the Project does not include a traditional NEV, the Project would support electric vehicle use through installing EV charging stations throughout the Project site, such that at least	Included in Project design as described in the Project Description and in the SPA Handbook. No additional implementation required.

3.0 REVISIONS

GHG REDUCTION MEASURE	*APPLICABILITY*	*IMPLEMENTATION*
	50% of single family residences and 5% of parking spaces within the commercial, park and recreation, and multi-family land uses will have EV charging stations to reduce reliance on gasoline-fueled vehicles.	
~~PDT-1 Limit Parking Supply: Parking supply below Institute of Transportation Engineers (ITE) rates~~	~~Not applicable. The suburban context of the Project is not appropriate for this measure.~~	~~Not applicable.~~
~~PDT-2 Unbundle Parking Costs: Parking cost separate from property costs~~	~~Not applicable. Project design incorporates garages into the single family residential units and does not have significant opportunities for unbundled parking costs.~~	~~Not applicable.~~
~~TST-1 Provide a Bus Rapid Transit (BRT) System: Establish a BRT line with permanent operational funding stream~~	~~Not applicable. While the Project will provide for an expanded transit system through providing a transit stop in accordance with the City's transit plan, it will not create an independent funding source for transit.~~	~~Not applicable.~~
~~TST-3 Expand Transit Network: Establishes or enhances bus line with permanent operational funding stream~~	~~Not applicable. While the Project will provide for an expanded transit system through providing a transit stop in accordance with the City's transit plan, it will not create an independent funding source for transit.~~	~~Not applicable.~~
~~TST-4 Increase Transit Frequency: Reduces headways of existing transit~~	~~Not applicable. While the Project will provide for an expanded transit system through providing a transit stop in accordance with the City's transit plan, it will not create an independent funding source for transit that would reduce headways.~~	~~Not applicable.~~
TRT-1&2 Implement Trip Reduction Program: Transportation Management Association (TMA) membership or other comprehensive services	Mitigation Measure. Mitigation Measure 3.6-~~1~~ 3 requires the Project to join a Transportation Management Association (all employees located within the Project site to be eligible to participate).	Prior to issuance of occupancy permits for each construction phase of the Project, the Project applicant shall demonstrate that the residential, commercial, and parks and recreation uses associated with each phase have a permanent commitment, demonstrated through CC&Rs or comparable permanent mechanisms, ~~have joined~~to participate in a Transportation Management Association and ensures payment of annual fees for on-going participation. The Transportation Management Association shall grant all employees located within the Project site eligibility to participate).
BE-1 Exceed Title 24 California Code of Regulations, known as the California Building Standards Code (Title 24): Use less energy than allowed by Title 24	Mitigation Measure. Mitigation Measure 3.6-~~1~~ 3 requires the Project to exceed the 2016 Title 24 requirements by 2 percent.	Prior to issuance of building permits for each construction phase of the Project, including all residential, commercial, and parks and recreation uses, the Project applicant shall demonstrate that the phase exceeds the 2016 Title 24 requirements for energy use and

GHG REDUCTION MEASURE	*APPLICABILITY*	*IMPLEMENTATION*
		efficiency by a minimum of 2 percent. The documentation shall identify specific Project components, such as building materials and design, lighting improvements beyond the minimum required by LE-1, etc. and the associated reduction with each component beyond the Title 24 requirements.
LE-1 Install High Efficiency Lighting: Make use of high-efficient outdoor and public lighting	Incorporated into Project Design. The Project proposes to install energy-efficient (i.e., LED or better) lighting for all outdoor lighting.	Included in Project design as described in the Project Description and SPA Handbook. No additional implementation required.
BE-4 Energy Efficient Appliances: Use appliances more energy efficient than standard models	Incorporated into Project Design. The Project proposes to install energy-efficient appliances.	Included in Project design as described in the Project Description and SPA Handbook. No additional implementation required.
AE-1 On-site Renewable Energy: Establish on-site renewable energy. (No Ozone Precursor reductions if NO_x intensity is higher than electric utility.)	Incorporated into Project Design. The Project would generate a minimum of 95% of electricity via renewable energy via either on-site energy generation and/or through a contract with SMUD.	Included in Project design as described in the Project Description and SPA Handbook. No additional implementation required.
WUW-2 Apply Water Conservation Strategy: Reduce indoor and outdoor water use	Incorporated into Project Design. The Project landscaping would be drought-tolerant, sufficient to reduce outdoor water use by 25% compared to non-drought tolerant landscaping. The Project would also minimize the use of turf for residential uses to 70% less than the maximum allowed turf area to reduce water use. ~~would~~	Included in Project design as described in the Project Description and described in the SPA Handbook. No additional implementation required.
~~WSW-1 Use Reclaimed Water: Project utilizes non-potable water~~	~~Not applicable. Nonpotable water is not available to the Project site.~~	~~Not applicable.~~
~~WSW-2 Use Grey Water: Project reuses onsite water~~	~~Not applicable. The Project does not have significant opportunities to reuse onsite water.~~	~~Not applicable.~~
WUW-1 Install Low-Flow Bathroom Faucet, Install Low-Flow Kitchen Faucet, Install Low-flow Toilet, Install Low-flow Shower	Incorporated into Project Design. The Project proposes to install energy-efficient appliances.	Included in Project design as described in the Project Description and identified in the SPA Handbook. No additional implementation required.
WUW-5 Reduce Turf in Landscapes and Lawns: Use less turf than normal projects	Incorporated into Project Design. Minimize turf for residential uses to 70% less than the maximum allowed turf area to reduce water use.	Included in Project design as described in the Project Description and identified in the SPA Handbook. No additional implementation required.
WUW-4 Use Water-Efficient Irrigation Systems: Install a smart irrigation control system	Incorporated into Project Design. Use water-efficient irrigation systems (automatic rain shut-off, maximum gallon per minute restriction, WiFi connectivity) to reduce water waste.	Included in Project design as described in the Project Description. No additional implementation required.
WUW-3 Water Efficient Landscape: Plant native or	Mitigation Measure. Mitigation Measure 3.6-~~1~~ 3 requires the Project to incorporate a minimum of	Prior to approval of improvement plans for each phase of construction,

GHG REDUCTION MEASURE	*APPLICABILITY*	*IMPLEMENTATION*
drought-resistant trees and Vegetation	50 percent of native or drought-resistant trees and vegetation into the proposed landscaping, including landscaping lots, landscaping associated with parks and recreation facilities, and landscaping associated with residential uses. Project applicant shall demonstrate at least a 25% reduction in outdoor water use from implementation of this measure.	the Project applicant shall submit landscaping plans that demonstrate a minimum of 50 percent of of native or drought-resistant trees and vegetation are included in the non-turf component of proposed landscaping, including landscaping lots, parks and recreation lots and facilities, and residential uses.
~~SW-1 Institute Recycling and Composting Services: Project Recycles, Reduces, and Reuses~~	~~Incorporated into Project Design. The Project will comply with the City's recycling requirements. Credit is not taken for this measure.~~	~~Not applicable.~~
ADDITIONAL MEASURES (NOT MODELED IN CALEEMOD)		
Purchase Offsets.	Mitigation Measure. This Mitigation Measure 3.6-~~1~~ 3 requires the Project applicant to purchase carbon offsets to reduce net project operational and amortized construction emissions to less than SMAQMD's adopted threshold for GHG emissions.	Prior to issuance of the project's first building permit, the project applicant shall develop a SMAQMD-approved commitment to purchase carbon offsets sufficient to reduce project operational emissions and amortized construction emissions to less than SMAQMD's adopted threshold for GHG emissions that is in place at the time of the offset purchase. The purchase of carbon offsets may be prorated so that the offsets are paid concurrent with the approval of each project phase (small lot subdivision maps, multifamily parcel, etc.).

[1] *SMAQMD LAND USE EMISSIONS REDUCTIONS VERSION 4 (FOR OPERATIONAL EMISSIONS), SMAQMD, 2017.*

Impact 3.6-3: The Project has the potential to conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases (Less than Significant with Mitigation)

The City of Rancho Cordova has not developed a qualified climate action plan or a GHG reduction plan. Therefore, the Project has been analyzed to determine consistency with State of California GHG reduction targets (as identified by AB 32, SB 32, and the Scoping Plan), the SACOG MTP/SCS, and Executive Order B-30-15 goals are provided below (per SMAQMD guidance contained within the SMAQMD CEQA Guide).

CONSISTENCY WITH THE SACOG MTP/SCS

The Project would be consistent with the planned-for development as provided with the MTP/SCS, and was therefore included within the SCS growth projections. When evaluating consistency with the MTP/SCS, the Project was reviewed as a mixed-use residential project located outside of a transit priority area. The Project meets the Public Resources Code Section 21159.28(a) requirements for a mixed-use residential project, with at least 75% of the total building square footage consisting of residential use, as approximately 98% of the Project's square footage would be residential (approximately 2,875,800 square feet residential uses divided by approximately 2,934,800 total building square feet).

The Project (the "Ranch at Sunridge" in the MTP/SCS) is located within a Developing Community and is consistent with the general uses envisioned for the site in the MTP/SCS. When determining consistency within a Developing Community, SACOG's Determination of MTP/SCS Consistency Worksheet indicates that the Project's average net density must meet or exceed the average net density described for the specific Developing Community. The proposed average net residential density of 10 units/acre exceeds the average net density of 7 units/acre described for the ~~the~~ Ranch at Sunridge (MTP/SCS Appendix E-3, p. 137); in comparison to earlier development proposals for this site, the area for total residential, commercial, and other development is limited by the Project's significant preservation of open space and wetland resources (approximately 199.5-acre wetland preserve). This preservation of open space is consistent with the environmental principles of the SCS. Employment-generating uses include the proposed senior clubhouse, commercial parcel, and parks and recreation uses, which are consistent with the commercial and public uses envisioned by the MTP/SCS (MTP/SCS Appendix E-3, p. 137). A Special Planning Area (SPA) Handbook has been prepared for the Project, which acts in a similar capacity to a Specific Plan, and is consistent with the MTP/SCS. The Project is consistent with the goals of the City of Rancho Cordova General Plan (see SPA Handbook for further detail). The Project provides for a high level of bicycle and pedestrian connectivity throughout the Project site, including non-auto connections to the parks, open space, and trails features of the Project. An open space and wetland preserve area is provided, preserving wetlands and aquatic resources on the site. A range of housing types (including single family market rate and senior units at a range of densities and lot sizes, senior congregate care units, and multifamily units) will serve a broad spectrum of households. As described in Section 3.2, Air Quality, comprehensive features and measures are provided to reduce GHG emissions, including use of renewable energy for the residential component of the Project, an EV charging network, and use of energy-efficient and water-conserving building and design practices.

As described above, the Project is consistent with the MTP/SCS general use designation, density and intensity, and applicable MTP/SCS policies. The Project is located in the "Developing Community" community type. Development from the Project when added to other entitled projects would not exceed the MTP/SCS buildout assumptions for the area within this Community type, which is 152,027 new housing units and 81,837 new employees.

Therefore, the Project is consistent with the MTP/SCS and qualifies for CEQA Streamlining under the 'Residential or Mixed-Use Residential Project Designation for Projects Located Outside of an MTP/SCS TPA' (see Appendix B.3 for the "Determination of MTP/SCS Consistency Worksheet"). Therefore, the Project would have a ***less than significant*** impact relative to consistency with this plan.

CONSISTENCY WITH STATE OF CALIFORNIA GHG REDUCTION TARGETS & EO B-30-15

The State of California has a target to reach 1990 GHG levels by 2020 (consistent with AB 32), 40 percent below 1990 levels by 2030 (consistent with EO B-30-15 and SB 32), and 80 percent below 1990 levels by 2050 (consistent with EO S-03-05). The SACOG MTP/SCS is required to be consistent with these targets. Since the Project is consistent with and has been planned for in the SACOG MTP/SCS, the Project would also be consistent with the California statewide reduction targets. The Project is also consistent with the CARB Scoping Plan, which is developed in coordination with the SACOG MTP/SCS. Therefore, the Project would have a ***less than significant*** impact relative to this threshold.

CONSISTENCY WITH THE SMAQMD CONSTRUCTION AND OPERATIONAL GHG THRESHOLDS

As previously described, the SMAQMD thresholds for construction-related and operational-related emissions is 1,100 MT CO_2e/year. The Project would not exceed these thresholds with implementation of mitigation, as described under Impact 3.6-1. With implementation of Mitigation Measure 3.6-~~1~~3, the Project would have a ***less than significant*** impact relative to this threshold.

CONCLUSION

As demonstrated in the analysis provided above, the Project is consistent with these adopted plans, and would assist the City and the State of California in achieving their adopted GHG reduction targets. The Project would also achieve the SMAQMD construction GHG emissions threshold of 1,100 MT CO_2e per year for construction-related emissions. Additionally, with Mitigation Measure 3.6-~~1~~3, the Project would offset sufficient GHG emissions to achieve the GHG emissions threshold of 1,100 MT CO_2e per year for operational-related emissions (inclusive of amortized construction-related emissions). Therefore, there is a ***less than significant*** impact relative to this topic.

The following changes were made to pages 3.6-38 through 3.6-42 of the Draft EIR:

ELECTRICITY AND NATURAL GAS

Electricity and natural gas used by the Project would be used primarily to power on-site buildings. Total annual electricity (kWh) and natural gas (kBTU) usage associated with the operation of the Project are shown in Table 3.6-8, below (as provided by CalEEMod). The Project incorporates feasible mitigation to reduce the Project's operational electricity and natural gas consumption. As shown, electricity usage within the Project site would be reduced by more than 95% between the unmitigated and mitigated scenarios (due to Project mitigation, including the measure to ensure that at least 95% of Project building electricity usage is derived from renewable sources).

TABLE 3.6-8: PROJECT OPERATIONAL NATURAL GAS AND ELECTRICITY USAGE (UNMITIGATED SCENARIO)

EMISSIONS	*NATURAL GAS (KBTU/YEAR)*	*ELECTRICITY (KWH/YEAR)*
Apartments Mid Rise	2,095,840	38,917
City Park	0	0

Single Family Housing	18,~~988,500~~911,000	~~261,857~~260,788
Total	**30,169,631~~30,634,291~~**	**~~462,844~~455,599**

SOURCE: CALEEMOD (V.2016.3.2)

According to CalEEMod's *Appendix A: Calculation Details for CalEEMod*, CalEEMod uses the California Commercial End Use Survey (CEUS) database to develop energy intensity value for non-residential buildings. The energy use from residential land uses is calculated based on the Residential Appliance Saturation Survey (RASS). Similar to CEUS, this is a comprehensive energy use assessment that includes the end use for various climate zones in California.

As shown in Table 3.6-8, Project operational energy usage would be reduced with implementation of Project components considered mitigation by CalEEMod (note: given the limited mitigation options available in the current version of CalEEMod, the reduction attributable to mitigation represents a conservative analysis). As described under Mitigation Measure 3.~~2~~6-1~~ (see Section 3.2, Air Quality)~~, the Project incorporates feasible mitigation that would reduce the Project's energy consumption, as compared to the unmitigated scenario. These reductions in overall Project energy usage also reflect a reduction in the Project's energy intensity.

ON-ROAD VEHICLES (OPERATION)

The Project would generate vehicle trips during its operational phase. Based on the traffic study prepared for the Project (Kimley Horn, 2019), the Project would generate approximately 11,~~606~~ 469 new daily vehicles trips[10]. In order to calculate operational on-road vehicle energy usage and emissions, default trip lengths generated by CalEEMod were used, which are based on the project location and urbanization level parameters De Novo (the EIR consultant) selected within CalEEMod (i.e. "Sacramento County" and "Urban", respectively). These values are provided by the individual districts or use a default average for the state, depending on the location of the Project (CAPCOA, 2017). Based on default factors provided by CalEEMod, the average distance per trip was conservatively calculated to be approximately 7.9 miles. The Project would generate at total of approximately 86,737 average daily vehicle miles travelled (average daily VMT). Using fleet mix data provide by CalEEMod (v2016.3.2), and Year ~~2026~~ 2035 gasoline and diesel MPG (miles per gallon) factors for individual vehicle classes as provided by EMFAC2014, De Novo derived weighted MPG factors for operational on-road vehicles of approximately 37.1 MPG for gasoline and 9.8 MPG for diesel vehicles. With this information, De Novo calculated as a conservative estimate that the unmitigated Project would generate vehicle trips that would use a total of approximately 2,186 gallons of gasoline and 566 gallons of diesel fuel per day, on average, or 798,060 gallons of gasoline and 206,430 annual gallons of diesel fuel per year.

ON-ROAD VEHICLES (CONSTRUCTION)

The Project would also generate on-road vehicle trips during Project construction (from construction workers and vendors). Estimates of vehicle fuel consumed were derived based on the assumed construction schedule, vehicle trip lengths and number of workers per construction phase as provided by CalEEMod (v 2016.3.2), and Year 2035 gasoline and diesel MPG factors provided by EMFAC2014. Table 3.6-9, below, describes gasoline and diesel fuel used by on-road mobile sources during each phase of the construction schedule. As shown, the vast majority of on-road mobile vehicle fuel used during the construction of the Project would occur during the building construction phase. See Appendix B.2 for a detailed calculation.

[10] For the purposes of ~~air quality and greenhouse gas emissions~~estimating energy consumption for on-road vehicle trips~~modeling~~ (i.e. CalEEMod), the average internal capture rate calculated by Kimley Horn (for AM and PM peak hours) was applied to Project trips.

SOURCE: CALEEMOD (V.2016.3.2); EMFAC2014.

OFF-ROAD VEHICLES (CONSTRUCTION)

Off-road construction vehicles would use diesel fuel during the construction phase of the Project. A non-exhaustive list of off-road constructive vehicles expected to be used during the construction phase of the Project includes: cranes, forklifts, generator sets, tractors, excavators, and dozers. Based on the total amount of CO_2 emissions expected to be generated by the Project (as provided by the CalEEMod output), and a CO_2 to diesel fuel conversion factor (provided by the U.S. Energy Information Administration), the Project would use a total of approximately 212,768~~134,644~~ gallons of diesel fuel for off-road construction vehicles (during the site preparation and ~~grading~~ building construction phases of the Project). Detailed calculations are provided in Appendix B.2.

OTHER

Project landscape maintenance activities would generally require the use fossil fuel (i.e. gasoline) energy. For example, lawn mowers require the use of fuel for power. As an approximation, it is estimated that landscape care maintenance would require approximately 44,200 man-hours of mowing per year. Assuming an average of approximately 0.5 gallons of gasoline used per person-hour, the Project would require the use of approximately 22,100 gallons of gasoline per year to power landscape maintenance equipment. The energy used to power landscape maintenance equipment would not differ substantially from the energy required for landscape maintenance for similar project.

The Project could also use other sources of energy not identified here. Examples of other energy sources include alternative and/or renewable energy (such as solar PV) and/or on-site stationary sources (such as on-site diesel generators) for electricity generation. The Project would introduce solar PV onto residential rooftops, which would greatly reduce the need for fossil fuel-based energy (for Project buildings), including for electricity.

CONCLUSION

The Project would use energy resources for the operation of Project buildings (electricity and natural gas), for on-road vehicle trips (e.g. gasoline and diesel fuel) generated by the Project, and from off-road construction activities associated with the Project (e.g. diesel fuel). Each of these activities would require the use of energy resources. The Project would be responsible for conserving energy, to the extent feasible, and relies heavily on reducing per capita energy consumption to achieve this goal, including through Statewide and local measures.

The Project would be in compliance with all applicable federal, state, and local regulations regulating energy usage. For example, SMUD is responsible for the mix of energy resources used to provide electricity for its customers, and it is in the process of implementing the Statewide Renewable Portfolio Standard (RPS) to increase the proportion of renewable energy (e.g. solar and wind) within its energy portfolio. SMUD is expected to achieve at least a 33% mix of renewable energy resources by 2020, and at least 40% by 2030. Additionally, energy-saving regulations, including the latest State Title 24 building energy efficiency standards ("part 6"), would be applicable to the Project. Other Statewide measures, including those intended to improve the energy efficiency of the statewide passenger and heavy-duty truck vehicle fleet (e.g. the Pavley Bill and the Low Carbon Fuel Standard), would improve vehicle fuel economies, thereby conserving gasoline and diesel fuel. These energy savings would continue to accrue over time. Furthermore, as described previously, the sustainability features of the Project that are incorporated into the project

design (as described previously in this section) would further reduce Project energy consumption. The Project would also be in compliance with the planning documents described previously within this section.

As a result, the Project would not result in any significant adverse impacts related to project energy requirements, energy use inefficiencies, and/or the energy intensiveness of materials by amount and fuel type for each stage of the Project including construction, operations, maintenance, and/or removal. SMUD, the electricity provider to the site, and PG&E, the natural gas provider, maintains sufficient capacity to serve the Project. The Project would comply with all existing energy standards, including those established by Rancho Cordova, as described under Impacts 3.6-1 through 3.6-3, previously, and would not result in significant adverse impacts on energy resources. Furthermore, existing connections exist between the Project site and nearby pedestrian and bicycle pathways, and public transit access exists nearby, reducing the need for local motor vehicle travel. Although improvements to the City's pedestrian, bicycle, and public transit systems would provide further opportunities for alternative transit, the Project would be linked closely with existing networks that, in large part, are sufficient for most residents of the Project and the City of Rancho Cordova as a whole. The Project would also be required to implement Mitigation Measures 3.6-1 through 3.6-~~1~~3, which would greatly reduce the Project's net energy emissions further. For these reasons, the Project would not be expected cause an inefficient, wasteful, or unnecessary use of energy resources nor conflict with or obstruct a state or local plan for renewable energy or energy efficiency. This is a ***less than significant*** impact.

3.7 HAZARDS AND HAZARDOUS MATERIALS

The following change was made to page 3.7-1 of Section 3.7 of the Draft EIR:

No comments were received during the public review period or scoping meeting for the Notice of Preparation regarding this topic. The Sacramento Municipal~~Metropolitan~~ Utilities District's (SMUD's) comment regarding its land use requirements for the transmission corridor, submitted via a letter dated August 6, 2018, are addressed in Section 3.9, Land Use.

The following changes were made to page 3.7-19 of Section 3.7 of the Draft EIR:

The operational phase of the Project would occur after construction is completed and tenants and residents move in to occupy the structures and facilities on a day-to-day basis. The site would be primarily used for residential uses. Single family residential land uses do not routinely transport, use, or dispose of hazardous materials, or present a reasonably foreseeable release of hazardous materials, with the exception of common residential grade hazardous materials such as household cleaners, paint, etc. Additionally, operation of the Project would not prohibit the ongoing groundwater monitoring or remediation program discussed previously.

Further, the open space, drainage areas, and protected preserve areas would be located below the existing on-site PG&E and SMUD facilities which cross the site from northwest to southeast. Development within the power line has the potential for electric and magnetic field (EMF) radiation.

Due to the lack of scientific or medical conclusions about potential health effects from utility electric facilities and power lines, the CPUC issued Decision 93-11-013, establishing EMF policy for regulated utilities, which included consideration of no-cost and low-cost magnetic field reduction

measures on new and upgraded project. The interim EMF requirements apply to PG&E, Southern California Edison, San Diego Gas & Electric, Sierra Pacific Power, and Pacific Power & Light. Municipal utilities, like the SMUD and the Los Angeles Department of Water and Power, are not under CPUC jurisdiction, although they may voluntarily follow the same measures.

The CPUC Decision 06-01-042, issued on January 27, 2006, affirmed that the CPUC's November 1993 decision on low-cost/no-cost policy to mitigate EMF exposure for new utility transmission and substation project should be continued. However, this decision does not apply to existing facilities and does not establish any numeric standards or thresholds, rather the policy encourages low-cost and no cost EMF mitigation, using a recommended benchmark of 4% of total project cost. Methods for reducing magnetic fields described in the CPUC's 2006 EMF Design Guidelines include increasing the distance from electrical facilities, reducing conductor spacing, and phasing circuits to reduce magnetic fields. Further, the 2006 decision re-re-affirmed that health hazards from exposures to EMF have not been established and that state and federal public health regulatory agencies have determined that setting numeric exposure limits is not appropriate.

The CPUC has not identified a significant scientifically verifiable relationship between EMF exposure and negative health consequences. However, the January 2006 decision directs the Commission's Energy Division to pursue and review all available studies regarding EMF, and to review scientific information and report on new findings. Should such studies indicate negative EMF health impacts, the Commission will reconsider its EMF policies, and open a new rulemaking if necessary.

In 2016, the CPUC conducted an EMF investigation to independently measure EMF levels along the San Diego Gas & Electric Company (SDG&E) Sunrise Powerlink underground 230-kilovolt (kV) transmission line located under Alpine Boulevard within the community of Alpine in unincorporated San Diego County. The Sunrise Powerlink 230-kV circuits in Alpine Boulevard pass in the vicinity of Alpine Elementary School and EMF levels at the elementary school have been a specific area of concern to the community. The results of this investigation are summarized in the CPUC's Electromagnetic Field Investigation: Alpine Boulevard – Sunrise Powerlink report (Alpine Report) dated dated June 6, 2016). The Alpine Report found that numerous laboratory, clinical, and epidemiological studies have been conducted over several decades to evaluate the public health impacts of EMF exposure and that laboratory studies on EMF exposures do not support a conclusion of health impacts from EMF exposure, and clinical studies have found that EMF exposure does not appear to affect general physiology. The Alpine Report further found that while epidemiological research indicates there is a weak association between childhood leukemia and certain levels of magnetic field exposure, there is no consensus among scientists about the level of magnetic field exposure that could constitute a health risk. There are no adopted federal, state of California, or local regulatory standards that provide any guidance regarding public exposures to EMF or guidelines for setbacks from transmission lines that apply to the Project. The CPUC has undertaken extensive studies of this issue since the 1990s and is the preeminent source on this subject in California and has determined that health hazards from exposures to EMF have not been established. The Alpine Report affirms that there is no scientific consensus that EMF exposure is actually hazardous to health, nor is there an accepted standard of exposure.

Neither the CPUC, PG&E, nor SMUD stipulate requirements for any setbacks from the edge of transmission line rights-of-way, nor have they established any limitations for land uses adjacent to the right of ways in order to maintain public safety. Based on the above information, the proposed open space, drainage areas, and protected preserve areas that would be located below the existing

on-site PG&E and SMUD facilities would not pose a hazard to public safety or health associated with EMF exposure.

Further, the California Supreme Court held that, as a general rule, CEQA does not apply to impacts of the environment on a project, with several statutory exceptions including "how a project might exacerbate existing environmental hazards." (California Building Industry Assoc. v. Bay Area Air Quality Management District (2015) 62 Cal. 4th 369). The existing transmission lines are not a hazard as health hazards associated with exposures to EMF have not been established, as determined by the CPUC in 1993 and 2006 and affirmed in the 2016 Alpine Report. The Project would not exacerbate any existing condition relative to the transmission lines that would make the transmission lines hazardous. State and national standards or guidelines for setbacks from transmissions lines have not been adopted by any jurisdiction relevant to the Ranch Cordova community. Neither the CPUC, PG&E, nor SMUD stipulate requirements for any setbacks from the edge of transmission line rights-of-way, nor have they established any limitations for land uses adjacent to the right of ways in order to maintain public safety. Based on the above information, the proposed open space, drainage areas, and protected preserve areas that would be located below the existing on-site PG&E and SMUD facilities would not pose a hazard to public safety or health associated with EMF exposure.

The following changes were made to page 3.7-20 of Section 3.7 of the Draft EIR:

Impact 3.7-3: Project implementation would not emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school (Less than Significant)

The Project has limited potential for the routine transport, use, or disposal of hazardous materials as discussed above (Impact 3.7-1). The existing closest school (Robert J. McGarvey Elementary School) is located approximately 0.45 miles west of the western boundary of the Project site. Other existing schools nearby include Sunrise Elementary School (0.75 miles northwest), and Mather Heights Elementary School (2.92 miles west). The Project is not located within one-quarter mile of an existing ~~or proposed~~ school and the Project components would not involve the routine transport, use, or disposal of hazardous materials, or present a reasonably foreseeable release of hazardous materials. However, the Project is located within one-quarter mile of a future proposed school. The EGUSD has a proposed 70-acre high school/middle school campus directly south of the Project site. North Campus Road will run along the southern boundary of the proposed age-restricted community. The proposed high school/middle school campus would be located on the other side of East Campus Road. Nevertheless, the Project would not involve the routine transport, use, or disposal of hazardous materials, or present a reasonably foreseeable release of hazardous materials. Therefore, the Project would have a ***less than significant*** impact with respect to emitting hazardous emissions or handling hazardous or acutely hazardous materials, substances, or waste within ¼ mile of an existing or proposed school.

3.8 HYDROLOGY AND WATER QUALITY

No changes were made to Section 3.8 of the Draft EIR.

3.9 LAND USE

No changes were made to Section 3.9 of the Draft EIR.

3.10 NOISE

No changes were made to Section 3.10 of the Draft EIR.

3.11 POPULATION AND HOUSING

The following changes were made to pages 3.11-6 and 3.11-7 of Section 3.11 of the Draft EIR:

> **Direct Population Growth:** The Project would be a residential and commercial mixed use development, resulting in the addition of up to 1,690~~725~~ residential units, including 705~~737~~ age restricted single-family units, 732~~735~~ non-age restricted single-family units, and up to 253 multifamily units, 38 of which would be age-restricted multifamily units. This would allow for a maximum population of approximately 4,242~~319~~ residents, as described in Chapter 2.0, Project Description. Development of the Project site for residential uses was accounted for in the SACOG MTP/SCS and in the City's General Plan.

3.12 PUBLIC SERVICES AND RECREATION

The following change was made to page 3.12-4 of Section 3.12 of the Draft EIR:

> The Project site is located within the Elk Grove Unified School District (EGUSD) boundary. EGUSD is the fifth largest school district in California and the largest in northern California. Located in southern and eastern Sacramento County, EGUSD covers 320 square miles and has been in existence for over 60~~41~~ years. The EGUSD boundaries encompass the entire City of Elk Grove, portions of the Cities Sacramento and Rancho Cordova, and most of southern Sacramento County.

The following changes were made to pages 3.12-5 and 3.12-6 of Section 3.12 of the Draft EIR:

> The EGUSD building program is funded by approximately 50% state and 50% local sources. The district ~~can~~ receives local funding through developer impact fees, and tax revenue from a Mello-Roos ~~districts,~~ and General Obligation bonds. Developer impact fees provide approximately 40% ~~are the major source of funding~~ for ~~the~~ district building projects resulting from growth. Based on its facility needs assessment, EGUSD demonstrated the need to levy Level II developer fees that are higher than the statutory fee. As of April 2019~~July 2018~~, Level II fees for residential construction are $5.94~~5.65~~ per square foot and $0.56 per square foot for commercial construction. Developer fees may be used to finance new schools and equipment, and to reconstruct existing facilities to maintain adequate housing for all the district's students. EGUSD's Mello-Roos District covers the entire 320 square miles of the District and proceeds are used throughout the District to help build new schools and modernize older schools. ~~Mello-Roos districts are defined tax areas usually associated with new residential subdivisions, which are often used for additional school taxes.~~

The following changes were made to page 3.12-15 of Section 3.12 of the Draft EIR:

> As required by state law, the Project applicant would pay the state-mandated school impact fees to EGUSD. As of April 2019~~August 2018~~, Level II fees for residential development are $5.94~~5.65~~ per square foot and $0.61 per square foot for commercial/industrial construction in the EGUSD boundaries.

3.0 REVISIONS

The following changes were made to pages 3.12-16 and 3.12-17 of Section 3.12 of the Draft EIR:

TABLE 3.12-4: PARKLAND DEDICATION REQUIREMENTS

DESIGNATION	*UNITS*	*QUIMBY PPH[1]*	*POPULATION*	*QUIMBY DEDICATION RATE*	*REQUIRED DEDICATION*
Market-rate Single Family Units	732	2.95	2,159	5 acres/ 1,000 persons	10.795
Market-rate Multi-family Units	215	1.54	331	5 acres/ 1,000 persons	1.655
Age-restricted Senior Single Family Units	705	2.00	1,410	5 acres/ 1,000 persons	7.0500
Age-restricted Senior Multi-family Units	38	1.04	40	5 acres/ 1,000 persons	0.200
Totals	*1,690*	--	*3,940*	--	*19.700*

NOTES: [1] QUIMBY POPULATION CALCULATIONS ARE PERFORMED CONSISTENT WITH MUNICIPAL CODE CHAPTER 22.40. DUE TO THE PRESCRIBED POPULATION PER HOUSEHOLD FACTORS, THESE CALCULATIONS DIFFER FROM THE POPULATION ESTIMATES FOR THE PROJECT IN CHAPTER 2.

SOURCE: CITY OF RANCHO CORDOVA, 2019

As shown in Table 3.12-4, the Project would be required to dedicate 19.7 acres of parkland. Park and recreation facilities totaling 21.78 acres would be provided by the Project. In addition to these facilities, the Project would dedicate approximately 4.4 acres of public open space (portions of Lots Q-S) to complement the active recreation uses associated with the 10.78-acre public park on Lot D and approximately 2.5 miles of public trails would be developed throughout the Project site. Within the age-restricted portion of the Project, approximately 7.60 acres would be dedicated for recreational purposes. The recreation center (4.62 net acres) would include a clubhouse serving as a recreation, community gathering, activity, and information hub for residents. A separate 1.58-acre community garden (Lot B) and a 1.40-acre linear park would be provided within the age-restricted community. In addition, multiple paseos would be provided throughout the age-restricted community to provide connectivity and off-road walkability. In addition to the proposed park lots, the Project would provide parks and recreation facilities on approximately 0.2575 acres within Village 23 to serve the proposed multifamily use.

In fall 2005, CRPD adopted new standards that include a requirement of 5 acres of parkland per 1,000 residents, and the addition of performance standards for specific types of open space. The addition of 21.78 acres of park and recreation facilities space exceeds the five acre per 1,000 goal 2.08 acres. However, the passive uses associated with Lots Q through S and the public walking trails would further contribute to the Project's parkland and open space. New or expanded off-site park facilities would not be required to serve the Project. The environmental impacts of development of the proposed on-site park and recreation facilities are addressed as part of the proposed Project and are analyzed throughout this EIR. Development of the park sites is anticipated as part of the Project and is included in the impact discussions associated with development of the Project site included in this Draft EIR, including analysis of impacts associated with aesthetics, air quality, biological resources, cultural and tribal cultural resources, geology and soils, greenhouse gases and energy, hazards and hazardous materials, hydrology and water quality, land use and planning, population and housing, public services and recreation, transportation and circulation, and utilities. For example, as shown in Figure 2.0-4 in Chapter 2.0, a 10.78-acre park site would be located in the north-central portion of the Project site. This large park area may include recreational fields. The potential lighting and noise impacts resulting from operation of this and other proposed parks are discussed in Section 3.1, Aesthetics, and Section 3.10, Noise and Vibration, of this EIR. Potential adverse environmental impacts associated with development of the Project, including the proposed park sites, are discussed in Sections 3.1 through 3.14 and 4.0 of this Draft EIR. The Project does not

propose any off-site parks and no expansion or development of off-site parks is anticipated as part of the Project.

3.13 TRANSPORTATION AND CIRCULATION

The following change was made to page 3.13-18 of Section 3.13 of the Draft EIR:

The significant impact at this intersection during the AM peak hour can be mitigated by changing the southbound approach to include a right turn lane and an all-purpose lane, which would result in the intersection operating at LOS D or better during the AM and PM peak hours as shown in Table 3.13-7. The intersection improvements would include restriping the southbound approach to move the bicycle lane from its existing location between the two travel lanes to the right shoulder and add dotted lines~~hatching~~ for the right turns from the inside lane, consistent with the Optional Through Right and Right-Turn-Only lane configuration included in Figure 9C-4a (CA) of the CaMUTCD. Mitigation Measure 3.13-2 requires the Project applicant to fund the Project's fair-share of the southbound approach improvements to this intersection. However, since the identified improvement falls under the jurisdiction of the County, neither the City nor the Project applicant would have control over their timing or implementation. Thus, this impact would remain ***significant and unavoidable***. If the County allows the improvement to move forward, the impact would be classified as significant in the short-term, but eventually would be reduced to a less-than-significant level in the long-term.

The following change was made to Table 3.13-8 on page 3.13-21 of the Draft EIR:

TABLE 3.13-8: EXISTING (2017) PLUS PROJECT ROADWAY SEGMENT LOS

3.0 REVISIONS

The following changes are made to pages 3.13-22 and 3.13-23 of Section 3.13 of the Draft EIR:

MITIGATION MEASURE(S)

Mitigation Measure 3.13-1: *Intersection #3, Jackson Road at Eagles Nest Road: The Project applicant shall be responsible for funding the Project's fair share (1.69 percent) of the construction costs, calculated to the satisfaction of the City, in consultation with Sacramento County Department of Transportation, of the following improvement:*

- *The intersection shall be converted from side street stop controlled to signalized. The estimated cost of this improvement is $527,880; the Project's fair-share would be $7,020 (Kimley Horn, 2019).~~Prior to issuance of the occupancy permit for the 400th dwelling unit, the Project applicant shall fund its fair share of the improvement. The Project's fair share of the improvement is 1.69 percent.~~*

Mitigation Measure 3.13-2: *Intersection #9, Grant Line Road at Sunrise Boulevard: The Project applicant shall be responsible for funding the Project's fair share (2.46 percent) of the construction costs, calculated to the satisfaction of the City, in consultation with Sacramento County Department of Transportation, of the following improvement:*

- *The southbound approach shall be changed to include a right turn lane and an all-purpose lane. This would require restriping the southbound approach to move the bicycle lane from its existing location between the two travel lanes to the right shoulder and add ~~hatching~~striping for the right turns from the inside lane, consistent with the Optional Through Right and Right-Turn-Only lane configuration included in Figure 9C-4a (CA) of the CaMUTCD[11]. The estimated cost of this improvement is $25,000; the Project's fair-share would be $620 (Kimley Horn, 2019).~~Prior to issuance of the occupancy permit for the 400th dwelling unit, the Project applicant shall fund its fair share of the improvement. The Project's fair share of the improvement is 2.46 percent.~~*

Mitigation Measure 3.13-3: *Intersection #11, Douglas Road at Sunrise Boulevard: Signal timing optimization ~~shall be completed at this intersection. Additionally~~and~~,~~ a right-turn overlap signal phase shall be added for the eastbound right-turn, overlapping with the northbound left-turn movement~~. The improvement~~ shall be completed prior to ~~issuance of the occupancy permit for the 400th~~ construction of the 763rd dwelling unit equivalent (DUE). A single-family residential (non-age-restricted) unit is calculated as 1.0 DUE, a multifamily residential unit is calculated as 0.616 DUE, and an active adult residential unit is calculated as 0.37 DUE.*

Mitigation Measure 3.13-4: *Intersection #21, Sunrise Boulevard at White Rock Road: Signal timing optimization shall be completed at this intersection~~. The improvement shall be completed~~ prior to ~~issuance of the occupancy permit for~~construction of the 1,162nd DUE~~400th~~. A single-family residential (non-age-restricted) unit is calculated as 1.0 DUE, a multifamily residential unit is calculated as 0.616 DUE, and an active adult residential unit is calculated as 0.37 DUE~~dwelling unit~~.*

Mitigation Measure 3.13-5: *Intersection #25, Sunrise Boulevard at Zinfandel Drive*: *The eastbound and westbound approaches shall be restriped to include a left turn lane and through-right lane. ~~The improvement shall be completed prior to issuance of the occupancy permit for the 400th dwelling~~*

[11] California MUTCD 2014 Edition. Chapter 9C-Markings: Part 9 Traffic Control for Bicycle Facilities. November 2014

~~*unit.*~~*It is noted that this improvement, or components thereof, are also required of the Suncreek Specific Plan project (see SunCreek Specific Plan Project DEIR/DEIS Mitigation Measure 3.15-1k, p. 3.15-43) and the Rio del Oro Specific Plan Project (see Rio del Oro Specific Plan Project DEIR/DEIS Mitigation Measure 3.14-1o, p. 3.14-61) and the Project may participate in the funding of the improvement, if constructed by other projects. Project participation in, or completion of, if not constructed by others, the improvement shall occur prior to construction of the 541st DUE. A single-family residential (non-age-restricted) unit is calculated as 1.0 DUE, a multifamily residential unit is calculated as 0.616 DUE, and an active adult residential unit is calculated as 0.37 DUE. Project participation may include Project construction of the improvement subject to reimbursement of the fair-share of any other projects conditioned or otherwise required to construct or fund the improvement or Project payment of the Project's fair-share of the improvement if constructed by others.*

The following changes were made to pages 3.13-33 and 3.13-34 of Section 3.13 of the Draft EIR:

CONCLUSION

Under the Cumulative (2040) Plus Project condition, the addition of the Project results in potentially significant impacts at five study intersections, including: Intersection #10, Douglas Road at Zinfandel Drive, Intersection #11, Douglas Road at Sunrise Boulevard, Intersection #21, Sunrise Boulevard at White Rock Road, Intersection #25, Sunrise Boulevard at Zinfandel Drive and Intersection #27, White Rock Road at Prairie City Road, and two roadway segments, Roadway Segment #9, Sunrise Boulevard between White Rock Road and Douglas Road, and Roadway Segment #24, Sunrise Boulevard between White Rock Road and Douglas Road. The Project also results in a potentially significant impact to Rancho Cordova Parkway along the Project extent.

Mitigation Measure 3.13-7 would result in acceptable operations at Intersection #10 and Mitigation Measure 3.13-9 would widen Rancho Cordova Parkway to accommodate proposed and planned traffic. However, even with signal timing optimization, the impacts to Intersections #11, #21, and #25 would be significant. The improvements identified in Mitigation Measures 3.13-6 and 3.13-7 falls under the jurisdiction of the County; therefore, neither the City nor the Project applicant would have control over the timing or implementation of this improvement to Intersections #10 and #27. Further, Roadway Segment #24 has been built out consistent with the General Plan designation and additional capacity for this roadway is not envisioned by the General Plan. ~~and~~Further, as discussed above, the City has determined that widening to larger than a 6-lane facility would conflict with bicycle and pedestrian use. While there may be potential to improve circulation conditions through additional connectivity along Sunrise Boulevard and further build out of the City's General Plan network, this would require an update to the General Plan to address long-range transportation planning to address adverse cumulative conditions regardless of Project implementation. Therefore, under the Cumulative (2040) Plus Project condition, impacts to intersections and roadways outside of the City's jurisdiction and control as well as Intersections ~~#10,~~ #11, #21, and #25 and Roadway Segment #24 would remain ***significant and unavoidable***. If the County allows the improvements Intersection #10 to move forward, the impacts would be classified as significant in the short-term, but eventually would be reduced to a less-than-significant level in the long-term.

MITIGATION MEASURE(S)

Mitigation Measure 3.13-6: *Intersection #10, Douglas Road at Zinfandel Drive:* ~~*Prior to issuance of the occupancy permit for the 400th dwelling unit, t*~~*The Project shall pay its fair-share for the*

westbound right turn to be converted from permitted to a free right turn with a receiving lane. The Project's fair share of the improvement is 10.61 percent.

Mitigation Measure 3.13-7: *Intersection #27, White Rock Road at Prairie City Road: A second southbound right-turn lane shall be added at this intersection, and a right-turn overlap signal phase shall be added for the southbound right-turn~~.~~. The Project's fair share of the improvement is 4.77 percent.~~ The improvement fair share shall be paid prior to issuance of the occupancy permit for the 400th dwelling unit.~~*

Mitigation Measure 3.13-8: *Roadway Segment #9, Douglas Road between Mather Boulevard and Sunrise Boulevard: ~~Prior to issuance of the occupancy permit for the 400th dwelling unit, t~~The Project shall pay its fair-share for the widening of Douglas Boulevard to six lanes. The Project's fair share of the improvement is 10.05 percent.*

Mitigation Measure 3.13-9: *Rancho Cordova Parkway shall be widened from two to four lanes along the project extents. The improvement shall be reflected on the Project's improvement plans. The improvement shall be completed before the 570th market rate single family detached unit and the 566th age-restricted senior unit (or the number of units generating an equivalent amount of trips) is constructed.*

Figure 3.13-6 is updated as shown on Revised Draft EIR Figure 3.13-6.

3.0 REVISIONS

REVISED DRAFT EIR FIGURE 3.13-6

This page left blank intentionally.

3.14 UTILITIES

The following changes were made to page 3.14-20 of Section 3.14 of the Draft EIR:

According to the California Department of Resources Recycling and Recovery (CalRecycle), in 2017, Rancho Cordova disposed of approximately 64,235 tons of solid waste. Republic Services ~~Allied Waste Services~~ provides solid waste and recycling collection services to the City. Solid waste is transported to the Elder Creek Transfer Station, located at 8642 Elder Creek Road in Sacramento~~Kiefer Landfill, near the intersection of Grant Line Road and Kiefer Boulevard~~. The waste is then transferred and hauled an additional 51 miles to Forward Landfill, located at 9999 S. Austin Road in Manteca.

Forward, Inc. and Allied Waste operate the Forward Landfill. The ~~Landfill~~ landfill has four units: Solid waste landfill, treatment unit (processing), asbestos containing waste disposal site, and land application. The solid waste landfill unit is a Class I, II, and III solid waste landfill facility which accepts the following waste types: agricultural, asbestos, friable, ash, construction/demolition, contaminated soil, green materials, industrial, mixed municipal, sludge, tires, and shreds. The solid waste unit is 567 total acres with 354.5 acres of disposal area. The maximum permitted throughput at the solid waste unit is 8,668 tons per day, the remaining capacity is 22,100,000 cubic yards, and the permitted capacity is 51,040,000 cubic yards. Given the remaining capacity, it is anticipated that the landfill will continue to operate beyond its estimated closure date in 2021 identified in the Solid Waste Facility Review Permit, Facility 39-AA-0015 dated January 31, 2012. It is noted that the Forward Landfill has submitted plans for expansion that would extend capacity until approximately 2036 are being processed by San Joaquin County. The Supplemental Draft EIR for the Forward Landfill Expansion Project (San Joaquin County, August 2018) estimates a closure date in 2030, based on current capacity and operations.

Additionally, Sacramento County owns and operates the Kiefer Landfill, and the landfill is the primary solid waste disposal facility in the County. Kiefer Landfill is a total of 1,084 acres in size, with a permitted disposal area of 660 acres. Kiefer Landfill is classified as a Class III municipal solid waste landfill facility and is permitted to accept general residential, commercial, and industrial refuse for disposal, including municipal solid waste, construction and demolition debris, green materials, agricultural debris, and other nonhazardous designated debris. Although the City of Rancho Cordova has not secured any current or future disposal capacity at the Kiefer Landfill, this landfill is discussed as a potential future landfill site for the City and Project.

The landfill is permitted to accept a maximum of 10,800 tons per day of solid waste; however, the average intake is only approximately 6,000 tons per day. The Kiefer Landfill receives over 700,000 tons of waste per year. The site currently has a permitted capacity of approximately 117 million cubic yards and a remaining capacity of 113 million cubic yards. Currently, the landfill is operating below permitted capacity, and the closure date of the Kiefer Landfill is anticipated to be approximately 2064.

The following change was made to page 3.14-21 of Section 3.14 of the Draft EIR:

California Green Building Standards Code (CALGreen)

CALGreen requires the diversion of at least 65~~50~~ percent of the construction waste generated during most new construction projects (CALGreen Sections 4.408 and 5.408) and some additions and alterations to nonresidential building projects (CALGreen Section 5.713).

The following changes were made to pages 3.14-23 and 3.14-24 of Section 3.14 of the Draft EIR:

Impact 3.14-3: The Project would comply with federal, state, and local management and reduction statutes and regulations related to solid waste, and would not generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals (Less than Significant)

The Project would be a residential and commercial mixed use development, resulting in the addition of up to 1,690~~725~~ residential units and 53,000 s.f. of commercial and non-residential uses, which is projected to increase the population by an estimated 4,242~~319~~ residents and 106 employees, as described in Section 2.0, Project Description. Development of the Project site for residential and commercial uses was accounted for in the City's General Plan.

CalRecycle provides an average per-capita solid waste disposal rate for residents and business. In Rancho Cordova, CalRecycle estimates a solid waste disposal rate of 4.8 tons per resident per year. Using this rate, the residential portion of the Project would generate approximately 20,361.6~~731.2~~ tons per year of solid waste. Additionally, as described in Section 2.0, the Project would include up to 53,000 square feet of non-residential uses, which includes 21,000 square feet for a recreation center and 32,000 square feet for commercial uses. In order to determine solid waste generation from the proposed non-residential uses, the rate of 6.8 tons per year per employee was used. Therefore, the non-residential components of the Project would generate up to 720.8 tons per year of solid waste. Total solid waste generated by all aspects of the Project would be 21,082.4~~452~~ tons per year.

The Project would be required to comply with applicable state and local requirements including those pertaining to solid waste, construction waste diversion, and recycling. Specifically, Chapter 6.20 of the City's Municipal Code regulates the management of garbage, recyclables, and other wastes, Chapter 6.21 of the City's Municipal Code promotes recycled and organics recycling for businesses and multifamily uses, and Chapter 16.92 outlines the City's Construction and Demolition Debris ordinance.

The addition of solid waste associated with the proposed project, approximately 21,082 tons per year (57.8 tons per day) at total buildout, to the Forward Landfill would not exceed the landfill's remaining capacity. The City will need to secure a new location of disposal of all solid waste generated in the City when the Forward landfill is ultimately closed. There are several options that the City will have to consider for solid waste disposal at that time which is estimated to be 2030, or 2036 if the proposed Forward Landfill expansion is approved.

For example, the Kiefer Landfill is permitted to accept a maximum of 10,800 tons per day of solid waste; however, the average intake is only approximately 6,000 tons per day. The landfill currently has a permitted capacity of approximately 117 million cubic yards and a remaining capacity of 113 million cubic yards. Currently, the landfill is operating below permitted capacity, and the closure date of the Kiefer Landfill is anticipated to be approximately 2064. ~~The addition of the volume of 21,452 tons per year (or 58.8 tons per day) of solid waste generated by the Project to the Kiefer Landfill would not exceed the landfill's remaining capacity.~~ Although the City of Rancho Cordova has not secured any current or future disposal capacity at the Kiefer Landfill, this landfill is discussed as a potential future landfill site for the City and Project if and/or when the Forward Landfill ceases operation.

The Project would comply with federal, state, and local management and reduction statutes and regulations related to solid waste, and would not generate solid waste in excess of State or local

standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals. This is a ***less than significant*** impact.

4.0 OTHER CEQA-REQUIRED TOPICS

No changes were made to Chapter 4.0 of the Draft EIR.

5.0 ALTERNATIVES TO THE PROPOSED PROJECT

The following changes were made to page 5.0-13 of the Draft EIR:

Greenhouse Gases, Climate Change, and Energy

Under Reduced Project Alternative #1, fewer housing units would be constructed on the Project site. Implementation of the Project would generate GHG emissions during construction and operation. Short-term construction GHG emissions are a one-time release of GHGs and are not expected to significantly contribute to global climate change over the lifetime of a Project. As noted previously, construction related impacts would be reduced under this alternative when compared to the Project, as the extent of the development footprint and duration of construction activities would be reduced slightly.

Under Reduced Project Alternative #1, because fewer people would likely reside within the Project site under this alternative due to the reduction of 127 units, the number of vehicle trips generated would also decrease by approximately 890 daily vehicle trips. Emissions associated with area sources and the mobile greenhouse gas emissions associated with vehicle trips would decrease when compared to the Project. ~~As such, the greenhouse gas emissions impact would be decreased when compared to the Project.~~ However, impacts would remain potentially significant and implementation of Mitigation Measures 3.6-1 and 3.6-2 would result in a comparable impact to the Project.

While there would be reduced development under this alternative, it is anticipated that energy-saving measures would be similar to the Project and there would not be a significant change in the potential for wasteful, inefficient, or excessive consumption of energy under this alternative.

The following changes were made to page 5.0-17 of the Draft EIR:

Greenhouse Gases, Climate Change, and Energy

Under Reduced Project Alternative #2, fewer housing units would be constructed on the Project site. Implementation of the Project would generate GHG emissions during construction and operation. Short-term construction GHG emissions are a one-time release of GHGs and are not expected to significantly contribute to global climate change over the lifetime of a project. As noted previously, construction related impacts would be reduced under this alternative when compared to the Project, as the extent of the development footprint and duration of construction activities would be reduced slightly.

Under Reduced Project Alternative #2, there would be less residential development, resulting in a reduced population and a reduction in the number of vehicle trips generated. ~~As such, the~~

~~greenhouse gas emissions impact would be decreased when compared to the Project.~~ However, impacts would remain potentially significant and implementation of Mitigation Measures 3.6-1 and 3.6-2 would result in a comparable impact to the Project.

While there would be reduced development under this alternative, it is anticipated that energy-saving measures would be similar to the Project and there would not be a significant change in the potential for wasteful, inefficient, or excessive consumption of energy under this alternative.

The following changes were made to page 5.0-21 of the Draft EIR:

6.0 REPORT PREPARERS

No changes were made to Chapter 6.0 of the Draft EIR.

7.0 REFERENCES

No changes were made to Chapter 7.0 of the Draft EIR.

APPENDICES

Appendix B.1. of the Draft EIR was revised to replace the CalEEMod modeling results.

This document is the Final Mitigation Monitoring and Reporting Program (FMMRP) for The Ranch Project (Project). This FMMRP has been prepared pursuant to Section 21081.6 of the California Public Resources Code, which requires public agencies to "adopt a reporting and monitoring program for the changes made to the project or conditions of project approval, adopted in order to mitigate or avoid significant effects on the environment." A FMMRP is required for the proposed Project because the EIR has identified significant adverse impacts, and measures have been identified to mitigate those impacts.

The numbering of the individual mitigation measures follows the numbering sequence as found in the Draft EIR.

4.1 MITIGATION MONITORING AND REPORTING PROGRAM

The FMMRP, as outlined in the following table, describes mitigation timing, monitoring responsibilities, and compliance verification responsibility for all mitigation measures identified in this Final EIR.

The City of Ranch Cordova will be the primary agency responsible for implementing the mitigation measures and will continue to monitor mitigation measures that are required to be implemented during the operation of the Project.

The FMMRP is presented in tabular form on the following pages. The components of the FMMRP are described briefly below:

- **Mitigation Measures**: The mitigation measures are taken from the Draft EIR in the same order that they appear in that document.
- **Mitigation Timing**: Identifies at which stage of the project mitigation must be completed.
- **Monitoring Responsibility**: Identifies the agency that is responsible for mitigation monitoring.
- **Compliance Verification**: This is a space that is available for the monitor to date and initial when the monitoring or mitigation implementation took place.

TABLE 4.0-1: MITIGATION MONITORING AND REPORTING PROGRAM

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
BIOLOGICAL RESOURCES				
Impact 3.3-1: The Project has the potential to, directly or indirectly, have a substantial adverse effect through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special-status, in local or regional plans, policies, regulations, or by the CDFW or USFWS - Invertebrates	***Mitigation Measure 3.3-1:*** *Prior to any ground disturbing activities, the Project proponent shall submit a South Sacramento Habitat Conservation Plan (SSHCP) permit application package to the City of Rancho Cordova ("Land Use Authority Permittee") as a request that the incidental take coverage provided by City's SSHCP Incidental Take Permit (ITP) be extended to the proposed activities. The City of Rancho Cordova shall review the SSHCP permit application for consistency with all of the SSHCP requirements and provide the South Sacramento Conservation Agency ("Implementing Entity) with a copy of the SSHCP requirements for tracking purposes. The Project proponent shall be responsible for paying all SSHCP development fees associated with obtaining coverage from the City of Rancho Cordova. Any proposal to provide land in fee title or provide a conservation easement in lieu of paying all or part of the required SSHCP development fees, shall include a consistency analysis in the application that sufficiently shows that the proposal is consistency with the SSHCP Conservation Strategy.* ***Mitigation Measure 3.3-2:*** *The Project proponent shall implement the following SSHCP Avoidance and Minimization Measures (AMMs) to the satisfaction of the City to avoid direct and indirect effects of Covered Activities on Covered Species:* • *AMM SPECIES-1 (Litter Removal Program): A litter control program shall be instituted for the entire Project site. All workers shall ensure that their food scraps, paper wrappers, food containers, cans, bottles, and other trash are deposited in covered or closed trash containers. All garbage shall be removed from the Project site at the end of each work day, and construction personnel shall not feed or otherwise attract wildlife to the area where construction activities are taking place.* • *AMM SPECIES-2 (No Pets in Construction Areas): To avoid harm and harassment of native species, workers and visitors shall not bring pets onto a Project site.* • *AMM SPECIES-3 (Take Report): If accidental injury or death of any Covered Species occurs, workers shall immediately inform the*	City of Rancho Cordova Planning Department City of Rancho Cordova Planning Department	Prior to any ground disturbing activities During construction and operation of the Project	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	approved biologist or on-site monitor and site supervisor. The approved biologist or on-site monitor shall phone the appropriate contact person at the Implementing Entity (i.e., the South Sacramento Conservation Agency). The Implementing Entity shall immediately contact the Wildlife Agencies (i.e., the USFWS and CDFW) by telephone. A memorandum shall be provided to the Implementing Entity and Wildlife Agencies within 1 working day of the incident. The report shall provide the date and location of the incident, number of individuals taken, the circumstances resulting in the take, and any corrective measures taken to prevent additional take. • *AMM SPECIES-4 (Post-Construction Compliance Report): A post-construction compliance report shall be submitted to the SSHCP Implementing Entity within 30 calendar days of completion of construction activities or within 30 calendar days of any break in construction activity that lasts more than 30 days. The report shall detail the construction start and completion dates, any information about meeting or failing to meet species take AMMs, effectiveness of each AMM that was applied at the Project site, and any known Project effects to Covered Species.* • *AMM LID-1 (Stormwater Quality): When the size of a Covered Activity Project exceeds the thresholds established by the State Water Resources Control Board (SWRCB) (see the most recent Stormwater Quality Design Manual for the Sacramento and South Placer Regions, or future SWRCB-approved design manuals applicable to the Plan Area), incorporate stormwater management into site design to satisfy the requirements outlined in the most recent Stormwater Quality Design Manual for the Sacramento and South Placer Regions. Stormwater management may include groundwater recharge (LID-2) and natural site features (LID-3).* • *AMM LID-3 (Natural Site Features): Incorporate preservation of a site's natural aquatic features (such as creeks and streams) into Project design to retain natural hydrologic patterns and to retain habitat that might be used by Covered Species.* • *AMM EDGE-1 (Compatible Land Uses): To the maximum extent practicable, development Project Covered Activities will locate*			

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	compatible land uses (e.g., designated open space such as parks and ball fields, detention basins, and other land uses with less-intensive human activity) in areas immediately adjacent to existing or planned Preserve boundaries. The compatible land use will provide additional buffering of Preserves from potential indirect effects of adjacent urban development. The soil surfaces in a compatible land use area may be re-contoured provided that the soil restrictive layer remains undamaged and most of the soil profile above the restrictive layer remains intact. The Land Use Authority will determine when it is not practicable to locate a compatible land use adjacent to existing or planned Preserve boundaries. • *AMM EDGE-2 (Single-Loaded Streets): To the maximum extent practicable, the design of Urban Development Covered Activities will locate single-loaded streets adjacent to existing or planned Preserve. The Land Use Authority will determine when single-loaded streets are not practicable.* • *AMM EDGE-3 (Preserve Setbacks): Urban Development Covered Activities constructed adjacent to existing or planned Preserves must establish a minimum 50-foot-wide setback outward from the boundary of any existing Preserve or planned SSHCP Preserve. This minimum 50-foot-wide setback will function as a transition between Urban Development and the Preserve, and must be managed to maintain the natural community of vegetation present in the adjacent Preserve. As much of the setback as possible should remain in the same natural habitat as the Preserve.* *However, as discussed in Section 5.2.5, Covered Activities in Preserve Setbacks in the UDA, where an existing or planned Preserve is adjacent to an existing roadway (e.g., collectors, arterials, thoroughfares), the 50-foot Preserve Setback will not be required, and any bicycle or pedestrian trail will be established in the road right-of-way. In addition, where a planned roadway crosses an existing or planned Preserve, no Preserve Setback will be required, and any bicycle or pedestrian trail will be established in the road right-of-way.* • *AMM EDGE-4 (Locate Stormwater Control Outside Preserves): Roads, sidewalks, and other impermeable surfaces of Urban*			

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	Development Covered Activities adjacent to existing or planned Preserves will slope away from Preserves and Preserve Setbacks or intercept drainage with swales or curbs and gutters to preclude drainage from entering Preserves and Preserve Setbacks. Stormwater flows must be directed away from Preserves and Preserve Setbacks and directed into stormwater control facilities inside the development (outside Preserves and Preserve Setbacks) (see EDGE-6 for exception to EDGE-4 in certain SSHCP Linkage Preserves). • *AMM EDGE-5 (Stormwater Control in Preserve Setbacks): If trails are established in any Preserve Setback in compliance with EDGE-3, the trail must be sloped away from the Preserve, and rainwater leaving the trail surface must flow into an adjacent low-velocity bio-retention swale or cell to keep rainwater runoff and trail contaminants from entering the Preserve. Low-velocity bio-retention swales or cells are typically small linear features placed on one or both sides of a trail. As required by EDGE-3, trails and their adjacent bio-retention swales or cells must be located on the side of the Preserve Setback nearest development.* • *AMM EDGE-7 (Hardpan/Duripan Protection): To protect the soil perched aquifer and the micro-watersheds supporting existing vernal pool hydrology, activities that have the potential to cut into, disrupt, or remove the soil's restrictive layer (hardpan or duripan) will not occur within Preserves or Preserve Setbacks. However, in certain circumstances, the Covered Activities defined in Section 5.2.6, Covered Activities in Stream Setbacks in the UDA, and Section 5.2.8, Covered Activities in the Laguna Creek Wildlife Corridor of the Preserve System, may result in punctures or other minor disruptions of the soil hardpan or duripan if approved by the Implementing Entity and the Technical Advisory Committee according to the process described in Chapter 9 of the SSHCP. If a Covered Activity on a Preserve or Preserve Setback results in a puncture or other disruption to the soil hardpan or duripan, the puncture will be sealed using bentonite clay or other material that maintains the functionality of the soil's restrictive layer and associated perched aquifer.*			

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	• *AMM EDGE-10 (Prevent Invasive Species Spread): Completed Covered Activities (including roads) will be maintained in a manner that avoids the spread of invasive species into Preserve and Open Space areas. Such maintenance measures will include the following:* o *To prevent the transport of non-native invasive species onto Preserves, before bringing any equipment onto an SSHCP Preserve or Preserve Setback, equipment must be cleaned of mud, dirt, and plant material. Cleaning will occur in the infested area or another appropriate location as approved by a Plan Permittee.* o *Mowing rotation will start in un-infested areas and move to infested areas.* o *Invasive plant prevention techniques will be incorporated into maintenance plans.* o *The SSHCP Implementing Entity will survey road shoulders, ditches, and rights-of-way that border SSHCP Preserves for invasive weeds or other exotic plant species. Where roadside weed infestations have reached a critical control point, the Implementing Entity or Land Use Authority Permittee will apply the appropriate manual, mechanical, or chemical treatment.* • *AMM BMP-9 (Soil Compaction): After construction is complete, all temporarily disturbed areas will be restored similar to pre-Project conditions, including impacts relating to soil compaction, water infiltration capacity, and soil hydrologic characteristics.* • *AMM NATURE TRAIL-1 (Nature Trail Plan): A nature trail plan must be prepared for each Preserve where a trail is allowed by the Preserve Management Plan. Nature trails will be unpaved trails that vary in width depending on terrain and existing constraints, but will never exceed 4 feet in width. Where a trail crosses a swale, wooden walkways elevated to a height no greater than 2 feet will be installed. Trail improvements may include mowing vegetation to create or maintain a trail, minor grading to remove trip hazards, and signs providing directional and educational information. Public access to land acquired for preservation will be prohibited until a trail plan can be prepared by the Implementing Entity and*			

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	approved by the Permitting Agencies. A trail plan will include the following: o *Maps identifying areas that contain sensitive habitats or species occurrences.* o *Maps that show the location and footprint of proposed trails.* o *Methods used to control public access.* o *Trail and use monitoring methods, schedules, and responsibilities.* o *Trail operation and maintenance guidelines and responsibilities.* o *Clear triggers for use restrictions or closure based on sensitive biological indicators (e.g., seasonal closures of some trails on the basis of activity periods of Covered Species or sensitive species).* • *AMM NATURE TRAIL-2 (Nature Trail Protection of Duripan): Nature trails will be sited and constructed so as not to interfere with existing soil duripan and the perched aquifer that support the existing hydrologic regime of the Vernal Pool–Grassland, and will not interfere with existing pool hydrology. Trails within Preserves will not be paved.* • *AMM NATURE TRAIL-3 (Nature Trail Location): Nature trails will be located away from sensitive natural resources (e.g., vernal pools, riparian habitat, woodland habitat, Covered Species occurrences, raptor nesting sites, tricolored blackbird (Agelaius tricolor) colony sites). The Wildlife Agencies will determine the distance necessary to avoid impacts to sensitive natural resources.* • *AMM NATURE TRAIL-4 (Biological Studies Prior to Nature Trail Design): Biological studies will be conducted within the area being considered for nature trail construction prior to Project design. The studies will include land cover type mapping and focused species surveys and/or wetland delineations. The biological studies will include assessments of potential effects of trail construction on Preserve System resources, and recommendations for avoidance and minimization that may be incorporated into Project siting, design, construction, and operation.*			

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	• *AMM NATURE TRAIL-5 (Monitoring of Nature Trail Impacts): Impacts that could result from use of a nature trail within a Preserve will be monitored according to the Preserve Management Plan (Chapter 8) to ensure that uses do not conflict with the individual Preserve Management Plan. If use of a trail is found to conflict with the individual Preserve Management Plan, use of that trail will be discontinued until adjustments in the use can be made to reduce or eliminate conflicts. The Implementing Entity will make decisions about discontinuing or modifying use of a trail in consultation with the Preserve Manager or other applicable Preserve management agency or organization.* • *AMM ROAD-1 (Road Project Location): Road projects will be located in the least environmentally sensitive area to avoid, to the maximum extent practicable, impacts on Covered Species, Covered Species habitat, and waters of the United States. Road project alignments will follow existing roads, road easements, and rights-of-way, or be sited in disturbed areas to minimize habitat loss and additional habitat fragmentation.* • *AMM ROAD-3 (Roadside Pesticide Use): If pesticide use is necessary along roadsides, the appropriate SSHCP Permittee will ensure that the pesticide application strictly complies with the pesticide label and all other applicable federal, state, and local authorities pertaining to the use, safety, storage, disposal, and reporting of the pesticide. Where roadside weed infestations have reached a critical control point, the Implementing Entity or a Land Use Authority Permittee will apply the appropriate manual, mechanical, or chemical treatment. In addition, the Implementing Entity or appropriate Land Use Authority Permittee will post signs along road shoulders adjacent to sensitive areas that are within the SSHCP Preserve System (e.g., California tiger salamander breeding ponds, endemic plant populations, vertebrates that rely on insects for part of their diet). The signs will identify pesticide use restrictions or other roadside maintenance restrictions.* • *AMM RE-ESTABLISHMENT/ESTABLISHMENT-1 (Vernal Pool): Re-establish or establish Vernal Pool Wetland according to the following guidelines:*			

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	o *Re-establishment will always take priority over establishment of vernal pools. Establishment will be permitted only after it has been determined that sites with the potential to re-establish vernal pools no longer exist in the Plan Area or cannot be acquired through a willing seller/buyer agreement.* o *When possible, re-established or established sites will be located adjacent to an existing Preserve(s) to maximize connectivity and Preserve area.* o *Re-establishment or establishment will not result in direct or indirect adverse impacts to the hydrologic regime of existing vernal pools. Vernal pool re-establishment or establishment actions will not remove more than 10% of any existing vernal pool watershed, as defined by the SSHCP LIDAR analysis (see Section 3.3 and Conservation Action VPI1.2 in Table 7.1).* o *Vernal pool re-establishment will attempt to restore the historical density and range of vernal pool sizes to the maximum extent feasible using historical aerial photography of the site, if available. Where aerial photography of the site's historical conditions is not available, vernal pool re-establishment will include a range of pool sizes (area and depth) to accommodate the different habitat needs and life history characteristics of the vernal pool invertebrate Covered Species.* o *Established vernal pools must be located on sites with vernal pool soils, defined as any Plan Area soil type where vernal pools currently exist.* o *Established vernal pool sites will include a range of pool sizes to accommodate the different habitat needs and life history characteristics of the three vernal pool invertebrate Covered Species.* o *The total density of vernal pools will not exceed 10% of the suitable soil areas in any vernal pool re-establishment and/or establishment site, unless it can be shown that the suitable areas of that site historically supported greater*			

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	densities. o *Re-establishment or establishment may include inoculation when it is likely that no seed or cyst bank of vernal pool species remains at a site. Vernal Pool inocula will come from nearby vernal pools that are on the same geologic formation and soil type.* • *AMM UTILITY-2 (Utility Maintenance on Preserves): Utility maintenance inside SSHCP Preserves and SSHCP Preserve Setbacks containing vernal pools will occur only when vernal pools have been dry for 30 days, except in emergency situations related to human health and safety.* • *AMM UTILITY-3 (Trenchless Construction Methods): Where a pipeline or conduit crosses an existing or planned Preserve or will be located between adjacent Preserves (e.g., under a roadway that has a Preserve on both sides), trenchless construction methods will be used to minimize impacts to the existing soil profile (including impacts to a hardpan or duripan) to maintain the perched aquifer in Vernal Pool Grassland land cover type.* • *AMM UTILITY-4 (Siting of Entry and Exit Location): The entry and exit locations for the trenchless construction method (see Utility-3) will be sited to avoid impacts to vernal pools and Riparian Woodland, and to avoid direct take of SSHCP Covered Species.*			
Impact 3.3-2: The Project has the potential to, directly or indirectly, have a substantial adverse effect through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate,	***Mitigation Measure 3.3-3:*** *The Project proponent shall implement the following SSHCP AMMs to the satisfaction of the City to avoid direct and indirect effects of Covered Activities on western spadefoot (Spea hammondii):* • *AMM WS-1 (Western Spadefoot Work Window): Ground-disturbing Covered Activities shall occur outside the breeding and dispersal season (after May 15 and before October 15), to the maximum extent practicable.* • *AMM WS-2 (Western Spadefoot Exclusion Fencing): If Covered Activities must be implemented after October 15 and before May 15, exclusion fencing shall be installed around the Project footprint before October 15, and the Project site must be monitored by an approved biologist following rain events. Temporary high visibility construction fencing shall be installed along the edge of work areas,*	City of Rancho Cordova Planning Department	During construction of the Project	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
sensitive, or special-status, in local or regional plans, policies, regulations, or by the CDFW or USFWS - Reptile and Amphibian	*and silt fencing shall be installed immediately behind the temporary high-visibility construction fencing to exclude western spadefoot from entering the construction area. Fencing shall remain in place until all construction activities within the construction area are completed. No Project activities shall occur outside the delineated Project footprint. If a western spadefoot is encountered. If a western spadefoot is encountered, refer to WS-6, below.* • *AMM WS-3 (Western Spadefoot Monitoring): If Covered Activities must be implemented in the breeding and dispersal season (after October 15 and before May 15), an approved biologist experienced with western spadefoot identification and behavior shall monitor the Project site, including the integrity of any exclusion fencing. The approved biologist shall be on site daily while construction related activities are taking place, and shall inspect the Project site daily for western spadefoot prior to construction activities. The approved biologist shall also train construction personnel on the required avoidance procedures, exclusion fencing, and protocols in the event that a western spadefoot enters an active construction zone (i.e., outside the buffer zone). If a western spadefoot is encountered, refer to WS-6, below.* • *AMM WS-4 (Avoid Western Spadefoot Entrapment): If a Covered Activity occurs in western spadefoot modeled habitat (Figure 3-17), all excavated steep-walled holes and trenches more than 6 inches deep shall be covered with plywood (or similar material) or provided with one or more escape ramps constructed of earth fill or wooden planks at the end of each work day or 30 minutes prior to sunset, whichever occurs first. All steep-walled holes and trenches shall be inspected by the approved biologist each morning to ensure that no wildlife has become entrapped. All construction pipes, culverts, similar structures, construction equipment, and construction debris left overnight within western spadefoot modeled habitat shall be inspected for western spadefoot by the approved biologist prior to being moved. If a western spadefoot is encountered, refer to WS-6, below.* • *AMM WS-5 (Erosion Control Materials in Western Spadefoot*			

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	Habitat): If erosion control is implemented within western spadefoot modeled habitat, non-entangling erosion control material shall be used to reduce the potential for entrapment. Tightly woven fiber netting (mesh size less than 0.25 inch) or similar material shall be used to ensure that western spadefoots are not trapped (no monofilament). Coconut coir matting and fiber rolls containing burlap are examples of acceptable erosion control materials. • *AMM WS-6 (Western Spadefoot Encounter Protocol): If Covered Activities must be implemented during the breeding and dispersal season (after October 15 and before May 15), and a western spadefoot is encountered during construction activities, the approved biologist shall notify the Wildlife Agencies immediately. Construction activities shall be suspended in a 100-foot radius of the animal until the animal leaves the Project site on its own volition. If necessary, the approved biologist shall notify the Wildlife Agencies (i.e., the USFWS and CDFW) to determine the appropriate procedures related to relocation. If the animal is handled, a report shall be submitted, including date(s), location(s), habitat description, and any corrective measures taken to protect the western spadefoot within 1 business day to the Wildlife Agencies. The biologist shall report any take of listed species to the U.S. Fish and Wildlife Service and California Department of Fish and Wildlife immediately. Any worker who inadvertently injures or kills a western spadefoot or who finds dead, injured, or entrapped western spadefoot(s) must immediately report the incident to the approved biologist.*			
Impact 3.3-4: The Project has the potential to, directly or indirectly, have a substantial adverse effect through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a	***Mitigation Measure 3.3-4:*** *The Project proponent shall implement the following SSHCP AMMs to the satisfaction of the City to avoid direct and indirect effects of Covered Activities on tricolored blackbird:* • *AMM TCB-1 (Tricolored Blackbird Surveys): If modeled habitat for tricolored blackbird is present within a Covered Activity's Project footprint or within 500 feet of a Project footprint, then an approved biologist shall conduct a field investigation to determine if existing or potential nesting or foraging sites are present within the Project*	City of Rancho Cordova Planning Department	Prior to and during construction of the Project	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special-status, in local or regional plans, policies, regulations, or by the CDFW or USFWS - Birds	*footprint and adjacent areas within 500 feet of the Project footprint. Adjacent parcels under different land ownership shall be surveyed only if access is granted or if the parcels are visible from authorized areas. Within the Plan Area, potential tricolor blackbird nest sites are often associated with freshwater marsh and seasonal wetlands, or in thickets of willow, blackberry, wild rose, thistle, and other thorny vegetation. Tricolored blackbirds are also known to nest in crops associated with dairy farms. Foraging habitat is associated with annual grasslands, wet and dry vernal pools and other seasonal wetlands, agricultural fields (such as large tracts of alfalfa and pastures with continuous haying schedules and recently tilled fields), cattle feedlots, and dairies. The Third-Party Project Proponent shall map all existing or potential nesting or foraging sites and provide these maps to the Local Land Use Permittees (i.e., City of Rancho Cordova) and Implementing Entity (i.e., the South Sacramento Conservation Agency). Nesting sites must also be noted on plans that are submitted to a Local Land Use Permittee. See Chapter 10 of the SSHCP for the process to conduct and submit survey information.* • *AMM TCB-2 (Tricolored Blackbird Pre-Construction Surveys): Pre-construction surveys shall be required to determine if active nests are present within a Project footprint or within 500 feet of a Project footprint if existing or potential nest sites were found during design surveys and construction activities shall occur during the breeding season (March 1 through September 15). An approved biologist shall conduct pre-construction surveys within 30 days and within 3 days of ground-disturbing activities, and within the proposed Project footprint and 500 feet of the proposed Project footprint to determine the presence of nesting tricolored blackbird. Pre-construction surveys shall be conducted during the breeding season (March 1 through August 31). Surveys conducted in February (to meet pre-construction survey requirements for work starting in March) must be conducted within 14 days and 3 days in advance of ground-disturbing activities. If a nest is present, then TCB-3 and TCB-4 shall be implemented. The approved biologist shall inform the Land Use Authority Permittee and the Implementing Entity of*			

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	species locations, and they in turn shall notify the Wildlife Agencies (i.e., the USFWS and CDFW). • *AMM TCB-3 (Tricolored Blackbird Nest Buffer): If active nests are found within the Project footprint or within 500 feet of any Project-related Covered Activity, the Third-Party Project Proponent shall establish a 500-foot temporary buffer around the active nest until the young have fledged.* • *AMM TCB-4 (Tricolored Blackbird Nest Buffer Monitoring): If nesting tricolored blackbirds are present within the Project footprint or within 500 feet of any Project-related Covered Activity, then an approved biologist experienced with tricolored blackbird behavior shall be retained by the Third-Party Project Proponent to monitor the nest throughout the nesting season and to determine when the young have fledged. The approved biologist shall be on site daily while construction-related activities are taking place near the disturbance buffer. Work within the nest disturbance buffer shall not be permitted. If the approved biologist determines that tricolored blackbirds are exhibiting agitated behavior, construction shall cease until the buffer size is increased to a distance necessary to result in no harm or harassment to the nesting tricolored blackbirds. If the biologist determines that the colonies are at risk, a meeting with the Third-Party Project Proponent, Implementing Entity, and Wildlife Agencies shall be held to determine the best course of action to avoid nest abandonment or take of individuals. The approved biologist shall also train construction personnel on the required avoidance procedures, buffer zones, and protocols in the event that a tricolored blackbird flies into an active construction zone (i.e., outside the buffer zone).* • *AMM TCB-5 (Timing of Pesticide Use and Harvest Timing on Agricultural Preserves): On SSHCP Agricultural Preserves, pesticides (including herbicides) shall not be applied from January 1 through July 15.* ***Mitigation Measure 3.3-5:*** *The Project proponent shall implement the following SSHCP AMMs to the satisfaction of the City to avoid direct and indirect effects of Covered Activities on Swainson's hawk:*	City of Rancho Cordova Planning	Prior to and during construction of	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	• *AMM SWHA-1 (Swainson's Hawk Surveys): If modeled habitat for Swainson's hawk (Figure 3-25) is present within a Covered Activity's Project footprint or within 0.25 mile of a Project footprint, then an approved biologist shall conduct a survey to determine if existing or potential nesting sites are present within the Project footprint and adjacent areas within 0.25 mile of the Project footprint. Adjacent parcels under different land ownership shall be surveyed only if access is granted or if the parcels are visible from authorized areas. Nest sites are often associated with Riparian land cover, but also include lone trees in fields, trees along roadways, and trees around structures. Nest trees may include, but are not limited to, Fremont's cottonwood (Populus fremontii), oaks (Quercus spp.), willows (Salix spp.), walnuts (Juglans spp.), eucalyptus (Eucalyptus spp.), pines (Pinus spp.), and Deodar cedar (Cedrus deodara). The Third-Party Project Proponent shall map all existing and potential nesting sites and provide these maps to the Local Land Use Permittees (i.e., City of Rancho Cordova) and Implementing Entity (i.e., the South Sacramento Conservation Agency). Nesting sites must also be noted on plans that are submitted to a Local Land Use Permittee. See Chapter 10 for the process to conduct and submit survey information.* • *AMM SWHA-2 (Swainson's Hawk Pre-Construction Surveys): Pre-construction surveys shall be required to determine if active nests are present within a Project footprint or within 0.25 mile of a Project footprint if existing or potential nest sites were found during initial surveys and construction activities shall occur during the breeding season (March 1 through September 15). An approved biologist shall conduct pre-construction surveys within 30 days and 3 days of ground-disturbing activities to determine presence of nesting Swainson's hawk. Pre-construction surveys shall be conducted during the breeding season (March 1 through September 15). If a nest is present, then SWHA-3 and SWHA-4 shall be implemented. The approved biologist shall inform the Land Use Authority Permittee and Implementing Entity of species locations, and they in turn shall notify the Wildlife Agencies (i.e., the USFWS and CDFW).*	Department	the Project	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	• *AMM SWHA-3 (Swainson's Hawk Nest Buffer): If active nests are found within the Project footprint or within 0.25 mile of any Project-related Covered Activity, the Third-Party Project Proponent shall establish a 0.25 mile disturbance buffer around the active nest until the young have fledged, with concurrence from the Wildlife Agencies.* • *AMM SWHA-4 (Swainson's Hawk Nest Buffer Monitoring): If nesting Swainson's hawks are present within the Project footprint or within 0.25 mile of any Project-related Covered Activity, then an approved biologist experienced with Swainson's hawk behavior shall be retained by the Third-Party Project Proponent to monitor the nest throughout the nesting season and to determine when the young have fledged. The approved biologist shall be on site daily while construction-related activities are taking place within the buffer. Work within the temporary nest disturbance buffer can occur with the written permission of the Implementing Entity and Wildlife Agencies. If nesting Swainson's hawks begin to exhibit agitated behavior, such as defensive flights at intruders, getting up from a brooding position, or flying off the nest, the approved biologist shall have the authority to shut down construction activities. If agitated behavior is exhibited, the biologist, Third-Party Project Proponent, Implementing Entity, and Wildlife Agencies shall meet to determine the best course of action to avoid nest abandonment or take of individuals. The approved biologist shall also train construction personnel on the required avoidance procedures, buffer zones, and protocols in the event that a Swainson's hawk flies into an active construction zone (i.e., outside the buffer zone).* ***Mitigation Measure 3.3-6:*** *The Project proponent shall implement the following SSHCP AMMs to avoid direct and indirect effects of Covered Activities on western burrowing owl:* • *AMM WBO-1 (Western Burrowing Owl Surveys): Surveys within modeled habitat are required for both the breeding and non-breeding season. If the Project site falls within modeled habitat, an approved biologist shall survey the Project site and map all*	City of Rancho Cordova Planning Department	Prior to and during construction of the Project	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	burrows, noting any burrows that may be occupied. Occupied burrows are often (but not always) indicated by tracks, feathers, egg shell fragments, pellets, prey remains, and/or excrement. Surveying and mapping shall be conducted by the approved biologist while walking transects throughout the entire Project site plus all accessible areas within a 250-foot radius from the Project site. The centerline of these transects shall be no more than 50 feet apart and shall vary in width to account for changes in terrain and vegetation that can preclude complete visual coverage of the area. For example, in hilly terrain with patches of tall grass, transects shall be closer together, and in open areas with little vegetation, they can be 50 feet apart. This methodology is consistent with current survey protocols for this species (California Burrowing Owl Consortium 1993). Adjacent parcels under different land ownership shall be surveyed only if access is granted or if the parcels are visible from authorized areas. If suitable habitat is identified during the initial survey, and if the Project does not fully avoid the habitat, pre-construction surveys shall be required. Burrowing owl habitat is fully avoided if Project-related activities do not impinge on a 250foot buffer established by the approved biologist around suitable burrows. See Chapter 10 for the process to conduct and submit survey information. • *AMM WBO-2 (Western Burrowing Owl Pre-Construction Surveys): Prior to any Covered Activity ground disturbance, an approved biologist shall conduct pre-construction surveys in all areas that were identified as suitable habitat during the initial surveys. The purpose of the pre-construction surveys is to document the presence or absence of burrowing owls on the Project site, particularly in areas within 250 feet of construction activities. To maximize the likelihood of detecting owls, the pre-construction survey shall last a minimum of 3 hours. The survey shall begin 1 hour before sunrise and continue until 2 hours after sunrise (3 hours total), or begin 2 hours before sunset and continue until 1 hour after sunset. Additional time may be required for large project sites. A minimum of two pre-construction surveys shall be conducted (if owls are detected on the first survey, a second survey is not needed). All owls*			

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	observed shall be counted and their location shall be mapped. Surveys shall conclude no more than 2 calendar days prior to construction. Therefore, the Third-Party Project Proponent must begin surveys no more than 4 days prior to construction (2 days of surveying plus up to 2 days between surveys and construction). To avoid last-minute changes in schedule or contracting that may occur if burrowing owls are found, the Third-Party Project Proponent may also conduct a preliminary survey up to 15 days before construction. This preliminary survey may count as the first of the two required surveys as long as the second survey concludes no more than 2 calendar days in advance of construction. • *AMM WBO-3 (Burrowing Owl Avoidance): If western burrowing owl or evidence of western burrowing owl is observed on the Project site or within 250 feet of the Project site during pre-construction surveys, then the following shall occur:* ***During Breeding Season**: If the approved biologist finds evidence of western burrowing owls within a Project site during the breeding season (February 1 through August 31), all Project-related activities shall avoid nest sites during the remainder of the breeding season or while the nest remains occupied by adults or young (nest occupation includes individuals or family groups foraging on or near the site following fledging). Avoidance is establishment of a minimum 250-foot buffer zone around nests. Construction and other Project-related activities may occur outside of the 250-foot buffer zone. Construction and other Project-related activities may be allowed inside of the 250-foot non-disturbance buffer during the breeding season if the nest is not disturbed, and the Third-Party Project Proponent develops an avoidance, minimization, and monitoring plan that is approved by the Implementing Entity (i.e., the South Sacramento Conservation Agency) and Wildlife Agencies (i.e., the USFWS and CDFW) prior to Project construction based on the following criteria:* o *The Implementing Entity (i.e., the South Sacramento Conservation Agency) and Wildlife Agencies (i.e., the USFWS and CDFW) approve of the avoidance and*			

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	minimization plan provided by the Project applicant. o *An approved biologist monitors the owls for at least 3 days prior to construction to determine baseline nesting and foraging behavior (i.e., behavior without construction).* o *The same approved biologist monitors the owls during construction and finds no change in owl nesting and foraging behavior in response to construction activities.* *If there is any change in owl nesting and foraging behavior as a result of construction activities, the approved biologist shall have authority to shut down activities within the 250-foot buffer. Construction cannot resume within the 250-foot buffer until any owls present are no longer affected by nearby construction activities, and with written concurrence from the Wildlife Agencies.* *If monitoring by the approved biologist indicates that the nest is abandoned prior to the end of nesting season and the burrow is no longer in use, the non-disturbance buffer zone may be removed if approved by the Wildlife Agencies. The approved biologist shall excavate the burrow in accordance with the latest California Department of Fish and Wildlife guidelines for burrowing owl to prevent reoccupation after receiving approval from the Wildlife Agencies.* *The Implementing Entity and Wildlife Agencies shall respond to a request from the Third-Party Project Proponent to review the proposed construction monitoring plan within 21 days.* ***During Non-Breeding Season**: During the non-breeding season (September 1 through January 31), the approved biologist shall establish a minimum 250-foot non-disturbance buffer around occupied burrows. Construction activities outside of this 250-foot buffer shall be allowed. Construction activities within the non-disturbance buffer shall be allowed if the following criteria are met to prevent owls from abandoning overwintering sites:* o *An approved biologist monitors the owls for at least 3*			

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	days prior to construction to determine baseline foraging behavior (i.e., behavior without construction). o *The same approved biologist monitors the owls during construction and finds no change in owl foraging behavior in response to construction activities.* o *If there is any change in owl foraging behavior as a result of construction activities, the approved biologist shall have authority to shut down activities within the 250foot buffer.* o *If the owls are gone for at least 1 week, the Third-Party Project Proponent may request approval from the Implementing Entity (i.e., the South Sacramento Conservation Agency) and Wildlife Agencies (i.e., the USFWS and CDFW) that an approved biologist excavate usable burrows and install one-way exclusionary devices to prevent owls from re-occupying the site. After all usable burrows are excavated, the buffer zone shall be removed and construction may continue.* *Monitoring must continue as described above for the non-breeding season as long as the burrow remains active.* • *AMM WBO-4 (Burrowing Owl Construction Monitoring): During construction of Covered Activities, 250-foot construction buffer zones shall be established and maintained around any occupied burrow. An approved biologist shall monitor the site to ensure that buffers are enforced and owls are not disturbed. The approved biologist shall also train construction personnel on avoidance procedures, buffer zones, and protocols in the event that a burrowing owl flies into an active construction zone.* • *AMM WBO-5 (Burrowing Owl Passive Relocation): Passive relocation is not allowed without the express written approval of the Wildlife Agencies. Passive owl relocation may be allowed on a case-by-case basis on Project sites during the non-breeding season (September 1 through January 31) with the written approval of the Wildlife Agencies if the other measures described in this condition			

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	preclude work from continuing. Passive relocation must be done in accordance with the latest California Department of Fish and Wildlife guidelines for burrowing owl. Passive relocation shall only be proposed if the burrow needing to be removed or with the potential to collapse from construction activities is the result of a Covered Activity. If passive relocation is approved by the Wildlife Agencies, an approved biologist can passively exclude birds from their burrows during the non-breeding season by installing one-way doors in burrow entrances. These doors shall be in place for 48 hours to ensure that owls have left the burrow, and then the biologist shall excavate the burrow to prevent reoccupation. Burrows shall be excavated using hand tools only. During excavation, an escape route shall be maintained at all times. This may include inserting an artificial structure into the burrow to avoid having materials collapse into the burrow and trap owls inside. Other methods of passive relocation, based on best available science, may be approved by the Wildlife Agencies over the 50-year Permit Term. • *AMM WBO-6 (Burrowing Owl Timing of Maintenance Activities): All activities adjacent to existing or planned Preserves, Preserve Setbacks, or Stream Setback areas shall be seasonally timed, when safety permits, to avoid or minimize adverse effects on occupied burrows.* • *AMM WBO-7 (Rodent Control): Rodent control shall be allowed only in developed portions of a Covered Activity Project site within western burrowing owl modeled habitat. Where rodent control is allowed, the method of rodent control shall comply with the methods of rodent control discussed in the 4(d) Rule published in the U.S. Fish and Wildlife Service's (2004) final listing rule for tiger salamander.* ***Mitigation Measure 3.3-7:*** *The Project proponent shall implement the following SSHCP AMMs to the satisfaction of the City to avoid direct and indirect effects on covered raptor species. This measure applies to loggerhead shrike (Lanius ludovicianus), northern harrier (Circus cyaneus), and white-tailed kite (Elanus leucurus). The following AMMs do not apply to*	City of Rancho Cordova Planning Department	Prior to and during construction of the Project	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	ferruginous hawk (Buteo regalis), as they do not nest in the Plan Area. The following AMMs also do not apply to Swainson's hawk or burrowing owl, as specific AMMs have been developed for these covered raptor species and are included in separate mitigation measures. • *AMM RAPTOR-1 (Raptor Surveys): An approved biologist shall conduct a field investigation to determine if existing or potential nesting sites are present within the Project footprint and adjacent areas within 0.25 mile of the Project footprint. Adjacent parcels under different land ownership shall be surveyed only if access is granted or if the parcels are visible from authorized areas. The Project proponent shall map all existing or potential nesting sites and provide these maps to the Local Land Use Permittees (i.e., City of Rancho Cordova) and Implementing Entity (i.e., the South Sacramento Conservation Agency). Nesting sites must also be noted on plans that are submitted to a Local Land Use Permittee. See Chapter 10 for the process to conduct and submit survey information.* • *AMM RAPTOR-2 (Raptor Pre-Construction Surveys): Pre-construction surveys shall be required to determine if active nests are present with a Project footprint or within 0.25 mile of a Project footprint if existing or potential nest sites are found during initial surveys and construction activities shall occur during the raptor breeding season. An approved biologist shall conduct pre-construction surveys within 30 days and 3 days of ground disturbing activities within the proposed Project footprint and within 0.25 mile of the proposed Project footprint to determine presence of nesting covered raptor species. Preconstruction surveys shall be conducted during the raptor breeding season. If a nest is present, then RAPTOR-3 and RAPTOR-4 shall be implemented. The approved biologist shall inform the Land Use Authority Permittee and Implementing Entity of species locations, and they in turn shall notify the Wildlife Agencies.* • *AMM RAPTOR-3 (Raptor Nest/Roost Buffer): If active nests are found within the Project footprint or within 0.25 mile of any Project-related Covered Activity, the Third-Party Project Proponent shall establish a 0.25 mile temporary nest disturbance buffer*			

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	around the active nest until the young have fledged. • *AMM RAPTOR-4 (Raptor Nest/Roost Buffer Monitoring): If Project-related Covered Activities within the temporary nest disturbance buffer are determined to be necessary during the nesting season, then an approved biologist experienced with raptor behavior shall be retained by the Third-Party Project Proponent to monitor the nest throughout the nesting season and to determine when the young have fledged. The approved biologist shall be on site daily while construction-related activities are taking place within the disturbance buffer. Work within the temporary nest disturbance buffer can occur with the written permission of the Implementing Entity and Wildlife Agencies. If nesting raptors begin to exhibit agitated behavior, such as defensive flights at intruders, getting up from a brooding position, or flying off the nest, the approved biologist/monitor shall have the authority to shut down construction activities. If agitated behavior is exhibited, the biologist, Third-Party Project Proponent, Implementing Entity, and Wildlife Agencies shall meet to determine the best course of action to avoid nest abandonment or take of individuals. The approved biologist shall also train construction personnel on the required avoidance procedures, buffer zones, and protocols in the event that a covered raptor species flies into an active construction zone (i.e., outside the buffer zone).* ***Mitigation Measure 3.3-8:*** *The Project proponent shall implement the following measure to avoid or minimize impacts on other protected bird species that may occur on the site:* • *Prior to any ground disturbance a pre-construction survey for protected bird species shall be completed. This survey shall be conducted in the morning or evening hours within 30 days prior to any construction activities. The entire site shall be surveyed for birds, nests and nesting behavior. Common nesting behavior by birds includes; collecting nesting materials, bringing food items to a nest and vocalizations from young or from adults to attract a mate and to establish or defend a nesting territory. A construction-free buffer of suitable dimensions must be established around any active*	City of Rancho Cordova Planning Department	Prior to any ground disturbance	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	migratory bird nests (up to 250 feet, depending on the location and species) for the duration of the Project or until it has been determined that the chicks have fledged and are independent of their parents.			
Impact 3.3-5: The Project has the potential to, directly or indirectly, have a substantial adverse effect through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special-status, in local or regional plans, policies, regulations, or by the CDFW or USFWS - Mammals	***Mitigation Measure 3.3-9:*** *The Project proponent shall implement the following SSHCP AMMs to the satisfaction of the City to avoid or minimize impacts on protected bat species that may occur on the site:* • *AMM BAT-1 (Winter Hibernaculum Surveys): An approved biologist shall conduct a field investigation of the Project footprint and adjacent areas within 300 feet of a Project footprint to determine if a potential winter hibernaculum is present, and to identify and map potential hibernaculum sites. Adjacent parcels under different land ownership shall be surveyed only if access is granted or if the parcels are visible from authorized areas. If potential hibernaculum sites are found, the Project proponent shall note their locations on Project designs and shall design the Project to avoid all areas within a 300-foot buffer around the potential hibernaculum sites. Winter hibernaculum habitat is fully avoided if Project-related activities do not impinge on a 300-foot buffer established by the approved biologist around an existing or potential winter hibernaculum site.* • *AMM BAT-2 (Winter Hibernaculum Pre-Construction Surveys): If the Project proponent elects not to avoid potential winter hibernaculum sites within the Project footprint plus a 300-foot buffer, additional surveys are required. Prior to any ground disturbance related to Covered Activities, an approved biologist shall conduct a preconstruction survey within 3 days of ground-disturbing activities within the Project footprint and 300 feet of the Project footprint to determine the presence of winter hibernaculum sites. Pre-construction surveys shall be conducted during the winter hibernaculum season (November 1 through March 31). If a winter hibernaculum is present, then BAT-3 and BAT-4 shall be implemented. The approved biologist shall inform the City of Rancho Cordova and Implementing Entity (i.e., the South Sacramento Conservation Agency) of species locations, and they in*	City of Rancho Cordova Planning Department	Prior to and during construction of the Project	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	turn shall notify the Wildlife Agencies (i.e., the USFWS and CDFW). • *AMM BAT-3 (Winter Hibernaculum Buffer): If active winter hibernaculum sites are found within the Project footprint or within 300 feet of the Project footprint, the Project proponent shall establish a 300-foot temporary disturbance buffer around the active winter hibernaculum site until bats have vacated the hibernaculum and the Implementing Entity and Wildlife Agencies concur.* • *AMM BAT-4 (Bat Eviction Methods): An approved biologist shall determine if non-maternity and non-hibernaculum day and night roosts are present on the Project site. If necessary, an approved biologist shall use safe eviction methods to remove bats if direct impacts to non-maternity and non-hibernaculum day and night roosts cannot be avoided. If a winter hibernaculum site is present, Covered Activities shall not occur until the hibernaculum is vacated, or, if necessary, safely evicted using methods acceptable to the Wildlife Agencies.* ***Mitigation Measure 3.3-10:*** *The Project proponent shall implement the following measure to avoid or minimize impacts on American badger that may occur on the site:* • *A qualified biologist shall conduct a pre-construction survey for American badger within 14 days prior to the start of ground disturbance. If no American badgers are observed, then a letter report documenting the results of the survey shall be provided to the Project proponent for their records, and no additional measures are recommended. If construction does not commence within 14 days of the preconstruction survey, or halts for more than 14 days, a new survey is required. The results of the survey shall be submitted to the City's Planning Department.* • *If American badgers or their dens are found during the survey, additional avoidance measures shall be implemented, including having a qualified biologist conduct a pre-construction survey within 24 hours prior to commencement of construction activities, performing a Worker Awareness Training to all construction workers, and being present on the Project site during grading*	City of Rancho Cordova Planning Department	Prior to and during construction of the Project	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	activities for the purpose of temporarily halting construction activities until the biologist determines that the badger has left the construction footprint on its own accord. The results of the survey shall be submitted to the City's Planning Department.			
Impact 3.3-6: The Project has the potential to, directly or indirectly, have a substantial adverse effect through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special-status, in local or regional plans, policies, regulations, or by the CDFW or USFWS - Plants	***Mitigation Measure 3.3-11:*** *The Project proponent shall implement the following measure to the satisfaction of the City to avoid or minimize impacts on special-status plants that may occur on the site:* • *AMM PLANT-1 (Rare Plant Surveys): The Project site shall be surveyed for rare plants, specifically including Ahart's dwarf rush (Juncus leiospermus var. ahartii), Dwarf downingia (Downingia pusilla), pincushion navarretia (Navarretia myersii ssp. myersii), and hoary navarretia (Navarretia eriocephala), by an approved biologist and following the CDFW rare plant survey protocols (CDF 2009) or the most recent CDFW rare plant survey protocols. An approved biologist will conduct the field surveys and will identify and map plant species occurrences according to the protocols.* • *AMM PLANT-2 (Rare Plant Protection): If a rare plant listed in AMM PLANT-1 is detected within an area proposed to be disturbed by a Covered Activity or is detected within 250 feet of the area proposed to be disturbed by a Covered Activity, the Implementing Entity (i.e., the South Sacramento Conservation Agency) will assure one unprotected occurrence of the species is protected within a SSHCP Preserve before any ground disturbance occurs at the Project site.* • *AMM ORCUTT-1 (Orcutt Grass Surveys): The Project site will be surveyed for Sacramento and slender Orcutt grass by an approved biologist following CDFW rare plant survey protocols (CDFG 2009) or most recent CDFW guidelines to determine if Sacramento and/or slender Orcutt grass is present. An approved biologist will conduct the field investigation to identify and map occurrences.* • *AMM ORCUTT-2 (Orcutt Grass Protection): Where known or new Sacramento or slender Orcutt grass occurrences are found, they will be protected within an SSHCP Preserve that is at least 50 acres. The occurrence will be located interior to the Preserve at a distance of no less than 300 feet from the edge of the Preserve boundary. If a*	City of Rancho Cordova Planning Department	Prior to and during construction of the Project	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	Project proponent encounters a previously undiscovered occurrence of Sacramento or slender Orcutt grass on a Covered Activity Project site, the Project proponent will contact the Implementing Entity or City of Rancho Cordova with authority over the Project, who will coordinate with the Wildlife Agencies (i.e., the USFWS and CDFW) for written concurrence of avoidance to ensure that the Project does not cause take of the species.			
Impact 3.3-7: The Project has the potential to have substantial adverse effect on federally- or state-protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means	*Implement* ***Mitigation Measure 3.5-1.*** ***Mitigation Measure 3.3-12****: Prior to any construction activities that would disturb a jurisdictional feature, The Project proponent shall submit a wetland delineation, site plan, and mitigation methods to the City of Rancho Cordova and the SSHCP. The Project proponent shall submit a SSHCP permit application package to the City of Rancho Cordova ("Land Use Authority Permittee") as a request that coverage provided by City's SSHCP Aquatic Resources Program be extended to the proposed activities. The City of Rancho Cordova shall review the SSHCP permit application for consistency with all of the SSHCP requirements and provide the South Sacramento Conservation Agency ("Implementing Entity) with a copy of the SSHCP requirements for tracking purposes. The Project proponent shall be responsible for paying all SSHCP development fees associated with obtaining coverage from the City of Rancho Cordova.* *Additionally, the Project applicant shall participate in the SSHCP Aquatic Resources Program (ARP) by paying the applicable mitigation fee for the loss of jurisdictional aquatic features. Costs for the aquatic resources compensatory mitigation projects shall be covered through the Covered Activity project mitigation fees collected under the SSHCP. The SSHCP includes a fee structure that is distinguished by land cover type. This approach accounts for variations in costs associated with the particular requirements for each land cover type. The Project proponent shall pay fees based on the land cover types affected by the development Project and the fee schedule.*	See Mitigation Measure 3.5-1 City of Rancho Cordova Planning Department	See Mitigation Measure 3.5-1 Prior to any construction activities that would disturb a jurisdictional feature	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	Mitigation Measure 3.3-13*: The Project proponent shall implement the following SSHCP Avoidance and Minimization Measures (AMMs) to the satisfaction of the City to avoid direct and indirect effects of Covered Activities on Aquatic land covers of the Verna Pool Ecosystem:* • *AMM LID-1 (Stormwater Quality): When the size of a Covered Activity project exceeds the thresholds established by the State Water Resources Control Board (SWRCB) (see the most recent Stormwater Quality Design Manual for the Sacramento and South Placer Regions, or future SWRCB-approved design manuals applicable to the Plan Area), incorporate stormwater management into site design to satisfy the requirements outlined in the most recent Stormwater Quality Design Manual for the Sacramento and South Placer Regions. Stormwater management may include groundwater recharge (LID-2) and natural site features (LID-3).* • *AMM LID-2 (Groundwater Recharge): When siting SSHCP Preserves containing Riparian, Open Water, or Freshwater Marsh SSHCP land cover types, the Implementing Entity (i.e., the South Sacramento Conservation Agency) will prioritize locations that are suitable for groundwater recharge.* • *AMM LID-3 (Natural Site Features): Incorporate preservation of a site's natural aquatic features (such as creeks and streams) into project design to retain natural hydrologic patterns and to retain habitat that might be used by Covered Species.* • *AMM BMP-1 (Construction Fencing): Orange construction fencing will be installed to ensure that ground disturbance does not extend beyond the allowed construction footprint (i.e., the limit of project construction plus equipment staging areas and access roads). Plan Permittees and Third-Party Project Proponents implementing ground-disturbing Covered Activities will mark the outer boundary of any Preserve Setback or Stream Setback adjacent to or within the project site with orange construction fencing prior to ground disturbance. This fencing will remain in place until project completion, as identified by the Plan Permittee.* • *AMM BMP-2 (Erosion Control): Plan Permittees and Third-Party Project Proponents implementing ground-disturbing Covered Activities will install temporary control measures for sediment,*	City of Rancho Cordova Planning Department	Prior to and during construction of the Project	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	stormwater, and pollutant runoff as required by the Plan Permittee to protect water quality and species habitat. Silt fencing or other appropriate sediment control device(s) will be installed downslope of any Covered Activity that disturbs soils. *Fiber rolls and seed mixtures used for erosion control will be certified as free of viable noxious weed seed. As discussed in Section 5.4.2, Covered Species Take Avoidance and Minimization Measures, erosion controls installed in or adjacent to Plan Area modeled habitat for giant gartersnake (Thamnophis gigas), western pond turtle (Actinemys marmorata), California tiger salamander (California tiger salamander), or western spadefoot (see Chapter 3) must be of appropriate design and materials that will not entrap the species (e.g., not contain mesh netting). Regular monitoring and maintenance of the project's erosion control measures will be conducted until project completion to ensure effective operation of erosion control measures.* • *AMM BMP-3 (Equipment Storage and Fueling): Plan Permittees and Third-Party Project Proponents implementing ground-disturbing Covered Activities will ensure that equipment storage and staging will occur in the development footprint only (not sited in any existing on-site Preserve, planned on-site Preserve, Preserve Setback, Stream Setback, or aquatic land cover type). Fuel storage and equipment fueling will occur away from waterways, stream channels, stream banks, and other environmentally sensitive areas within the development footprint.* *However, certain equipment storage and fueling activities can be allowed on Preserves within habitat re-establishment/establishment sites (refer to Section 5.2.7) if no location outside of the site is available. If a Covered Activity results in a spill of fuel, hydraulic fluid, lubricants, or other petroleum products, the spill will be absorbed and waste disposed of in a manner to prevent pollutants from entering a waterway, Preserve, Preserve Setback, or Stream Setback.* • *AMM BMP-4 (Erodible Materials): Plan Permittees and Third-Party Project Proponents implementing Covered Activities must not deposit erodible materials into waterways. Vegetation clippings,*			

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	brush, loose soils, or other debris material will not be stockpiled within stream channels or on adjacent banks. Erodible material must be disposed of such that it cannot enter a waterway, Preserve, Preserve Setback, Stream Setback, or aquatic land cover type. If water and sludge must be pumped from a subdrain or other structure, the material will be conveyed to a temporary settling basin to prevent sediment from entering a waterway. • *AMM BMP-5 (Dust Control): Plan Permittees and Third-Party Project Proponents implementing ground-disturbing Covered Activities will water active construction sites regularly, if warranted, to avoid or minimize impacts from construction dust on adjacent vegetation and wildlife habitats. No surface water will be used from aquatic land covers; water will be obtained from a municipal source or existing groundwater well.* • *AMM BMP-6 (Construction Lighting): Plan Permittees and Third-Party Project Proponents implementing ground-disturbing Covered Activities will direct all temporary construction lighting (e.g., lighting used for security or nighttime equipment maintenance) away from adjacent natural habitats, and particularly Riparian and Wetland habitats and wildlife movement areas.* • *AMM BMP-7 (Biological Monitor): If a Covered Activity includes ground disturbance within Covered Species modeled habitat, an approved biologist will be on site during the period of ground disturbance, and may need to be on site during other construction activities depending on the Covered Species affected. After ground-disturbing project activities are complete, the approved biologist will train an individual to act as the on-site construction monitor for the remainder of construction, with the concurrence of the Permitting Agencies. The on-site monitor will attend the training described in BMP-8. The approved biologist and the on-site monitor will have oversight over implementation of Avoidance and Minimization Measures, and will have the authority to stop activities if any of the requirements associated with those measures are not met. If the monitor requests that work be stopped, the Wildlife Agencies (i.e., the USFWS and CDFW) will be notified within one working day by email. The approved biologist and/or on-site*			

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	monitor will record all observations of listed species on California Natural Diversity Database field sheets and submit them to the California Department of Fish and Wildlife. The approved biologist or on-site monitor will be the contact source for any employee or contractor who might inadvertently kill or injure a Covered Species or who finds a dead, injured or entrapped individual. The approved biologist and on-site monitor's names and telephone numbers will be provided to the Wildlife Agencies prior to the initiation of ground-disturbing activities. Refer to species-specific measures for details on requirements for biological monitors. • *AMM BMP-11 (Speed Limit): Project-related vehicles will observe the posted speed limits on paved roads and a 10-mile-per-hour speed limit on unpaved roads and during travel in project areas. Construction crews will be given weekly tailgate instruction to travel only on designated and marked existing, cross-country, and project-only roads.* • *AMM ROAD-1 (Road Project Location): Road projects will be located in the least environmentally sensitive area to avoid, to the maximum extent practicable, impacts on Covered Species, Covered Species habitat, and waters of the United States. Road project alignments will follow existing roads, road easements, and rights-of-way, or be sited in disturbed areas to minimize habitat loss and additional habitat fragmentation.* • *AMM UTILITY-4 (Siting of Entry and Exit Location): The entry and exit locations for the trenchless construction method (see Utility-3) will be sited to avoid impacts to vernal pools and Riparian Woodland, and to avoid direct take of SSHCP Covered Species.* • *AMM EDGE-4 (Locate Stormwater Control Outside Preserves): Roads, sidewalks, and other impermeable surfaces of Urban Development Covered Activities adjacent to existing or planned Preserves will slope away from Preserves and Preserve Setbacks or intercept drainage with swales or curbs and gutters to preclude drainage from entering Preserves and Preserve Setbacks. Stormwater flows must be directed away from Preserves and Preserve Setbacks and directed into stormwater control facilities inside the development (outside Preserves and Preserve Setbacks)*			

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	(see EDGE-6 for exception to EDGE-4 in certain SSHCP Linkage Preserves). • *AMM EDGE-5 (Stormwater Control in Preserve Setbacks): If trails are established in any Preserve Setback in compliance with EDGE-3, the trail must be sloped away from the Preserve, and rainwater leaving the trail surface must flow into an adjacent low-velocity bio-retention swale or cell to keep rainwater runoff and trail contaminants from entering the Preserve. Low-velocity bio-retention swales or cells are typically small linear features placed on one or both sides of a trail. As required by EDGE-3, trails and their adjacent bio-retention swales or cells must be located on the side of the Preserve Setback nearest development.* • *AMM EDGE-6 (Detention Basins in Linkage Preserves): Because planned SSHCP Linkage Preserves L1, L2, L4, L7, L8, L9, and L10 (see Section 7.5) surround natural creeks or streams that must receive stormwater from planned adjacent Urban Development Covered Activities, a limited number of stormwater detention basins will be allowed on those Linkage Preserves. Detention basins within Linkage Preserves (see Section 5.2.7) will be designed and constructed with fill material to build up the perimeter of the detention basin so as not to impact the soil restrictive layer (duripan or hardpan) and function of the soil perched aquifer. Detention basins within Linkage Preserves will capture stormwater flows and runoff, and will discharge water to the stream/creek or percolate collected water to the soil perched aquifer. Detention basin structures that collect stormwater entering the basin or convey stormwater leaving the basin must be designed to avoid and minimize effects to Covered Species habitat in the Linkage Preserve.* • *AMM EDGE-7 (Hardpan/Duripan Protection): To protect the soil perched aquifer and the micro-watersheds supporting existing vernal pool hydrology, activities that have the potential to cut into, disrupt, or remove the soil's restrictive layer (hardpan or duripan) will not occur within Preserves or Preserve Setbacks. However, in certain circumstances, the Covered Activities defined in Section 5.2.6, Covered Activities in Stream Setbacks in the UDA, and Section 5.2.8, Covered Activities in the Laguna Creek Wildlife Corridor of*			

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	the Preserve System, may result in punctures or other minor disruptions of the soil hardpan or duripan if approved by the Implementing Entity and the Technical Advisory Committee according to the process described in Chapter 9 of the SSHCP. If a Covered Activity on a Preserve or Preserve Setback results in a puncture or other disruption to the soil hardpan or duripan, the puncture will be sealed using bentonite clay or other material that maintains the functionality of the soil's restrictive layer and associated perched aquifer.			
CULTURAL AND TRIBAL RESOURCES				
Impact 3.4-1: Project implementation has the potential to cause a substantial adverse change to a significant historical or archaeological resource, as defined in CEQA Guidelines §15064.5, or a significant tribal cultural resource, as defined in Public Resources Code §21074	***Mitigation Measure 3.4-1:*** *Prior to any ground-disturbing activities on the Project site, a qualified archaeologist shall conduct pre-construction worker cultural resources sensitivity training. The training session shall focus on the recognition of the types of historical and cultural, including Native American, resources that could be encountered, procedures to be followed if resources are found, and pertinent laws protecting these resources. Representatives from the Shingle Springs Band of Miwok Indians and the United Auburn Indian Community shall be invited to attend the training.* *Representatives from the Shingle Springs Band of Miwok Indians and the United Auburn Indian Community shall be invited to monitor ground-disturbing activities during construction and shall be provided with any safety requirements that shall be followed during any ground-disturbing and construction activities.* *If any cultural resources, including prehistoric or historic artifacts, or other indications of archaeological resources or tribal cultural resources are found during grading and construction activities, all work shall be halted immediately within a 100-foot radius of the discovery until an archaeologist meeting the Secretary of the Interior's Professional Qualifications Standards in prehistoric or historical archaeology, as appropriate, has evaluated the find(s) and until the Shingle Springs Band of Miwok Indians and the United Auburn Indian Community have been contacted and invited to review and document the find.*	City of Rancho Cordova Planning Department	Prior to any ground-disturbing activities on the Project site	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	Work shall not continue at the discovery site until the archaeologist conducts sufficient research and data collection to make a determination that the resource is either 1) not cultural in origin; or 2) not potentially significant or eligible for listing on the NRHP or CRHR; or 3) not a significant Public Trust Resource. *If a significant finding is made, a plan must be developed for this inadvertent finding. Measures to potentially address a subsurface finding could include one or more of the following depending upon the nature of the find: recordation of the finding; further efforts to define the extent and nature of the resource; preservation in place, and re-design to ensure long-term preservation of the resource; and/or data recovery excavations.* *If Native American resources are identified, a Native American monitor, following the Guidelines for Monitors/Consultants of Native American Cultural, Religious, and Burial Sites established by the Native American Heritage Commission, may also be required and, if required, shall be retained at the Applicant's expense. Additionally, if any of these resources are identified, the Shingle Springs Band of Miwok Indian shall be consulted to go over the process to protect any potentially important or sacred resources, particularly if located along the on-site aquatic resources.*			
Impact 3.4-2: Project implementation has the potential to disturb human remains, including those interred outside of formal cemeteries	***Mitigation Measure 3.4-2:*** *If human remains are discovered during the course of construction during any phase of the Project, work shall be halted at the site and at any nearby area reasonably suspected to overlie adjacent human remains until the Sacramento County Coroner has been informed and has determined that no investigation of the cause of death is required. If the remains are of Native American origin, the following steps will be taken:* • *The coroner shall contact the Native American Heritage Commission in order to ascertain the proper descendants from the deceased individual. The most likely descendent shall make a recommendation to the landowner or the person responsible for the excavation work, for means of treating or disposing of, with appropriate dignity, the human remains and any associated grave goods, which may include obtaining a qualified archaeologist or team of archaeologists to properly excavate the human remains.* • *The Shingle Springs Band of Miwok Indian shall be consulted to go*	City of Rancho Cordova Planning Department	If human remains are discovered during the course of construction during any phase of the Project	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	over the process to protect any human remains, particularly if located along the on-site aquatic resources. • *The landowner shall retain a Native American monitor, and an archaeologist, if recommended by the Native American monitor, and rebury the Native American human remains and any associated grave goods, with appropriate dignity, on the property and in a location that is not subject to further subsurface disturbance when any of the following conditions occurs:* o *The Native American Heritage Commission is unable to identify a descendent.* o *The descendant identified fails to make a recommendation.* o *The City of Rancho Cordova or its authorized representative rejects the recommendation of the descendant, and the mediation by the Native American Heritage Commission fails to provide measures acceptable to the landowner.*			
GEOLOGY AND SOILS				
Impact 3.5-2: Project construction and implementation has the potential to result in substantial soil erosion or the loss of topsoil	***Mitigation Measure 3.5-1:*** *Prior to any site disturbance, the Project proponent shall submit a Notice of Intent (NOI) and Storm Water Pollution Prevention Plan (SWPPP) to the RWQCB in accordance with the NPDES General Construction Permit requirements. The SWPPP shall be designed to control pollutant discharges utilizing Best Management Practices (BMPs) and technology to reduce erosion and sediments. BMPs may consist of a wide variety of measures taken to reduce pollutants in stormwater runoff from the Project site. Measures shall include temporary erosion control measures (such as silt fences, staked straw bales/wattles, silt/sediment basins and traps, check dams, geofabric, sandbag dikes, and temporary revegetation or other ground cover) that will be employed to control erosion from disturbed areas. Final selection of BMPs will be subject to approval by the City of Rancho Cordova and the RWQCB. The SWPPP will be kept on site during construction activity and will be made available upon request to representatives of the RWQCB.*	City of Rancho Cordova Planning Department Regional Water Quality Control Board	Prior to any site disturbance	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
Impact 3.5-3: The Project has the potential to be located on a geologic unit or soil that is unstable, or that would become unstable as a result of Project implementation, and potentially result in landslide, lateral spreading, subsidence, liquefaction or collapse	***Mitigation Measure 3.5-2:*** *Prior to final design approval and issuance of building permits for each phase of the Project, the Project applicant shall submit to the City of Rancho Cordova Building and Safety Division, for review and approval, a design-level geotechnical engineering report produced by a California Registered Civil Engineer or Geotechnical Engineer. The design-level report shall address, at a minimum, the following:* • *Compaction specifications and subgrade preparation for onsite soils;* • *Structural foundations, including concrete design that addresses potential soils corrosivity;* • *Grading practices; and* • *Expansive/unstable soils.* *The design-level geotechnical engineering report shall include a summary of the site, soil, and groundwater conditions, seismicity, laboratory test data, exploration data and a site plan showing exploratory locations and improvement limits. The report shall include borings/test pits for park sites and include recommendations for park site development, including the potential to amend soils, if necessary, during the preliminary grading of the Project site during the first phase of construction activities. The report shall be signed by a licensed California Geotechnical Engineer. Design-level recommendations shall be included in the foundation and improvement plans and approved by the City of Rancho Cordova Public Works Department prior to issuance of any building permits.*	City of Rancho Cordova Building and Safety Division City of Rancho Cordova Public Works Department	Prior to final design approval and issuance of building permits for each phase of the Project	
Impact 3.5-5: Project implementation has the potential to directly or indirectly destroy a unique paleontological resource	***Mitigation Measure 3.5-3:*** *If any paleontological resources are found during grading and construction activities, all work shall be halted immediately within a 200-foot radius of the discovery until a qualified paleontologist has evaluated the find.* *Work shall not continue at the discovery site until the paleontologist evaluates the find and makes a determination regarding the significance of the resource and identifies recommendations for conservation of the resource, including preserving in place or relocating on the Project site, if feasible, or collecting the resource to the extent feasible and documenting the find with the University of California Museum of Paleontology.*	City of Rancho Cordova Planning Department	If any paleontological resources are found during grading and construction activities	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
GREENHOUSE GASES, CLIMATE CHANGE, AND ENERGY				
Impact 3.6-1: The Project has the potential to generate construction-related GHGs, either directly or indirectly, that may have a significant effect on the environment	***Mitigation Measure 3.6-1:*** *The Project applicant shall implement the following best management practices (BMPs) for reducing GHG emissions from construction projects, as feasible. The City of Rancho Cordova shall be responsible for monitoring implementation of these measures:* • *Improve fuel efficiency from construction equipment:* o *Minimize idling time either by shutting equipment off when not in use or reducing the time of idling to no more than 3 minutes (5 minute limit is required by the state airborne toxics control measure [Title 13, sections 2449(d)(3) and 2485 of the California Code of Regulations]). Provide clear signage that posts this requirement for workers at the entrances to the site.* o *Maintain all construction equipment in proper working condition according to manufacturer's specifications. The equipment must be checked by a certified mechanic and determined to be running in proper condition before it is operated.* o *Train equipment operators in proper use of equipment.* o *Use the proper size of equipment for the job.* o *Use equipment with new technologies (repowered engines, electric drive trains).* • *Perform on-site material hauling with trucks equipped with on-road engines (if determined to be less emissive than the off-road engines).* • *Use alternative fuels for generators at construction sites such as propane or solar, or use electrical power, as feasible.* • *Use an ARB approved low carbon fuel for construction equipment. (NOx emissions from the use of low carbon fuel must be reviewed and increases mitigated.), as applicable.* • *Encourage and provide carpools, shuttle vans, transit passes and/or secure bicycle parking for construction worker commutes.* • *Reduce electricity use in the construction office by using compact fluorescent bulbs, powering off computers every day, and replacing heating and cooling units with more efficient ones.*	City of Rancho Cordova Planning Department	During all construction activities	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	• *Recycle or salvage non-hazardous construction and demolition debris (goal of at least 75% by weight).* • *Use locally sourced or recycled materials for construction materials (goal of at least 20% based on costs for building materials, and based on volume for roadway, parking lot, sidewalk and curb materials). Wood products utilized should be certified through a sustainable forestry program.* • *Minimize the amount of concrete for paved surfaces or utilize a low carbon concrete option.* • *Produce concrete on-site if determined to be less emissive than transporting ready mix.* • *Use SmartWay certified trucks for deliveries and equipment transport.* • *Develop a plan to efficiently use water for adequate dust control.* ***Mitigation Measure 3.6-2:*** *The Project applicant shall implement the following Basic Construction Emissions Control Practices (BCECP) BMPs for reducing emissions from construction projects, as feasible. The City of Rancho Cordova shall be responsible for monitoring implementation of these measures:* • *Control of fugitive dust is required by District Rule 403 and enforced by District staff.* • *Water all exposed surfaces two times daily. Exposed surfaces include, but are not limited to soil piles, graded areas, unpaved parking areas, staging areas, and access roads.* • *Cover or maintain at least two feet of free board space on haul trucks transporting soil, sand, or other loose material on the site. Any haul trucks that would be traveling along freeways or major roadways should be covered.* • *Use wet power vacuum street sweepers to remove any visible trackout mud or dirt onto adjacent public roads at least once a day. Use of dry power sweeping is prohibited.* • *Limit vehicle speeds on unpaved roads to 15 miles per hour (mph).* • *All roadways, driveways, sidewalks, parking lots to be paved should be completed as soon as possible. In addition, building pads should be laid as soon as possible after grading unless seeding or soil*	City of Rancho Cordova Planning Department	During all construction activities	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	binders are used. • *Maintain all construction equipment in proper working condition according to manufacturer's specifications. The equipment must be checked by a certified mechanic and determine to be running in proper condition before it is operated.* • *For diesel-powered fleets working at the construction site:* o *Minimize idling time either by shutting equipment off when not in use or reducing the time of idling to 5 minutes [California Code of Regulations, Title 13, sections 2449(d)(3) and 2485]. Provide clear signage that posts this requirement for workers at the entrances to the site.* o *Provide current certificate(s) of compliance for CARB's In-Use Off-Road Diesel-Fueled Fleets Regulation [California Code of Regulations, Title 13, sections 2449 and 2449.1]. For more information contact CARB at 877-593-6677, doors@arb.ca.gov, or www.arb.ca.gov/doors/compliance_cert1.html*			
Impact 3.6-2: The Project has the potential to generate operation-related GHGs, either directly or indirectly, that may have a significant effect on the environment	***Mitigation Measure 3.6-3:*** *The Project shall comply with the GHG Reduction Plan for The Ranch throughout all phases of Project construction and operation.* ***<u>The Ranch GHG Reduction Plan</u>*** *The Project shall implement all measures shown in the table below that are identified as "Mitigation Measure" in order to reduce the Project's net operational emissions, including amortized construction emissions, to an emissions level that meets the SMAQMD threshold for GHG emissions. It is noted that incorporation of the three SMAQMD-Recommended CalEEMod Measures to Reduce GHGs that are identified specifically as "Mitigation Measures" in the below table, would reduce the Project's net operational emissions, including amortized construction emissions, to approximately 1,099.9 MT CO_2e, as shown below. It is noted that the CalEEMOD measures incorporated into the Project design are also included in the GHG Reduction Plan to ensure that these measures are carried forward and reflected in all phases of the Project.* ***MT CO2e***	City of Rancho Cordova Planning Department	Throughout all phases of Project construction and operation

GHG REDUCTION PLAN

GHG REDUCTION MEASURE	*APPLICABILITY*	*IMPLEMENTATION*
SMAQMD-RECOMMENDED CALEEMOD MEASURE TO REDUCE GHGS[1,2]		
LUT-9 Improve Walkability Design: Walkable street network	Incorporated into Project Description. Project is designed with a walkable street pattern, with a ratio of 144.9 intersections per square mile, multiple bicycle/pedestrian connections, an off-street trail system, and bicycle lanes to encourage walkability.	Included in Project design as described in the Project Description and based on intersections identified on TSM and in the TSM and site plan figures shown in the SPA Handbook. No additional implementation required.
SDT-1 Improve Pedestrian Network: On-site pedestrian access network links all of project internally and externally	Incorporated into Project Description. Project is designed with a walkable street pattern, with a ratio of 144.9 intersections per square mile, multiple bicycle/pedestrian connections, an off-street	Included in Project design as described in the Project Description based on pedestrian amenities shown on the TSM as well as those identified in the SPA Handbook. No additional

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*			*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
		trail system, and bicycle lanes to encourage walkability.	implementation required.			
	SDT-2 Provide Traffic Calming Measures: Projects streets and intersections feature traffic calming features	Incorporated into Project Description. Project has been designed to include a range of traffic-calming street design features, such as narrower streets, limited single-loaded streets, parking on both sides of the street, posted speed limit signs, planter strips with street trees, bulb-outs, and horizontal shifts (lane centerline that curves or shifts), and intersection traffic calming features, including pedestrian push-buttons at three intersections, marked crosswalks, count-down signal timers where appropriate, curb extensions, channelization islands, median islands, and tight corner radii.	Included in Project design as described in the Project Description and based on the features of the TSM and identified in the SPA Handbook. No additional implementation required.			
	SDT-3 Implement a Neighborhood Electric Vehicle (NEV) Network: Project provides a viable NEV network	Incorporated into Project Design. While the Project does not include a traditional NEV, the Project would support electric vehicle use through installing EV charging stations throughout the Project site, such that at least 50% of single family residences and 5% of	Included in Project design as described in the Project Description and in the SPA Handbook. No additional implementation required.			

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*			*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
		parking spaces within the commercial, park and recreation, and multi-family land uses will have EV charging stations to reduce reliance on gasoline-fueled vehicles.				
	TRT-1&2 Implement Trip Reduction Program: Transportation Management Association (TMA) membership or other comprehensive services	Mitigation Measure. Mitigation Measure 3.6-3 requires the Project to join a Transportation Management Association (all employees located within the Project site to be eligible to participate).	Prior to issuance of occupancy permits for each construction phase of the Project, the Project applicant shall demonstrate that the residential, commercial, and parks and recreation uses associated with each phase have a permanent commitment, demonstrated through CC&Rs or comparable permanent mechanisms, to participate in a Transportation Management Association and ensures payment of annual fees for on-going participation. The Transportation Management Association shall grant all employees located within the Project site eligibility to participate.			

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*			*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	BE-1 Exceed Title 24 California Code of Regulations, known as the California Building Standards Code (Title 24): Use less energy than allowed by Title 24	Mitigation Measure. Mitigation Measure 3.6-3 requires the Project to exceed the 2016 Title 24 requirements by 2 percent.	Prior to issuance of building permits for each construction phase of the Project, including all residential, commercial, and parks and recreation uses, the Project applicant shall demonstrate that the phase exceeds the 2016 Title 24 requirements for energy use and efficiency by a minimum of 2 percent. The documentation shall identify specific Project components, such as building materials and design, lighting improvements beyond the minimum required by LE-1, etc. and the associated reduction with each component.			
	LE-1 Install High Efficiency Lighting: Make use of high-efficient outdoor and public lighting	Incorporated into Project Design. The Project proposes to install energy-efficient (i.e., LED or better) lighting for all outdoor lighting.	Included in Project design as described in the Project Description and SPA Handbook. No additional implementation required.			
	BE-4 Energy Efficient Appliances: Use appliances more energy efficient than standard models	Incorporated into Project Design. The Project proposes to install energy-efficient appliances.	Included in Project design as described in the Project Description and SPA Handbook. No additional implementation required.			

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*			*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	AE-1 On-site Renewable Energy: Establish on-site renewable energy. (No Ozone Precursor reductions if NO_X intensity is higher than electric utility.)	Incorporated into Project Design. The Project would generate a minimum of 95% of electricity via renewable energy via either on-site energy generation and/or through a contract with SMUD.	Included in Project design as described in the Project Description and SPA Handbook. No additional implementation required.			
	WUW-2 Apply Water Conservation Strategy: Reduce indoor and outdoor water use	Incorporated into Project Design. The Project landscaping would be drought-tolerant, sufficient to reduce outdoor water reduction by 25% from non-drought tolerant landscaping. The Project would also minimize the use of turf for residential uses to 70% less than the maximum allowed turf area to reduce water use.	Included in Project design as described in the Project Description and described in the SPA Handbook. No additional implementation required.			
	WUW-1 Install Low-Flow Bathroom Faucet, Install Low-Flow Kitchen Faucet, Install Low-flow Toilet, Install Low-flow Shower	Incorporated into Project Design. The Project proposes to install energy-efficient appliances.	Included in Project design as described in the Project Description and identified in the SPA Handbook. No additional implementation required.			
	WUW-5 Reduce Turf in Landscapes and Lawns: Use less turf than normal projects	Incorporated into Project Design. Minimize turf for residential uses to 70% less than the maximum allowed turf area to reduce water	Included in Project design as described in the Project Description and identified in the SPA Handbook. No additional			

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*			*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
		use.	implementation required.			
	WUW-4 Use Water-Efficient Irrigation Systems: Install a smart irrigation control system	Incorporated into Project Design. Use water-efficient irrigation systems (automatic rain shut-off, maximum gallon per minute restriction, WiFi connectivity) to reduce water waste.	Included in Project design as described in the Project Description. No additional implementation required.			
	WUW-3 Water Efficient Landscape: Plant native or drought-resistant trees and Vegetation	Mitigation Measure. Mitigation Measure 3.6-3 requires the Project to incorporate a minimum of 50 percent of native or drought-resistant trees and vegetation into the proposed landscaping, including landscaping lots, landscaping associated with parks and recreation facilities, and landscaping associated with residential uses. Project applicant shall demonstrate at least a 25% reduction in outdoor water use from implementation of this measure.	Prior to approval of improvement plans for each phase of construction, the Project applicant shall submit landscaping plans that demonstrate a minimum of 50 percent of of native or drought-resistant trees and vegetation are included in the non-turf component of proposed landscaping, including landscaping lots, parks and recreation lots and facilities, and residential uses.			
	ADDITIONAL MEASURES (NOT MODELED IN CALEEMOD)					
	Purchase Offsets.	Mitigation Measure. This Mitigation Measure 3.6-3 requires the Project applicant to purchase carbon offsets to reduce net project operational and amortized construction emissions to less than SMAQMD's	Prior to issuance of the project's first building permit, the project applicant shall develop a SMAQMD-approved commitment to purchase carbon offsets sufficient to reduce project			

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	adopted threshold for GHG emissions. operational emissions and amortized construction emissions to less than SMAQMD's adopted threshold for GHG emissions that is in place at the time of the offset purchase. The purchase of carbon offsets may be prorated so that the offsets are paid concurrent with the approval of each project phase (small lot subdivision maps, multifamily parcel, etc.). [1] *SMAQMD LAND USE EMISSIONS REDUCTIONS VERSION 4 (FOR OPERATIONAL EMISSIONS), SMAQMD, 2017.* [2] *MEASURES LUT-1, LUT-5, LUT-6, PDT-1, PDT-2, TST-1, TST-3, TST-4, WSW-1, WSW-2, AND SW-1 ARE NOT APPLICABLE AS DESCRIBED IN THE DRAFT EIR.*			
HAZARDS AND HAZARDOUS MATERIALS				
Impact 3.7-1: Project implementation has the potential to create a significant hazard through the routine transport, use, or disposal of hazardous materials or through the reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment	***Mitigation Measure 3.7-1****: Prior to commencement of grading, the applicant shall submit Construction Site Management Plan for review and approval by the City. The Construction Site Management Plan shall establish management practices for handling hazardous materials, including fuels, paints, cleaners, solvents, etc., during construction to reduce the potential for spills and to direct the safe handling of these materials if encountered. The City shall approve the Construction Site Management Plan prior to any earth moving.*	City of Rancho Cordova Building and Safety Division	Prior to commence-ment of grading	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
HYDROLOGY AND WATER QUALITY				
Impact 3.8-1: The Project may violate water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality during construction	***Mitigation Measure 3.5-1****: Prior to any site disturbance, the Project proponent shall submit a Notice of Intent (NOI) and Storm Water Pollution Prevention Plan (SWPPP) to the RWQCB in accordance with the NPDES General Construction Permit requirements. The SWPPP shall be designed to control pollutant discharges utilizing Best Management Practices (BMPs) and technology to reduce erosion and sediments. BMPs may consist of a wide variety of measures taken to reduce pollutants in stormwater runoff from the Project site. Measures shall include temporary erosion control measures (such as silt fences, staked straw bales/wattles, silt/sediment basins and traps, check dams, geofabric, sandbag dikes, and temporary revegetation or other ground cover) that will be employed to control erosion from disturbed areas. Final selection of BMPs will be subject to approval by the City of Rancho Cordova and the RWQCB. The SWPPP will be kept on site during construction activity and will be made available upon request to representatives of the RWQCB. (Note: This measure is also included in Section 3.5.)* ***Mitigation Measure 3.8-1:*** *Prior to the commencement of construction activities, the Project proponent shall submit, and obtain approval of, a Spill Prevention Countermeasure and Control Plan (SPCC) to the Sacramento County Environmental Management Department. The SPCC shall specify measures and procedures to minimize the potential for, and effects from, spills of hazardous, toxic, or petroleum substances during all construction activities, and shall meet the requirements specified in the Code of Federal Regulations, title 40, part 112.*	City of Rancho Cordova Planning Department Regional Water Quality Control Board City of Rancho Cordova Planning Department Sacramento County Environmental Management Department	Prior to any site disturbance Prior to the commence-ment of construction activities	
Impact 3.8-2: The Project may violate water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality during post-construction	***Mitigation Measure 3.8-2:*** *Before approval of the final subdivision map for all Project phases, a detailed Best Management Practice (BMP) and water quality maintenance plan shall be prepared by a qualified engineer retained by the Project applicants that meets the standards of the City's NPDES Permit (No. CAS00853254) and shall document that stormwater runoff from the Project site is treated per the standards in the Stormwater Quality Design Manual for Sacramento and South Placer Regions. Drafts of the plan shall be submitted to the City of Rancho Cordova for review and approval*	City of Rancho Cordova Planning Department	Before approval of the final subdivision map for all Project phases	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	concurrently with development of tentative subdivision maps for all Project phases. The plan shall finalize the water quality improvements and further detail the structural and nonstructural BMPs proposed for the Project. The plan shall include the elements described below. • *A quantitative hydrologic and water quality analysis of proposed conditions incorporating the proposed drainage design features.* • *Pre-development and post-development calculations demonstrating that the proposed water quality BMPs meet or exceed requirements established by the City of Rancho Cordova and including details regarding the size, geometry, and functional timing of storage and release pursuant to the "Stormwater Quality Design Manual for Sacramento and South Placer Regions".* • *Source control programs to control water quality pollutants on the Project site, which may include but are limited to recycling, street sweeping, storm drain cleaning, household hazardous waste collection, waste minimization, prevention of spills and illegal dumping, and effective management of public trash collection areas.* • *A pond management component for the proposed basins that shall include management and maintenance requirements for the design features and BMPs, and responsible parties for maintenance and funding.* • *Low Impact Development (LID) and Hydromodification control measures shall be integrated into the BMP and water quality maintenance plan. These may include, but are not limited to:* o *Bioretention planters;* o *surface swales;* o *replacement of conventional impervious surfaces with pervious surfaces (e.g., porous pavement, green roofs);* o *impervious surfaces disconnection; and* o *trees planted to intercept stormwater.*			
LAND USE				
Impact 3.9-1: Implementation of the Project would not conflict	***Mitigation Measure 3.9-1:*** *The proposed open space areas located under the SMUD transmission line that traverses the site shall be designed and*	City of Rancho Cordova	During review of Project	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
with an applicable land use plan, policy, or regulation of an agency with jurisdiction over the Project adopted to avoid or mitigate an environmental effect	*maintained in accordance with SMUD's Guide for Transmission Encroachment. According to the Guide, certain improvements, for safety and liability reasons, are typically not allowed within transmission corridors. These include, but not limited to the following:* • *Buildings or structures;* • *Covered parking;* • *Excavation, elevation or grade changes;* • *Light Standards over 15' tall;* • *Parallel Utilities;* • *Playground Equipment;* • *Stockpiling of materials;* • *Storage of combustibles;* • *Swimming pools, spas, gazebos, etc.;* • *Tall tree species (over 15' at maturity);* • *Trash enclosures; and* • *Water Detention and/or Retention Basins.* *The proposed open space areas located under the PG&E transmission line that traverses the site shall be designed and maintained in accordance with the PG&E Electric and Gas Service Requirements.* *Future improvement plans that include the transmission lines shall be consistent with the items outlined in Chapter 5, Trails and Parks, of the Guide, as well as other applicable Chapters. This requirement shall be noted on the Project improvement plans, subject to review and approval by the City of Rancho Cordova.*	Planning Department	Improvement Plans for the proposed open space areas located under the on-site SMUD transmission line	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
TRANSPORTATION AND CIRCULATION				
Impact 3.13-1: Under Existing (2017) Plus Project conditions, Project may conflict with an applicable program, plan, ordinance or policy addressing the circulation system – Roadway Segments and Intersections	***Mitigation Measure 3.13-1:*** *Intersection #3, Jackson Road at Eagles Nest Road: The Project applicant shall be responsible for funding the Project's fair share (1.69 percent) of the construction costs, calculated to the satisfaction of the City, in consultation with Sacramento County Department of Transportation, of the following improvement:* • *The intersection shall be converted from side street stop controlled to signalized. The estimated cost of this improvement is $527,880; the Project's fair-share would be $7,020 (Kimley Horn, 2019).*	City of Rancho Cordova Planning Department	Prior to approval of Project Improvement Plans	
	Mitigation Measure 3.13-2: *Intersection #9, Grant Line Road at Sunrise Boulevard: The Project applicant shall be responsible for funding the Project's fair share (2.46 percent) of the construction costs, calculated to the satisfaction of the City, in consultation with Sacramento County Department of Transportation, of the following improvement:* • *The southbound approach shall be changed to include a right turn lane and an all-purpose lane. This would require restriping the southbound approach to move the bicycle lane from its existing location between the two travel lanes to the right shoulder and add striping for the right turns from the inside lane, consistent with the Optional Through Right and Right-Turn-Only lane configuration included in Figure 9C-4a (CA) of the CaMUTCD[1]. The estimated cost of this improvement is $25,000; the Project's fair-share would be $620 (Kimley Horn, 2019).*	City of Rancho Cordova Planning Department	Prior to approval of Project Improvement Plans	
	Mitigation Measure 3.13-3: *Intersection #11, Douglas Road at Sunrise Boulevard: Signal timing optimization and a right-turn overlap signal phase shall be added for the eastbound right-turn, overlapping with the northbound left-turn movement shall be completed prior to construction of the 763rd dwelling unit equivalent (DUE). A single-family residential (non-age-restricted) unit is calculated as 1.0 DUE, a multifamily residential unit is calculated as 0.616 DUE, and an active adult residential unit is calculated as 0.37 DUE.*	City of Rancho Cordova Planning Department	Prior to approval of Project Improvement Plans

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	Mitigation Measure 3.13-4: *Intersection #21, Sunrise Boulevard at White Rock Road: Signal timing optimization shall be completed at this intersection prior to construction of the 1,162nd DUE. A single-family residential (non-age-restricted) unit is calculated as 1.0 DUE, a multifamily residential unit is calculated as 0.616 DUE, and an active adult residential unit is calculated as 0.37 DUE.* ***Mitigation Measure 3.13-5:*** *Intersection #25, Sunrise Boulevard at Zinfandel Drive: The eastbound and westbound approaches shall be restriped to include a left turn lane and through-right lane. It is noted that this improvement, or components thereof, are also required of the Suncreek Specific Plan project (see SunCreek Specific Plan Project DEIR/DEIS Mitigation Measure 3.15-1k, p. 3.15-43) and the Rio del Oro Specific Plan Project (see Rio del Oro Specific Plan Project DEIR/DEIS Mitigation Measure 3.14-1o, p. 3.14-61) and the Project may participate in the funding of the improvement, if constructed by other projects. Project participation in, or completion of, if not constructed by others, the improvement shall occur prior to construction of the 541st DUE. A single-family residential (non-age-restricted) unit is calculated as 1.0 DUE, a multifamily residential unit is calculated as 0.616 DUE, and an active adult residential unit is calculated as 0.37 DUE. Project participation may include Project construction of the improvement subject to reimbursement of the fair-share of any other projects conditioned or otherwise required to construct or fund the improvement or Project payment of the Project's fair-share of the improvement if constructed by others.*	City of Rancho Cordova Planning Department City of Rancho Cordova Planning Department	Prior to approval of Project Improvement Plans Prior to approval of Project Improvement Plans	
Impact 3.13-2: Under Cumulative (2040) Plus Project conditions, Project may conflict with an applicable program, plan, ordinance or policy addressing the circulation system – Roadway Segments and Intersections	***Mitigation Measure 3.13-6:*** *Intersection #10, Douglas Road at Zinfandel Drive: The Project shall pay its fair-share for the westbound right turn to be converted from permitted to a free right turn with a receiving lane. The Project's fair share of the improvement is 10.61 percent.* ***Mitigation Measure 3.13-7:*** *Intersection #27, White Rock Road at Prairie City Road: A second southbound right-turn lane shall be added at this intersection, and a right-turn overlap signal phase shall be added for the southbound right-turn. The Project's fair share of the improvement is 4.77 percent.*	City of Rancho Cordova Planning Department City of Rancho Cordova Planning Department	Prior to approval of Project Improvement Plans Prior to approval of Project Improvement Plans	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	Mitigation Measure 3.13-8: *Roadway Segment #9, Douglas Road between Mather Boulevard and Sunrise Boulevard: The Project shall pay its fair-share for the widening of Douglas Boulevard to six lanes. The Project's fair share of the improvement is 10.05 percent.*	City of Rancho Cordova Planning Department	Prior to approval of Project Improvement Plans	
	Mitigation Measure 3.13-9: *Rancho Cordova Parkway shall be widened from two to four lanes along the project extents. The improvement shall be reflected on the Project's improvement plans. The improvement shall be completed before the 570th market rate single family detached unit and the 566th age-restricted senior unit (or the number of units generating an equivalent amount of trips) is constructed.*	City of Rancho Cordova Planning Department	Prior to approval of Project Improvement Plans	

Revised Draft EIR Appendix B.1.

CalEEMOD Outputs

The Ranch - City of Rancho Cordova (Construction Only - Phase 1)

Sacramento County, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
City Park	1.54	Acre	1.54	67,082.40	0
City Park	1.40	Acre	1.40	60,984.00	0
Retirement Community	211.00	Dwelling Unit	42.20	211,000.00	439
Single Family Housing	270.00	Dwelling Unit	28.61	486,000.00	766

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	3.5	**Precipitation Freq (Days)**	58
Climate Zone	6			**Operational Year**	2035
Utility Company	Sacramento Municipal Utility District				
CO2 Intensity (lb/MWhr)	590.31	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Estimated construction state date of January 2020 (provided by Applicant).

Land Use - This model run provides construction emissions only.

Construction Phase - Phase 1

Off-road Equipment -

Off-road Equipment - For building construction, assumes 1 crane, 2 forklifts, 1 generator set, 1 tractor/loader/backhoe, and 1 welder (as provided by the applicant)

Off-road Equipment -

Off-road Equipment - D
Off-road Equipment -

Off-road Equipment -

Trips and VMT - -

Grading - 173.6 acres graded (as provided by project applicant). Assume 1/2 of site is exported during this this phase (152,708 CY / 2 = 76,354 CY). Total net export for entire project (152,708 CY) as provided by applicant.

Architectural Coating - 75 g/L for architectural coatings as provided by SMAQMD (average as provided by the air district).

Vehicle Trips - Operational emissions not modeled under this scenario (construction only)

Road Dust -

Woodstoves - No fireplaces.

Consumer Products - 'General Category' consumer products EF red. by 28.33% - reflects project person/du value (2.523) vs. statewide avg. (2.97) and latest statewide data (ARB). Parking Degreaser EF red. by 57.5% (corrects for walking paths modeled as 'parking lot').

Area Coating - Maximum 50 g/l for flat coatings SMAQMD Rule 442. Assume flat coatings are used for interior coatings.

Landscape Equipment -

Energy Use -

Land Use Change - Assumes residential, commercial, and right-of-way are converted from grassland. Total acres = 530.1 - 77.57-92.01-5.08-0.65-30.40-21.18-18.41 = 284.80

Sequestration - Approximately 2,240 new trees planted as part of the project (provided by project applicant).

Construction Off-road Equipment Mitigation - Construction mitigation reflects quantification of the SMAQMD Basic Construction Emissions Control Practices: Water Exposed area 2x daily; Unpaved road mitigation = 15 mph; Clean paved road = 9%. NOTE: This model run reflects operational emissions only.

Mobile Land Use Mitigation -

Mobile Commute Mitigation -

Area Mitigation -

Energy Mitigation -

Water Mitigation -

Fleet Mix -

The Ranch - City of Rancho Cordova (Construction Only - Phase 1)

Sacramento County, Summer

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
City Park	1.54	Acre	1.54	67,082.40	0
City Park	1.40	Acre	1.40	60,984.00	0
Retirement Community	211.00	Dwelling Unit	42.20	211,000.00	439
Single Family Housing	270.00	Dwelling Unit	28.61	486,000.00	766

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	3.5	**Precipitation Freq (Days)**	58
Climate Zone	6			**Operational Year**	2035
Utility Company	Sacramento Municipal Utility District				
CO2 Intensity (lb/MWhr)	590.31	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Estimated construction state date of January 2020 (provided by Applicant).

Land Use - This model run provides construction emissions only.

Construction Phase - Phase 1

Off-road Equipment -

Off-road Equipment - For building construction, assumes 1 crane, 2 forklifts, 1 generator set, 1 tractor/loader/backhoe, and 1 welder (as provided by the applicant)

Off-road Equipment -

Off-road Equipment - D
Off-road Equipment -

Off-road Equipment -

Trips and VMT - -

Grading - 173.6 acres graded (as provided by project applicant). Assume 1/2 of site is exported during this this phase (152,708 CY / 2 = 76,354 CY). Total net export for entire project (152,708 CY) as provided by applicant.

Architectural Coating - 75 g/L for architectural coatings as provided by SMAQMD (average as provided by the air district).

Vehicle Trips - Operational emissions not modeled under this scenario (construction only)

Road Dust -

Woodstoves - No fireplaces.

Consumer Products - 'General Category' consumer products EF red. by 28.33% - reflects project person/du value (2.523) vs. statewide avg. (2.97) and latest statewide data (ARB). Parking Degreaser EF red. by 57.5% (corrects for walking paths modeled as 'parking lot').

Area Coating - Maximum 50 g/l for flat coatings SMAQMD Rule 442. Assume flat coatings are used for interior coatings.

Landscape Equipment -

Energy Use -

Land Use Change - Assumes residential, commercial, and right-of-way are converted from grassland. Total acres = 530.1 - 77.57-92.01-5.08-0.65-30.40-21.18-18.41 = 284.80

Sequestration - Approximately 2,240 new trees planted as part of the project (provided by project applicant).

Construction Off-road Equipment Mitigation - Construction mitigation reflects quantification of the SMAQMD Basic Construction Emissions Control Practices: Water Exposed area 2x daily; Unpaved road mitigation = 15 mph; Clean paved road = 9%. NOTE: This model run reflects operational emissions only.

Mobile Land Use Mitigation -

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Estimated construction state date of January 2020 (provided by Applicant).

Land Use - This model run provides construction emissions only.

Construction Phase - Phase 1

Off-road Equipment -

Off-road Equipment - For building construction, assumes 1 crane, 2 forklifts, 1 generator set, 1 tractor/loader/backhoe, and 1 welder (as provided by the applicant)

Off-road Equipment -

Off-road Equipment - D
Off-road Equipment -

Off-road Equipment -

Trips and VMT - -

Grading - 173.6 acres graded (as provided by project applicant). Assume 1/2 of site is exported during this this phase (152,708 CY / 2 = 76,354 CY). Total net export for entire project (152,708 CY) as provided by applicant.

Architectural Coating - 75 g/L for architectural coatings as provided by SMAQMD (average as provided by the air district).

Vehicle Trips - Operational emissions not modeled under this scenario (construction only)

Road Dust -

Woodstoves - No fireplaces.

Consumer Products - 'General Category' consumer products EF red. by 28.33% - reflects project person/du value (2.523) vs. statewide avg. (2.97) and latest statewide data (ARB). Parking Degreaser EF red. by 57.5% (corrects for walking paths modeled as 'parking lot').

Area Coating - Maximum 50 g/l for flat coatings SMAQMD Rule 442. Assume flat coatings are used for interior coatings.

Landscape Equipment -

Energy Use -

Land Use Change - Assumes residential, commercial, and right-of-way are converted from grassland. Total acres = 530.1 - 77.57-92.01-5.08-0.65-30.40-21.18-18.41 = 284.80

Sequestration - Approximately 2,240 new trees planted as part of the project (provided by project applicant).

Construction Off-road Equipment Mitigation - Construction mitigation reflects quantification of the SMAQMD Basic Construction Emissions Control Practices: Water Exposed area 2x daily; Unpaved road mitigation = 15 mph; Clean paved road = 9%. NOTE: This model run reflects operational emissions only.

Mobile Land Use Mitigation -

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Estimated construction state date of April 2022 (provided by Applicant).

Land Use - This model run provides construction emissions only.

Construction Phase - Phase 2

Off-road Equipment -

Off-road Equipment - For building construction, assumes 1 crane, 2 forklifts, 1 generator set, 1 tractor/loader/backhoe, and 1 welder (as provided by the applicant)

Off-road Equipment -
Off-road Equipment - D

Trips and VMT - -

Grading - No grading/soil export assumed for Phase 2 (already captured during Phase 1)

Architectural Coating - 75 g/L as provided by SMAQMD (average as provided by the air district).

Vehicle Trips - Operational emissions not modeled under this scenario (construction only)

Road Dust -

Woodstoves - No fireplaces.

Consumer Products - 'General Category' consumer products EF red. by 28.33% - reflects project person/du value (2.523) vs. statewide avg. (2.97) and latest statewide data (ARB). Parking Degreaser EF red. by 57.5% (corrects for walking paths modeled as 'parking lot').

Area Coating - Maximum 50 g/l for flat coatings SMAQMD Rule 442. Assume flat coatings are used for interior coatings.

Landscape Equipment -

Energy Use -

Land Use Change - Assumes residential, commercial, and right-of-way are converted from grassland. Total acres = 530.1 - 77.57-92.01-5.08-0.65-30.40-21.18-18.41 = 284.80

Sequestration - Approximately 2,240 new trees planted as part of the project (provided by project applicant).

Construction Off-road Equipment Mitigation - Construction mitigation reflects quantification of the SMAQMD Basic Construction Emissions Control Practices: Water Exposed area 2x daily; Unpaved road mitigation = 15 mph; Clean paved road = 9%. NOTE: This model run reflects operational emissions only.

Mobile Land Use Mitigation -

Mobile Commute Mitigation -

Area Mitigation -

Energy Mitigation -

Water Mitigation -

Fleet Mix -

The Ranch - City of Rancho Cordova (Construction Only - Phase 2) - Sacramento County, Annual

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Estimated construction state date of April 2022 (provided by Applicant).

Land Use - This model run provides construction emissions only.

Construction Phase - Phase 2

Off-road Equipment -

Off-road Equipment - For building construction, assumes 1 crane, 2 forklifts, 1 generator set, 1 tractor/loader/backhoe, and 1 welder (as provided by the applicant)

Off-road Equipment -
Off-road Equipment - D

Trips and VMT - -

Grading - No grading/soil export assumed for Phase 2 (already captured during Phase 1)

Architectural Coating - 75 g/L as provided by SMAQMD (average as provided by the air district).

Vehicle Trips - Operational emissions not modeled under this scenario (construction only)

Road Dust -

Woodstoves - No fireplaces.

Consumer Products - 'General Category' consumer products EF red. by 28.33% - reflects project person/du value (2.523) vs. statewide avg. (2.97) and latest statewide data (ARB). Parking Degreaser EF red. by 57.5% (corrects for walking paths modeled as 'parking lot').

Area Coating - Maximum 50 g/l for flat coatings SMAQMD Rule 442. Assume flat coatings are used for interior coatings.

Landscape Equipment -

Energy Use -

Land Use Change - Assumes residential, commercial, and right-of-way are converted from grassland. Total acres = 530.1 - 77.57-92.01-5.08-0.65-30.40-21.18-18.41 = 284.80

Sequestration - Approximately 2,240 new trees planted as part of the project (provided by project applicant).

Construction Off-road Equipment Mitigation - Construction mitigation reflects quantification of the SMAQMD Basic Construction Emissions Control Practices: Water Exposed area 2x daily; Unpaved road mitigation = 15 mph; Clean paved road = 9%. NOTE: This model run reflects operational emissions only.

Mobile Land Use Mitigation -

Mobile Commute Mitigation -

Area Mitigation -

Energy Mitigation -

Water Mitigation -

Fleet Mix -

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Estimated construction state date of April 2022 (provided by Applicant).

Land Use - This model run provides construction emissions only.

Construction Phase - Phase 2

Off-road Equipment -

Off-road Equipment - For building construction, assumes 1 crane, 2 forklifts, 1 generator set, 1 tractor/loader/backhoe, and 1 welder (as provided by the applicant)

Off-road Equipment -
Off-road Equipment - D

Trips and VMT - -

Grading - No grading/soil export assumed for Phase 2 (already captured during Phase 1)

Architectural Coating - 75 g/L as provided by SMAQMD (average as provided by the air district).

Vehicle Trips - Operational emissions not modeled under this scenario (construction only)

Road Dust -

Woodstoves - No fireplaces.

Consumer Products - 'General Category' consumer products EF red. by 28.33% - reflects project person/du value (2.523) vs. statewide avg. (2.97) and latest statewide data (ARB). Parking Degreaser EF red. by 57.5% (corrects for walking paths modeled as 'parking lot').

Area Coating - Maximum 50 g/l for flat coatings SMAQMD Rule 442. Assume flat coatings are used for interior coatings.

Landscape Equipment -

Energy Use -

Land Use Change - Assumes residential, commercial, and right-of-way are converted from grassland. Total acres = 530.1 - 77.57-92.01-5.08-0.65-30.40-21.18-18.41 = 284.80

Sequestration - Approximately 2,240 new trees planted as part of the project (provided by project applicant).

Construction Off-road Equipment Mitigation - Construction mitigation reflects quantification of the SMAQMD Basic Construction Emissions Control Practices: Water Exposed area 2x daily; Unpaved road mitigation = 15 mph; Clean paved road = 9%. NOTE: This model run reflects operational emissions only.

Mobile Land Use Mitigation -

Mobile Commute Mitigation -

Area Mitigation -

Energy Mitigation -

Water Mitigation -

Fleet Mix -

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Parking Lot	1.50	Acre	1.50	65,340.00	0
City Park	1.54	Acre	1.54	67,082.40	0
City Park	10.78	Acre	10.78	469,576.80	0
Retirement Community	295.00	Dwelling Unit	59.00	295,000.00	613
Single Family Housing	265.00	Dwelling Unit	86.04	477,000.00	752

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	3.5	**Precipitation Freq (Days)**	58
Climate Zone	6			**Operational Year**	2035
Utility Company	Sacramento Municipal Utility District				
CO2 Intensity (lb/MWhr)	590.31	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Estimated construction state date of February 2025 (provided by Applicant).

Land Use - This model run provides construction emissions only. Includes 8,000 sf of restrooms (City Park) and 7,000 sf (1/3 of clubhouse).

Construction Phase - Phase 3

Off-road Equipment -

Off-road Equipment - For building construction, assumes 1 crane, 2 forklifts, 1 generator set, 1 tractor/loader/backhoe, and 1 welder (as provided by the applicant)

Off-road Equipment -
Off-road Equipment -

Off-road Equipment -

Off-road Equipment -

Trips and VMT - -

Grading - 38,177 soil export. 143.0 acres graded during this phase (as provided by project applicant).

Architectural Coating - 75 g/L as provided by SMAQMD (average as provided by the air district).

Vehicle Trips - Operational emissions not modeled under this scenario (construction only)

Road Dust -

Woodstoves - No fireplaces.

Consumer Products - 'General Category' consumer products EF red. by 28.33% - reflects project person/du value (2.523) vs. statewide avg. (2.97) and latest statewide data (ARB). Parking Degreaser EF red. by 57.5% (corrects for walking paths modeled as 'parking lot').

Area Coating - Maximum 50 g/l for flat coatings SMAQMD Rule 442. Assume flat coatings are used for interior coatings.

Landscape Equipment -

Energy Use -

Land Use Change - Assumes residential, commercial, and right-of-way are converted from grassland. Total acres = 530.1 - 77.57-92.01-5.08-0.65-30.40-21.18-18.41 = 284.80

Sequestration - Approximately 2,240 new trees planted as part of the project (provided by project applicant).

Construction Off-road Equipment Mitigation - Construction mitigation reflects quantification of the SMAQMD Basic Construction Emissions Control Practices: Water Exposed area 2x daily; Unpaved road mitigation = 15 mph; Clean paved road = 9%. NOTE: This model run reflects operational emissions only.

Mobile Land Use Mitigation -

Mobile Commute Mitigation -

Area Mitigation -

Energy Mitigation -

Water Mitigation -

Fleet Mix -

Off-road Equipment -

Off-road Equipment -

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Estimated construction state date of February 2025 (provided by Applicant).

Land Use - This model run provides construction emissions only. Includes 8,000 sf of restrooms (City Park) and 7,000 sf (1/3 of clubhouse).

Construction Phase - Phase 3

Off-road Equipment -

Off-road Equipment - For building construction, assumes 1 crane, 2 forklifts, 1 generator set, 1 tractor/loader/backhoe, and 1 welder (as provided by the applicant)

Off-road Equipment -
Off-road Equipment -

Off-road Equipment -

Off-road Equipment -

Trips and VMT - -

Grading - 38,177 soil export. 143.0 acres graded during this phase (as provided by project applicant).

Architectural Coating - 75 g/L as provided by SMAQMD (average as provided by the air district).

Vehicle Trips - Operational emissions not modeled under this scenario (construction only)

Road Dust -

Woodstoves - No fireplaces.

Consumer Products - 'General Category' consumer products EF red. by 28.33% - reflects project person/du value (2.523) vs. statewide avg. (2.97) and latest statewide data (ARB). Parking Degreaser EF red. by 57.5% (corrects for walking paths modeled as 'parking lot').

Area Coating - Maximum 50 g/l for flat coatings SMAQMD Rule 442. Assume flat coatings are used for interior coatings.

Landscape Equipment -

Energy Use -

Land Use Change - Assumes residential, commercial, and right-of-way are converted from grassland. Total acres = 530.1 - 77.57-92.01-5.08-0.65-30.40-21.18-18.41 = 284.80

Sequestration - Approximately 2,240 new trees planted as part of the project (provided by project applicant).

Construction Off-road Equipment Mitigation - Construction mitigation reflects quantification of the SMAQMD Basic Construction Emissions Control Practices: Water Exposed area 2x daily; Unpaved road mitigation = 15 mph; Clean paved road = 9%. NOTE: This model run reflects operational emissions only.

Mobile Land Use Mitigation -

Mobile Commute Mitigation -

Area Mitigation -

Energy Mitigation -

Water Mitigation -

Fleet Mix -

Off-road Equipment -

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Parking Lot	1.50	Acre	1.50	65,340.00	0
City Park	1.54	Acre	1.54	67,082.40	0
City Park	10.78	Acre	10.78	469,576.80	0
Retirement Community	295.00	Dwelling Unit	59.00	295,000.00	613
Single Family Housing	265.00	Dwelling Unit	86.04	477,000.00	752

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	3.5	**Precipitation Freq (Days)**	58
Climate Zone	6			**Operational Year**	2035
Utility Company	Sacramento Municipal Utility District				
CO2 Intensity (lb/MWhr)	590.31	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Estimated construction state date of February 2025 (provided by Applicant).

Land Use - This model run provides construction emissions only. Includes 8,000 sf of restrooms (City Park) and 7,000 sf (1/3 of clubhouse).

Construction Phase - Phase 3

Off-road Equipment -

Off-road Equipment - For building construction, assumes 1 crane, 2 forklifts, 1 generator set, 1 tractor/loader/backhoe, and 1 welder (as provided by the applicant)

Off-road Equipment -
Off-road Equipment -

Off-road Equipment -

Off-road Equipment -

Trips and VMT - -

Grading - 38,177 soil export. 143.0 acres graded during this phase (as provided by project applicant).

Architectural Coating - 75 g/L as provided by SMAQMD (average as provided by the air district).

Vehicle Trips - Operational emissions not modeled under this scenario (construction only)

Road Dust -

Woodstoves - No fireplaces.

Consumer Products - 'General Category' consumer products EF red. by 28.33% - reflects project person/du value (2.523) vs. statewide avg. (2.97) and latest statewide data (ARB). Parking Degreaser EF red. by 57.5% (corrects for walking paths modeled as 'parking lot').

Area Coating - Maximum 50 g/l for flat coatings SMAQMD Rule 442. Assume flat coatings are used for interior coatings.

Landscape Equipment -

Energy Use -

Land Use Change - Assumes residential, commercial, and right-of-way are converted from grassland. Total acres = 530.1 - 77.57-92.01-5.08-0.65-30.40-21.18-18.41 = 284.80

Sequestration - Approximately 2,240 new trees planted as part of the project (provided by project applicant).

Construction Off-road Equipment Mitigation - Construction mitigation reflects quantification of the SMAQMD Basic Construction Emissions Control Practices: Water Exposed area 2x daily; Unpaved road mitigation = 15 mph; Clean paved road = 9%. NOTE: This model run reflects operational emissions only.

Mobile Land Use Mitigation -

Mobile Commute Mitigation -

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Estimated construction state date of March 2030 (provided by Applicant).

Land Use - This model run provides construction emissions only.

Construction Phase - Phase 4

Off-road Equipment -

Trips and VMT - -

Grading - Total of 38,177 soil export. 13.8 acres graded during this phase (as provided by project applicant).

Architectural Coating - 75 g/L as provided by SMAQMD (average as provided by the air district).

Vehicle Trips - Operational emissions not modeled under this scenario (construction only)

Road Dust -

Woodstoves - No fireplaces.

Consumer Products - 'General Category' consumer products EF red. by 28.33% - reflects project person/du value (2.523) vs. statewide avg. (2.97) and latest statewide data (ARB). Parking Degreaser EF red. by 57.5% (corrects for walking paths modeled as 'parking lot').

Area Coating - Maximum 50 g/l for flat coatings SMAQMD Rule 442. Assume flat coatings are used for interior coatings.

Landscape Equipment -

Energy Use -

Land Use Change - Assumes residential, commercial, and right-of-way are converted from grassland. Total acres = 530.1 - 77.57-92.01-5.08-0.65-30.40-21.18-18.41 = 284.80

Sequestration - Approximately 2,240 new trees planted as part of the project (provided by project applicant).

Construction Off-road Equipment Mitigation - Construction mitigation reflects quantification of the SMAQMD Basic Construction Emissions Control Practices: Water Exposed area 2x daily; Unpaved road mitigation = 15 mph; Clean paved road = 9%. NOTE: This model run reflects operational emissions only.

Mobile Land Use Mitigation -

Mobile Commute Mitigation -

Area Mitigation -

Energy Mitigation -

Water Mitigation -

Fleet Mix -

The Ranch - City of Rancho Cordova (Construction Only - Phase 4)

Sacramento County, Summer

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Apartments Mid Rise	215.00	Dwelling Unit	5.66	215,000.00	574
Regional Shopping Center	32.00	1000sqft	0.73	32,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	3.5	**Precipitation Freq (Days)**	58
Climate Zone	6			**Operational Year**	2035
Utility Company	Sacramento Municipal Utility District				
CO2 Intensity (lb/MWhr)	590.31	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Estimated construction state date of March 2030 (provided by Applicant).

Land Use - This model run provides construction emissions only.

Construction Phase - Phase 4

Off-road Equipment -

Trips and VMT - -

Grading - Total of 38,177 soil export. 13.8 acres graded during this phase (as provided by project applicant).

Architectural Coating - 75 g/L as provided by SMAQMD (average as provided by the air district).

Vehicle Trips - Operational emissions not modeled under this scenario (construction only)

Road Dust -

Woodstoves - No fireplaces.

Consumer Products - 'General Category' consumer products EF red. by 28.33% - reflects project person/du value (2.523) vs. statewide avg. (2.97) and latest statewide data (ARB). Parking Degreaser EF red. by 57.5% (corrects for walking paths modeled as 'parking lot').

Area Coating - Maximum 50 g/l for flat coatings SMAQMD Rule 442. Assume flat coatings are used for interior coatings.

Landscape Equipment -

Energy Use -

Land Use Change - Assumes residential, commercial, and right-of-way are converted from grassland. Total acres = 530.1 - 77.57-92.01-5.08-0.65-30.40-21.18-18.41 = 284.80

Sequestration - Approximately 2,240 new trees planted as part of the project (provided by project applicant).

Construction Off-road Equipment Mitigation - Construction mitigation reflects quantification of the SMAQMD Basic Construction Emissions Control Practices: Water Exposed area 2x daily; Unpaved road mitigation = 15 mph; Clean paved road = 9%. NOTE: This model run reflects operational emissions only.

Mobile Land Use Mitigation -

Mobile Commute Mitigation -

Area Mitigation -

Energy Mitigation -

Water Mitigation -

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Estimated construction state date of March 2030 (provided by Applicant).

Land Use - This model run provides construction emissions only.

Construction Phase - Phase 4

Off-road Equipment -

Trips and VMT - -

Grading - Total of 38,177 soil export. 13.8 acres graded during this phase (as provided by project applicant).

Architectural Coating - 75 g/L as provided by SMAQMD (average as provided by the air district).

Vehicle Trips - Operational emissions not modeled under this scenario (construction only)

Road Dust -

Woodstoves - No fireplaces.

Consumer Products - 'General Category' consumer products EF red. by 28.33% - reflects project person/du value (2.523) vs. statewide avg. (2.97) and latest statewide data (ARB). Parking Degreaser EF red. by 57.5% (corrects for walking paths modeled as 'parking lot').

Area Coating - Maximum 50 g/l for flat coatings SMAQMD Rule 442. Assume flat coatings are used for interior coatings.

Landscape Equipment -

Energy Use -

Land Use Change - Assumes residential, commercial, and right-of-way are converted from grassland. Total acres = 530.1 - 77.57-92.01-5.08-0.65-30.40-21.18-18.41 = 284.80

Sequestration - Approximately 2,240 new trees planted as part of the project (provided by project applicant).

Construction Off-road Equipment Mitigation - Construction mitigation reflects quantification of the SMAQMD Basic Construction Emissions Control Practices: Water Exposed area 2x daily; Unpaved road mitigation = 15 mph; Clean paved road = 9%. NOTE: This model run reflects operational emissions only.

Mobile Land Use Mitigation -

Mobile Commute Mitigation -

Area Mitigation -

Energy Mitigation -

Water Mitigation -

Fleet Mix -

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Buildout Year: 2035

Land Use - Land use info as provided by the unit counts/gross acres/sf provided by applicant. 8,000sf restroom is in the Lot D park. 21,000sf clubhouse/restroom is incl. in the Lot A park. Population provided by ACS projections.

Construction Phase - Note - constructed not modeled under this (operational) scenario.

Off-road Equipment -

Trips and VMT -

Grading - Assumes whole project site is graded (except for protected areas) = 319.9 acres. 152,708 CY of material exported from project site (as provided by the Project Applicant).

Architectural Coating -

Vehicle Trips - Trip rates used from Traffic Impact Memo (June, 2019), inclusive of average internal capture rate the traffic consultant applied to AM and PM peak hours. Park trips are assumed to be accounted for by the land uses provided in the Traffic Impact Memo.

Road Dust - Project will not have unpaved roads during the project's operational phase. Since the project is in the SMAQMD jursidiction, project uses the CARB's 2.0 and 0.2 method (per CalEEMod User Guidebook).

Woodstoves - No hearths modeled (per SMAQMD Guidance - See User Tips guide from February 2019).

Consumer Products - 'General Category' consumer products EF red. by 29.1% - reflects project person/du value (2.504) vs. statewide avg. (2.97) and latest statewide data (ARB).

Area Coating - Average of 75 g/l for all coatings, per SMAQMD guidance.

Landscape Equipment -

Energy Use -

Land Use Change - Assumes residential, commercial, and right-of-way are converted from grassland. Total acres = 530.1 - 78.51 - 89.49 - 7.14 - 5.33 - 32.3 - 21.3 - 17.41 = 278.62 acres

Sequestration - Approximately 2,240 new trees planted as part of the project (provided by project applicant).

Construction Off-road Equipment Mitigation - NOTE: This model run reflects operational emissions only.

Mobile Land Use Mitigation - Density = ~6.66 du/acre. Increase walkability design (144.9 int/sq. mile). Improve ped network. Provide traffic calming (50%/50%). 100% increase in transit coverage (current coverage=0). Provide Transit Accessibility (0.25 mile)

Mobile Commute Mitigation -

Area Mitigation - No hearths are to be installed as part of the proposed project. Flat (i.e. non-reflective) paints are assumed for projects building interiors. (see SMAQMD Rule 442 - maximum VOC content for flat paints is 75 g/L).

Energy Mitigation - High-efficiency lighting (LEDs) (71.5% improvement). EE appliances. 95% electricity generated via renewables (on-site or SMUD contract).

Water Mitigation - Install low-floor indoor water use fixtures, and use water-efficient irrigation systems (=current version of Title 24).

Fleet Mix -

The Ranch - City of Rancho Cordova (Full Buildout - 2035 - Operational Only) Unmitigated - Sacramento County, Annual

1.3 User Entered Comments & Non-Default Data

The Ranch - City of Rancho Cordova (Full Buildout - 2035 - Operational Only) Unmitigated - Sacramento County, Summer

Project Characteristics - Buildout Year: 2035

Land Use - Land use info as provided by the unit counts/gross acres/sf provided by applicant. 8,000sf restroom is in the Lot D park. 21,000sf clubhouse/restroom is incl. in the Lot A park. Population provided by ACS projections.

Construction Phase - Note - constructed not modeled under this (operational) scenario.

Off-road Equipment -

Trips and VMT -

Grading - Assumes whole project site is graded (except for protected areas) = 319.9 acres. 152,708 CY of material exported from project site (as provided by the Project Applicant).

Architectural Coating -

Vehicle Trips - Trip rates used from Traffic Impact Memo (June, 2019), inclusive of average internal capture rate the traffic consultant applied to AM and PM peak hours. Park trips are assumed to be accounted for by the land uses provided in the Traffic Impact Memo.

Road Dust - Project will not have unpaved roads during the project's operational phase. Since the project is in the SMAQMD jursidiction, project uses the CARB's 2.0 and 0.2 method (per CalEEMod User Guidebook).

Woodstoves - No hearths modeled (per SMAQMD Guidance - See User Tips guide from February 2019).

Consumer Products - 'General Category' consumer products EF red. by 29.1% - reflects project person/du value (2.504) vs. statewide avg. (2.97) and latest statewide data (ARB).

Area Coating - Average of 75 g/l for all coatings, per SMAQMD guidance.

Landscape Equipment -

Energy Use -

Land Use Change - Assumes residential, commercial, and right-of-way are converted from grassland. Total acres = 530.1 - 78.51 - 89.49 - 7.14 - 5.33 - 32.3 - 21.3 - 17.41 = 278.62 acres

Sequestration - Approximately 2,240 new trees planted as part of the project (provided by project applicant).

Construction Off-road Equipment Mitigation - NOTE: This model run reflects operational emissions only.

Mobile Land Use Mitigation - Density = ~6.66 du/acre. Increase walkability design (144.9 int/sq. mile). Improve ped network. Provide traffic calming (50%/50%). 100% increase in transit coverage (current coverage=0). Provide Transit Accessibility (0.25 mile)

Mobile Commute Mitigation -

Area Mitigation - No hearths are to be installed as part of the proposed project. Flat (i.e. non-reflective) paints are assumed for projects building interiors. (see SMAQMD Rule 442 - maximum VOC content for flat paints is 75 g/L).

Energy Mitigation - High-efficiency lighting (LEDs) (71.5% improvement). EE appliances. 95% electricity generated via renewables (on-site or SMUD contract).

Water Mitigation - Install low-floor indoor water use fixtures, and use water-efficient irrigation systems (=current version of Title 24).

Fleet Mix -

The Ranch - City of Rancho Cordova (Full Buildout - 2035 - Operational Only) Unmitigated - Sacramento County, Summer

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Buildout Year: 2035

Land Use - Land use info as provided by the unit counts/gross acres/sf provided by applicant. 8,000sf restroom is in the Lot D park. 21,000sf clubhouse/restroom is incl. in the Lot A park. Population provided by ACS projections.

Construction Phase - Note - constructed not modeled under this (operational) scenario.

Off-road Equipment -

Trips and VMT -

Grading - Assumes whole project site is graded (except for protected areas) = 319.9 acres. 152,708 CY of material exported from project site (as provided by the Project Applicant).

Architectural Coating -

Vehicle Trips - Trip rates used from Traffic Impact Memo (June, 2019), inclusive of average internal capture rate the traffic consultant applied to AM and PM peak hours. Park trips are assumed to be accounted for by the land uses provided in the Traffic Impact Memo.

Road Dust - Project will not have unpaved roads during the project's operational phase. Since the project is in the SMAQMD jursidiction, project uses the CARB's 2.0 and 0.2 method (per CalEEMod User Guidebook).

Woodstoves - No hearths modeled (per SMAQMD Guidance - See User Tips guide from February 2019).

Consumer Products - 'General Category' consumer products EF red. by 29.1% - reflects project person/du value (2.504) vs. statewide avg. (2.97) and latest statewide data (ARB).

Area Coating - Average of 75 g/l for all coatings, per SMAQMD guidance.

Landscape Equipment -

Energy Use -

Land Use Change - Assumes residential, commercial, and right-of-way are converted from grassland. Total acres = 530.1 - 78.51 - 89.49 - 7.14 - 5.33 - 32.3 - 21.3 - 17.41 = 278.62 acres

Sequestration - Approximately 2,240 new trees planted as part of the project (provided by project applicant).

Construction Off-road Equipment Mitigation - NOTE: This model run reflects operational emissions only.

Mobile Land Use Mitigation - Density = ~6.66 du/acre. Increase walkability design (144.9 int/sq. mile). Improve ped network. Provide traffic calming (50%/50%). 100% increase in transit coverage (current coverage=0). Provide Transit Accessibility (0.25 mile)

Mobile Commute Mitigation -

Area Mitigation - No hearths are to be installed as part of the proposed project. Flat (i.e. non-reflective) paints are assumed for projects building interiors. (see SMAQMD Rule 442 - maximum VOC content for flat paints is 75 g/L).

Energy Mitigation - High-efficiency lighting (LEDs) (71.5% improvement). EE appliances. 95% electricity generated via renewables (on-site or SMUD contract).

Water Mitigation - Install low-floor indoor water use fixtures, and use water-efficient irrigation systems (=current version of Title 24).

Fleet Mix -

The Ranch - City of Rancho Cordova (Full Buildout - 2035 - Operational Only) Unmitigated - Sacramento County, Winter

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Buildout Year: 2035

Land Use - Land use info as provided by the unit counts/gross acres/sf provided by applicant. 8,000sf restroom is in the Lot D park. 21,000sf clubhouse/restroom is incl. in the Lot A park. Population provided by ACS projections.

Construction Phase - Note - constructed not modeled under this (operational) scenario.

Off-road Equipment -

Trips and VMT -

Grading - Assumes whole project site is graded (except for protected areas) = 319.9 acres. 152,708 CY of material exported from project site (as provided by the Project Applicant).

Architectural Coating -

Vehicle Trips - Trip rates used from Traffic Impact Memo (June, 2019), inclusive of average internal capture rate the traffic consultant applied to AM and PM peak hours. Park trips are assumed to be accounted for by the land uses provided in the Traffic Impact Memo.

Road Dust - Project will not have unpaved roads during the project's operational phase. Since the project is in the SMAQMD jursidiction, project uses the CARB's 2.0 and 0.2 method (per CalEEMod User Guidebook).

Woodstoves - No hearths modeled (per SMAQMD Guidance - See User Tips guide from February 2019).

Consumer Products - 'General Category' consumer products EF red. by 29.1% - reflects project person/du value (2.504) vs. statewide avg. (2.97) and latest statewide data (ARB).

Area Coating - Average of 75 g/l for all coatings, per SMAQMD guidance.

Landscape Equipment -

Energy Use -

Land Use Change - Assumes residential, commercial, and right-of-way are converted from grassland. Total acres = 530.1 - 78.51 - 89.49 - 7.14 - 5.33 - 32.3 - 21.3 - 17.41 = 278.62 acres

Sequestration - Approximately 2,240 new trees planted as part of the project (provided by project applicant).

Construction Off-road Equipment Mitigation - NOTE: This model run reflects operational emissions only.

Mobile Land Use Mitigation - Density = ~6.66 du/acre. Increase walkability design (144.9 int/sq. mile). Improve ped network. Provide traffic calming (50%/50%). 100% increase in transit coverage (current coverage=0). Provide Transit Accessibility (0.25 mile)

Mobile Commute Mitigation - Implement trip reduction program (100% voluntary).

Area Mitigation - No hearths are to be installed as part of the proposed project. Flat (i.e. non-reflective) paints are assumed for projects building interiors. (see SMAQMD Rule 442 - maximum VOC content for flat paints is 75 g/L).

Energy Mitigation - High-efficiency lighting (LEDs) (71.5% improvement). EE appliances. 95% electricity generated via renewables (on-site or SMUD contract). Exceed Title 24 by 2%.

Water Mitigation - Install low-floor indoor water use fixtures, and use water-efficient irrigation systems (=current version of Title 24). Apply Water Conservation

Strategy (25% reduction in Outoroodr water use)
Fleet Mix -

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Buildout Year: 2035

Land Use - Land use info as provided by the unit counts/gross acres/sf provided by applicant. 8,000sf restroom is in the Lot D park. 21,000sf clubhouse/restroom is incl. in the Lot A park. Population provided by ACS projections.

Construction Phase - Note - constructed not modeled under this (operational) scenario.

Off-road Equipment -

Trips and VMT -

Grading - Assumes whole project site is graded (except for protected areas) = 319.9 acres. 152,708 CY of material exported from project site (as provided by the Project Applicant).

Architectural Coating -

Vehicle Trips - Trip rates used from Traffic Impact Memo (June, 2019), inclusive of average internal capture rate the traffic consultant applied to AM and PM peak hours. Park trips are assumed to be accounted for by the land uses provided in the Traffic Impact Memo.

Road Dust - Project will not have unpaved roads during the project's operational phase. Since the project is in the SMAQMD jursidiction, project uses the CARB's 2.0 and 0.2 method (per CalEEMod User Guidebook).

Woodstoves - No hearths modeled (per SMAQMD Guidance - See User Tips guide from February 2019).

Consumer Products - 'General Category' consumer products EF red. by 29.1% - reflects project person/du value (2.504) vs. statewide avg. (2.97) and latest statewide data (ARB).

Area Coating - Average of 75 g/l for all coatings, per SMAQMD guidance.

Landscape Equipment -

Energy Use -

Land Use Change - Assumes residential, commercial, and right-of-way are converted from grassland. Total acres = 530.1 - 78.51 - 89.49 - 7.14 - 5.33 - 32.3 - 21.3 - 17.41 = 278.62 acres

Sequestration - Approximately 2,240 new trees planted as part of the project (provided by project applicant).

Construction Off-road Equipment Mitigation - NOTE: This model run reflects operational emissions only.

Mobile Land Use Mitigation - Density = ~6.66 du/acre. Increase walkability design (144.9 int/sq. mile). Improve ped network. Provide traffic calming (50%/50%). 100% increase in transit coverage (current coverage=0). Provide Transit Accessibility (0.25 mile)

Mobile Commute Mitigation - Implement trip reduction program (100% voluntary).

Area Mitigation - No hearths are to be installed as part of the proposed project. Flat (i.e. non-reflective) paints are assumed for projects building interiors. (see SMAQMD Rule 442 - maximum VOC content for flat paints is 75 g/L).

Energy Mitigation - High-efficiency lighting (LEDs) (71.5% improvement). EE appliances. 95% electricity generated via renewables (on-site or SMUD contract). Exceed Title 24 by 2%.

Water Mitigation - Install low-floor indoor water use fixtures, and use water-efficient irrigation systems (=current version of Title 24). Apply Water Conservation

The Ranch - City of Rancho Cordova (Full Buildout - 2035 - Operational Only) Mitigated - Sacramento County, Summer

Strategy (25% reduction in Outoroodr water use)

4.0 Operational Detail - Mobile

4.1 Mitigation Measures Mobile

Increase Density

Improve Walkability Design

Increase Transit Accessibility

Improve Pedestrian Network

Provide Traffic Calming Measures

Implement NEV Network

Expand Transit Network

Implement Trip Reduction Program

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Buildout Year: 2035

Land Use - Land use info as provided by the unit counts/gross acres/sf provided by applicant. 8,000sf restroom is in the Lot D park. 21,000sf clubhouse/restroom is incl. in the Lot A park. Population provided by ACS projections.

Construction Phase - Note - constructed not modeled under this (operational) scenario.

Off-road Equipment -

Trips and VMT -

Grading - Assumes whole project site is graded (except for protected areas) = 319.9 acres. 152,708 CY of material exported from project site (as provided by the Project Applicant).

Architectural Coating -

Vehicle Trips - Trip rates used from Traffic Impact Memo (June, 2019), inclusive of average internal capture rate the traffic consultant applied to AM and PM peak hours. Park trips are assumed to be accounted for by the land uses provided in the Traffic Impact Memo.

Road Dust - Project will not have unpaved roads during the project's operational phase. Since the project is in the SMAQMD jursidiction, project uses the CARB's 2.0 and 0.2 method (per CalEEMod User Guidebook).

Woodstoves - No hearths modeled (per SMAQMD Guidance - See User Tips guide from February 2019).

Consumer Products - 'General Category' consumer products EF red. by 29.1% - reflects project person/du value (2.504) vs. statewide avg. (2.97) and latest statewide data (ARB).

Area Coating - Average of 75 g/l for all coatings, per SMAQMD guidance.

Landscape Equipment -

Energy Use -

Land Use Change - Assumes residential, commercial, and right-of-way are converted from grassland. Total acres = 530.1 - 78.51 - 89.49 - 7.14 - 5.33 - 32.3 - 21.3 - 17.41 = 278.62 acres

Sequestration - Approximately 2,240 new trees planted as part of the project (provided by project applicant).

Construction Off-road Equipment Mitigation - NOTE: This model run reflects operational emissions only.

Mobile Land Use Mitigation - Density = ~6.66 du/acre. Increase walkability design (144.9 int/sq. mile). Improve ped network. Provide traffic calming (50%/50%). 100% increase in transit coverage (current coverage=0). Provide Transit Accessibility (0.25 mile)

Mobile Commute Mitigation - Implement trip reduction program (100% voluntary).

Area Mitigation - No hearths are to be installed as part of the proposed project. Flat (i.e. non-reflective) paints are assumed for projects building interiors. (see SMAQMD Rule 442 - maximum VOC content for flat paints is 75 g/L).

Energy Mitigation - High-efficiency lighting (LEDs) (71.5% improvement). EE appliances. 95% electricity generated via renewables (on-site or SMUD contract). Exceed Title 24 by 2%.

Water Mitigation - Install low-floor indoor water use fixtures, and use water-efficient irrigation systems (=current version of Title 24). Apply Water Conservation

The Ranch - City of Rancho Cordova (Full Buildout - 2035 - Operational Only) Mitigated - Sacramento County, Winter

Strategy (25% reduction in Outoroodr water use)
Fleet Mix -

4.0 Operational Detail - Mobile

4.1 Mitigation Measures Mobile

Increase Density

Improve Walkability Design

Increase Transit Accessibility

Improve Pedestrian Network

Provide Traffic Calming Measures

Implement NEV Network

Expand Transit Network

Implement Trip Reduction Program

CITY OF RANCHO CORDOVA

RESOLUTION NO. XX-2020

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF RANCHO CORDOVA APPROVING A GENERAL PLAN AMENDMENT AND LARGE LOT AND SMALL LOT TENTATIVE MAP WITH ATTACHED CONDITIONS OF APPROVAL FOR THE RANCH PROJECT ASSESSOR PARCEL NUMBER APN 067-0040-008 PROJECT NO. DD9725

WHEREAS, the property within The Ranch Special Planning Area is owned by K. Hovnanian at Jaeger Ranch, LLC is referred to as "Landowners"; and

WHEREAS, The Ranch, due to its central location in the eastern part of the City, is envisioned as an integral part of the City; and

WHEREAS, The Ranch project is envisioned to be a planned community that illustrates the City's "building blocks" as described in the General Plan.

WHEREAS, The Ranch project is a plan for a mixed-use development with a broad range of residential uses, commercial, parks/open space, natural resources, and associated infrastructure and roads on an approximately 530-acre site in the City. The Project includes 1,690 residential units at various densities; of that number of residential uses, 743 residential units are active adult, 5.73 acres of commercial, 14.36 acres of community and neighborhood parks, 8.99 acres of private parks; stormwater detention basins; open-space areas, trails, major roads with landscaping; and a 200 acre wetland natural resource/preserve; and

WHEREAS, the attached large lot and small lot tentative maps meets the requirements of the Subdivision Map Act and the Rancho Cordova Municipal Code as set forth in findings below, and the City Council has conducted a properly noticed public hearing for the approval of the Large Lot and Small Lot Tentative Map attached hereto in accordance with the Subdivision Map Act requirements.

WHEREAS, on January 6, 2020, the City Council held a properly noticed public hearing at which it received a report from City Staff regarding The Ranch Special Planning Area and oral and written testimony from the public, and deliberated on the item; and

WHEREAS, the public hearing was noticed in accordance with the requirements set forth in Government Code section 65090 and 65091

NOW THEREFORE, the City Council of the City of Rancho Cordova hereby resolves as follows:

Section 1. RECITALS

The foregoing recitals are true and correct and made a part of this Resolution.

Section 2. General Plan Consistency- According to Section 23.155.060 of the Zoning Code, in order to amend the General Plan to modify the Land Use Map (Exhibit A) the following findings shall be made:

A. Finding: The proposed amendment is internally consistent with the General Plan.
Evidence: The proposed project area with the proposed land use designations as shown in Exhibit A: Proposed General Land Use Map are consistent with the General Plan "Suncreek Preserve Planning Area" conceptual plan. In addition, the project is consistent with several of the General Plan goals as stated above and in The Ranch Special Planning Area handbook.

B. Finding: The proposed amendment would not be detrimental to the public interest, health, safety, convenience, or welfare of the City.
Evidence: The proposed Ranch SPA will not be detrimental to the public interest, health, safety, convenience, or welfare of the City as the project is expected to result in an improved jobs/housing ratio than what currently exists and includes the designation of public uses including parks and other public or quasi-public uses. The Ranch SPA integrates sustainable development practices at each level of community planning and implementation. It includes retail opportunities for the planned community and the surrounding areas of the City as well as a variety of residential densities resulting in a range of housing opportunities for a range of income levels.

C. Finding: In the case of amendments to the General Plan map, the site is physically suitable (including absence of physical constraints, access, compatibility with adjoining land uses, and provisions of utilities) for the requested/anticipated land use developments.
D. Evidence: The site is physically suitable for the proposed density of development. The proposed plan is consistent with the General Plan conceptual plan "Suncreek Preserve Planning Area" as the land uses designations show in the TRSPA handbook Figure 3: Proposed General Plan Land Use Map. Natural Resource areas have been avoided to the extent possible. The proposed circulation plan enhances and expands roadway systems in the area with connections to existing roads. The project land use uses are consistent with the surrounding areas that includes residential and natural resources designations. The project infrastructure that includes utilities will connect into existing infrastructure.

E. Finding: The proposed project has been reviewed in compliance with the provisions of CEQA.
Evidence: The Ranch Environmental Impact Report identifies all known and protected resources within the project area. Required protection and mitigation measures have been incorporated into The Ranch SPA and the Mitigation Monitoring Report Plan. The Ranch project is consistent with the General Pan Natural Resources Element Goals NR-2, and NR-3 regarding protection and preservation of wildlife, plant habitats, wetlands and creek corridors.

Approval
The City Council approves the attached General Plan Map for The Ranch Project attached as (Exhibit A).

Section 3. LARGE LOT AND SMALL LOT TENTATIVE MAP WITH ATTACHED CONDITIONS OF APPROVAL FINDINGS AND APPROVAL

In accordance with Government Code section 66473.5, the proposed Large Lot Tentative Map with attached Conditions of Approval ("Tentative Map") attached hereto is consistent with the applicable General and Specific Plan objectives, policies, land uses and programs. Section 66474 of the Government Code requires a City to deny approval of a tentative map if any of the findings are found to be true. In the case of the proposed map, none of the required findings were found to be true. The following evidence supports the map request:

1. *Finding: That the proposed map is not consistent with applicable general and specific plans as specified in Section 65451*.

   Evidence: The proposed project is consistent with the proposed General Plan Amendment for The Ranch Special Planning Area (TRSPA) land use designation. All lots are consistent with the proposed TRSPA development standards. The Tentative Maps will subdivide the 530 acre Ranch area into 37 large lots and creates boundaries for the multiple land uses, zoning districts, and major roadways within the project. The small lot map will further divide the lots as shown in Exhibit C. All such identified uses within the Tentative Map are consistent with the allowed land uses set forth in the General Plan and Special Planning Area land use, which call for the project area to include a mix of residential, commercial, parks and open space, and natural resources uses. There are currently no buildings on site and all lots are consistent with the development standards of the General Plan and Special Planning A for this parcel

2. *Finding: That the design or improvement of the proposed subdivision is not consistent with applicable general and specific plans.*

   Evidence: The proposed Tentative Subdivision Map is consistent with the proposed General Plan Amendment designation of Low, Medium, High Density Residential, Commercial, Parks/Open Space, and Natural Resources and the proposed TRSPA handbook densities and zoning districts as follows;
   - The proposed subdivision map is consistent with the proposed TRSPA Land Use Plan.
   - The overall proposed subdivision densities (Low, Medium, and High) are consistent with proposed General Plan Amendment designations
   - The proposed subdivision lots are consistent with the proposed Special Planning Area development standards.

3. *Finding: That the site is not physically suitable for the type of development.*

   Evidence: The site is physically suitable to subdivide. The existing parcel will be split into 1,437 single-family lots, 2 commercial lots, 1 public multi-family lot, 1 private multi-family lot, 3 public parks, 3 private parks, 11 protected area (natural resources) lots that include drainage basin and landscape, several private landscape lots and private drives. There are no buildings currently onsite.

4. *Finding: That the site is not physically suitable for the proposed density of development.*

   Evidence: The site is physically suitable for the proposed density of development. The proposed TRSPA includes low (2.1-6.0 dwelling units per acre (du/ac), medium (6.1-18.0 du/ac), and High (27.0-50.0 du/ac) densities. The proposed

subdivision map is consistent with the proposed General Plan designations. Improvements are provided as shown on the Tentative Subdivision Map (Exhibit B and Exhibit C), and subject to the attached Conditions of Approval (Exhibit D).

5. *Finding: That the design of the subdivision or the proposed improvements are likely to cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat.*

   Evidence: An Environmental Impact Report was prepared for The Ranch project DD9725 where the construction of single-family lots, multi-family lots, commercial, parks/open space, and the protection of natural resources were addressed in accordance with the requirements of the California Environmental Quality Act (CEQA). The Draft EIR contains a description of the Project, description of the environmental setting, identification of project impacts, and mitigation measures for impacts found to be significant, as well as an analysis of project alternatives, identification of significant irreversible environmental changes, growth-inducing impacts, and cumulative impacts. The Draft EIR identifies issues determined to have no impact or a less-than-significant impact and provides analysis of potentially significant and significant impacts. The proposed project is consistent with the project analyzed in the Environmental Impact Report.

6. *Finding: That the design of the subdivision or the type of improvements is not likely to cause serious public health problems*.

   Evidence: The proposed subdivision includes a 200 plus acre natural preserve and an existing 275-foot wide utility easement. Proposed development has been planned outside of the protected natural preserve and the existing easement. The proposed Tentative Subdivision Map includes necessary improvements to serve the project. The proposed improvements are consistent with the proposed TRSPA. No public health problems will result from approval of the tentative subdivision map.

7. *Finding: That the design of the subdivision or the type of improvements will conflict with easements, acquired by the public at large, for access through or use of property within the proposed subdivision. In this connection, the legislative body may approve a map if it finds that alternate easements, for access or for use, will be provided, and that these will be substantially equivalent to ones previously acquired by the public.*

   Evidence: The proposed improvements on the tentative subdivision map and included within the project are consistent with the proposed TRSPA and City of Rancho Cordova Ordinances and Standards and do not conflict with public easements and related necessary access through the project. The streets proposed include public and private streets.

B. Approval.

The City Council approves the attached General Plan Amendment Land Use Designations as shown in (Exhibit A). Large Lot (Exhibit B) and Small Lot (Exhibit C) Tentative Map for The Ranch Project with attached conditions of approval (Exhibit D) as attached.

Section 7. EFFECTIVE DATE.

This Resolution shall become effective upon the effective date of City Council Ordinance adopting The Ranch Special Planning Area.

PASSED AND ADOPTED by the City Council of the City of Rancho Cordova this 6th day of January 2020, by the following vote:

THE RANCH SPECIAL PLANNING AREA CONDITIONS OF APPROVAL

	Conditions of Approval	Category	Timing / Implementation	Enforcement/ Monitoring
1.	The approved entitlement is for a Large Lot and Small Lot Tentative Subdivision Map ("LLTSM") ("SLTSM") for The Ranch Special Planning Area property (APN 0067-0040-008 **Attachment 7 and 8**, as described in the City Council staff report dated January 6, 2020 and subject to the conditions of approval herein, for project number DD9725 ("Project"). These Master Conditions of Approval" are applicable to this entitlement for a Large Lot and Small Lot Tentative Map. Additionally, new Conditions may be added as applicable to future entitlements.	Project Description	On-Going	Planning
2.	Developer shall indemnify, defend with counsel selected by City and hold harmless City, and its elected and appointed councils, boards, commissions, officers, officials, agents, employees, and representatives from any and all claims, costs (including legal fees and costs incurred by City or awarded to plaintiffs) and liability incurred by the City and/or awarded to any plaintiff in any legal or equitable action or other proceeding instituted by any third party challenging the validity of any provisions of this permit.	General	On-Going	Planning
3.	The LLTSM and SLTSM approval is valid for three years from the date of City approval, unless an extension of time is subsequently approved per Government Code Section 66452.6(e), or as otherwise stated in the Project development agreement.	Time/ expiration	On-Going	Planning
4.	Applicant/Developer shall not carry a negative account balance with the City for the processing of the project. If a negative account balance occurs, it will be the developer's responsibility to pay the balance due, in order to avoid delays in the processing of future permits or recordation of maps. Please e-mail the Finance Department at billings@cityofranchocordova.org for the status of your account with the City.	General	On-Going	Planning
5.	In accordance with Government Code Section 65864 through 65869.5 and Zoning Code 23.158, all active Development Agreements must maintain a minimum deposit balance of $5,000 and report to the Planning Department annually. This report should include the status of the project, payment of fees, and any change in ownership.	Funding	On-Going	Planning
6.	The Applicant shall submit payment as needed for Plan Review/ Plan Check Fees required by the Cordova Recreation and Parks District	Park Application	On-Going	CRPD

	Conditions of Approval	Category	Timing / Implementation	Enforcement/ Monitoring
	(CRPD).			
7.	Noise sources associated with construction, repair, remodeling, demolition, paving and/or grading of any real property must adhere to the development standards outlined within the City's Noise Element, RCMC 6.68 and RCMC 16.18.1407(F).	Noise	On-Going	Code Enforcement/Police
8.	Applicant shall be responsible for all damage to City streets associated with construction of the project and shall repair any damage as soon as possible.	Infrastructure	On-Going	Public Works
9.	The project shall comply with The Ranch Mitigation Monitoring Plan.	MMRP	On-Going	Planning
10.	In the event the property to the east known as "Grantline 220" provides public access through the pedestrian gates. The Ranch shall also allow public access through the pedestrian gates.	Pedestrian Gates	On-Going	Planning
Prior to Recordation of the Final Map				
11.	Dedicate a standard 12.5-foot public utility easement, or smaller to the satisfaction of SMUD, for underground facilities and appurtenances adjacent to all public street rights of ways.	Infrastructure	Prior to Recordation of the Small Lot Subdivision Map	Public Works
12.	Dedicate to the City all the right-of-ways as shown on the Tentative Map and install or bond for public street improvements, consistent with the City adopted cross sections to the satisfaction of the City Engineer.	Right of Way Dedication	Prior to Recordation of the Subdivision Map	Public Works
13.	Enter into a subdivision improvement agreement and bond for construction of public improvements per the approved Public Works plans to the satisfaction of the Public Works Department.	Bonds	Prior to Approval of Final Map	Public Works
14.	The final map shall show easements or other mapped provisions for the placement of centralized mail delivery units.	Mail	Prior to Recordation of the Subdivision Map	Public Works
15.	Property Owner/Applicant shall participate in or provide a funding mechanism for maintenance services for the project's stormwater drainage and flood protection system. This may be accomplished through annexation to the City's Stormwater Utility Fee District, or other financial mechanism as may be proposed and provided by the Property Owner for the same purpose of providing a funding mechanism to fund	Funding	The annexation shall occur prior to the recordation of any small lot final map.	Public Works

	Conditions of Approval	Category	Timing / Implementation	Enforcement/ Monitoring
	the operation and maintenance of the Project's stormwater drainage and flood protection system. Costs associated with the annexation shall be borne by the Property Owner/Applicant through payment of the annexation costs in the amount of $7,000 per annexation. Contact Elizabeth Sparkman at (916) 851-8714 with regard to the process to satisfy this condition of approval.			
16.	Property Owner/Applicant shall participate in or provide a funding mechanism for maintenance services for the fair share of existing and all new public improvements associated with the project including, but not limited to, streets, bridges/culverts, traffic signals, traffic signs, striping and legends, ITS operations, street lights and safety lighting, public frontage and median and landscape improvements, and trails. This may be accomplished through annexation to the City's Community Facilities District No. 2014-2 (Street, Lighting and Landscape Maintenance), or other financial mechanism as may be proposed and provided by the Property Owner for the same purpose of providing a financial mechanism to fund the operation and maintenance of the Project's public improvements. Costs associated with the annexation shall be borne by the Property Owner/Applicant through payment of the annexation costs of the CFD annexation in the amount of $5,000 per annexation. Contact Elizabeth Sparkman at (916) 851-8714 with regard to the process to satisfy this condition of approval	Funding	The annexation shall occur prior to the recordation of any small lot final map..	Public Works
17.	Property Owner/Applicant shall participate in the provision of funding to provide transit-related services. This may be accomplished by annexation to the City's Transit Related Services Special Tax Area by voting to approve a special tax for the parcels created for this subdivision approval, or other financial mechanism as may be proposed and provided by the Property Owner for the same purpose of providing a funding mechanism to fund transit-related services. The tax shall be the per parcel annual amount as specified in an approving ordinance (with appropriate annual inflation adjustment) as established at the time of voting by the City Council. The election to provide for the tax shall be completed prior to the recording of the final map. Costs associated with the annexation and election of the annual tax shall be borne by the	Funding	The annexation shall occur prior to the recordation of any small lot final map.	Public Works

	Conditions of Approval	Category	Timing / Implementation	Enforcement/ Monitoring
	Property Owner/Applicant through payment of the annexation costs in the amount of $5,000 per annexation. In addition, the Property Owner shall hold a deed assessment in the form of Conditions, Covenants & Restrictions against the property or other form as shall be approved by the City, which assessment will take effect in the event described in this Condition Approval is reduced or repealed. Contact Elizabeth Sparkman at (916) 851-8714 with regard to the process to satisfy this condition of approval.			
18.	Property Owner/Applicant shall participate in or provide a funding mechanism for maintenance services for the fair share of existing and all new community places and neighborhood greens as required by the City's Open Space Standards. This may be accomplished through annexation to the City's Community Facilities District No. 2018-1 (Maintenance of Community Places and Neighborhood Greens), or other financial mechanism as may be proposed and provided by the Property Owner for the same purpose of providing a financial mechanism to fund the operation and maintenance of the Project's public improvements related to community places and neighborhood greens. Costs associated with the annexation shall be borne by the Property Owner/Applicant through payment of the annexation costs of the CFD annexation in the amount of $7,000 per annexation. Contact Elizabeth Sparkman at (916) 851-8714 with regard to the process to satisfy this condition of approval.	Funding	The annexation shall occur prior to the recordation of any small lot final map. The annual fee commences when a building permit is issued.	Public Works
19.	The Property Owner/Applicant shall support the annexation of the Project into CFD 2013-2 (Police Services) and cover Developer's fair-share costs of the CFD annexation, not to exceed $5,000 for the Participating Developer's Properties. City agrees that the CFD will provide that on lands designated for all residential land use categories, the base year FY 2018/2019 Police Maximum Services Special Tax shall be Five Hundred Forty-four Dollars and Seventy-Six ($544.76) annually per residential dwelling unit, including multi-family units, or Three Hundred Sixty Three Dollars and Seventeen cents ($363.17) annually per Age-Restricted Community dwelling unit. The special tax imposed by the CFD will be payable on a parcel within the Property only after a building permit has been issued by City for the construction of a building on that particular parcel, and there will be no undeveloped	Funding	The annexation shall occur prior to the recordation of any small lot final map. The annual fee commences when a building permit is issued.	Public Works

	Conditions of Approval	Category	Timing / Implementation	Enforcement/ Monitoring
	land tax imposed by the CFD. The CFD shall further provide that on each July 1 commencing July 1, 2019, the base year Police Special Tax shall be escalated by the increase, if any, in the City CPI Index. However, in no event shall the tax per parcel for any fiscal year be less than the amount established for the prior fiscal year. The CFD shall specify that the Police Special Tax shall commence being payable annually following the issuance of a building permit for each parcel subject to the Police Special Tax.			
20.	Record a maintenance agreement involving all the parcels of the subject map assuring timely maintenance of the private streets and associated utilities.	Maintenance Agreement	Prior to recordation of the Final Map	Public Works
21.	The maps shall include a disclosure statement regarding the Kiefer Landfill location.	Disclosure Statement	Prior to recordation of the Final Map	DWMR
22.	Prior to recordation of a final map or certificate of compliance, dedicate land or pay in lieu fees, or both, for park purposes, as required by and in accordance with the procedures and standards set forth in Chapter 22.40, Title 22 of the City of Rancho Cordova Zoning Code	Fees	Prior to approval of any final map.	Public Works
23.	Grant irrevocable offer of Dedication (IOD) as indicated on the approved tentative map exhibit or to the satisfaction of the City Engineer. The City will accept roads when they are fully completed and there is demonstrated public benefit to the satisfaction of the City.	IOD	Prior to recordation of the Final lot map for that phase.	Public Works
24.	The District shall provide and the developer shall deliver a certificate from the Cordova Recreation and Parks District stating that all fees as required by the District have been paid and a Park Development Agreement has been executed	Parks	Prior to recordation of the first phase of the Final Map	Planning/CRPD
25.	The developer shall enter into a Park Development Agreement (Park DA) with the Cordova Recreation and Park District (the District). All costs to prepare the Park DA shall be borne by the Developer. The Park DA shall include, but not be limited to, all of the following; A. The developer's obligation to dedicate land or the payment of in lieu fees or both for park purposes; B. The developer's obligation to construct all necessary street frontage improvements abutting the dedicated park site(s) including, but not limited to, vertical curb, gutter, sidewalk,	Parks	Prior to recordation of the first phase of the Final Map	Planning/CRPD

	Conditions of Approval	Category	Timing / Implementation	Enforcement/ Monitoring
	gutter, street paving, utilities (water, sewer, electrical, storm drain, phone, gas) and street lights; C. All property to be transferred to the District shall be free and clear of any past or future taxes or assessments, any liens or encumbrances. Any structures, walls, fences, wells or storage tanks must be removed in accordance with all applicable laws and regulations prior to acceptance of any grant deeds or easements; D. The design and improvement of all parks within the project. All plans and specifications shall be prepared by a licensed landscape architect with all subconsultants found to be mutually acceptable to the District and the developer. E. The timing of construction of all parks; F. The credits and reimbursement to which the landowner/applicant is entitled in connection with the construction of such park improvements. G. A funding mechanism for the on-going maintenance of park landscaping and associated facilities. All costs of forming the maintenance mechanism or annexation into an existing maintenance mechanism shall be borne by the developer; H. A landscape architect of record shall be retained by the developer, at the developer's expense, throughout the construction process to review the construction as it occurs and attend construction meetings on a weekly basis; I. The landscape architect of record shall be required to authorize all changes to the approved improvement plans in coordination with the District. J. The landscape architect of record and all appropriate subconsultants shall provide as-constructed plans and certify that the project has been constructed per the approved plans, as amended.			
26.	All real property to be transferred to the Cordova Recreation and Parks District for park purposes, shall be appropriately zoned for parks.	Parks	Prior to recordation of the first phase of the	Planning/CRPD

	Conditions of Approval	Category	Timing / Implementation	Enforcement/ Monitoring
			Final Map	
27.	Dedicate land through an irrevocable deed of dedication or pay in-lieu fees or both for park purposes, as required and in accordance with the Development Agreement between the City and the Developer and in the Park Development Agreement between the Park District and the Developer	Parks	Prior to recordation of the first phase of Final Map	Planning/CRPD
28.	The developer shall record a Covenant for Active Park Uses notifying all future property owners that a future public park(s) is located within the proposed subdivision, and that the public park may include facilities (basketball courts, a baseball field, softball fields, soccer fields, and playground equipment) that may generate vehicular and pedestrian traffic and noise impacts during various times, including but not limited to evening and nighttime hours and that the public park may include nighttime sports lighting that may generate lighting impacts during evening and nighttime hours.	Parks	Prior to approval of each phase of the final map	Public Works/CRPD
29.	Provide Fire Access Agreement between all parcels connected to and served by fire access. Fire Access Agreement shall be recorded with the Public Recorders Office having jurisdiction	Fire Access Agreement	Prior to recordation of the Final lot map for that phase.	Fire
Prior to Submittal or Approval of Improvement Plans				
30.	Prior to the SUBMITTAL OF IMPROVEMENT PLANS: Preliminary analysis shows the sanitary sewer facilities available to serve this project are capacity constrained. Before the submittal of the improvement plans to plan check, SASD requires an approved level 3 sewer study. The study needs to address all sanitary sewer issues related to the proposed project. The study must demonstrate there is capacity in the existing system or propose construction of new facilities to mitigate the proposed project's impact on the existing system. SASD's "Minimum Sewer Study Requirements" and Design Standards apply	Sewer	Prior to Submittal of Improvement Plans	SASD
31.	Prior to the APPROVAL OF IMPROVEMENT PLANS: To obtain sewer service, construction of SASD sewer infrastructure will be required. Any construction and/or modification to the public sewer system shall be required to the satisfaction of SASD. SASD Design Standards apply to any sewer construction and/or modification	Sewer Infrastructure	Prior to Improvement Plan Approval	SASD

	Conditions of Approval	Category	Timing / Implementation	Enforcement/ Monitoring
32.	Prior to the APPROVAL OF IMPROVEMENT PLANS: SASD requires each building on each lot with a sewage source to have a separate connection to the SASD's sewer system. If there is more than one building in any single parcel and the parcel is not proposed for split, then each building on that parcel shall have a separate connection to a private onsite sewer line or a separate connection to the SASD public sewer line	Sewer Infrastructure	Prior to Improvement Plan Approval	Public Works
33.	Prior to the APPROVAL OF IMPROVEMENT PLANS: Sewer easements may be required to service this development. All public sewer easements will be dedicated to SASD in a form approved by the District Engineer. All public sewer easements will be at least 20 feet in width and requires continuous access for installation and maintenance. SASD will only provide maintenance in public right-of-ways and SASD dedicated sewer easements	Sewer Infrastructure	Prior to Improvement Plan Approval	Public Works
34.	SMUD occupies a transmission line easement with transmission and subtransmission facilities within boundaries of the proposed development. The applicant shall be responsible for maintaining all CalOSHA and State of California Public Utilities Commission General Order No. 95 safety clearances during construction and upon building completion. If the required clearances cannot be maintained, the Applicant shall be responsible for the cost of relocation.	Utilities	Prior to Improvement Plan Approval	SMUD
35.	The project shall meet all applicable SMUD requirements: • Sidewalks will need to attach or meander around SMUD equipment where conditions won't allow for SMUD underground equipment and appurtenances to be within 15 feet from the drivable surface or when equipment is larger than available space. The PUE's shall be free and clear of any permanent structures such as overhangs, porches, patios, etc. • All structural setbacks shall be a minimum of 14-feet from the edge of the roadway right-of-way. Structural setbacks less than 14 feet shall require the applicant to conduct a pre-engineering meeting with all utilities to ensure proper clearances are maintained. • In the event the applicant requires the relocation or removal of existing SMUD facilities on or adjacent to the subject property,	Utilities	Prior to Improvement Plan Approval and On-Going	SMUD

Conditions of Approval	Category	Timing / Implementation	Enforcement/ Monitoring
the applicant shall coordinate with SMUD. The applicant shall be responsible for the cost of relocation or removal. • SMUD reserves the right to use any portion of its easements on or adjacent to the subject property that it reasonably needs and shall not be responsible for any damages to the developed property within said easement that unreasonably interferes with those needs. • The applicant shall not place any building foundations within 5 feet of any SMUD trench to maintain adequate trench integrity. The applicant shall verify specific clearance requirements for other utilities. • The applicant shall provide separate SMUD service points to each parcel to the satisfaction of SMUD. • The applicant shall locate, verify, and provide a drawing to SMUD identifying all electrical utility infrastructure for the existing structures. If necessary, any existing onsite electrical infrastructure that serves existing structures shall be relocated to the satisfaction of SMUD. • The applicant shall dedicate any private drive, ingress and egress easement, or Irrevocable Offer of Dedication (and 10-feet adjacent thereto) as public utility easement for underground facilities and appurtenances. All access roads shall meet minimum SMUD requirements for access roads. • The applicant shall dedicate and provide all-weather vehicular access for service vehicles that are up to 26,000 pounds. At a minimum: (a) the drivable surface shall be 20 feet wide; and (b) all SMUD underground equipment and appurtenances shall be within 15 feet from the drivable surface. • Under no circumstances shall any grading or construction activities be permitted within SMUD's transmission line easements without the conveyance of rights from SMUD's real estate department. Should the applicant be found performing unapproved improvements, the applicant shall be responsible for returning the property to its original condition at their expense.			

Conditions of Approval	Category	Timing / Implementation	Enforcement/ Monitoring
• Project owner or contractor is responsible for assessing any impacts to its facilities as a result of constructing and operating their facilities within close proximity to SMUD's high voltage transmission lines. • Storm water quality detention basins within SMUD easement: It is SMUD's policy that construction of basins not be placed within transmission line easements. SMUD may, at its own discretion allow after the following items are addressed to SMUD's satisfaction: (1)The basin shall be designed and constructed as a dry extended basin. (2) The detention basin shall be inspected and maintained as required by Table DB-5. (3) Project owners shall provide the detailed design of the basin to SMUD for review and approval. (4) The basin shall be designed that it does not interfere with access to SMUD towers/poles and maintains at least 2 construction and maintenance pads as shown in the SMUD guide for Transmission Encroachment drawings GFE-1 thru 4. • Playground structures are not allowed within SMUD transmission line easement. • Flying of kites is the transmission line easement is prohibited. Signs will need to be installed at Park ingress areas to inform the public. • Show all SMUD transmission towers and poles in the drawings. • Project owner shall provide detailed engineering drawings for any improvements that are proposed within the SMUD transmission line easement and will require SMUD's consent to do work within the transmission line easement. The applicant shall comply with the SMUD drawing requirements. • All excavations within 25 feet of any structure will require submittal of construction procedures, drawings, calculations and shoring plans reviewed and stamped by a licensed California Civil engineer. Additional requirements may be requested by SMUD. • All personnel and boom-operated equipment performing work within SMUD's easement shall obey Electrical Safety Orders of			

	Conditions of Approval	Category	Timing / Implementation	Enforcement/ Monitoring
	California Title 8, Subchapter 5, Group 2, Article 37. • Add following note to drawings: WARNING-SMUD 230KV OVERHEAD TRANSMISSION LINES ARE LIVE- Electrocution Potential. Project owner or contractor shall take all appropriate safety measures when working near or under lines, including placement of OSHA-required warning signage. On site SMUD inspection required when working within 25 feet of SMUD facilities. Contractor shall contact SMUD Inspection Services at 916-732-5916 to schedule inspection. 72-hour advance notice is required. Project owner or contractor shall protect SMUD facilities during construction and notify SMUD immediately if facilities are damaged. Any damage to existing facilities shall be repaired at the project owner or contractor's expense. • Any necessary future SMUD facilities located on the Applicant's property shall require a dedicated SMUD easement as determined prior to SMUD performing work on the applicant's property.			
36.	In cases where the roadway cross-sections are phased, extend all utilities beyond edge of pavement to accommodate future roadway build out.	Infrastructure	Prior to Improvement Plan Approval	Public Works
37.	The project is within the Sacramento County Water Agency District and shall comply with the following; • Provide public water service to each building • Provide separate public water service to each parcel. All water lines shall be located within a public right-of-way or within easements dedicated to SCWA. Easements shall be reviewed and approved by Sacramento County Water Agency prior to Improvement Plan approval or Final Map approval. • Destroy all abandoned wells on the proposed project site in accordance with the requirements of the Sacramento County Environmental Health Division. Clearly show all abandoned/destroyed wells on the improvement plans for the project. Prior to abandoning any existing agricultural wells, applicant shall use water from agricultural wells for grading and construction.	Water	Prior to Improvement Plan and or Prior to Final Map	Sacramento County Water Agency

	Conditions of Approval	Category	Timing / Implementation	Enforcement/ Monitoring
	• Prior to the issuance of building permits require water intensive commercial and industrial building permit applicants to conduct a water use efficiency review and submit the findings in required environmental documentation for the project. • Prior to the issuance of building permits require efficient cooling systems, re-circulating pumps for fountains and ponds, and water recycling systems for vehicle washing as a condition of service			
38.	Applicant shall photo-document the condition of existing streets, sidewalks and infrastructure that will be affected by work to the satisfaction of the Public Works Department.	Infrastructure	Prior to approval of improvement plans	Public Works
39.	Enter into a frontage agreement and bond for construction of public improvements per the approved Public Works plans to the satisfaction of the Public Works Department.	Infrastructure/Bond	Prior to approval of applicable improvement plans	Public Works
40.	A final landscape plan shall be submitted in conjunction with improvement plan and or building permit submittal and approved by the planning and public works departments prior to issuance of permits and/or any installation of landscape materials RCMC 23.716.020. The final landscape planting and irrigation plan shall be prepared by a registered licensed landscape architect and include the following items per RCMC 22.180.060: • Planting plan to scale that indicate slope • Irrigation Plan • Soils Test • Water Use Calculations • Irrigation Schedule	Landscaping	Prior to approval of improvement plans	Public Works
41.	Number, size, and location of driveways are subject to approval by the Public Works Department.	Infrastructure	Prior to approval of improvement plans	Public Works
42.	The applicant shall comply with the Fire conditions as follows; a. Show the design for a fire access roadway of not less than 20-feet of unobstructed width, 13-feet, 6-inches of vertical clearance, and turning radii of 25 feet inside and 50 feet outside dimension on the improvement plans. The access roadway	Fire	Prior to approval of improvement plans	Fire

Conditions of Approval	Category	Timing / Implementation	Enforcement/ Monitoring
shall extend to within 150 feet of all portions of the exterior walls of the first story of any proposed building. The use of turf-block or grass-crete or similar alternate road surfaces is not approved for installation in fire apparatus access roadways. b. Show the design for an approved fire apparatus turnaround which shall conform to Sacramento Metro Fire Districts, Fire Prevention Standard #3. c. Show on the plans how Fire Lanes will be marked. Fire Lane identification shall be provided along the required fire access roadway. Fire Lane identification shall be in accordance with the Sacramento Metro Fire Districts Fire Prevention Standard #3 and the California Vehicle Code. Vehicle parking is prohibited on any street less than 28 feet in width. Vehicle parking is permitted on both sides of streets 36 feet or more in width. Roadway widths shall be measured between the gutter-line or edge of pavement on opposite sides of the road. Identification of fire apparatus access roadways may be required on private roads. d. Provide a note on the plan that reads, "Fire access roadways shall be built to bear a minimum of 80,000 pounds and meet the Sacramento County Public Works Standards for roadways. A report, prepared by a registered geotechnical engineer, verifying the ability of the road to bear the required minimum weight, shall be submitted with any plan indicating construction of roadway. Verification of constructed roadway shall be provided by a registered geotechnical engineer prior to final of the project." Required Private streets and fire apparatus access roads shall be installed to the "first lift," (Up to the last one inch of pavement) identified, and verified by SMFD prior to any construction, (including foundations) or on-site storage of combustible materials. e. Show the location of the required fire hydrants for this project on the improvement plans. Approved fire hydrants capable of providing the required fire flow for the protection of any and all structures shall be located along the fire apparatus access roadway. The required fire hydrants shall be installed and			

	Conditions of Approval	Category	Timing / Implementation	Enforcement/ Monitoring
	operational prior to any construction, (including foundations) or on-site storage of combustible materials. The minimum required fire flow for the protection of commercial developments is 1,500 gallons per minute (gpm) at a pressure of 20 pounds per square inch (psi) for a two-hour duration.			
43.	Incorporate permanent storm water quality treatment, hydromodification and full capture trash control measures into the site improvement plans in conformance with applicable City and County codes & standards, and state and federal law.	Drainage	Prior to approval of improvement plans	Public Works
44.	Improvement plans shall provide that Developer shall rough grade the park site pursuant to the specification of the Cordova Recreation and Park District, so that there are no excessive amounts of dirt or depressions.	Parks	Prior to approval of improvement Plan	Public Works
45.	All trails shall be located outside of the 10-year flood boundary that is shown in the Ranch Master drainage study.	Trails	Prior to approval of improvement Plan	Public Works
46.	Construct private street(s) in accordance with the approved Tentative Map, and City standard specifications to the satisfaction of the Public Works Department. In addition, provide a level of LED street light illumination equivalent to that required for public streets for the entire portion of the private road system.	Infrastructure	Prior to approval of improvement Plan	Public Works
47.	Traffic control devices including but not limited to signage and striping shall be designed where needed to the satisfaction of the City Engineer. Specific locations of the Traffic control devices will be determined at time of improvement plan submittal. Bulbouts shall be installed at the intersection corners adjacent to Lot D (Community Park).	Infrastructure	Prior to approval of improvement Plan	Public Works
48.	The Stormwater Pollution Prevention Plan shall include a contingency plan for the implementation of a process to remove fine clay sediments prior to discharge to The City of Rancho Cordova's storm drain system and/or Waters of the State (e.g., creeks, rivers) to the satisfaction of the City of Rancho Cordova. A polymer treatment system or comparable process shall be included as a contingency in the erosion and sediment	Drainage	Prior to approval of the Improvement Plans and during construction	Public Works

	Conditions of Approval	Category	Timing / Implementation	Enforcement/ Monitoring
	control plan of the improvement plans. The developer is not required to have the system on site full time, but shall be prepared to mobilize if necessary. If the system utilized, it shall be implemented by qualified professionals with training and proven experience in this field. Such treatment shall be accomplished in a manner that does not pose a toxic threat to fish and other aquatic organisms in receiving waters.			
49.	All landscape strips, medians, etc that contain trees shall be installed with continuous root barriers.	Infrastructure	Prior to approval of improvement plans	Public Works
50.	Provide a permanent concrete stamp, or other permanently applied message to the satisfaction of DWR not including paint, which reads “No Dumping-Flows to Creek” or other approved message at each storm drain inlet	Infrastructure	Prior to acceptance of improvements	Public Works
51.	Provide a clear physical demarcation between city-maintained landscaping and privately maintained landscaping. Examples include bend boards, mow bands, etc.	Landscaping/ Infrastructure	Prior to approval of improvement plans	Public Works
52.	Basins as shown on Exhibit F of the Development Agreement shall be privately maintained by the HOA. The basin design shall include a minimum 10-ft wide asphalt concrete service road with 2-ft compacted aggregate base shoulders. The service road shall be installed on sides of the basin that are not already served by a vehicular road. Provide access to all inlets and outlets, where necessary including minimum 10-ft wide access ramps to the bottom of the basin, per Section 9-20-C9 of the City’s Improvement Standards. A maintenance covenant between the City and the Ranch HOA is required for all proposed on-site drainage facilities within the gated community area, including pipes, detention basins and other drainage facilities. The maintenance manual (developed by the applicant per Conditions of Approval) for the basin shall be included as an appendix to this maintenance covenant. The Ranch HOA will be responsible for maintaining the drainage facilities and the detention basins as specified in the maintenance manual and per standard of care. In addition, the	Private Drainage Maintenance	Prior to approval of improvement plans	Public Works

	Conditions of Approval	Category	Timing / Implementation	Enforcement/ Monitoring
	maintenance covenant will require the Ranch HOA to submit maintenance certification documentation to the City on an annual basis. The maintenance covenant will allow the City access in case of emergencies or condition that could foreseeably be the cause of an emergency, and the City shall be reimbursed by the HOA for any costs incurred.			
53.	Developer shall provide adequate drainage facilities to the boundary of the park site at a depth sufficient to accept all drainage requirements for the improved park site. The District and the City shall jointly review and approve the drainage plans for the street frontages and utilities adjacent to the park site.	Parks	Prior to approval of the grading and drainage plan.	Public Works/CRPD
54.	The park site shall be rough graded to a uniform elevation so there are no resulting excessive amounts of fill or depressions in accordance with the latest edition of the Park Site Criteria of the *Cordova Recreation and Park District Design and Construction Standards Manual* and pursuant to the improvement plans and specifications approved by the District.	Parks	Prior to approval of grading plans	Public Works/CRPD
55.	All subdivision utilities (i.e. Water, Sewer, Storm Drain, Public Utilities, etc.) shall be brought into the park site by the developer at a location coordinated with the District and approved by the District Administrator. The District and the City shall jointly review and approve the improvement plans for the street frontages and utilities adjacent to the park site. The Park District shall give written approval for all locations of utility service points of connection on all land to be dedicated or maintained by the District prior to the approval of infrastructure construction documents.	Parks	Prior to approval of the improvement plans.	Public Works/CRPD
56.	The developer shall install signage on all park sites notifying the surrounding residential units of future park construction and identifying the park size, type, potential amenities and anticipated construction schedule. The District will have final approval of the sign design. The sign shall be maintained in good condition until the park construction is	Park	Prior to approval of the improvement plans.	Public Works/CRPD

	Conditions of Approval	Category	Timing / Implementation	Enforcement/ Monitoring
	complete.			
Prior to Issuance of Building Permit				
57.	Applicant shall submit improvement plans to the satisfaction of the Public Works Department. Improvement plans shall include, but shall not be limited to, all streets, water, sewer, storm drain, recycled water, lighting, signage and striping, and other associated facilities for all streets and other public areas depicted on the tentative map or tentative map phase.	Improvements	Prior to issuance of Building Permits except for model homes and clubhouse	Public Works
58.	Grant the improved landscaped lots within the phase of construction to the City of Rancho Cordova as shown on the approved tentative map and tentative map phasing plan and provide a maintenance entity with an ongoing funding source. The maintenance entity shall be approved and found acceptable by City representatives. Annexation to a current Lighting and Landscape District or a Mello Roos Community Finance District may be possible and is the preferred course of action.	Landscape funding	Prior to issuance of the first building permit within the phase except for Model homes and clubhouse.	Public Works
59.	Prior to issuance of the first building permit except for model homes and clubhouse within a TM phase or subphase approved by the Public Works Department: All streets and improvements shown on the TM phasing plan, all streets necessary for access to the proposed homes, associated improvements included in the approved improvement plans, and other infrastructure as necessary for adequate public access and use shall be substantially complete to the satisfaction of the Public Works Department. Prior to occupancy all streets and improvements except landscaping shown on the TM phasing plan shall be fully constructed and completed to the satisfaction of the Public Works Department. Prior to the 15th certificate of occupancy in the tentative map phase or subphase, all public landscaping shall be fully constructed to the satisfaction of the Public Works Department. At the discretion of the Public Works Department, the final lift of asphalt only (e.g. upper approximately 1.5 inches of asphalt) may be deferred	Infrastructure	Prior to issuance of the first building permit within a TM phase or subphase.	Public Works

	Conditions of Approval	Category	Timing / Implementation	Enforcement/ Monitoring
	to prior to the first occupancy. The structural section shall be designed to accommodate construction traffic and loads until such time that the finish lift of asphalt concrete is installed.			
60.	All landscape corridor walls shall be of masonry construction using graffiti resistant materials. Wall design shall be subject to City's approval and according to the design standards in the Ranch Special Planning Area Handbook.	Sound Walls	Prior to the issuance of the first building permit except for model homes and clubhouse.	Public Works and Planning
61.	Provide fencing around basins where required per City of Rancho Cordova Drainage standards.	Fencing	Prior to issuance of the first building permit except for model homes and clubhouse	Public Works
62.	Provide a stormwater maintenance plan for all drainage basins. The manual shall include, but is not limited to: • As-built topography of the basin. • Cut and fill quantities. • Plat map. • Depth volume rating curve. • As builts for steel, concrete and other structures. • Inverts of inlets, outlets, etc. • Updated model based on as-built topography if as-built topography varies from approved Improvement plans. • Document any sensitive resources.	Drainage	Prior to issuance of the first building permit except for model homes and clubhouse.	Public Works
63.	Prior to acceptance of the improvements, as-built grading and improvement plans (1 full size and 1 half size hard copy), as well as a compact disc containing said plans in AutoCAD and pdf format, and a GIS Shape file shall be submitted and approved by the Public works Department.	Files	Prior to issuance of Building Permits except for model homes and clubhouse.	Public Works
64.	Designer shall certify that installed landscaping conforms to City water	Landscaping	Prior to issuance	Public Works

	signed site observation reports, photographs and documentation verifying implementation of soil report recommendations.			
72.	Upon completion of the installation of the landscaping, the designer shall certify that the landscape complies with all city water conserving landscape requirements. Certification shall be accomplished by completion of a certificate of compliance on a form approved by the director of the city public works department. Failure to submit a complete and accurate certificate of compliance will delay final approval of the project and/or discontinue water service per RCMC 22.180.090. Upon receipt of the certificate of compliance and site inspection from City staff, the landscaping performance bond will be released.	Landscaping	Prior to final Building Inspection	Public Works

CITY OF RANCHO CORDOVA

ORDINANCE NO. XX-2020

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF RANCHO CORDOVA REZONING THE RANCH PROPERTY FROM AGRICULTURAL 80 TO THE RANCH SPECIAL PLANNING AREA

THE CITY COUNCIL OF THE CITY OF RANCHO CORDOVA DOES ORDAIN AS FOLLOWS:

WHEREAS, The Ranch, due to its central location in the eastern part of the City, is envisioned as an integral part of the City; and

WHEREAS, The Ranch project is a plan for a mixed-use development with a broad range of residential uses, commercial, parks/open space, natural resources, and associated infrastructure and roads on an approximately 530-acre site in the City. The Project includes 1,690 residential units at various densities; of that number of residential uses, 743 residential units are active adult, 5.73 acres of commercial, 14.36 acres of community and neighborhood parks, 8.99 acres of private parks; stormwater detention basins; open-space areas, trails, major roads with landscaping; and a 200 acre wetland natural resource/preserve; and

WHEREAS, The Ranch Special Planning Area (SPA) consistent with Government Code section 65451 establishes the land plan (zoning map) and zoning regulations for development within the 530 acre project area. Consistent with State law, a Special Planning Area can establish zoning regulations that are different from and unique to the project area. The Ranch SPA includes information about project objectives, relationship to other City documents, setting and surroundings, land use and circulation, development standards, environmental resources, public utilities, design guidelines and on-site infrastructure phasing plan; and

WHEREAS, The Ranch Special Planning Area adopted by this Ordinance (attached hereto as Exhibit A) complies with the requirements of California Government Code sections 65451 and 65454 and its adoption complies with Government Code section 65453; and

WHEREAS, the City referred the proposed Ranch Special Planning Area to numerous agencies and entities and provided each with adequate time in which to comment on the draft Special Planning Area; and

WHEREAS, in accordance with Government Code section 65454, the proposed Ranch Special Planning Area has been determined to be consistent with the City's General Plan as detailed in The Ranch Special Planning Area Handbook (Consistency of The Ranch Special Planning Area with the City of Rancho Cordova General Plan): and

WHEREAS, the City determined that an Environmental Impact Report ("EIR") should be prepared and circulated a Notice of Preparation on July 26, 2018 to public agencies and interested parties for consultation on the scope of the EIR; and

WHEREAS, the Draft EIR was circulated for public review from August 16, 2019 through September 30, 2019 which identified several potentially significant impacts that will be reduced to insignificance with specified mitigation measures and certain impacts that are significant and unavoidable. Approval of the Project will therefore require adoption of CEQA environmental

findings, a Statement of Overriding Considerations, and a Mitigation Monitoring and Reporting Program; and

WHEREAS, on January 6, 2020, the City Council held a properly noticed public hearing at which it received a report from City Staff regarding The Ranch Special Planning Area and oral and written testimony from the public, and deliberated on the item; and

WHEREAS, the public hearing was noticed in accordance with the requirements set forth in Government Code section 65090 and 65091.

NOW THERFORE, **THE CITY COUNCIL OF THE CITY OF RANCHO CORDOVA DOES ORDAIN AS FOLLOWS:**

Section 1. Recitals.

The foregoing recitals are true and correct and made a part of this Ordinance

Section 2: Rezone Findings.

A. Finding: The proposed amendment is internally consistent with the General Plan**.** Evidence: In accordance with Government Code section 65454, the City Council finds that the proposed Ranch Special Planning Area is consistent with the City's General Plan. The findings and evidence to support this General Plan consistency determination are set forth in Exhibit A attached hereto and incorporated herein by this reference, which addressing consistency with applicable policies in the General Plan, and the general findings set forth below.

In general, the Project is consistent with the General Plan as follows:

i. The Ranch Special Planning Area includes land use districts that are consistent with the desired land use patterns (neighborhoods and villages) and corresponding development parameters in the General Plan Land Use Element. Specifically, the land use types, distribution, densities and intensities of The Ranch Special Planning Area are consistent with the Suncreek Preserve Planning Area Concept Plan (General Plan Figure LU-26), corresponding text description, and assumed development potential (General Plan Table LU-5) outlined in the General Plan.

ii. The Ranch Special Planning Area includes a land use plan, development standards as well as guidelines for subsequent project design consistent with the goals of the General Plan Urban Design Element. Specifically, the location and design concepts for the commercial area within The Ranch are in keeping with the building block concepts outlined in the Urban Design Element (General Plan Goal UD-1 and corresponding policies and actions). Additionally, design guidelines establish unique project identity with context-sensitive design provisions envisioned in General Plan Goals UD-3.

iii. The Ranch Special Planning Area includes land use designation for two commercial areas located at the corner of two major roadways. The SPA implements General Plan

Economic Development Element Goal ED-1 in that it diversifies the local economy with land uses that provide fiscal benefits to the City and residents, and because it provides new local retail and service opportunities that will generate tax revenues for the City.

iv. The Ranch Land Use Plan includes a wide range of residential land use designations including single-family residential, medium density residential, high density residential, as well as an active adult community with amenities. Residential land use designations (allowing between 2 and 50 units/acre) are distributed throughout the project site with high density housing located in close proximity to the commercial area, parks, and trails. The mix and distribution of housing are consistent with the General Plan Housing Element Goals H-1 and H-4 in terms of balancing employment and housing and encouraging housing opportunities, respectively.

v. The Ranch Circulation Plan is consistent with the General Plan Circulation Plan (Figure C-1) and establishes a roadway system for local project traffic, improved community circulation, and as well as regional transportation system with the addition of one major east west roadway (Chrysanthy Boulevard) as well as improvements to the north-south connectivity. The Ranch Bikeway and Trails Plan is consistent with the General Plan Bikeway and Trails Plan (Figure C-2) as well as the City's current Bikeway Master Plan. The Ranch Special Planning Area Section 3.8.1 through 3.8.3 identifies planned street improvements for major roadways and trails and establishes standards and principles for subsequent review of local streets and trail connections in keeping with the General Plan Circulation Element Goals C-1 and C-2 for multi-modal facilities and connectivity.

vi. The Ranch Land Use Plan designates approximately 200 acres (38% of the project area) for natural resources, which excludes storm water detention and private recreation areas. Project open space includes a 510 acre wetland preserve, drainage parkways, landscape corridors, and greenbelts which are consistent with the General Plan Goals NR-2 and NR-3. Project parks include a total of 14.36 acres of public parks and 8.99 acres of private parks. The Ranch Bikeway and Trails Plan paved off-street bike paths and trails connecting neighborhoods to activity centers and improving regional trail connections. Planned open space, parks, and trails for The Ranch are consistent with General Plan Open Space, Parks, and Trails Element Goals OSPT-1, OSPT-2, and OSPT-3 in establishing a premier system of public parks, establishing connected and diverse open space systems, and maximizing opportunities for pedestrians and cyclists.

vii. The Ranch Circulation Plan and Infrastructure plan identify necessary infrastructure, utilities, and services for the project consistent with the goals and policies outlined in the General Plan Infrastructure Goal ISF.2.

viii. The Ranch Environmental Impact Report identifies all known and protected resources within the project area. Required protection and mitigation measures have been incorporated into The Ranch SPA and the Mitigation Monitoring Report Plan. The Ranch project is consistent with the General Pan Natural Resources Element Goals NR-2, and NR-3 regarding protection and preservation of wildlife, plant habitats, wetlands and creek corridors.

ix. The Ranch project includes a drainage plans and guidelines consistent with General Plan Safety Element Goal S-2 (and corresponding policies and actions) to reduce the possibility of a flooding or drainage issue causing damage to urban land uses.

B. Finding The proposed amendment would not be detrimental to the public interest, health, safety, convenience, or welfare of the City
Evidence: The proposed Ranch SPA will not be detrimental to the public interest, health, safety, convenience, or welfare of the City as the project is expected to result in an improved jobs/housing ratio than what currently exists and includes the designation of public uses including parks and other public or quasi-public uses. The Ranch SPA integrates sustainable development practices at each level of community planning and implementation. It includes retail opportunities for the planned community and the surrounding areas of the City as well as a variety of residential densities resulting in a range of housing opportunities for a range of income levels.

C. Finding: CEQA Compliance.
Evidence **:** In compliance with the California Environmental Quality Act ("CEQA"), on January 6, 2020, by Resolution, the City certified the Special Planning Area EIR (State Clearinghouse #2018072011) adopted environmental findings pursuant to CEQA guidelines Section 15091, adopted a statement of overriding considerations, and adopted a mitigation monitoring plan for The Ranch project including the Special Planning Area, prior to approval of the Special Planning Area.

D. Finding: If a map amendment the site is physically suitable (including absence of physical constraints, access, compatibility with adjoining land uses and provisions of utilities) for the requested zoning code.
Evidence: The project site is physically suitable for the proposed density of development. The proposed plan is consistent with the General Plan conceptual plan "Suncreek Preserve Planning Area" as the land uses designations show in the TRSPA handbook Figure 3: Proposed General Plan Land Use Map. Natural Resource areas have been avoided to the extent possible. The proposed circulation plan enhances and expands roadway systems in the area with connections to existing roads. The project land use uses are consistent with the surrounding areas that includes residential and natural resources designations. The project infrastructure that includes utilities will connect into existing infrastructure.

E. Finding: If a text amendment, the amendment is internally consistent with the other applicable provisions in the zoning code.

Evidence: The project includes a proposed zoned Special Planning Area (SPA) that is subject to development according to the SPA handbook text and exhibits as well as subject to provisions as set forth by the Development Agreement. The Ranch SPA handbook provides a set of development standards and guidelines for the project site. As a SPA, the handbook establishes unique and specific standards to create design flexibility in achieving project goals. The standards and permitted uses provided in the SPA handbook are intended to supplement the City of Rancho Cordova Zoning Code. Where the standards are silent or unspecified, the City of Rancho Cordova Zoning Code shall apply.

Section 3: Special Area Planning Findings

A. Finding: The proposed special planning area is consistent with the goals, policies, and objectives of the General Plan.
Evidence: The Ranch SPA is consistent with several of the General Plan goals as stated in The Ranch Special Planning Area handbook (Exhibit A The Ranch Special Planning Area).

B. Finding: The proposed special planning area meets the requirements set forth in Zoning Ordinance chapter 23.149.
Evidence: The proposed Ranch SPA includes the SPA handbook text and exhibits. The Ranch SPA handbook provides a set of development standards and guidelines for the project site. As a SPA, the handbook establishes unique and specific standards to create design flexibility in achieving project goals. The standards and permitted uses provided in the SPA handbook are intended to supplement the City of Rancho Cordova Zoning Code. Where the standards are silent or unspecified, the City of Rancho Cordova Zoning Code shall apply. The SPA handbook includes all the requirements as stated in the Zoning Ordinance chapter 23.149.120 General provisions.

C. Finding: The special planning area is needed because the project is not possible under the existing requirements.
Evidence: The site is currently zoned as Agricultural 80 which would result in very low density residential use and agricultural uses. Therefore, higher residential uses and commercial uses would be unable to be developed on the project site. In addition, the General Plan concept plan shows higher residential densities and commercial that is consistent with the proposed SPA.

Section 4: Adoption of The Ranch Special Planning Area.

The City Council hereby adopts The Ranch Special Planning Area, attached as Exhibit A.

Section 5: Severability.

If any section, subsection, clause or phrase of this Ordinance is for any reason held to be invalid or unconstitutional by the decision of a court of competent jurisdiction, it shall not affect the remaining portions of this Ordinance that can be given effect without the invalid provision and, to this end, the provisions of this Ordinance are severable. This City Council hereby declares that it would have adopted this Ordinance irrespective of the invalidity of any particular portion

thereof and intends that the invalid portions should be severed and the balance of the Ordinance enforced.

Section 6: Publication and Effective Date.

Within fifteen (15) days after adoption, a summary of this Ordinance shall be published once in the Grapevine Independent or the Sacramento Bee, a newspaper of general circulation printed and published in Sacramento County and circulated in the City of Rancho Cordova, in accordance with Government Code section 36933. This Ordinance shall take effect and be enforced thirty (30) days after its adoption.

PASSED AND ADOPTED by the City Council of the City of Rancho Cordova this _____ day of _____, 2020, by the following vote:

AYES:

NOES:

ABSENT:

ABSTAIN:

_____
David M. Sander, Mayor

ATTEST:

_____
Stacy Leitner, CMC
City Clerk

1 Introduction

1.1 OVERVIEW

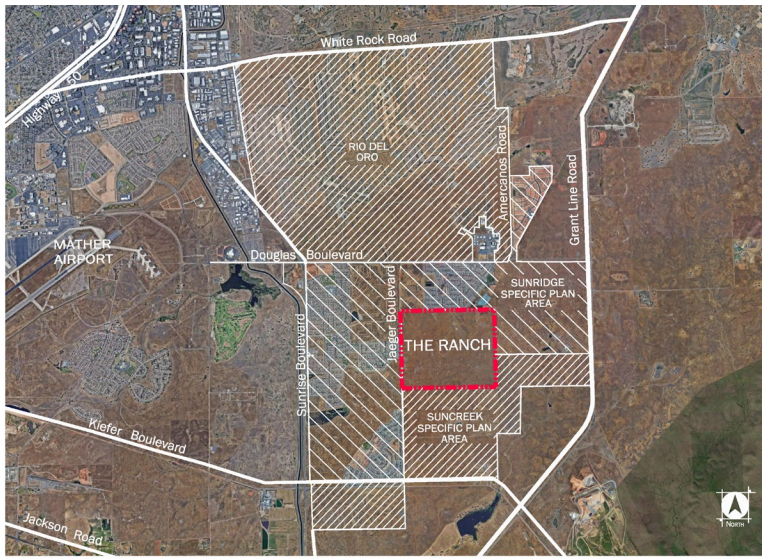
The City of Rancho Cordova, since its incorporation in 2003, has defined an aggressive vision—to "Build a City". Its implementing themes are equally important: Place Making, Catalyst for Change, Great Ideas, Land Use Change, and Services for Quality of Life.

Since the City of Rancho Cordova is not a traditional City nor built around a historic downtown, the long-term strategy is to create a unique urban form. The City has elected to pursue an urban form composed of multiple centers, each designed to contribute to the City as a whole. Such an approach to an urban form relies on a hierarchy of activity centers that respond to the diverse civic, residential, commercial, employment, and recreational needs of this growing community. The Ranch, due to its central location in the eastern part of the City, is envisioned as an integral part of the City—providing a dynamic program of types and styles of homes, connected to a commercial village center and a range of recreational uses by a series of on- and off-street trails.

In preparation for creating this handbook, the Applicant and Development Team have worked closely with City Staff and Elected Officials to understand the needs and wishes of the City and community at large. In addition, the Applicant and Development Team have reviewed and analyzed relevant policy and regulatory documents as context for this SPA document:

- City of Rancho Cordova General Plan
- City of Rancho Cordova Zoning Code
- Sunrise Douglas Community Plan
- South Sacramento Habitat Conservation Plan
- City of Rancho Cordova Pedestrian & Bicycle Master Plan
- Citywide Design Guidelines
- Cordova Recreation & Park District Master Plan for Incorporated Areas 2014
- Cordova Recreation & Park District Preliminary District-wide Facilities Distribution Plan, June 2017

Exhibit 1: Regional Location Map



1.2 PURPOSE

The purpose of The Ranch Special Planning Area Handbook is to guide future development(s) within The Ranch SPA project and allow for a more creative implementation of the General Plan. Special Planning Areas are more conducive to the use of imaginative planning standards that would not be allowed through the application of a standard zoning district.

The Ranch is envisioned to be a focal community that exemplifies the City's "building blocks" as described in the General Plan. Every city has several basic elements—neighborhoods, villages, and districts distributed throughout the community. Each of these elements contribute to a successful city. The Ranch will use these "building blocks" to create a city on a small scale—one that ensures a walkable, livable and sustainable development by:

- Providing a mix of residential and nonresidential uses,
- Creating neighborhood retail development,
- Implementing compact design to preserve sensitive wetlands,
- Providing market-rate neighborhoods with a variety of densities; and
- Create the City's first active-adult neighborhood to provide housing choices to an underserved segment of the City of Rancho Cordova's population catering to their specific needs and lifestyle.

The community is cohesively designed with a unique street scene, prominent monumentation to mark arrival, and a quality architectural palette to create continuity across varied and diverse housing types.

Through the creation, and eventual adoption, of a SPA Handbook, unique development standards and allowed uses will be established that will permit The Ranch to become this unique urban area. It is for these reasons that The Ranch Special Planning Area Handbook has been created and why this community will be a model community in the City of Rancho Cordova and in the greater Sacramento region.

1.3 CONTEXT & SETTING

The Ranch Special Planning Area (TRSPA) lies within the Sunrise Douglas Community Plan area. However, the TRSPA was not included in the approved Sunridge Specific Plan (approved June 2003) nor was it included in the adjacent Suncreek Specific Plan (approved October 2012). In the City's General Plan, this area is called the "Suncreek Preserve Planning Area", and is slated for:

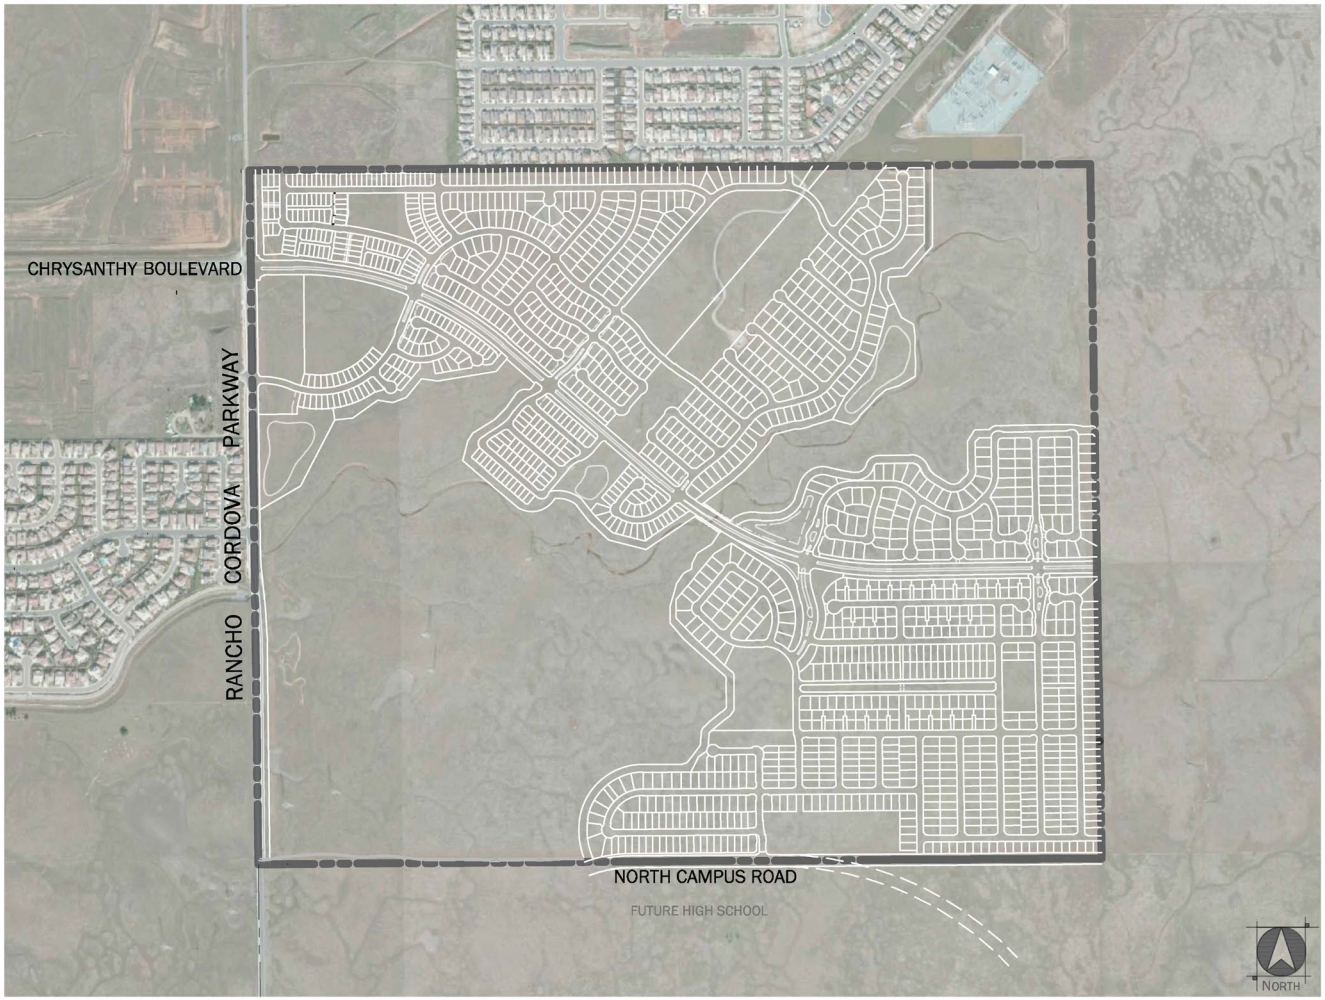
- A mix of low, medium and high-density residential uses,
- An Active Adult community comprises approximately 49% of the total residential development,
- A series of walkable neighborhoods with local and community parks,
- A village center with commercial development at the south east corner of the Chrysanthy Boulevard and Rancho Cordova Parkway intersection,
- Wetland preservation,
- Connection to the City's open space and trail system.

The Ranch Special Planning Area comprises approximately 530 contiguous acres and is bound on the north by the partially built Sunridge Park subdivision. The subject property is bound on the east by vacant lands known as Grantline 208 and Arista Del Sol, both with approved Tentative Subdivision Maps, and are currently being developed. The site is bound on the south by the approved Suncreek Specific Plan Area and on the west by the completed Anatolia II and Anatolia under construction.

Access to the subject property is provided by arterial roadways including Rancho Cordova Parkway on the west and Chrysanthy Boulevard, which is planned for extension through the project, ultimately connecting Sunrise Boulevard to Grantline Road.

With The Ranch SPA's proximity to the existing City of Rancho Cordova job base, Folsom Boulevard Transit Corridor, Highway 50, as well as the site's location in the heart of the Sunrise Douglas Community Plan, the SPA is strongly positioned to be as one of the focal communities within the City of Rancho Cordova.

Exhibit 2: Local Context Map



1.4 VISIONS AND PRINCIPLES

One of the essential goals of the City is to ensure that future growth is smart growth. A City is being built where quality of life and community balance are top priorities. RSPA designed to be developed in keeping with the following nine Smart Growth Principles, which are described in more detail below:

1. Balanced Land Uses
2. Transportation Choices
3. Housing Choices
4. Integrated (Mixed) Land Uses
5. Compact Urban Development
6. Walkable Neighborhoods
7. Preservation/Integration of Natural Resources
8. Quality Design/Sense of Place
9. Regeneration/Infill

These principles promote a balanced development to serve the economy, the community, and the environment.

1. Balanced Land Use

A balanced community is a healthy community – one that can support itself over the long-term and provide choices, variety, and services that residents need and expect.

Residential, commercial, office, recreational, and public/quasi-public uses are provided throughout the entire community and sized appropriately with the service area. Retail shopping opportunities are provided close to homes so as various recreational and public/quasi-public uses. The Ranch also provides a range of housing choices throughout the community.

2. Transportation Choices

Walking, cycling, public transit, and driving are all important modes of transportation and are all found at the Ranch development. Streets are designed to safely accommodate many modes of transportation; continuous off-street trails will connect future residents to the commercial area, parks, future schools and open space area. A future transit stop, located at Rancho Cordova Parkway and Chrysanthy Boulevard intersection will provide public transit opportunities on the City's Signature Bus Route and accessible to all future residents.

3. Housing Opportunities and Choices

The design of the community allows for a range of densities, including low, medium and high density residential, and a variety of housing types including:

- Higher density Single-family homes:
  - zero lot line/use-easement homes
  - Alley-loaded homes
  - I-courts (cluster) homes
- Multi-family residences
- Senior multi-family residences
- Traditional single-family homes
- Executive single-family homes
- Affordable Housing opportunities

What's more, The Ranch offers both a market-rate neighborhood and the City's first active-adult neighborhood, expanding the housing choices offered within the City of Rancho Cordova.

4. Mixed Land Uses

The Ranch community provides for various land uses within its boundaries. By integrating or mixing these compatible uses in close proximity to one another, the development creates a desirable place for people to live, work, play, and shop. A commercial neighborhood center blends with a high-density residential development through shared access points, landscape areas and public plaza for a true integration. Other residential uses are a short walk away. A multi-family use is combined with various recreational uses for truly unique experience. The Active Adult multi-family units are integrated with clubhouse, pool, gardens, and other recreational uses.

5. Compact Urban Development

Compact development uses less land than conventional development for a more efficient land use pattern conducive to the integration of compatible uses in close proximity. Efficient use of land provides more room for the things we care about, like parks, bike trails, playgrounds and environmental amenities. Most importantly, efficient design for both community and the building itself makes efficient use of our time, thereby providing more leisure time to spend with friends and family. Within the development several neighborhoods are designed as compact urban development and located in the close proximity to the public transportation, neighborhood commercial uses and recreational opportunities. Those uses include commercial, multi-family residential, small-lot single family homes and alley-loaded single-family homes.

6. Walkable Neighborhoods

Walkability is a focus for The Ranch Land Use Plan. Streets provide sidewalks and large shade trees to create a pedestrian-friendly street scene. Off-street trails connect neighborhoods to parks, open space and the commercial area so the residents can easily walk from their homes to schools, parks, and shopping areas. The off-street north-south trail will provide connectivity to the future school sites south of the development to the existing neighborhoods north of the project. Neighborhood streets are designed for slower speeds and pedestrian crossings at key locations. Off street trails and street sidewalks will connect neighborhoods to parks, open space, natural resource areas as well as commercial area and public transportation.

7. Preservation and Integration of Natural Resources

Natural resources are a valued amenity within The Ranch. Over 200+ acres will be placed in the natural permanent preserve. The development footprint was strategically chosen to minimize impacts to the natural resources found on site such as valuable vernal pools and natural habits for plants and animals unique to the area.

8. Quality Design/Sense of Place

One of the most important aspects of creating community character and sense of identity is through the quality of project design. The Ranch site design is focused on the future residents, the nature preserve and relationship to its surroundings. The Ranch Community creates a unique identity and a memorable place that is inviting to residents, employees, and visitors.

The Ranch specific design guidelines will ensure that new development improves the aesthetics of the community. The Ranch SPA document provides a vision for the community, to create cohesive continuity across varied and diverse housing types including the city's first Active Adult neighborhood. The communal nodes and gathering areas will provide the community with a sense of place regardless of neighborhood chosen.

9. Regeneration/Infill

The area of the plan has historically been called the "donut hole" as all surrounding parcels have their land uses determined and project approved, some build out or have their Tentative Maps approved making The Ranch is quasi-infill project. As such, The Ranch development will fill in a large gap in the center of the Sunrise Douglas Community Plan Area, providing vital transportation, infrastructure, recreational and natural resources link between communities and preserves.

1.5 THE RANCH LAND USE PLAN

The Ranch Land Use Plan is consistent with the patterns for development as set forth in the City's General Plan Land Use Map. The Land Use Plan locates a commercial area along Chrysanthy Boulevard and Rancho Cordova Parkway, two 4-lane (ultimately) arterial roadways, to provide varied housing opportunities in close proximity to shopping and daily services as well as to existing employment centers throughout the City.

The Ranch plan area is divided into three distinct neighborhoods that are generally separated by Chrysanthy Boulevard and the wetland preserve:

- **The Gateway Neighborhood.**
  A commercial center with opportunity for neighborhood-serving multi-family, retail, and higher-density homes.

- **Parkview Neighborhood.**
  A traditional, single-family neighborhood with a large, centrally located Community Park and a smaller Neighborhood park close to the entrance from Rancho Cordova parkway.

- **Four Seasons Neighborhood.**
  A gated active-adult neighborhood located east of the wetland preserve.

These neighborhoods are described and illustrated in further detail in Section 2. Exhibit 3, below, illustrates the overall arrangement of neighborhoods and Exhibit 4 details the relationship of public and private lands.

Eight different single-family lot sizes and ten product types are provided within the Plan Area to accommodate various income levels and lifestyle choices within the plan area. Additionally, the plan provides for a higher density housing conveniently located next to the commercial village and in close proximity to transit opportunities.

The Ranch Land Use Plan provides many varied recreation opportunities in the form of both active and passive parks, natural open spaces, and a system of off-street trails. Public parks include; one 11-acre community park adjacent to open space power line corridor which is integrated for additional park uses, a +2-acre neighborhood park, and a 1.2-acre passive open green park at the edge of the preserve. The park is linked to the surrounding neighborhood by sidewalks and off-street trails. A private clubhouse and system of private parks are provided in the Four Seasons neighborhood.

The plan area also includes a 200+/- acre wetland preserve that will be maintained in perpetuity for the preservation of threatened and/or endangered species. A pedestrian trail around the wetland preserve provides continuous off-street circulation from the Anatolia neighborhood to the west of Rancho Cordova Parkway, through The Ranch community, to future developments to the east and existing trail to the north.

The Ranch will consist of both public and private neighborhoods (see Exhibit 4, Public and Private Neighborhoods). Vehicle traffic will be limited to residents of the gated neighborhood, utility maintenance, and emergency vehicles. Please see primary entry discussion 3.9.4 for a detailed discussion.

The following is the proposed Land Use Plan and associated Land Use Summary.

Exhibit 3: Illustrative Site Plan

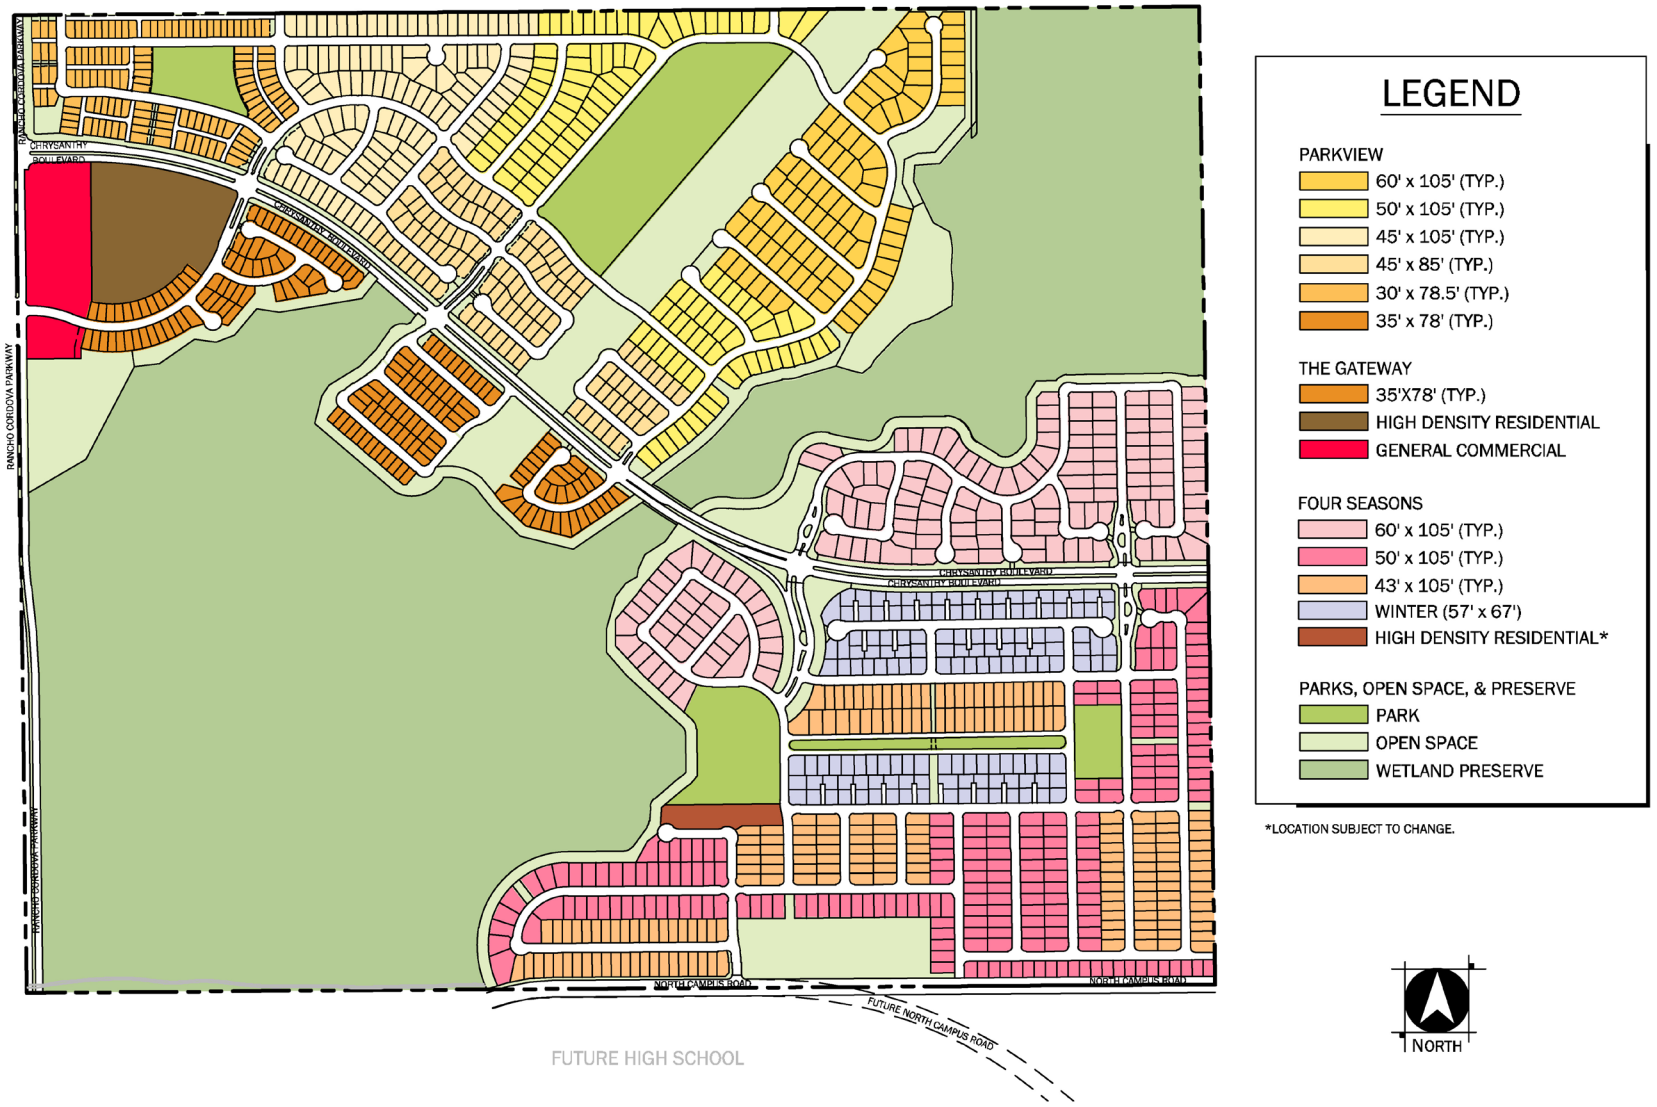


Table 1: Lot Size Summary Table

LOT SIZE SUMMARY

LOT SIZE	ACRES (GROSS)	UNITS	DENSITY (GROSS)
PARKVIEW			
60' x 105' (TYP.)	19.42	86	4.4
50' x 105' (TYP.)	22.48	114	5.1

2 Regulatory Framework

2.1 RELATIONSHIP TO EXISTING CITY DOCUMENTS

The Ranch Special Planning Area (TRSPA) Handbook, and the subsequent Development Agreement, work together to insure a high-quality cohesive design that implements the vision for The Ranch. By virtue of the adoption of this Handbook by ordinance, the zoning districts, development standards and guidelines provided herein shall apply. Where there is a conflict between this document and other City documents, the tentative subdivision map, the TRSPA Development Agreement, and this Handbook shall prevail.

2.2 GENERAL PLAN CONSISTENCY

As defined in the City's Zoning Code a Special Planning Area can allow for a more unique development then what would otherwise be possible under provisions of the existing zoning code; however, the SPA must be consistent with the goals, policies and objectives of the General Plan. The Ranch SPA accomplishes the following City of Rancho Cordova General Plan goals:

Goal LU.2: Establish growth patterns based on smart growth principles and the City building blocks concept.

The Ranch design was based on proven Smart Growth Principles. Smart Growth principles relevant to the project include:

- Creating a distinctive, attractive community with a strong sense of place,
- Creating walkable, close-knit neighborhoods with excellent bicycle access, and
- Fostering citizen and stakeholder participation in development decisions.

Goal LU.6: Ensure development of the Planning Areas consistent with the City's vision.

This plan area is called the "Suncreek/Preserve Planning Area" in the City's General Plan, and is slated for:

- A mix of low, medium and high-density residential uses,
- A series of walkable neighborhoods with community park,
- A commercial village development on the south intersection of Chrysanthy Boulevard and Rancho Cordova Parkway,
- Wetland preservation, and
- Connection to the City's open space and trail system.

This Handbook implements each element discussed in the General Plan for this Suncreek/Preserve Planning Area.

Goal UD.1: Development in keeping with the building block concepts of neighborhoods, villages, and districts.

The Ranch uses these "building blocks" to create a small-scale city that provides:

- A mix of uses,
- Flexible retail development,
- Compact design which preserves sensitive wetlands,
- A market-rate neighborhood, and
- The City's first active-adult neighborhood.

These "building blocks" are all cohesively designed with a unique street scene, prominent monumentation to mark arrival, and an interesting architectural palette to create continuity across varied and diverse housing types.

Goal UD.3: Create unique project identities that contribute to the overall character of the district and City.

The Ranch proposes the City's first active-adult neighborhood which will be cohesively designed to blend with the traditional, market-rate neighborhood.

Goal ED.2: Encourage expansion of retail and services to meet local and regional demands and generate tax revenues for the City.

The commercial village is envisioned to provide neighborhood-serving retail and higher density homes, placing residents in walking distance to services and transit.

Goal H.1: Balance Employment and Housing

The village center concept places residents in walking and biking distance to retail and services. Ultimately creating a balance of employment opportunities in close proximity to housing.

Goal H.3: Encourage Housing Opportunities

The design of the community allows for a range of densities, including low, medium and high density residential, and a variety of housing types including:

- Single-family detached and attached,
- Front- and alley-loaded homes,
- Small-lot and clustered homes, and
- Multi-family attached homes.

What's more, The Ranch offers both a market-rate neighborhood and the City's first active-adult neighborhood, expanding the housing choices offered within the City of Rancho Cordova.

The Ranch has an Affordable Housing Plan that will provide housing opportunities for all economic segments of the community through an Affordable Housing In-lieu Fee and identify land for the City of Rancho Cordova's Regional Housing Needs Allocation.

Goal C.1: Develop a roadway system that accommodates future land uses at the City's desired level of service, provides multiple options for travel routes, protects residential areas from excessive traffic, coexists with other travel modes, and contributes to the quality of the City's residential, commercial, office, and industrial areas.

The extension of Chrysanthy Boulevard to the project's eastern boundary will begin to complete the City's planned roadway network by providing connection from Sunrise Boulevard toward Grant Line Road.

Goal C.2: Establish an extensive, complete, smooth, interconnected, and continuous pedestrian and bicycle network that is a safe and attractive option for local or regional trips or recreation and that connects to the City's neighborhoods, parks and schools, employment areas, and retail centers.

Streets provide sidewalks and large shade trees to create a pedestrian-friendly street scene. Traffic-calming features included in the circulation system include narrower streets, limited single-loaded streets, parking on both sides of the street, posted speed limit signs, planter strips with street trees, bulb-outs, and horizontal shifts (lane centerline that curves or shifts), and intersection traffic calming features, including pedestrian push-buttons at three intersections, marked crosswalks, count-down signal timers where appropriate, curb extensions, channelization islands, median islands, and tight corner radii. Off-street trails connect neighborhoods to parks, open space and the commercial center. Details are shown on the Pedestrian Crossing and Trail Exhibit 30.

Goal C.3: Establish a viable transit system that connects all parts of the City and links with regional destinations.

The Ranch provides for multi-model transportation choices. A future transit stop, located at Rancho Cordova Parkway and Chrysanthy Boulevard, will provide public transit opportunities.

Goal OSPT.1: Create a premier system of public parks and recreation programs that meet the needs of all residents.

A community park is provided in The Ranch's traditional market-rate neighborhoods. The Cordova Recreation and Park District's Preliminary District-wide Facilities Distribution Plan anticipates the park program to include two regulation-sized soccer fields, public restrooms, and other facilities typical to community parks such as children's play areas, picnic shelters and sport courts. The community park's programming will be adjusted by Cordova Recreation and Park District as needed to meet current trends and

community needs when the design for the community park commences. For the active adult portion of the project, the plan provides a truly premier system of recreational programs including a clubhouse, pool, various ball courts, and community garden for the enjoyment of its residents.

Goal OSPT.2: Establish a system of open space areas that connect all parts of the community and provide opportunities for passive and neighborhood-based recreation.

The Ranch will dedicate approximately 32.53 acres of open space to the city. This will include a network of open space corridors such as greenway, trails, nodes, green infrastructure, paseos and small open space areas that will be provided throughout the community. There will be numerous trailheads and access points that provide connections from the residential neighborhoods to this open space system. The Ranch has strategically located public parks and open space adjacent to mitigation lands to create a greater sense of open space and to take advantage of trail connections.

Goal OSPT.3: Create a system of pedestrian and bicycle trails that maximize usage while providing places for walking and bicycling without conflicts with motor vehicles.

Walking and biking opportunities is a focus for The Ranch Land Use Plan. Streets provide sidewalks and large shade trees to create a pedestrian-friendly street scene. Off-street multi-use trails connect neighborhoods to parks, open space and the commercial center.

Goal ISF.2: Ensure the development of quality infrastructure to meet community needs at the time they are needed.

Infrastructure improvements will be phased to meet the needs of the community as it develops.

Goal NR.2: Preserve the City's rich and diverse natural wetlands.

The Ranch preserves over 200 acres of on-site wetlands. Off-street trails are provided along the preserved wetland, consistent with the South Sacramento Habitat Conservation Plan. The trails will provide opportunities for passive outlook areas, including benches and pet waste stations, at major trailhead locations.

Goal NR.3: Preserve and maintain creek corridors and wetland preserves with useable buffer zones throughout the new development areas as feasible.

The design of the community has minimized developable area in order to prioritize natural resources and included buffer zones at the edge of the development area to protect natural resources.

Goal E.1: Reduce greenhouse gas and air pollutant emissions through sustainable features that reduce energy demands, air pollutant emissions, and greenhouse gas emissions compared with conventional development.

Reduce energy demand through providing electric vehicle charging stations for at least 50% of single family residences and 5% of parking spaces within the commercial, parks and recreation, and multi-family land uses, planting at least 2,240 trees, installing energy-efficient outdoor lighting, energy-efficient appliances, low-flow appliances, and water-efficient irrigation systems, reducing turf areas to 70% less than maximum allowed, meeting at 95% of energy demand through renewable energy.

2.3 SPECIAL PLANNING AREA ADMINISTRATION

This Handbook is the culmination of intensive project-specific planning. Provided in this Handbook are a set of development standards and guidelines which, once approved, will set The Ranch apart from other communities.

Although this handbook will grant approval for those items described and illustrated herein, The Ranch SPA is subject to the City of Rancho Cordova's design review process. Design review is a subject to the City of Rancho Cordova Municipal Code, Chapter 23.141, Major Design Review. Once the Design Review is approved by the City Council, the approvals are vested for 10 years from the date of the approval.

3 Special Planning Area Elements

3.1 LAND USE DESIGNATIONS

The Ranch SPA Land Use Designations are consistent with the City's General Plan (Exhibit 5):

Low Density Residential (LDR) 2.1 – 6.0 du/ac

The Single-Family Residential Land Use Designation is generally characterized by single-family detached residential lots in a variety of lot sizes and configurations. Within the TRSPA this land use designation is used for the single-family conventional residential lot sizes of 60'x105'. Other lot sizes and configurations meeting the specified density range are possible and are permitted.

Medium Density Residential (MDR) 6.1 – 18.0 du/ac

The Medium Density Residential Land Use Designation is generally characterized by small lot single-family detached or single-family attached products including condominium and townhome type development. Within the TRSPA this land use designation is used for the small lot single-family residential at various lot sizes and configurations including but not limited to and 50'x105' and 45'x105' conventional lots, 45'x85' conventional lots, 35'x78' conventional lots, 30'x78.5' alley-loaded lots and 4-pack Cluster lots. Other lot sizes and configurations meeting the specified density range are possible and are permitted. A lot may vary in the area by ±10% and still be considered consistent with the lot type per Exhibit 3.

High Density Residential (HDR) 27.0 – 50.0 du/ac

The High-Density Residential Land Use Designation is generally characterized by larger multi-family housing complexes, like apartments, or other multi-family attached condominium products. Within the TRSPA this land use designation has a maximum density of 50 dwelling units per acre. Other types and configurations meeting the specified density range are possible and permitted.

Commercial (C)

The Commercial Land Use designation is characterized by neighborhood-serving uses, the daily shopping and service needs of residents within The Ranch Plan Area. Typical uses include retail services, including general retail, restaurants, coffee shops, offices, small to medium sized grocery stores, drug stores, and dry cleaners. This designation allows for a Floor Area Ratio (FAR) ranging from 0.25 to 1.0.

Parks/Open Space (P/OS)

The Parks/Open Space Land Use Designation is generally characterized by parks and other public facilities owned and operated by the Cordova Recreation Park District, City of Ranch Cordova, and HOA. See page 71, Exhibit 33: Overall Parks + Open Space System for a detailed map. Within the TRSPA this land use is used for the parks, open space along the power line corridor.

Natural Resources (NR)

This land use is generally characterized by lands set aside as natural habitat to protect natural and/or protected resources. Within the TRSPA this land use designation is used for the wetland preserve, associated development buffer zone and public trails.

3.2 ZONING + PERMITTED LAND USES

The Ranch is zoned SPA (Exhibit 6) and is subject to development according to the text and exhibits contained herein, as well as subject to provisions as set forth by the project's Development Agreement. The standards and permitted uses provided in this document are intended to supplement the City of Rancho Cordova Zoning Code. As a SPA, this handbook establishes unique and specific standards to create design flexibility in achieving project goals. Where these standards are silent or unspecified, the City of Rancho Cordova Zoning Code shall apply.

Permitted Land Uses

Allowed uses, and corresponding permit requirements, for all residential zoning districts in the TRSPA shall be consistent with the City's Zoning Code. Ranch SPA zone characteristics, intensity of uses, and their attributes are located in section 3.5. This is a large and medium density residential district, allowing development of 4-10 dwelling units per acre. Table 2, to follow, identifies allowed uses within the Commercial District.

Exhibit 5: General Plan Land Use Map

1. Outdoor storage shall comply with Chapter 23.728 and Chapter 23.731 for standards related to the outdoor storage and screening.
2. On site consumption is permitted as an incidental use to a permitted primary use.

3.3 THE RANCH NEIGHBORHOODS

As discussed in the introduction, The Ranch Land Use Plan is divided into three distinct neighborhoods that are generally separated by Chrysanthy Boulevard and wetland preserve. Each neighborhood is defined by its location and relationship to adjacent park, open space or wetland preserve. To follow is a detailed discussion of each neighborhood.

3.3.1 The Gateway Neighborhood

The Gateway Neighborhood creates a public front door to The Ranch Plan Area by forming a commercial edge along Rancho Cordova Parkway. The neighborhood provides local-serving retail opportunities next to higher-density residential uses as well as a small-lot single-family residential village on its eastern boundary. The internal street network of The Gateway Neighborhood is well connected, providing on- and off-street connection to trails along the Wetland Preserve. This neighborhood provides amenities and commercial uses to both the surrounding neighborhoods and community at large.

Also located within this neighborhood is a large detention/water quality basin that will be designed to incorporate trails

The Gateway Neighborhood is generally bound on the north by Chrysanthy Boulevard, on the east by the open space trail along the Wetland Preserve, on the south by the Wetland Preserve and on the west by Rancho Cordova Parkway.

Exhibit 7: The Gateway Neighborhood Map

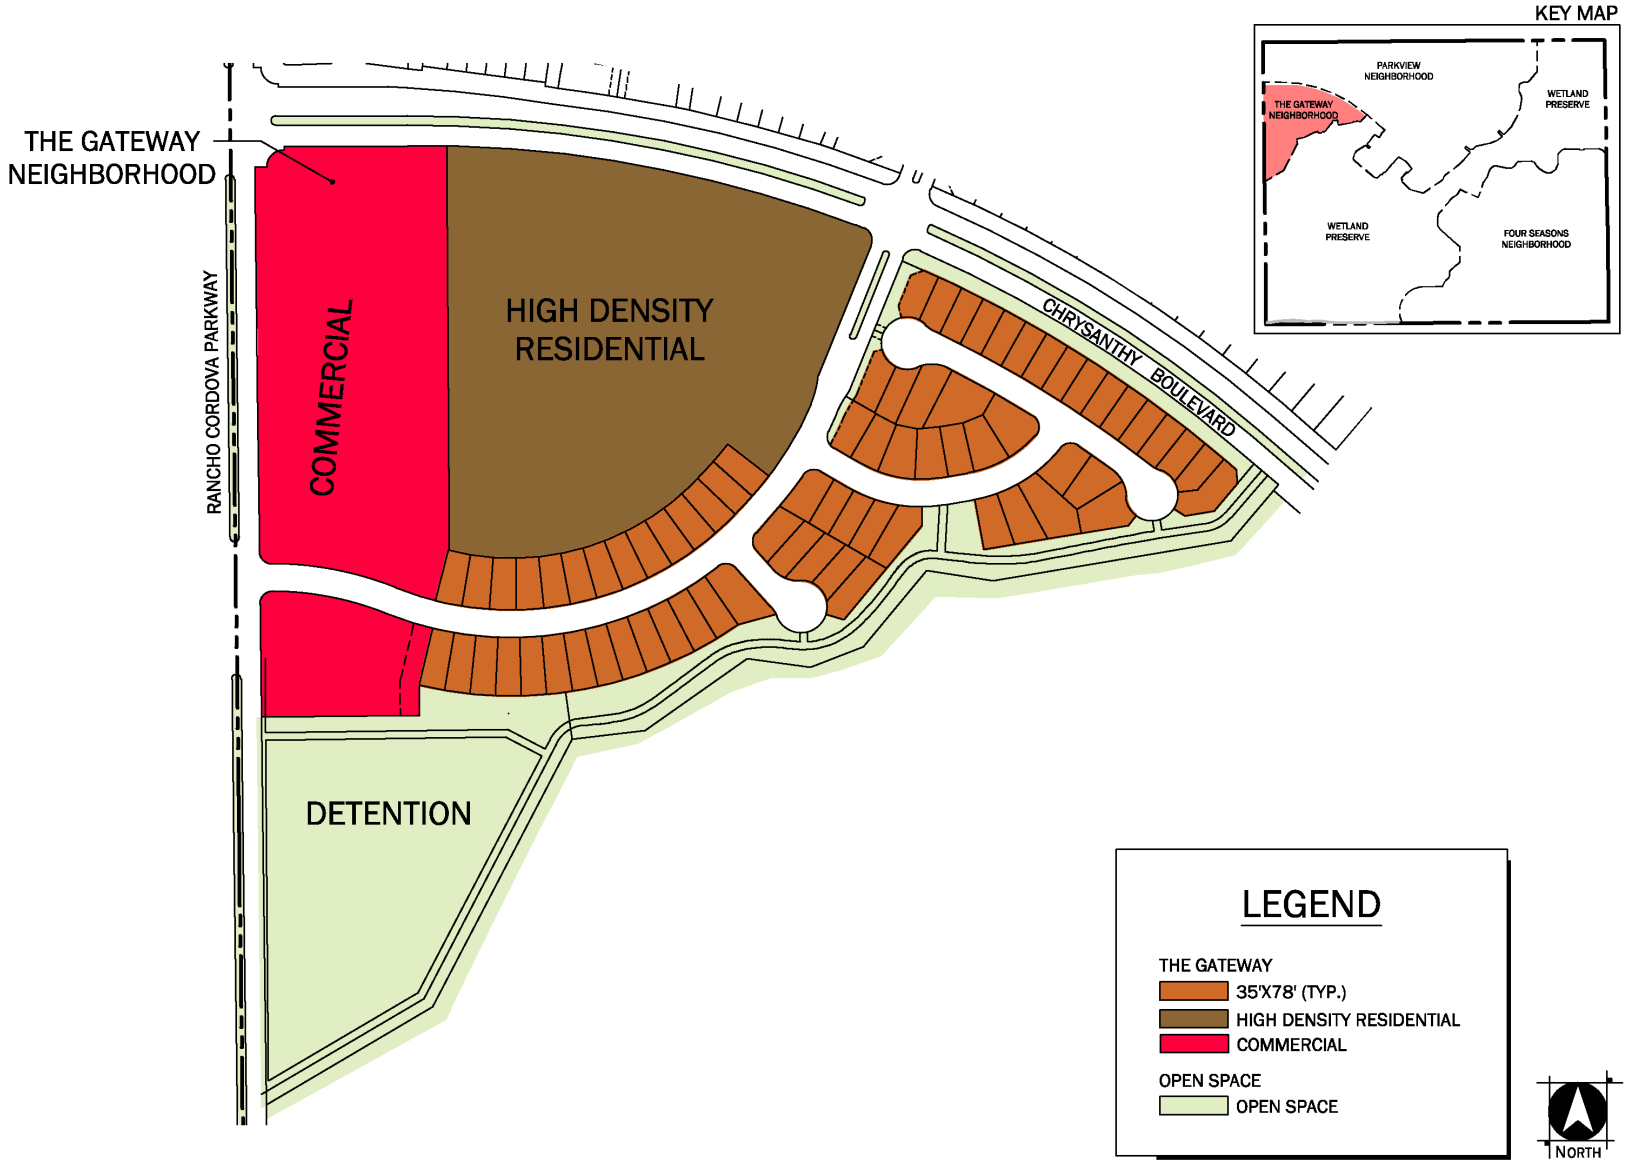

Exhibit 8: The Gateway Neighborhood Conceptual Site Plan

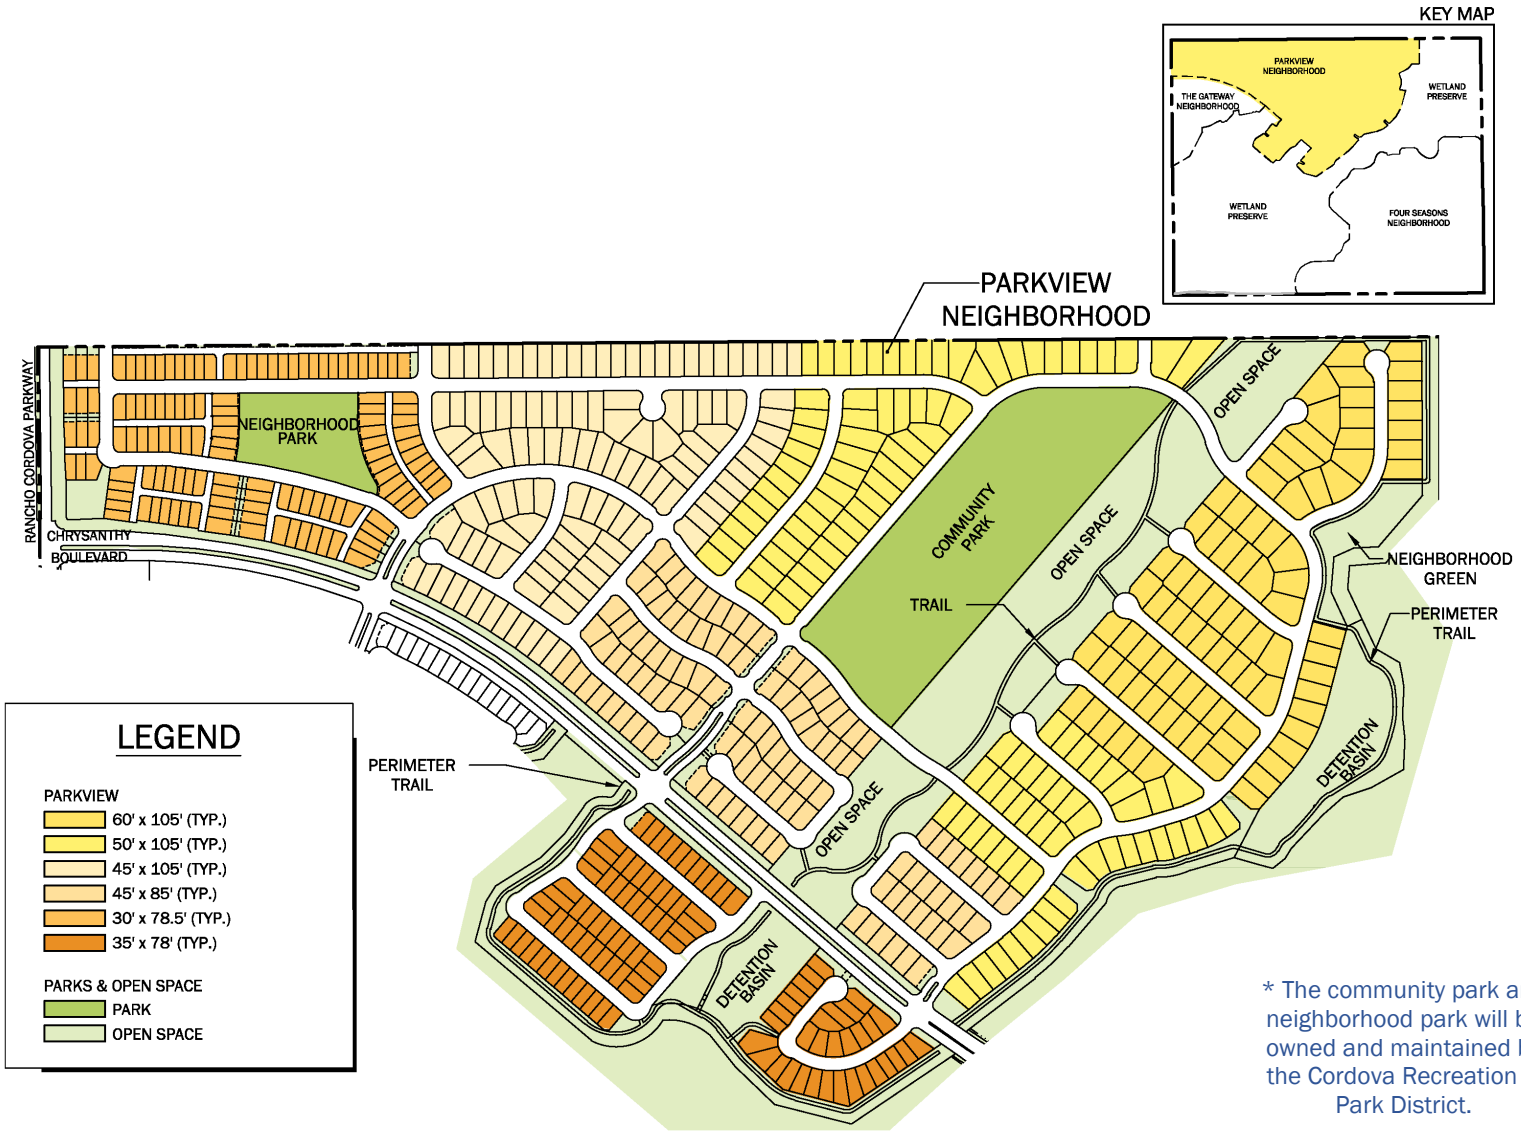
Note: Conceptual site plan only. Layout is subject to change.

3.3.2 Parkview Neighborhood

Parkview is home to a large, centrally located community park surrounded by single-family residential at various lot sizes and configurations. The neighborhood park is planned to provide recreational opportunities to the surrounding villages and may include play structures, sport courts, and shade structures. The power line corridor bisects the neighborhood, offering a parkway of passive recreational uses and a continuous off-street trail from the northern edge of the plan area to the wetland preserve trail south of Chrysanthy Boulevard.

Parkview is generally bound on the north by the project boundary and a partially built single-family residential neighborhood, on the east by the wetland preserve, on the south by Chrysanthy Boulevard and the wetland preserve and on the west by Rancho Cordova Parkway.

Exhibit 9: Parkview Neighborhood Map



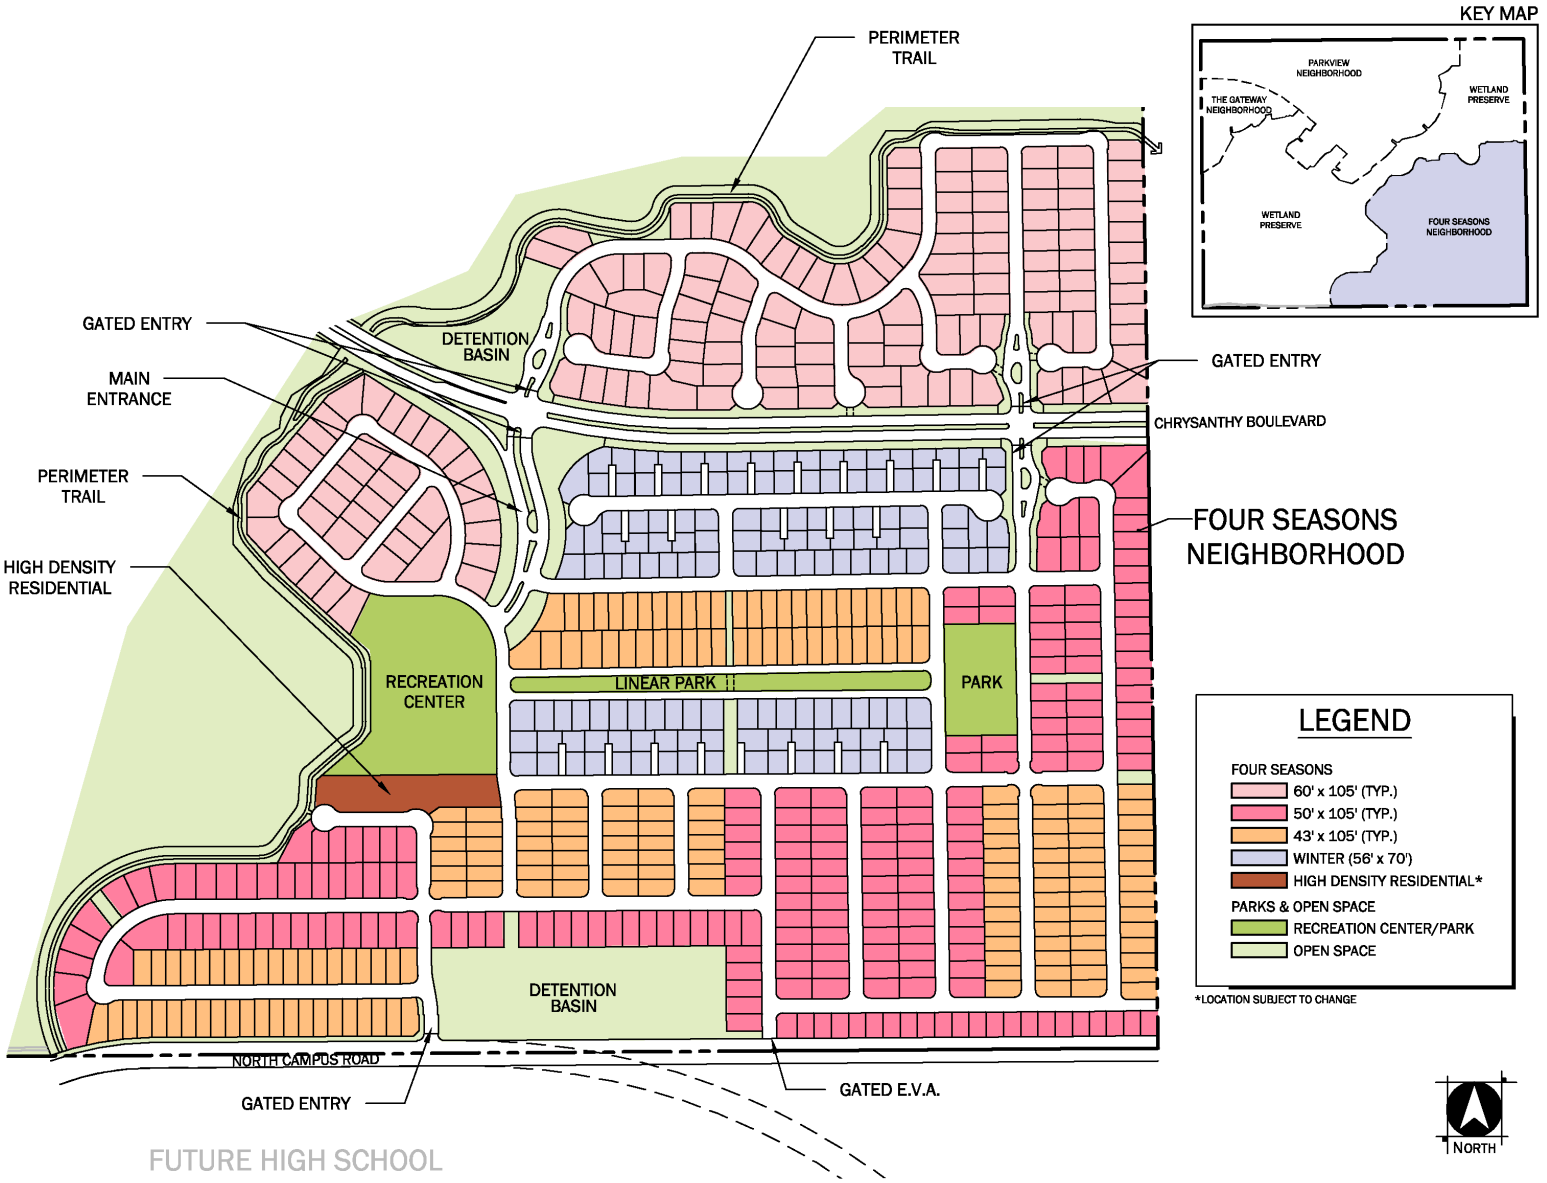
* The community park and neighborhood park will be owned and maintained by the Cordova Recreation & Park District.

3.3.3 Four Seasons Neighborhood

The Four Seasons Neighborhood is the first active-adult community within the City of Rancho Cordova. Envisioned as a gated community, this neighborhood contains four single family residential lot sizes and product types organized around a suite of private recreational amenities: a clubhouse, linear park, community and rose garden, planned for connectivity. High density units (38-unit maximum) are permitted within the recreation center parcel, providing rental opportunities with the active-adult community. A multi-use trail is also provided along the wetland preserve which will provide off-street pedestrian and bicycle connection between the southern and northern portions of the neighborhood.

The Four Seasons Neighborhood is generally bound on the north by the wetland preserve, on the east by the project boundary and future single-family residential uses, on the south by the project boundary and the approved Suncreek Specific Plan Area (including a high school and regional park) and east by the wetland preserve.

Exhibit 10: Four Seasons Neighborhood Map



3.4 ARCHITECTURAL STYLES

The Ranch allows for a wide variety of architectural styles throughout each of the residential and non-residential neighborhoods. To follow are illustrations and graphics of the architectural styles. These representations are not meant to be descriptive but are meant to demonstrate typical examples of the variety of footprints and massing, elevations, and possible design elements. Implementation of the architecture should always be of quality materials and finishes.

Other architectural styles not mentioned in the following pages are allowed but will be subject to the city's design review approval.

3.4.1 Market Rate Single Family Residential

An array of architecture, blending historic styles with modernized designs and amenities will be carefully employed throughout each of the neighborhoods. Six architectural styles are proposed throughout the single-family neighborhoods, developing a dynamic and active streetscape.

Spanish Colonial

Informal, colorful, articulated

DESIGN CHARACTERISTICS

- Half round arches
- Low pitch gables with occasional hip roof accents
- Wrought iron accents, gable vents, plank shutters
- S-Tile roof
- Short gable eaves, with 12” minimum hip eaves
- Windows with large grids
- Occasional deeply recessed windows
- Occasional half round or oculus accent windows
- Stucco siding and detailing

Craftsman

Informal, hand-crafted, varied materials.

DESIGN CHARACTERISTICS

- Large front porches with tapered or multi-post columns
- Low pitch gables, flat concrete or comp roof tiles
- Mostly stucco siding with board and batten, lap, or shingle siding accents, especially under gables
- Stone and brick accents at column bases
- Single hung windows with grids on upper half
- Deep gable eaves with brackets (front only)
- No shutters

Tuscan

Rustic elegance, "built-over time" look, varied materials

DESIGN CHARACTERISTICS

- Low-pitched hip or gable roofs, S-tile
- Exposed timber truss tails, dentils and/or corbels
- Half round archways
- Stucco siding
- Stone masonry or brick accent siding
- Decorative shutters
- Accent wrought iron
- Windows with large grids
- Heavy lintels
- Rustic shutters used sparingly

Farmhouse

Semi-formal, repetition of materials, simple lines

DESIGN CHARACTERISTICS

- Large front porches, occasionally with metal accent roof
- Wood post columns with bracket and corbel detailing
- Combination of gable and shed roofs, medium pitch main gable, steeply pitched projecting gables
- Flat concrete or comp roof tiles
- Board and batten or horizontal siding on front, stucco on sides and rear (where not visible)
- Brick veneer accents
- Windows with small grids
- No shutters

French Country

Informal, interesting-varied roof lines, eye-catching details

DESIGN CHARACTERISTICS

- Prominent and steep projecting gables, main gable or hip roof
- Flat concrete or comp roof tiles
- Short eaves at gables, with deep eaves at shed roofs
- Flat arched exterior soffits
- Mixing of siding, colors and textures
- Decorative shutters
- Stucco siding with large areas of stone accent siding
- Windows with small grids

Modern/Contemporary

Clean lines, unconventional massing and window placement

DESIGN CHARACTERISTICS

- Low pitched or shed roofs with flat concrete tile or metal seam roofs
- Deep eaves with clean simple lines and masses
- Horizontal siding accents
- Asymmetrical and overlapping soffits and window sills
- Stucco siding
- Stacked stone masonry accents
- Windows with no grids, often positioned unconventionally such as at corners
- No shutters

3.4.2 Active Adult Single Family Residential

Similar to the market rate neighborhood, the Active Adult neighborhood will also provide an array of architecture, blending historic styles with modernized designs and amenities. Five architectural styles are proposed throughout the single-family neighborhoods, developing a dynamic and active streetscape. All homes in the active-adult neighborhood area designed as single-story buildings to cater to this specific market segment.

Spanish Colonial

Informal, colorful, articulated

DESIGN CHARACTERISTICS

- Half round arches
- Low pitch gables with occasional hip roof accents
- Wrought iron accents, gable vents, plank shutters
- S-Tile roof
- Short gable eaves, with 12” minimum hip eaves
- Windows with large grids
- Occasional deeply recessed windowsOccasional half round or oculus accent windows
- Stucco siding and detailing

Farmhouse

Semi-formal, repetition of materials, simple lines

DESIGN CHARACTERISTICS

- Medium pitch gables utilizing either flat concrete or comp tile roof
- Large front porches occasionally with metal accent roof
- Wood post columns with bracket and corbel detailing
- Horizontal or board/batten siding on front with stucco on sides/rear (where not visible)
- Brick veneer accents
- Tall windows with small grids
- No shutters

Modern Ranch

Emphasizes horizontal lines, window massing

DESIGN CHARACTERISTICS

- Low pitched gable or shed roofs
- Wide-overhanging eaves
- Emphasis on horizontal lines with a brick veneer base
- Extensions of wall bands into the adjacent landscape areas
- Interesting window placement and sizing
- No window grids
- Stucco siding with various accent siding treatments
- No shutters

Cottage

Informal, storybook quality

DESIGN CHARACTERISTICS

- Prominent and steep projecting gables, main gable or hip roof
- Curved pitch roof over front porch
- Flat concrete or comp roof tiles
- Short eaves at gables, with deep eaves at shed roofs
- Flat arched exterior soffits
- Mixing of siding, colors and textures
- Decorative shutters
- Stucco siding with stone accent siding
- Detailing under gables such as half-timbering
- Windows with small grids

Tuscan

Old world, "built-over time" look, varied materials

DESIGN CHARACTERISTICS

- Low-pitched hip or gable roofs, S-tile
- Exposed timber truss tails, dentils and/or corbels
- Half round archways
- Stucco siding
- Stone masonry or brick accent siding
- Decorative shutters
- Accent wrought iron
- Windows with large grids
- Heavy lintels
- Rustic shutters used sparingly

3.4.3 High Density Residential

The Multi-Family parcel may be developed in a variety of product configurations, from apartments to condominiums. Because the ultimate configuration is unknown, this SPA document provides a variety of product types with varied architectural styles. Ultimately, the High-Density Residential parcel will be subject to Design Review, as outlined in Section 2.3.

The following architectural and site guidelines will guide future development of the multi-family parcel:

Architectural + Site Design Guidelines

The architectural guidelines are crafted to create an intimate neighborhood with a strong sense of place, and a pedestrian-oriented streetscape. The following guidelines are provided to create a framework within which developers, builders and designers can have flexibility to create unique multi-family communities.

Circulation

- The circulation pattern should be designed to facilitate the smooth flow of vehicular traffic and internal pedestrian activity.
- The circulation pattern and parking should be designed to maximize conflict with adjacent uses and limit the maximum extent practicable.
- Provide internal pedestrian paths of travel between parking areas and dwellings to avoid pedestrian and vehicle conflicts.

Building Placement + Orientation

- Variable building orientations are encouraged along the streets to create visual diversity and interesting streetscapes.
- Provide direct connections from individual and common entries to the public sidewalk system.
- The fronts of buildings and individual units should face and provide access to the public street.
- All trash, recycling, and green waste containers should be screened from view of public streets.
- All mechanical equipment (HVAC) should be screened from view of public streets.
- Garages, carports and surface parking should be limited from view along public streets. If garages or carports are placed along public streets, a landscape buffer of 10’ wide is recommended.
- Garages and carports should be designed to complement the project architecture in terms of design, materials and color.
- Surface parking areas should be broken up into smaller parking areas to provide parking in close proximity to dwellings.

Public Spaces + Pedestrian Amenities

- Where feasible, multi-family developments should include plazas, courtyards, tot-lots or other properly scaled features where residents can gather. Public spaces should be located for easy access by residents.
- Picnic areas, including picnic tables and barbeques, should be provided as an amenity to the community, where feasible.
- Landscaping of outdoor areas should be visually stimulating, with both softscape and hardscape elements to help site identification and create an inviting build environment. Outdoor furniture, such as benches, lamps, and landscape planters should be integrated into the overall project.
- Special attention should be paid to the design of major corners.

Massing, Scale + Form

- All visible elevations shall be made interesting by means of articulation of facades, varied roof lines,

window placement and shape, and variety in exterior colors, finishes, and detailing.

- Buildings shall be designed with different building setbacks or façade variations to avoid the creation of a monotonous streetscape.
- Roof lines may be made interesting by use of gables, hips, dormers, and roof planes that create variations in planes.
- Use of roof overhangs, porches, balconies, trellises, patios, and low walls are encouraged to add interest to the streetscape.

Style + Design

- Roof pitch, elevation styles, and materials should be consistent with the architectural style of the building.
- Use of quality materials such as stucco, brick, stone, and wood are recommended.
- Accent materials may include stone veneer, painted wood trim, and shutters.
- Roofing material shall be consistent with the architectural style of the building.
- Color selection should match the overall neighborhood design theme palette and be consistent with the building's architectural style.

Also incorporated into The Ranch is land identified for the City of Rancho Cordova reginal housing allocation. Affordable Housing Plan will provide housing opportunities for all economic segments of the community through an Affordable Housing In-lieu Fee.

3.4.4 Commercial

The architectural character of The Gateway Commercial Center employs a more contemporary style indicative of an urban retail center. Ultimately, this development will be subject to Design Review, as outlined in Section 2.3.

The following architectural and site guidelines will guide future development of the commercial parcels:

Architectural + Site Design Guidelines

The architectural guidelines are crafted to provide a well-designed retail environment that is compatible with adjacent uses, contributes to the character of the street, neighborhood, and community at large; and creates a vibrant, pedestrian-friendly place that serves the needs of the The Ranch residents. The following guidelines are provided to create a framework within which developers, builders and designers can have flexibility to create unique multi-family communities.

Circulation

- The circulation pattern should be designed to facilitate the smooth flow of vehicular traffic and internal pedestrian activity.
- Provide internal pedestrian paths of travel between parking areas and shops to avoid pedestrian and vehicle conflicts.

Building Placement + Orientation

- Commercial buildings should be oriented to internal or external streets or drive aisles and pedestrian-friendly paths of travel.
- Design and construct a primary building entrance for each building façade. If a building has frontage on more than one public street or internal drive aisle, special attention should be paid to the location of the building entrance in an effort to serve both vehicular and pedestrian users.
- Areas between public streets or internal drive aisles and commercial buildings can be used to create plazas, planter areas, bicycle parking, or other appropriate amenities.
- Building frontages should be detailed with architectural elements oriented to the “human scale” on the ground floor.
- Surface parking areas should be located and designed to minimize potential circulation conflicts.
- Loading, delivery and mechanical equipment (HVAC) areas should be located and designed to minimize their visibility, circulation conflicts, and adverse noise and light impacts. These areas can be screened with portions of buildings, wing walls, freestanding walls, and/or landscaping.

Public Spaces + Pedestrian Amenities

- Where feasible, commercial developments should include plazas, courtyards, greens or other properly scaled and located public places where people can gather. Public spaces should be integrated, or oriented, toward commercial uses.
- Uses such as restaurants or coffee shops are encouraged to provide outdoor space for seating and/or dining.
- Landscaping of outdoor areas should be visually stimulating, with both softscape and hardscape elements to help site identification and create an inviting build environment. Street furniture, such as benches, lamps, and landscape planters should be integrated into the overall project.
- Special attention should be paid to the design of major corners.
- Hardscape elements should be designed to use different materials, colors and patterns to offset the paving and to provide visual interest.

Massing, Scale + Form

- Overly long, straight and flat facades are not permitted; projects should provide wall projections, recesses or other relief at appropriate intervals along the walls of all buildings.
- Facades that face pubic streets shall provide an adequate amount of visual interest by employing arcades, display windows, entry areas, awnings, insets, canopies, wing walls, trellises or other such features.
- Roof lines may be made interesting by employing parapets to conceal flat roofs, overhang eaves, sloping roofs, multiple roof places or other such features.

Style + Design

- Break up rooflines through use of cornices, changes in parapet heights, or other techniques that create an aesthetically pleasing skyline effect.
- Use awnings, reliefs, and fenestrations to add distinction to the façade of the structure.
- Roofing materials should be unique, cohesive, and add character and style to the building.
- Visible building walls should provide architectural interest by varying the color, texture and/or material.
- Exterior building materials should be of highest quality, including brick, stone and/or textured concrete masonry.
- Colors should be consistent or complementary throughout the commercial development while giving distinction to individual buildings and tenants. Building trim and accents may employ brighter colors.

3.5 DEVELOPMENT STANDARDS

3.5.1 Single-Family Residential Development Standards

The Ranch Land Use Plan provides for varied single-family residential opportunities to attract a diverse population. Seven different single-family residential home-ownership opportunities are located within the Plan Area to appeal to an economically- and lifestyle-diverse community of future residents. These single-family lot sizes/product types are listed below and described in detail on the exhibits on the following pages.

- 60'x105' Conventional Lots
- 50'x105'Conventional Lots
- 45'x105'Conventional Lots
- 43'x105'Conventional Lots
- 45'x85' Conventional Lots
- 35'x78' Conventional Lots
- 30'x78.5' Alley-Loaded Lots
- 55'X70' Conventional and I-Court Lots

RD-10 zoning is an equivalent zoning for all Villages within the Project. See Title 23 of the Zoning Code for details.

The typical Development Standards exhibits illustrated in this handbook outline the typical lot and setback requirements needed for each product type listed above. The exhibits illustrate and list particular detailed information to accommodate a particular product envisioned for the Plan Area. This information may include, but is not limited to, the following items.

- Minimum Lot Size
- Minimum Interior Lot Width
- Minimum Corner Lot Width
- Minimum Lot Depth
- Maximum Lot Coverage
- Minimum Front Yard Setback
- Minimum Garage Setback (Measured to the garage door)
- Minimum Interior Side Yard Setbacks
- Minimum Corner Side Yard Setbacks
- Minimum Rear Yard Setback
- Maximum Building Height
- Location/width of Public Utility Easement (PUE)

3.5.2 High Density Residential Development Standards

Within the Gateway Neighborhood, the high-density residential parcel will provide for multi-family attached uses including apartments and condominiums, lofts and other multi-story residential uses. The development standards for this neighborhood are provided in Table 3a.

Table 3a: High Density Residential Development Standards

DENSITY (du/ac)	
Minimum	27
SETBACKS	
Front	18’
Side	
To adjacent building	15’ min
Street/Corner	15’

3.6 SUSTAINABILITY FEATURES

The Ranch has been planned designed to include sustainable amenities and features that encourage walking, biking, and transit use, reduce energy demand and water use. These features reduce greenhouse gas, air pollutant emissions, water use, and vehicle travel. The features are described below and include measures identified the Draft Environmental Impact Report prepared for The Ranch.

Walkable and Bikeable Design

The Ranch is designed with a walkable street pattern, with a ratio of approximately 144.9 intersections per square mile, multiple bicycle/ pedestrian connections, an off-street trail system, and bicycle lanes to encourage walkability. The Ranch’s pedestrian and bicycle network includes pedestrian/bicycle-only links, through push-buttons to provide safe pedestrian and bicycle crossing at major streets, a comprehensive trail system, pedestrian/bicycle-only connections between streets, sidewalks, and bicycle lanes. The Ranch includes traffic-calming street design features, such as narrower streets, limited single-loaded streets, parking on both sides of the street, posted speed limit signs, planter strips with street trees, bulb-outs, and horizontal shifts (lane centerline that curves or shifts), and intersection traffic calming features, including pedestrian push-buttons at three intersections, marked crosswalks, count-down signal timers where appropriate, curb extensions, channelization islands, median islands, and tight corner radii, on a minimum of 50% of streets.

Electric Vehicles

The Ranch supports electric vehicle use, including installation of EV charging stations throughout the site for at least 50% of single-family residences and 5% of parking spaces within the commercial, park and recreation, and multi-family land uses to reduce reliance on gasoline-fueled vehicles.

Vehicle Trip Reduction

All project components, including residential, commercial, and parks and recreation uses will join a Transportation Management Association.

Energy Use

All development will be designed to exceed the 2016 Title 24 energy use and efficiency requirements by 2 percent. All outdoor lighting will be energy-efficient (i.e., LED or better). All appliances will be energy efficient, with an EnergyStar or comparable rating.

The Ranch will focus on renewable energy use, with a minimum of 95% of electricity supplied via renewable energy through either on-site energy generation and/or a contract with SMUD.

Water Conservation

All development will install energy-efficient appliances, including low-flow bathroom and kitchen faucets, shower heads, and toilets.

The landscaping plan shall ensure a minimum of 50% of vegetation on all lots, including residential, commercial, and parks/recreation, consisting of drought-resistant trees, shrubs, grasses, and other vegetation, and shall demonstrate a reduction of outdoor water use of at least 25% compared with water use associated with the conventional landscaping that would be allowed for each lot. In addition, turf for residential uses will be at least 70% less than the maximum allowed turf area.

All landscaping and turf areas shall be irrigated by water-efficient irrigation systems that use a smart irrigation control system with automatic rain shut-off, maximum gallon per minute restriction, and WiFi connectivity to reduce water waste.

Greenhouse Gases

A minimum of 2,240 new trees will be planted throughout The Ranch to sequester greenhouse gas emissions. The majority of trees will be planted on residential lots, with tree planting also occurring on parks and recreation lots, landscaped medians, and along the trails.

The Ranch will purchase carbon offsets to reduce net project operational and amortized construction emissions to less than the Air District's adopted threshold for GHG emissions at the time of purchase.

3.7 NOISE STANDARDS

3.7.1 Construction Noise Standards

The following requirements shall be noted on all the improvements plans prior to approval by the City's Public Works Department and shall be implemented during construction activities.

- Construction activities shall adhere to the requirements of the City of Rancho Cordova Municipal Code, including the specified hours of operation for construction activities.
- Construction staging areas, including equipment staging, equipment and materials storage, and soil stockpiling for grading activities, shall be located centrally within each phase of Project development and shall be setback from residential dwellings to the maximum extent feasible to minimize construction noise impacts to existing residential uses. Construction staging areas shall be shown on grading and improvement plans.
- All construction equipment shall be fitted with factory equipped mufflers and shall be maintained in good working order.
- Any compaction required less than 26 feet from residential structures shall be accomplished by using static drum rollers which use weight instead of vibrations to achieve soil compaction. As an alternative to this requirement, pre-construction crack documentation and construction vibration monitoring could be conducted to ensure that construction vibrations do not cause damage to any adjacent structures.

3.7.2 Operational Noise Standards

T

To ensure that noise levels are reduced to less than significant within the project the follow measures are included and shall be adhered to by all components of the project:

- Residential lots along Rancho Cordova Parkway and Chrysanthy Boulevard:

Residential lots along Rancho Cordova Parkway and Chrysanthy Boulevard shall be shielded from excessive noise through a six-foot masonry wall located along the rear-yard of each residential lot that backs up to Rancho Cordova Parkway or Chrysanthy Boulevard. Along Rancho Cordova Parkway. At the terminus of each segment of the sound wall, in addition to shielding the lot line adjacent Rancho Cordova Parkway, the masonry wall shall wrap around the side yard of each residential lot for a minimum of 15 feet toward the east, with the exception of any portion of the lot that is a driveway or front yard. This requirement shall be waived or modified if the Project applicant conducts a site-specific acoustical analysis for the lots that addresses cumulative roadway noise impacts that takes into account site specific conditions (e.g., site design, location of structures, building characteristics) and noise-attenuating features and demonstrates that noise levels in the exterior activity area of the residential lots will not exceed the City's conditional noise standard shown in General Plan Table N-2.

Villages 24 and 25 (Commercial), Village 23 (Multifamily Lot), and Parks and Recreation Facilities:

Prior to approval of whichever occurs first: approval of improvement plans, site design plans, or issuance of building permits for uses located in Villages 24 and 25 (Commercial), Village 23 (Multifamily Lot), and parks and recreation facilities that include potential noise generating uses (e.g., competitive sports fields and other uses anticipated to involve amplified sound or large crowds), an acoustical analysis shall be prepared addressing the potential noise impacts associated with the specific proposed uses and site design.

The proposed land uses shall be designed so that on-site mechanical equipment (e.g., HVAC units' compressors, generators) and area-source operations (e.g., loading docks, parking lots, and recreational-use areas) are located as far as feasible from or shielded from nearby noise-sensitive land uses.

The acoustical analysis shall evaluate stationary- and mobile-source noise attributable to the proposed use or uses and impacts on nearby noise-sensitive land uses, in accordance with adopted City noise standards. For any noise impacts

identified in the acoustical analysis that would be greater than City noise standards, the Project applicant shall submit a noise reduction plan to reduce any identified impacts above adopted City noise standards to acceptable levels. The noise reduction plan shall be reviewed and approved by the City and its implementation shall be required as a condition on improvement plans and operational measures shall be included in the creeds, covenants, and restrictions (CC&Rs) or similar mechanism to ensure on-going adherence to the requirements. Feasible measures to be included in the noise reduction plan to reduce Project-related noise impacts shall include, but are not limited to, the following:

- To the extent feasible, major noise-generating commercial uses (e.g., loading docks and equipment/vehicle storage repair facilities, etc.) shall be designed and sited to shield residential land uses located or proposed to be located within 500 feet of and within the direct line of sight of these facilities by construction of a noise barrier, earthen berm, or combination of the two. To provide effectiveness, noise barriers shall be continuous or solid, with no gaps, and shall block the line of sight to windows of neighboring dwellings. (Achievable noise reductions from barriers can vary, but typically range from approximately 5 to 10 dBA, depending on construction characteristics, height, and location.) The applicant shall retain the services of a professional acoustician to determine the design and location of noise barriers to be constructed prior to City issuance of building permits or improvement plans.

- Use of "quiet pavement" (e.g., rubberized asphalt) construction methods, where appropriate to reduce vehicle noise.

- Dual-pane, noise-rated windows, mechanical air systems, exterior wall insulation, and other noise reducing building materials shall be used to address existing noise levels as well as projected noise levels associated with nearby noise-generating uses. For example, Village 23 shall be designed and planned to address future commercial uses planned for Villages 24 and 25.

- Routine testing and preventive maintenance of emergency electrical generators shall be conducted during the less sensitive daytime hours (i.e., 7 a.m. to 6 p.m.). All electrical generators shall be equipped with noise control (e.g., muffler, acoustic enclosure, etc.) devices in accordance with manufacturers' specifications.

- On-site landscape maintenance equipment shall be equipped with properly operating exhaust mufflers and engine shrouds, in accordance with manufacturers' specifications.

- For maintenance areas located within 500 feet of noise-sensitive land uses, the operation of on-site landscape maintenance equipment shall be limited to the least noise-sensitive periods of the day, between the hours of 7 a.m. and 7 p.m.

- Outdoor use of amplified sound systems within 500 feet of noise-sensitive land uses shall be permitted only between 7 a.m. and 10 p.m. Sunday through Thursday, and between 7 a.m. and 11 p.m. on Friday and Saturday and shall comply with the noise requirements of the City of Rancho Cordova Municipal Code.

3.8 CIRCULATION DESIGN STANDARDS

The design of The Ranch SPA's circulation system utilizes an efficient system of streets and pathways to serve the Plan Area. The internal street system is designed such that a 'block' or 'grid' system is achieved. Wherever possible, various pedestrian pathways are designed to provide non-vehicular transportation opportunities throughout the project site, especially within the Active Adult portion of the project. The intent of the circulation network is to create a well-

connected system of roadways and pedestrian facilities to encourage biking and walking.

3.8.1 Overall Circulation Plan

Minor arterial streets (4-lane) are the principal streets that serve through traffic in the vicinity of the Plan Area. These streets include Rancho Cordova Parkway on the sites' western boundary and Chrysanthy Boulevard that bisects the Plan Area and provides an east-west connection between Sunrise Boulevard and Grant Line Road, two major arterial streets (6-lane roadways).

Construction of the Plan Area street system, including the internal streets, will occur in a timely and coordinated manner. Street improvements will be phased according to the phasing plan and specifications contained within the TRSPA Development Agreement. The Development Agreement will define the financing and implementation of the projects phased circulation system. A total of 2.5 +/- miles of trails will be added connecting the site in the east -west and north-south direction.

The internal residential streets provide connections into and through, the TRSPA and connect residential neighborhoods with The Gateway Neighborhood, various planned park, open space facilities, and wetland features, thus allowing residents to travel within and throughout the Plan Area without traveling along the arterial roadways. Where necessary, pedestrian push buttons will be installed that will facilitate timely and safe pedestrian crossings.

The Ranch provides for non-vehicular transportation choices. A future transit stop, located at Rancho Cordova Parkway and Chrysanthy Boulevard, will provide public transit opportunities. The design of the TRSPA encourages the use of public transit by locating denser residential development close to the future transit stop, facilitating easy, walkable access.

Traffic-calming street design features, such as narrower streets, limited single-loaded streets, parking on both sides of the street, posted speed limit signs, planter strips with street trees, bulb-outs, and horizontal shifts (lane centerline that curves or shifts), and intersection traffic calming features, including pedestrian push-buttons at three intersections, marked crosswalks, count-down signal timers where appropriate, curb extensions, channelization islands, median islands, and tight corner radii, are provided on a minimum of 50% of streets.

Additionally, The Ranch SPA provides a varied network of both on- and off-street pedestrian pathways and trails allowing for safe and convenient non-vehicular travel throughout the Plan Area. All minor arterial streets have Class II bike lanes striped on the street. Large street trees are provided next to sidewalks, creating a shaded street environment for pedestrians. Pedestrian and bike trail facilities are located within the TRSPA along the Wetland Preserve as well as within the Open Space Parkway (Power Line Corridor) that facilitates a continuous off-street connection from Rancho Cordova Parkway through to eastern project boundary.

Exhibit 19: Overall Circulation Plan (Subject to change)

* General locations shown. Final location will be determined at improvement plan stage.

3.8.2 Street Sections

The Ranch SPA identifies the basic framework and hierarchy of roadways and establishes the primary circulation system that feeds, defines and connects the Plan Area. Streets within the SPA are classified based on their functional requirements and their relative importance in serving the neighborhoods and establishing the character of the project.

Minor Arterial Streets

Minor Arterial streets within the SPA include Rancho Cordova Parkway, Chrysanthy Boulevard and North Campus Road.

Exhibit 20: Rancho Cordova Parkway Minor Arterial Street Section

These streets are design for less than 32,500 average daily trips (ADT) with a speed limit of 35 to 45 mph. These 4-lane facilities are generally comprised the following components:

- 74’ right-of-way
- 14’ landscaped median and 15’ to 25’ landscape corridors
- Two travel lanes (12’ and 11’) in each direction
- 6.5’ striped bike lane (to Face of Curb)
- 3’ vertical curb & gutter with 7’ Sidewalk
- Parking is not permitted
- 10’ Left Turn Lanes (not pictured)
- Attached sidewalk along preserve boundaries

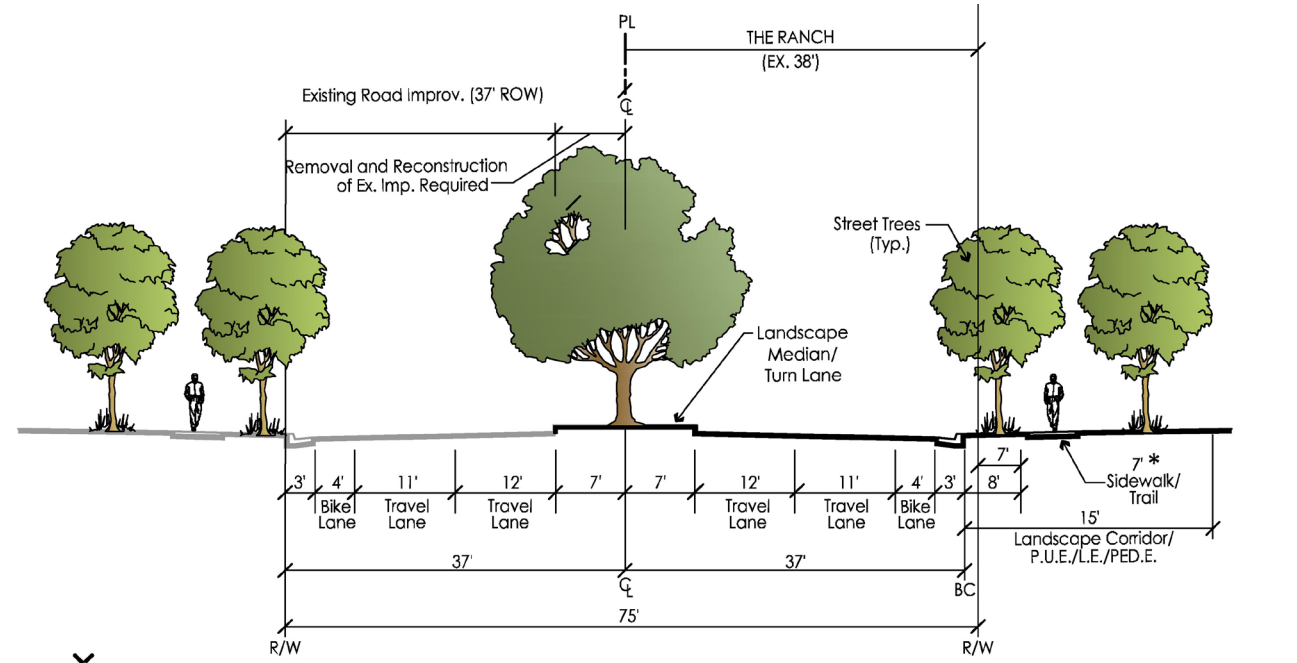

Exhibit 21: Chrysanthy Boulevard Minor Arterial Street Section

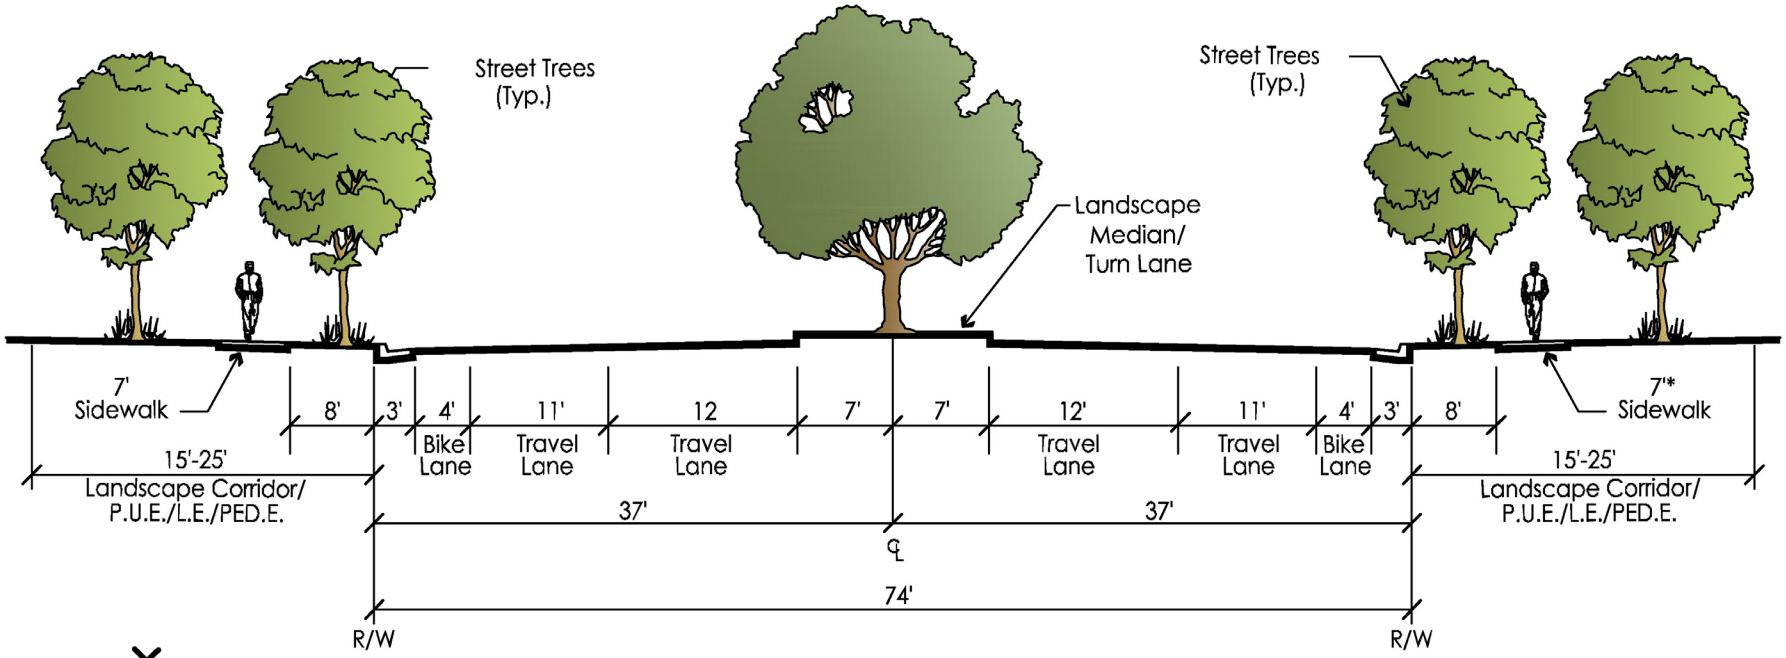
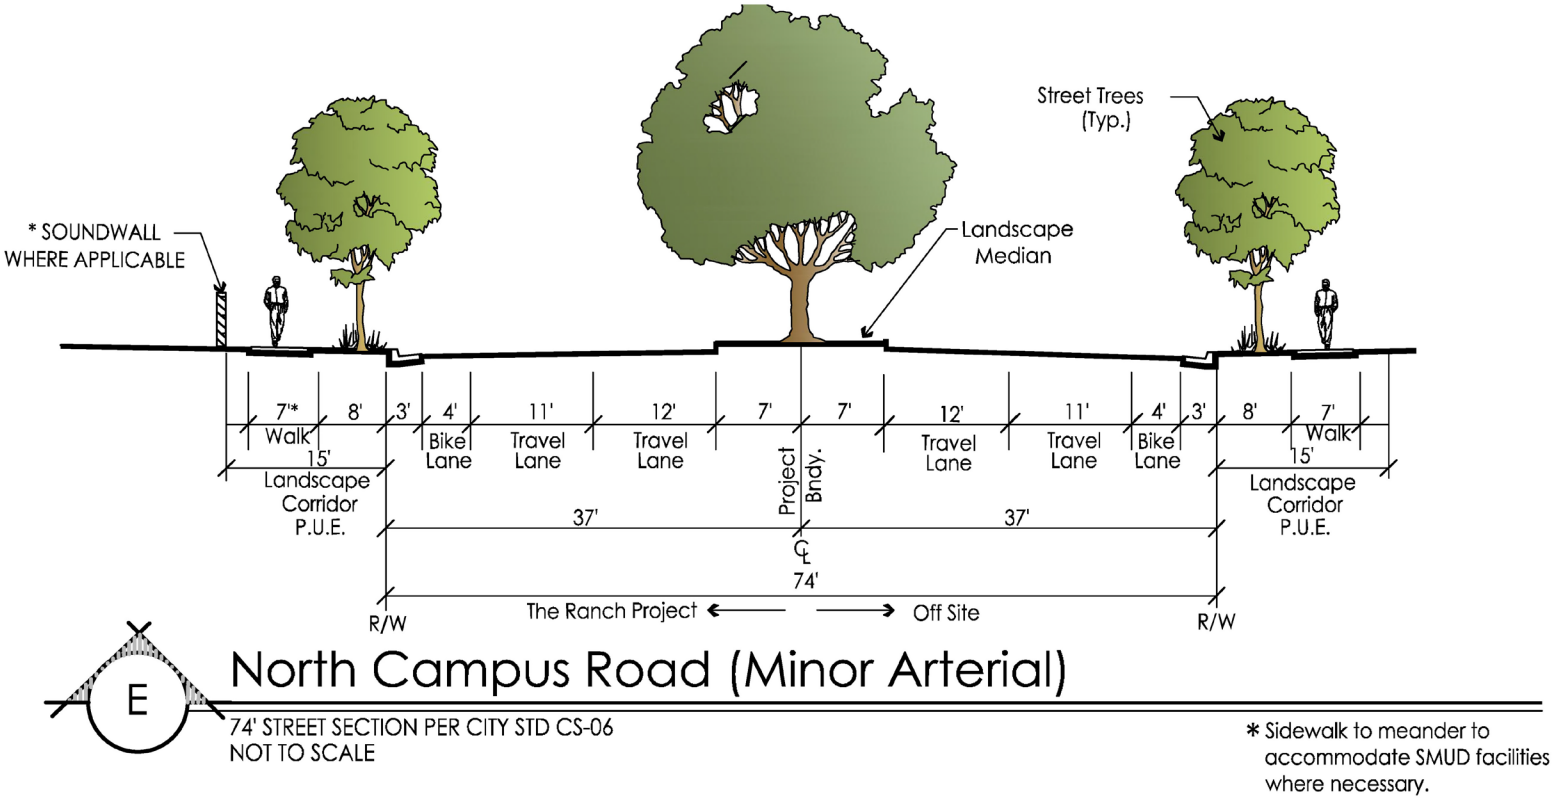


North Campus Road – Modified Minor Arterial

North Campus Road is a modified minor arterial street within the SPA which serves as a residential collector on the project's southern boundary.

Exhibit 22: North Campus Road



Modified Minor Arterial Street

Modified Minor arterial streets within the TRSPA include Rancho Cordova Parkway adjacent to the Wetland Preserve, and Chrysanthy Boulevard at the crossing of the Wetland Preserve and protected area. These modified arterial sections have been designed to conform to SSHCP standards and to minimize impacts to the preserve area while maintaining bicycle and pedestrian connections at these key locations. In both cases, the 25' landscape corridor is removed and the sidewalk transitions to a 10' attached walk.

Exhibit 23: Rancho Cordova Parkway Modified Minor Arterial Street

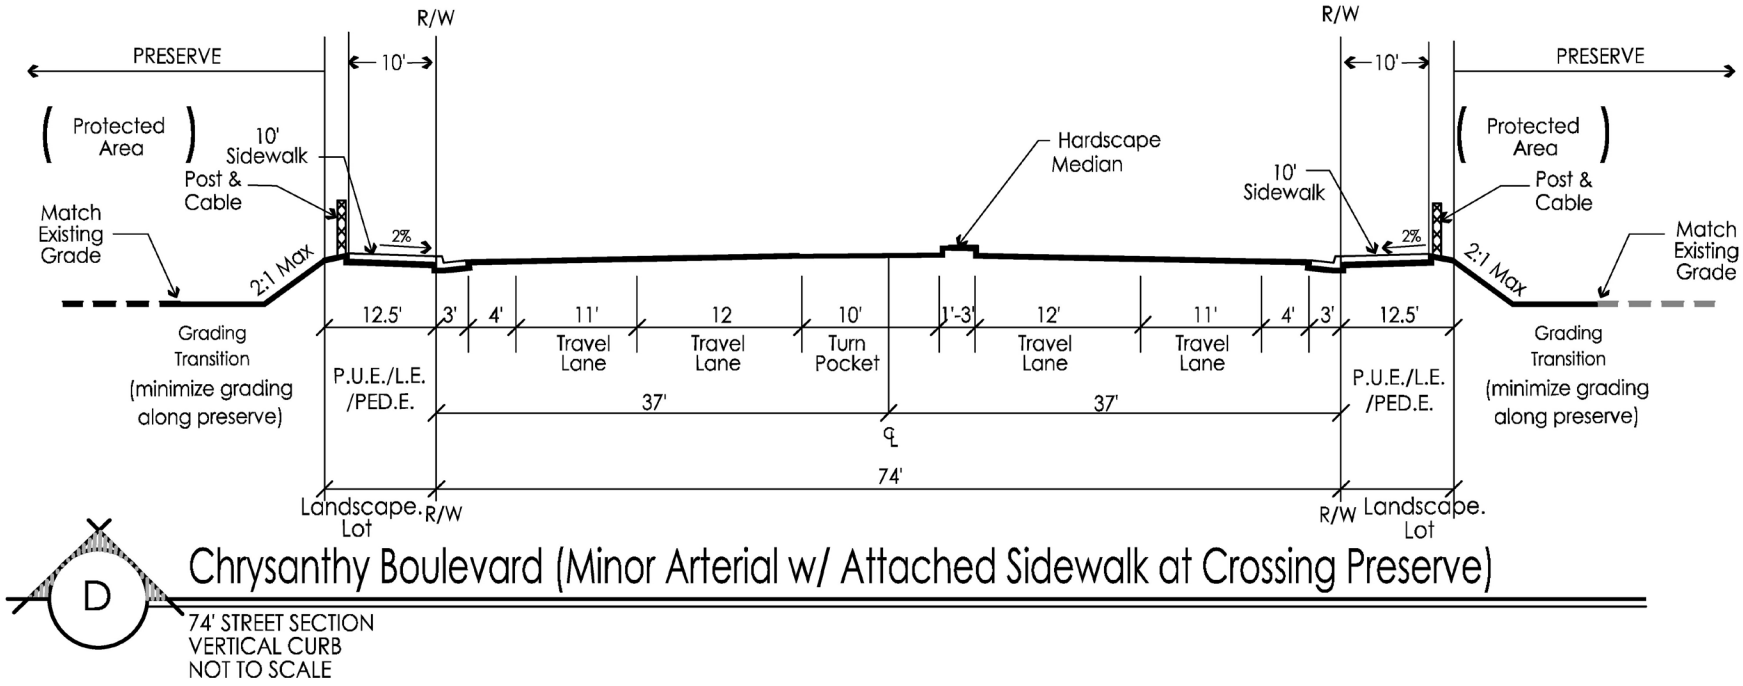
Exhibit 24: Chrysanthy Boulevard Modified Minor Arterial Street



D

Chrysanthy Boulevard (Minor Arterial w/ Attached Sidewalk at Crossing Preserve)

74' STREET SECTION
VERTICAL CURB
NOT TO SCALE

Standard Residential Streets

Standard residential streets within the SPA serve as primary circulation within a neighborhood. This designation includes a modified residential street section for major entries only in which parking is prohibited and a median is added. These streets are design for less than 7,000 ADT with a speed limit of 25 mph. Generally, these 2-lane facilities are comprised of the following components:

- 43’ right-of-way (typical); 53’ right-of-way at entry
- 9’ travel lane in each direction
- 7’ parking (typical); no parking at entry
- 5’ attached sidewalk
- No striping required
- Vertical curb along community park

Exhibit 25: Standard Residential Street

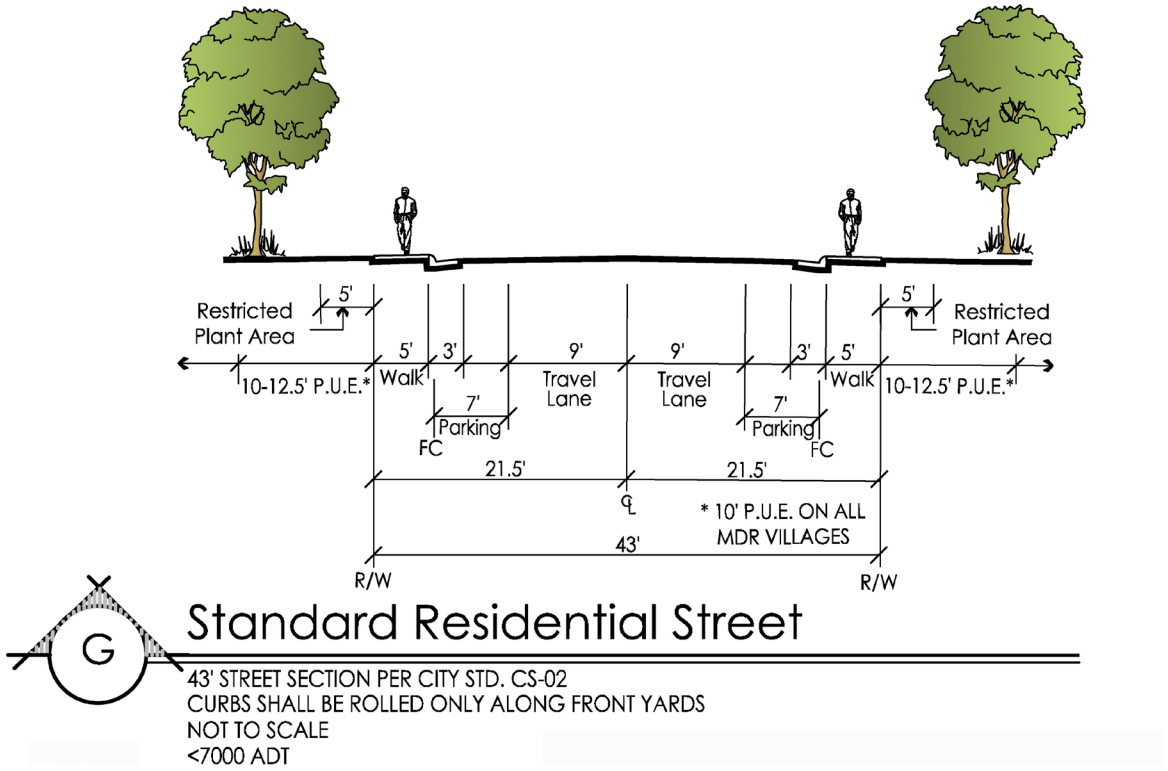


Exhibit 26: Modified Residential Street Section at Entry

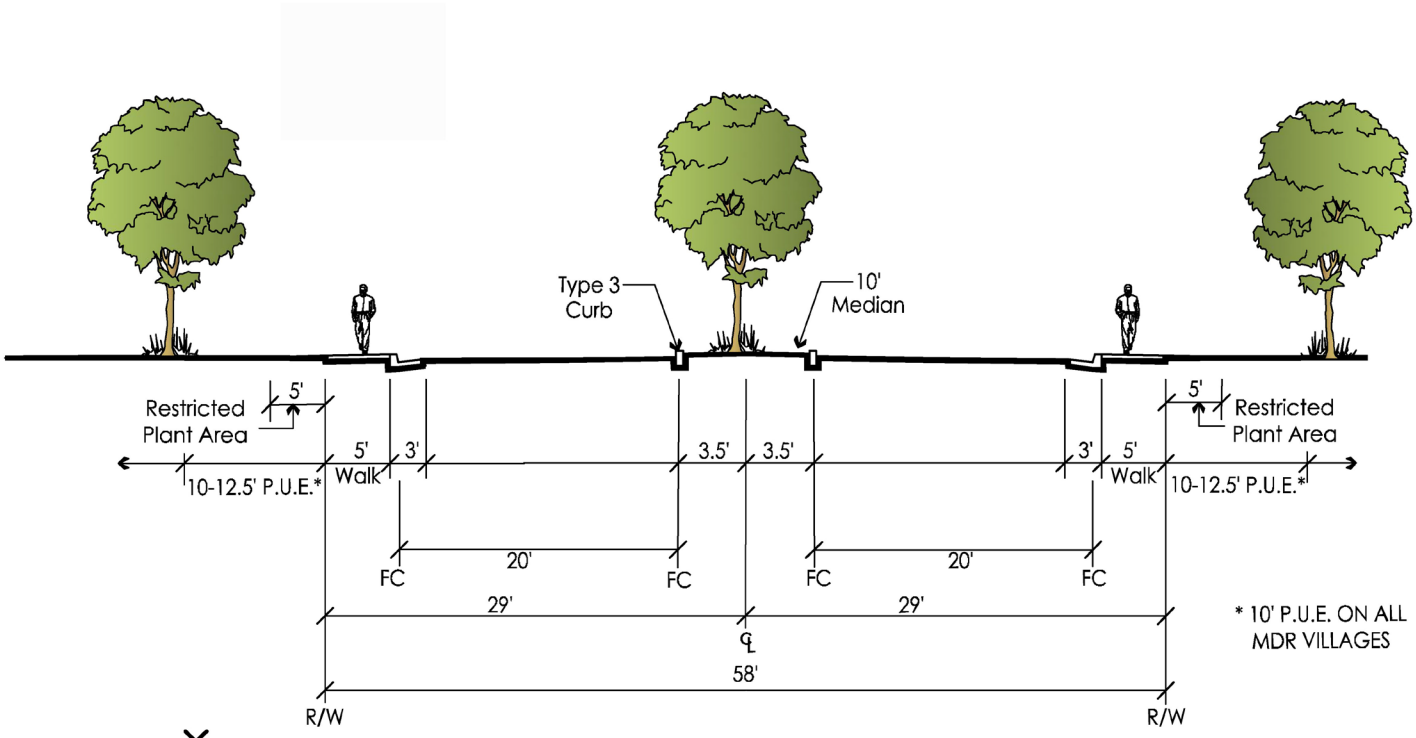


H

Standard Residential Street Entry

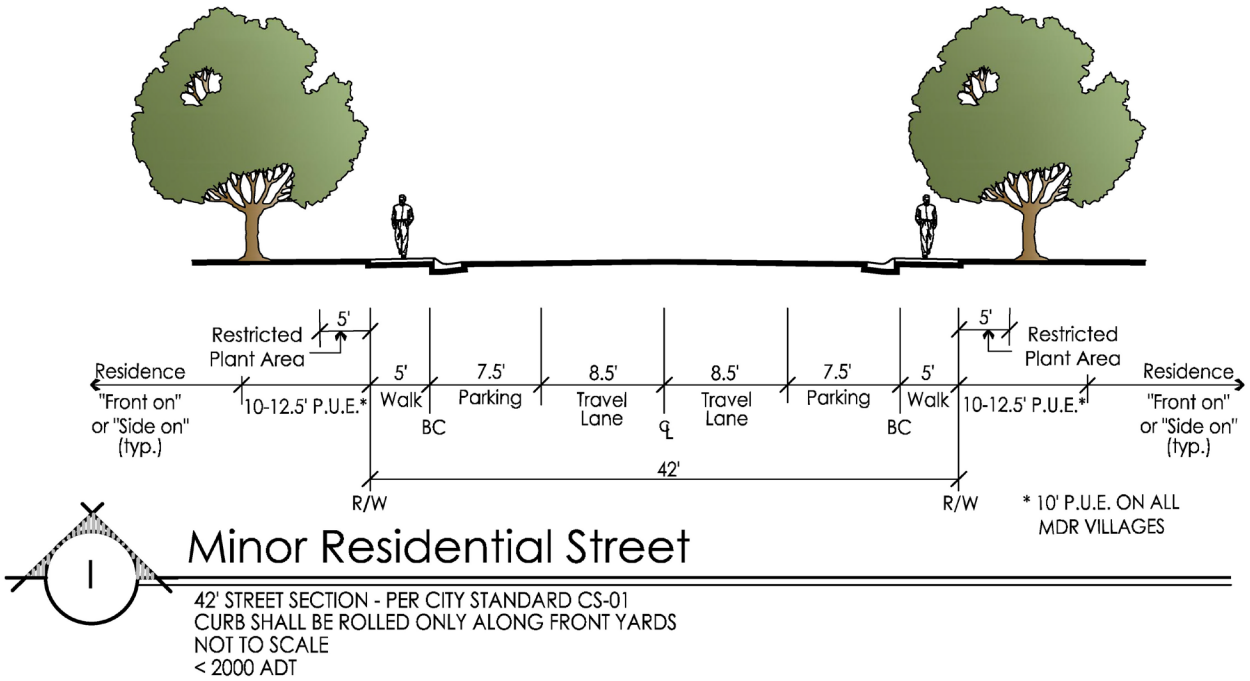
58' STREET SECTION PER CITY STD CS-02
VERTICAL CURB

Minor Residential Streets

Minor residential streets within the TRSPA serve as local connector streets within the individual neighborhoods and are consistent with City Standard (CS-01). These streets are designed to carry low volumes of local traffic (less than 2,000 ADT). These 2-lane facilities comprise the following components:

- 42’ right-of-way
- Two 8.5’ travel lane in each direction
- 7’ parking, including rolled curb & gutter (to Face of Curb)
- 5’ attached sidewalk
- Parking is permitted
- Vertical curbs should be installed along parks and residential frontages for alley loaded homes.

Exhibit 27: Minor Residential Street Sections



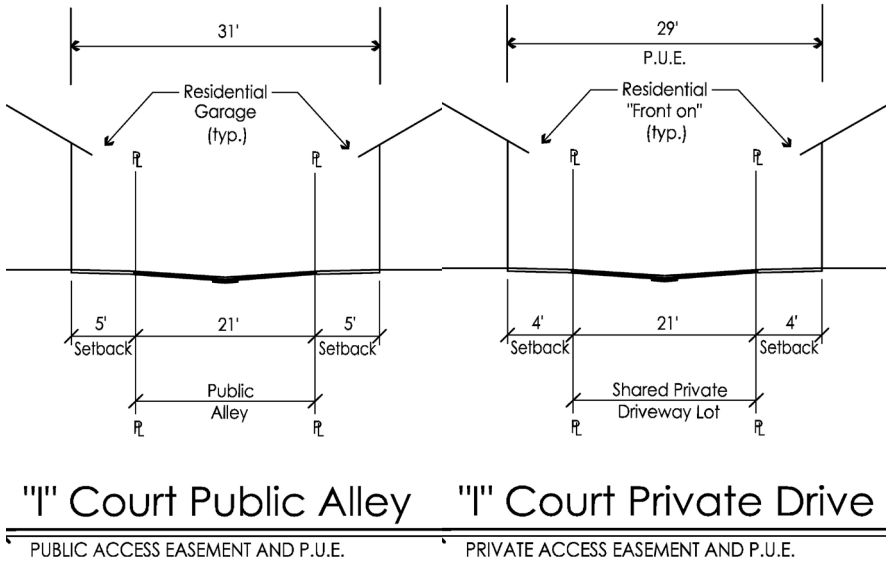
Public and Private Alleys

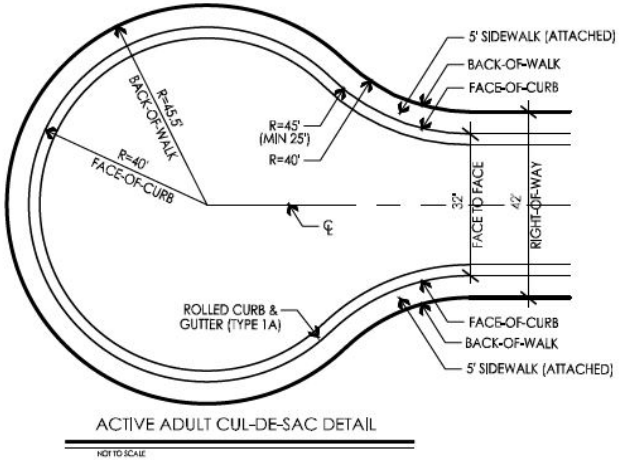
Private drives within the SPA serve residential units as a shared private driveway within the Four Seasons Neighborhood. These private drives provide access to multiple homes off this shared facility. This clustered configuration of homes minimizes garages and driveways in front yards of small lot detached residential units and eliminates 'garage-dominant' architecture. Private drives carry only the traffic from the residences that they serve and will be privately maintained as part of a Home Owners Association (HOA).

These 2-lane facilities comprise the following components:

- 21' wide pavement width
- No sidewalks
- Parking is not permitted

Exhibit 28: Public and Private Alleys





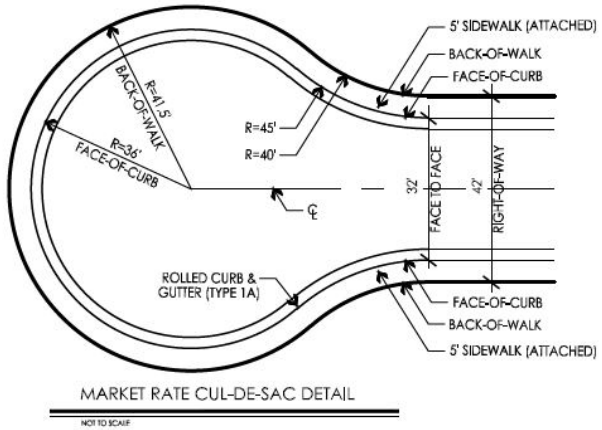


Exhibit 29: Typical Cul-de-Sac Bulbs

3.8.3 Trail Network

The trail network will create a citywide network with regional connections, allowing convenient and safe access to all pathways. The trail network, located throughout The Ranch Plan Area, is a key defining factor of the community. Trails encourage alternate transportation choices, like walking and biking, and limit the need for the conventional automobile. Trailheads orient residents to trail connections within the residential community and provide a unique sense of place integrating the natural and built environment. Proposed Trails provide opportunities for both active nodes and passive outlook areas, including benches, and pet waste stations, at these major trailhead locations. All trail improvements must be consistent with the South Sacramento Habitat Conservation Plan which governs this area. A total of 2.5+/- miles of trails will be added to the proposed site.

Within the SPA, trails are located along the expansive Wetland Preserve and a Class I Bike Trail is located within the Open Space Power Line Corridor. (Exhibit 30: Trail Map)

Nature Trails (Exhibit 31: Nature Trail Section)
Adjacent to the Wetland Preserve, there is a nature trail on the south side of Chrysanthy Boulevard, and on the north side of Chrysanthy Boulevard adjacent to the Four Seasons Neighborhood. These trails will consist of a 10' wide permeable and non-permeable trails with 2' shoulders. Proposed Trails will be located within a 50' buffer zone adjacent to the wetland preserve. The setback area will have natural vegetation and have minimal grading alteration incidental to grading transition from adjacent homes and necessary drainage. A 4' post and cable fence will separate the trail area from the remainder of the setback.

Class I Trail (Exhibit 32: Class I Trail Section)
Within the Open Space Parkway (Power Line Corridor) the trail section itself will be similar: 10' wide asphalt trail with 2' native shoulders on either side. However, it will occur in quite a different setting. A community-wide amenity, the Open Space Parkway will consist of an existing 275' wide power line easement providing access from the northern property boundary down to the Wetland Preserve south of Chrysanthy Boulevard. A 300' wide Community Park is proposed next to the Parkway located centrally within Parkview to create a premier parkland feature. The Open Space Parkway, and adjacent parklands, offer direct pedestrian connectivity throughout the Plan Area to other areas of the Sunrise Douglas Community Plan. The area will have native vegetation and limited landscaping incidental to community park amenities. This Class I trail provides a great opportunity to connect with other Class I trails, both existing and planned, in the area and in the greater City of Rancho Cordova community as identified in the City's Pedestrian Master Plan.

Trail Head (Exhibit 30: Trail map)
Meeting areas, benches, signs, pet waste stations, and landscaping will be located at every trail head. Trail head will be located at major pedestrian access points shown in exhibit 30.

Exhibit 30: Trail Map (Subject to change)

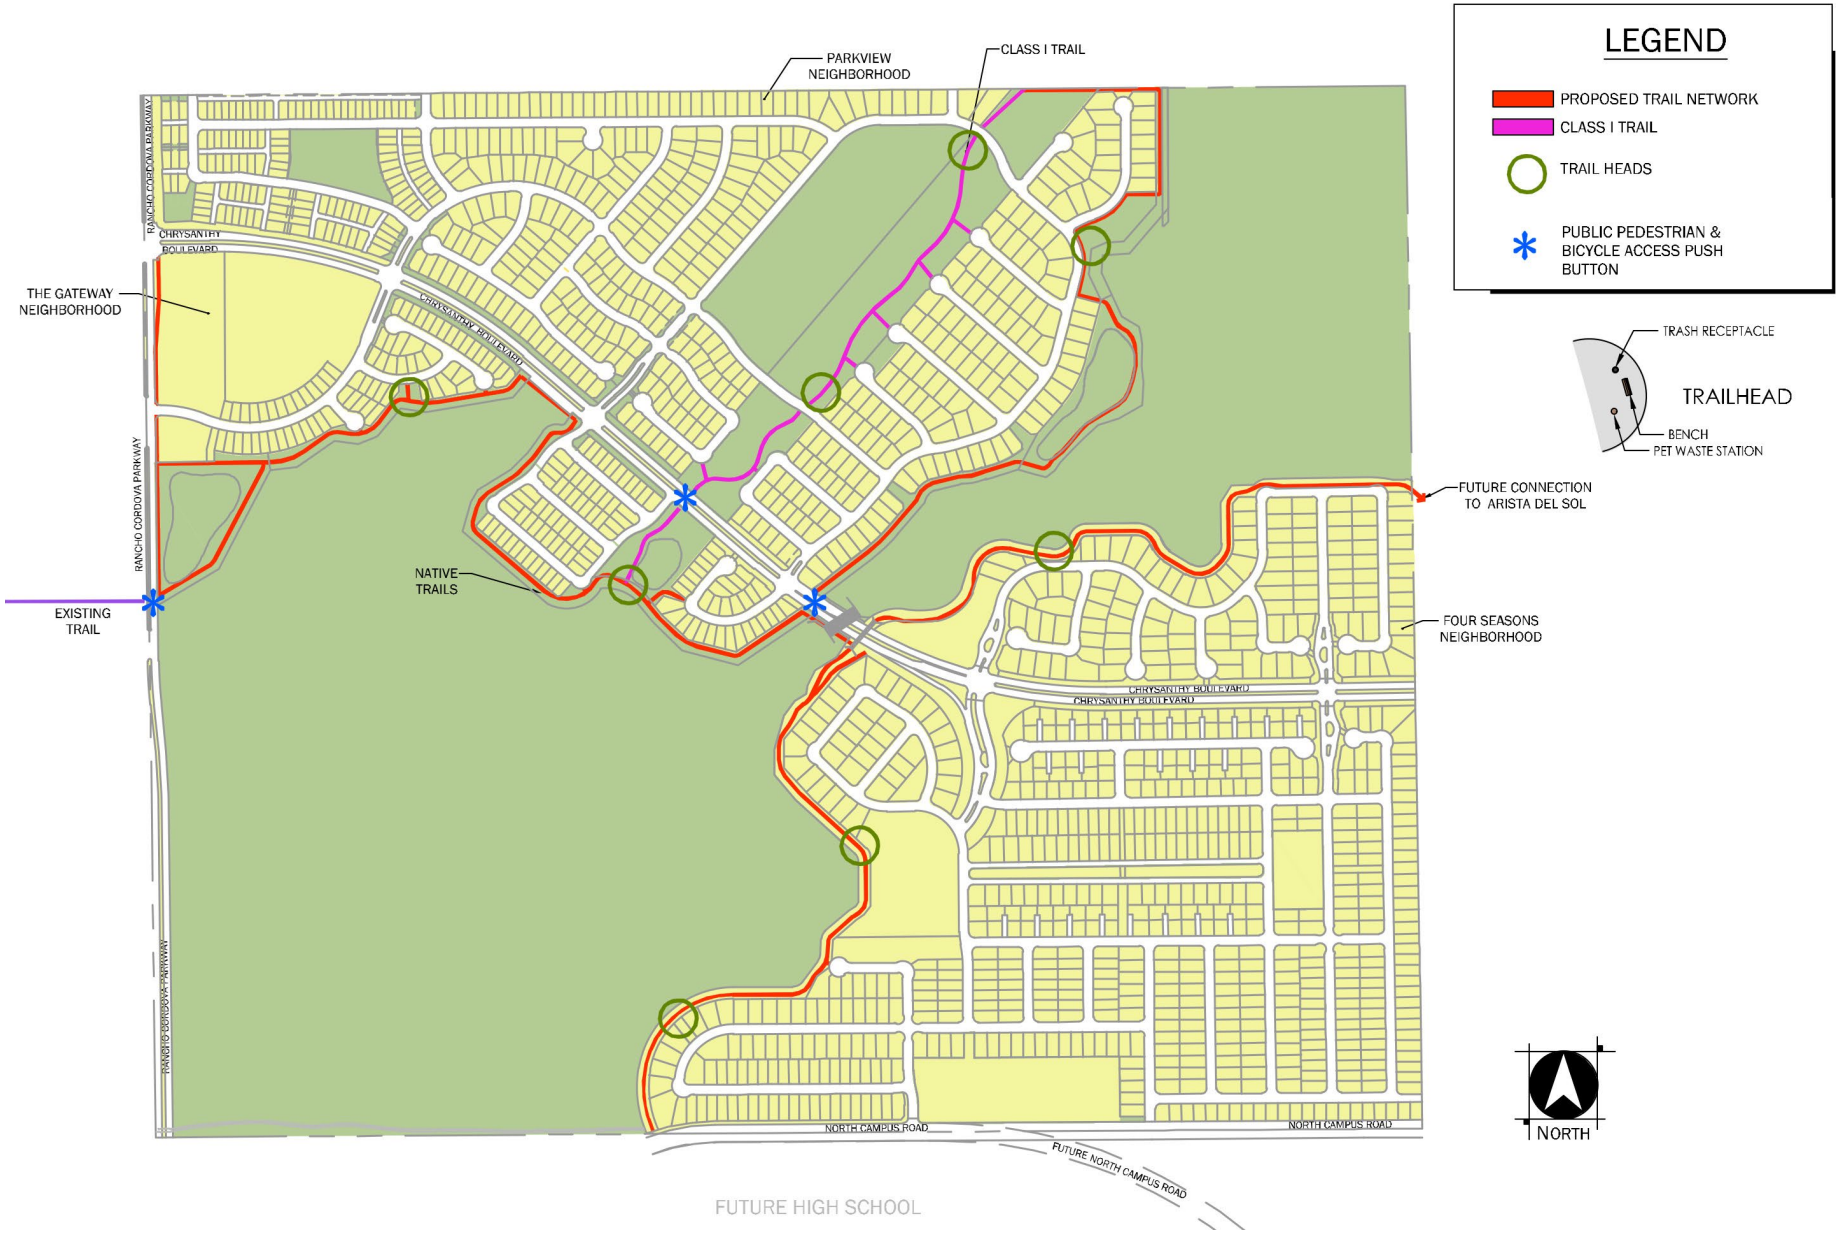

Exhibit 31: Nature Trail Section

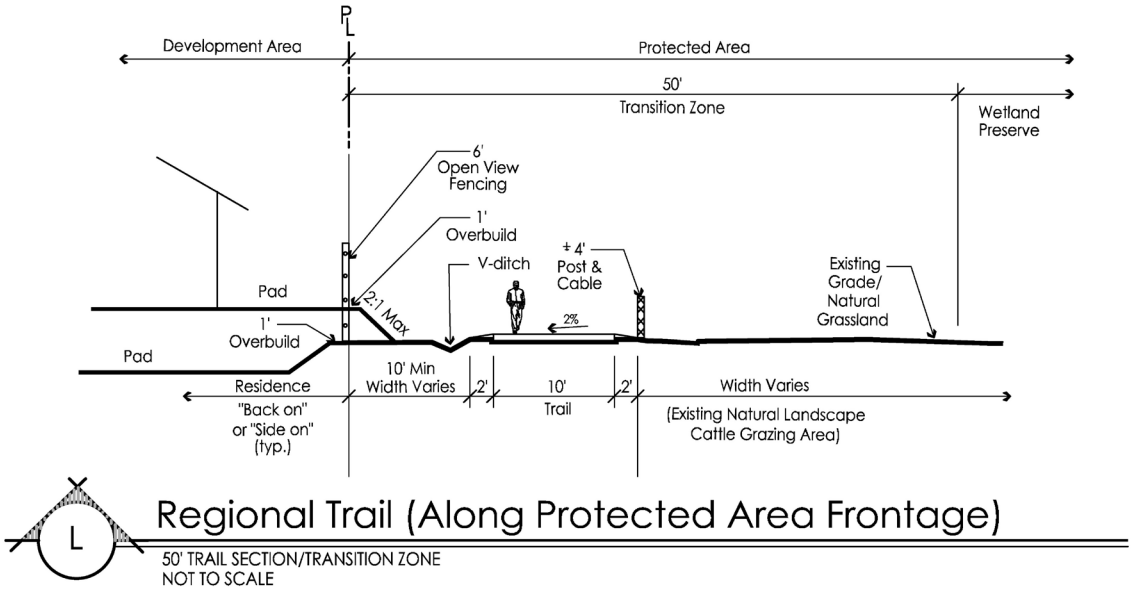

Exhibit 32: Class I Trail Section

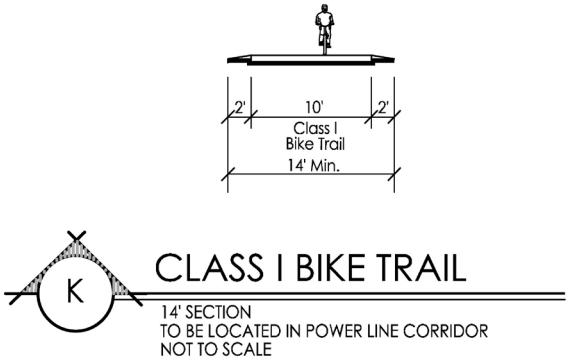

3.9 PARKS + OPEN SPACE DESIGN PROGRAM

3.9.1 Overall Park + Open Space Plan

The Ranch Overall Park and Open Space Plan provides a variety of recreation opportunities, including active Community park, Neighborhood Park, passive parks, and open spaces within the Plan Area. The system of parks and open space will create a cohesive outdoor environment that complements the surrounding neighborhood form, playing an integral role in shaping the community as a whole. Proposed parks are located throughout the Plan Area, linked by residential streets, trails, and enhanced open space connections. The parks and open space system will greatly enhance the visual nature, quality of life, housing desirability, and the overall community image.

The Overall Parks and Open Space Plan is divided into two park programs: Public and Private. Within The Gateway and Parkview Neighborhoods a 10.8-acre public park combined with the adjacent Open Space Parkway will accommodate a premier park program, several detention basins as well as off-street Class I bicycle and pedestrian trail. This Corridor trends generally in a northeast-southwest orientation and provides community-wide open space. The community park consists of two regulation size soccer fields to be owned and maintained by Cordova Recreation & Park District. Public open space is generally owned and maintained by the City of Rancho Cordova.

The Four Seasons Neighborhood provides parks and recreation. For residents of this neighborhood this system of private amenities includes a clubhouse, linear park, community garden and off-street paths which create a looped walking network. These Four Seasons amenities will be privately owned and maintained as part of a Home Owners Association (HOA).

The Plan Area also includes a large Wetland Preserve that will be maintained in perpetuity for the preservation of threatened and/or endangered species. A trail around the Wetland Preserve will incorporate interpretive signage regarding the Wetland Preserve's special site characteristics, plant and animal inhabitants and on-going maintenance efforts.

Bicycle Facilities

Bicycle facilities shall be incorporated into each phase of The Ranch. The bicycle facilities and features shall include bicycle parking facilities for the multifamily, parks, recreation, and commercial uses, and may include bicycle lockers, showers for employment-generating uses, or bicycle-related signage.

Parkland Dedication

The Ranch public and private parks within the Plan Area contribute to the required parkland dedication. As outlined in the City's General Plan, 'All new residential development is required by the State to dedicate parkland at a rate determined by the land authority. The City of Rancho Cordova requires a rate of five acres per 1,000 population. In addition, the City of Rancho Cordova requires open space dedication at a rate of one acre per 1,000 population.' Table 5 outlines the required and provided parkland dedication.

Lighting Standards

A lighting plan shall be prepared prior to the approval of any improvement plans or building permits for park facilities. The lighting plan shall demonstrate that the lighting systems have been designed to minimize light spillage onto adjacent properties to the greatest extent feasible. The lighting plan shall include the following:

- Design of site lighting and exterior building light fixtures to reduce the effects of light pollution and glare from glass and metal surfaces;
- Lighting shall be directed downward, and light fixtures shall be shielded to reduce upward and spillover lighting;
- Where it is not feasible to fully shield light fixtures from light pollution, such as the sports field lights, the sports fields shall be located as to minimize the effect of lighting on nearby residential uses and the lighting shall be directed downward, be of the minimum wattage and height suitable for illuminating the playing surfaces and immediately surrounding areas, and shall be shielded and hooded to prevent light trespass outside of the park boundary and any adjacent roadway and to minimize any backscatter to the night sky.
- Lighting for each playfield, parking area, and structure shall have control boxes that allow operation of specific areas of lighting in order to only illuminate the field(s) and parking area(s) in use at any given time.
- Lights shall be turned off when the fields, parking areas, and structures are not in use.
- Parking lot lights added within the powerline easement east of the Community Park shall not be installed until the poles and fixtures have been reviewed and approved by easement holder. (PG&E or SMUD)

These requirements shall be noted on the project improvement plans.

The following pages illustrate the overall parks and open space plan including individual conceptual park plans, landscape standards and monumentation.

Exhibit 33: Overall Parks + Open Space System
(Subject to change)

3.9.2 Conceptual Park + Open Space Program

The park designs and programs for uses shown in this section are conceptual in nature and are subject to further design refinements. For purposes of this handbook, the park plans/ and programs are separated and listed by neighborhood, as previously identified in this handbook, and described in detail on the following pages.
Concept only. Layout is subject to change.

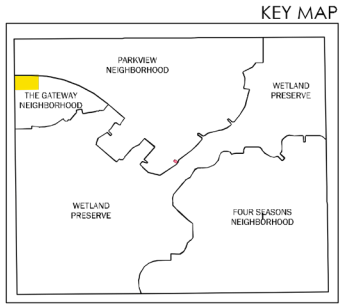
The Gateway Neighborhood

The Gateway Neighborhood represents the public front door to the community and marks one's arrival to The Ranch SPA. As such, prominent community entry feature and plaza are planned for the intersection of Ranch Cordova Parkway and Chrysanthy Boulevard. Refer to Section 3.7.4, Signage + Monumentation, for more detail on the community entries.

In addition, this neighborhood also provides opportunity for residential and retail-service uses to interface by providing a parks or plaza to orient the neighborhood, creating a focal meeting area and community gathering space. The plaza is envisioned to have a formal, urban design yet provide passive-use recreational spaces.

PARKS PROGRAM
Linear connection to town center
Plaza at village end with water fountain
Raised planters with minor turf berms
Linear turf parkway strip
Landscaped transition to higher density homes
Site amenities: benches, trash receptacles, drinking fountains

Exhibit 34: The Gateway Neighborhood Plaza Concept



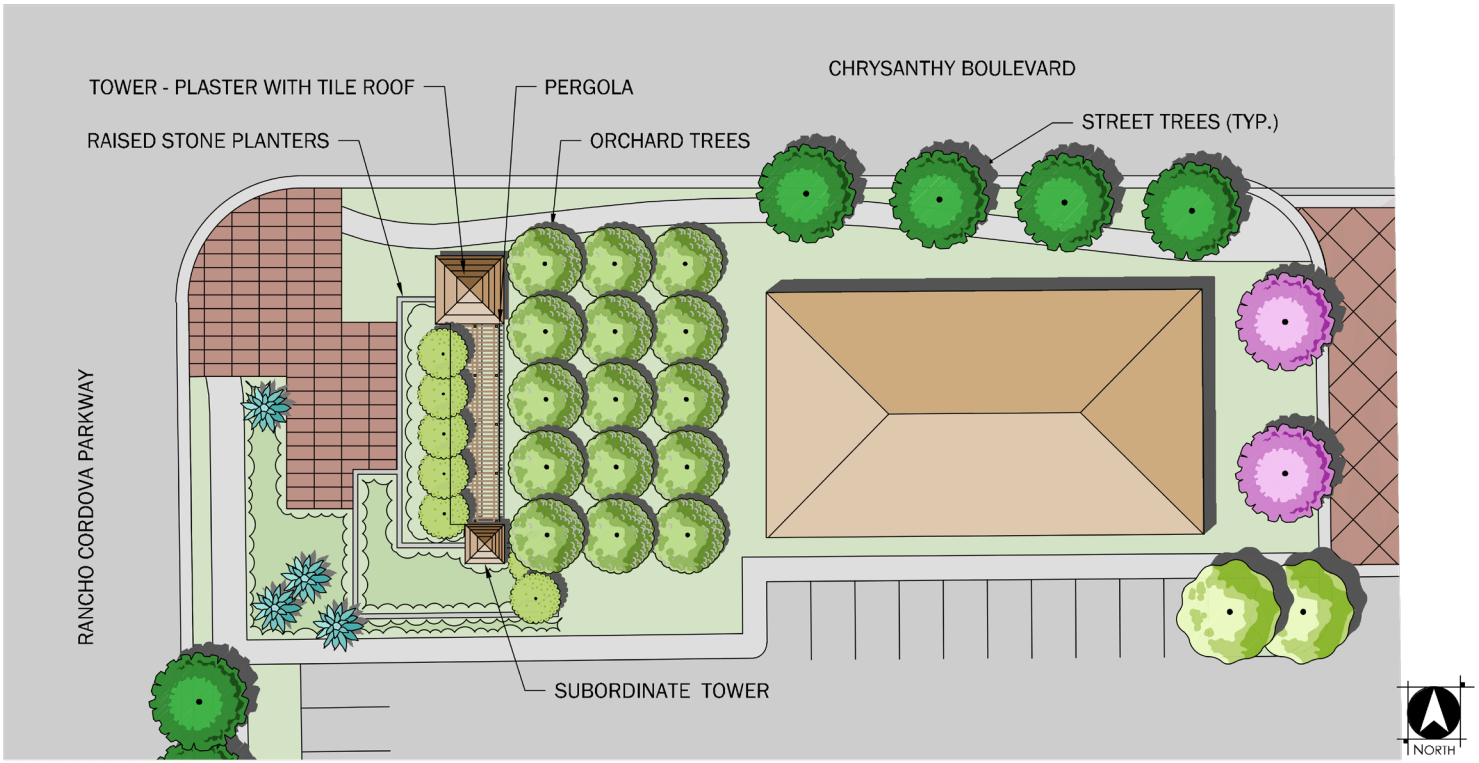


Exhibit 35: The Parkview Neighborhood Community Entry
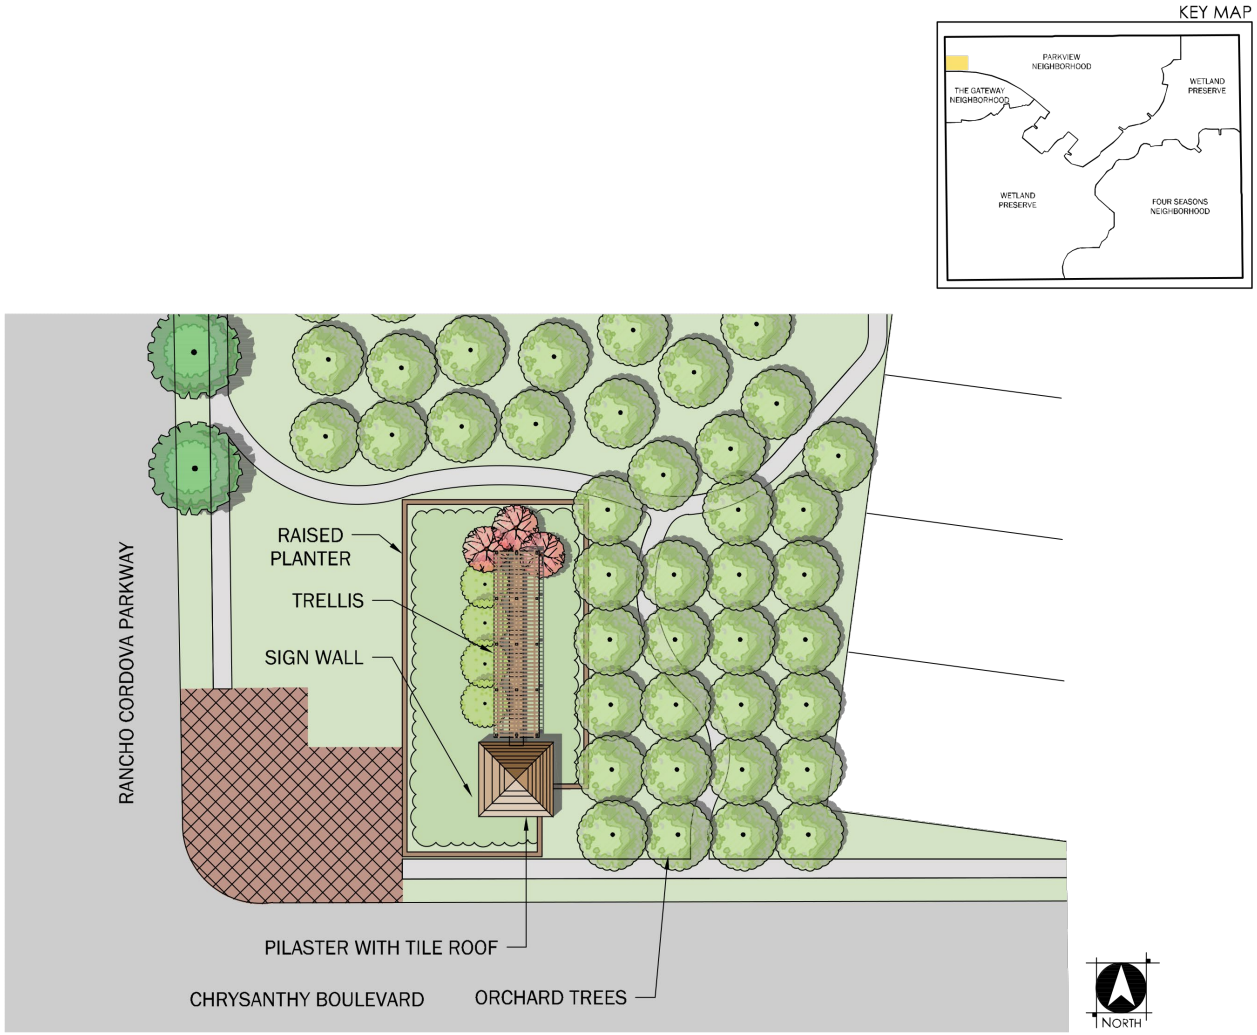
Concept only. Layout is subject to change.



Parkview Neighborhood

This neighborhood is home to an 11-acre public community park, combined with the adjacent 8-acre open space parkway and a 2.1-acre neighborhood park. The parks serve the neighborhood and the community to provide active and passive recreational uses for the plan area. The community park is envisioned to have active recreation facilities. The open space in the adjacent power line corridor will be a natural, informal design.

The open space parkway consists of an existing 275' wide power line easement that provides Community-wide Open Space and offers direct pedestrian connectivity throughout the Plan Area and to other areas of the Sunrise Douglas Community Plan. Improvements include a Class I trail system consisting of a 10' wide asphalt or concrete trail with 2' gravel shoulders and will provide regional connectivity through the Plan Area.

The neighborhood park is envisioned to serve high density villages. The park will be an ideal location for a tot lot and will feature a basketball court available for all ages. The exact programing will be determined in collaboration with CRPD and local residents.

The park design elements within Parkview Neighborhood will be consistent with the architectural character of the surrounding neighborhood. The community park programing will be adjusted as needed to meet current trends and community needs when the design for the community park commences, consistent with the Cordova Recreation & Park District *Preliminary District-wide Facilities Distribution Plan* (June 2016). Final programming will be determined during the design phase of the community park.

The Programs for Uses and Conceptual designs are as follows.

COMMUNITY PARK PROGRAM

Two regulation-sized soccer fields, public restrooms, and other facilities typical to community parks such as children's play areas, picnic shelters and sports courts.

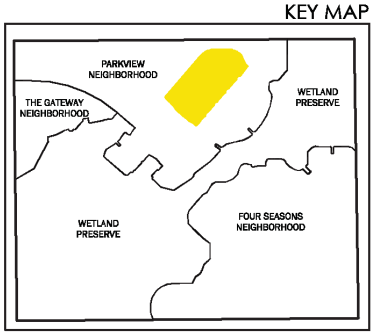
NEIGHBORHOOD PARK PROGRAM

Play structures, sports courts, picnic areas, shade structures, benches, tables, barbeque and trash cans.

PROGRAM FOR OTHER PARKS

Meandering, Class I Bike and Pedestrian Trail
Site amenities: dog stations, trash receptacles, drinking fountains
Surface parking for adjacent community park facility
Detention basin facilities

Exhibit 36: Parkview Conceptual Plan of Community Park



* Kite flying is prohibited in this area. Signs shall be posted to inform the public.

Exhibit 37: Parkview Conceptual Open Space Power Line Corridor
(Improved with drought tolerant plants and very limited turf area)

Four Seasons Neighborhood

This gated Neighborhood is home to a private recreation center, linear park, and community garden. The system of park amenities within this private community are meant to orient the neighborhood and provide focal meeting areas for community gatherings. The parks and open space system are envisioned to have a formal design and provide passive and active use recreational spaces.

The park design elements within the Four Seasons Neighborhood will be consistent with the architectural character of the surrounding neighborhood. The programs for uses and conceptual designs are as follows.

Four Seasons Parking

Parking on private streets within Four Seasons neighborhood on streets are allowed on one side only on streets up to 35 feet wide.

Table 6: Four Seasons Clubhouse & MFR Parking Requirements

Use	Area/Units	Rate	Parking
Clubhouse (approx. 19,000 sf)	19	2	38
AA MFR	38	0.5	19
AA MFR Guest	38	0.1	3.8
Total			**60.8**

ADA per building code

LINEAR PARK PROGRAM
Picnic trellis with enhanced paving and raised planter
Informal turf & grasses
Canopy shade trees
Meandering pathway
Site amenities: benches, trash receptacles & drinking fountains

COMMUNITY GARDEN
Community garden plots
Picnic area with trellis
Raised bed planters
Site amenities: picnic tables, trash receptacles & drinking fountains

MAIN COMMUNITY ENTRY
Gates and guard house
Prominent entry monumentation
Landscaped median
Wide landscaped corridors with street trees
Water features
(Secondary entries will have understated gated entries.

RECREATION CENTER PROGRAM
Gym/Fitness/Showers/Lockers
Aerobics/Multipurpose Room
Ballroom/Assembly
Cards/Mojang Room/Billiard tables
Club Room
Bistro (w/Pro Kitchen)
Lounge/Bar
Kitchen Demonstration/Lounge/TV Events
Small Conference Room
HOA Office Suite
Staff Breakroom
IT Room
Fire Room(s)
Storage Room (Maintenance)
Pickleball Courts (At Least 4)
BBQ/Outdoor Kitchen Stations/Tables
Putting Green
Pool (s) and Spas
Shaded Structures
Fire Pits

*The above program is subject to change

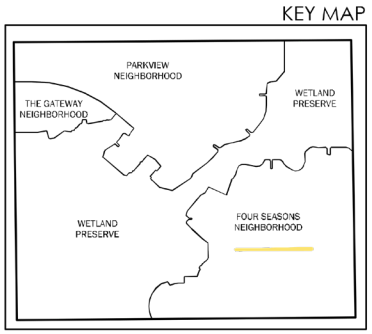
Exhibit 39: Four Seasons Linear Park Conceptual Plan
(Concept only, subject to change)



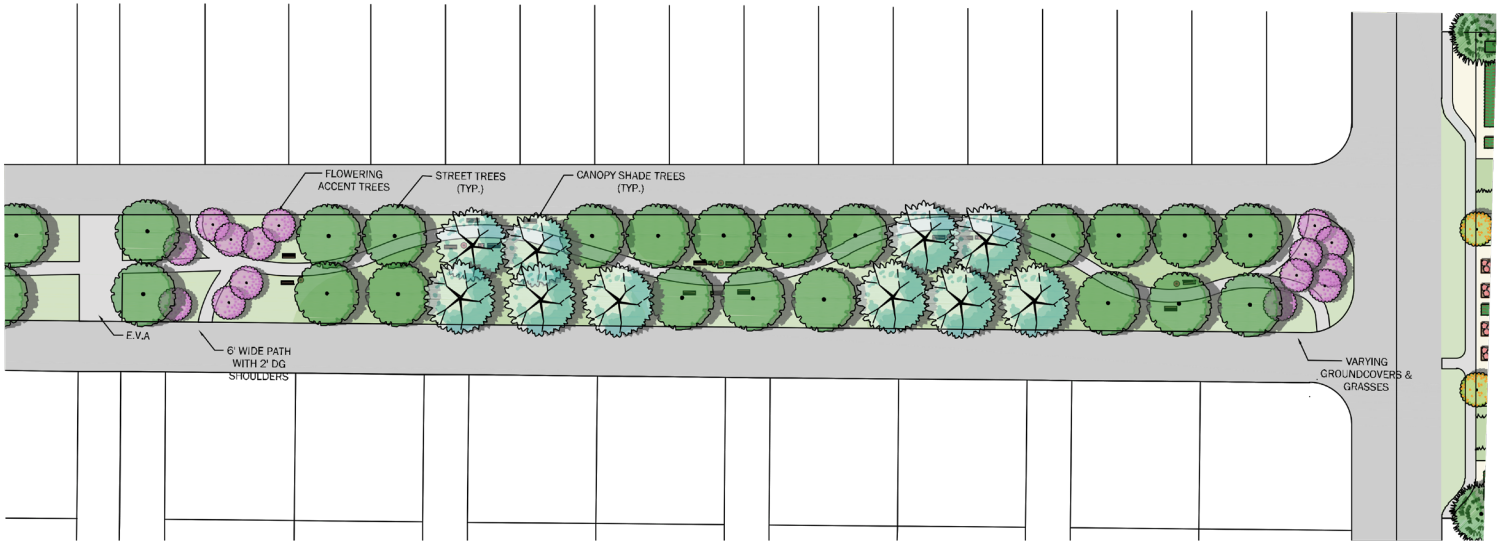


Exhibit 40: Four Seasons Community Garden Conceptual Plan (Concept only, subject to change).

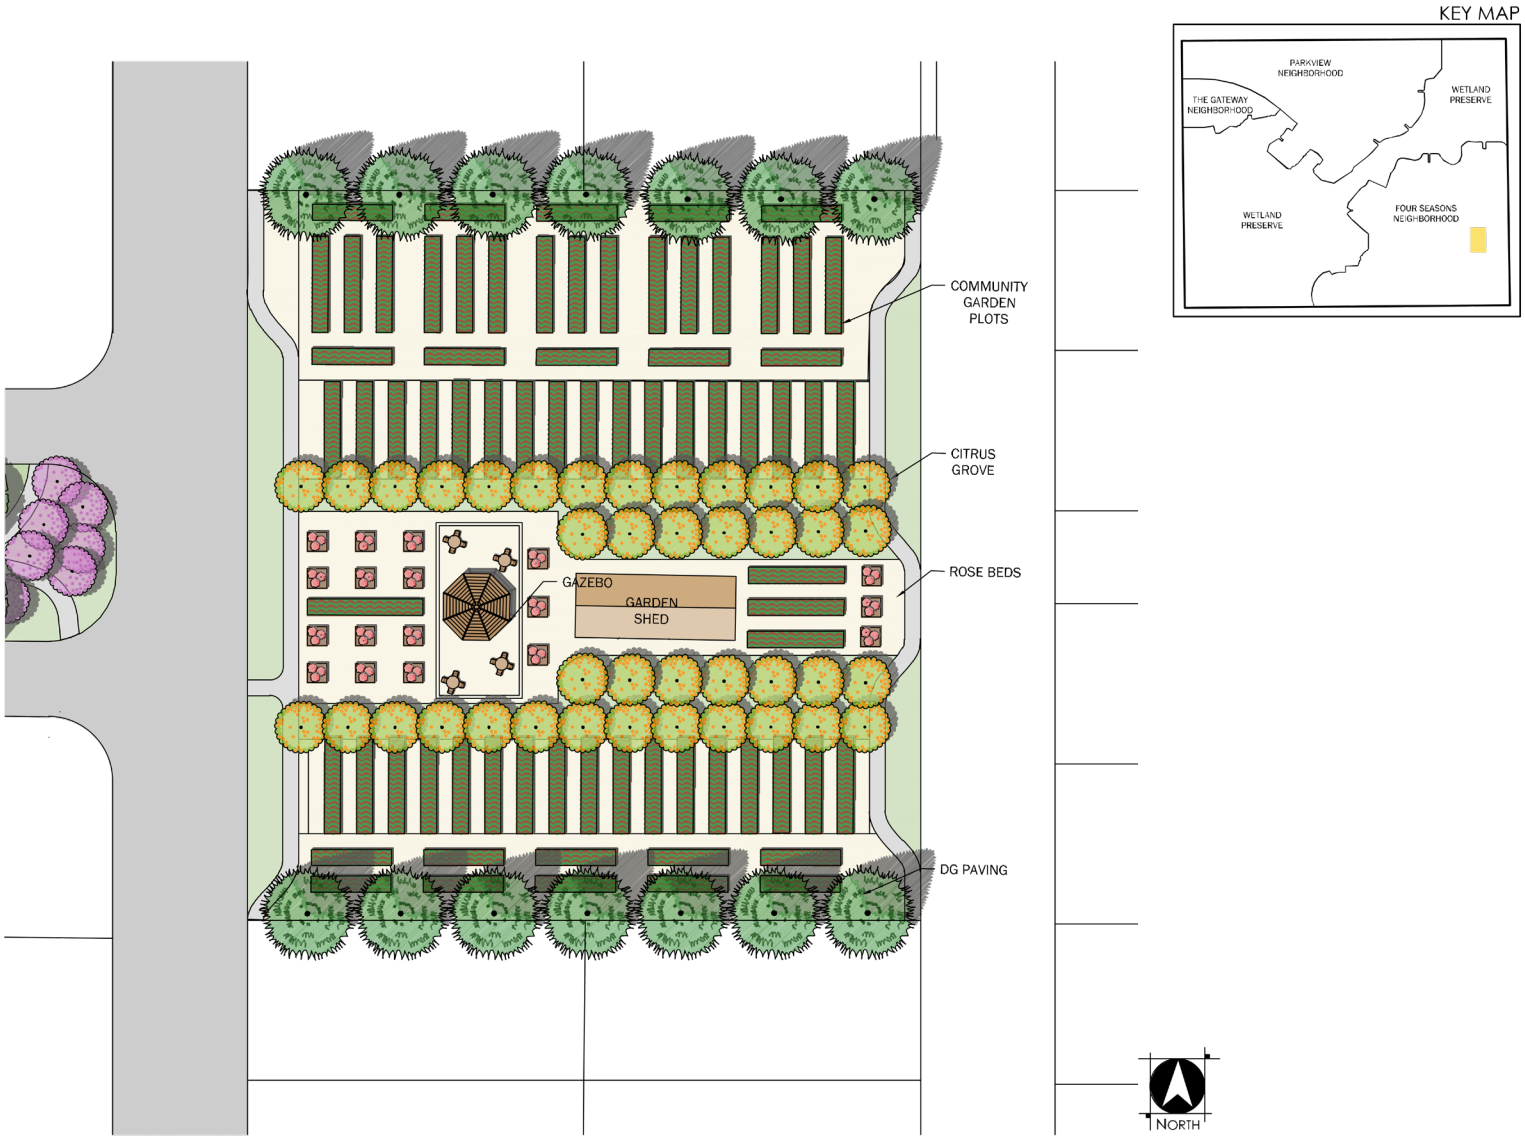

3.9.3 Landscape Standards

The intent of the landscape design within each neighborhood is to provide continuity throughout the community. Landscaping guidelines specify standards for streetscapes and public spaces. Using deciduous and evergreen plant material, year-round interest will be given to the site with an evenly layered plant design. This layered plant design helps to frame views and highlight special features and can also screen or diminish adverse views and utilities.

The streetscape within The Ranch community is unified through a consistent palette of ground cover, shrubs, and street trees. A minimum of 2,240 new trees will be included in the project, as street trees and trees included in the parks and landscaping areas. The street trees create a canopy along all public streets to increase the aesthetics of the neighborhood while providing shade and a walkable environment. All street trees should be a minimum of 15 gallons in size at the time of planting and centered in the parkway strip or behind the sidewalk in a few locations where there is an attached sidewalk. A mix of evergreen and deciduous trees is encouraged as primary and accent tree options.

The landscaping of public spaces should be carefully considered to attract visitors. Trees with a consistent canopy should be used in areas where shade is desirable especially along the walking path along the roadways. In general, the landscaping of public spaces should complement the other features and amenities of the area, becoming a backdrop to pedestrian activities.

The following landscape guidelines and standards apply to the community:

- Landscaping should be used to define outdoor spaces, softening and complementing structures
- Provide landscaping to screen parking, loading, storage and equipment areas
- Provide landscaping to shade and enhance the streetscape, parking areas, and outdoor gathering places
- Detention facilities should be planted to create the appearance of natural vegetation, with careful consideration of plant selection to ensure survival and compatibility of a proper functioning drainage system; and,
- Landscape should be drought tolerant.

Plant Palette

Refer to the Cordova Recreation & Park District *Design & Construction Standard Manual* (June 2015) for preferred trees, shrubs and groundcover. A minimum of 50% of trees and vegetation on each lot shall be drought-resistant. Additional trees and plants may be utilized with administrative review.

Turf Area

Turf for residential uses shall be at least 70% less than the maximum allowed turf area.

Irrigation

All irrigation shall use water-efficient irrigation systems that include automatic rain shut-off, maximum gallon per minute restriction, and WiFi connectivity features.

Public Art

Public art is encouraged and may be incorporated into public community spaces such as urban plazas and parks.

Fencing

Open view fence shall be installed along all lots backing to the preserve and open space lots. The fences will be wrought iron (or similar material), as seen in exhibit 41. Good neighbor fences will be installed on side property lines adjacent to open space lots and paseos. Please see exhibit 42.

3.9.4 Signage, Entry Monumentation, and Walls

Entry features and monumentation create an identity or "sense of place" for a community. Entries provide a rhythm to the streetscape, acting as a defining element that reinforces the overall architectural and landscape design theme. Both Primary and Secondary monumentation and associated signage are envisioned for The Ranch. To follow, are examples of primary and secondary monuments which may be found throughout the community.

The Primary Entry to the community is Located at the intersection of Rancho Cordova Parkway and Chrysanthy Boulevard. The entry feature at this major intersection is a combination of plant material, hardscape elements, decorative structures and paving, and signage (Exhibit 46).

Gates and a guard house are located at the main entrance to the Active Adult neighborhoods at Chrysanthy Boulevard (Exhibit 49). All other Active Adult entries will be scaled down and recessed from Chrysanthy Blvd. Secondary entries are designed to have a similar feel as the rest of The Ranch community, including a combination of plant material, hardscape elements, paving, and signage.

The following guidelines and standards apply to entry features and monumentation:

- Neighborhood identification signage or thematic logos may be incorporated into pilasters or low walls
- Entry street corners may incorporate hardscape elements including enhanced paving, pilasters, walls, raised planters and pedestrian gateways
- Groupings of evergreen or deciduous flowering trees shall be used to highlight each entry
- Thematic landscaping material consistent with Plant Palette, will set the tone for the community
- Must not interfere with vehicular sight lines

Exhibit 41: Open View Fencing

Exhibit 42: Good Neighbor/Privacy Fencing

Walls and fences are intended to provide screening and buffering between different land uses, to define the edges of roadways and public landscape, and to provide privacy and security for private homes. Masonry sound and safety walls are provided along the edges of the primary roadways. (Exhibit 43) These walls also provide for the entry and signage that are described in this section. Enhanced fencing is provided along the main entry drives within the project (along the enhanced landscape pedestrian walks), and lot line fencing between homes.

Exhibit 43: Example of wall detailing (preliminary design, subject to change)

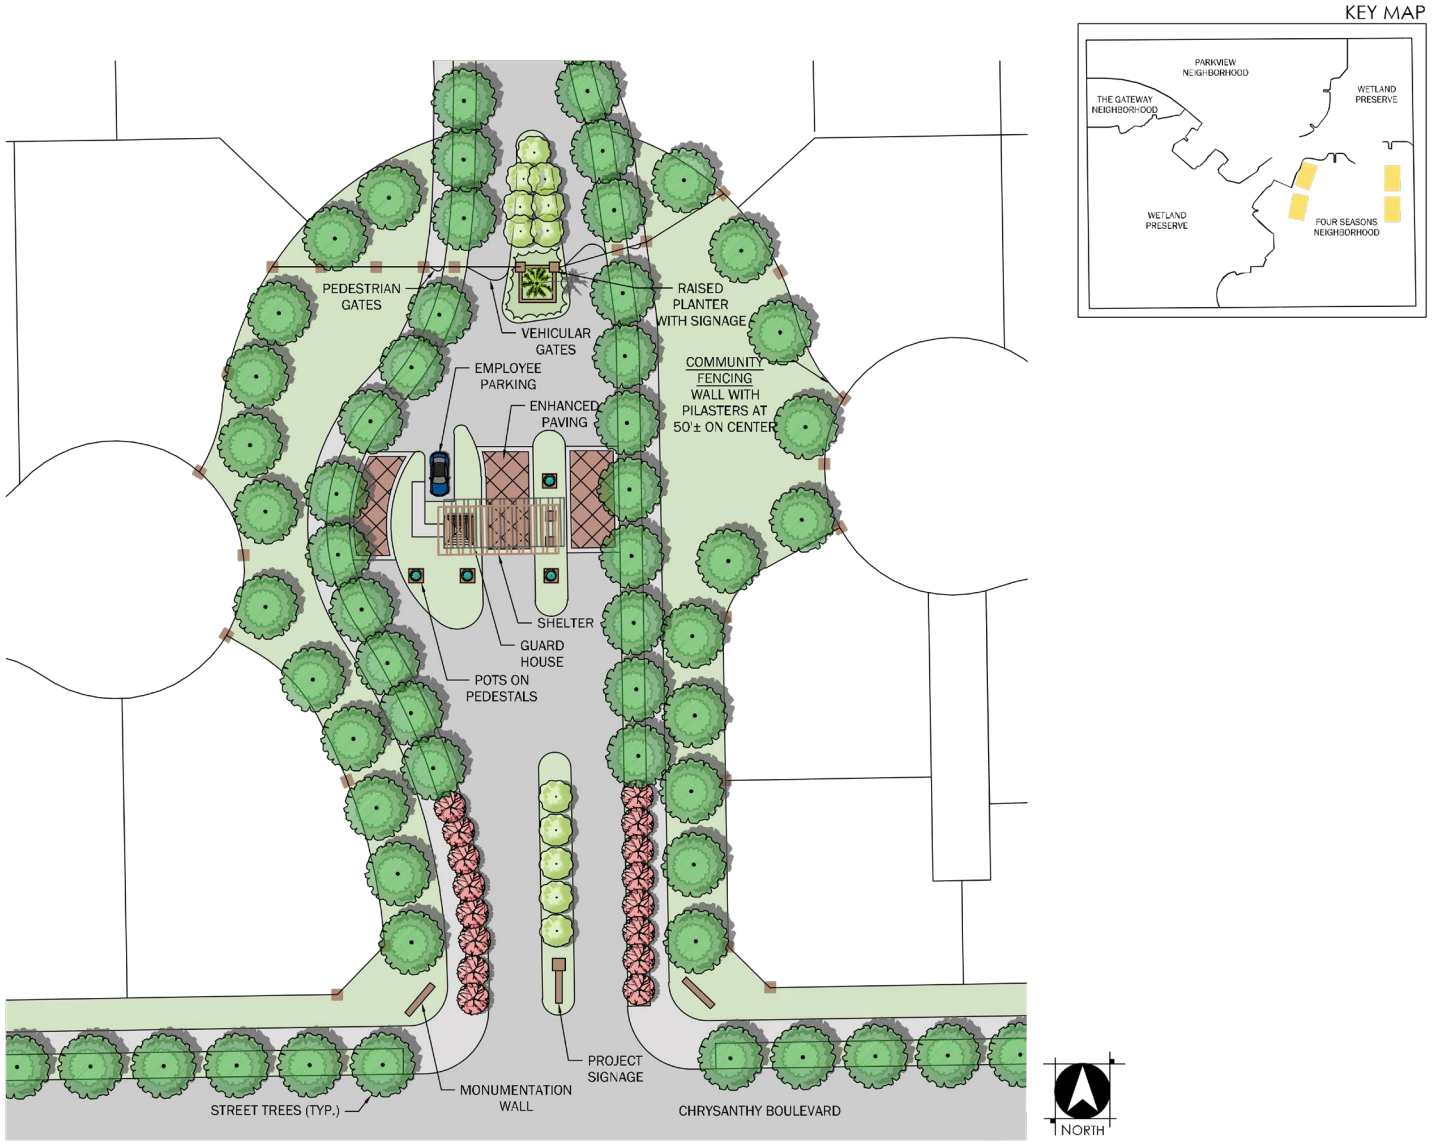
(Preliminary Design, subject to change)

Exhibit 49: Four Seasons Community Primary Entry Plan



3.9 WETLAND PRESERVE

The TRSPA includes a 200+/- acre Wetland Preserve which will be protected through a perpetual conservation easement. The Applicant is working with the South Sacramento Habitat Conservation Plan (SSHCP) to implement the Preserve. The SSHCP is a regional effort that will provide development and infrastructure Project with a streamlined, predictable federal and state permitting process by creating a Preserve System to protect habitat, open space, and agricultural lands.

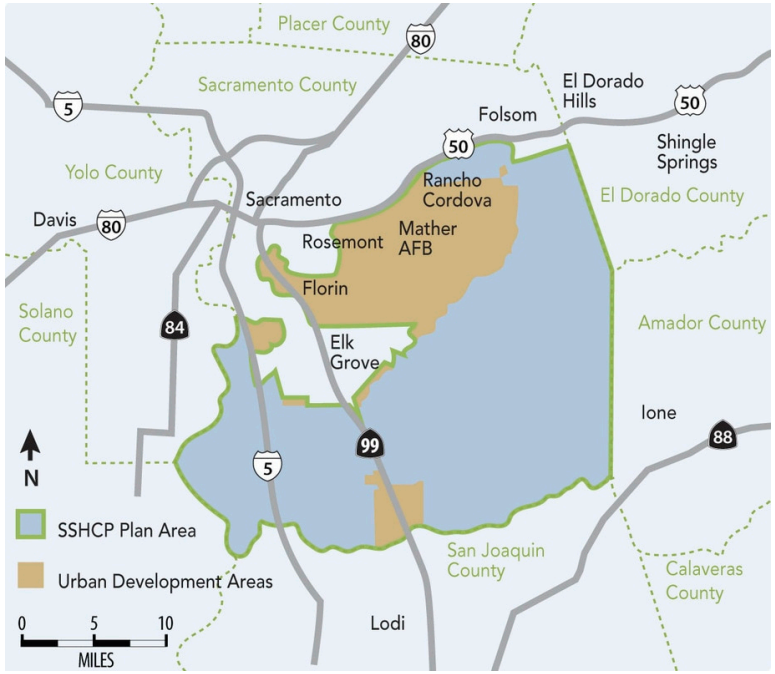
The SSHCP was adopted by the City of Rancho Cordova on October 15, 2018. The SSHCP allows project proponents within the Plan Area to simplify and expedite the state and federal Endangered Species Act (ESA) permitting process. It is anticipated that the SSHCP will receive approval to sell mitigation credits for Incidental Take Permits in late March-Early April of 2019.

Other Related Permitting

In addition to streamlining the ESA permitting processes, a separate but parallel multi-tiered permitting program has been developed to streamline Clean Water Act Section 404 and 401 permitting process (see SSHCP Draft Environmental Impact Statement/Environmental Impact Report (EIS/EIR) Appendix C) and a Master Streambed Alternation Agreement will be prepared to address Section 1602 of the California Fish and Game Code.

Incidental Take

The SSHCP will allow the Sacramento County (the County), the City of Rancho Cordova, City of Galt, Sacramento County Water Agency, and the Southeast Connector Joint Powers Authority (collectively referred to as the Plan Permittees) to issue an Incidental Take Permit (ITP) for activities and projects they conduct. In addition, the three local Land Use Authority Permittees (the County, Galt, and Rancho Cordova) have the ability to extend incidental take coverage provided by the SSHCP ITPs to activities and projects implemented by Third-Party Project Proponents that are under the jurisdiction of that Land Use Authority Permittee. This will allow Third-Party Project Proponents to avoid the extensive negotiation and processing currently required to obtain individual project permits under the California Endangered Species Act (CESA) from the California Department of Fish and Wildlife (CDFW) and project ESA compliance from the U.S. Fish and Wildlife Service (USFWS).



Ultimately the SSHCP Conservation Strategy will result in an interconnected Preserve System totaling 36,282 acres of which TRSPA will be a part of. All SSHCP Preserves will be preserved in perpetuity and would be acquired either as a fee title or as conservation easements, although most of the Preserve System will be acquired using conservation easements. As the SSHCP is implemented over the 50-Year Permit Term, the new 36,282-acre SSHCP Preserve System will be established in a manner that supplements, complements, and links together many of the existing preserves within the Plan Area.

Monitoring SSHCP

The frameworks for two monitoring programs have been developed. The first framework is the "South Sacramento Habitat Conservation Plan (SSHCP) Compliance and Avoidance and Minimization Measure Monitoring (AMM) Program Framework." This monitoring program framework was developed to monitor compliance with the Plan requirements, the Implementing Agreement, and the permits. A second monitoring program framework, the "SSHCP Preserve System Monitoring and Management Program" was developed to monitor the effectiveness of the Plan in terms of protecting Covered Species, natural communities, and ecosystem processes within the SSHCP Preserve System and to evaluate the effects of preserve management actions.

Land Dedication

The applicant proposes to dedicate the entire area of the wetland preserve to the HCP Authority. Therefore, Land Dedication in lieu of Development Fees implementation strategy outlined in Chapter 9 of the SSHCP is being proposed by the applicant. The SSHCP describes a land dedication process where project proponents can dedicate land towards satisfying their mitigation requirements and thereby reduce their development fees. When the dedication of land (or a re-establishment/establishment site) is accepted into the SSHCP Preserve System, development fees will be adjusted by reducing the appropriate portion(s) of the development fee (e.g., the "land" component of the SSHCP development fee) at a 1:1 ratio. It should be noted that some components of the proposed SSHCP development fees (i.e., "Other" fees shown in Table 12-5) will remain unchanged, as these fee revenues are used to fund SSCHP requirements for management and monitoring, changed circumstances, plan administration, plan development, and endowment). Land dedication in lieu of paying the land purchase component of the SSHCP development fee is only awarded after the Implementing Entity has approved the land dedication and recordation of a conservation easement or transfer of fee title to the Implementing Entity has occurred.

Endowment

The development fees include a contribution to a non-wasting endowment fund designed to generate sufficient interest to cover the ongoing annual costs beyond the 50-year Permit Term. The endowment needs are based on estimates of the long-term average real interest rate.

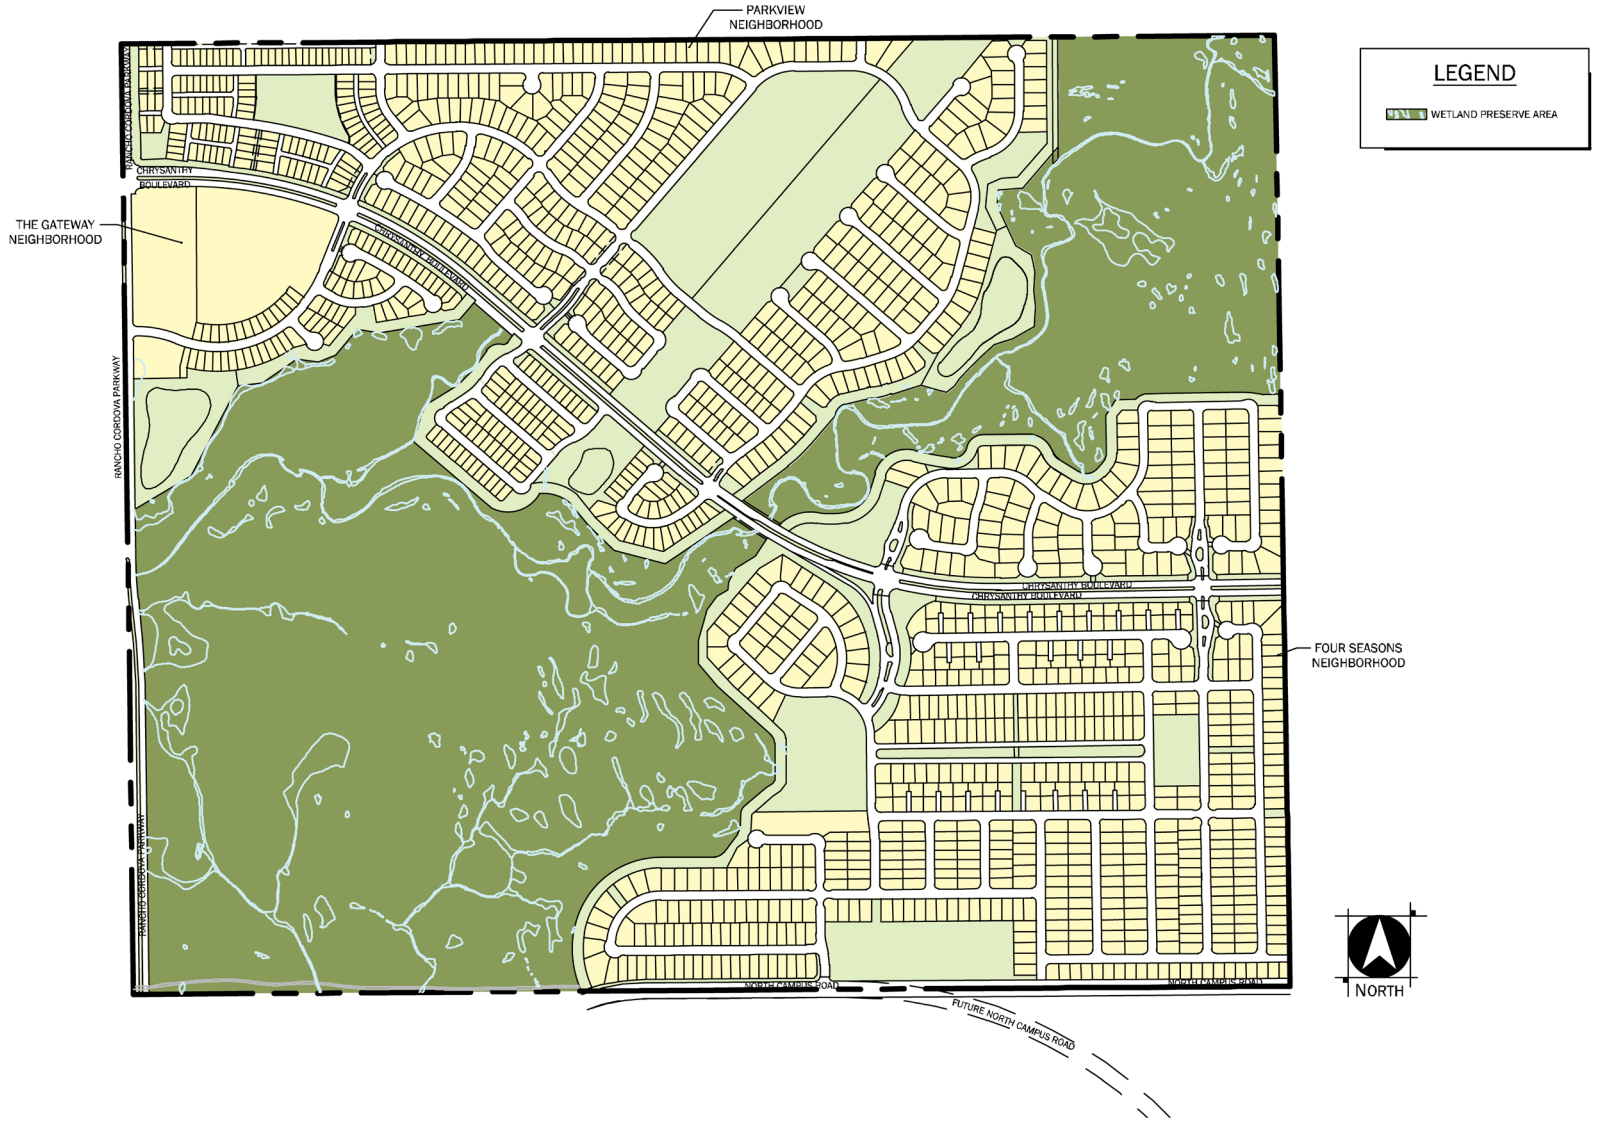
Preserve

The preserve will be fenced, and the conservation easement will specifically prohibit public access to the preserve. The easement will also prohibit vegetation removal, burning and dumping, discing, addition of roads or trails, equipment or fuel storage, alteration of topography, motor vehicle use, application of harmful chemicals, construction activities, or planting vegetation except for the express purpose of habitat monitoring and maintenance. Discing and mowing will only be allowed for fire control purposes and will be conducted in manner to avoid adverse impacts to vernal pool habitat.

Trails

Within the TRSPA, trails are located alongside the extensive Wetland Preserve. The trail will consist of a 10' wide all-weather surface with 2' shoulders on either side. The trail will be set back from the adjacent development a minimum of 10' and 0-5' from the curb and gutter on local streets and adjacent to the curb and gutter along minor arterials. The edge of the trail adjacent to the preserve will be clearly delineated with a low post and cable fence or any other similar delineation; no landscaping is permitted to occur within the wetland preserve boundary. Cattle have historically grazed the site and it is possible that this practice will be continued for weed abatement and fire control, as well as to provide a perpetual view into the site's historic agricultural past.

Exhibit 50: Wetland Preserve (Subject to change)



3.10 INFRASTRUCTURE

3.10.1 Sanitary Sewer

The Ranch SPA is located within Area 2 of the BR East Rancho Expansion Trunk Shed (2015 Amendment) of the Sacramento Area Sewer District (SASD) and the Sacramento Regional County Sanitation District (SRCSD}. SASD amended the BR East Rancho Trunk Shed in 2015, ahead of the scheduled 2020 System Capacity, to include The Ranch in the buildout expansion facilities. At build-out, The Ranch SPA will be served by a trunk main connecting to the existing Aerojet Interceptor 1B located in Chrysanthy Boulevard (east of Rancho Cordova Parkway), which drains to Location #1 Outfall at S132 Chrysanthy Pump Station.

The following Sewer Service Standards and Guidelines are identified to ensure necessary infrastructure is provided in a timely manner, consistent with the project-phasing plan:

- The City of Rancho Cordova General Plan citywide policy mandates public sewer service for new residential developments of densities greater than one unit per two acres. Consistent with this policy, the SPA will be served by a public sewer collection system.

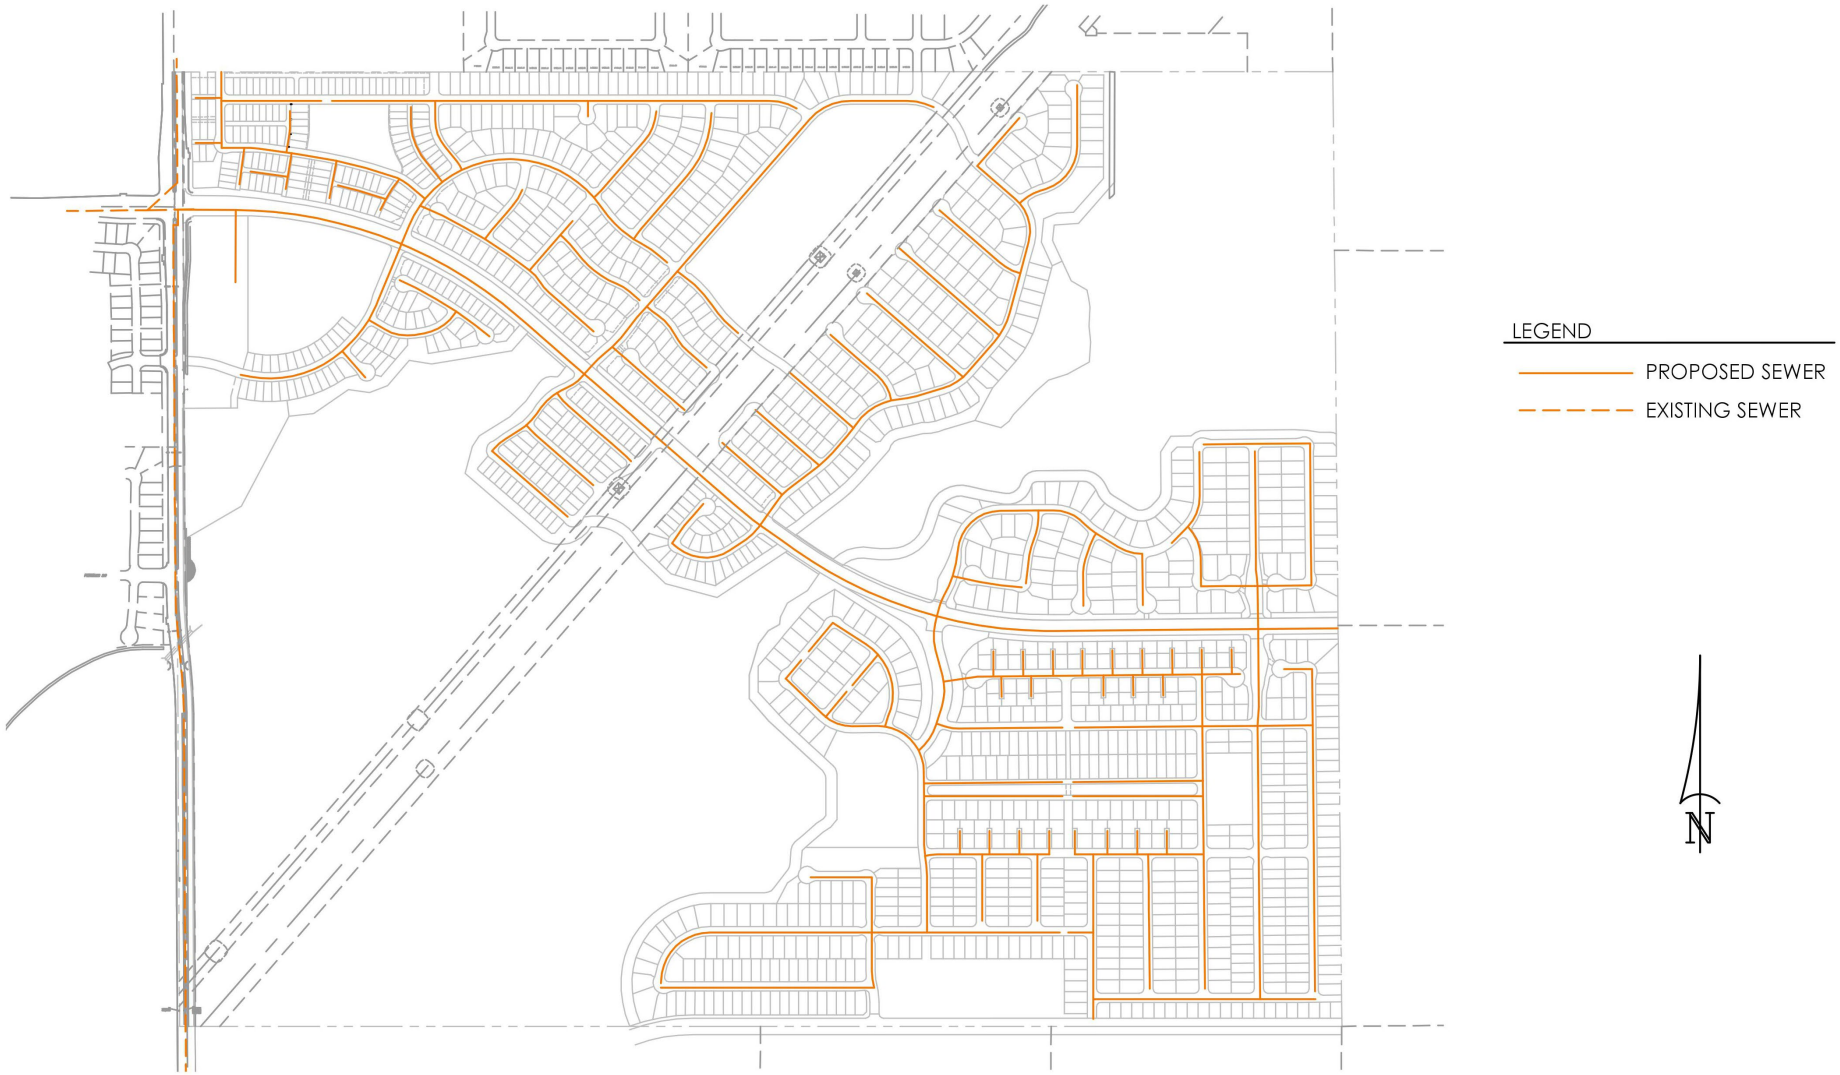
- Design and construction of phased sewer infrastructure into and through the Plan Area will be done with the approval and to the satisfaction of the City of Rancho Cordova and SASD staff, per SASD Sewer Ordinance (Effective 2/9/2018).

- Building permits for proposed projects shall not be approved until an approved Sewer Study for the Plan Area is approved by SASD.

- Interim sewer facilities, if required for phased development of the Plan Area, shall be designed in consultation with SASD and SRCSD.

The proposed on-site sewer collection system is illustrated in Exhibit 51.

Exhibit 51: Sanitary Sewer (Subject to change)



3.10.2 Water Service

The Ranch SPA is within service area Zone 40 of the Sacramento County Water Agency (SCWA). SCWA will provide water service to each developable parcel and building of The Ranch SPA. The SCWC has an adequate source of water to meet the needs of The Ranch SPA as outlined in their letter provided to the City of Rancho Cordova. A water distribution system, constructed in phases, in and through The Ranch SPA will consist of a 24-inch, 12-inch and 8-inch diameter pipes, providing water to each of the proposed land uses in the quantity and pressure necessary for the intended development. Development of the project's water system will be consistent with the Regional Water Forum Agreement. Each project development phase will convey water in the appropriate quantity and pressure to support the proposed level of development without impacting the surrounding area.

Water demands were projected for The Ranch SPA based on the land uses identified and the standard methodology implemented by the SCWA. The projected demands are similar to the existing water uses within the SCWA service area. The proposed water distribution system has been designed and sized to service this demand.

The following Water Service Standards and Guidelines are identified to ensure necessary infrastructure is provided in a timely manner, consistent with the project phasing plan:

- The City of Rancho Cordova General Plan Citywide policy mandates public water service for new residential developments of densities greater than one unit per two acres. Consistent with this policy, The Ranch SPA will be served by a public water distribution system.

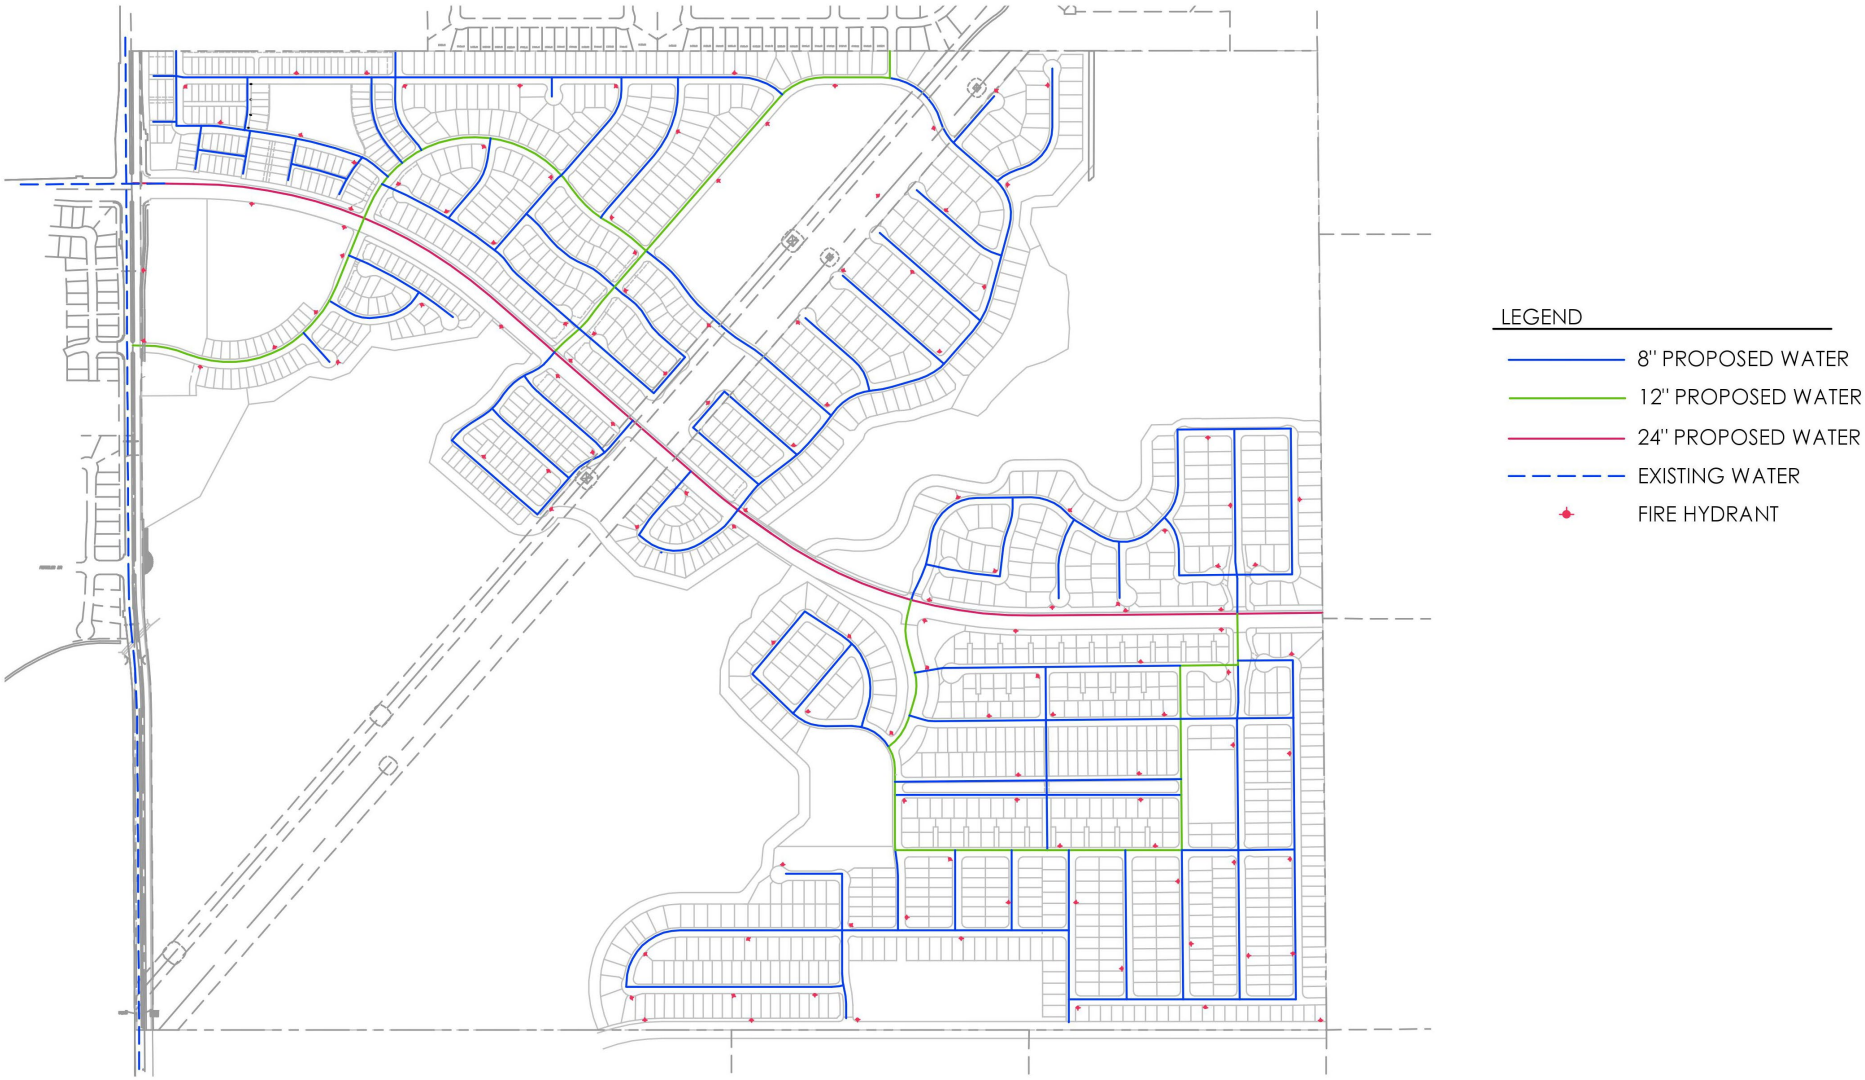
- Design and construction of phased water infrastructure into and through The Ranch SPA will be done with the approval and to the satisfaction of the City of Rancho Cordova and SCWA staff.

- The Ranch SPA is required to connect to the existing SCWA system at a minimum of two locations. Interim water facilities, if required for phased development of the Plan Area, shall be designed in consultation with the City of Rancho Cordova, SCWA staff, and coordination with adjacent projects.

- Building permits for proposed projects shall not be approved until SCWA staff approves a Water Distribution Plan for The Ranch SPA. In addition, Building Permits for the proposed project shall conform to the specific provisions of the City of Rancho Cordova Landscaping Ordinance (Municipal Code Title 23, Chapter 23.716).

The proposed on-site water distribution system is illustrated in Exhibit 52.

Exhibit 52: Water Service (Subject to change)



3.10.3 Drainage

The Ranch SPA topography is characterized by gently rolling terraces, numerous hills, and depressions. Current land use is cattle grazing. The unnamed tributary to the lower Morrison Creek South meanders down the middle, generally from the northeast to southwest.

The project consists of two development areas at the northwest and southeast quadrants, with the remaining area left as open space and an environmental corridor for the Lower Morrison Creek South. The northwest quadrant will drain to the Lower Morrison Creek South, and the southeast quadrant will drain to both the Lower Morrison Creek South and Kite Creek.

The open spaces will also include detention basins that will provide water quality and stormwater management. The management includes capture and treatment of summer irrigation flows, hydromodification of storm runoff, and attenuation of very large storms so that post-project flow rates are equal to or less than existing conditions. There will be three basins to manage runoff from the northwest quadrant development and two basins to manage the southeast quadrant stormwater runoff. Adequate overland release paths to convey runoff in excess of storm drainage collection pipe capacities shall be provided.

With the exception of a major road crossing (Chrysanthy Boulevard) and four outflows from the respective detention basins, the unnamed tributary to LMCS will remain as a meandering channel within an open space corridor. The outfall for the southern portion of the Southeast quadrant into Kite Creek is tentatively planned to be part of a larger outfall that will serve the proposed Sun Creek Specific Plan.

The following Drainage Service Standards and Guidelines are identified to ensure necessary infrastructure is provided in a timely manner, consistent with the project-phasing plan:

- Design and construction of phased drainage infrastructure into and through The Ranch SPA will be done with the approval and to the satisfaction of the City of Rancho Cordova.

- Building permits for proposed projects shall not be approved until the City of Rancho Cordova approves a Drainage Study of The Ranch SPA.

- Interim drainage facilities, if required for phased development of The Ranch SPA, shall be designed in consultation with City of Rancho Cordova staff.

The proposed on-site drainage system is illustrated in Exhibit 53.

Exhibit 53: Drainage Map (Subject to change)

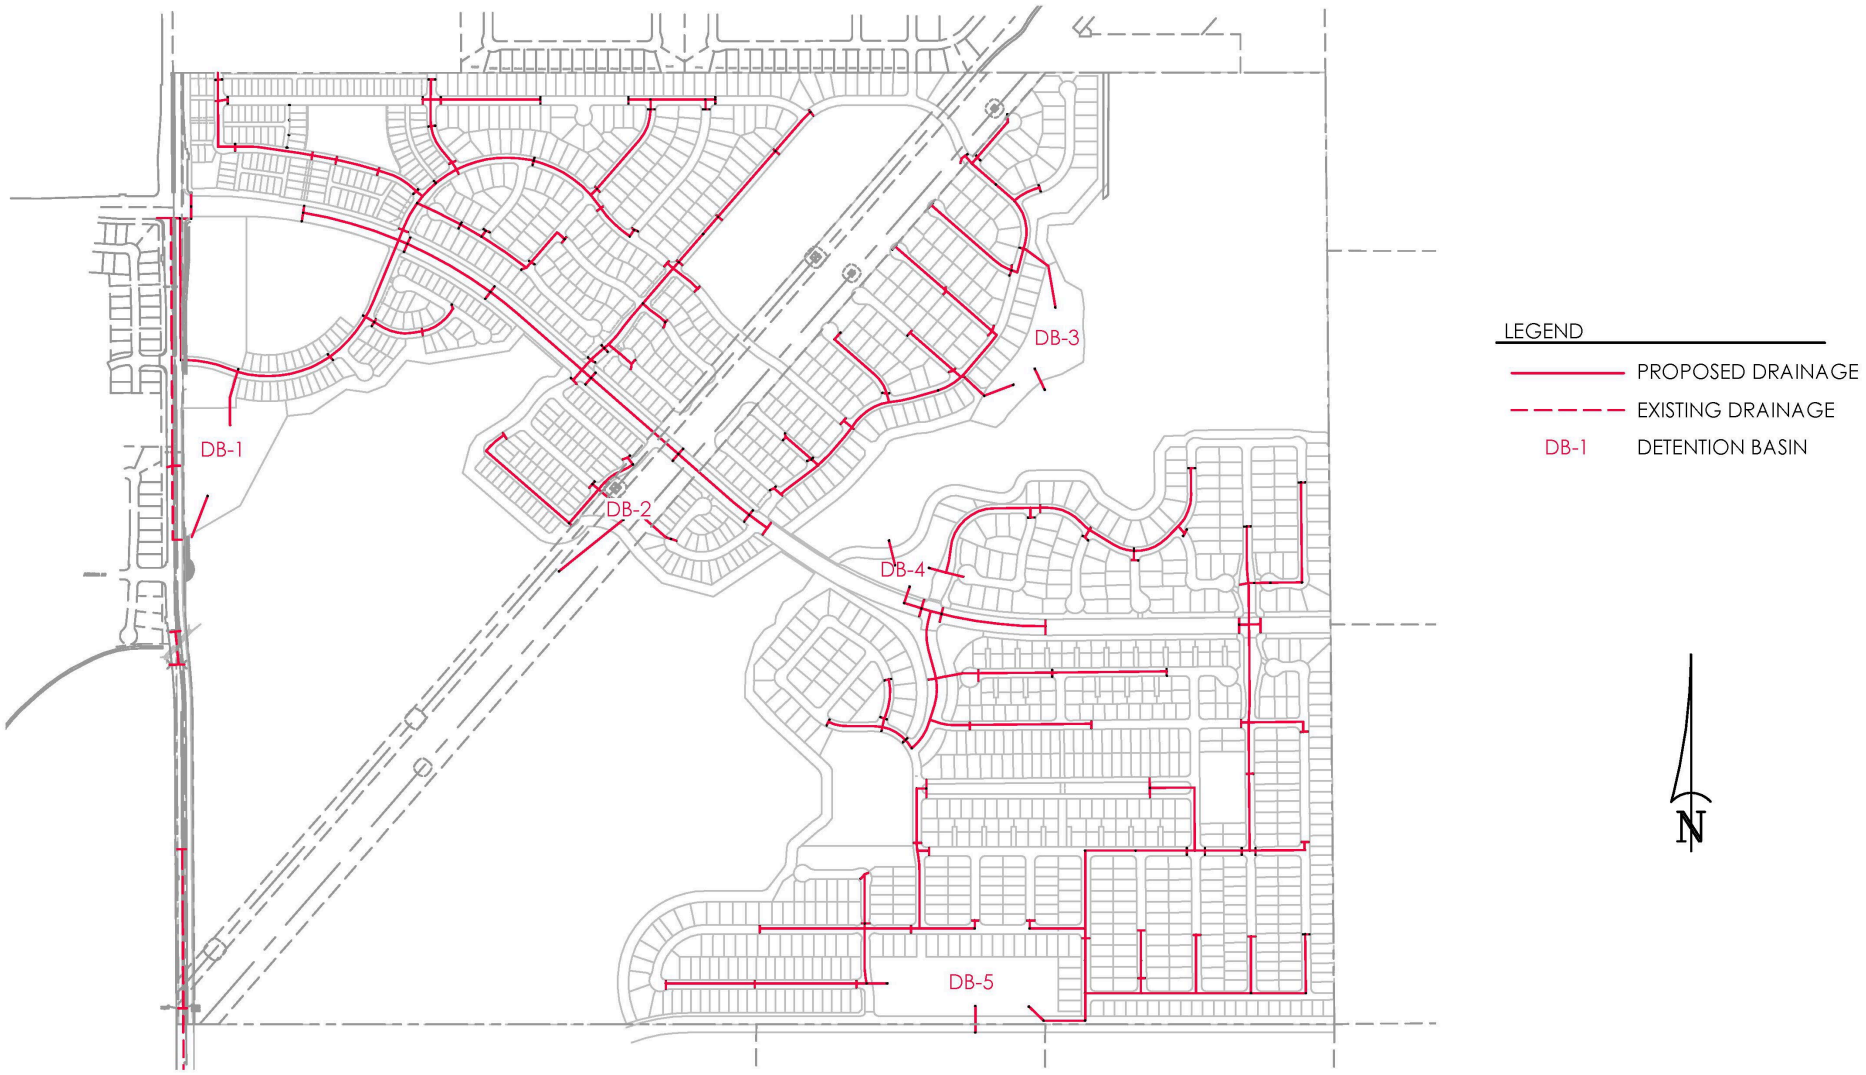


Exhibit 54: Section A-A Drainage Basin Illustration (Subject to change)

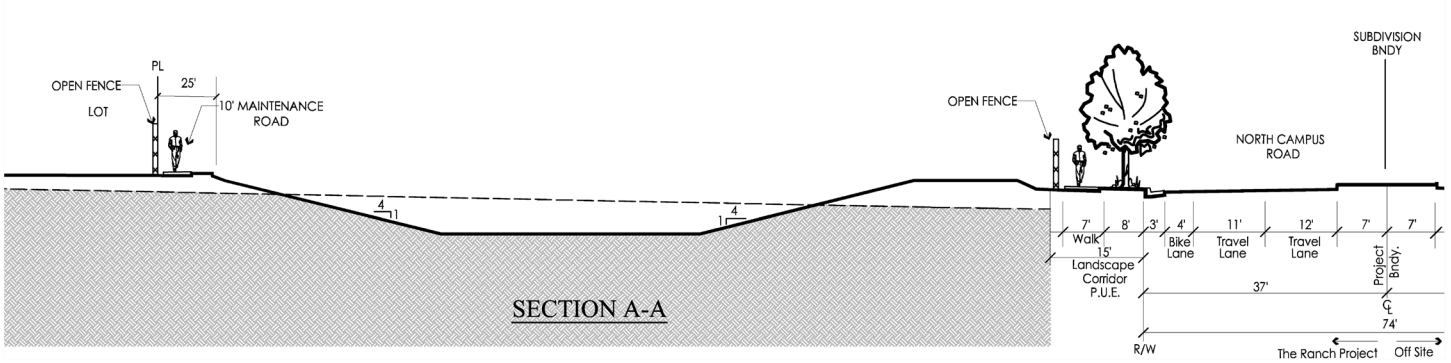

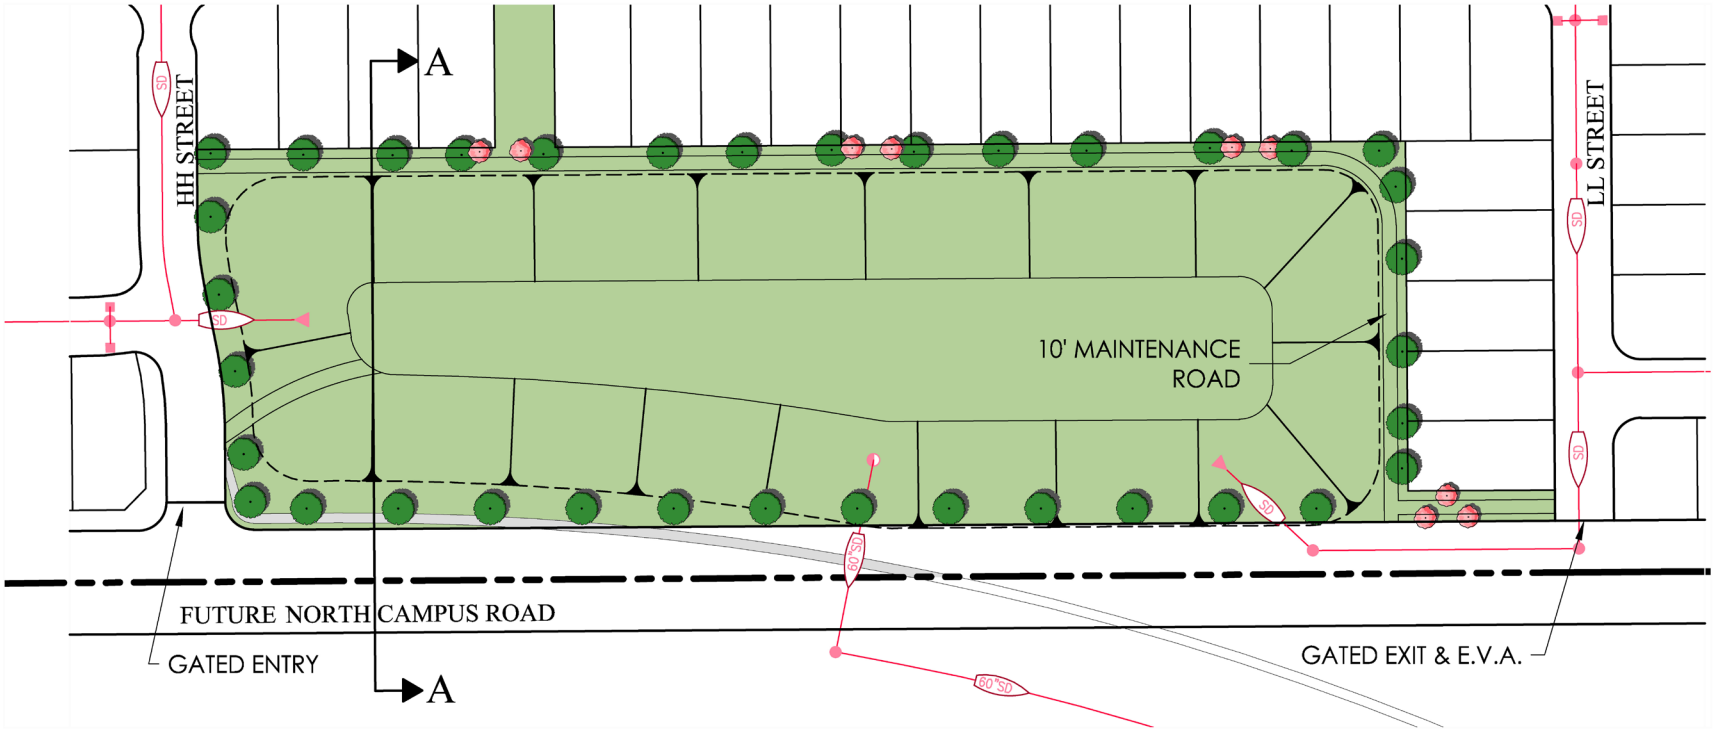

3.10.4 Phasing

A phasing plan has been prepared and included to demonstrate the logical, timely and appropriate completion of the infrastructure and roadway facilities, required to serve the phased build-out of the Plan Area. Refer to Exhibit 55 on the following page for the Phasing Map.

CITY OF RANCHO CORDOVA

ORDINANCE NO. XX-2020

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF RANCHO CORDOVA APPROVING DEVELOPMENT AGREEMENT FOR THE RANCH PROJECT

THE CITY COUNCIL OF THE CITY OF RANCHO CORDOVA DOES ORDAIN AS FOLLOWS:

Section 1. Recitals

A. In order to strengthen the public planning process, encourage private participation in comprehensive planning and reduce the economic risk of development, the Legislature of the State of California adopted Section 65864, et seq., of the Government Code (the "Development Agreement Statute"), authorizing the City, and any person having a legal or equitable interest in the real property, to enter into a development agreement and establish certain development rights in the property, which is the subject of the development project application. Pursuant to Government Code section 65868, Development Agreements may be amended by mutual assent of the parties.

B. The Ranch Special Planning Area Project ("Project" or "Special Planning Area") is a plan for a mixed-use development with a broad range of residential uses, commercial, parks/open space, natural resources, and associated infrastructure and roads on an approximately 530-acre site in the City. The Project includes 1,690 residential units at various densities; of that number of residential uses, 743 residential units are active adult, 5.73 acres of commercial, 14.36 acres of community and neighborhood parks, 8.99 acres of private parks; stormwater detention basins; open-space areas, trails, major roads with landscaping; and a 200 acre wetland natural resource/preserve; and

D. The Special Planning Area's purpose is to create a cluster of walkable residential neighborhoods and a commercial area with park/open space and a 200 plus acre natural resource area. The residential neighborhoods will create a distinctive district for the City and house a work force to enhance the City's jobs/housing balance.

E. In compliance with the requirements of the California Environmental Quality Act ("CEQA"), the City prepared an Environmental Impact Report for the Special Planning Area ("EIR").

F. The property within the Specific Plan area is owned by K. Hovnanian at Jaeger Ranch, LLC (referred to as "Landowner").

G. The Landowner has agreed to enter into a development agreement for The Ranch Special Planning Area. The attached development agreement, attached hereto as Exhibit A ("Development Agreement"), and cover the Special Planning Area.

H. On ____, 2020, the City Council, pursuant to Resolution No. **-2020, certified the EIR, adopted mitigation findings pursuant to CEQA guidelines Section 15091, adopted a statement of overriding considerations, and adopted a mitigation monitoring plan for the Special Planning Area, which covered the attached Development Agreement.

I. On____, 2020, the City Council, as the legislative body for purposes of Development Agreement approval, held a properly noticed public hearing pursuant to Government Code section 65867, and considered all comments received, in writing, and all testimony received at the public hearing.

Section 2: Findings

On the basis of (a) the foregoing Recitals, which are incorporated herein, (b) The Ranch Special Planning Area, (c) the City of Rancho Cordova's General Plan, (d) the Environmental Impact Report for The Ranch Special Planning Area, and (e) on the basis of the specific conclusions set forth below, the City Council finds and determines that:

A. Finding: *The development agreement is consistent with the General Plan objectives, policies, land uses, and implementation programs and any other applicable Specific Plans.*
Evidence: The Development Agreement is consistent with the objectives, policies, general land uses and programs specified and contained in the City's General Plan. In accordance with Government Code section 65867.5(b), the Development Agreement vest the Landowners' right to proceed with development of the property in accordance with the Special Planning Area. The Development Agreement does not amend or revise the development standards in the Special Planning Area. Therefore, the Development Agreement will be consistent with the General Plan if development under the Special Planning Area is consistent with the City's General Plan. The findings and evidence to support this General Plan consistency determination are set forth in the Special Planning Area, 2.2 "General Plan Consistency," Furthermore, (a) the land use designation for The Ranch site allows for residential, commercial, parks/open space, and natural resources, (b) the project is consistent with the fiscal policies of the General Plan and the proposed TRSPA with respect to provision of infrastructure and public services, and (c) the Development Agreement includes provisions relating to financing, construction and maintenance of public facilities, park development fees and similar provisions set forth in The Ranch Special Planning Area.

B. Finding**:** *The development agreement is in conformance with the public convenience and general welfare of persons residing in the immediate area and will not be detrimental or injurious to property or persons in the general neighborhood or to the general welfare of the residents of the city as a whole.*
Evidence: As described above, the development agreement and the project it allows for, are consistent with the proposed General Plan Amendment and Special Planning Area for this site and therefore the development agreement promotes the orderly development of property as well as the preservation of property values, as area properties and their values would be, in part, based on this exact use occurring on this site in the future.

C. Finding: *The development agreement will promote the orderly development of property or the preservation of property values*.
Evidence**:** As described above, the development agreement and the project it allows for, are consistent with the proposed General Plan Amendment and Special Planning Area for this site and therefore the development agreement promotes the orderly development of

property as well as the preservation of property values, as area properties and their values would be, in part, based on this exact use occurring on this site in the future.

D. Finding: The development agreement does not pertain to any property in the protected 200-year floodplain, unless the development agreement contains conditions that will provide an urban level of protection to the property consistent with California Government Code Section 65865.5.

Evidence: The Development Agreement does not pertain to any property in the protected 200-year floodplain.

C. **CEQA Compliance.** In compliance with the requirements of CEQA, the City prepared an EIR for The Ranch project. On_____, 2020, the City Council adopted Resolution No. **-2020 certifying the EIR and adopting environmental findings, a statement of overriding consideration and a mitigation monitoring and reporting program for the Ranch Special Planning Area Project approvals. Resolution No. **-2020 is incorporated herein by reference.

Section 3: Approval of Development Agreement.

The City Council hereby approves the Development Agreement, attached hereto as Exhibit A, in a form approved by the City Attorney, and authorizes the City Manager to execute the Development Agreement. The attached Development Agreement is as follows:

A. Development Agreement by and between the CITY OF RANCHO CORDOVA and K. HOVNANIAN AT JAEGER RANCH, LLC;

Section 4: Recordation.

Within ten (10) days after the Development Agreement is executed by the City Manager, the City Clerk shall submit the Development Agreement to the County Recorder for recordation.

Section 5: Severability.

If any section, subsection, clause or phrase of this Ordinance is for any reason held to be invalid or unconstitutional by the decision of a court of competent jurisdiction, it shall not affect the remaining portions of this Ordinance that can be given effect without the invalid provision and, to this end, the provisions of this Ordinance are severable. This City Council hereby declares that it would have adopted this Ordinance irrespective of the invalidity of any particular portion thereof and intends that the invalid portions should be severed, and the balance of the Ordinance enforced.

Section 6: Publication and Effective Date.

Within fifteen (15) days after adoption, a summary of this Ordinance shall be published once in the Grapevine Independent or the Sacramento Bee, a newspaper of general circulation printed and published in Sacramento County and circulated in the City of Rancho Cordova, in accordance with Government Code section 36933. This Ordinance shall take effect and be enforced thirty (30) days after its adoption.

PASSED AND ADOPTED by the City Council of the City of Rancho Cordova this _____ day of _____, 2020, by the following vote:

DEVELOPMENT AGREEMENT

BY AND BETWEEN

THE CITY OF RANCHO CORDOVA

AND

K. HOVNANIAN AT JAEGER RANCH, LLC

"THE RANCH"

DEVELOPMENT AGREEMENT
"THE RANCH"

This Development Agreement ("Agreement" or "Development Agreement") is entered into as of this ___ day of _____, 2020 by and between the CITY OF RANCHO CORDOVA, a municipal corporation ("City"), and K. HOVNANIAN AT JAEGER RANCH, LLC, a California Limited Liability Company ("Developer"), pursuant to the authority of Government Code section 65864 et. seq., relating to Development Agreements. City and Developer are hereinafter collectively referred to as the "Parties" and singularly as "Party."

RECITALS

A. **Authorization**. To strengthen the public planning process, encourage private participation in comprehensive planning and reduce the economic risk of development, California Government Code section 65864, *et seq.* (the "Development Agreement Statute") and Rancho Cordova Municipal Code chapter 23.158, authorize City and any person having a legal or equitable interest in the real property to enter into a Development Agreement, establishing certain development rights in the Property which is the subject of the development project application.

B. **Definitions**. All capitalized terms as used herein are defined in Section 3 of this Agreement or otherwise herein.

C. **Property**. Developer owns in fee title that certain 530-acre parcel located in the City of Rancho Cordova, County of Sacramento, more particularly described in **Exhibit A** and **Exhibit B**, attached hereto (the "Property"). The marketing name for the Project is "The Ranch."

D. **Public Hearing and Approval of this Agreement**. On _____, 20__, the City Council, serving as City's planning agency for purposes of Development Agreement review pursuant to Government Code section 65867 and Rancho Cordova Municipal Code chapter 23.158, held a public hearing to consider this Development Agreement. Following the hearing, the City Council introduced City of Rancho Cordova Ordinance No. __-20__ approving this Agreement. City Council approved Ordinance __- 20__ on _____, 20__.

E. **Environmental Review**. In compliance with the California Environmental Quality Act ("CEQA"), on _____, 201__, by Resolution No. __- 20___, City certified the Ranch Project Environmental Impact Report ("EIR").

F. **Development Agreement Ordinance**. City and Developer have taken all actions mandated by, and fulfilled all requirements set forth in, Rancho Cordova Municipal Code chapter 23.158, the Development Agreement Ordinance of the City of Rancho Cordova.

G. **Consistency with General Plan**. Having duly examined and considered this Development Agreement and having held properly noticed public hearings hereon, in City Ordinance No. XX-201X, City found that this Development Agreement satisfies Government Code section 65867.5, and this Agreement is consistent with the requirements of the General Plan.

H. **Negotiations**. The Parties have, in good faith, negotiated terms set forth in this Development Agreement, which terms are intended to carry out the legislative purposes of the Development Agreement Statute and Municipal Code chapter 23.158, and which provide for the mutually desirable development of the Property.

AGREEMENT

1. **Incorporation of Recitals**. The Preamble, the Recitals, all defined terms set forth herein, and all exhibits attached hereto, are hereby incorporated into this Development Agreement as if set forth herein in full.

2. **Relationship of City and Developer**. This Development Agreement is a contract that has been negotiated and voluntarily entered into by City and Developer. Neither Party is an agent of the other Party. City and Developer renounce the existence of any form of joint venture or partnership between them. Nothing contained in this Agreement, or in any document executed in connection with this Agreement, may be construed as making City and Developer joint venturers or partners.

3. **Definitions**.

"Age-Restricted Community" means a subdivision which is developed, occupied, and maintained as a "senior citizen housing development" as currently defined in California Civil Code Sections 51.3 and 51.11.

"Affordable Housing Plan" means the plan attached hereto as **Exhibit I**, prepared for the Project in compliance with the City of Rancho Cordova General Plan Housing Element, and in particular with Policy H.1.5, and approved by City on _____, 201_, by Resolution No. __-201__, and implemented pursuant to the Affordable Housing Plan between City and Developer. The Affordable Housing Plan identifies the plans to provide adequate affordable housing in the Project.

"Approved Tentative Map" means the Small Lot Subdivision Map for The Ranch dated June, 2018, with last revision dated November 2019 prepared by Wood Rodgers civil engineers which approval by City Council, if at all, is anticipated to be concurrent with this Development Agreement.

"Backbone Infrastructure" means the infrastructure improvements generally described and listed as Backbone Infrastructure on **Exhibit G**, Guiding Principles for Funding Backbone Infrastructure.

"CC&R Enforcement" means enforcement by Developer and/or a Homeowners Association and/or City of covenants, conditions and restrictions that are recorded against the single family portions of the Property to protect, preserve and maintain the appearance, condition, function and operation of such single family development.

"City CCI Index" means the construction cost index applied by City in documents authorizing the subject fee, assessment or tax to adjust fees to account for changes to the costs of constructionas published by the Engineering News Record, and as may be revised by the City for such Fee Programs.

"City CPI Index" means the Consumer Price Index for San Francisco-Oakland-Hayward (includes 4 Northern California counties) compiled by the US Bureau of Labor Statistics, which is applied by City to adjust the fees, assessments or taxes for changes in the costs of performing and/or providing municipal services.

"City Council" means the City Council of the City of Rancho Cordova.

"Core Backbone Road Infrastructure" means infrastructure roadway improvements to major roadways planned by City, as further described, identified, and listed on **Exhibit G**.

"CRPD" means the Cordova Recreation and Park District.

"Developer's Property" or "Property" means that certain portion of the Project Area located in the City of Rancho Cordova, County of Sacramento, more particularly described in **Exhibit A** and **Exhibit B**, and attached hereto, which is subject to this Development Agreement.

"EDU" means the single-family residential equivalent dwelling unit, as applicable within the context of the applicable improvement, facility or service. All other land uses are assigned EDUs based on their relative impact compared to a single family unit with respect to the applicable improvement, facility or service.

"Entitlements" means

(a) that certain General Plan Amendment approved by Resolution No. __-20__ on _____;

(b) that certain Tentative Large Lot Subdivision Map approved by Resolution No. __-20__ on _____;

(c) that certain Tentative Small Lot Subdivision Map approved by Resolution No. __-20__ on _____;

(d) that certain Special Plan, approved by City on _____, 20__, by Ordinance No. __-20__;

(e) the "Environmental Impact Report" or "EIR" certified by Resolution No. __-20__ on _____;

(f) this Development Agreement, approved by City on _____, 20__, by Ordinance No. __-20__ (the "Adopting Ordinance");

(g) the Affordable Housing Plan approved by City on _____, 20__, by Resolution No. __-20__; and

(h) zoning of the Property approved by City on _____, 20__, by Ordinance No. __-20__.

"General Plan" means the City of Rancho Cordova General Plan, including all appendices thereto, approved by City as of the date of this Agreement.

"Homeowners Association" means an association of owners within the portions of the Property zoned for single family use that is formed and operated, in part, to provide CCR Enforcement.

"Neighborhood Green" means open space to be dedicated pursuant to the Special Planning Area to supplement the park amenities provided by the Parks dedications.

"Parks" means the community and neighborhood parks to be dedicated pursuant to the Special Planning Area.

"Phasing Plan" – means the Infrastructure Phasing Plan that the Developer has prepared pursuant to Section 7.3, and attached to this Development Agreement as shown on **Exhibit C**.

"Private Facilities" means the private facilities generally described and listed as Private Facilities in **Exhibit F**.

"Project" means the planned development of the Property pursuant to the Entitlements.

"Public Facilities" means the public facilities owned by the City, CRPD, or other public agency.

"Regional Trail Network" refers to a system of trails, both existing and planned, that crisscross through the Special Planning Area, as identified in Section 3.8.3 of the Special Planning Area Handbook.

"Small Lot Subdivision Map" means a subdivision map processed and approved pursuant to the Subdivision Map Act that, upon recordation thereof, will create either individual lots or parcels upon which permits for the construction of single-family residential units are intended and may be issued, or for the construction and sale of individual condominium units within a parcel for multifamily residential use.

"Special Plan" means the Special Planning Area Handbook, dated _____ prepared by Developer, including all appendices thereto adopted by City on _____, 2019, by Ordinance XX-2019.

"Special Planning Area" means the entire 530.1 acre area which is the subject of The Ranch Special Planning Area Handbook.

"Subsequent Entitlements" mean those additional permits, plans and approvals that may be approved following approval of the Entitlements, and which will allow for implementation of the Entitlements by subdivision, development and construction within the Project Area. Subsequent Entitlements may include, without limitation, small lot final subdivision maps, parcel maps for non-residential areas, lot line adjustments, conditional use permits, and design review permits.

"TDIF" means City's Transportation Development Impact Fee, as adopted and as revised by City from time to time.

"Turnkey Construction" means the developer is responsible to the agency of jurisdiction ("Agency") for the management and funding of the development, design and construction of the improvements on the parcel(s) that will be deeded to the agency or for parcels the developer will be granted credit for public purpose. The developer must comply with the requirements of the agency's requirements for turnkey process that specifies the agency's oversight and ultimate approval of the end product.

4. Effective Date, Term and Termination.

4.1. Effective Date. The effective date of this Development Agreement ("Effective Date") is _____, 20__ which is the effective date of City Ordinance No. __-20__, adopting this Development Agreement.

4.2. Term. The term of this Development Agreement commences on the Effective Date and extends for a period of twenty (20) years from the Effective Date, unless said term is terminated, modified or extended consistent with the terms of this Development Agreement. This Development Agreement automatically terminates upon expiration of the 20-year term and shall then be of no further force and effect, unless otherwise extended by the Parties. If and when this Development Agreement expires, Developer shall thereafter retain no vested rights under the Entitlements of this Development Agreement, and City shall have the right to modify or repeal the Entitlements and apply new laws, regulations and fees to the development of the Property.

4.3. Tolling and Extension During Legal Challenge or Moratoria. Developer may, at its discretion, extend the term of this Development Agreement for a maximum period of three years pursuant to Gov. Code 66452.6(b-c):

4.3.1. a third-party lawsuit is filed challenging any of the Entitlements or challenging the EIR related to this Project;

4.3.2. the Developer is unable to proceed, or elects not to proceed, with the Project because of litigation described in Section 4.3.1 above; and

4.3.3. the Developer submits to City written notice that this Agreement is tolled.

During any such period that the Agreement and development of the Project are being tolled by Developer, Developer may, at its sole expense and risk, submit applications to process Subsequent Entitlements, including tentative subdivision maps and improvement plans for the Property, provided City shall not be obligated to approve and may defer approval of any final subdivision maps, improvement plans or building permits for the Property during any such tolling period.

4.4. Length of Extension. The tolling period will begin when City receives written notice from the Developer. The tolling period may only extend the term of this Agreement until a final order of judgment is issued upholding the challenged Entitlements or the EIS, as applicable, the case is dismissed, or the three-year

maximum tolling period is reached, whichever is shorter. The Developer may also elect to end the tolling period at any time and proceed with the Project, effective upon delivery of a written notice to City.

5. Vested Rights. Developer shall have the vested right to proceed with development of the Property in accordance with the Entitlements and to have Subsequent Entitlements considered for approval or denial, based upon the terms, standards and requirements set forth in the Entitlements, including without limitation, the Special Plan and Small Lot Subdivision Maps. Except as provided in this Section 5 below, this Agreement does not vest Developer's rights to pay development impact fees, exactions, processing fees, inspection fees, plan check fees, or other permit processing fees or charges.

5.1. Permitted Uses, Density and Intensity, Maximum Height and Size of Structures, and Reservation or Dedication of Land Vested. The permitted uses of the Property, the density and intensity of use, the maximum height and size of proposed buildings, provisions for reservation or dedication of land or payment of fees in lieu of dedication for public purposes, the location and maintenance of on-site and off-site improvements, the location of public utilities, and other terms and conditions of development shall be those set forth in the Entitlements, including the approved Small Lot Subdivision Map shows acreages of the proposed land uses. The Ranch Special Planning Area include the land uses and approximate acreages for the Project as shown and described in Section 1.5 of the Special Plan.

5.2. Vested Against Moratorium, Quotas, Restrictions or Other Growth Limitations. Subject to applicable law relating to the vesting provisions of Development Agreements, City agrees that, except as otherwise provided in or limited by the provisions of this Agreement, this Development Agreement vests the Entitlements against subsequent City ordinances, resolutions, rules, regulations, initiatives, and official policies that directly or indirectly limit the rate, timing, or sequencing of development, or prevent or conflict with the permitted uses, or the density or intensity of uses, or the terms, provisions, standards or requirements for development, as set forth in the Entitlements. To the extent allowed by the laws pertaining to development agreements, however, Developer will be subject to any growth limitation ordinance, resolution, rule, regulation, or policy which is adopted on a uniformly applied, Citywide or area-wide basis, and directly concerns an imminent public health or safety issue, in which case City shall treat in a uniform, equitable and proportionate manner all properties, public and private, which are impacted by that public health or safety issue.

5.3. Vested Rights Exclude Design and Construction. All ordinances, resolutions, rules, regulations, initiatives, and official policies governing design, improvement and construction standards and specifications applicable to the Project, and to public improvements to be constructed by the Developer shall be those in force and effect at the time the applicable permit approval is granted, unless such ordinances, resolutions, rules, regulations, initiatives or official policies are inconsistent with the Entitlements, or the specific terms of this Agreement, in which case the Entitlements, and the terms of this Agreement shall prevail.

5.4. Vested Rights Exclude Changes in State or Federal Law. This Agreement shall not preclude the application to development of the Property of changes in City laws, regulations, plans or policies, the terms of which are specifically mandated and required by changes in state or federal law or regulation. In the event that state or federal laws or regulations enacted after the Effective Date of this Development Agreement prevent or preclude compliance with one or more provisions of this Agreement or any Entitlements, the Parties shall meet and confer in good faith in a reasonable attempt to modify this Agreement and such Entitlements to comply with such federal or state law or regulation. Any such amendment or suspension of this Agreement or Entitlements shall be approved by the City Council in accordance with the Municipal Code and this Agreement.

5.5. Vested Rights Exclude Building and Fire Codes. The Project shall be constructed in accordance with the provisions of the Uniform Building, Mechanical, Plumbing, Electrical and Fire Codes, City standard construction specifications, and Title 24 of the California Code of Regulations, related to Building Standards (collectively "Building Code"), in effect at the time the applicable building, grading, encroachment or other construction permit is granted for the Project. If no permits are required for infrastructure improvements, such improvements will be constructed in accordance with the provisions of the Uniform Building, Mechanical,

Plumbing, Electrical and Fire Codes, City standard construction specifications, and Title 24 of the California Code of Regulations, related to Building Standards, in effect at the time of approval by City of the improvement plans for such infrastructure. If a permit that has been granted expires, the Project shall be required to be constructed in accordance with the provisions of the Uniform Building, Mechanical, Plumbing, Electrical and Fire Codes, City standard construction specifications, and Title 24 of the California Code of Regulations, related to Building Standards, in effect at the time the applicable replacement permit to the expired building, grading, encroachment or other construction permit is granted for the Project.

5.6. Vested Rights Exclude Processing Fees and Charges. Developer shall pay those processing, inspection, and plan check fees and charges required by City under ordinances, resolutions, rules, regulations, initiatives, and official policies which are in effect when such fees or charges are due under then-existing code or policy.

5.7. Vested Rights Limited for Development Impact Fees, Exactions and Dedications. Developer shall pay all development impact fees, connection or mitigation fees, and exactions required by City to support the construction of any public facilities and improvements or the provision of public services in relation to development of the Property (together "Exactions") authorized by City after the Effective Date, as long as said Exactions otherwise comply with applicable law, and are either (i) required on a Citywide basis, (ii) apply uniformly to all properties within City that are zoned with density and uses similar to those of the subject properties in the Entitlements, or (iii) apply on a fair share basis to all properties that are similarly situated within the portion of the City located south of Highway 50 and east of Sunrise Boulevard.

Except as otherwise provided in this Agreement and/or contemplated by the Special Plan Area, exactions required by City to be paid by Developer that do not meet one of the preceding criteria shall only be the Exactions that were authorized on the Effective Date. Furthermore, notwithstanding anything to the contrary in this Section 5.7, in consideration of Developer's obligations under Section 8 hereof to comply with the Affordable Housing Plan applicable to the Property, development of the Property shall not be subject to any other impact fee, mitigation fee or exaction related to the provision of affordable housing or inclusionary housing, or other such fee or exaction related to the provision of affordable housing or inclusionary housing that may be subsequently adopted by City during the period that this Section 5.7 is vested by this Agreement.

5.8. Subsequent Entitlements. Subject to Section 14.1.1 hereof, City shall accept for processing, review and action any and all applications submitted by Developer for Subsequent Entitlements, necessary or convenient for the exercise of Developer's rights under the Entitlements for the use and development of the Property.

5.9. Term of Tentative Maps. Consistent with the authority provided in Government Code section 66452.6(a)(1), the term of any tentative subdivision map approved for all or any portion of the Property shall be the later of the date this Agreement expires or the date the tentative map expires pursuant to City approval of the tentative map pursuant to the City of Rancho Cordova Municipal Code, including without limitation Section 22.20.060 ("Expiration of Tentative Map Approval"), as it may be modified from time to time by state law.

5.10. CC&R Enforcement and Property Maintenance Code. Developer agrees to establish, with input from City, and record covenants, conditions and restrictions ("CC&Rs") against the individual parcels within the Project prior to their sale that will protect, preserve, and maintain the appearance, condition, function and operation of the single family home development in a similar manner to the City's Property Maintenance Code within Sections 16.18.1700 through 16.18.1709 of the City's Municipal Code, as may be amended from time to time. City may impose a condition, as part of subsequent approvals, for the Developer to include a copy of the Property Maintenance Code as part of individual home sale documents. City may impose a condition, as part of subsequent approvals for single family development, for the Developer to establish a mechanism acceptable to City to provide for CC&R Enforcement within the single family portions of the Property by Developer and/or a Homeowners Association.

If City elects to develop a City program for providing CC&R Enforcement that includes the Project Area and to form a financing mechanism to fund the costs of such program, Developer shall retain the option, at its sole discretion, to elect to either include the Property for participation in City's CC&R Enforcement Program or to provide such CC&R Enforcement for the Property through a Homeowners Association, separate and apart from City's program. If Developer elects to provide its own CC&R Enforcement through a Homeowners Association, so long as the Homeowners Association provides adequate CC&R Enforcement within the Property comparable to City's CC&R Enforcement program, as confirmed by City in its reasonable discretion, City will exempt the Property from any special taxes or assessments otherwise levied by City to fund the costs of City's CC&R Enforcement program.

6. Park Development and Community Places Fee Obligations.

6.1. Park Development Fee and Community Places Fee.

i) Dedication of Parkland. Developer's obligation to dedicate 19.00 acres of park land to the Cordova Recreation and Park District (the "Park District") pursuant to California Government Code Section 66477 (the "Quimby Act") shall be satisfied by Developer's dedication of Lots T, D, and R to the Park District and by the creation of private park amenities in the Special Plan Area identified as Lots A, B, and C as set forth more specifically in **Exhibit E** (the "Dedicated Lands"). Developer's obligation to dedicate 3.80 acres of open space land to the City shall be satisfied by Developer's dedication of Neighborhood Greens to the City, identified as Lots C, S, Q, and U as set forth more specificially in **Exhibit E.** City agrees and acknowledges that Developer's dedication of the Dedicated Lands will satisfy the Developer's dedication requirements of Resolution No. 28-2005. Specific population factors of 2.95 persons per household ("pph") for market rate single family residential, 1.54 pph for multifamily residential, 2.0 pph for age-restricted single family residential, and 1.04 pph for the age-restricted multifamily residential products have been established and agreed upon for this Project.

ii) Park Development Fee and Community Places Fee – Market Rate Housing.

The Developer will pay a Park Development Fee in the amount of $9,931.37 per Market Rate Single Family EDU and a Community Places Fee in the amount of $1,421.19 per Market Rate Single Family EDU (excluding fee credits, as applicable) when each building permit for residential development is issued within market rate housing portion of the Project. Pursuant to the terms of a future Park Development Agreement between the Park District and Developer, the Park Development Fee shall be so reduced to reflect Developer construction of the neighborhood park on Lot T and the community park on Lot D and parking facilities on Lot R as agreed upon by the Park District. The Park Impact fee credits will be specified in the Park Development Agreement between the Park District and Developer. Pursuant to the terms of a future Credit/Reimbursement Agreement with the City, the Community Places Fee payable to the City shall be reduced to reflect Developer Turnkey Construction of the Neighborhood Green or other community places amenities as agreed upon by the City on Lots S, Q, U and a portion of Lot R.

iii) Park Development Fee and Community Places Fee – Age-Restricted.

The Developer shall Turnkey Construct all park and recreational facilities identified in the Special Plan on the parcels identified as Lots A, B, and C in **Exhibit E** in the Age-Restricted Community portion of the Project Pursuant to the terms of a future Park Development Agreement between the Park District and Developer, the Park Development Fee shall be so reduced to reflect Developer Turnkey Construction of the neighborhood park on Lot T and the community park on Lot D as agreed upon by the Park District. Pursuant to the terms of a future Credit/Reimbursement Agreement with the City, the Community Places Fee payable to the City shall be reduced to reflect Developer Turnkey Construction of the Neighborhood Green or other community places amenities as agreed upon by the City on Lots S, Q, U and a portion of Lot R.

iv) The Park Development Fees and the Community Places Fees shall be adjusted on January 1, 2020 and annually thereafter, no later than January 15th by the method provided in City CCI Index as follows:

(a) A "mean" index will be computed by averaging the index for 20 U.S. cities with the index for San Francisco by resort to the most recent October issue of the Engineering News Record Magazine Construction Cost Index.

(b) An adjustment factor shall be computed by dividing the "mean" index as calculated in subsection (a) of this Section by the "mean" index for the previous October.

(c) The adjusted Park Development Impact Fee and Community Places Fee shall be calculated by multiplying the adjustment factor, as calculated in subsection (b) of this Section, by the Park Development Impact Fee and the Community Places Fee in place prior to the annual adjustment.

6.2. Timing of Dedications of Parks. Prior to the recordation of any residential Small Lot Subdivision Map in the Project which contains a portion of the Dedicated Lands, Developer shall, at the sole discretion of City, to the extent permitted by law: (i) irrevocably offer for dedication to City or the CRPD that portion of the Dedicated Land that is encompassed within such residential Small Lot Subdivision Map and which is identified in the Specific Plan as a Park, (ii) irrevocably offer for dedication to City or the CRPD that portion of the Dedicated Land that is encompassed within such residential Small Lot Subdivision Map and which is identified in the Specific Plan as a Neighborhood Green, and (iii) enter into park development agreements with the CRPD or City, as applicable, for the improvement of the lands that CRPD or City will be dedicated within such residential Small Lot Subdivision Map. If and to the extent a park development agreement provides for the design and construction of any improvements included within the Park Development Fee or Community Places Fee, then the park development agreement shall include provisions for fee credits and/or reimbursements from the applicable Park Development Fee and/or Community Places Fee. The amount of any such Park Development Fee and/or Commnity Places Fee credits and reimbursements shall be based on the amount budgeted by the applicable Park Development Fee and/or Commnity Places Fee program for the cost of the creditable improvements, including soft costs and contingencies related thereto, and shall not be subject to adjustment based on the actual costs incurred by Developer to design and construct such creditable Park and/or Neighborhood Green improvements. In particular recognition of the importance of the timing of Park and Neighborhood Green construction in relation to the build out of adjacent subdivisions, Developer agrees that for all park development agreements, whether between the City and the Developer or between the Developer and CRPD, Developer must obtain the City's agreement to the terms regarding the timing of development of turnkey Parks and Neighborhood Greens in the Project prior to the approval of the tentative map for each phase, which agreement shall not be unreasonably withheld.

6.3. Community Renovation Fee. Developer agrees that it shall pay City the total sum of $1,193.17 for each single family dwelling unit and $932.16 for each multifamily dwelling unit (the "Community Renovation Fee"); provided that the Community Renovation Fee shall not be paid for any unit constructed on any parcel dedicated to the City pursuant to the Affordable Housing Plan. Beginning January 1, 2020, the Community Renovation Fee shall be adjusted annually on each January 1 based upon City CPI Index. The Community Renovation Fee shall be paid to City upon issuance of a building permit for each residential unit within the Property. It shall be used by City, at its sole discretion, to acquire, renovate, repair, improve or maintain community facilities, parks, Neighborhood Greens or other open space in the City. This payment is made voluntarily by Developer. It is paid in addition to all other existing park fees, and construction and dedication obligations, including without limitation any fees paid pursuant to California Government Code Section 66477 (the "Quimby Act"), and the Community Places Fee described in Section 6.1 above. Developer agrees that it shall not claim any credit against or right to reimbursement from any other existing park fees, and construction and dedication obligations, including Quimby Act fees, or the Community Places Fee as a result of paying the Community Renovation Fee required under this Section 6.3.

Developer voluntarily agrees to construct an off-tract segment of the Regional Trail Network that connects the Developer's northerly trail terminus to an existing trail terminus at Canyonlands Drive. City shall award Developer

fee credits towards the Community Renovation Fee in an amount equal to a City approved engineer's estimate of construction costs.

7. **Infrastructure and Maintenance Finance.**

7.1. Infrastructure Finance. Prior to approval of a Small Lot Subdivision Map, or for residential properties that do not require subdivision, prior to issuance of building permits, City and Developer will cooperate to establish one or more Mello-Roos Community Facilities Districts, pursuant to and as authorized by Government Code sections 53311 et seq., to fund necessary Backbone Infrastructure and Public Facilities.

7.2. Maintenance Finance. Prior to approval of a Small Lot Subdivision Map, or for residential properties that do not require subdivision, prior to issuance of building permits, City and Developer will complete all actions needed to form, annex into, and/or implement the funding mechanism(s), including financing districts and special taxes, to pay to maintain existing and new public improvements associated with or needed to serve the Project. Developer shall participate in, vote in favor of, and pay all costs incurred by City associated with such actions consistent with this Agreement, the SPA, or the conditions of approval on the Entitlement. The amount of special taxes or assessments to be included in each new maintenance or services district referred to herein and identified for formation shall not exceed the amounts reasonably determined by City during the formation of such finance district to fund the operations, maintenance and/or services to be financed thereby.

The funding mechanisms for such maintenance may include, but are not limited to the following:

7.2.1. Street, Lighting and Landscape Maintenance. Developer and City agree that the Developer will participate in or provide a funding mechanism for maintenance services for the fair share of existing and all new public improvements associated with the project including, but not limited to, streets, bridges/culverts, traffic signals, traffic signs, striping and legends, intelligent transportation systems (ITS), operations, streetlights and safety lights, and public frontage and median landscape improvements. This may be accomplished through annexation to the City's Communities Facilities District No. 2014-2 (Street, Lighting and Landscaping Maintenance), or other financial mechanism as may be proposed and provided by the Developer for the same purpose of providing a financial mechanism to fund the operation and maintenance of the Project's public improvements. If the Developer does not provide another financial mechanism, the Developer will support the annexation of the Project into CFD 2014-2, and cover the Developer's fair share costs of the CFD annexation not to exceed Five Thousand dollars ($5,000) per annexation. The Age-Restricted Community portion of the project will participate in this CFD at a reduced rate to reflect HOA maintenance of the private streets in the gated community and fair share City maintenance of public streets and soundwalls on public property. The reduced rate at FY 19/20 amounts are estimated to be $301.58 per single family unit and $171.91 per multifamily unit, such rates to inflate annually per the method described in the CFD.

7.2.2. Park Maintenance. Developer and City agree that the Developer will participate in or provide a funding mechanism for maintenance services for the Project's associated financial impacts to the operation, maintenance and capital replacement of existing and proposed public parks that are maintained by the Cordova Recreation and Park District. This may be accomplished through annexation to CRPD's Communities Facilities District No. 2018-1 (Park Facilities and Services), or other financial mechanism as may be proposed and provided by the Developer for the same purpose of providing a financial mechanism to fund the operation and maintenance of the Project's public park improvements. If the Developer does not provide another financial mechanism, the Developer will support the annexation of the Project into CFD 2018-1 (Park Facilities and Services), and cover the Developer's fair share costs of the CFD annexation not to exceed Seven Thousand dollars ($7,000) per annexation. The Age-Restricted Community portion of the Project will participate in this CFD at a reduced rate commensurate with the reduced benefit to this portion.

7.2.3. Community Places and Neighborhood Greens Maintenance. Developer and City agree that the Developer will participate in or provide a funding mechanism for maintenance services for the Project's associated community places and Neighborhood Greens. This may be accomplished through annexation to the City's Communities Facilities District No. 2018-2 (Community Places and Neighborhood

Greens), or other financial mechanism as may be proposed and provided by the Developer for the same purpose of providing a financial mechanism to fund the operation and maintenance of the Project's public community places and Neighborhood Green improvements. If the Developer does not provide another financial mechanism, the Developer will support the annexation of the Project into CFD 2018-2 (Community Places and Neighborhood Greens), and cover the Developer's fair share costs of the CFD annexation not to exceed Five Thousand dollars ($5,000) per annexation. The Age-Restricted Community portion of the project will participate in this CFD at a reduced rate to reflect HOA maintenance of the neighborhood greens in the gated community and fair share City maintenance of public community places, regional trails and neighborhood greens. The reduced rate at the FY 18/19 amount shall not exceed $48.83 per single family unit and $25.55 per multifamily unit, such rates to inflate annually commencing FY 19/20 per the method described in the CFD.

7.2.4. Support for a Special Tax for Transit-Related Services. The Property will be subject to a special tax on the Property to pay for transit related-services for the Project. The base year FY 2019/2020 Transit-Related Services Tax shall be $114.75 per low density residential unit, $91.80 per medium density residential unit, $68.65 per high density residential unit, $2,942.45 per acre for retail and service commercial, and $2,429.15 per acre for commercial mixed use. This special tax will be adjusted annually commencing with the FY 2020/2021 annual levy, in accordance with the City CPI Index.

7.2.5. Stormwater Utility Fee. Developer and City agree that the Developer will participate in or provide a funding mechanism for maintenance services for the Project's public stormwater drainage and flood protection system. This may be accomplished through annexation to the City's Stormwater Utility Fee District, or other financial mechanism as may be proposed and provided by the Developer for the same purpose of providing a financial mechanism to fund the operation and maintenance of the Project's public stormwater and flood protection system. If the Developer does not provide another financial mechanism for the public system, the Developer will support the annexation of the Project into the City's Stormwater Utility Fee District, and cover Developer's fair share costs of the annexation not to exceed Seven Thousand dollars ($7,000) per annexation. The Age-Restricted Community portion of the project will participate in this District at a reduced rate to reflect HOA maintenance of the detention basin in the gated community and fair share City maintenance of public drainage improvements. The reduced rate at FY 19/20 amounts are estimated to be $30.61 per single family unit and $287.19 per acre for the multifamily parcel, such rates to inflate annually per the method described in the CFD.

7.2.6. Annexation into CFD No. 2013-2 (Police Services). Prior to recordation of the first Small Lot Subdivision Map or for residential properties that do not require subdivision, prior to issuance of building permits, the Developer shall support the annexation of the Project into CFD 2013-2 (Police Services) and cover Developer's fair-share costs of the CFD annexation, not to exceed $5,000 for the Participating Developer's Properties. City agrees that the CFD will provide that on lands designated for all residential land use categories, the base year FY 2018/2019 Police Maximum Services Special Tax shall be Five Hundred Forty-four Dollars and Seventy-Six ($544.76) annually per residential dwelling unit, including multi-family units, or Three Hundred Sixty Three Dollars and Seventeen cents ($363.17) annually per Age-Restricted Community dwelling unit. The special tax imposed by the CFD will be payable on a parcel within the Property only after a building permit has been issued by City for the construction of a building on that particular parcel, and there will be no undeveloped land tax imposed by the CFD. The CFD shall further provide that on each July 1 commencing July 1, 2019, the base year Police Special Tax shall be escalated by the increase, if any, in the City CPI Index. However, in no event shall the tax per parcel for any fiscal year be less than the amount established for the prior fiscal year. The CFD shall specify that the Police Special Tax shall commence being payable annually following the issuance of a building permit for each parcel subject to the Police Special Tax.

The Developer acknowledges that no Small Lot Subdivision Map, or for residential properties that do not require subdivision, prior to issuance of building permits, shall be submitted to City for approval prior to annexation of the Property to the Police Services CFD; provided Developer may, at its own risk, process and obtain approvals of any tentative subdivision maps for the Property and submit applications for and process, but not obtain final approval of, any final subdivision maps and improvement plans related thereto.

7.2.7. Special Taxes. Developer agrees that it will not vote to repeal or amend any of the special taxes being imposed in the amounts or as set forth in Sections 7.2.1 through 7.2.6, inclusive, and that any such vote by Developer would constitute an event of default under this Agreement. In the event of such a default by Developer, then in addition to all other remedies available to City, Developer shall be obligated to annually pay under this Agreement the difference between the amount of the special taxes identified in Sections 7.2.1 through 7.2,6 after the Developer's vote to repeal or amend the tax, and the amount of the proposed Police Special Tax set forth above.

7.2.8. Homeowner Associations.

7.2.8.1. Age-Restricted Community. Developer hereby agrees to form a Homeowner Association to maintain certain infrastructure components in the Age-Restricted Community portion of the Project: residential streets, street lights, sidewalks, drainage facilities, private parks, frontage landscaping at the entrances, entrance gates, clubhouse recreation facility, and common areas and other amenities as appropriate, and similar portions of the Property as a common interest development under the Davis-Stirling Common Interest Development Act. A map of the facilities that shall be owned and maintained by the Homeowner Association is shown in **Exhibit F**.

7.2.8.2. Market Rate Portion. Developer shall form a separate Homeowner's Associaton for the Market Rate portion of the Project for the exclusive purpose of enforcing the CC&Rs that are recorded against the properties to protect, preserve, and maintain the appearance, condition, function, and operation of the entire Project.

7.2.8.3. CC&R Enforcement. The purpose of the Homeowner Associations will be to enforce the rules and regulations for both Market Rate and Age-Restricted Community portions of the Project as adopted from time to time by its board of directors, enhance and protect the value, desirability, and attractiveness of the community, and discharge such other lawful duties and responsibilities as may be required pursuant to its bylaws and the declaration of CC&Rs to be recorded in the Office of the Recorder of Sacramento County, State of California, with respect to the residential planned development. The City shall be identified on the CC&Rs as a third-party beneficiary for purposes of exercising the duties and covenants imposed therein and shall be entitled to, without obligation, take appropriate legal action to enforce those duties and covenants. If an action is commenced, the City shall be entitled to recover costs including attorneys' fees.

7.2.8.4. Discretionary Maintenance. Subject to City approval, Developer using Declarant powers has the option to specify other additional maintenance obligations as the responsibility of the Homeowner Association including public facilities, if Developer determines that the Homeowner Association can perform such obligations cost effectively. If Developer desires to exercise this option and City agrees, then the City funding mechanism for maintainence, such as a CFD, shall be modified so that the assessment applied to homeowner property tax bills is reduced to reflect the cost savings for item(s) to be maintained by the Homeowner Association.

7.2.9. Amounts and Effect of Alternative HOA Maintenance. As provided above pursuant to Sections 7.2.1, 7.2.2, 7.2.3, and 7.2.5, the fees, special taxes or assessments to be established for these additional financing districts shall not exceed the amounts reasonably determined by City to fund the operations, maintenance and/or services to be financed thereby, subject to annual adjustments thereto based on the City CPI Index. The final amounts of the fees, special taxes or assessments for these additional districts shall be established during the formation of such finance districts as part of the implementation of the Special Plan Area. Furthermore, if and to the extent a Homeowners Association elects to perform any of the maintenance obligations that would otherwise be performed by the districts described in Sections 7.2.1, 7.2.2, 7.2.3 or 7.2.5 above, subject to City's satisfaction, in its reasonable discretion, with the adequacy of the performance thereof by the Homeowners Association, the applicable maintenance financing districts shall include a mechanism whereby the amount of the special taxes or assessments to be levied thereby shall be credited by the savings

to be realized by the districts from the performance of such maintenance obligations by the Homeowners Association and the relieving of the districts from having to perform such maintenance obligations.

7.3. Infrastructure Phasing Plan. Prior to approval of any large lot tentative map, Developer shall provide a large lot phasing plan addressing sequencing and full build-out of major public onsite and offsite infrastructure necessary to support the project. The large lot phasing plan shall show all public facilities including but not limited to, major roadways, signals, trails, pedestrian over/under crossings, sewer, water, drainage facilities, parks and Neighborhood Greens, and other utilities, and shall be prepared to the satisfaction of the City Public Works Department. The large lot phasing plan may be amended from time-to-time upon written approval by the Public Works Director. The large lot phasing plan shall be in substantial compliance with the infrastructure phasing plan included as a part of this DA and to the satisfaction of the Public Works Director (**Exhibit C**).

Prior to approval of any Small Lot Subdivision Map for an individual phase, the Developer shall prepare and submit to City a small lot phasing plan that addresses full build-out of all onsite and offsite infrastructure necessary to support the project, including all secondary streets and utility infrastructure. The small lot phasing plan will show the blocks of the small lot tentative map to be constructed and all roads, signals, trails and other infrastructure required to serve the use of the proposed units within each block to the satisfaction of the City's Public Works Department.

Prior to issuance of building permits (except permits for model homes and clubhouse) within an individual map phase, all streets and improvements shown on the large lot and small lot phasing plans, all streets necessary for access to the proposed homes, associated improvements included in the approved improvement plans and other infrastructure as necessary for adequate public access and use shall be substantially complete to the satisfaction of the Public Works Director. These improvements including sound walls and landscaping shall be fully constructed to the satisfaction of the City's Public Works Department prior to the first occupancy. The Phasing Plan may be amended from time-to-time upon written approval by the Public Works Director.

7.4. County Reciprocal Funding Agreement. City has concluded good faith negotiations with the County of Sacramento ("County") to enter into a reciprocal funding agreement between City and County to address impacts of developing the SPA on Sacramento County roadways, as well as other cross-jurisdictional roadway impacts related to planned development in the City and County. Through Developer required roadway and signal improvements as negotiated between the Developer and City, the City has determined that Developer has fully satisfied its obligations with regard to the requirement for the County Reciprocal Funding Agreement.

7.5. Transportation Set-Aside. As more particularly described in **Exhibit G**, City and Developer agree that a TDIF Set-Aside will be used to establish a dedicated revenue source to help fund certain Core Backbone Road Infrastructure. The TDIF Set-Aside shall not apply to non-residential uses. **Exhibit G** details the requirements and administration of the TDIF Set-Aside. Developer and City acknowledge and agree that the availability of credits or reimbursements for roadway constructed by Developer within or off-site of the Special Planning Area shall be subject to and administered in accordance with the TDIF Set-Aside provisions in **Exhibit G**. City further acknowledges that the administration and maintenance of the TDIF Set-Aside will automatically sunset and terminate when City has secured full funding for the Rancho Cordova Parkway interchange project, alternative funding approved by City therefor has been secured.

7.6. Off-Site Intersection Improvements. The traffic mitigation measures for the Project, as set forth in Sections 3.13-3, 3.13-4, and 3.13-5 of the Project EIR, include signal and/or striping improvements at the intersections of Douglas Road at Sunrise Boulevard, Sunrise Boulevard at White Rock Road, and Sunrise Boulevard at Zinfandel Drive. City has relieved Developer of the obligation to construct those improvements and City shall assume the responsibility to fund and construct the improvements. Subject to applicable laws and regulations, the timing of the construction of the improvements is at the discretion of the Public Works Director.

8. **Affordable Housing.** Developer shall comply with all terms, conditions and requirements under the Affordable Housing Plan applicable to the Property. Any failure by Developer to perform any material term, condition or requirement of the Affordable Housing Plan applicable to the Property is a violation of this Agreement, subject to default under Sections 13 and 14 herein. Dedication and/or transfer of Village 23 to City will generate fee credits applicable to City's affordable housing in-lieu fee, as further identified and described in the Affordable Housing Plan, attached as **Exhibit I**. City acknowledges that Developer's compliance with all the terms, conditions and requirements of the Affordable Housing Plan applicable to the Property shall fully satisfy Developer's obligations to provide affordable housing or inclusionary housing or other such fee or exaction related thereto associated with development of the Property.

9. **Dedication of Public Rights of Way and Other Public Lands.** Within thirty (30) days of receipt of a written dedication request from City, including without limitation any such request by City to accommodate a requirement for another developer to build any SPA Backbone Infrastructure within any portion of the Property in connection with the development of the other developer's property, Developer shall grant irrevocable dedications of rights of way and easements to City, in a form acceptable to City, for those portions of the Property required to construct such Backbone Improvements, which may include water, sewer, and storm drain facilities not within a right-of-way. The cost of preparing the dedication documents, including the engineering and surveying costs related thereto, shall be paid by the developer initiating or necessitating the request for the dedication. In addition to granting such irrevocable offers of dedication, Developer shall also grant temporary construction easements for reasonable access onto the Property to construct such Backbone Improvements, which shall be assignable to any developer who intends to construct such Backbone Infrastructure. Developer shall obtain the consent of any and all beneficiaries under any deeds of trust or mortgages or other such holders of monetary claims or liens against the Property to subordinate their interests therein to such dedicated rights of way and easements. The alignment of said rights of way and/or easements shall substantially conform to the alignment shown on the Approved Tentative Map.

9.1. Off-site Improvements (Acquisition). Developer may be required to perform off-site improvements. If Developer is unable to secure sufficient title or interest for lands despite Developer's best faith effort, nothing shall prohibit Developer from exercising any and all rights available to it pursuant to Government Code section 66462.5 prior to the filing of any final or parcel map for which such off-site improvement was conditioned.

10. **Participation in the South Sacramento Habitat Conservation Plan.** City and Developer recognize that mitigating impacts on protected natural resources through a coordinated regional approach may provide a variety of biological and economic benefits. City has adopted the South Sacramento Habitat Conservation Plan ("SSHCP") in order to mitigate such impacts for public improvement projects and private development within the City. Developer shall pay City a per-acre fee based upon the methodology established by City to defray the costs of City to participate in the development of the SSHCP, to the extent such costs are not otherwise included in the SSHCP. The Project is within the boundaries of the SSHCP, and therefore, prior to issuance of the SSHCP Permit, Developer shall obtain and have all necessary permits (federal, state, regional, and/or local) to ensure compliance with the adopted SSHCP.

11. **Amendment or Cancellation.**

11.1 Amendment by Mutual Consent. This Agreement may be amended in writing from time to time by mutual consent of the Parties hereto, and in accordance with the procedures of state law and the Municipal Code. Any amendment of the Entitlements that does not constitute a Minor Revision as defined in the Specific Plan shall require amendment of this Agreement. Any such amendment may be requested and made only as to a portion of the Property, in which case only the owner(s) of such portion of the Property subject thereto shall be required to apply for and sign such partial amendment of this Agreement.

11.2 Cancellation by Mutual Consent. Except as otherwise permitted herein, this Agreement may be canceled in whole or in part only by the mutual consent of the Parties or their successors in interest, in

accordance with Municipal Code. Any fees paid pursuant to this Agreement and spent by City prior to the date of cancellation shall be retained by City.

11.3 Automatic Termination Upon Completion and Sale of Residential Unit. This Agreement shall automatically be terminated, without any further action by either party or need to record any additional document, with respect to any single-family residential lot designated by the Special Planning Area for residential use, upon completion of construction and issuance by City of a final inspection for a dwelling unit upon such residential lot and conveyance of such improved residential lot by Developer to a bona-fide good faith purchaser thereof. In connection with its issuance of a final inspection for such improved lot, City shall confirm that: (i) all improvements which are required to serve the lot, as determined by City, have been accepted by City; and (ii) the lot is included within any financing districts or mechanisms required by Section 7 or other financing mechanism acceptable to City, to the extent required hereby. Termination of this Agreement for any such residential lot as provided for in this Section 11.3 shall not in any way be construed to terminate or modify any assessment district or Mello-Roos Community Facilities District lien affecting such lot at the time of termination.

11.4 Termination Upon Developer Request. This Agreement may also be terminated, at the election of the then property owner, with respect to any legally subdivided parcel designated by the Specific Plan for residential or nonresidential use (other than parcels designated for public use), when recording a final subdivision map for such parcel, or receiving a certificate of occupancy or final inspection, whichever is applicable, for a multifamily or nonresidential building within such parcel, by giving written notice to City of its election to terminate the Agreement for such parcel, provided that: (i) all improvements which are required to serve the parcel, as determined by City, have been accepted by City; (ii) the parcel is included within any financing districts or mechanisms required by Section 7, or other financing mechanisms acceptable to City, to the extent required hereby; (iii) all other financial obligations to City under this Agreement that are outstanding or may become outstanding upon subsequent development of the Property, or portion thereof subject to such termination, have been satisfied, including without limitation satisfaction of all obligations under Sections 6 and 7.3 hereinabove to pay any Park Development Fee, Community Renovation Fees, Community Places Fees, planning reimbursements, and/or roadway frontage reimbursements that are then outstanding or may become payable upon further development of the Property or portion thereof subject to such termination; and (iv) the Developer of such portion of the Property is not in Default of this Agreement and no notice of Default has then been issued by City with respect to such portion of the Property. City shall cause any written notice of termination approved pursuant to this Section to be recorded with the Sacramento County Recorder against the applicable parcel at Developer's expense. Termination of this Agreement for any such residential or nonresidential parcel as provided for in this Section 11.4 shall not in any way be construed to terminate or modify any assessment district or Mello-Roos Community Facilities District lien affecting such parcel at the time of termination.

12. Annual Review.

12.1. Annual Review. City reserves the right to annually monitor and review Developer's good faith compliance with the terms of this Agreement and the Entitlements.

12.2. Monitoring. City has discretion to monitor the continuing compliance of the terms of this Agreement and the Entitlements by updating decision-makers, conducting field inspections, implementing and interpreting requirements, monitoring any litigation relating to the Property, and taking any other actions City may find appropriate.

12.3. Annual Review Date. City intends to conduct an annual review each year during the term of this Agreement in September of each year after the Effective Date.

12.4. Initiation of Review. City's Planning Director initiates the annual review by giving Developer written notice that City will conduct the annual review. The Planning Director's written notice will include an estimate of the total costs City expects to incur in connection with the review. Within thirty (30) days of City's notice, Developer must provide evidence to the Planning Director to demonstrate good faith compliance with this Development Agreement. The burden of proof, by substantial evidence of compliance, is upon the

Developer. City's failure to timely initiate the annual review is not a waiver of the right to conduct a review at a later date or otherwise enforce the provisions of this Development Agreement. Developer is not in default under this Agreement by virtue of a failure by City to timely initiate review.

12.5. Staff Reports. City shall deposit in the mail to Developer a copy of all staff reports and related exhibits concerning contract performance at least twenty (20) days prior to any annual review. City shall also, to the extent practicable, make reasonable efforts to provide simultaneous notice to Developer by e-mail or other then-available means of electronic technology.

12.6. Costs. Costs reasonably and directly incurred by City in connection with the annual review and monitoring shall be paid by Developer in accordance with the City's schedule of fees and billing rates in effect at the time of review.

12.7. Non-compliance with Agreement; Hearing. Subject to Section 14 below, if the Planning Director determines, on the basis of substantial evidence, that Developer has not complied in good faith with the terms and conditions of this Development Agreement during the period under review, the City Council may initiate proceedings to modify or terminate the Agreement, at which time an administrative hearing shall be conducted in accordance with the procedures of state law. As part of that final determination, the City Council may impose conditions on the Project that it considers necessary and appropriate to protect the interests of City. Developer may, at the same hearing, raise any and all issues of non-compliance by City with the terms of this Development Agreement, and the City Council shall review and make findings concerning the compliance of all Parties to the Agreement.

12.8. Appeal of Determination. The decision of the City Council as to Developer's compliance shall be final. Any court action or proceeding to challenge, review, set aside, void, or annul any compliance determination by the Council must be commenced within thirty (30) days of the final decision of the City Council, or the Developer forfeits the right to seek judicial review.

13. Violation of Entitlements. In addition to complying with all terms of this Agreement, Developer agrees to perform all terms, conditions and requirements of all other Entitlements. Any failure by Developer to perform any material term, condition or requirement of any of the other Entitlements or Subsequent Entitlements is a violation of this Agreement, subject to default under Section 14. City acknowledges that the timing and implementation of any development of the Property shall be at the discretion of Developer, and that unless and until the Developer elects to develop any portion of the Property, the only obligations of the Developer hereunder shall be to dedicate public rights or way and lands and grant temporary construction easements as, if and when required pursuant to Section 9 above.

14. Default and Opportunity to Cure. Subject to any applicable extension of time agreed to by the Parties in writing, failure by any Party to perform any term or provision of this Agreement required to be performed by such Party, including without limitation any violation of Section 13, constitutes an event of default ("Event of Default"). For purposes of this Agreement, a Party claiming another Party is in default shall be referred to as the "Complaining Party," and the Party alleged to be in default shall be referred to as the "Party in Default." Except as provided in Section 12, a Complaining Party shall not exercise any of its remedies as the result of such Event of Default unless such Complaining Party first gives notice to the Party in Default as provided in Section 24, and the Party in Default fails to cure such Event of Default within the applicable cure period.

14.1. Procedure Regarding Defaults.

14.1.1. Notice of Default. If an Event of Default occurs, prior to exercising any remedies, the Complaining Party shall give the Party in Default written notice of such default. After City as the Complaining Party provides notice of an Event of Default by Developer, if such Event of Default is not cured within sixty (60) days after the Developer's receipt of such notice, City may thereafter cease to issue any permit or approve any entitlement for which an application has been filed for any portion of the Property then owned or controlled by the Party in Default until the Default is cured pursuant to the procedures in this Section 14.

14.1.2. Cure. The Party in Default must cure the default within sixty (60) days from the Notice of Default. The Complaining Party may pursue all available remedies if the Party in Default fails to cure the default within the 60-day time period. If the nature of the alleged default is such that it cannot reasonably be cured within sixty (60) days, the 60-day time period will be tolled if: (a) the cure is commenced at the earliest practicable date following receipt of the notice; (b) the cure is diligently prosecuted to completion at all times thereafter; (c) at the earliest practicable date (in no event later than sixty (60) days after the Party in Default's receipt of the notice), the Party in Default provides written notice to the Complaining Party that the cure cannot practicably be completed within such sixty- (60) day period; and (d) the cure is completed at the earliest practicable date. In no event shall Complaining Party be precluded from exercising remedies if a default is not cured within one-hundred twenty (120) days after the first notice of default is given. If the Event of Default is discovered or determined in the course of the Annual Compliance Review, in addition to other remedies and potential cures, City shall have the statutory authority pursuant to Government Code section 65865.1 to decide to terminate or modify the Development Agreement following the opportunity to cure as provided in this Section 14.1.2.

14.1.3. Failure to Assert. Any failures or delays by a Complaining Party in asserting any of its rights and remedies as to any default shall not operate as a waiver of any default or of any such rights or remedies. Delays by a Complaining Party in asserting any of its rights and remedies shall not deprive the Complaining Party of its right to institute and maintain any actions or proceedings which it may deem necessary to protect, assert, or enforce any such rights or remedies.

14.1.4. Legal Proceedings. If the Party in Default fails to cure a default in accordance with the provisions of Section 14.1.2, the Complaining Party, at its option, may institute legal proceedings pursuant to this Development Agreement or terminate this Development Agreement. Upon the occurrence of an Event of Default, the Parties may pursue all other remedies at law or in equity, which are not otherwise provided for or prohibited by this Agreement or City's regulations governing development agreements, expressly including the remedy of specific performance of this Development Agreement. In no event, except as provided in Sections 18, 21 and 22 of this Agreement, will either Party be liable to the other Party for any monetary damage for claims arising out of this Agreement, and both Parties hereby expressly waive any such monetary damages. Notwithstanding the foregoing, City may immediately institute any legal proceedings relating to this Development Agreement without the notice and opportunity to cure required in the case of an emergency or immediate danger to public health, safety or welfare.

15. Estoppel Certificate. Either Party may, at any time, and from time to time, deliver written notice to the other Party requesting that the other Party certify in writing that, to the knowledge of the certifying Party: (i) this Development Agreement is in full force and effect and a binding obligation of the Parties; (ii) this Development Agreement has not been amended or modified either orally or in writing, or if so amended, identifying the amendments; and, (iii) the requesting Party is not in default in the performance of its obligations under this Development Agreement, or if in default, describing therein the nature and amount of any such defaults. A Party receiving a request hereunder shall execute and return such estoppel certificate, or give a written detailed response explaining why it will not do so, within thirty (30) days following the receipt of each such request. Each Party acknowledges that such an estoppel certificate may be relied upon by third parties acting in good faith. A certificate provided by City establishing the status of this Development Agreement with respect

to the Property or any portion thereof shall be in recordable form and may be recorded at the expense of the recording Party.

16. Severability. If any part of this Agreement is for any reason held to be unenforceable, the rest of the Agreement remains fully enforceable. If, however, a provision of this Agreement is determined to be invalid or unenforceable and the effect is to deprive a Party of an essential benefit of this Agreement, then the Party so deprived will have the option to terminate this entire Agreement upon written notice to the other Party.

17. Applicable Law. California law applies to this Agreement without regard for any choice-of-law rules that might direct the application of the laws of any other jurisdiction.

18. Attorneys' Fees and Costs in Legal Actions by Parties to the Agreement. Should any legal action be brought by either Party for breach of this Development Agreement or to enforce any provisions herein, the prevailing party in the action is entitled to attorneys' fees, court costs, and any other costs as may be fixed by the Court.

19. Agreement Runs with the Land. Except as otherwise provided for in this Development Agreement, all of the provisions, rights, terms, covenants, and obligations contained in this Agreement are binding upon the Parties and their respective heirs, successors and assignees, representatives, lessees, and all other persons acquiring the Property, or any portion thereof, or any interest therein, whether by operation of law or in any manner whatsoever. All of the provisions of this Development Agreement are enforceable as equitable servitudes and constitute covenants running with the land pursuant to applicable laws, including but not limited to Section 1468 of the California Civil Code. Each covenant to do, or refrain from doing, some act on the Property, or with respect to any owned property: (i) is for the benefit of such properties and is a burden upon such properties; (ii) runs with such properties; and (iii) is binding upon each party and each successive owner during its ownership of such properties or any portion thereof, and shall be a benefit to and a burden upon each Party and its property hereunder and each other person succeeding to an interest in such properties.

20. Bankruptcy. The obligations of this Development Agreement are not dischargeable in bankruptcy.

21. Indemnification from Construction, Improvement, Operation and Maintenance Claims. Developer agrees to indemnify, defend with counsel selected by City, and hold harmless City, and its elected and appointed councils, boards, commissions, officers, officials, agents, employees, and representatives, from any and all claims, costs (including legal fees and costs incurred by City or awarded to plaintiffs) and liability for any personal injury or property damage which may arise directly or indirectly as a result of any actions or inactions by Developer, or any actions or inactions of Developer's contractors, subcontractors, agents, or employees in connection with the construction, improvement, operation, or maintenance of the Property or the Project. Developer has no indemnification obligation with respect to the gross negligence or willful misconduct of City, or its elected and appointed councils, boards, commissions, officers, officials, agents, employees, and representatives or with respect to the maintenance, use, or condition of any improvement after the time it has been dedicated to and accepted by City or another public entity (except as provided in an improvement agreement or maintenance bond). The provisions of this Section 21 shall survive the termination of this Agreement.

22. Cooperation and Indemnification of City in Event of Legal Challenge to This Agreement or Entitlements. In the event of any legal or equitable action or other proceeding instituted by any third party challenging the validity of any provisions of this Development Agreement or the Entitlements, or seeking to overturn or invalidate any approval granted pursuant to this Agreement:

22.1. The Parties agree to cooperate in defending against the action or proceeding;

22.2. The Developer is solely responsible for its own costs and any reasonable legal fees and costs incurred by City for such defense;

22.3. Developer will indemnify, defend with counsel selected by City and hold harmless City, and its elected and appointed councils, boards, commissions, officers, officials, agents, employees, and representatives from any and all claims, costs (including legal fees and costs incurred by City or awarded to plaintiffs) and liability;

22.4. Neither Developer nor City shall settle any action or proceeding on grounds that include non-monetary relief or admissions of liability without written consent of the other Party. City agrees to not settle any action based upon monetary relief without the written consent of Developer, unless City is solely liable and agrees to pay such monetary relief.

22.5. The provisions of this Section 22 shall survive the termination of this Development Agreement.

23. **Third Party Beneficiaries**. This Development Agreement is made and entered into for the sole protection and benefit of Developer and City and their successors and assigns. No other person shall have any right of action based upon any provision in this Agreement.

24. **Notices**. All notices and other communications required or permitted under this Agreement, the enabling legislation, or the procedure adopted pursuant to Government Code section 65865, must be in writing and must be delivered in person or sent by certified mail, postage prepaid, or by facsimile or electronic mail (provided that such email shall be promptly followed by delivery of such notice by another method as provided herein).

Notice required to be given to City shall be addressed as follows:

CITY OF RANCHO CORDOVA
Community Development Director
2729 Prospect Park Drive
Rancho Cordova, CA 95670
Fax: (916) 851-8714
E-mail: esparkman@cityofranchocordova.org

Notice required to be given to Developer shall be addressed as follows:

Phoenix, AZ 85050
Phone: 480-824-4200
Fax: 480-824-4201
E-mail: CFuller@KHov.com

Either Party may change the address stated herein by giving notice in writing to the other Party, and thereafter notices shall be addressed and transmitted to the new address.

25. Assignment and Release. From and after recordation of this Agreement against the Property, Developer shall have the full right to assign this Agreement as to the Property, or any portion thereof, in connection with any sale, transfer or conveyance thereof, provided that (i) Developer has paid City any and all fees or amounts due and payable to City arising out of this Agreement, the processing of the Entitlements, or the development of the portion of the Property to be assigned, and (ii) upon the receipt by City Planning Director of the express written assignment by Developer and assumption by the assignee of such assignment in the form attached hereto as **Exhibit H**. Upon the payment of such fees or amounts due (which shall be acknowledged on the assignment by City Planning Director upon the request of Developer) and City's receipt of the express written assignment by Developer, the assumption by the assignee of such assignment in the form attached hereto as **Exhibit H**, and the conveyance of Developer's interest in the Property related thereto, Developer shall be released from further liability or obligation related to the portion of the Property so conveyed and the assignee will be considered the "Developer," with all rights and obligations related thereto, with respect to such conveyed property (the "Assigned Property").

26. Mortgagee Protection. The parties hereto agree that this Agreement shall not prevent or limit Developer, in any manner, at Developer's sole discretion, from encumbering the Property or any portion thereof by any mortgage, deed of trust or other security device securing financing with respect to the Property. City acknowledges that lenders providing any such financing may require certain Agreement interpretations and modifications, and agrees upon request, from time to time, to meet with Developer and representatives of such lenders to negotiate in good faith any such request for interpretation or modification. City will not unreasonably withhold its consent to any such requested interpretation or modification, provided such interpretation or modification is consistent with the intent and purposes of this Agreement. Any lender or other such entity (a "Mortgagee") that obtains a mortgage or deed of trust against the Property shall be entitled to the following rights and privileges:

(a) Neither entering into this Agreement nor a breach of this Agreement shall defeat, render invalid, diminish or impair the lien of any mortgage on the Property made in good faith and for value, unless otherwise required by law.

(b) The Mortgagee of any mortgage or deed of trust encumbering the Property, or any part thereof, for which Mortgagee has submitted a request in writing to City in the manner specified herein for giving notices, may request to receive written notification from City of any Event of Default by Developer in the performance of Developer's obligations under this Agreement.

(c) If City receives a timely request from a Mortgagee requesting a copy of any notice of an Event of Default given to Developer under the terms of this Agreement, City shall provide a copy of that notice to the Mortgagee within ten (10) days of sending the notice of Event of Default to Developer. The Mortgagee shall have the right, but not the obligation, to cure the Event of Default during the remaining cure period allowed to Developer under this Agreement.

(d) Any Mortgagee who comes into possession of the Property, or any part thereof, by any means, whether pursuant to foreclosure of the mortgage, deed of trust, or deed in lieu of such foreclosure or otherwise, shall take the Property, or part thereof, subject to the terms of this Agreement; provided, however, notwithstanding anything to the contrary above, any Mortgagee, or successor or assign of such Mortgagee, who becomes an owner of the Property through foreclosure shall not be obligated to pay any fees or construct or complete the construction of any improvements, unless such owner desires to continue development of the Property consistent with this Agreement and the Entitlements, in which case the owner by foreclosure shall assume the obligations of Developer hereunder in a form acceptable to City.

(e) The foregoing limitation on Mortgagees and owners by foreclosure shall not restrict City's ability pursuant to Section 9 of this Agreement to specifically enforce against such Mortgagees or owners any dedication requirements under this Agreement or under any conditions of any other Entitlements.

27. **Priority of Enactment.** In the event of conflict between this Development Agreement and the Entitlements, this Development Agreement is controlling and the Parties will meet and confer in good faith to amend the Entitlements accordingly.

28. **Form of Agreement; Recordation; Exhibits.** City will record this Agreement and any subsequent amendment to this Agreement, with the County Recorder within ten (10) days of the effective date. City will also record any termination of any parts or provisions of this Agreement, except as otherwise provided in this Development Agreement, including the automatic termination of this Development Agreement due to the expiration of the Term. Any amendment or termination of this Development Agreement that affects less than all of the Property must describe the portion of the property that is the subject of the amendment or termination. This Agreement is executed in three duplicate originals, each of which is deemed to be an original. This Agreement consists of 20 pages and 9 exhibits, which constitute the entire understanding and agreement of the Parties.

29. **City Manager Authorization.** The City of Rancho Cordova, a municipal corporation, has authorized this Development Agreement to be executed in duplicate by its City Manager and attested to by its City Clerk under the authority of Ordinance No. _____ adopted by the Council of the City on the __ day of December, 2019, and has caused this Agreement to be executed.

NOTES:

1. Chrysanthy Boulevard (generally from Rancho Cordova Parkway to the eastern Special Planning Area boundary) and Rancho Cordova Parkway (generally north of Chrysanthy), including but not limited to sidewalks, landscaping, mid-block ped push buttons, and signal at the intersection of Rancho Cordova Parkway and Chrysanthy Boulevard shall be substantially complete within the limits shown on the phasing plan prior to issuance of the first building permit within the Special Planning Area (SPA) excluding model homes and clubhouse complex, and complete to the satisfaction of the Public Works Department prior to the first occupancy within the SPA.

2. Rancho Cordova Parkway including but not limited to sidewalks, landscaping, signals and ped push buttons, shall be substantially complete to the satisfaction of the Public Works Department within the limits shown on the phasing plan (generally from Chrysanthy Boulevard to the southern SPA boundary) prior to issuance of more than 1,184 (EDU) building permits within the SPA excluding model homes and clubhouse.

3. Signal B (located on Chrysanthy Boulevard approximately 1000-feet east of Rancho Cordova Parkway) and Signal C (located on Chrysanthy Boulevard at the main entrance to the active adult community) shall be substantially complete to the satisfaction of the Public Works Department prior to issuance of more than 1,184 (EDU) building permits within the SPA excluding model homes.

4. City open space areas shall be completed to the satisfaction of the Public Works Department prior to the first occupancy within the phase they are contained in. Trails shall not be constructed without a logical terminus. Trails shall be constructed to connect to the overall bicycle network, generally connecting to Chrysanthy or Rancho Cordova Parkway.

5. A continuous class 1 bicycle/pedestrian Trail Connection from Chrysanthy to Canyonlands Drive through powerline corridor shall be complete to the satisfaction of the Public Works Department prior to the first occupancy permit within phases 3D, or 3C.

6. Project frontage of the North Campus Road shall be substantially complete to the satisfaction of the City prior to issuance of more than 1,200 EDU building permits excluding model homes and clubhouse within the SPA. If construction of the road would not provide public benefit of a connected road to Americanos Blvd or Rancho Cordova Parkway at the required time of construction, and with prior approval from the Public Works Department, developer may elect to make a cash payment to the City for its frontage obligations in-lieu of construction in an amount of engineer's estimate for said frontage including reasonable design and administrative costs.

7. If the commercial parcel is developed prior to Rancho Cordova Parkway widening, the commercial parcel developer shall improve its Rancho Cordova Parkway frontage along its boundaries, prior to occupancy.

8. Reference Development Agreement Exhibit G for additional information regarding creditable items per the transportation development impact fee program or Park Renovation program.

9. The basins identified in column A below, plus amenities shall be substantially complete prior to issuance of the first SFR building permit within phases identified in column B, or other area that drains to the basin and necessitates construction. The basin and associated amenities shall be complete to the satisfaction of the Public Works Department prior to the first occupancy within these phases.

Guiding Principles for Funding Backbone Infrastructure

Core Backbone Infrastructure

The City has identified the following core backbone infrastructure improvements as necessary to support the next 10,000 residential units EDUs in the new development area east of Sunrise Blvd. The estimated costs of these improvements are approximately $150 million. A dedicated revenue stream in the form of a set aside from the development impact fee is intended to partially fund the core improvements.

- Zinfandel Complex Improvements
- Sunrise Boulevard Widening from Kiefer Blvd. to Jackson Hwy including intersection improvements at Jackson Hwy
- White Rock Road Widening from Sunrise Blvd. to Rancho Cordova Pkwy including intersection improvements
- Rancho Cordova Parkway Interchange and Rancho Cordova Parkway Extension to White Rock Road
- Douglas Road Widening from Sunrise Blvd. to Zinfandel Drive including bridge widening over the Folsom South Canal and completion of intersection improvements at Sunrise Blvd.

Transportation Development Impact Fee (TDIF) Rates

The current TDIF rates applicable to The Ranch Special Planning Area are as follows:

Single Family Dwelling, Market Rate	$17,311.50
Single Family Dwelling, Age Restricted	$ 7,830.52
Multifamily, Age Restricted	$ 4,272.04

These rates shall increase effective January 1, 2020 pursuant to the inflationary adjustment methodology described in the Nexus Study for the TDIF.

Infrastructure Funding Approach for Core Backbone

For development within The Ranch Special Planning Area (TRSPA), a portion of the City's Transportation Development Impact Fee (TDIF) on residential units will be set aside to establish a dedicated revenue source to help fund the core backbone road improvements. The set aside amount is $9,000 per residential EDU and does not apply to nonresidential development. Commencing the January after the Special Planning Area is adopted, the TDIF set-aside amount of $9,000 will be adjusted annually using the same annual inflation rate as the TDIF. Single-family uses are assigned 1 EDU per unit and Multifamily land uses are assigned EDUs based on their relative impact compared to a single-family unit. Therefore, the multifamily EDU factor will be less than a single-family unit. Additionally, the EDUs for active adult products will be reduced by the methodology established in the Development Agreement.

If applied uniformly to the next 10,000 residential EDUs in the new development area, the set aside fund would generate approximately $90 million (today's dollars) to spend towards the major core infrastructure. If new development in the TRSPA builds any core backbone infrastructure, the core backbone infrastructure improvements will be creditable against the TDIF.

The City will maintain flexibility and full discretion on the prioritization, timing, and phasing of the improvements and to modify the list of backbone improvements to substitute or add other improvements that are identified to meet level of service requirements or to improve traffic circulation in the City. Such

modifications shall not increase the set aside amount. The City also has full discretion to utilize the monies generated to leverage funding opportunities for transportation improvements.

Developer Construction of Core Backbone Improvements

Any associated TRSPA construction requirements for Core Backbone Road Infrastructure would be eligible for credits or reimbursement from the set-aside portion of the TDIF and/or the remaining TDIF obligation. Core Backbone Road Improvement construction requirements would be eligible for credits against the TDIF to the extent that such credits are available, based on the applicable TDIF obligation otherwise payable by the development requiring the construction of credit-generating improvements. If credits exceed the corresponding fee obligation (i.e., if the improvement cost exceed the amount of credits that can be applied against the applicable fee obligation), the constructing entity then would be eligible for reimbursement from the TDIF.

Developer Backbone Infrastructure

City has agreed that the following Developer obligations are fee creditable against the TDIF and shall be creditable towards the set-aside to the extent the improvements are eligible for credits in the TDIF:

1. Construction of center travel lanes and median landscaping on Chrysanthy Boulevard
2. Widening and signal improvements at the intersection of Rancho Cordova Parkway/Chrysanthy Boulevard
3. Construction of median travel lane and median landscaping on Rancho Cordova Parkway
4. Construction of a traffic signal at Street K/Street V and Chrysanthy Boulevard in the amount of $400,000 in 2019 dollars.

The fee credits generated from Items 1 and 2 shall be applied uniformly to single family detached homes at building permits in Phases 1 and 2, as depicted in Exhibit C, Infrastructure Phasing Plan. The fee credits generated from Items 3 and 4 shall be applied uniformly to single family detached homes at building permits in Phase 3, as depicted in Exhibit C.

Developer and City agree that Developer has an obligation to construct a traffic signal at the entrance to the age-restricted community. Such signal serves only the TRSPA development and therefore does not have status in the TDIF program, is not eligible for any credits, and shall be constructed at developers cost.

Developer Construction of Other TDIF Improvements

Fee Program eligible improvements that a developer may be required to construct through the phasing plan for the project will be fully creditable towards the remaining portion of the TDIF after the set aside has been allocated for the core backbone infrastructure. To the extent that improvement costs exceed available credits, the developer will be eligible for reimbursements form the remaining portion of future TDIF revenues.

Administration

The initial set aside of $9,000 per residential EDU is being established as of January 2019 and would inflate at the same inflation rate and methodology as the Transportation Development Impact Fee (TDIF), commencing upon adoption of the TRSPA. The City will be responsible for managing the set aside funding and delivering the core backbone infrastructure improvements. Administration of the TDIF set aside will be funded from the administration component of the TDIF. The TDIF set aside will not have an additional administration charge.

The set aside will automatically sunset when full funding for the Rancho Cordova Parkway/Highway 50 interchange or an alternative approved by the City has been secured.

ASSIGNMENT AND ASSUMPTION AGREEMENT
RELATIVE TO _____

THIS ASSIGNMENT AND ASSUMPTION AGREEMENT (hereinafter, the "Agreement") is entered into this _____ day of _____ 20__, by and between K. Hovnanian at Jaeger Ranch, LLC, a California limited liability company (hereinafter "Developer"), and _____, a _____ (hereinafter "Assignee").

RECITALS

On _____, 20__, the City of Rancho Cordova and Developer entered into that certain agreement entitled "Development Agreement By and Between the City of Rancho Cordova and K. Hovnanian at Jaeger Ranch, LLC "The Ranch" (hereinafter the "Development Agreement"). Pursuant to the Development Agreement, Developer agreed to develop certain property more particularly described in the Development Agreement (hereinafter, the "Subject Property"), subject to certain conditions and obligations as set forth in the Development Agreement. The Development Agreement was recorded against the Subject Property in the Official Records of Sacramento County on _____, 20__, as Instrument No. 20__-_____.

Developer intends to convey a portion of the Subject Property to Assignee, commonly referred to as Parcel _____, and more particularly identified and described in Exhibit A, attached hereto and incorporated herein by this reference (hereinafter the "Assigned Parcel").

Developer desires to assign and Assignee desires to assume all of Developer's right, title, interest, burdens and obligations under the Development Agreement with respect to and as related to the Assigned Parcel.

ASSIGNMENT AND ASSUMPTION

NOW, THEREFORE, Developer and Assignee hereby agree as follows:

Developer hereby assigns, effective as of Developer's conveyance of the Assigned Parcel to Assignee, all of the rights, title, interest, burdens and obligations of Developer under the Development Agreement with respect to the Assigned Parcel. Developer retains all the rights, title, interest, burdens and obligations under the Development Agreement with respect to all other property, if any, within the Subject Property owned by Developer.

Assignee hereby assumes all of the rights, title, interest, burdens and obligations of Developer under the Development Agreement with respect to the Assigned Parcel, and agrees to observe and fully perform all of the duties and obligations of Developer under the Development Agreement with respect to the Assigned Parcel. The parties intend hereby that, upon the execution of this Agreement and conveyance of the Assigned Parcel to Assignee, Assignee shall become substituted for Developer as the "Developer" under the Development Agreement with respect to the Assigned Parcel and Developer shall be released of and from any obligations or liabilities under the Development Agreement with respect to the Assigned Parcel.

All of the covenants, terms and conditions set forth herein shall be binding upon and shall inure to the benefit of the parties hereto and their respective heirs, successors and assigns.

The Notice Address described in Section 24 of the Development Agreement for the Assignee with respect to the Assigned Parcel shall be:

_____
_____
_____
Attn: _____

[Signatures follow on next page]

IN WITNESS HEREOF, the parties hereto have executed this Agreement as of the day and year first above written. This Agreement may be signed in identical counterparts.

AFFORDABLE HOUSING PLAN AGREEMENT FOR THE RANCH PROJECT BY AND BETWEEN THE CITY OF RANCHO CORDOVA, AND K. HOVNANIAN AT JAEGER RANCH, LLC

THIS AFFORDABLE HOUSING PLAN AGREEMENT ("AHP" or "Agreement"), and the requirements herein, are agreed upon by and between the CITY OF RANCHO CORDOVA ("City") and K. HOVNANIAN AT JAEGER RANCH, LLC, a California limited liability company ("Landowner"), as of _____, 2019 (the "Effective Date"). City and Landowner are hereinafter sometimes collectively referred to as the Parties. This AHP shall be binding on Landowner and on any and all of Landowner's successors and assigns developing the real property described in Exhibit 1 and depicted in Exhibit 2 hereto and incorporated herein (the "Property") within the The Ranch Special Planning Area.

RECITALS

WHEREAS, pursuant to California Government Code section 65580, the Legislature has established the following priorities related to the provision of affordable housing: 1) the availability of housing is of vital statewide importance, and the early attainment of decent housing and a suitable living environment for every Californian, including farmworkers, is a priority of the highest order; 2) the early attainment of this goal requires the cooperative participation of government and the private sector in an effort to expand housing opportunities and accommodate the housing needs of Californians of all economic levels; 3) the provision of housing affordable to low- and moderate-income households requires the cooperation of all levels of government; 4) local and State governments have a responsibility to use the powers vested in them to facilitate the improvement and development of housing to make adequate provision for the housing needs of all economic segments of the community; and 5) the Legislature recognizes that in carrying out this responsibility, each local government also has the

responsibility to consider economic, environmental, and fiscal factors and community goals set forth in the general plan and to cooperate with other local governments and the State in addressing regional housing needs; and

WHEREAS, the City of Rancho Cordova Housing Element, adopted December 16, 2013 by City Council Resolution No. 119-2013 ("Housing Element") states that all large-scale development in the City's undeveloped areas, generally located south of Highway 50, is required to provide a range of housing opportunities responding to the housing needs associated with the proposed development; and

WHEREAS, Policy H.1.5 of the Housing Element states that "[d]evelopers of new residential projects within the newly developing areas of the city (generally in the large, vacant areas south of Highways 50) shall prepare an Affordable Housing Plan for the project for City review and approval that identifies the project's plan for providing affordable housing;" and

WHEREAS, Housing Element Action H.1.5.1 provides that the Affordable Housing Plan ("AHP") "shall be approved in conjunction with the earliest stage of project entitlement, typically with the City Council approval of the Specific Plan, Development Agreement, or other primary land use entitlement," and "[i]n order to ensure the production and preservation of housing affordable to the City's workforce, no productive, reasonable program or incentive option will be excluded from consideration within project-specific Affordable Housing Plans...;" and

WHEREAS, on September 20, 2012, the Sacramento Area Council of Governments' ("SACOG") Board of Directors unanimously approved the 2013-21 Regional Housing Needs Plan ("RHNP"). This action was the final stage in the adoption of an eight-year plan for the Regional Housing Needs Allocation ("RHNA"). RHNA is a State requirement to determine the number of housing units that cities and counties must plan for in their housing element updates. Pursuant to California Government Code section 65583, localities are required to update their housing elements to plan to accommodate their entire RHNA share by income category; and

WHEREAS, the City has received its allocation from SACOG of the projected share of the Region's total growth within the City, including both a projected allocation of total housing units and a distribution of this projected growth by family incomes categories; and

WHEREAS, the City intends to meet Housing Element Policies H.1.5, H.1.5.1 and the requirements of state law by demonstrating that it is providing sufficient zoning

capacity to accommodate a portion of the RHNA for housing available to a variety of income categories within The Ranch Special Planning Area; and

WHEREAS, based on the foregoing requirements, this AHP is comprised of two major components: the Property's fair share of the RHNA allocation and Affordable Housing Performance; and

WHEREAS, the City Council supports and has determined that an Affordable Housing In Lieu Fee (as defined below) per Market Rate Unit (as defined below)and per Active Adult Unit (as defined below) in The Ranch Special Planning Area will, when combined with the City's non –residential linkage fees as set forth in Rancho Cordova Municipal Code Chapter 16.89 and Sacramento County Code Chapter 16.89, State and federal tax credits, and other state, federal and local grant and loan program funds, result in sufficient funds for City, or another third party, to develop within the City approximately six percent (6%) of new residential development as affordable rental units and one percent (1%) as affordable for- sale units; and

WHEREAS, in preparing this AHP, the City and Landowner considered economic, environmental, and fiscal factors and community goals set forth in the general plan; and

WHEREAS, Landowner has agreed to meet the affordable housing obligations as identified in this AHP. This AHP fully satisfies Landowner's obligations pursuant to Housing Element Policy H.1.5 and all action items related thereto; and

WHEREAS, pursuant to the City's Housing Element, the requirement to enter into this AHP is a condition of approval for projects within The Ranch Special Planning Area. Any violation of Landowner of the terms of this AHP shall be considered a violation of the conditions of approval and shall permit the City to proceed with enforcement action as further set forth in this Agreement.

THEREFORE, in consideration of the foregoing recitals and the mutual covenants contained herein, the parties hereby agree to the following AHP:

DEFINITIONS

All capitalized terms used in this Agreement shall have the meaning set forth in this Section, unless otherwise defined in this Agreement. Any capitalized terms not defined herein shall have the meaning set forth in the Development Agreement ("DA") by and between Landowner and the City adopted by the City by Ordinance No._____, on _____;

"**AAU**" or "**Active Adult Units**" shall mean those age restricted units approved for residential development within The Ranch Special Planning Area that have not been designated by the City to be Affordable Units pursuant to Section 4 of this AHP.

"**AHP**" shall mean this Affordable Housing Plan Agreement, entered into between the City and Landowner and approved by Resolution No._____, on _____.

"**Affordable Housing In Lieu Fee**" is the fee payable pursuant to this AHP, in the amount of Four Thousand Eight Hundred Dollars ($4,800) per MRU and Three Thousand Eight Hundred Eight Dollars ($3,808) per AAU, and as may be adjusted as allowed by Section 2.2 of this AHP.

"**Affordable Units**" shall mean those units (whether single family or multi- family and regardless of density) designated by the City to be affordable under the provision of Section 4 of this AHP (and which are subject to a regulatory agreement as specified in that Section), with income levels calculated pursuant to regulations issued by the California Department of Housing and Community Development ("HCD") (with specific application to Sacramento County), and as may be adjusted from time to time by HCD based upon size of household, regional cost of living and other relevant factors. Subject to the regulations issued by HCD, City may designate Affordable Units as those units available to families with incomes ranging from zero to 120% of median family income.

"**HD**" shall refer to the acreage designated in The Ranch Special Planning Area for development at or above an average density of 26 units per acre.

"**MRU**" or "**Market Rate units**" shall mean those units approved for residential development (whether single family or multi- family, and regardless of density) within The Ranch Special Planning Area that have not been designated by the City to be Affordable Units pursuant to Section 4 of this AHP.

"**The Ranch Special Planning Area**" shall mean the entire property included within The Ranch Special Plan, approved by the City on _____, by Ordinance No._____.

"**RHNA Acreage**" shall mean those sites identified on Exhibit 3 to this AHP, which are designated in The Ranch Special Planning Area for high-density development at no less than 26 units per acre.

AGREEMENT

1. Property Subject to this Affordable Housing Plan. Landowner owns fee title to the Property. This AHP shall apply to, and be recorded on, the Property.

2. Payment of Affordable Housing In Lieu Fee. The Affordable Housing In Lieu Fee shall be paid on all MRU and AAU (both single family and multi-family). The Affordable Housing in Lieu Fee shall be due and payable at the time a building permit is issued for the unit or multi-family structure.

   2.1. **Exemptions.** No Affordable Housing In Lieu Fee shall be required to be paid for any Affordable Units developed on the Property or by any development or structure subject to a non-residential building permit. Any development or structure subject to a non-residential building permit shall pay the housing trust development impact fee established pursuant to Rancho Cordova Municipal Code Chapter 16.89 and Sacramento County Code Chapter 16.89.

   2.2. Increases to Affordable Housing In Lieu Fee. The Affordable Housing In Lieu Fee required under this AHP shall be adjusted annually in January based upon the October to October index value increase found in the 20 City Building Cost Index published in Engineering News Records (ENR), averaged with the ENR's index of the City of San Francisco between October and October of each year.

3. Regional Housing Needs Allocation for The Ranch Special Planning Area. Based on the RHNA, City has designated 7.14 acres within The Ranch Special Planning Area for high density development, and City has identified the RHNA Acreage as the property identified on Exhibit 3 to this AHP. Landowner has no obligation to develop or cause the development of Affordable Units on the RHNA Acreage. However, unless otherwise approved by the City, any development of that portion of the RHNA Acreage within the Property as, if, and when the same occurs, shall be consistent with RHNA requirements as identified by the Housing Element (in effect as of the date of this AHP), and shall be at a minimum density of 26 dwelling units per acre, subject to the following provisions:

   3.1. **No Net Loss.** California Government Code Section 65584 requires all development on RHNA qualifying acres approved by the State through the Housing Element process to yield no less than the minimum acreage used to satisfy State RHNA requirements. In order to contribute to the required RHNA performance, development on the RHNA Acreage following findings in writing

supported by substantial evidence: (1) the reduction is consistent with the adopted General Plan, including the Housing Element, and (2) the remaining sites identified in the Housing Elements are adequate to accommodate the City's share of the regional housing need pursuant to Government Code section 65863. The City will accept an average of 26 units per acre on RHNA Acreage being developed concurrently by the same owner.

3.2. **Review of RHNA Acreage.** The Parties acknowledge that SACOG will review, from time to time, the RHNA for the City. The SACOG allocation of RHNA units to the City may differ from the amounts anticipated in determining projected RHNA requirements for The Ranch Special Planning Area. However, no such future adjustment by SACOG in the allocation of RHNA units to the City shall result in an increase to the RHNA Acreage as described herein. There may be changes in market conditions and demand which results in amendments to policy and statute. In order to be more responsive to future conditions in The Ranch Special Planning Area, upon receipt by City of a written request from Landowner for reconsideration of the allocation of RHNA Acreage, the City will consider whether RHNA Acreage is still needed to accommodate the City's regional housing needs pursuant to Government Code section 65584.

4. Affordable Housing Performance Requirements. Landowner has identified the location and acreage of one (1) site (the "Identified Site"), as shown in Exhibit 4 attached hereto, that may be suitable for the construction of Affordable Units by third parties. Landowner will dedicate to City for compensation as set forth below, the Identified Site as follows:

4.1. Identified Site for Affordable Units.

4.1.1. Total Acreage. The Identified Site within the Property will result in 7.14 acres of HD to be dedicated by Landowner to the City. The Identified Site is depicted on Exhibit 4.

4.1.2. Timing and Manner of Acquisition. Landowner shall dedicate to the City the Identified Site no later than one hundred eighty (180) days after the completion of the frontage improvements and utility stubs for the Identified Site. The frontage improvements and utility stubs for the Identified Site shall be constructed with the first phase of the Chrysanthy road construction.

4.1.3. Compensation to Landowner. Landowner shall be paid an amount equal to Two Million Seven Hundred Fifty Thousand Dollars ($2,750,000) for the dedication to the City of the Identified Site through the application of credits to any exactions owed on remaining undeveloped units within The Ranch Special Planning Area. City and Landowner will enter into an

appropriate agreement memorializing the application of the credits prior to the dedication of the Identified Site to the City.

4.1.4. **Obligations of Landowner with Respect to Improvements for Identified Site.** City acknowledges and agrees that Landowner is not required to construct Affordable Units on the Identified Site. City further acknowledges and agrees that Landowner shall only be required to construct frontage improvements and utility stubs for the Identified Site.

4.1.5. **Construction of Affordable Units on the Identified Site.** City shall consult with Landowner on the selection of a third party who will construct Affordable Units on the Identified Site. The design, landscaping, materials, and all other pertinent development standards contained in The Ranch Special Plan Development standards and Design Guidelines (and any and all amendments thereto) shall apply to the construction of the Affordable Units.

4.2. **Other Options for Meeting Obligations Under the AHP.** The Parties acknowledge that as the Property develops and market conditions evolve, new solutions for meeting affordable housing obligations may arise and merit consideration. Pursuant to Section 5.2 below, the Parties may cooperate to amend this AHP to accommodate such additional options.

5. **Term, Amendment and Termination.**

5.1. **Term.** The term of this AHP shall extend and be equal to the term of the DA, but the requirements applicable to any MRU and AAU shall terminate as to the entire Property when all Affordable Housing In Lieu Fees required by this Agreement for the Property have been paid and Landowner has fully complied with the requirements of Section 4. Notwithstanding anything to the contrary in this AHP, the encumbrance of this AHP shall terminate and be of no further force and effect with respect to any completed residence, upon the sale of such residence to a member of the general public. In such events, such portions of the Property shall be deemed automatically released from the encumbrance of this AHP, without signing or recording any instrument of release.

5.2. **Amendment by Mutual Consent.** This AHP may be amended in writing from time to time by mutual consent of the City and Landowner.

5.3. **Termination.** This AHP may be canceled in whole or in part only by mutual consent of the City and Landowner or their successors in interest. Any fees paid pursuant to this AHP and spent by the City prior to the date of cancellation shall be retained by City.

6. **Breach.** This AHP is implemented as a condition of approval for consistency with the City's Housing Element. Any material violation by Landowner of the requirements under this AHP shall be considered a violation of a condition of approval, and City may invoke remedies appropriate to a violation of a condition of approval, including the withholding of building permits until such violation has been cured. The procedures regarding defaults and opportunity to cure set forth in the Development Agreement (Ordinance number _____, Sections 14 and 14.1 through 14.1.4, inclusive) shall apply to any alleged violation of the terms of this AHP.

7. **Severability.** If any part of this AHP is for any reason held to be unenforceable, the rest of the AHP remains fully enforceable. If, however, a provision of this AHP is determined to be invalid or unenforceable and the effect is to deprive Landowner of an essential benefit of this AHP, then Landowner will have the option to terminate this entire Agreement upon written notice to City. If City contends that it has been deprived of an essential benefit of this AHP, then City shall notify Landowner and the Parties will meet and confer to evaluate whether the remainder of the Agreement should be valid and enforceable.

8. Applicable Law. California law applies to this AHP without regard for any choice-of-law rules that might direct the application of the laws of any other jurisdiction.

9. Attorneys' Fees and Costs in Legal Actions by Parties to The Agreement. Should any legal action be brought by either party for breach of this AHP or to enforce any provisions herein, the prevailing party in the action is entitled to reasonable attorneys' fees, court costs, and any other costs as may be fixed by the Court.

10. Agreement Runs With The Land. Except as otherwise provided for in this AHP, all of the provisions, rights, terms, covenants, and obligations contained in this AHP are binding upon the parties and their respective heirs, successors and assignees, representatives, lessees, and all other persons acquiring the property this AHP applies to, or any portion thereof, or any interest therein, whether by operation of law or in any manner whatsoever. All of the provisions of this AHP are enforceable

as equitable servitudes and constitute covenants running with the land pursuant to applicable laws, including, but not limited to, Section 1468 of the California Civil Code. Except as otherwise provided in Section 5.1 of this AHP, each covenant to do, or refrain from doing, some act on the property subject to this AHP, or with respect to any owned property: (1) is for the benefit of such properties and is a burden upon such properties; (2) runs with such properties; and (3) is binding upon each party and each successive owner during its ownership of such properties or any portion thereof, and shall be a benefit to and a burden upon each party and its property hereunder and each other person succeeding to an interest in such properties.

11. **Indemnification.** Landowner agrees to indemnify, defend with counsel selected by the City, and hold harmless City, and its elected and appointed councils, boards, commissions, officers, officials, agents, employees, and representatives from any and all claims, costs (including legal fees and costs incurred by the City or awarded to plaintiffs) and liability for any personal injury or property damage which may arise directly or indirectly as a result of any actions or inactions by Landowner, or any actions or inactions of Landowner's contractors, subcontractors, agents, or employees in connection with the construction, improvement, operation, or maintenance of the Property or the Project. Landowner has no indemnification obligation with respect to the negligence or willful misconduct of City, or its elected and appointed councils, boards, commissions, officers, officials, agents, employees, and representatives.

12. **Cooperation In The Event of Legal Challenge to This AHP.** In the event of any legal or equitable action or other proceeding instituted by any third party challenging the validity of any provisions of this AHP:

12.1. The City and Landowner agree to reasonably cooperate in defending against the action or proceeding.

12.2. Landowner is solely responsible for its own costs and any costs incurred by the City for such defense.

12.3. Neither Landowner nor the City shall settle any action or proceeding on grounds that include non-monetary relief or admissions of liability without written consent of the other party. City agrees not to settle any action based upon monetary relief without the written consent of Landowner, unless City is solely liable and agrees to pay such monetary relief.

13. **Third Party Beneficiaries**. This AHP is made and entered into for the sole protection and benefit of Landowner and City and their successors and assigns. No other person shall have any right of action based upon any provision in this AHP.

14. **Notices.** All notices and other communications required or permitted under this AHP must be in writing and must be delivered in person or sent by certified mail, postage prepaid, or sent by facsimile or electronic mail.

    Notice required to be given to City shall be addressed as follows:
    City of Rancho Cordova
    Community Development Director
    2729 Prospect Park Drive
    Rancho Cordova, CA 95670
    Fax: (916) 851-8762
    E-mail: esparkman@cityofranchocordova.org

    Notice required to be given to Landowner shall be addressed as follows:

    Landowner
    Attn: _____
    _____
    Fax : _____
    E-mail: _____

    Either party may change the address stated herein by giving notice in writing to the other party and, thereafter, notices shall be addressed and transmitted to the new address.

15. **Assignment And Release**. From and after recordation of this AHP against the Property, Landowner shall have the full right to assign this AHP as to the Property, or any portion thereof, in connection with any sale, transfer or conveyance thereof, provided that: (1) Landowner has paid City any and all fees or amounts that City has reasonably determined to be due and owing to City arising out of this AHP for processing of any entitlements for the Property, or the development of the portion of the Property to be assigned due and owing as of the date of such assignment, and (2) upon the receipt by the City Community Development Director of the express written assignment by Landowner and assumption by the assignee of such

assignment in the form reasonably approved by the City. Upon the payment of such fees or amounts due and owing (which shall be acknowledged on the assignment by the City Community Development Director upon the request of Landowner) and the City's receipt of the express written assignment by Landowner, the assumption by the assignee of such assignment, and the conveyance of Landowner's interest in the Property related thereto, Landowner shall be released from further liability or obligation related to the portion of the property so conveyed and the assignee will be considered the "Landowner," with all rights and obligations related thereto, with respect to such conveyed property.

16. **Form Of Agreement; Recordation; Exhibits.** City will record this AHP and any subsequent amendment to this AHP, with the County Recorder within thirty (30) days of the Effective Date. City will also record any termination of any parts or provisions of this AHP. Any amendment or termination of this AHP that affects less than all of the Property must describe the portion of the property that is the subject of the amendment or termination. This AHP is executed in two (2) duplicate originals, each of which is deemed to be an original. This AHP consists of 13 pages and 4 exhibits, which constitute the entire understanding and agreement of the parties.

17. **Housing Trust Development Impact Fee.** Nothing in this AHP shall be construed to limit the application of the Housing Trust Development Impact Fee, a current city-wide non-residential affordable housing fee.

18. **Recitals.** The Recitals set forth above are an integral part of this Agreement and shall have the same contractual and legal significance as any other language in this Agreement.

[signatures on following page]

IN WITNESS WHEREOF, the City of Rancho Cordova, a municipal corporation, has authorized the execution of this AHP in duplicate by its City Manager and attested to by its City Clerk under the authority of Resolution No. ____-201_, adopted by the Council of the City on this ____ day of _____ 201_, and Landowner has caused this AHP to be executed.

CITY OF RANCHO CORDOVA

RESOLUTION NO. XX-2020

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF RANCHO CORDOVA APPROVING THE RANCH AFFORDABLE HOUSING PLAN

WHEREAS, the property within The Ranch Special Planning Area is owned by K. Hovnanian at Jaeger Ranch, LLC is referred to as "Landowners"; and

WHEREAS, The Ranch, due to its central location in the eastern part of the City, is envisioned as an integral part of the City; and

WHEREAS, The Ranch project is envisioned to be a planned community that illustrates the City's "building blocks" as described in the General Plan

WHEREAS, The Ranch project is a plan for a mixed-use development with a broad range of residential uses, commercial, parks/open space, natural resources, and associated infrastructure and roads on an approximately 530-acre site in the City. The Project includes 1,690 residential units at various densities; of that number of residential uses, 743 residential units are active adult, 5.73 acres of commercial, 14.36 acres of community and neighborhood parks, 8.99 acres of private parks; stormwater detention basins; open-space areas, trails, major roads with landscaping; and a 200 acre wetland natural resource/preserve; and

WHEREAS, the Housing Plan Agreement meets the meets the requirements of the California Government Code section 65580, the Legislature has established the following priorities related to the provision of affordable housing and the Rancho Cordova Municipal Code as set forth in findings below

WHEREAS, on January 6, 2020, the City Council held a properly noticed public hearing at which it received a report from City Staff regarding The Ranch project and oral and written testimony from the public, and deliberated on the item;

WHEREAS, the public hearing was noticed in accordance with the requirements set forth in Government Code section 65090 and 65091

NOW THEREFORE, the City Council of the City of Rancho Cordova hereby resolves as follows:

Section 1. RECITALS

The foregoing recitals are true and correct and made a part of this Resolution.

Section 2. AFFORDABLE HOUSING PLAN AGREEMENTS – FINDINGS AND APPROVALS

A. Findings.

i. Pursuant to California Government Code section 65580, the Legislature has established the following priorities related to the provision of affordable housing: 1) the availability of housing is of vital statewide importance, and the early attainment of decent housing and a suitable living environment for every Californian, including farmworkers, is a priority of the highest order; 2) the early attainment of this goal requires the cooperative participation of government and the private sector in an effort to expand housing opportunities and accommodate the housing needs of Californians of all economic levels; 3) the provision of housing affordable to low- and moderate-income households requires the cooperation of all levels of government; 4) local and State governments have a responsibility to use the powers vested in them to facilitate the improvement and development of housing to make adequate provision for the housing needs of all economic segments of the community; and 5) the Legislature recognizes that in carrying out this responsibility, each local government also has the responsibility to consider economic, environmental, and fiscal factors and community goals set forth in the general plan and to cooperate with other local governments and the State in addressing regional housing needs.

ii. Rancho Cordova General Plan Housing Element Policy H.1.5 states that "Developers of new residential projects within the newly developing areas of the City (generally in the large, vacant areas south of Highway 50) shall prepare an Affordable Housing Plan ("'Plan") for the project for City review and approval that identifies the project's plan for providing affordable housing." (City of Rancho Cordova Housing Element adopted December 16, 2013; "Housing Element").

iii. All large-scale development in the City's undeveloped areas, generally located south of Highway 50, is required to provide a range of housing opportunities responding to the housing needs associated with the proposed development. Developers must prepare an Affordable Housing Plan ("AHP") which "shall be approved in conjunction with the earliest stage of project entitlement, typically with the City Council approval of the Specific Plan, Development Agreement, or other primary land use entitlement."

iv. The Housing Element also states that "[in] order to ensure the production and preservation of housing affordable to the City's workforce, no productive, reasonable program or incentive option will be excluded from consideration within project-specific Affordable Housing Plans...." and therefore the AHPs will contain two major components: Regional Housing Needs Allocation ("RHNA") - or proof of capacity (i.e., appropriately zoned land); and Affordable Housing Performance (i.e., production or other strategies).

v. On September 20, 2012, the Sacramento Area Council of Governments' ("SACOG") Board of Directors unanimously approved the 2013-21 Regional Housing Needs Plan ("RHNP"). This action was the final stage in the adoption of an eight-year plan for the Regional Housing Needs Allocation ("RHNA"). RHNA is a State requirement to determine the number of housing units that cities and counties must plan for in their housing element updates. Pursuant to California Government Code section 65583, localities are required to update their housing elements to plan to accommodate their entire RHNA share by income category. For The Ranch Special Plan Area, lands intended to meet RHNA obligations may be developed as either market rate or affordable units, but the acreage must be developed at the minimum average densities identified in this AHP. For purposes of this AHP, market rate units shall mean those units which involve no regulatory requirement for affordability ("Market Rate Units"). Affordable units shall mean those units which include a regulatory agreement recorded against the land consistent with this AHP which designate the units in question to be as affordable to

families with incomes from zero to 120% of median family income (MFI) ("Affordable Units"). The definitions of income categories and income limits for these affordable units shall be consistent with those definitions updated from time to time by the State Department of Housing and Community Development at its website: < https://www.hcd.ca.gov/grants-funding/income-limits/state-and-federal-income-limits.shtml >.

vi. The attached The Ranch Affordable Housing Plan identifies very low, low-, moderate-, and above moderate-income housing, and provides both affordable housing in-lieu fees and land dedication in order to comply with General Plan Housing Element requirements; the attached Affordable Housing Plan will satisfy the affordable housing requirements for The Ranch Special Plan.

vii. The attached Affordable Housing Plan shall be binding on Landowner and on any and all of Landowner's successors and assigns developing property within The Ranch Special Plan Area and any amendments thereto. The Affordable Housing Plan and the requirements therein shall run with the property and remain in place until amended by mutual consent of the City and Landowner or terminated by the City in its sole discretion.

B. General Plan Consistency.

i. The attached Affordable Housing Plan (Exhibit A of the Development Agreement) is consistent with Rancho Cordova Housing Element Policy H.1.5, which requires "Developers of new residential projects within the newly developing areas of the City (generally in the large, vacant areas south of Highway 50) [to] prepare an Affordable Housing Plan for the project for City review and approval that identifies the project's plan for providing affordable housing"; and

ii. The Ranch Special Planning Area and the attached Affordable Housing Plan (Exhibit A of the Development Agreement) are consistent with the Housing Element Action H.1.2.1, which requires that residential development projects of 100 gross acres or more include a minimum of 5 percent of the total project residential developable acreage (net) for residential uses of 30 units per acre or higher, and 5 percent for residential uses of 10 units per acre or higher. The Ranch Special Plan Area meets both requirements; the Specific Plan contains 176.4 total net developable residential acres, of which 8.4 allow for residential uses of 30 units per acre or higher and 63.4 acres are designated for 10 units per acre or higher. The attached Affordable Housing Plan requires Landowner to designate certain portions of their property "High Density Residential," which supports 30 dwelling units per acre or higher and is therefore consistent with Housing Element Action H.1.2.1; and

iii. The land designations required under the attached Affordable Housing Plan (Exhibit A of the Development Agreement) are consistent with The Ranch Special Plan Area. These designations are also consistent with the General Plan as described in City Council Ordinance, adopting The Ranch Special Plan, in the findings above, and as follows:

a. General Plan Housing Element Action H.1.5.1 provides that an Affordable Housing Plan be approved in conjunction with early project entitlements to "ensure the production and preservation of housing affordable to the City's workforce…" and The Ranch Affordable Housing Plan is being approved in conjunction with the project's development agreement and therefore is consistent with Action H.1.5.1's direction to approve such plans early in the entitlement process.

b. The Affordable Housing Plan is consistent with the General Plan in that General Plan Housing Element Policy H.1.2 requires that adequate sites be maintained to meet the City's housing needs and the City's share of regional housing needs. Within the Sacramento region, local agencies must zone a certain amount of land for 30 dwelling units or more per acre in order to meet Regional Housing Need Allocation (RHNA) obligations. Further, the General Plan's Housing Element Action H.1.2.1 requires development projects greater than 100 acres in area to provide five percent (5%) of residential acreage to be zoned to accommodate 30 dwelling units per acre or higher. The Ranch Special Plan residential densities and affordable housing requirements carried out through the Affordable Housing Plan are proposed to achieve consistency with the above noted General Plan policy and action in that they call for at least five percent (5%) of residential acreage, approximately 8.4 of 176.4 net developable residential acres to accommodate 30 dwelling units per acre or higher.

c. The Affordable Housing In Lieu Fee for The Ranch Project and alternative methods to meet such requirements (such as land dedication), as established in the Affordable Housing Plan, will contribute to the development of new affordable residential rental units and affordable residential for-sale units; this is consistent with General Plan Housing Element Action H.1.5.1, which requires affordable housing plans to specify program options, including in-lieu fees and land dedications. Such provisions of the Affordable Housing Plan are further consistent with the General Plan in that they carry out Housing Element Policy H.1.2 to maintain adequate sites that support a range of housing types by allowing the City to acquire such sites.

C. Approval.

The City Council approves the attached Affordable Housing Plan and Exhibits thereto between the City and Landowner covering all Projects within The Ranch Special Plan(Exhibit A of the Development Agreement), in a form approved by the City Attorney, and authorizes the City Manager to execute the Affordable Housing Plan for The Ranch Special Plan by and between the CITY OF RANCHO CORDOVA and K. Hovnanian at Jaeger Ranch, LLC

Section 7. EFFECTIVE DATE.

This Resolution shall become effective upon the effective date of City Council Ordinance adopting The Ranch Special Planning Area.

MEMORANDUM

DATE: January 6, 2020

TO: Honorable Mayor and Council Members

FROM: Kim Juran, Administrative Services Director

SUBJECT: **TECHNOLOGY INITIATIVES UPDATE**

RECOMMENDATION

Receive Technology Initiatives Update.

RESULT OF RECOMMENDED ACTION

This presentation is for informational purposes only.

BACKGROUND

The City has a number of technology projects currently underway. The purpose of this presentation is to update the CIty Council and members of the public on the status of these technology initiatives. In addition, staff will present a demonstration of the City's new Customer Service portal that will enable online application and payment of several different City processes. The first phase of this project, which is slated to go live on March 2, 2020, will enable online application and payment of business licenses, rental housing licenses, and animal licenses. The second phase of the project, which will go live in early 2021, will allow for online building permit application and payment.

FISCAL IMPACT AND FUNDING SOURCE

There is no fiscal impact.
