In addition, all construction projects are reviewed by the City to ensure that do not interfere with emergency response and evacuation plans (SCES 2022). As the proposed project would occur within the project site boundaries, development plans would be reviewed by the City, and there are alternative evacuation routes away from the project site, impacts would be less than significant.

b) If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project, due to slope, prevailing winds, and other factors, exacerbate wildfire

risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

Less Than Significant Impact. The project site is not within a designated Very High FHSZ. The project site does not have any built structures and is occupied by paved areas with patches of vegetation, including trees. The project site is generally flat and would not exacerbate wildfire risk due to slope. The LHMP states high winds are common occurrences in the city throughout the entire year, and straight line winds are primarily a public safety and economic concern (Sacramento 2021, pg. E-80). High winds can increase wildfire risks especially during periods of dry vegetation. The proposed project would need to comply with the CBC, which helps regulate construction techniques that minimize damage from windstorms such as Section 1609, Wind Load. In addition, the City's Municipal Code, Chapter 17.12, Weed Control, would help to prevent fire hazards by requiring firebreaks and removal of accumulation. Moreover, the City's LHMP and Emergency Operations Plan provide guidance to effectively respond to and mitigate wildfires.

Although the project site is not in or near a State Responsibility Area (SRA) or a Very High FHSZ, compliance with applicable laws and regulations regarding wildfire emergencies would ensure that the proposed project would not exacerbate wildfire risk, and impacts would be less than significant.

c) If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

The project site is not within a designated Very High FHSZ. Currently, there are no built structures on the project site, and the proposed project would require the expansion of connections to utilities such as electricity, water, and sewer. The proposed project would also introduce circulation network into the project site. However, General Plan Policy C.1.7 requires the installation of traffic pre-emption devices for emergency vehicles (police and fire) at all newly constructed intersections and seeks to retrofit all existing intersections to incorporate these features. Since the project site is not within a FHSZ or Very High FHSZ, impacts would be less than significant.

d) If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

The project site is not located in an SRA or Very High FHSZ, and project development would not exacerbate wildfire risk on-site. As indicated in Section 8.3, *Geology and Soils,* and Section 8.5, *Hydrology and Water Quality,* the project site is not within a landslide hazard area or floodplain (CDC 2022c; FEMA 2012). Therefore, the proposed project would not expose people or structures to significant risks. Construction activities related to the proposed project would be subject to compliance with the CFC and would include BMPs. Section 3303, Owner's Responsibility for Fire Protection, of the CFC requires that landowners, or an authorized agent, to prepare a site safety plan prior to building permit issuance. BMPs may include but are not limited to grading in a pattern that slows stormwater flow and reduce the potential for erosion, landslides, and downstream flooding. Operationally, drainage could facilitate in areas of open space proposed by the project (See Figure 3-3, *Conceptual*

Site Plan). However, General Plan Policy S.2.4 would ensure that adequate drainage exists for both existing and new development. As such, impacts would be less than significant, and the proposed project would not result in new or substantially more severe significant impacts.

Subject: **Notice of Preparation of a Draft Subsequent Environmental Impact Report and Scoping Meeting for the Mills Crossing Civic Center Project**

To: State Clearinghouse
State Responsible Agencies
State Trustee Agencies
Other Public Agencies
Organizations and Interested Persons

Lead Agency: City of Rancho Cordova
Department of Community Development – Planning Division
2729 Prospect Park Drive
Rancho Cordova, CA 95670
Phone: (916) 851-8700
Contact: Stefan Heisler, Housing Manager
Email: sheisler@cityofranchocordova.org

Notice of Preparation: This is to notify the public agencies and the general public that the City of Rancho Cordova, as Lead Agency, will prepare a subsequent environmental impact report (SEIR) for the Mills Crossing Civic Center Project (referred to as the "proposed project"). The City is interested in the input and/or comments of public agencies and the general public as to the scope and content of the environmental information that should be evaluated in the SEIR. Public agencies will need to use the SEIR prepared by the City when considering applicable permits, or other approvals for the proposed project.

Project Title: Mills Crossing Civic Center Project

Project Location: A 9.85-acre site at the corner of Folsom Boulevard and La Loma Drive in the City of Rancho Cordova (Assessor's Parcels Numbers [APN] 076-0020-019, -20, -21, -22).

Scoping Meeting: **Thursday January 19, 2023 starting at 6:00 PM**, the City of Rancho Cordova Department of Community Development will conduct an in-person public scoping meeting to solicit input and comments from public agencies and the general public on the proposed SEIR for the Mills Crossing Civic Center Project.

This public scoping meeting will be held:

- **In-person:**

Rancho Cordova City Hall
2729 Prospect Park Drive
Rancho Cordova, CA 95670

The scoping meeting will include a materials describing the proposed Mills Crossing Civic Center Project, followed by an opportunity for members of the public to discuss the project with City and consultant staff and provide comment on environmental topics which should be discussed and analyzed in the SEIR.

If you have any questions regarding this scoping meeting, contact Stefan Heisler at sheisler@cityofranchocordova.org, or (916) 851-8700. Additional information about the proposed project is available at the following City webpage:

https://www.cityofranchocordova.org/residents/new-businesses-and-projects/mills-crossing-civic-center

Comment Period: Consistent with the time limits mandated by State law, your input, comments, or responses must be received in writing and sent at the earliest possible date, but not later than 5:00 PM on February 6, 2023.

Comments/ Input: Please send your input, comments, or responses (including the name for a contact person in your agency, if applicable) to:

Attn: Stefan Heisler, Housing Manager
City of Rancho Cordova Department of Community Development
2729 Prospect Park Drive
Rancho Cordova, CA 95670
sheisler@cityofranchocordova.org

If sending input, comments, or responses via email, please write "Mills Crossing Civic Center NOP Comments" in the subject line.

Project Location and Existing Uses

The 9.85-acre project site is located at the corner of Folsom Boulevard and La Loma Drive in the City of Rancho Cordova, Sacramento County (see Figure 1, *Regional Location*). The project site is vacant and includes grassy and paved areas. The project site is surrounded by residential uses to the north, residential uses and Folsom Lake College/Rancho Cordova Civic Center to the east, light industrial uses to the south, and commercial and residential uses to the west (see Figure 2, *Aerial Photograph*). The project site is listed on the Department of Toxic Substance Control's Envirostor site for evaluation.

Project Description

The proposed project would result in the following uses:

- Community-Commercial Buildings (up to 132,000 square feet) and would include:

	Gross Area (SF)	Building
Health & Wellness	27,500	1
Community-Commercial	25,000	1
Community-Commercial	27,000	3
Arts Center - Theater	18,000	2
Arts Center - Flex Studios	17,000	2
Community Event Hall	9,000	3
Commercial-Retail	7,200	4
Total	**130,700**	

- Housing Units (up to 120 units):
  - Between 55-60 Multi-Family Affordable Apartments
  - Between 50-60 Zero Lot Line Townhouse-Style Homes for Sale

- Public Open Space (up to 2.5 acres):
  - Between 1.3-1.5 acres of Neighborhood and Community Greens
  - Between 0.75-1.0-acre of Plaza and Green Space
- Parking Structure which would include between 275-325 parking stalls.

Figure 3, *Conceptual Site Plan*, shows the proposed layout of these uses on the project site. It is anticipated that construction of the project would occur from 2024 through 2029.

Areas of Potential Impacts

The California Environmental Quality Act (CEQA) Guidelines Section 15128 allows environmental issues, for which there is no likelihood of significant impact, to be "scoped out" and not analyzed further in the SEIR. As the project site was assumed for development in the General Plan EIR, some footprint-related topics can be focused out of the SEIR as adequately addressed in the General Plan EIR.

Environmental Topics	Evaluated in EIR	Not Evaluated in EIR
Aesthetics		X
Agriculture and Forestry		X
Air Quality	X	
Biological Resources	X	
Cultural Resources	X	
Energy	X	
Geology and Soils		X
Greenhouse Gas Emissions	X	
Hazardous Materials		X
Hydrology/Water Quality		X
Land Use/Planning	X	
Mineral Resources	X	
Noise	X	
Population/Housing	X	
Public Services	X	
Parks and Recreation	X	
Transportation	X	
Tribal Cultural Resources	X	
Utilities/Service Systems	X	
Wildfire		X

Requested Actions

This section presents the actions that would be required to implement the proposed project.

City of Rancho Cordova

- Site Plan Approval
- Building Permits
- Certify SEIR and Adopt Mitigation Monitoring and Reporting Program

Central Valley Regional Water Quality Control Board

- Issuance of National Pollutant Discharge Elimination System (NPDES) Permit
- Issuance of Construction Permit

Subject: Comments on Mills Crossing plan
Date: Thursday, January 5, 2023 5:45:08 PM

---

1. Parking seems excessive when there is so much street parking available; the Folsom Lake College parking lot is NEVER even close to full and could be leased for events. Public transportation should be encouraged as the space is right across the street from buses and light rail. Reduce parking and add more green space or a craft center (like in Davis).
2. Please landscape with native plants and trees - CA Native Plant Society should be used as a resource. No more crepe myrtle please - those trees are getting tiresome. Add oaks or CA sycamore...shrubs with native fruit for birds. Save on maintenance, support plant diversity and wildlife with native plants.

Nancy Marsh

Subject: **Mills Crossing Civic Center Project / 2023010102 / NOP**

Dear Mr. Heisler:

The Sacramento Municipal Utility District (SMUD) appreciates the opportunity to provide comments on the Notice of Preparation of a Draft EIR (NOP) for the Mills Crossing Civic Center Project (Project, SCH 2021040039). SMUD is the primary energy provider for Sacramento County and the proposed Project area. SMUD's vision is to empower our customers with solutions and options that increase energy efficiency, protect the environment, reduce global warming, and lower the cost to serve our region. As a Responsible Agency, SMUD aims to ensure that the proposed Project limits the potential for significant environmental effects on SMUD facilities, employees, and customers.

It is our desire that the Project will acknowledge any impacts related to the following:

- Overhead and or underground transmission and distribution line easements. Please view the following links on smud.org for more information regarding transmission encroachment:
  - https://www.smud.org/en/Business-Solutions-and-Rebates/Design-and-Construction-Services
  - https://www.smud.org/en/Corporate/Do-Business-with-SMUD/Land-Use/Transmission-Right-of-Way
- Utility line routing
- Electrical load needs/requirements
- Energy Efficiency
- Climate Change
- Cumulative impacts related to the need for increased electrical delivery
- The potential need to relocate and or remove any SMUD infrastructure that may be affected in or around the project area

More specifically, SMUD would like to have the following details related to the electrical infrastructure incorporated into the project description:

- South of Folsom Blvd, there are existing 69/12kV OH/UG facilities
- On project site, there are existing 12kV OH/UG facilities
- Structural setbacks of less than 14-feet shall require the applicant to conduct a pre-engineering meeting with all utilities to ensure proper clearances are maintained
- To maintain adequate trench integrity, building foundations must have a minimum horizontal clearance of 5 feet from any SMUD trench. Developer to verify with other utilities (Gas, Telephone, etc.) for their specific clearance requirements
- Proposed SMUD facilities located on the customer's property outside of the existing or proposed PUE(s) may require a dedicated SMUD easement
- The Applicant shall dedicate and provide a vehicular access road; SMUD will supply the minimum specifications during the acquisition process. (or: The Applicant shall dedicate and provide all-weather vehicular access for service vehicles that are up to 26,000 pounds. At a minimum: (a) the drivable surface shall be 20-feet wide; and (b) all SMUD underground equipment and appurtenances shall be within 15-feet from the drivable surface)
- SMUD requires a minimum 12.5-foot PUE adjacent to all public roads for 12kV facilities
- The developer shall dedicate any private drive, ingress and egress easement, or Irrevocable Offer of Dedication (and 10 feet adjacent thereto) as a public utility easement for overhead and underground facilities and appurtenances
- If alternative locations are not provided, existing overhead/underground 12kV facilities will need to remain in order to maintain existing services not part of development
- If applicable existing overhead lines will be removed and existing underground cables will be relocated at developer's expense to maintain existing services within development

SMUD would like to be involved with discussing the above areas of interest as well as discussing any other potential issues. We aim to be partners in the efficient and sustainable delivery of the proposed Project. Please ensure that the information included in this response is conveyed to the Project planners and the appropriate Project proponents.

Environmental leadership is a core value of SMUD and we look forward to collaborating with you on this Project. Again, we appreciate the opportunity to provide input on this Project. If you have any questions regarding this letter, please do not hesitate to contact me at 916.732.7406, or by email at jerry.park@smud.org.

Sincerely,

Jerry Park
Environmental Services Specialist
Sacramento Municipal Utility District

Re: 2023010102, Mills Crossing Civic Center Project, Sacramento County

Dear Mr. Heisler:

The Native American Heritage Commission (NAHC) has received the Notice of Preparation (NOP), Draft Environmental Impact Report (DEIR) or Early Consultation for the project referenced above. The California Environmental Quality Act (CEQA) (Pub. Resources Code §21000 et seq.), specifically Public Resources Code §21084.1, states that a project that may cause a substantial adverse change in the significance of a historical resource, is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.1; Cal. Code Regs., tit.14, §15064.5 (b) (CEQA Guidelines §15064.5 (b)). If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an Environmental Impact Report (EIR) shall be prepared. (Pub. Resources Code §21080 (d); Cal. Code Regs., tit. 14, § 5064 subd.(a)(1) (CEQA Guidelines §15064 (a)(1)). In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources within the area of potential effect (APE).

CEQA was amended significantly in 2014. Assembly Bill 52 (Gatto, Chapter 532, Statutes of 2014) (AB 52) amended CEQA to create a separate category of cultural resources, "tribal cultural resources" (Pub. Resources Code §21074) and provides that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment. (Pub. Resources Code §21084.2). Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource. (Pub. Resources Code §21084.3 (a)). **AB 52 applies to any project for which a notice of preparation, a notice of negative declaration, or a mitigated negative declaration is filed on or after July 1, 2015.** If your project involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space, on or after March 1, 2005, it may also be subject to Senate Bill 18 (Burton, Chapter 905, Statutes of 2004) (SB 18). **Both SB 18 and AB 52 have tribal consultation requirements**. If your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966 (154 U.S.C. 300101, 36 C.F.R. §800 et seq.) may also apply.

The NAHC recommends consultation with California Native American tribes that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Below is a brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments.

Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws.

AB 52

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

1. Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project: Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a lead agency shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:

- **a.** A brief description of the project.
- **b.** The lead agency contact information.
- **c.** Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code §21080.3.1 (d)).
- **d.** A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code §21073).

2. Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report: A lead agency shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code §21080.3.1, subds. (d) and (e)) and prior to the release of a negative declaration, mitigated negative declaration or Environmental Impact Report. (Pub. Resources Code §21080.3.1(b)).

- **a.** For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code §65352.4 (SB 18). (Pub. Resources Code §21080.3.1 (b)).

3. Mandatory Topics of Consultation If Requested by a Tribe: The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:

- **a.** Alternatives to the project.
- **b.** Recommended mitigation measures.
- **c.** Significant effects. (Pub. Resources Code §21080.3.2 (a)).

4. Discretionary Topics of Consultation: The following topics are discretionary topics of consultation:

- **a.** Type of environmental review necessary.
- **b.** Significance of the tribal cultural resources.
- **c.** Significance of the project's impacts on tribal cultural resources.
- **d.** If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency. (Pub. Resources Code §21080.3.2 (a)).

5. Confidentiality of Information Submitted by a Tribe During the Environmental Review Process: With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code §6254 (r) and §6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code §21082.3 (c)(1)).

6. Discussion of Impacts to Tribal Cultural Resources in the Environmental Document: If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:

- **a.** Whether the proposed project has a significant impact on an identified tribal cultural resource.
- **b.** Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code §21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code §21082.3 (b)).

7. Conclusion of Consultation: Consultation with a tribe shall be considered concluded when either of the following occurs:

a. The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or

b. A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code §21080.3.2 (b)).

8. Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document: Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code §21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code §21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code §21082.3 (a)).

9. Required Consideration of Feasible Mitigation: If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code §21084.3 (b). (Pub. Resources Code §21082.3 (e)).

10. Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:

a. Avoidance and preservation of the resources in place, including, but not limited to:

i. Planning and construction to avoid the resources and protect the cultural and natural context.

ii. Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.

b. Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:

i. Protecting the cultural character and integrity of the resource.

ii. Protecting the traditional use of the resource.

iii. Protecting the confidentiality of the resource.

c. Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.

d. Protecting the resource. (Pub. Resource Code §21084.3 (b)).

e. Please note that a federally recognized California Native American tribe or a non-federally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code §815.3 (c)).

f. Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code §5097.991).

11. Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource: An Environmental Impact Report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:

a. The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code §21080.3.1 and §21080.3.2 and concluded pursuant to Public Resources Code §21080.3.2.

b. The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.

c. The lead agency provided notice of the project to the tribe in compliance with Public Resources Code §21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code §21082.3 (d)).

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf

SB 18

SB 18 applies to local governments and requires local governments to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. (Gov. Code §65352.3). Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf.

Some of SB 18's provisions include:

1. Tribal Consultation: If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.** (Gov. Code §65352.3 (a)(2)).

2. No Statutory Time Limit on SB 18 Tribal Consultation. There is no statutory time limit on SB 18 tribal consultation.

3. Confidentiality: Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Gov. Code §65040.2, the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code §5097.9 and §5097.993 that are within the city's or county's jurisdiction. (Gov. Code §65352.3 (b)).

4. Conclusion of SB 18 Tribal Consultation: Consultation should be concluded at the point in which:

- **a.** The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
- **b.** Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation. (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

Agencies should be aware that neither AB 52 nor SB 18 precludes agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52 and SB 18. For that reason, we urge you to continue to request Native American Tribal Contact Lists and "Sacred Lands File" searches from the NAHC. The request forms can be found online at: http://nahc.ca.gov/resources/forms/.

NAHC Recommendations for Cultural Resources Assessments

To adequately assess the existence and significance of tribal cultural resources and plan for avoidance, preservation in place, or barring both, mitigation of project-related impacts to tribal cultural resources, the NAHC recommends the following actions:

1. Contact the appropriate regional California Historical Research Information System (CHRIS) Center (https://ohp.parks.ca.gov/?page_id=30331) for an archaeological records search. The records search will determine:

- **a.** If part or all of the APE has been previously surveyed for cultural resources.
- **b.** If any known cultural resources have already been recorded on or adjacent to the APE.
- **c.** If the probability is low, moderate, or high that cultural resources are located in the APE.
- **d.** If a survey is required to determine whether previously unrecorded cultural resources are present.

2. If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.

- **a.** The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.
- **b.** The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.

3. Contact the NAHC for:

a. A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.

b. A Native American Tribal Consultation List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.

4. Remember that the lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.

a. Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources per Cal. Code Regs., tit. 14, §15064.5(f) (CEQA Guidelines §15064.5(f)). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.

b. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.

c. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code §7050.5, Public Resources Code §5097.98, and Cal. Code Regs., tit. 14, §15064.5, subdivisions (d) and (e) (CEQA Guidelines §15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

If you have any questions or need additional information, please contact me at my email address: Pricilla.Torres-Fuentes@nahc.ca.gov.

Sincerely,

CITY OF RANCHO CORDOVA NOTICE OF PREPARATION OF A DRAFT SUBSEQUENT ENVIRONMENTAL IMPACT REPORT FOR THE MILLS CROSSING PROJECT

Dated: January 6, 2023

TO: Responsible Agencies, Interested Parties, and Organizations

SUBJECT: Mills Crossing Project Preparation of Draft SEIR — CITY OF RANCHO CORDOVA, SACRAMENTO COUNTY

The City of Rancho Cordova, as Lead Agency, intends to prepare a Draft Subsequent Environmental Impact Report (SEIR) for the Mills Crossing project (Project). In accordance with Section 15082 of the CEQA Guidelines, the City has prepared this Notice of Preparation (NOP) to provide responsible agencies and other interested parties with sufficient information describing the Project and its potential environmental effects.

PROJECT LOCATION: The Project is located at 10153-10179 Folsom Blvd (APNs: 076-0020-019, -020, -021, & -022)

PROPERTY OWNER: City of Rancho Cordova
APPLICANT/DEVELOPER: City of Rancho Cordova

2729 Prospect Park Drive
2729 Prospect Park Drive
Rancho Cordova, CA 95670
Rancho Cordova, CA 95670

PROJECT DESCRIPTION: The City of Rancho Cordova is proposing a mixed-use project located on a property zoned Residential Mixed Use (RMU) within the Folsom Blvd Specific Plan (FBSP) designation of the General Plan. The project will include approximately 130,700 SF of community-commercial buildings, up to 120 housing units including multi-family apartments and zero lot line townhouse-style homes, up to 2.5 acres of public open space, and a parking structure with up to 325 parking stalls. The Community-commercial component will include health and wellness, community serving commercial, an arts center with black box theater and flex studios, a community event hall, and retail.

Hazardous Waste Sites: Pursuant to Section 15087(c)(6) of the Guidelines for California Environmental Quality Act, the City of Rancho Cordova acknowledges that a portion of the property, specifically the parcel in the west corner of the project site (APN: 076-0020-021) is listed as a site for evaluation on the Department of Toxic Substances Control (DTSC) EnviroStor database (DTSC 2022).

Public Comment Opportunity: The public review and comment period for the NOP will extend for 30 days **starting January 6, 2023 and ending February 6, 2023 at 5:00 PM**. The NOP can be viewed and/or downloaded at the following website: **https://www.cityofranchocordova.org/residents/new-businesses-and-projects/mills-crossing-civic-center**

A Scoping Meeting will be held on Thursday, January 19, 2023 at 6:00 p.m. in the City of Rancho Cordova City Hall, American River Room North, located at 2729 Prospect Park Drive, Rancho Cordova, CA 95670

Comments/Questions: Comments and/or questions regarding the NOP may be directed to:

SUBJECT: COMMENTS ON NOTICE OF PREPARATION OF A DRAFT SUBSEQUENT ENVIRONMENTAL IMPACT REPORT AND SCOPING MEETING FOR THE MILLS CROSSING CIVIC CENTER PROJECT.

Stefan Heisler,

The County of Sacramento appreciates the opportunity to comment on the Notice of Preparation of a Draft Subsequent Environmental Impact Report for the Mills Crossing Civic Center Project (The Mills). We anticipate a project of this size may generate enough traffic to cause impacts in Sacramento County. Because of this, we'd ask the city to analyze the following County facilities:

- Intersections (LOS and queuing analysis)
  - Folsom Blvd. at Horn Rd./Paseo Rio Way
  - Folsom Blvd. at Bradshaw Rd.

If any County facilities are impacted from the project, Sacramento County would request to enter a Project Specific Reciprocal Funding Agreement with the City of Rancho Cordova, as necessary. Please feel free to contact me at (916) 876-4108 with any questions or comments.

Sincerely,

_____

Reviewed by: Cordova Recreation and Park District
Laura Taylor, CRPD Park Planning and Development Manager
Lisbet Gullone, CRPD Contract Planner

Cordova Recreation and Park District (CRPD) is responding to the City of Rancho Cordova's Notice of Preparation to prepare a Draft Subsequent Environmental Impact Report for the Mills Crossing Civic Center project.

This comment letter has more requests for clarifications than statements. This is a unique project. Usually CRPD would have more familiarity with a development project before CRPD is asked to comment on an EIR because CRPD, the Developer and City would have already worked together on a land use plan that clearly identifies Quimby park land dedication and City Open Space (or Neighborhood Green Space). The land use plan and ownership responsibilities are often out prior to the NOP for an EIR. CRPD has not previously made comments regarding the proposed Civic Center development.

CRPD Planning staff attended the City's Scoping Meeting held on January 19, 2023. After that meeting Planning staff had email correspondence with Stefan Heisler following up on a few questions.

PROJECT DESCRIPTION

The proposed 10-acre Mills Crossing development is located in the Transit Oriented District Overlay Zone of Mather Field/Mills Light Rail Station on the south side of Folsom Boulevard. Concept 2 of the project will include 130,700 square feet of commercial space, a parking structure for 325 vehicles, 2.5 acres of public open space and up to 120 housing units. The current master plan exhibit shows 48 townhome lots and a four-story apartment building. According to the housing program, the apartment building will include a minimum of 55 affordable units. The final number of residential units within Mills Crossing is not yet known.

Stefan confirmed that the proposed townhomes will be on individual lots. The proposed project falls under Quimby park land requirements for projects with 50 or more lots. Stefan said it is not clear yet if some portion of the public outdoor space in the land use plan is intended to be Quimby park land dedicated to Cordova Recreation and Park District and that further conversations are needed between the City and CRPD.

PARK AND RECREATION SYSTEM IMPACTS

Rancho Cordova's new Civic Center project includes three public outdoor space parcels with a combined area of 2.5 acres. The parcels have inconsistent labels so it is unclear which parcels are intended to be City Open Space or Quimby park land dedications. The project graphic on the City's web page Mills Crossing Civic Center | City of Rancho Cordova indicates a 1.1 acre Community Park. Community Parks are under the jurisdiction of CRPD and are dedicated to CRPD as Quimby park land dedication. However the City Council agenda staff report associated with the 12/6/2021 presentation to the City Council states, "City maintaining ownership, management and control of the community facilities, ...". CRPD has not yet been included on discussions pertaining to the proposed Community Park site. The intent for ownership and maintenance of the Hybrid/Plaza Park also needs clarification.

CRPD anticipates that standard Quimby dedication requirements will be applied to all residential units per the Municipal Code, Chapter 22.40. Once more information about the townhomes and apartment units have been provided CRPD will calculate the Quimby dedication acreage requirement. For order of magnitude consideration, CRPD anticipates the Quimby park land dedication amount for this project to be around 1.25 acres. This project may also need to contribute towards maintenance of the Quimby Community Park and other existing park facilities impacted by the residents of this project by annexing into an existing CRPD Community Facilities District.

CRPD's Recommendations

The Subsequent Environmental Impact Report should include the following information:

- For CRPD to accurately respond to the potential impacts of this project, the land use plan should clearly identify Quimby park land and City Open Space in the proposed project. CRPD looks forward to further discussions with the City on this item.

- Cordova Recreation and Park District should be listed as the jurisdiction responsible for Quimby Parkland.

- Once the Quimby park land (and/or Quimby in-lieu fees) for this project have been clarified for this project then CRPD can provide more information about Quimby in-lieu fees, park impact fees and on-going maintenance assessments for park land.

FUTURE ENTITLEMENT PROCESS

Thank you for notifying CRPD regarding the preparation of additional environmental documents for the Mills Crossing project. Please contact CRPD if you have any questions or comments regarding CRPD's current recommendations.

CRPD will continue to follow the progress of Rancho Cordova's new Civic Center project with great interest.

Respectfully,

Laura L. Taylor, ASLA

NAME OF DEVELOPMENT: Mills Crossing Project
TYPE OF DOCUMENTS: Notice of Preparation (NOP) - Draft Subsequent Environmental Impact Report

Sacramento Regional Transit District (SacRT) appreciates the opportunity to review the NOP for the Draft Subsequent Environmental Impact Report for the Mills Crossing Project. SacRT has provided previous support related to this project, to the Sacramento Area Council of Governments (SACOG) in October 2022 related to the Green Means Go Early Activation Category Application (Attachment 1).

The Mills Crossing Project (Project) is located on a 9.85-acre site at the corner of Folsom Boulevard and La Loma Drive in the City of Rancho Cordova. The Project will include approximately 130,700 SF of community-commercial buildings, up to 120 housing units including multi-family apartments and zero lot line townhouse-style homes, up to 2.5 acres of public open space, and a parking structure with up to 325 parking stalls. The Community-commercial component will include health and wellness, community serving commercial, an arts center with black box theater and flex studios, a community event hall and retail.

SacRT's previous letter of support for the Project was primarily focused on transit-oriented development (TOD) goals, and the opportunities that the Project presents. SacRT has a renewed focus on TOD, which helps the community and surrounding neighborhoods by providing benefits such as higher quality of life, increased transit ridership, reduced traffic congestion and driving, healthier lifestyle through more active transportation, and reduced pollution and environmental destruction. SacRT feels that the Mills Crossing Project will provide these benefits such as these.

In addition to the statements described above, SacRT also has the following comments pertaining to the Project:

- SacRT supports the development patterns with a mix of commercial and residential, as they are appropriate for efficient transit operations and supportive of TOD.
- SacRT supports the high-density residential sites located within the planned community and planned pedestrian pathways and crossings to fixed-route transit options.
- SacRT supports the inclusion of 55-60 multi-family affordable housing units.
- SacRT requests review of a traffic impact analysis, to further understand the methodology for planned number of parking spaces.

Comments listed below pertain specifically to the site plan included in the NOP:

- SacRT is in favor of placing the community facilities, commercial/retail spaces, and the arts center facing Folsom Boulevard, and nearest to transit. Additionally, with the public plaza also fronting

sacrt.com

Public Transit Since 1973

Folsom Boulevard, this provides easy pedestrian access into the center and onto safe crossings and pathways leading directly to housing units.

- SacRT is interested in a revised layout of the residential units within the community. As it is currently proposed, the affordable housing units are located around the perimeter of the Project area, adjacent to La Loma Drive and at the edge of the property line. SacRT would be interested to see the affordable housing units brought closer to the center of the community, around the neighborhood green space, and closer to the planned pathways to transit. SacRT believes that many residents of affordable housing units are likely to be transit-dependent; therefore, placing these units closer to transit options may be more beneficial.

Thank you again for the opportunity to review the NOP for the Mills Crossing Project. SacRT staff looks forward to the continued review of project information as it becomes available and looks forward to collaborating on the transit goals identified in the future SEIR.

Sincerely,

Sarah Poe
Planner, SacRT

Subject: Mills Crossing Project Preparation of Draft SEIR

Dear Stefan Heisler:

Thank you for providing the Sacramento Metropolitan Air Quality Management District (Sac Metro Air District) with the Notice of Preparation (NOP) of a Draft Subsequent Environmental Impact Report (SEIR) for the Mills Crossing project (Project). The project, located at 10153-10179 Folsom Blvd, will include approximately 130,700 SF of community-commercial buildings, up to 120 housing units, including multi-family apartments and zero lot line townhouse-style homes, up to 2.5 acres of public open space, and a parking structure with up to 325 parking stalls. The Community-commercial component will include health and wellness, community serving commercial, an arts center with black box theater and flex studios, a community event hall, and retail. Sac Metro Air District comments on the project CEQA review follow.

CEQA Review:

CEQA Guide:

The Sac Metro Air District recommends that the City of Rancho Cordova utilize the Guide to Air Quality Assessment in Sacramento County[1] (CEQA Guide) as a resource for preparing the DEIR. The CEQA Guide includes recommended thresholds of significance, analysis methods, mitigation measures, and best management practices for project CEQA review in support of regional plans to attain Federal and State air quality and climate goals, reduce public exposure to toxic air contaminants, and disclose project public health effects.

Construction Analysis:

The DEIR's construction analysis should quantify and disclose projected construction emissions of Criteria Pollutants, pollutants regulated by the Clean Air Act, using methods referenced in the CEQA Guide's chapter on Construction-Generated Criteria Air Pollutant and Precursor Emissions. If construction emissions are projected to exceed applicable Sac Metro Air District thresholds of significance, the DEIR should incorporate mitigation measures for construction emissions using methods in this chapter.

[1] Guide to Air Quality Assesment in Sacramento County: https://www.airquality.org/Businesses/CEQA-Land-Use-Planning/CEQA-Guidance-Tools

All projects must implement Sac Metro Air District Basic Construction Emission Control Practices to use the non-zero particulate matter CEQA thresholds of significance. These are also helpful to ensure compliance with Sac Metro Air District's Rule 403, Fugitive Dust.

Please note that all projects are subject to Sac Metro Air District rules and regulations at the time of construction. Please visit our website to find a list of the most common rules that apply during the construction phase of projects[2].

Operational Analysis:

The DEIR's analysis of operational emissions should quantify and disclose projected operational emissions of Criteria Pollutants using methods referenced in the CEQA Guide's chapter on Operational Criteria Air Pollutant and Precursor Emissions[3]. For projects that will exceed Sac Metro Air District's operational emissions thresholds of significance for reactive organic gases, oxides of nitrogen, or particulate matter, Sac Metro Air District recommends the project proponent develop an Air Quality Mitigation Plan (AQMP), using methods described in the CEQA Guide. Consistent with the City of Rancho Cordova General Plan Air Quality Element[4] [5], the AQMP should include measures to reduce operational emissions of these pollutants by 15% or more and can be a standalone document or incorporated into the environmental document. The AQMP must be referenced in the DEIR as an air quality mitigation measure, appended to the document, and referenced as a condition of approval by the lead agency.

Sac Metro Air District recommends using its Recommended Guidance for Land Use Emission Reductions[6] to develop AQMP measures. Should the project need to develop an AQMP, Sac Metro Air District respectfully requests consultation to review the AQMP for technical adequacy before inclusion in the DEIR.

Analysis of operational Criteria Pollutants should also include an analysis of health effects that may result from operational emissions pursuant to the "Friant Ranch" decision. In December 2018, the California Supreme Court issued a decision in the Sierra Club v. County of Fresno case regarding the "Friant Ranch" project ((2018) 6 Cal. 5th 502). The Court determined that CEQA air quality analysis should include a reasonable effort to connect a project's air quality impacts to likely health consequences or explain why it is not feasible to do so in meaningful detail. To analyze health effects pursuant to the Friant Ranch decision, consult Sac Metro Air

[4] City of Rancho Cordova General Plan, Chapter XII, page 11; Action AQ.1.2.2.– "*Require project proponents to coordinate with SMAQMD on appropriate methodologies for evaluating project emissions and air quality impacts (e.g., emissions modeling software, SMAQMD's thresholds of significance, etc.).*" Adopted 6/26/2006

[5] City of Rancho Cordova General Plan, Chapter XII, page 11; Action AQ.1.2.3.– *"Require all new development projects that exceed SMAQMD's thresholds of significance to incorporate design, construction material, and/or other operational features that will result in a 15 percent reduction in emissions when compared to an "unmitigated baseline" project."* Adopted 6/26/2006

[6] Sac Metro Air District Guide to Air Quality Assesment in Sacramento County, http://www.airquality.org/Residents/CEQA-Land-Use-Planning/CEQA-Guidance-Tools

District's Guidance to Address the Friant Ranch Ruling for CEQA Projects in the Sac Metro Air District.[7]

The operational analysis should also study consistency with local and regional plans, including the City of Rancho Cordovoa's Folsom Boulevard Specific Plan[8] and SACOG Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS) for the Sacramento region[9].

Greenhouse Gases:

If CEQA analysis demonstrates that Project greenhouse gas (GHG) emissions, from construction or operations will exceed applicable Sac Metro Air District thresholds of significance[10], we recommend mitigating emission impacts using mitigation methods referenced in the CEQA Guide's chapter on GHG Emissions[11].

Permit Requirements:

Equipment in the Community center or commercial operations may be subject to Sac Metro Air District permit requirements. Sac Metro Air District Rule 201 requires any business or person to obtain an Authority to Construct and Permit to Operate before installing or operating new equipment or processes that may release or control air pollutants. To ensure that all Sac Metro Air District rules and regulations are considered, please visit the Sac Metro Air District's website[12] for permit application instructions and forms.

Design Comments:

Clean Air Resiliency Center

Climate-exacerbated hazards and disasters will likely compound existing vulnerabilities and challenges for individuals and communities. With increasing extreme weather events, wildfires, and other worsening natural disasters, it becomes critical to develop and establish local resilience centers that can support the needs of the surrounding community—as well as potentially evacuees—at short notice for potentially extended periods.

The City of Rancho Cordova can assist in this effort by anticipating how the proposed community center can be adapted to serve as a resilience center or provide emergency services, such as a cooling center or clean air centers. We recommend that the project be equipped with MERV-13 or higher-rated air filtration systems to serve as a clean air center during wildfire smoke events. We recommend including an onsite renewable energy system, specifically a solar photovoltaic system coupled with battery storage, to provide emergency

power. Disaster preparedness training, supplies, and other capacity-building features should be included in the final plan for the Project.

Multi-Modal Accommodation

The DEIR should evaluate project support of bicycle and pedestrian transportation as consistent with adopted policies to encourage multi-modal transportation. Specific policies include those in the Folsom Boulevard Specific Plan[13].

Urban Heat Island (UHI) impacts:

Sac Metro Air District participated in the Capital Region Transportation Sector Urban Heat Island Mitigation Project (UHI Project), producing a report on urban heat island effect impacts on the Sacramento region and mitigation strategies for these impacts. According to the report, the heat island effect already presents a serious challenge for our region. Developed areas in Sacramento range from 3 to 9 degrees Fahrenheit warmer than surrounding areas, which results in decreased air quality and associated public health impacts. The urban heat island results from the conversion of undeveloped land to developed land.

Higher ambient temperatures can increase the formation of ozone, a respiratory system irritant. During extreme heat and extended heat waves, these higher temperatures can lead to heat stress, heat stroke, and even heat mortality, especially for the elderly, the young, and those with pre-existing health conditions.

The recommendations below on strategies to reduce urban heat island effect impacts are consistent with the UHI Project.

- Utilize certified cool roofs, consistent with recommendations for solar reflectance and thermal emittance in the California Building Energy Efficiency Standards Table 170.2-A for the Sacramento Climate Zone (Zone 12), as applicable.

- Utilize “cool pavement” for new outdoor pavement, with the highest albedo possible but no less than 0.25. Please visit Sac Metro Air District’s Recommended Cool Pavement Strategies[14] for guidance on cool pavement strategies

- Incorporate new trees to shade new and existing pavements and structures to the full extent feasible.

- We recommend selecting air-quality supportive tree species for these plantings. A list of air-quality-supportive tree species is available in the Sacramento Tree Foundation’s Shady Eighty guide,[15] along with information for each species on tree shade canopy, the distance between plantings, and more.

STATE CLEARING HOUSE

COMMENTS TO REQUEST FOR REVIEW FOR THE NOTICE OF PREPARATION FOR THE DRAFT ENVIRONMENTAL IMPACT REPORT, MILLS CROSSING CIVIC CENTER PROJECT, SCH#2023010102, SACRAMENTO COUNTY

Pursuant to the State Clearinghouse's 6 January 2023 request, the Central Valley Regional Water Quality Control Board (Central Valley Water Board) has reviewed the *Request for Review for the Notice of Preparation for the Draft Environmental Impact Report* for the Mills Crossing Civic Center Project, located in Sacramento County.

Our agency is delegated with the responsibility of protecting the quality of surface and groundwaters of the state; therefore, our comments will address concerns surrounding those issues.

I. Regulatory Setting

Basin Plan

The Central Valley Water Board is required to formulate and adopt Basin Plans for all areas within the Central Valley region under Section 13240 of the Porter-Cologne Water Quality Control Act. Each Basin Plan must contain water quality objectives to ensure the reasonable protection of beneficial uses, as well as a program of implementation for achieving water quality objectives with the Basin Plans. Federal regulations require each state to adopt water quality standards to protect the public health or welfare, enhance the quality of water and serve the purposes of the Clean Water Act. In California, the beneficial uses, water quality objectives, and the Antidegradation Policy are the State's water quality standards. Water quality standards are also contained in the National Toxics Rule, 40 CFR Section 131.36, and the California Toxics Rule, 40 CFR Section 131.38.

The Basin Plan is subject to modification as necessary, considering applicable laws, policies, technologies, water quality conditions and priorities. The original Basin Plans were adopted in 1975, and have been updated and revised periodically as required, using Basin Plan amendments. Once the Central Valley Water Board has adopted a Basin Plan amendment in noticed public hearings, it must be approved by the State Water Resources Control Board (State Water Board), Office of

Administrative Law (OAL) and in some cases, the United States Environmental Protection Agency (USEPA). Basin Plan amendments only become effective after they have been approved by the OAL and in some cases, the USEPA. Every three (3) years, a review of the Basin Plan is completed that assesses the appropriateness of existing standards and evaluates and prioritizes Basin Planning issues. For more information on the *Water Quality Control Plan for the Sacramento and San Joaquin River Basins*, please visit our website:
http://www.waterboards.ca.gov/centralvalley/water_issues/basin_plans/

Antidegradation Considerations
All wastewater discharges must comply with the Antidegradation Policy (State Water Board Resolution 68-16) and the Antidegradation Implementation Policy contained in the Basin Plan. The Antidegradation Implementation Policy is available on page 74 at:
https://www.waterboards.ca.gov/centralvalley/water_issues/basin_plans/sacsjr_201805.pdf

In part it states:

Any discharge of waste to high quality waters must apply best practicable treatment or control not only to prevent a condition of pollution or nuisance from occurring, but also to maintain the highest water quality possible consistent with the maximum benefit to the people of the State.

This information must be presented as an analysis of the impacts and potential impacts of the discharge on water quality, as measured by background concentrations and applicable water quality objectives.

The antidegradation analysis is a mandatory element in the National Pollutant Discharge Elimination System and land discharge Waste Discharge Requirements (WDRs) permitting processes. The environmental review document should evaluate potential impacts to both surface and groundwater quality.

II. Permitting Requirements

Construction Storm Water General Permit
Dischargers whose project disturb one or more acres of soil or where projects disturb less than one acre but are part of a larger common plan of development that in total disturbs one or more acres, are required to obtain coverage under the General Permit for Storm Water Discharges Associated with Construction and Land Disturbance Activities (Construction General Permit), Construction General Permit Order No. 2009-0009-DWQ. Construction activity subject to this permit includes clearing, grading, grubbing, disturbances to the ground, such as stockpiling, or excavation, but does not include regular maintenance activities performed to restore the original line, grade, or capacity of the facility. The Construction General Permit requires the development and implementation of a Storm Water Pollution Prevention Plan (SWPPP). For more information on the Construction General Permit, visit the State Water Resources Control Board website at:
http://www.waterboards.ca.gov/water_issues/programs/stormwater/constpermits.shtml

Clean Water Act Section 404 Permit

If the project will involve the discharge of dredged or fill material in navigable waters or wetlands, a permit pursuant to Section 404 of the Clean Water Act may be needed from the United States Army Corps of Engineers (USACE). If a Section 404 permit is required by the USACE, the Central Valley Water Board will review the permit application to ensure that discharge will not violate water quality standards. If the project requires surface water drainage realignment, the applicant is advised to contact the Department of Fish and Game for information on Streambed Alteration Permit requirements. If you have any questions regarding the Clean Water Act Section 404 permits, please contact the Regulatory Division of the Sacramento District of USACE at (916) 557-5250.

Clean Water Act Section 401 Permit – Water Quality Certification

If an USACE permit (e.g., Non-Reporting Nationwide Permit, Nationwide Permit, Letter of Permission, Individual Permit, Regional General Permit, Programmatic General Permit), or any other federal permit (e.g., Section 10 of the Rivers and Harbors Act or Section 9 from the United States Coast Guard), is required for this project due to the disturbance of waters of the United States (such as streams and wetlands), then a Water Quality Certification must be obtained from the Central Valley Water Board prior to initiation of project activities. There are no waivers for 401 Water Quality Certifications. For more information on the Water Quality Certification, visit the Central Valley Water Board website at: https://www.waterboards.ca.gov/centralvalley/water_issues/water_quality_certification/

Waste Discharge Requirements – Discharges to Waters of the State

If USACE determines that only non-jurisdictional waters of the State (i.e., "non-federal" waters of the State) are present in the proposed project area, the proposed project may require a Waste Discharge Requirement (WDR) permit to be issued by Central Valley Water Board. Under the California Porter-Cologne Water Quality Control Act, discharges to all waters of the State, including all wetlands and other waters of the State including, but not limited to, isolated wetlands, are subject to State regulation. For more information on the Waste Discharges to Surface Water NPDES Program and WDR processes, visit the Central Valley Water Board website at:https://www.waterboards.ca.gov/centralvalley/water_issues/waste_to_surface_water/

Projects involving excavation or fill activities impacting less than 0.2 acre or 400 linear feet of non-jurisdictional waters of the state and projects involving dredging activities impacting less than 50 cubic yards of non-jurisdictional waters of the state may be eligible for coverage under the State Water Resources Control Board Water Quality Order No. 2004-0004-DWQ (General Order 2004-0004). For more information on the General Order 2004-0004, visit the State Water Resources Control Board website at: https://www.waterboards.ca.gov/board_decisions/adopted_orders/water_quality/2004/wqo/wqo2004-0004.pdf

Dewatering Permit

If the proposed project includes construction or groundwater dewatering to be discharged to land, the proponent may apply for coverage under State Water Board General Water Quality Order (Low Threat General Order) 2003-0003 or the Central Valley Water Board's Waiver of Report of Waste Discharge and Waste Discharge Requirements (Low Threat Waiver) R5-2018-0085. Small temporary construction dewatering projects are projects that discharge groundwater to land from excavation activities or dewatering of underground utility vaults. Dischargers seeking coverage under the General Order or Waiver must file a Notice of Intent with the Central Valley Water Board prior to beginning discharge.

For more information regarding the Low Threat General Order and the application process, visit the Central Valley Water Board website at: http://www.waterboards.ca.gov/board_decisions/adopted_orders/water_quality/2003/wqo/wqo2003-0003.pdf

For more information regarding the Low Threat Waiver and the application process, visit the Central Valley Water Board website at: https://www.waterboards.ca.gov/centralvalley/board_decisions/adopted_orders/waivers/r5-2018-0085.pdf

Limited Threat General NPDES Permit

If the proposed project includes construction dewatering and it is necessary to discharge the groundwater to waters of the United States, the proposed project will require coverage under a National Pollutant Discharge Elimination System (NPDES) permit. Dewatering discharges are typically considered a low or limited threat to water quality and may be covered under the General Order for *Limited Threat Discharges to Surface Water* (Limited Threat General Order). A complete Notice of Intent must be submitted to the Central Valley Water Board to obtain coverage under the Limited Threat General Order. For more information regarding the Limited Threat General Order and the application process, visit the Central Valley Water Board website at: https://www.waterboards.ca.gov/centralvalley/board_decisions/adopted_orders/general_orders/r5-2016-0076-01.pdf

NPDES Permit

If the proposed project discharges waste that could affect the quality of surface waters of the State, other than into a community sewer system, the proposed project will require coverage under a National Pollutant Discharge Elimination System (NPDES) permit. A complete Report of Waste Discharge must be submitted with the Central Valley Water Board to obtain a NPDES Permit. For more information regarding the NPDES Permit and the application process, visit the Central Valley Water Board website at: https://www.waterboards.ca.gov/centralvalley/help/permit/

Re: Mills Crossing Civic Center Project Notice of Preparation (SCH #2023010102)

Dear Mr. Heisler,

This letter is in response to the Notice of Preparation for the proposed Mills Crossing Civic Center Project that would be built there in Rancho Cordova. I have reviewed the documents and based on what information is provided there, I have several suggestions of topics to be studied as well as elements to be improved.

Based on the image included in the NOP document, it appears that the project would, as proposed, introduce several hazards by design so the study should be sure to acknowledge and propose mitigation for them. The first is that it looks like there would be an unacceptable number of options for entering the parking structure off of La Loma Drive. As currently shown in the image, the entrance would be accessible from all movements to/from La Loma Dr. However, based on measurements using Google Maps, it would be only 100 feet at most from the intersection of La Loma Dr. and Folsom Blvd. That would be far too close to the intersection to allow all turning movements into the garage (and/or from the existing driveway across the street), presenting an additional threat to any bicyclists using the Class II bike lanes which exist on La Loma Dr. Thus, the EIR must either acknowledge this creation of a hazard by design or identify what mitigation measures would be taken to restrict the parking garage to only allow right in/right out.

Additionally, the Project proposes to construct an entirely new street which would run across the site from La Loma Dr. to El Caprice Dr. which based on measurements, would be roughly 900 feet long. The image is not detailed enough to be able to conclusively determine all features and markings that would be used for this new street. However, what we see is not promising and appears to create several hazards by design. The length is nearly a fifth of a mile, which is enough to create a speeding problem if not managed properly. This would be further influenced by the fact that this new street would create a shortcut between El Caprice Dr. and La Loma Dr. which would induce drivers to use it in an attempt to save time, especially for shorter trips such as from the homes behind the Project to retail locations along Folsom Blvd. This is particularly worrisome given the proposal for a prominent crosswalk approximately in the middle which would connect the proposed Public Plaza + Green Space with the proposed Neighborhood Green where people crossing would be put at heightened risk due to the shortcut.

It borders on criminal to propose infrastructure to be built new in 2023 at the earliest which would cast in place known safety problems. Both the potential speeding problem and cut-through traffic present hazards which must not only be acknowledged in the EIR, but actually mitigated too. Thus, this new road should be designed to discourage cut-through traffic as well as speeding. Fortunately, a route that is slow to drive is not going to be as attractive a route to use as a shortcut so the solutions to both problems build upon each other.

An ideal approach for the City to use would be to take advantage of AB 43 (Friedman, 2021) allowing speed limits below 25 MPH to produce a street that is *designed and built* for 20 MPH travel speeds

from the very beginning. (Some excellent models of the complete package of what this looks like are the reconstructions of Mariaplaats[1] or Adriaen van Ostadelaan,[2] both in Utrecht, NL.) Doing so would mean that the project starts with proven measures via keeping speeds and traffic counts low.[3] This would not at all preclude the street from being used by motor traffic and there would continue to be access to all the residential components as well as the parking garage. However, the focus would be to create an environment where that is the sole reason that a vast majority of motor traffic using the street, **not** just an ancillary action done by a few.

With the examples in mind, it is easier to see what is wrong. The first glaring issue with the new street is that it appears to have on-street parking. Given the provision of an entire parking structure as well as on-street parking mixed in with the residential portion of the Project, the need to still provide more on-street parking is questionable. Instead the space that is currently used for parking can be used to narrow the street by using wider sidewalks and bioswales/planter boxes with trees, all of which is instrumental in helping keep speeds low.[4][5] Doing so also would improve any potential water quality and runoff capture issues and requirements by both reducing the paved surface as well as providing infrastructure which actively helps capture and clean the runoff, not make more of it.

Nevertheless, if it is decided that on-street parking is truly necessary, then it should at least be provided in a manner that makes it abundantly clear that it is not a part of the traveled way if/when no cars are parked there. This can take on a variety of forms, but a vital approach is to use bays as well as elements which provide an unmistakable demarcation between the traveled way and the parking bay. While the examples referenced in the videos above provided parking at sidewalk level, other techniques include providing the gutter between the traveled way and parking and sloping the parking away from the sidewalk (see Figure 1), using a contrasting material to pave the parking bays, and of course, providing bulbouts at the locations where parking is not going to be allowed.

Another issue is the proposed crosswalk referenced earlier. Once again, it is not possible to conclusively determine the exact details of what is proposed based on the image from the NOP document. However, it is vital that such a prominent element be done properly the first time around, both to ensure safety and to avoid needing to search for funding to take corrective actions later to fix a hazardous design which did not need to exist in the first place. Thus, a few items are critical for its design, namely making it a raised crosswalk as well as using bulbouts. Additionally, all other crosswalks associated with the Project site need to receive the same treatment, including what would traditionally be considered or provided in an unmarked manner.

---

Marven E. Norman
PO Box 1147
San Bernardino, CA 92402

Finally, while it is often presented as a "conservative" choice for developments to overbuild car infrastructure and ignore other forms of transportation for purposes of analysis, given the location of the Project directly adjacent a rail transit station, it is unfathomable that the studies done for this Project would need to make that same error. In a similar vein, it is vital that any offsite traffic mitigation deemed to be "necessary" for the Project **not** contradict and undermine the existing active transportation plans for the City, County, Caltrans, or any other entities. Instead, those items should at a bare minimum, build out what is included in those plans and ideally use the opportunity to actually upgrade those recommended facilities based on the latest standards.

Thank you for taking the time to receive and consider these comments. If there are any questions, please do not hesitate to reach out for clarification.

Sincerely,

Marven E. Norman

1.0 INTRODUCTION

This report documents the results of an Air Quality and Greenhouse Gas (GHG) Emissions Assessment completed for the Mills Crossing Project (Project), which proposes the construction of a community center with a health and wellness center, a parking structure, arts center and theater, a multifamily and single-family housing development, commercial and retail businesses, and community and event centers. This assessment was prepared using methodologies and assumptions recommended in the rules and regulations of the Sacramento Metropolitan Air Quality Management District (SMAQMD). Regional and local existing conditions are presented, along with pertinent emissions standards and regulations. The purpose of this assessment is to estimate Project-generated criteria air pollutants and GHG emissions attributable to the Project and to determine the level of impact the Project would have on the surrounding environment.

1.1 Project Location and Description

The Project Site is a 9.85-acre property located at the corner of Folsom Boulevard and La Loma Drive in the City of Rancho Cordova, Sacramento County, and encompasses the following Assessor's Parcel Numbers (APNs): 076-0020-019, -20, -21, -22. The Proposed Project Area is roughly bounded by Folsom Boulevard to the south, La Loma Drive to the west, El Caprice Drive to the east, and residential housing to the north fronting Malaga Way and Ashbury Court. Surrounding land uses includes the residential uses to the north, residential uses and Folsom Lake College/Rancho Cordova Civic Center to the east, light industrial uses to the south, and commercial and residential uses to the west. The Mather Field/Mills Train Station is located directly across Folsom Boulevard from the Project Site and can be accessed via a pedestrian crosswalk with stop-traffic control. Additionally, the site is fronted by a Class II bike lane on Folsom Boulevard.

The Project Site is located within the Folsom Boulevard Specific Plan area. The Folsom Boulevard Specific Plan (FBSP or Specific Plan) is the primary planning tool the City uses to guide future development and redevelopment within the Specific Plan area. It seeks to increase the density of both housing and commercial activity; increase pedestrian, bicycle, and transit trips to, from, and through the area; increase the visibility of the corridor as a destination; and change the dynamic and image to that of a high demand, thriving urban area. The site is zoned Residential Mixed-Use – Folsom Boulevard Specific Plan (RMU [FBSP]). The RMU (FBSP) Zoning District is intended to designate property for the development of medium and high-density housing (between 6.1 and 40 dwelling units per acre) that may incorporate office and/or commercial services. While the predominant use of the development is residential, the City encourages the vertical and/or horizontal integration of commercial and/or office uses that are compatible with the residential development.

The Project Site has a City of Rancho Cordova General Plan land use designation of Residential Mixed-Use (FB-RMU).

The Project proposes a mix of land uses as follows:

Community-Commercial Buildings

The community-commercial buildings would include up to 140,000 square feet of uses, and would include the following:

- Health and Wellness
    - Community Health Clinic – up to 30,000 square feet
- Events and Meetings Space
    - Space for meetings, community and cultural events, banquet, and weddings – up to 15,000 square feet
- Arts Center (Subtotal – up to 35,000 square feet)
    - Flex Theater (black/white/green box) – up to 18,000 square feet
    - Flexible Classrooms and Rehearsal Space – up to 6,000 square feet
    - Production/Artist's Studios – up to 4,000 square feet
    - Gallery/Exhibits – up to 4,000 square feet
    - Administrative Space – up to 3,000 square feet
- Community-Commercial Building (Subtotal – up to 52,500 square feet)
    - Commercial Office-Anchor – up to 25,000 square feet
    - Commercial Office-Shared – up to 10,000 square feet
    - Flexible Studios 1 – up to 5,000 square feet
    - Flexible Studios 2 – up to 7,500 square feet
    - Commercial Kitchen – up to 5,000 square feet
- Commercial-Retail (Subtotal – up to 7,500 square feet)
    - Fresh Market, Food and Beverage, Café, Retail – up to 5,000 square feet
    - Café – up to 2,500 square feet

Housing

The Proposed Project would provide up to 120 dwelling units, as follows:

- Between 55-60 Multi-Family Affordable Apartments
- Between 50-60 Zero Lot Line Townhouse-Style Homes for Sale

Public Open Space

The Proposed Project would include up to 2.5 acres of public open space as follows:

- Between 1.3-1.5 acres of Neighborhood and Community Greens
- Between 0.75-1.0-acre of Plaza and Green Space

Parking Structure

The Proposed Project would include a parking structure with between 275-325 parking spaces.

The Project Site would be accessible via Folsom Boulevard to the south and La Loma Drive to the west of the Project Site.

Construction activities would involve the removal of vegetation and paved areas; grading to finished design elevations; excavation to allow construction of building foundations, utilities, roadways, parking areas, sidewalks, and landscaping. Equipment used during construction may include, but is not limited to, crawler tractors, tractors, loaders, backhoes, excavators, graders, scrapers, cranes, forklifts, generator sets, welders, pavers, paving equipment, rollers, and air compressors. It is anticipated that construction of the Project would occur from 2024 through 2029.

2.0 AIR QUALITY

2.1 Air Quality Setting

Air quality in a region is determined by its topography, meteorology, and existing air pollutant sources. These factors are discussed below, along with the current regulatory structure that applies to the Sacramento Valley Air Basin (SVAB), which encompasses the Project Site, pursuant to the regulatory authority of the SMAQMD.

Ambient air quality is commonly characterized by climate conditions, the meteorological influences on air quality, and the quantity and type of pollutants released. The air basin is subject to a combination of topographical and climatic factors that reduce the potential for high levels of regional and local air pollutants. The following section describes the pertinent characteristics of the air basin and provides an overview of the physical conditions affecting pollutant dispersion in the Project Area.

2.1.1 Sacramento Valley Air Basin

The California Air Resources Board CARB divides the State into air basins that share similar meteorological and topographical features. The Project site lies in the SVAB, which is comprised all of Butte, Colusa, Sacramento, Shasta, Sutter, Tehama, Yolo, and Yuba counties and parts of Solano and Placer County. The air basin is relatively flat, bordered by mountains to the east, west, and north and by the San Joaquin Valley to the south. Air flows into the SVAB through the Carquinez Strait, moving across the Sacramento Delta, and bringing pollutants from the heavily populated San Francisco Bay Area. The climate is characterized by hot, dry summers and cool, rainy winters. Characteristic of SVAB winter weather are periods of dense and persistent low-level fog, which are most prevalent between storm systems. From May to October, the region's intense heat and sunlight lead to high ozone pollutant concentrations. Summer inversions are strong and frequent but are less troublesome than those that occur in the fall. Autumn inversions, formed by warm air subsiding in a region of high pressure, have accompanying light winds that do not provide adequate dispersion of air pollutants.

2.1.1.1 Meteorological Influences on Air Quality

Regional flow patterns affect air quality patterns by directing pollutants downwind of sources. Localized meteorological conditions, such as moderate winds, disperse pollutants and reduce pollutant concentrations. However, the mountains surrounding the SVAB can create a barrier to airflow, which can trap air pollutants in the valley when meteorological conditions are right and a temperature inversion exists. The highest frequency of air stagnation occurs in the autumn and early winter when large high-pressure cells lie over the valley. The lack of surface wind during these periods and the reduced vertical air flow caused by less surface heating reduces the influx of outside air and allows air pollutants to become concentrated in a stable volume of air. The surface concentrations of pollutants are highest when these conditions are combined with smoke from agricultural burning or when temperature inversions trap cool air, fog, and pollutants near the ground.

The ozone season (May through October) in the valley is characterized by stagnant morning air or light winds, with the delta sea breeze arriving in the afternoon out of the southwest. Usually, the evening breeze transports the airborne pollutants to the north out of the valley. During about half of the days from July to September, however, a phenomenon called the Schultz Eddy prevents this from occurring. Instead of allowing the prevailing wind patterns to move north and carry the pollutants out of the valley, the Schultz Eddy causes the wind pattern to circle back south. This phenomenon exacerbates the pollution levels in the area and increases the likelihood of exceeding federal or state standards.

2.1.2 Criteria Air Pollutants

Criteria air pollutants are defined as those pollutants for which the federal and state governments have established air quality standards for outdoor or ambient concentrations to protect public health with a determined margin of safety. Ozone (O_3), coarse particulate matter (PM_{10}), and fine particulate matter ($PM_{2.5}$) are generally considered to be regional pollutants because they or their precursors affect air quality on a regional scale. Pollutants such as carbon monoxide (CO), nitrogen dioxide (NO_2), and sulfur dioxide (SO_2) are considered to be local pollutants because they tend to accumulate in the air locally. PM is also considered a local pollutant. Health effects commonly associated with criteria pollutants are summarized in Table 2-1.

Table 2-1. Criteria Air Pollutants- Summary of Common Sources and Effects

Pollutant	Major Manmade Sources	Human Health & Welfare Effects
CO	An odorless, colorless gas formed when carbon in fuel is not burned completely; a component of motor vehicle exhaust.	Reduces the ability of blood to deliver oxygen to vital tissues, effecting the cardiovascular and nervous system. Impairs vision, causes dizziness, and can lead to unconsciousness or death.
NO_2	A reddish-brown gas formed during fuel combustion for motor vehicles, energy utilities and industrial sources.	Respiratory irritant; aggravates lung and heart problems. Precursor to ozone and acid rain. Causes brown discoloration of the atmosphere.
O_3	Formed by a chemical reaction between reactive organic gases (ROGs) and nitrous oxides (N_2O) in the presence of sunlight. Common sources of these precursor pollutants include motor vehicle exhaust, industrial emissions, solvents, paints and landfills.	Irritates and causes inflammation of the mucous membranes and lung airways; causes wheezing, coughing and pain when inhaling deeply; decreases lung capacity; aggravates lung and heart problems. Damages plants; reduces crop yield.
PM_{10} & $PM_{2.5}$	Power plants, steel mills, chemical plants, unpaved roads and parking lots, wood-burning stoves and fireplaces, automobiles and others.	Increased respiratory symptoms, such as irritation of the airways, coughing, or difficulty breathing; aggravated asthma; development of chronic bronchitis; irregular heartbeat; nonfatal heart attacks; and premature death in people with heart or lung disease. Impairs visibility (haze).
SO_2	A colorless, nonflammable gas formed when fuel containing sulfur is burned. Examples are refineries, cement manufacturing, and locomotives.	Respiratory irritant. Aggravates lung and heart problems. Can damage crops and natural vegetation. Impairs visibility.

Source: California Air Pollution Control Officers Association (CAPCOA 2013)

2.1.2.1 Carbon Monoxide

CO in the urban environment is associated primarily with the incomplete combustion of fossil fuels in motor vehicles. CO combines with hemoglobin in the bloodstream and reduces the amount of oxygen that can be circulated through the body. High CO concentrations can cause headaches, aggravate cardiovascular disease and impair central nervous system functions. CO concentrations can vary greatly over comparatively short distances. Relatively high concentrations of CO are typically found near crowded intersections and along heavy roadways with slow moving traffic. Even under the most severe meteorological and traffic conditions, high concentrations of CO are limited to locations within relatively short distances of the source. Overall CO emissions are decreasing as a result of the Federal Motor Vehicle Control Program, which has mandated increasingly lower emission levels for vehicles manufactured since 1973. CO levels in the SVAB are in compliance with the state and federal one- and eight-hour standards.

2.1.2.2 Nitrogen Oxides

Nitrogen gas comprises about 80 percent of the air and is naturally occurring. At high temperatures and under certain conditions, nitrogen can combine with oxygen to form several different gaseous compounds collectively called nitric oxides (NO_x). Motor vehicle emissions are the main source of NO_x in urban areas. NO_x is very toxic to animals and humans because of its ability to form nitric acid with water in the eyes, lungs, mucus membrane, and skin. In animals, long-term exposure to NO_x increases susceptibility to respiratory infections, and lowering resistance to such diseases as pneumonia and influenza. Laboratory studies show that susceptible humans, such as asthmatics, who are exposed to high concentrations can suffer from lung irritation or possible lung damage. Precursors of NO_x, such as NO and NO_2, attribute to the formation of O_3 and $PM_{2.5}$. Epidemiological studies have also shown associations between NO_2 concentrations and daily mortality from respiratory and cardiovascular causes and with hospital admissions for respiratory conditions.

2.1.2.3 Ozone

O_3 is a secondary pollutant, meaning it is not directly emitted. It is formed when volatile organic compounds (VOCs) or ROGs and NO_x undergo photochemical reactions that occur only in the presence of sunlight. The primary source of ROG emissions is unburned hydrocarbons in motor vehicle and other internal combustion engine exhaust. NO_x forms as a result of the combustion process, most notably due to the operation of motor vehicles. Sunlight and hot weather cause ground-level O_3 to form. Ground-level O_3 is the primary constituent of smog. Because O_3 formation occurs over extended periods of time, both O_3 and its precursors are transported by wind and high O_3 concentrations can occur in areas well away from sources of its constituent pollutants.

People with lung disease, children, older adults, and people who are active can be affected when O_3 levels exceed ambient air quality standards. Numerous scientific studies have linked ground-level O_3 exposure to a variety of problems including lung irritation, difficult breathing, permanent lung damage to those with repeated exposure, and respiratory illnesses.

2.1.2.4 Particulate Matter

PM includes both aerosols and solid particulates of a wide range of sizes and composition. Of concern are those particles smaller than or equal to 10 microns in diameter size (PM_{10}) and small than or equal to 2.5 microns in diameter ($PM_{2.5}$). Smaller particulates are of greater concern because they can penetrate deeper into the lungs than larger particles. PM_{10} is generally emitted directly as a result of mechanical processes that crush or grind larger particles or form the resuspension of dust, typically through construction activities and vehicular travel. PM_{10} generally settles out of the atmosphere rapidly and is not readily transported over large distances. $PM_{2.5}$ is directly emitted in combustion exhaust and is formed in atmospheric reactions between various gaseous pollutants, including NO_x, sulfur oxides (SO_x) and VOCs. $PM_{2.5}$ can remain suspended in the atmosphere for days and/or weeks and can be transported long distances.

The principal health effects of airborne PM are on the respiratory system. Short-term exposure of high $PM_{2.5}$ and PM_{10} levels are associated with premature mortality and increased hospital admissions and emergency room visits. Long-term exposure is associated with premature mortality and chronic respiratory disease.

According to the U.S. Environmental Protection Agency (USEPA), some people are much more sensitive than others to breathing PM_{10} and $PM_{2.5}$. People with influenza, chronic respiratory and cardiovascular diseases, and the elderly may suffer worse illnesses; people with bronchitis can expect aggravated symptoms; and children may experience decline in lung function due to breathing in PM_{10} and $PM_{2.5}$. Other groups considered sensitive include smokers and people who cannot breathe well through their noses. Exercising athletes are also considered sensitive because many breathe through their mouths.

2.1.3 Toxic Air Contaminants

In addition to the criteria pollutants discussed above, toxic air contaminants (TACs) are another group of pollutants of concern. TACs are considered either carcinogenic or noncarcinogenic based on the nature of the health effects associated with exposure to the pollutant. For regulatory purposes, carcinogenic TACs are assumed to have no safe threshold below which health impacts would not occur, and cancer risk is expressed as excess cancer cases per one million exposed individuals. Noncarcinogenic TACs differ in that there is generally assumed to be a safe level of exposure below which no negative health impact is believed to occur. These levels are determined on a pollutant-by-pollutant basis.

There are many different types of TACs, with varying degrees of toxicity. Sources of TACs include industrial processes such as petroleum refining and chrome plating operations, commercial operations such as gasoline stations and dry cleaners, and motor vehicle exhaust. Public exposure to TACs can result from emissions from normal operations, as well as from accidental releases of hazardous materials during upset conditions. The health effects of TACs include cancer, birth defects, neurological damage, and death.

Most recently, CARB identified diesel particulate matter (DPM) as a TAC. DPM differs from other TACs in that it is not a single substance but rather a complex mixture of hundreds of substances. Diesel exhaust is a complex mixture of particles and gases produced when an engine burns diesel fuel. DPM is a concern because it causes lung cancer; many compounds found in diesel exhaust are carcinogenic. DPM includes the particle-phase constituents in diesel exhaust. The chemical composition and particle sizes of DPM vary between different engine types (heavy-duty, light-duty), engine operating conditions (idle, accelerate, decelerate), fuel formulations (high/low sulfur fuel), and the year of the engine (USEPA 2002). Some short-term (acute) effects of diesel exhaust include eye, nose, throat, and lung irritation, and diesel exhaust can cause coughs, headaches, light-headedness, and nausea. DPM poses the greatest health risk among the TACs; due to their extremely small size, these particles can be inhaled and eventually trapped in the bronchial and alveolar regions of the lung.

2.1.4 Ambient Air Quality

Ambient air quality at the Project Site can be inferred from ambient air quality measurements conducted at nearby air quality monitoring stations. CARB maintains more than 60 monitoring stations throughout California. O_3, PM_{10} and $PM_{2.5}$ are the pollutant species most potently affecting the Project region. As described in detail below, the region is designated as a nonattainment area for the federal O_3 and $PM_{2.5}$ standards and is also a nonattainment area for the state standards for O_3 and PM_{10} (CARB 2022b). The Sacramento – Branch Center #2 air monitoring station (3847 Branch Cener Road, Sacramento), located

approximately 2.7 miles southwest of the Project Site, monitors ambient concentrations of PM_{10}. The Sacramento-Del Paso Manor air monitoring station (2701 Avalon Drive, Sacramento), located approximately 3.5 miles northwest of the Project Site, monitors ambient concentrations of O_3 and $PM_{2.5}$. Ambient emissions concentrations vary due to localized variation in emissions sources and climate conditions, but the concentrations from this air quality monitoring station should be considered "generally" representative of ambient concentrations in the Project Area.

Table 2-2 summarizes the published data concerning O_3, $PM_{2.5}$ and PM_{10} from the Sacramento – Branch Cener #2 monitoring station and the Sacramento-Del Paso Manor monitoring station. O_3, PM_{10} and $PM_{2.5}$ are the pollutant species most potently affecting the Project region.

Table 2-2. Summary of Ambient Air Quality Data

Pollutant Standards	2019	2020	2021
O_3 - Sacramento-Del Paso Manor Monitoring Station			
Max 1-hour concentration (ppm)	0.087	0.120	0.110
Max 8-hour concentration (ppm) (state/federal)	0.069 / 0.069	0.085 / 0.085	0.091 / 0.091
Number of days above 1-hour standard (state/federal)	0 / 0	4 / 0	7 / 0
Number of days above 8-hour standard (state/federal)	0 / 0	10 / 10	18 / 17
PM_{10} - Sacramento-Branch Center #2 Monitoring Station			
Max 24-hour concentration (µg/m^3) (state/ federal)	55.0 / 53.0	203.0 / 201.0	58.0 57.0
Number of days above 24-hour standard (state/federal)	* / *	* / 7.7	25.4 / 0
$PM_{2.5}$ - Sacramento- Del Paso Manor Monitoring Station			
Max 24-hour concentration (µg/m^3) (state/federal)	41.4 / 41.4	147.3 / 147.3	95.4 / 90.0
Number of days above federal 24-hour standard	3.0	28.1	5.0

Source: CARB 2022a
Note: µg/m^3 = micrograms per cubic meter; ppm = parts per million
* = Insufficient data available

The USEPA and CARB designate air basins or portions of air basins and counties as being in "attainment" or "nonattainment" for each of the criteria pollutants. Areas that do not meet the standards are classified as nonattainment areas. The National Ambient Air Quality Standards (NAAQS) (other than O_3, PM_{10} and $PM_{2.5}$ and those based on annual averages or arithmetic mean) are not to be exceeded more than once per year. The NAAQS for O_3, PM_{10}, and $PM_{2.5}$ are based on statistical calculations over one- to three-year

periods, depending on the pollutant. The California Ambient Air Quality Standards (CAAQS) are not to be exceeded during a three-year period. The attainment status for the Sacramento County portion of the SVAB, which encompasses the Project Site, is included in Table 2-3.

Table 2-3. Attainment Status of Criteria Pollutants in the Sacramento County Portion of the SVAB

Pollutant	State Designation	Federal Designation
O_3	Nonattainment	Nonattainment
PM_{10}	Nonattainment	Attainment
$PM_{2.5}$	Attainment	Nonattainment
CO	Attainment	Unclassified/Attainment
NO_2	Attainment	Unclassified/Attainment
SO_2	Attainment	Unclassified/Attainment

Source: CARB 2022b

The determination of whether an area meets the state and federal standards is based on air quality monitoring data. Some areas are unclassified, which means there is insufficient monitoring data for determining attainment or nonattainment. Unclassified areas are typically treated as being in attainment. Because the attainment/nonattainment designation is pollutant-specific, an area may be classified as nonattainment for one pollutant and attainment for another. Similarly, because the state and federal standards differ, an area could be classified as attainment for the federal standards of a pollutant and as nonattainment for the state standards of the same pollutant. The region is designated as a nonattainment area for the federal O_3 and $PM_{2.5}$ standards and is also a nonattainment area for the state standards for O_3 and PM_{10} (CARB 2022b).

2.1.5 Sensitive Receptors

Sensitive receptors are defined as facilities or land uses that include members of the population who are particularly sensitive to the effects of air pollutants, such as children, the elderly, and people with illnesses. Examples of these sensitive receptors are residences, schools, hospitals, and daycare centers. CARB has identified the following groups of individuals as the most likely to be affected by air pollution: the elderly over 65, children under 14, athletes, and persons with cardiovascular and chronic respiratory diseases such as asthma, emphysema, and bronchitis. The nearest sensitive receptors to the Project Site include residences directly adjacent to the west, north, and east.

2.2 Regulatory Framework

2.2.1 Federal

2.2.1.1 Clean Air Act

The Clean Air Act (CAA) of 1970 and the CAA Amendments of 1971 required the USEPA to establish the NAAQS, with states retaining the option to adopt more stringent standards or to include other specific pollutants.

These standards are the levels of air quality considered safe, with an adequate margin of safety, to protect the public health and welfare. They are designed to protect those "sensitive receptors" most susceptible to further respiratory distress such as asthmatics, the elderly, very young children, people already weakened by other disease or illness, and persons engaged in strenuous work or exercise. Healthy adults can tolerate occasional exposure to air pollutant concentrations considerably above these minimum standards before adverse effects are observed.

The USEPA has classified air basins (or portions thereof) as being in attainment, nonattainment, or unclassified for each criteria air pollutant, based on whether or not the NAAQS have been achieved. If an area is designated unclassified, it is because inadequate air quality data were available as a basis for a nonattainment or attainment designation. Table 2-3 lists the federal attainment status of the SVAB for the criteria pollutants.

2.2.2 State

2.2.2.1 California Clean Air Act

The California Clean Air Act (CCAA) allows the State to adopt ambient air quality standards and other regulations provided that they are at least as stringent as federal standards. CARB, a part of the California Environmental Protection Agency, is responsible for the coordination and administration of both federal and state air pollution control programs within California, including setting the CAAQS. CARB also conducts research, compiles emission inventories, develops suggested control measures, and provides oversight of local programs. CARB establishes emissions standards for motor vehicles sold in California, consumer products (such as hairspray, aerosol paints, and barbecue lighter fluid), and various types of commercial equipment. It also sets fuel specifications to further reduce vehicular emissions. CARB also has primary responsibility for the development of California's State Implementation Plan (SIP), for which it works closely with the federal government and the local air districts.

2.2.2.2 California State Implementation Plan

The federal CAA (and its subsequent amendments) requires each state to prepare an air quality control plan referred to as the SIP. The SIP is a living document that is periodically modified to reflect the latest emissions inventories, plans, and rules and regulations of air basins as reported by the agencies with jurisdiction over them. The CAA Amendments dictate that states containing areas violating the NAAQS revise their SIPs to

include extra control measures to reduce air pollution. The SIP includes strategies and control measures to attain the NAAQS by deadlines established by the CAA. The USEPA has the responsibility to review all SIPs to determine if they conform to the requirements of the CAA.

State law makes CARB the lead agency for all purposes related to the SIP. Local air districts and other agencies prepare SIP elements and submit them to CARB for review and approval. CARB then forwards SIP revisions to the USEPA for approval and publication in the Federal Register. To comply with California law, the SMAQMD has rolled out a series of air quality plans and reports that constitute the SIP for the Sacramento County portion of the SVAB. The most recent report, the *2021 Sacramento County Second 10-Year PM_{10} Maintenance Plan* as a comprehensive strategy to update emission inventories, demonstrates maintenance efforts and updated control measures, and establishes new motor vehicle emission budgets. Additional plans include the SMAQMD *2017 Sacramento Regional 2008 8-Hour Ozone Attainment and Reasonable Further Progress Plan* (including 2018 updates) and the *$PM_{2.5}$ Implementation/Maintenance Plan and Re-designation Request for Sacramento $PM_{2.5}$ Nonattainment Area* (2013). These air quality planning documents present comprehensive strategies to reduce the O_3 precursor pollutants (ROG and NOx) as well as PM emissions from stationary, area, mobile, and indirect sources.

2.2.2.3 Tanner Air Toxics Act & Air Toxics "Hot Spots" Information and Assessment Act

CARB's statewide comprehensive air toxics program was established in 1983 with Assembly Bill (AB) 1807, the Toxic Air Contaminant Identification and Control Act (Tanner Air Toxics Act of 1983). AB 1807 created California's program to reduce exposure to air toxics and sets forth a formal procedure for CARB to designate substances as TACs. Once a TAC is identified, CARB adopts an airborne toxics control measure (ATCM) for sources that emit designated TACs. If there is a safe threshold for a substance at which there is no toxic effect, the control measure must reduce exposure to below that threshold. If there is no safe threshold, the measure must incorporate toxics best available control technology to minimize emissions.

CARB also administers the State's mobile source emissions control program and oversees air quality programs established by state statute, such as AB 2588, the Air Toxics "Hot Spots" Information and Assessment Act of 1987. Under AB 2588, TAC emissions from individual facilities are quantified and prioritized by the air quality management district or air pollution control district. High priority facilities are required to perform a health risk assessment (HRA) and, if specific thresholds are exceeded, required to communicate the results to the public in the form of notices and public meetings. In September 1992, the "Hot Spots" Act was amended by SB 1731, which required facilities that pose a significant health risk to the community to reduce their risk through a risk management plan.

2.2.3 Local

2.2.3.1 Sacramento Metropolitan Air Quality Management District

The SMAQMD is the air pollution control agency for Sacramento County, including the Project Site. The agency's primary responsibility is ensuring that the NAAQS and CAAQS are attained and maintained in the Sacramento County portion of the SVAB. The SMAQMD coordinates the work of government agencies, businesses, and private citizens to achieve and maintain healthy air quality for the Sacramento area. The

SMAQMD develops market-based programs to reduce emissions associated with mobile sources, processes permits, ensures compliance with permit conditions and with SMAQMD rules and regulations, and conducts long-term planning related to air quality. The SMAQMD is also responsible for adopting and enforcing rules and regulations concerning air pollutant sources, issuing permits for stationary sources of air pollutants, inspecting stationary sources of air pollutants, responding to citizen complaints, monitoring ambient air quality and meteorological conditions, awarding grants to reduce motor vehicle emissions, and conducting public education campaigns, as well as many other activities.

The following is a list of noteworthy SMAQMD rules that are required of construction activities associated with the Proposed Project:

- **Rule 201: General Permit Requirements.** Any project that includes the use of equipment capable of releasing emissions to the atmosphere may require permit(s) from SMAQMD prior to equipment operation. The applicant, developer, or operator of a project that includes an emergency generator, boiler, or heater should contact the SMAQMD early to determine if a permit is required, and to begin the permit application process. Other general types of uses that require a permit include, but are not limited to, dry cleaners, gasoline stations, spray booths, and operations that generate airborne particulate emissions. Portable construction equipment (e.g. generators, compressors, pile drivers, lighting equipment, etc.) with an internal combustion engine over 50 horsepower is required to have a SMAQMD permit or a CARB portable equipment registration (PERP).
- **Rule 402: Nuisance.** The purpose of this rule is to limit emissions which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or the public, or which endanger the comfort, repose, health, or safety of any such persons or the public, or which cause or have natural tendency to cause injury or damage to business or property.
- **Rule 403: Fugitive Dust.** The purpose of this rule is to require that reasonable precautions be taken so as not to cause or allow the emissions of fugitive dust from non-combustion sources from being airborne beyond the property line from which the emission originates.
- **Rule 442: Architectural Coatings.** The purpose of this rule is to limit the emissions of volatile organic compounds from the use of architectural coatings supplied, sold, offered for sale, applied, solicited for application, or manufactured for use within the SMAQMD.

2.3 Air Quality Emissions Impact Assessment

2.3.1 Thresholds of Significance

The impact analysis provided below is based on the following California Environmental Quality Act (CEQA) Guidelines Appendix G thresholds of significance. The Project would result in a significant impact to air quality if it would do any of the following:

1) Conflict with or obstruct implementation of any applicable air quality plan.

2) Result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is nonattainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors).

3) Expose sensitive receptors to substantial pollutant concentrations.

4) Result in other emissions (such as those leading to odors adversely affecting a substantial number of people).

2.3.1.1 Sacramento Metropolitan Air Quality Management District Thresholds

The significance criteria established by the applicable air quality management or air pollution control district (SMAQMD) may be relied upon to make the above determinations. According to the SMAQMD, an air quality impact is considered significant if the Proposed Project would violate any ambient air quality standard, contribute substantially to an existing or projected air quality violation, or expose sensitive receptors to substantial pollutant concentrations. The SMAQMD has established thresholds of significance for air quality for construction and operational activities of land use development projects such as that proposed, as shown in Table 2-4.

Table 2-4. SMAQMD Regional Significance Thresholds

Air Pollutant	Construction Activities		Operations	
Reactive Organic Gas	-		65 pounds/day	
Carbon Monoxide	-		-	
Nitrogen Oxide	85 pounds/day		65 pounds/day	
Sulfur Oxide	-		-	
Coarse Particulate Matter (PM_{10})	*80 pounds/day (If all feasible BACT/BMP applied)	*14.6 tons/year	*80 pounds/day (If all feasible BACT/BMP applied)	*14.6 tons/year
Fine Particulate Matter ($PM_{2.5}$)	*82 pounds/day (If all feasible BACT/BMP applied)	*15 tons/year	*82 pounds/day (If all feasible BACT/BMP applied)	*15 tons/year

Source: SMAQMD 2020
Notes: BACT= best available control technology; BMP = best management practices
* = The allowable threshold level is 0 pounds/day or 0 tons/year unless all SMAQMD recommended BACT/BMP are implemented.

By its very nature, air pollution is largely a cumulative impact. No single project is sufficient in size, by itself, to result in nonattainment of ambient air quality standards. Instead, a project's individual emissions contribute to existing cumulatively significant adverse air quality impacts. If a project's individual emissions exceed its identified significance thresholds, the project would be cumulatively considerable. Projects that do not exceed any significance thresholds would not be considered cumulative considerable.

2.3.2 Methodology

Air quality impacts were assessed in accordance with methodologies recommended by the SMAQMD. Where criteria air pollutant quantification was required, emissions were modeled using the California Emissions Estimator Model (CalEEMod), version 2022.1. CalEEMod is a statewide land use emissions computer model designed to quantify potential criteria pollutant emissions associated with both construction and operations from a variety of land use projects. Project construction-generated air pollutant emissions were calculated primarily using CalEEMod model defaults for Sacramento County, though the timing of construction was adjusted to reflect the anticipated construction schedule of 2024 through 2029. Operational air pollutant emissions were based on the land use mix identified in Section 1.0 of this report and traffic trip generation rates provided by DKS Associates (2023). Two design features attributable to the Project are accounted for in the emissions modeling calculations, specifically the Project's proximity to transit and its number of affordable/below-market residential units.

2.3.3 Impact Analysis Impact Analysis

2.3.3.1 Project Construction-Generated Criteria Air Quality Emissions

Construction Significance Analysis

Construction-generated emissions are temporary and short-term but have the potential to represent a significant air quality impact. Three basic sources of short-term emissions will be generated through construction of the Proposed Project: operation of the construction vehicles (i.e., excavators, trenchers, dump trucks), the creation of fugitive dust during clearing and grading, and the use of asphalt or other oil-based substances during paving activities. Construction activities such as excavation and grading operations, construction vehicle traffic, and wind blowing over exposed soils would generate exhaust emissions and fugitive PM emissions that affect local air quality at various times during construction. Effects would be variable depending on the weather, soil conditions, the amount of activity taking place, and the nature of dust control efforts. The dry climate of the area during the summer months creates a high potential for dust generation.

Construction-generated emissions associated with the Proposed Project were calculated using the CARB-approved CalEEMod computer program, which is designed to model emissions for land use development projects, based on typical construction requirements. See Attachment A for more information regarding the construction assumptions, including construction equipment and duration, used in this analysis. Construction activities would be subject to mitigation measure AQ-1 (presented below), which would implement the SMAQMD's Basic Construction Emission Control Practices, known as Best Management

Practices (BMPs) during the Project's construction. The application of AQ-1 ensures that the construction of the Project will not have significant air quality impacts.

Predicted maximum daily construction-generated emissions for the Proposed Project are summarized in Table 2-5. Construction-generated emissions are short-term and of temporary duration, lasting only as long as construction activities occur, but would be considered a significant air quality impact if the volume of pollutants generated exceeds the SMAQMD's thresholds of significance.

Table 2-5. Construction-Related Emissions						
Construction Year	**Pollutant**

Source: CalEEMod version 2022.1. Refer to Attachment A for Model Data Outputs.

Notes: Emission reduction/credits for construction emissions are applied based on the required implementation of SMAQMD Rule 403. The specific Rule 403 measures applied in CalEEMod include sweeping/cleaning adjacent roadway access areas daily, water exposed surfaces twice daily, and limit speeds on unpaved roads to 15 miles per hour. Emissions taken of the season, summer or winter, with the highest outputs. Building construction, paving and painting assumed to occur simultaneously.

* = The allowable threshold level is 0 pounds/day or 0 tons/year unless all SMAQMD recommended BACT/BMP are implemented.

As shown in Table 2-5, emissions generated during Project construction would not exceed the SMAQMD's daily or annual thresholds of significance with the implementation of mitigation measure AQ-1. This mitigation measure ensures that the SMAQMD's BACT/BMPs are implemented; which, according to air district regulations, allows the particulate matter significance threshold to be non-zero (allowing PM_{10} to be 80 pounds/day or 14.6 tons/year and $PM_{2.5}$ to be 82 pounds/day or 15 tons/year). Without the implementation of AQ-1, the Project's construction emissions would be over the threshold of 0 pounds/day and thus have a significant effect. The City of Rancho Cordova General Plan: Air Quality Element, Policy AQ.1.2 1 promotes the thresholds and standards set out by the SMAQMD and ensures the enforcement of the air pollution control measures during construction periods. Specifically, Policy AQ.1.2.1 requires the evaluation of projects for compliance with SMAQMD thresholds of significance. With AQ-1, criteria pollutant emissions generated during Project construction would not result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is nonattainment under an applicable federal or state ambient air quality standard, and no health effects from Project criteria pollutants would occur.

AQ-1: Implement SMAQMD Basic and Enhanced Construction Emission Control Practices to Reduce Fugitive Dust.

The implementing agency will require the construction contractor(s) to implement basic and enhanced control measures to reduce construction-related fugitive dust as a standard or specification of their contract. The following measures are required for the entirety of the construction area. The implementing agency will ensure, through contract provisions and specifications, that the contractor adheres to the mitigation measures before and during construction and documents compliance with the adopted mitigation measures.

- Control of fugitive dust is required by District Rule 403 and enforced by District staff.
- Water all exposed surfaces two times daily. Exposed surfaces include, but are not limited to soil piles, graded areas, unpaved parking areas, staging areas, and access roads.
- Cover or maintain at least two feet of free board space on haul trucks transporting soil, sand, or other loose material on the site. Any haul trucks that would be traveling along freeways or major roadways should be covered.
- Use wet power vacuum street sweepers to remove any visible trackout mud or dirt onto adjacent public roads at least once a day. Use of dry power sweeping is prohibited.
- Limit vehicle speeds on unpaved roads to 15 miles per hour (mph).
- All roadways, driveways, sidewalks, parking lots to be paved should be completed as soon as possible. In addition, building pads should be laid as soon as possible after grading unless seeding or soil binders are used.
- Minimize idling time either by shutting equipment off when not in use or reducing the time of idling to 5 minutes [California Code of Regulations, Title 13, sections 2449(d)(3)

and 2485]. Provide clear signage that posts this requirement for workers at the entrances to the site.

- Provide current certificate(s) of compliance for CARB's In-Use Off-Road Diesel-Fueled Fleets Regulation [California Code of Regulations, Title 13, sections 2449 and 2449.1].
- Maintain all construction equipment in proper working condition according to manufacturer's specifications. The equipment must be checked by a certified mechanic and determine to be running in proper condition before it is operated.

2.3.3.2 Project Operation-Generated Criteria Air Quality Emissions

Operational Significance Analysis

Implementation of the Project would result in long-term operational emissions of criteria air pollutants such as PM_{10}, $PM_{2.5}$, CO, and SO_2 as well as O_3 precursors such as ROGs and NO_X. Project-generated increases in emissions would be predominantly associated with motor vehicle use. As previously described, operational air pollutant emissions were based on the land use mix identified in Section 1.0 of this report and traffic trip generation rates from Nelson/Nygaard (2023). Long-terms operational emissions attributable to the Project are identified in Table 2-6 and compared to the operational significance thresholds promulgated by the SMAQMD. The PM_{10} and $PM_{2.5}$ non-zero thresholds are reliant on the implementation of the SMAQMD's BACT/BMPs for land use development project operations. The following are the recommendations made by the SMAQMD for land use development project operations:

- Compliance with District rules that control operational PM and NOx emissions. Reference rules regarding wood burning devices, boilers, water heaters, generators and other PM control rules that may apply to equipment to be located at the project.
- Compliance with mandatory measures in the California Building Energy Efficiency Standards (Title 24, Part 6) that pertain to efficient use of energy at a residential or a non-residential land use.
- Compliance with mandatory measures in the California Green Building Code (Title 24, Part 11). Current mandatory measures related to operational PM include requirements for bicycle parking, parking for fuel efficient vehicles, electric vehicle charging, and fireplaces for non-residential projects. Residential project measures include requirements for electric vehicle charging and fireplaces.

The Proposed Project will comply with the above recommendations in order to justify the use of a non-zero operational threshold for PM_{10} and $PM_{2.5}$. As seen by Table 2-6, the air pollutant concentrations are below the SMAQMD significance threshold for the Project.

Table 2-6. Operational-Related Emissions

Source: CalEEMod version 2022.1. Refer to Attachment A for Model Data Outputs.
Notes: Emission projections are predominately based on the land use mix identified in Section 1.0 of this report and traffic trip generation rates from DKS Associates (2023).
* = The allowable threshold level is 0 pounds/day or 0 tons/year unless all SMAQMD recommended BACT/BMP are implemented.

As shown in Table 2-6, the Project's emissions would not exceed any SMAQMD thresholds for any criteria air pollutants during operation.

As identified in Table 2-3, the Sacramento County portion of the SVAB is listed as a nonattainment area for federal O_3 and $PM_{2.5}$ standards and is also a nonattainment area for the state standards for O_3, and PM_{10} (CARB 2022b). O_3 is a health threat to persons who already suffer from respiratory diseases and can cause severe ear, nose and throat irritation and increases susceptibility to respiratory infections. PM can adversely

affect the human respiratory system. As shown in Table 2-6, the Proposed Project would result in increased emissions of the O_3 precursor pollutants ROG and NOx, PM_{10}, and $PM_{2.5}$, however, the correlation between a project's emissions and increases in nonattainment days, or frequency or severity of related illnesses, cannot be accurately quantified. The overall strategy for reducing air pollution and related health effects in the SMAQMD is contained in the SMAQMD *2017 Sacramento Regional 8-Hour Ozone Attainment and Reasonable Further Progress Plan* (2018), *2021 Sacramento County Second 10-Year PM_{10} Maintenance Plan*, and *$PM_{2.5}$ Implementation/Maintenance Plan and Re-designation Request for Sacramento $PM_{2.5}$ Nonattainment Area* (2013). These air quality planning documents present comprehensive strategies to reduce the O_3 precursor pollutants (ROG and NOx) as well as PM emissions from stationary, area, mobile, and indirect sources. Each of these air quality planning documents provide control measures that reduce emissions to attain and maintain federal ambient air quality standards such as the application of available cleaner technologies, best management practices, incentive programs, as well as development and implementation of zero and near-zero technologies and control methods. The CEQA thresholds of significance established by the SMAQMD are designed to meet the objectives of these air quality planning documents and in doing so achieve and maintain attainment status with state and federal standards. As noted above, the Project would increase the emission of certain pollutants, but would not exceed the thresholds of significance established by the SMAQMD for purposes of reducing air pollution and its deleterious health effects.

2.3.3.3 Project Consistency with Air Quality Planning

As part of its enforcement responsibilities, the USEPA requires each state with nonattainment areas to prepare and submit a SIP that demonstrates the means to attain the federal standards. The SIP must integrate federal, state, and local plan components and regulations to identify specific measures to reduce pollution in nonattainment areas, using a combination of performance standards and market-based programs. Similarly, under state law, the CCAA requires an air quality attainment plan to be prepared for areas designated as nonattainment with regard to the NAAQS and CAAQS. Air quality attainment plans outline emissions limits and control measures to achieve and maintain these standards by the earliest practical date.

As previously mentioned, the Project Site is located within the SVAB, which is under the jurisdiction of the SMAQMD. SMAQMD is required, pursuant to the federal CAA, to reduce emissions of criteria pollutants for which the SVAB is in nonattainment. The SMAQMD is required to submit air quality plans and rate-of-progress milestone evaluations in accordance with the federal Clean Air Act. The SMAQMD air quality attainment plans and reports, which include the *2017 Sacramento Regional 8-Hour Ozone Attainment and Reasonable Further Progress Plan* (2018), *2021 Sacramento County Second 10-Year PM_{10} Maintenance Plan*, and *$PM_{2.5}$ Implementation/Maintenance Plan and Re-designation Request for Sacramento $PM_{2.5}$ Nonattainment Area* (2013), present comprehensive strategies to reduce the O_3 precursor pollutants (ROG and NO_x) as well as PM emissions from stationary, area, mobile, and indirect sources.

A project is consistent with regional air quality planning efforts in part if it is consistent with the population and housing assumptions that were used in the development of the SMAQMD air quality plans and does nothing to inhibit the region's achievement of air quality standards. Growth projections in the City of Rancho

Cordova are based largely on the City of Rancho Cordova General Plan. As such, projects that propose development consistent with the growth anticipated by the General Plan would generally be consistent with the SMAQMD regional air quality planning efforts. The Project Site is located within the Folsom Boulevard Specific Plan area and has a City of Rancho Cordova General Plan land use designation of Residential Mixed-Use (FB-RMU). The site is zoned Residential Mixed-Use – Folsom Boulevard Specific Plan (RMU [FBSP]). The Folsom Boulevard Specific is the primary planning tool the City uses to guide future development and redevelopment within the Specific Plan area. It seeks to increase the density of both housing and commercial activity; increase pedestrian, bicycle, and transit trips to, from, and through the area; increase the visibility of the corridor as a destination; and change the dynamic and image to that of a high demand, thriving urban area. The RMU (FBSP) Zoning District is intended to designate property for the development of medium and high-density housing (between 6.1 and 40 dwelling units per acre) that may incorporate office and/or commercial services. While the predominant use of the development is residential, the City encourages the vertical and/or horizontal integration of commercial and/or office uses that are compatible with the residential development. The Project proposes a mix of uses onsite by developing residential, commercial, and recreational uses on infill and underutilized parcels. As such, the Project is consistent with the City's General Plan, Folsom Boulevard Specific Plan, and City Zoning Code and is therefore consistent with the types, intensity, and patterns of land use envisioned for the site. Furthermore, as shown in Tables 2-5 and 2-6, all Project emissions would fall below SMAQMD significance thresholds. For these reasons the Project would not conflict with SMAQMD's air quality planning.

It is additionally noted that the Project is considered "infill development" as it proposes to redevelop a previously developed property and enhance the physical design of the urban environment. Under Public Resources Code (PRC) section 21061.3, an "infill site" is defined as a site that "has been previously developed for qualified urban uses." In turn, a "qualified urban use" is defined, pursuant to PRC section 21072, as "a residential, commercial, or public institutional, transit or transportation passenger facility, or retail use, or any combination of those uses." Additionally, the Project Site is located in an "urbanized area," which is defined under PRC section 21071 as "an incorporated city" that meets the criteria of having a population of at least 100,000 persons. These aspects of the Project would result in the generation of a reduced amount of criteria air pollutant emissions. According to the USEPA, redevelopments (namely at brownfield sites such as the Project Site) produce 32 to 57 percent less emissions per capita relative to conventional developments (USEPA 2011); this is because the number of daily vehicle trips and daily vehicle miles traveled (VMT) associated with the redevelopment tend to be lower compared with development on vacant land.

The Proposed Project would be located in close proximity to the Mather Field/Mills Train Station, which is directly across Folsom Boulevard from the Project Site and can be accessed via a pedestrian crosswalk with stop-traffic control. The public transit accessibility would result in fewer vehicle trips and VMT compared to the statewide average and encourage walking and non-automotive forms of transportation, thus resulting in the reduction of, or no increase in, transportation-related emissions, a primary goal of SMAQMD air quality planning. Furthermore, the site is fronted by a Class II bike lane on Folsom Boulevard.

The Project Site can be identified for its "location efficiency." Location efficiency describes the location of the Project relative to the type of urban landscape its proposed to fit within, such as an "urban area," "compact infill," or "suburban center." The Project Site represents an urban/compact infill location within an

area of the city developed with residential and commercial uses. The Project Site is served by existing public transportation as previously described; it is within an active urban center surrounded with many existing offsite office, commercial, and residential buildings. The Project would locate additional residential land uses in close proximity to existing offsite office, commercial, and residential uses. Therefore, the Project would provide future Project residents with potential work opportunities and commercial service options in close proximity to the site. Additionally, the Project would locate potential employment opportunities for residents already living in the vicinity. The location efficiency of the Project Site would result in synergistic benefits that would reduce vehicle trips and VMT compared to the statewide average and would result in corresponding reduction of transportation related air pollutant emissions, a primary goal of SMAQMD air quality planning.

The Project would increase housing density in the vicinity over current conditions. Increased density reduces emissions associated with transportation as it reduces the distance people travel for work or services and provides a foundation for the implementation of other strategies to reduce emissions, a primary goal of SMAQMD air quality planning.

2.3.3.4 Exposure of Sensitive Receptors to Toxic Air Contaminants

As previously described, sensitive receptors are defined as facilities or land uses that include members of the population that are particularly sensitive to the effects of air pollutants, such as children, the elderly, and people with illnesses. Examples of these sensitive receptors are residences, schools, hospitals, and daycare centers. CARB has identified the following groups of individuals as the most likely to be affected by air pollution: the elderly over age 65, children under age 14, athletes, and persons with cardiovascular and chronic respiratory diseases such as asthma, emphysema, and bronchitis. The nearest sensitive receptors to the Project Site include residences directly adjacent to the west, north, and east.

Construction-Generated Air Contaminants

Construction-related activities would result in temporary, short-term Proposed Project-generated emissions of DPM, ROG, NOx, CO, and PM_{10} from the exhaust of off-road, heavy-duty diesel equipment for site preparation (e.g., clearing, grading); soil hauling truck traffic; paving; and other miscellaneous activities. The Sacramento County portion of the SVAB is listed as a nonattainment area for the federal O_3 and $PM_{2.5}$ standards and is also a nonattainment area for the state standards for O_3 and PM_{10}. Thus, existing O_3, PM_{10} and $PM_{2.5}$ levels in the SVAB are at unhealthy levels during certain periods. However, as shown in Table 2-5 the Project would not exceed the SMAQMD significance thresholds for construction emissions.

The health effects associated with O_3 are generally associated with reduced lung function. Because the Project would not involve construction activities that would result in O_3 precursor emissions (ROG or NOx) in excess of the SMAQMD thresholds, the Project is not anticipated to substantially contribute to regional O_3 concentrations and the associated health impacts.

CO tends to be a localized impact associated with congested intersections. In terms of adverse health effects, CO competes with oxygen, often replacing it in the blood, reducing the blood's ability to transport oxygen to vital organs. The results of excess CO exposure can include dizziness, fatigue, and impairment of central nervous system functions. The Project would not involve construction activities that would result in

CO emissions in excess of the SMAQMD thresholds. Thus, the Project's CO emissions would not contribute to the health effects associated with this pollutant.

Particulate matter (PM_{10} and $PM_{2.5}$) contains microscopic solids or liquid droplets that are so small that they can get deep into the lungs and cause serious health problems. Particulate matter exposure has been linked to a variety of problems, including premature death in people with heart or lung disease, nonfatal heart attacks, irregular heartbeat, aggravated asthma, decreased lung function, and increased respiratory symptoms such as irritation of the airways, coughing, or difficulty breathing. For construction activity, DPM is the primary TAC of concern. PM10 exhaust is considered a surrogate for DPM as all diesel exhaust is considered to be DPM and PM_{10} contains $PM_{2.5}$ as a subset. As with O_3 and NOx, the Project would not generate emissions of PM_{10} or $PM_{2.5}$ that would exceed the SMAQMD's thresholds. Accordingly, the Project's PM_{10} and $PM_{2.5}$ emissions are not expected to cause any increase in related regional health effects for these pollutants.

In summary, Project construction would not result in a potentially significant contribution to regional concentrations of nonattainment pollutants and would not result in a significant contribution to the adverse health impacts associated with those pollutants.

Operational Air Contaminants

Operation of the Proposed Project would not result in the development of any substantial sources of air toxics. There are no stationary sources associated with the operations of the Project; nor would the Project attract additional mobile sources that spend long periods queuing and idling at the site. Onsite Project emissions would not result in significant concentrations of pollutants at nearby sensitive receptors. The Project would not have a high carcinogenic or non-carcinogenic risk during operation.

Carbon Monoxide Hot Spots

It has long been recognized that CO exceedances are caused by vehicular emissions, primarily when idling at intersections. Concentrations of CO are a direct function of the number of vehicles, length of delay, and traffic flow conditions. Under certain meteorological conditions, CO concentrations close to congested intersections that experience high levels of traffic and elevated background concentrations may reach unhealthy levels, affecting nearby sensitive receptors. Given the high traffic volume potential, areas of high CO concentrations, or "hot spots," are typically associated with intersections that are projected to operate at unacceptable levels of service during the peak commute hours. It has long been recognized that CO hotspots are caused by vehicular emissions, primarily when idling at congested intersections. However, transport of this criteria pollutant is extremely limited, and CO disperses rapidly with distance from the source under normal meteorological conditions. Furthermore, vehicle emissions standards have become increasingly more stringent in the last 20 years. Currently, the allowable CO emissions standard in California is a maximum of 3.4 grams/mile for passenger cars (there are requirements for certain vehicles that are more stringent). With the turnover of older vehicles, introduction of cleaner fuels, and implementation of increasingly sophisticated and efficient emissions control technologies, CO concentration in the Sacramento County portion of the SVAB is designated as in attainment. Detailed modeling of Project-specific CO "hot spots" is not necessary and thus this potential impact is addressed qualitatively.

A CO "hot spot" would occur if an exceedance of the state one-hour standard of 20 parts per million (ppm) or the eight-hour standard of 9 ppm were to occur. The analysis prepared for CO attainment in the South Coast Air Quality Management District's (SCAQMD's) *1992 Federal Attainment Plan for Carbon Monoxide* in Los Angeles County and a Modeling and Attainment Demonstration prepared by the SCAQMD as part of the 2003 AQMP can be used to demonstrate the potential for CO exceedances of these standards. The SCAQMD is the air pollution control officer for much of southern California. The SCAQMD conducted a CO hot spot analysis as part of the 1992 CO Federal Attainment Plan at four busy intersections in Los Angeles County during the peak morning and afternoon time periods. The intersections evaluated included Long Beach Boulevard and Imperial Highway (Lynwood), Wilshire Boulevard and Veteran Avenue (Westwood), Sunset Boulevard and Highland Avenue (Hollywood), and La Cienega Boulevard and Century Boulevard (Inglewood). The busiest intersection evaluated was at Wilshire Boulevard and Veteran Avenue, which has a traffic volume of approximately 100,000 vehicles per day. Despite this level of traffic, the CO analysis concluded that there was no violation of CO standards (SCAQMD 1992). In order to establish a more accurate record of baseline CO concentrations affecting the Los Angeles, a CO "hot spot" analysis was conducted in 2003 at the same four busy intersections in Los Angeles at the peak morning and afternoon time periods. This "hot spot" analysis did not predict any violation of CO standards. The highest one-hour concentration was measured at 4.6 ppm at Wilshire Boulevard and Veteran Avenue and the highest eight-hour concentration was measured at 8.4 ppm at Long Beach Boulevard and Imperial Highway. Thus, there was no violation of CO standards.

Similar considerations are also employed by other Air Districts when evaluating potential CO concentration impacts. More specifically, the Bay Area Air Quality Management District (BAAQMD), the air pollution control officer for the San Francisco Bay Area, concludes that under existing and future vehicle emission rates, a given project would have to increase traffic volumes at a single intersection by more than 44,000 vehicles per hour or 24,000 vehicles per hour where vertical and/or horizontal air does not mix—in order to generate a significant CO impact.

The Proposed Project is anticipated to result in 4,354 daily traffic trips (DKS Associates 2023). Thus, the Proposed Project would not generate traffic volumes at any intersection of more than 100,000 vehicles per day (or 44,000 vehicles per day) and there is no likelihood of the Project traffic exceeding CO values.

2.3.3.5 Odors

Typically, odors are regarded as an annoyance rather than a health hazard. However, manifestations of a person's reaction to foul odors can range from psychological (e.g., irritation, anger, or anxiety) to physiological (e.g., circulatory and respiratory effects, nausea, vomiting, and headache).

With respect to odors, the human nose is the sole sensing device. The ability to detect odors varies considerably among the population and overall is quite subjective. Some individuals have the ability to smell minute quantities of specific substances; others may not have the same sensitivity but may have sensitivities to odors of other substances. In addition, people may have different reactions to the same odor; in fact, an odor that is offensive to one person (e.g., from a fast-food restaurant) may be perfectly acceptable to another. It is also important to note that an unfamiliar odor is more easily detected and is more likely to cause complaints than a familiar one. This is because of the phenomenon known as odor fatigue, in which

a person can become desensitized to almost any odor and recognition only occurs with an alteration in the intensity.

Quality and intensity are two properties present in any odor. The quality of an odor indicates the nature of the smell experience. For instance, if a person describes an odor as flowery or sweet, then the person is describing the quality of the odor. Intensity refers to the strength of the odor. For example, a person may use the word "strong" to describe the intensity of an odor. Odor intensity depends on the odorant concentration in the air. When an odorous sample is progressively diluted, the odorant concentration decreases. As this occurs, the odor intensity weakens and eventually becomes so low that the detection or recognition of the odor is quite difficult. At some point during dilution, the concentration of the odorant reaches a detection threshold. An odorant concentration below the detection threshold means that the concentration in the air is not detectable by the average human.

During construction, the Proposed Project presents the potential for generation of objectionable odors in the form of diesel exhaust in the immediate vicinity of the site. However, these emissions are short-term in nature and will rapidly dissipate and be diluted by the atmosphere downwind of the emission sources. Additionally, odors would be localized and generally confined to the construction area. Therefore, construction odors would not adversely affect a substantial number of people to odor emissions.

According to the SMAQMD, land uses commonly considered to be potential sources of obnoxious odorous emissions include wastewater treatment plants, sanitary landfills, composting/green waste facilities, recycling facilities, petroleum refineries, chemical manufacturing plants, painting/coating operations, rendering plants, and food packaging plants. The Proposed Project does not include any uses identified by the SMAQMD as being associated with odors.

3.0 GREENHOUSE GAS EMISSIONS

3.1 Greenhouse Gas Setting

Certain gases in the earth's atmosphere, classified as GHGs, play a critical role in determining the earth's surface temperature. Solar radiation enters the earth's atmosphere from space. A portion of the radiation is absorbed by the earth's surface and a smaller portion of this radiation is reflected back toward space. This absorbed radiation is then emitted from the earth as low-frequency infrared radiation. The frequencies at which bodies emit radiation are proportional to temperature. Because the earth has a much lower temperature than the sun, it emits lower-frequency radiation. Most solar radiation passes through GHGs; however, infrared radiation is absorbed by these gases. As a result, radiation that otherwise would have escaped back into space is instead trapped, resulting in a warming of the atmosphere. This phenomenon, known as the greenhouse effect, is responsible for maintaining a habitable climate on earth. Without the greenhouse effect, the earth would not be able to support life as we know it.

Prominent GHGs contributing to the greenhouse effect are CO_2, methane (CH_4), and N_2O. Fluorinated gases also make up a small fraction of the GHGs that contribute to climate change. Fluorinated gases include chlorofluorocarbons, hydrofluorocarbons, perfluorocarbons, sulfur hexafluoride, and nitrogen trifluoride; however, it is noted that these gases are not associated with typical land use development. Human-caused emissions of these GHGs in excess of natural ambient concentrations are believed to be responsible for intensifying the greenhouse effect and leading to a trend of unnatural warming of the earth's climate, known as global climate change or global warming. It is "extremely likely" that more than half of the observed increase in global average surface temperature from 1951 to 2010 was caused by the anthropogenic increase in GHG concentrations and other anthropogenic factors together (Intergovernmental Panel on Climate Change [IPCC] 2014).

Table 3-1 describes the primary GHGs attributed to global climate change, including their physical properties, primary sources, and contributions to the greenhouse effect.

Each GHG differs in its ability to absorb heat in the atmosphere based on the lifetime, or persistence, of the gas molecule in the atmosphere. CH_4 traps over 25 times more heat per molecule than CO_2, and N_2O absorbs 298 times more heat per molecule than CO_2 (IPCC 2014). Often, estimates of GHG emissions are presented in carbon dioxide equivalents (CO_2e), which weight each gas by its global warming potential. Expressing GHG emissions in CO_2e takes the contribution of all GHG emissions to the greenhouse effect and converts them to a single unit equivalent to the effect that would occur if only CO_2 were being emitted.

Climate change is a global problem. GHGs are global pollutants, unlike criteria air pollutants and TACs, which are pollutants of regional and local concern. Whereas pollutants with localized air quality effects have relatively short atmospheric lifetimes (about one day), GHGs have long atmospheric lifetimes (one to several thousand years). GHGs persist in the atmosphere for long enough time periods to be dispersed around the globe. Although the exact lifetime of any particular GHG molecule is dependent on multiple variables and cannot be pinpointed, it is understood that more CO_2 is emitted into the atmosphere than is sequestered by ocean uptake, vegetation, or other forms. Of the total annual human-caused CO_2 emissions, approximately 55 percent is sequestered through ocean and land uptakes every year, averaged over the

last 50 years, whereas the remaining 45 percent of human-caused CO_2 emissions remains stored in the atmosphere (IPCC 2013).

Table 3-1. Greenhouse Gases

Greenhouse Gas	Description
CO_2	Carbon dioxide is a colorless, odorless gas. CO_2 is emitted in a number of ways, both naturally and through human activities. The largest source of CO_2 emissions globally is the combustion of fossil fuels such as coal, oil, and gas in power plants, automobiles, industrial facilities, and other sources. A number of specialized industrial production processes and product uses such as mineral production, metal production, and the use of petroleum-based products can also lead to CO_2 emissions. The atmospheric lifetime of CO_2 is variable because it is so readily exchanged in the atmosphere.[1]
CH_4	Methane is a colorless, odorless gas and is the major component of natural gas, about 87 percent by volume. It is also formed and released to the atmosphere by biological processes occurring in anaerobic environments. Methane is emitted from a variety of both human-related and natural sources. Human-related sources include fossil fuel production, animal husbandry (intestinal fermentation in livestock and manure management), rice cultivation, biomass burning, and waste management. These activities release significant quantities of CH_4 to the atmosphere. Natural sources of CH_4 include wetlands, gas hydrates, permafrost, termites, oceans, freshwater bodies, non-wetland soils, and other sources such as wildfires. The atmospheric lifetime of CH_4 is about12 years.[2]
N_2O	Nitrous oxide is a clear, colorless gas with a slightly sweet odor. Nitrous oxide is produced by both natural and human-related sources. Primary human-related sources of N_2O are agricultural soil management, animal manure management, sewage treatment, mobile and stationary combustion of fossil fuels, adipic acid production, and nitric acid production. N_2O is also produced naturally from a wide variety of biological sources in soil and water, particularly microbial action in wet tropical forests. The atmospheric lifetime of N_2O is approximately 120 years.[3]

Sources: [1]USEPA 2016a, [2] USEPA 2016b, [3] USEPA 2016c

The quantity of GHGs that it takes to ultimately result in climate change is not precisely known; it is sufficient to say the quantity is enormous, and no single project alone would measurably contribute to a noticeable incremental change in the global average temperature or to global, local, or microclimates. From the standpoint of CEQA, GHG impacts to global climate change are inherently cumulative.

3.1.1 Sources of Greenhouse Gas Emissions

In 2022, CARB released the 2022 edition of the California GHG inventory covering calendar year 2020 emissions. In 2020, California emitted 369.2 million gross metric tons of CO_2e including from imported electricity. Combustion of fossil fuel in the transportation sector was the single largest source of California's GHG emissions in 2020, accounting for approximately 38 percent of total GHG emissions in the state. Continuing the downward trend from previous years, transportation emissions decreased 27 million metric

tons of CO_2e in 2020, though the intensity of this decrease was most likely from light duty vehicles after shelter-in-place orders were enacted in response to the COVID-19 pandemic. Emissions from the electricity sector account for 16 percent of the inventory and have remained at a similar level as in 2019 despite a 44 percent decrease in in-state hydropower generation (due to below average precipitation levels), which was more than compensated for by a 10 percent growth in in-state solar generation and cleaner imported electricity incentivized by California's clean energy policies. California's industrial sector accounts for the second largest source of the state's GHG emissions in 2020, accounting for 23 percent (CARB 2022c).

3.2 Regulatory Framework

3.2.1 State

3.2.1.1 Executive Order S-3-05

Executive Order (EO) S-3-05, signed by Governor Arnold Schwarzenegger in 2005, proclaims that California is vulnerable to the impacts of climate change. It declares that increased temperatures could reduce the Sierra Nevada snowpack, further exacerbate California's air quality problems, and potentially cause a rise in sea levels. To combat those concerns, the EO established total GHG emission targets for the state. Specifically, emissions are to be reduced to the 2000 level by 2010, the 1990 level by 2020, and to 80 percent below the 1990 level by 2050.

3.2.1.2 Assembly Bill 32 Climate Change Scoping Plan and Updates

In 2006, the California legislature passed Assembly Bill (AB) 32 (Health and Safety Code § 38500 et seq., or AB 32), also known as the Global Warming Solutions Act. AB 32 required CARB to design and implement feasible and cost-effective emission limits, regulations, and other measures, such that statewide GHG emissions are reduced to 1990 levels by 2020 (representing a 25 percent reduction in emissions). Pursuant to AB 32, CARB adopted a Scoping Plan in December 2008, which outlined measures to meet the 2020 GHG reduction goals. California exceeded the target of reducing GHG emissions to 1990 levels by the year 2017.

The Scoping Plan is required by AB 32 to be updated at least every five years. The latest update, the 2017 Scoping Plan Update, addresses the 2030 target established by Senate Bill (SB) 32 as discussed below and establishes a proposed framework of action for California to meet a 40 percent reduction in GHG emissions by 2030 compared to 1990 levels. The key programs that the Scoping Plan Update builds on include increasing the use of renewable energy in the State, the Cap-and-Trade Regulation, the Low Carbon Fuel Standard, and reduction of methane emissions from agricultural and other wastes.

3.2.1.3 Senate Bill 32 and Assembly Bill 197 of 2016

In August 2016, Governor Brown signed SB 32 and AB 197, which serve to extend California's GHG reduction programs beyond 2020. SB 32 amended the Health and Safety Code to include § 38566, which contains language to authorize CARB to achieve a statewide GHG emission reduction of at least 40 percent below 1990 levels by no later than December 31, 2030.

3.2.1.4 Senate Bill X1-2 of 2011, Senate Bill 350 of 2015, and Senate Bill 100 of 2018

In 2018, SB 100 was signed codifying a goal of 60 percent renewable procurement by 2030 and 100 percent by 2045 Renewables Portfolio Standard.

3.2.1.5 Senate Bill 375

The Sustainable Communities and Climate Protection Act of 2008, which became effective in January 2009, helps facilitate AB 32's GHG reduction goals by addressing the emissions from passenger vehicles. The main objectives of the bill aim to reduce GHG emissions through extensive transportation, housing, and land use planning. SB 375 directs CARB to establish regional targets to reduce GHG emissions from passenger vehicle use. CARB administers 2035 targets for each of the regions throughout the State. The corresponding metropolitan planning organizations (MPOs) in each region are required to prepare and adopt a Sustainable Communities Strategy (SCS) that helps to adhere to the CARB administered targets. Sustainable Community Strategies play a vital role in regional transportation plans by allowing transportation, land use, and housing strategies to align with the State's GHG emission goals. Project Plans that are consistent with their region's SCS may be subject to a more streamlined CEQA process.

3.2.1.6 2022 Building Energy Efficiency Standards for Residential and Nonresidential Buildings

The Building and Efficiency Standards (Energy Standards) were first adopted and put into effect in 1978 and have been updated periodically in the intervening years. These standards are a unique California asset that have placed the State on the forefront of energy efficiency, sustainability, energy independence and climate change issues. The 2022 California Building Codes include provisions related to energy efficiency to reduce energy consumption and greenhouse gas emissions from buildings. Some of the key energy efficiency components of the codes are:

1. Energy Performance Requirements: The codes specify minimum energy performance standards for the building envelope, lighting, heating and cooling systems, and other components.
2. Lighting Efficiency: The codes require that lighting systems meet minimum efficiency standards, such as the use of energy-efficient light bulbs and fixtures.
3. HVAC Systems: The codes establish requirements for heating, ventilation, and air conditioning (HVAC) systems, including the use of high-efficiency equipment, duct sealing, and controls.
4. Building Envelope: The codes include provisions for insulation, air sealing, glazing, and other building envelope components to reduce energy loss and improve indoor comfort.
5. Renewable Energy: The codes encourage the use of renewable energy systems, such as photovoltaic panels and wind turbines, to reduce dependence on non-renewable energy sources.
6. Commissioning: The codes require the commissioning of building energy systems to ensure that they are installed and operate correctly and efficiently.

Overall, the energy efficiency provisions of the 2022 California Building Codes aim to reduce the energy consumption of buildings, lower energy costs for building owners and occupants, and reduce the environmental impact of the built environment. The 2022 Building Energy Efficiency Standards improve upon the 2019 Energy Standards for new construction of, and additions and alterations to, residential and nonresidential buildings. The exact amount by which the 2022 Building Codes are more efficient compared to the 2019 Building Codes would depend on the specific provisions that have been updated and the specific building being considered. However, in general, the 2022 Building Codes have been updated to include increased requirements for energy efficiency, such as higher insulation and air sealing standards, which are intended to result in more efficient buildings. The 2022 standards are a major step toward meeting Zero Net Energy.

3.2.2 Local

3.2.2.1 Sacramento Metropolitan Air Quality Management District

To provide guidance to local lead agencies on determining significance for GHG emissions in CEQA documents, SMAQMD has established operational GHG reduction thresholds, as well as construction-related thresholds. The GHG targets and reduction recommendations made by the SMAQMD have taken into considerations reports and guidelines from various state agencies and organizations, such as the California Air Pollution Control Officers Association CEQA & Climate Change guidelines, the CARB Scoping Plan, the California Natural Resource Agency's CEQA Guidelines, and other reputable sources. In February 2021, the SMAQMD revised the Greenhouse Gas Emissions Chapter within their CEQA Guide.

The SMAQMD has both construction and operational thresholds for GHG emissions within their CEQA Guide. Their construction thresholds establish a bright line threshold of 1,100 metric tons/year. Similarly, SMAQMD recommends a comparison of a project's annual operational GHG emissions to a significance threshold of 1,100 metric tons per year, though coupled with implementation of SMAQMD Tier 1 Best Management Practices (BMPs). Specifically, if a project's annual operational GHG emissions are calculated to fall under 1,100 metric tons and the project implements all SMAQMD Tier 1 BMPs, GHG-related impacts would be less than significant. If the threshold is exceeded, or in the case the project does not implement the Tier 1 BMPs, then the project may have a cumulatively considerable contribution to a significant cumulative environmental impact.

The Tier 1 BMPs are:

- BMP 1 – projects shall be designed and constructed without natural gas infrastructure; and
- BMP 2 - projects shall meet the current CalGreen Tier 2 standards[1], except all electric vehicle capable spaces shall instead be electric vehicle ready.

[1] CalGreen contains voluntary "Tier 1" and "Tier 2" standards that are not mandatory statewide but could be required by a City or County. These are 'reach' standards, related to energy efficiency, that can be adopted by local jurisdictions and may be incorporated as mandatory standards in future code cycles.

If Tier 1 BMPs are not fully implemented then emissions, including natural gas emissions, should be estimated and the project should mitigate any natural gas emissions and require all prewiring necessary so that the building is ready for a future retrofit to all-electric (e.g., such that electric space heating, water heating, drying, and cooking appliances could be installed). If emissions still exceed 1,100 metric tons of CO_2e per year, then the project must implement SMAQMD's Tier 2 BMP 3:

- Office projects must achieve a 15 percent reduction in VMT per worker compared to the existing average VMT per capita for the County.
- Residential projects must achieve a 15 percent reduction in VMT per resident compared to the existing average VMT per capita in the County.
- Retail projects must achieve no net increase in total VMT.

If the project achieves BMP 3, then the operational impact is considered less than significant, and no further analysis is needed. If a project cannot incorporate the required BMPs, other reductions or purchasing and retiring GHG/carbon offsets from a registry approved by the SMAQMD may be required. Carbon offsets are instruments that can be bought, sold, and traded. Like a stock or equity that represents a unit of ownership in a company, a carbon offset represents a unit of GHG emissions reductions. Each offset is essentially a certification that a certain quantity of GHG emissions has been avoided, prevented, or sequestered. Offset registries that the SMAQMD may approve have developed a broad consensus around the standards that are necessary to ensure that offsets are environmentally sound, namely, that offsets be real, permanent, quantifiable, verifiable, enforceable, and additional. Approved registries may include but are not limited to any of the following: (i) the Climate Action Reserve, the American Carbon Registry and Verra, which are all approved by CARB; (ii) any entity approved at any time by CARB to act as an "offset project registry" under the state's cap-and-trade program; (iii) other regulatory or voluntary credits that demonstrate, based on substantial evidence, that the offsets are real, permanent, quantifiable, verifiable, enforceable, and additional.

3.2.2.2 Sacramento Metropolitan Air Quality Management District

The Sacramento Area Council of Government's (SACOG's) Metropolitan Transportation Plan/Sustainable Communities Strategy 2020 (MTP/SCS) is the latest update of a long-range policy and planning program that establishes GHG emissions goals for automobiles and light-duty trucks for and the year 2035, and thus establishes an overall GHG target for the region beyond 2020 applicable to these subsectors of the transportation sector. CARB assigned SACOG a 19 percent GHG reduction target from 2005 levels by 2035. The GHG reduction target is the percent reduction in passenger vehicle GHG emission per capita, compared to Year 2005. This change represents a reduction from just over 23 pounds per capita on a given weekday in 2005, to just under 19 pounds by 2035 (SACOG 2020).

3.2.2.3 City of Rancho Cordova Climate Action and Adaptation Plan

The City of Rancho Cordova has drafted the City Climate Action and Adaptation Plan (CAAP), which at the time of this analysis was in the public review process and therefore not yet adopted. The CAAP is intended to serve as a comprehensive roadmap to community sustainability and resilience in the city. The purposes

of the CAAP are to identify strategies and measures the City can take to reduce GHG emissions to levels that align with the State of California's goals and set forth strategies to adapt and promote resilience to the impacts of climate change. In drafting the CAAP, the City evaluated the volume of emissions generated in a baseline year (2019) and identified City-specific targets and goals that determine the amount of community-wide emissions that need to be reduced in Rancho Cordova to align with statewide GHG reduction targets for 2030 and 2045. The City then developed GHG reduction measures to achieve the City's 2030 target and make substantial progress towards the City's 2045 goal. Additionally, in preparation of the CAAP, the City conducted a climate change vulnerability assessment to better understand its vulnerability to climate hazards. This was then used to inform and develop a set of adaptation strategies, objectives, and actions to improve community resilience in the context of climate change. The successful implementation and administration of the CAAP would reduce emissions and reduce climate related risks in the city, as well as provide other co-benefits like strengthening the city's economy, improving risk management, cleaning the environment, and improving the health and wellness of residents.

The CAAP provides new development project applicants in the city the opportunity to use CEQA streamlining tools for projects that are consistent with the CAAP. Demonstrating consistency with the CAAP establishes that a project will not result in an "additional environmental effect" related to GHG emissions. A project's consistency with the CAAP will be determined through a Consistency Checklist ("Checklist"). The Checklist, which has yet to be made available at the time of this analysis, will contain GHG reduction measures applicable to development projects that are required to be implemented on a project-by-project basis to achieve the City's 2030 reduction target and make substantial progress toward the 2045 goal. Once the CAAP is adopted, new development projects will need to incorporate all potentially applicable Plan measures to demonstrate consistency with the CAAP. By incorporating applicable GHG reduction measures in the Checklist into project designs or conditions of approval, the City will ensure that new development is consistent with applicable GHG reduction measures in the CAAP and will contribute its "fair share" in achieving the identified GHG reduction targets. Projects that do not demonstrate consistency may, at the City's discretion, prepare a more comprehensive project-specific analysis of GHG emissions consistent with CEQA requirements.

3.3 Greenhouse Gas Emissions Impact Assessment

3.3.1 Thresholds of Significance

The impact analysis provided below is based on the following CEQA Guidelines Appendix G thresholds of significance. The Project would result in a significant impact to greenhouse gas emissions if it would:

1) Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment.

2) Conflict with any applicable plan, policy, or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases or

The Appendix G thresholds for GHG emissions do not prescribe specific methodologies for performing an assessment, do not establish specific thresholds of significance, and do not mandate specific mitigation

measures. Rather, the CEQA Guidelines emphasize the lead agency's discretion to determine the appropriate methodologies and thresholds of significance consistent with the manner in which other impact areas are handled in CEQA. With respect to GHG emissions, the CEQA Guidelines Section 15064.4(a) states that lead agencies "shall make a good-faith effort, based to the extent possible on scientific and factual data, to describe, calculate or estimate" GHG emissions resulting from a project. The CEQA Guidelines note that an agency has the discretion to either quantify a project's GHG emissions or rely on a "qualitative analysis or other performance-based standards." (14 CCR 15064.4(b)). A lead agency may use a "model or methodology" to estimate GHG emissions and has the discretion to select the model or methodology it considers "most appropriate to enable decision makers to intelligently take into account the project's incremental contribution to climate change." (14 CCR 15064.4(c)). Section 15064.4(b) provides that the lead agency should consider the following when determining the significance of impacts from GHG emissions on the environment:

1. The extent a project may increase or reduce GHG emissions as compared to the existing environmental setting.
2. Whether the project emissions exceed a threshold of significance that the lead agency determines applies to the project.
3. The extent to which the project complies with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of GHG emissions (14 CCR 15064.4(b)).

In addition, Section 15064.7(c) of the CEQA Guidelines specifies that "[w]hen adopting or using thresholds of significance, a lead agency may consider thresholds of significance previously adopted or recommended by other public agencies, or recommended by experts, provided the decision of the lead agency to adopt such thresholds is supported by substantial evidence" (14 CCR 15064.7(c)). The CEQA Guidelines also clarify that the effects of GHG emissions are cumulative and should be analyzed in the context of CEQA's requirements for cumulative impact analysis (see CEQA Guidelines Section 15130). As a note, the CEQA Guidelines were amended in response to Senate Bill 97. In particular, the CEQA Guidelines were amended to specify that compliance with a GHG emissions reduction plan renders a cumulative impact insignificant.

Per CEQA Guidelines Section 15064(h)(3), a project's incremental contribution to a cumulative impact can be found not cumulatively considerable if the project would comply with an approved plan or mitigation program that provides specific requirements that would avoid or substantially lessen the cumulative problem within the geographic area of the project. To qualify, such plans or programs must be specified in law or adopted by the public agency with jurisdiction over the affected resources through a public review process to implement, interpret, or make specific the law enforced or administered by the public agency. Examples of such programs include a "water quality control plan, air quality attainment or maintenance plan, integrated waste management plan, habitat conservation plan, natural community conservation plans [and] plans or regulations for the reduction of greenhouse gas emissions." Put another way, CEQA Guidelines Section 15064(h)(3) allows a lead agency to make a finding of less than significant for GHG emissions if a project complies with adopted programs, plans, policies and/or other regulatory strategies to reduce GHG emissions.

The local air quality agency regulating the SVAB is the SMAQMD, the regional air pollution control officer for the basin. As previously stated, to provide guidance to local lead agencies on determining significance for GHG emissions in CEQA documents, SMAQMD has set thresholds and required BMPs to implement throughout the Project construction and operations. The numeric bright line thresholds and BMPs described in Section 3.2.2.1 above were developed to be consistent with CEQA requirements for developing significance thresholds, are supported by substantial evidence, and provide guidance to CEQA practitioners and lead agencies with regard to determining whether GHG emissions from a proposed project are significant.

The significance of the Project's GHG emissions is evaluated consistent with CEQA Guidelines Section 15064.4(b)(2) by considering whether the Project complies with applicable plans, policies, regulations and requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of GHG emissions. The City Rancho Cordova may set a project-specific threshold based on the context of each particular project, including using the SMAQMD expert recommendation. For the Proposed Project, the SMAQMD's 1,100 metric tons of CO_2e per year threshold and implementation of SMAQMD BMPs are used as the significance threshold for the Project. Additionally, the Project is assessed for consistency with SACOG's MTP/SCS. As previously described, the MTP/SCS is the latest update of a long-range policy and planning program that establishes GHG emissions goals for automobiles and light-duty trucks for the year 2035, and thus establishes an overall GHG target for the region beyond 2020 applicable to these subsectors of the transportation sector. CARB assigned SACOG a 19 percent GHG reduction target from 2005 levels by 2035 (SACOG 2020).

3.3.2 Methodology

GHG impacts were assessed in accordance with methodologies recommended by the SMAQMD. Where GHG emission quantification was required, emissions were modeled using the CalEEMod software, version 2022.1. CalEEMod is a statewide land use emissions computer model designed to quantify potential GHG emissions associated with both construction and operations from a variety of land use projects. Project construction generated GHG emissions were calculated primarily using CalEEMod model defaults for Sacramento County, though the timing of construction was adjusted to reflect the anticipated construction schedule of 2024 through 2029. Operational GHG emissions were based on the land use mix identified in Section 1.0 of this report and traffic trip generation rates provided by Nelson/Nygaard (2023). Two design features attributable to the Project are accounted for in the emissions modeling calculations, specifically the Project's proximity to transit and its number of affordable/below-market residential units.

3.3.3 Impact Analysis

3.3.3.1 Generation of GHG Emissions

Construction

Construction-related activities that would generate GHG emissions include worker commute trips, haul trucks carrying supplies and materials to and from the Project Site, and off-road construction equipment (e.g., dozers, loaders, excavators). Table 3-2 illustrates the specific construction generated GHG emissions

that would result from construction of the Project. Once construction is complete, the generation of these GHG emissions would cease.

Table 3-2. Construction-Related Greenhouse Gas Emissions

Emissions Source	CO_2e (Metric Tons/ Year)
Calendar Year One	499
Calendar Year Two	890
Calendar Year Three	973
Calendar Year Four	963
Calendar Year Five	939
SMAQMD Annual Construction Significance Threshold	*1,100*
Exceed SMAQMD Threshold?	**No**

Source: CalEEMod version 2022.1. Refer to Attachment A for Model Data Outputs.

As shown in Table 3-2, Project construction would result in the maximum generation of 973 metric tons of CO_2e over the third calendar year of construction, which is below the SMAQMD significance threshold. Once construction is complete, the generation of these GHG emissions would cease.

Operational Significance Analysis

Operation of the Project would result in an increase in GHG emissions primarily associated with motor vehicle trips and onsite energy sources. Long-term operational GHG emissions attributed to the Project are identified in Table 3-3.

As previously described, SMAQMD specifies that all projects must adhere to the Tier 1 BMP requirements in order to be considered less than significant. In order to ensure compliance with the SMAQMD guidelines, this Project is subject to mitigation measure GHG-1 (see below), which will ensure that Tier 1 BMPs are implemented. The long-term Project operational GHG emissions identified in Table 3-3 account for SMAQMD Tier 1 BMP 1, which requires that all development be designed and constructed without natural gas infrastructure. Due to limitations in the modeling software, GHG-reductions resulting from Tier 1 BMP 2, which requires projects to meet the current CalGreen Tier 2 standards with the exception that all electric vehicle capable spaces be electric vehicle ready, are unable to be quantified.

Table 3-3. Operational-Related Greenhouse Gas Emissions	
Emissions Source	**CO_2e (Metric Tons/ Year)**
Area	8
Energy	608
Mobile	4,441
Waste	190
Water	19
Refrigeration	2
Total	**5,268**
SMAQMD Annual Operational Significance Threshold	*1,100*
Exceed SMAQMD Threshold?	**Yes**

Source: CalEEMod version 2022.1. Refer to Attachment A for Model Data Outputs.

Notes: Emission projections are predominately based on the land use mix identified in Section 1.0 of this report and traffic trip generation rates from DKS Associates(2023). SMAQMD Tier 1 BMP 1, which requires that all development be designed and constructed without natural gas infrastructure, is included in the modeling calculations per mitigation measure GHG-1.

As shown in Table 3-3, the Proposed Project's operational GHG emissions would be approximately 5,268 metric tons of CO_2e per year, which exceeds the SMAQMD significance threshold of 1,100 metric tons of CO_2e per year. Projects that exceed 1,100 metric tons of CO_2e per year after implementation of the Tier 1 BMPs must also implement SMAQMD Tier 2 BMPs. As previously discussed, the SMAQMD's Tier 2 BMP are as follows:

- Office projects must achieve a 15 percent reduction in VMT per worker compared to the existing average VMT per capita for the County.
- Residential projects must achieve a 15 percent reduction in VMT per resident compared to the existing average VMT per capita in the County.
- Retail projects must achieve no net increase in total VMT.

If the project achieves this SMAQMD Tier 2 BMP, then the operational impact is considered less than significant, and no further analysis is needed. If a project cannot incorporate the required BMPs, other reductions or purchasing and retiring GHG/carbon offsets from a registry approved by the SMAQMD may be required. Carbon offsets are instruments that can be bought, sold, and traded. Like a stock or equity that represents a unit of ownership in a company, a carbon offset represents a unit of GHG emissions reductions. Each offset is essentially a certification that a certain quantity of GHG emissions has been avoided, prevented, or sequestered. Offset registries that the SMAQMD may approve have developed a broad consensus around the standards that are necessary to ensure that offsets are environmentally sound, namely that offsets be real, permanent, quantifiable, verifiable, enforceable, and additional. Approved

registries may include but are not limited to any of the following: (i) the Climate Action Reserve, the American Carbon Registry, and Verra, which are all approved by CARB; (ii) any entity approved at any time by CARB to act as an "offset project registry" under the state's cap-and-trade program; (iii) other regulatory or voluntary credits that demonstrate, based on substantial evidence, that the offsets are real, permanent, quantifiable, verifiable, enforceable, and additional.

Therefore, in addition to mitigation measure GHG-1, mitigation measure GHG-2 is required in order for the Project's contribution of GHG emissions to be considered less than significant.

Mitigation Measures

GHG-1: Implement SMAQMD Tier 1 Best Management Practices.

The implementing agency will require the Project to implement Sacramento Metropolitan Air Quality Management District Tier 1 Best Management Practices:

- **BMP 1** - projects shall be designed and constructed without natural gas infrastructure.
- **BMP 2** - projects shall meet the current CalGreen Tier 2 standards, except all electric vehicle capable spaces shall instead be electric vehicle ready.

GHG-2: Implement SMAQMD Tier 2 Best Management Practices.

The implementing agency will require the Project to implement Sacramento Metropolitan Air Quality Management District Tier 2 Best Management Practices:

- **BMP 3** - The Project applicant shall coordinate with the City of Rancho Cordova to implement feasible transportation demand management (TDM) strategies, which would decrease the vehicle miles traveled generated by the Project as follows:

  1. The Project office space component must achieve a 15 percent reduction in VMT per worker compared to the existing average VMT per capita for Sacramento County.
  2. The Project residential component must achieve a 15 percent reduction in VMT per resident compared to the existing average VMT per capita in Sacramento County.
  3. The Project retail component must achieve no net increase in total VMT.

Examples of potential measures include (but are not limited to): paid parking, employee telecommuting, employee shuttle service, expansion of transit service coverage / subsidized transit fares, enhanced bicycle and pedestrian connections, and flexible work schedules.

In the case that the necessary VMT reductions are infeasible, the purchasing and retiring GHG/carbon offsets from a SMAQMD-approved registry is required. Approved registries may include but are not limited to any of the following: (i) the Climate Action Reserve, the American Carbon Registry and Verra; (ii) any entity approved at any time by the California Air Resources Board to act as an "offset project registry" under the state's cap-and-trade program; (iii) other

regulatory or voluntary credits that demonstrate, based on substantial evidence, that the offsets are real, permanent, quantifiable, verifiable, enforceable, and additional.

Adherence to both mitigation measures GHG-1 and GHG-2 are required in order for the Project's contribution of GHG emissions to be considered less than significant.

3.3.3.2 Conflict with any Applicable Plan, Policy, or Regulation of an Agency Adopted for the Purpose of Reducing the Emissions of Greenhouse Gases

As previously described, SACOG's MTP/SCS establishes GHG emissions goals for automobiles and light-duty trucks. As shown in Table 3-3, GHG emissions resulting from Project-related transportation sources are one of the most potent sources of emissions, and therefore comparison to the MTP/SCS is an appropriate indicator of whether the Project is consistent with the MTP/SCS. Since the development site is classified as a "Center and Corridor Community" in the MTP/SCS (SACOG 2020, Appendix D), it is included in an area where urban development is predicted by SACOG. According to the MTP/SCS, land uses in Center and Corridor Communities are typically higher density and more mixed than surrounding land uses. Centers and Corridors are identified in local plans as historic downtowns, main streets, suburban or urban commercial corridors, rail station areas, central business districts, or town centers. They typically have more compact development patterns, a greater mix of uses, and a wider variety of transportation infrastructure compared to the communities surrounding them. Some have frequent transit service, either bus or rail, and all have pedestrian and bicycling infrastructure that is more supportive of walking and bicycling than other Community Types. The Project is consistent with the "Center and Corridor Community" classification in the MTP/SCS, and it can be assumed that regional mobile emissions will decrease in line with the goals of the MTP/SCS with implementation of the future development within the Project Area.

Mills Crossing Detailed Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

2.2. Construction Emissions by Year, Unmitigated

2.3. Construction Emissions by Year, Mitigated

2.4. Operations Emissions Compared Against Thresholds

2.5. Operations Emissions by Sector, Unmitigated

2.6. Operations Emissions by Sector, Mitigated

3. Construction Emissions Details

3.1. Demolition (2024) - Unmitigated

3.2. Demolition (2024) - Mitigated

3.3. Site Preparation (2024) - Unmitigated

3.4. Site Preparation (2024) - Mitigated

3.5. Grading (2024) - Unmitigated

3.6. Grading (2024) - Mitigated

3.7. Grading (2025) - Unmitigated

3.8. Grading (2025) - Mitigated

3.9. Building Construction (2025) - Unmitigated

3.10. Building Construction (2025) - Mitigated

3.11. Building Construction (2026) - Unmitigated

3.12. Building Construction (2026) - Mitigated

3.13. Building Construction (2027) - Unmitigated

3.14. Building Construction (2027) - Mitigated

3.15. Building Construction (2028) - Unmitigated

3.16. Building Construction (2028) - Mitigated

3.17. Paving (2025) - Unmitigated

3.18. Paving (2025) - Mitigated

3.19. Paving (2026) - Unmitigated

3.20. Paving (2026) - Mitigated

3.21. Paving (2027) - Unmitigated

3.22. Paving (2027) - Mitigated

3.23. Paving (2028) - Unmitigated

3.24. Paving (2028) - Mitigated

3.25. Architectural Coating (2025) - Unmitigated

3.26. Architectural Coating (2025) - Mitigated

3.27. Architectural Coating (2026) - Unmitigated

3.28. Architectural Coating (2026) - Mitigated

3.29. Architectural Coating (2027) - Unmitigated

3.30. Architectural Coating (2027) - Mitigated

3.31. Architectural Coating (2028) - Unmitigated

3.32. Architectural Coating (2028) - Mitigated

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

4.1.2. Mitigated

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

4.2.2. Electricity Emissions By Land Use - Mitigated

4.2.3. Natural Gas Emissions By Land Use - Unmitigated

4.2.4. Natural Gas Emissions By Land Use - Mitigated

4.3. Area Emissions by Source

4.3.2. Unmitigated

4.3.1. Mitigated

4.4. Water Emissions by Land Use

4.4.2. Unmitigated

4.4.1. Mitigated

4.5. Waste Emissions by Land Use

4.5.2. Unmitigated

4.5.1. Mitigated

4.6. Refrigerant Emissions by Land Use

4.6.1. Unmitigated

4.6.2. Mitigated

4.7. Offroad Emissions By Equipment Type

4.7.1. Unmitigated

4.7.2. Mitigated

4.8. Stationary Emissions By Equipment Type

4.8.1. Unmitigated

4.8.2. Mitigated

4.9. User Defined Emissions By Equipment Type

4.9.1. Unmitigated

4.9.2. Mitigated

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

4.10.4. Soil Carbon Accumulation By Vegetation Type - Mitigated

4.10.5. Above and Belowground Carbon Accumulation by Land Use Type - Mitigated

4.10.6. Avoided and Sequestered Emissions by Species - Mitigated

5. Activity Data

5.1. Construction Schedule

5.2. Off-Road Equipment

5.2.1. Unmitigated

5.2.2. Mitigated

5.3. Construction Vehicles

5.3.1. Unmitigated

5.3.2. Mitigated

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

5.5. Architectural Coatings

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

5.6.2. Construction Earthmoving Control Strategies

5.7. Construction Paving

5.8. Construction Electricity Consumption and Emissions Factors

5.9. Operational Mobile Sources

5.9.1. Unmitigated

5.9.2. Mitigated

5.10. Operational Area Sources

5.10.1. Hearths

5.10.1.1. Unmitigated

5.10.1.2. Mitigated

5.10.2. Architectural Coatings

5.10.3. Landscape Equipment

5.10.4. Landscape Equipment - Mitigated

5.11. Operational Energy Consumption

5.11.1. Unmitigated

5.11.2. Mitigated

5.12. Operational Water and Wastewater Consumption

5.12.1. Unmitigated

5.12.2. Mitigated

5.13. Operational Waste Generation

5.13.1. Unmitigated

5.13.2. Mitigated

5.14. Operational Refrigeration and Air Conditioning Equipment

5.14.1. Unmitigated

5.14.2. Mitigated

5.15. Operational Off-Road Equipment

5.15.1. Unmitigated

5.15.2. Mitigated

5.16. Stationary Sources

5.16.1. Emergency Generators and Fire Pumps

5.16.2. Process Boilers

5.17. User Defined

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

5.18.1.2. Mitigated

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

5.18.1.2. Mitigated

5.18.2. Sequestration

5.18.2.1. Unmitigated

5.18.2.2. Mitigated

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

6.2. Initial Climate Risk Scores

6.3. Adjusted Climate Risk Scores

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

7.2. Healthy Places Index Scores

7.3. Overall Health & Equity Scores

7.4. Health & Equity Measures

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Mills Crossing
Construction Start Date	1/2/2024
Operational Year	2029
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	2.70
Precipitation (days)	3.00
Location	38.58510137581632, -121.31208673995633
County	Sacramento
City	Rancho Cordova
Air District	Sacramento Metropolitan AQMD
Air Basin	Sacramento Valley
TAZ	608
EDFZ	13
Electric Utility	Sacramento Municipal Utility District
Gas Utility	Pacific Gas & Electric
App Version	2022.1.1.14

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description

Medical Office Building	30.0	1000sqft	0.69	30,000	0.00	—	—	—
Library	15.0	1000sqft	0.34	15,000	0.00	—	—	—
Strip Mall	35.0	1000sqft	0.80	35,000	0.00	—	—	—
Strip Mall	52.5	1000sqft	1.21	52,500	0.00	—	—	—
High Turnover (Sit Down Restaurant)	7.50	1000sqft	0.17	7,500	0.00	—	—	—
Condo/Townhouse	60.0	Dwelling Unit	1.50	63,600	0.00	—	168	—
City Park	2.50	Acre	2.50	0.00	100,000	100,000	—	—
Unenclosed Parking with Elevator	325	Space	1.17	130,000	—	—	—	—
Apartments Mid Rise	60.0	Dwelling Unit	1.50	57,600	—	—	168	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-10-A	Water Exposed Surfaces
Construction	C-11	Limit Vehicle Speeds on Unpaved Roads
Transportation	T-3	Provide Transit-Oriented Development
Transportation	T-4	Integrate A ordable and Below Market Rate Housing

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	23.1	annual days of extreme heat
Extreme Precipitation	5.35	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	0	0	N/A
Extreme Precipitation	2	0	0	N/A
Sea Level Rise	N/A	N/A	N/A	N/A

Wildfire	1	0	0	N/A
Flooding	0	0	0	N/A
Drought	0	0	0	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	1	1	3
Extreme Precipitation	2	1	1	3
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	1	1	2
Flooding	1	1	1	2
Drought	1	1	1	2
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	59.7
AQ-PM	36.3
AQ-DPM	68.6
Drinking Water	98.5
Lead Risk Housing	91.7
Pesticides	2.52
Toxic Releases	18.4
Traffic	12.1
Effect Indicators	—
CleanUp Sites	79.7
Groundwater	59.6
Haz Waste Facilities/Generators	1.80
Impaired Water Bodies	51.2
Solid Waste	0.00
Sensitive Population	—
Asthma	78.2

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	69.0
Healthy Places Index Score for Project Location (b)	36.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Square footage, acreage, and land uses depicted in the Project Description were adapted to CalEEMod. The designations are shown below: Medical Office Building = Health and Wellness Clinic Library = Events and Meeting Space Strip Mall = Arts Center Strip Mall = Community Commercial Building High Turnover Restaurant = Commercial Retail Condo/Townhouse = Townhome Housing Apartments Mid Rise = Affordable Multifamily housing City Park = Public Open Space Unenclosed Parking with Elevator = Parking Structure
Construction: Construction Phases	Construction occurs from 2024-2029 per the PD
Construction: Dust From Material Movement	no information per the PD
Construction: Demolition	no information per the PD
Operations: Vehicle Data	Trip Rates adjusted from Nelson/Nygaard 2023 to reflect higher square footage of buildings
Operations: Energy Use	No natural gas per SMAQMD BMP 1

1.0 INTRODUCTION

At the request of PlaceWorks, Inc., ECORP Consulting, Inc. conducted a Biological Resources Assessment (BRA) for the proposed Mills Crossing Project (Project) located in Sacramento County, California. The purpose of the assessment was to collect information on the biological resources present or with the potential to occur in the Study Area and to assess any potential biological constraints related to Project activities.

1.1 Project Area Location

The approximately 9.77-acre Study Area is located in the city of Rancho Cordova, Sacramento County, California. The Study Area corresponds to a portion of the unsectioned Rancho de los Americanos land grant within the "Carmichael, California" 7.5-minute quadrangle (U.S. Geological Survey [USGS] 1961, photorevised 1980; Figure 1). The approximate center of the Project Area is located at latitude 38.585407° and longitude -121.312575° within the Lower American River Watershed (Hydrologic Unit Code #18020111; Natural Resources Conservation Service, et al. 2016).

1.2 Project Description

The proposed Project entails the construction of a community center with a health and wellness center, parking structure, muti-family housing, single family housing, arts center and theater, and community events and meeting center.

1.3 Purpose of this Biological Resources Assessment

The purpose of this BRA is to assess the potential for occurrence of special-status plant and animal species or their habitats, and sensitive biological resources such as wetlands within the Study Area. This assessment does not include determinate presence-absence field surveys for special-status species or an Aquatic Resources Delineation meeting U.S. Army Corps of Engineers (USACE) standards. The conclusions and recommendations presented in this report are based upon a review of the available literature and the field assessment.

For the purposes of this assessment, special-status species are defined as plants or animals that:

- are listed, proposed for listing, or candidates for future listing as threatened or endangered under the federal Endangered Species Act (ESA);
- are listed or candidates for future listing as threatened or endangered under the California ESA;
- meet the definitions of endangered or rare under Section 15380 of the California Environmental Quality Act (CEQA) Guidelines;
- are identified as a species of special concern (SSC) by the California Department of Fish and Wildlife (CDFW);

ENVIRONMENTAL CONSULTANTS

2023-009 Mills Crossing Project

- are included on the CDFW Watch List (WL);
- are birds identified as Birds of Conservation Concern (BCC) by the U.S. Fish and Wildlife Service (USFWS 2022);
- are plants considered by the California Native Plant Society (CNPS) to be "rare, threatened, or endangered in California" (California Rare Plant Rank [CRPR] 1 and 2), plants listed by CNPS as species about which more information is needed to determine their status (CRPR 3), and plants of limited distribution (CRPR 4);
- are plants listed as rare under the California Native Plant Protection Act (NPPA; California Fish and Game Code, Section 1900 et seq.); or
- are fully protected in California in accordance with the California Fish and Game Code, Sections 3511 (birds), 4700 (mammals), 5050 (amphibians and reptiles), and 5515 (fishes).

Only species that fall into one of the above-listed groups were considered for this assessment. Other species without special status that are sometimes found in database or literature searches were not included in this analysis.

2.0 REGULATORY SETTING

2.1 Federal Regulations

2.1.1 Federal Endangered Species Act

The federal ESA protects plants and animals that are listed as endangered or threatened by the USFWS and the National Marine Fisheries Service (NMFS). Section 9 of ESA prohibits the taking of listed wildlife, where take is defined as “harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, collect, or attempt to engage in such conduct” (50 Code of Federal Regulations [CFR] 17.3). For plants, this statute governs removing, possessing, maliciously damaging, or destroying any listed plant on federal land and removing, cutting, digging up, damaging, or destroying any listed plant on non-federal land in knowing violation of state law (16 U.S. Code 1538). Under Section 7 of ESA, federal agencies are required to consult with the USFWS if their actions, including permit approvals or funding, could adversely affect a listed (or proposed) species (including plants) or its critical habitat. Through consultation and the issuance of a Biological Opinion, the USFWS may issue an incidental take statement allowing take of the species that is incidental to an otherwise authorized activity provided the activity will not jeopardize the continued existence of the species. Section 10 of ESA provides for issuance of incidental take permits where no other federal actions are necessary provided a Habitat Conservation Plan is developed.

2.1.2 Critical Habitat

Critical Habitat is defined in Section 3 of the ESA as (1) the specific areas within the geographical area occupied by a species, at the time it is listed in accordance with the ESA, on which are found those physical or biological features essential to the conservation of the species and that may require special management considerations or protection; and (2) specific areas outside the geographical area occupied

by a species at the time it is listed, upon a determination that such areas are essential for the conservation of the species. For inclusion in a Critical Habitat designation, habitat within the geographical area occupied by the species at the time it was listed must first have features that are essential to the conservation of the species. Critical Habitat designations identify, to the extent known and using the best scientific data available, habitat areas that provide essential life cycle needs of the species (areas on which are found the primary physical and biological features). Primary physical and biological features are features essential to the conservation of the species and that may require special management considerations or protection. These include but are not limited to the following:

- Space for individual and population growth and for normal behavior;
- Food, water, air, light, minerals, or other nutritional or physiological requirements;
- Cover or shelter;
- Sites for breeding, reproduction, or rearing (or development) of offspring; or
- Habitats that are protected from disturbance or are representative of the historic, geographical, and ecological distributions of a species.

2.1.3 Migratory Bird Treaty Act

The Migratory Bird Treaty Act (MBTA) implements international treaties between the United States and other nations devised to protect migratory birds, any of their parts, eggs, and nests from activities such as hunting, pursuing, capturing, killing, selling, and shipping, unless expressly authorized in the regulations or by permit. As authorized by the MBTA, the USFWS issues permits to qualified applicants for the following types of activities: falconry, raptor propagation, scientific collecting, special purposes (rehabilitation, education, migratory game bird propagation, and salvage), take of depredating birds, taxidermy, and waterfowl sale and disposal. The regulations governing migratory bird permits can be found in 50 CFR part 13 General Permit Procedures and 50 CFR part 21 Migratory Bird Permits. The State of California has incorporated the protection of birds of prey in Sections 3800, 3513, and 3503.5 of the California Fish and Game Code.

2.1.4 Federal Clean Water Act

The purpose of the federal Clean Water Act (CWA) is to "restore and maintain the chemical, physical, and biological integrity of the nation's waters." Section 404 of the CWA prohibits the discharge of dredged or fill material into "Waters of the U.S." without a permit from the USACE. The definition of Waters of the U.S. includes rivers, streams, estuaries, the territorial seas, ponds, lakes, and wetlands. Wetlands are defined as those areas "that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions" (33 CFR 328.3 7b).

Substantial impacts to wetlands (over 0.5 acre of impact) may require an individual permit. Projects that only minimally affect wetlands (less than 0.5 acre of impact) may meet the conditions of one of the existing Nationwide Permits. A Water Quality Certification or waiver pursuant to Section 401 of the CWA is

required for Section 404 permit actions; this certification or waiver is issued by the Regional Water Quality Control Board (RWQCB).

2.2 State and Local Regulations

2.2.1 California Fish and Game Code

2.2.1.1 California Endangered Species Act

The California ESA (California Fish and Game Code Sections 2050-2116) generally parallels the main provisions of the ESA, but unlike its federal counterpart, the California ESA applies the take prohibitions to species proposed for listing (called *candidates* by the state). Section 2080 of the California Fish and Game Code prohibits the taking, possession, purchase, sale, and import or export of endangered, threatened, or candidate species, unless otherwise authorized by permit or in the regulations. Take is defined in Section 86 of the California Fish and Game Code as "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill." The California ESA allows for take incidental to otherwise lawful development projects. State lead agencies are required to consult with CDFW to ensure that any action they undertake is not likely to jeopardize the continued existence of any endangered, threatened or candidate species or result in destruction or adverse modification of essential habitat.

2.2.1.2 Fully Protected Species

The State of California first began to designate species as "fully protected" prior to the creation of the federal and California ESAs. Lists of fully protected species were initially developed to provide protection to those animals that were rare or faced possible extinction and included fish, amphibians and reptiles, birds, and mammals. Most fully protected species have since been listed as threatened or endangered under the federal and/or California ESAs. The regulations that implement the Fully Protected Species Statute (California Fish and Game Code Sections 4700 for mammals, 3511 for birds, 5050 for reptiles and amphibians, and 5515 for fish) provide that fully protected species may not be taken or possessed at any time. Furthermore, the CDFW prohibits any state agency from issuing incidental take permits for fully protected species. The CDFW will issue licenses or permits for take of these species for necessary scientific research or live capture and relocation pursuant to the permit.

2.2.1.3 Native Plant Protection Act

The NPPA of 1977 was created with the intent to "preserve, protect and enhance rare and endangered plants in this State." The NPPA is administered by CDFW and provided in California Fish and Game Code Sections 1900-1913. The Fish and Wildlife Commission has the authority to designate native plants as "endangered" or "rare" and to protect endangered and rare plants from take. The California ESA of 1984 (California Fish and Game Code Section 2050-2116) provided further protection for rare and endangered plant species, but the NPPA remains part of the California Fish and Game Code.

2.2.1.4 Protected Birds

Sections 3800, 3513, and 3503 of the California Fish and Game Code specifically protect birds. Section 3800 states that it is unlawful to take nongame birds, such as those occurring naturally in California that are not resident game birds, migratory game birds, or fully protected birds, except when in accordance with regulations of the commission or a mitigation plan approved by CDFW for mining operations. Section 3513 specifically prohibits the take or possession of any migratory nongame bird as designated in the MBTA.

Section 3503 of the California Fish and Game Code prohibits the take, possession, or needless destruction of the nest or eggs of any bird. Additionally, Subsection 3503.5 prohibits the take, possession, or destruction of any birds and their nests in the orders Strigiformes (owls) or Falconiformes (hawks and eagles). These provisions, along with the federal MBTA, serve to protect nesting native birds.

2.2.1.5 California Lake or Streambed Alteration Notification/Agreement

Section 1602 of the California Fish and Game Code requires that a Streambed Alteration Application (SAA) be submitted to CDFW for "any activity that may substantially divert or obstruct the natural flow or substantially change the bed, channel, or bank of any river, stream, or lake." The CDFW reviews the proposed actions and, if necessary, submits proposed measures to protect affected fish and wildlife resources to the applicant. The SAA is the final proposal mutually agreed upon by CDFW and the Applicant. Projects that require an SAA often also require a permit from the USACE under Section 404 of the CWA.

2.2.2 Species of Special Concern

The CDFW defines SSC as a species, subspecies, or distinct population of an animal native to California that are not legally protected under ESA, the California ESA or the California Fish and Game Code, but currently satisfy one or more of the following criteria:

- The species has been completely extirpated from the state or, as in the case of birds, it has been extirpated from its primary seasonal or breeding role;
- The species is listed as federally (but not state) threatened or endangered, or meets the state definition of threatened or endangered but has not formally been listed;
- The species has or is experiencing serious (noncyclical) population declines or range retractions (not reversed) that, if continued or resumed, could qualify it for state threatened or endangered status;
- The species has naturally small populations that exhibit high susceptibility to risk from any factor that if realized, could lead to declines that would qualify it for state threatened or endangered status.

SSC are typically associated with habitats that are threatened. Project-related impacts to SSC or their habitats may be considered "significant" under CEQA.

2.2.3 Watch List Species

The CDFW maintains a list consisting of taxa that were previously designated as "Species of Special Concern" but no longer merit that status, or which do not yet meet SSC criteria, but for which there is concern and a need for additional information to clarify status.

Depending on the policy of the lead agency, projects that result in substantial impacts to species on the WL may be considered significant under CEQA.

2.2.4 California Rare Plant Ranks

The CNPS maintains the Inventory of Rare and Endangered Plants of California (CNPS 2023), which provides a list of plant species native to California that are threatened with extinction, have limited distributions, and/or low populations. Plant species meeting one of these criteria are assigned to one of six CRPRs. The rank system was developed in collaboration with government, academia, nongovernmental organizations, and private sector botanists, and is jointly managed by CDFW and the CNPS. The CRPRs are currently recognized in the California Natural Diversity Database (CNDDB). The following are definitions of the CNPS CRPRs:

- Rare Plant Rank 1A – presumed extirpated in California and either rare or extinct elsewhere
- Rare Plant Rank 1B – rare, threatened, or endangered in California and elsewhere
- Rare Plant Rank 2A – presumed extirpated in California, but more common elsewhere
- Rare Plant Rank 2B – rare, threatened, or endangered in California but more common elsewhere
- Rare Plant Rank 3 – a review list of plants about which more information is needed
- Rare Plant Rank 4 – a watch list of plants of limited distribution

Additionally, the CNPS has defined Threat Ranks that are added to the CRPR as an extension. Threat Ranks designate the level of threat on a scale of 1 through 3, with 1 being the most threatened and 3 being the least threatened. Threat Ranks are generally present for all plants ranked 1B, 2B, or 4, and for the majority of plants ranked 3. Plant species ranked 1A and 2A (presumed extirpated in California), and some species ranked 3, which lack threat information, do not typically have a Threat Rank extension. The following are definitions of the CNPS Threat Ranks:

- Threat Rank 0.1 – Seriously threatened in California (more than 80 percent of occurrences threatened/high degree and immediacy of threat)
- Threat Rank 0.2 – Moderately threatened in California (20 to 80 percent occurrences threatened/moderate degree and immediacy of threat)
- Threat Rank 0.3 – Not very threatened in California (less than 20 percent of occurrences threatened/low degree and immediacy of threat or no current threats known)

Factors such as habitat vulnerability and specificity, distribution, and condition of occurrences, are considered in setting the Threat Rank; and differences in Threat Ranks do not constitute additional or

different protection (CNPS 2023a). Depending on the policy of the lead agency, substantial impacts to plants ranked 1A, 1B, or 2 are typically considered significant under CEQA Guidelines Section 15380. Significance under CEQA is typically evaluated on a case-by-case basis for plants ranked 3 or 4.

2.2.5 Sensitive Natural Communities

The CDFW maintains the California Natural Community List (CDFW 2023a), which provides a list of vegetation alliances, associations, and special stands as defined in *A Manual of California Vegetation Online* (CNPS 2022) along with their respective state and global rarity ranks. Natural communities with a state rarity rank of S1, S2, or S3 are considered sensitive natural communities. Depending on the policy of the lead agency, impacts to sensitive natural communities may be considered significant under CEQA.

2.2.6 Porter-Cologne Water Quality Act

The RWQCB implements water quality regulations under the federal CWA and the Porter-Cologne Water Quality Act. These regulations require compliance with the National Pollutant Discharge Elimination System (NPDES), including compliance with the California Storm Water NPDES General Construction Permit for discharges of stormwater runoff associated with construction activities. General Construction Permits for projects that disturb 1 or more acres of land require development and implementation of a Stormwater Pollution Prevention Plan. Under the Porter-Cologne Water Quality Act, the RWQCB also regulates actions that would involve "discharging waste, or proposing to discharge waste, within any region that could affect the water of the state" [Water Code 13260(a)]. Waters of the State are defined as "any surface water or groundwater, including saline waters, within the boundaries of the state" [Water Code 13050 (e)]. The RWQCB regulates all such activities, as well as dredging, filling, or discharging materials into Waters of the State that are not regulated by USACE due to a lack of connectivity with a navigable water body. The RWQCB may require issuance of Waste Discharge Requirements for these activities.

2.2.7 California Environmental Quality Act

In accordance with CEQA Guidelines Section 15380, a species or subspecies not specifically protected under the federal or California ESAs or NPPA may be considered endangered, rare, or threatened for CEQA review purposes if the species meets certain criteria specified in the Guidelines. These criteria include definitions similar to definitions used in the federal ESA, California ESA, and NPPA. Section 15380 was included in the CEQA Guidelines primarily to address situations in which a project under review may have a significant effect on a species that has not been listed under the federal ESA, California ESA, or NPPA, but that may meet the definition of endangered, rare, or threatened. Animal species identified as SSC by CDFW, and plants identified by the CNPS as rare, threatened, or endangered, may meet the CEQA definition of rare or endangered.

2.2.7.1 California Environmental Quality Act Significance Criteria

Sections 15063-15065 of the CEQA Guidelines address how an impact is identified as significant. Generally, impacts to listed (rare, threatened, or endangered) species are considered significant. Assessment of "impact significance" to populations of nonlisted species (e.g., SSC) usually considers the

proportion of the species' range that will be affected by a project, impacts to habitat, and the regional and population level effects.

Specifically, Section 15064.7 of the CEQA Guidelines encourages local agencies to develop and publish the thresholds that the agency uses in determining the significance of environmental effects caused by projects under its review. However, agencies may also rely upon the guidance provided by the expanded Initial Study checklist contained in Appendix G of the CEQA Guidelines. Appendix G provides examples of impacts that would normally be considered significant.

An evaluation of whether or not an impact on biological resources would be substantial must consider both the resource itself and how that resource fits into a regional or local context. Substantial impacts would be those that would diminish, or result in the loss of, an important biological resource, or those that would obviously conflict with local, state, or federal resource conservation plans, goals, or regulations. Impacts are sometimes locally important but not significant under CEQA. The reason for this is that although the impacts would result in an adverse alteration of existing conditions, they would not substantially diminish or result in the permanent loss of an important resource on a population-wide or region-wide basis.

2.2.8 Rancho Cordova General Plan

The Natural Resources Element of the Rancho Cordova General Plan (City of Rancho Cordova 2006) includes goals and policies for protection of natural resources. The following goals are relevant to biological resources:

- Goal NR.1: Protect and preserve diverse wildlife and plant habitats, including habitat for special status species.
- Goal NR.2: Preserve the City's rich and diverse natural wetlands.
- Goal NR.3: Preserve and maintain creek corridors and wetland preserves.
- Goal NR.4: Encourage the planting a preservation of high-quality trees throughout the City.

2.2.9 Rancho Cordova - Preservation and Protection of Private Trees (Chapter 19.12)

It is the intent of this chapter within the Rancho Cordova Municipal Code (2022) to establish regulations for the protection, removal, and preservation of landmark trees and protected trees, as defined herein, within the city in order to retain as many trees as possible consistent with the purpose hereof and the reasonable economic enjoyment of all property in the city. For the purpose of this chapter, "protected tree" means the following:

- Native oak – Quercus lobata, valley oak; Quercus wislizenii, interior live oak; Quercus douglasii, blue oak; or Quercus morehus, oracle oak – having a trunk diameter of at least six inches or greater; or
- Any tree species other than a native oak having a trunk diameter of at least 12 inches or greater on nonresidential property; or

- Any tree species other than a native oak having a trunk diameter of at least 24 inches or greater on residential property; or
- Any tree planted as a requirement tree for site development, tree permit condition, landscape plan removal replacement, or other designated condition by the public works director or planning director.
- "Protected tree" does not include any trees for sale within the city sold by a nursery.

3.0 METHODS

3.1 Literature Review

The following resources were reviewed to determine the special-status species that have been documented within or in the vicinity of the Study Area (Appendix A).

- The CDFW CNDDB for the "Carmichael, California" 7.5-minute USGS quadrangle and the eight surrounding USGS quadrangles (CDFW 2023b);
- The USFWS Information, Planning, and Consultation System Resource Report List for the Study Area (USFWS 2023);
- The CNPS Rare Plant Inventory for the "Carmichael, California" 7.5-minute USGS quadrangle and the eight surrounding quadrangles (CNPS 2023a); and
- The NMFS species list for the "Carmichael, California" 7.5-minute quadrangle.

Aerial imagery and site or species-specific background information, as cited throughout this document, were reviewed to determine the potential for occurrence of sensitive biological resources in the Study Area.

3.2 Site Surveys

3.2.1 Reconnaissance Site Survey

ECORP biologist Rachel Bennett and Keith Kwan conducted a reconnaissance-level field survey for the Study Area on February 7, 2023. The Study Area was surveyed on foot using a georeferenced digital map and aerial imagery to ensure total site coverage. Special attention was given to identifying areas with the potential to support special-status species, aquatic resources, or sensitive habitats. The following biological resource information was collected:

- Location and extent of potential aquatic resources;
- Vegetation communities and their distribution within the Study Area;
- Plant and wildlife species directly observed onsite;
- Burrows or other special habitat features; and

- Representative photographs (Appendix B).

3.3 EVALUATION OF SPECIAL-STATUS SPECIES

Each of the special-status species identified during the literature review (Appendix A) was evaluated for its potential to occur in the Study Area. Species were assessed based on the following criteria:

- **Present** – Species was observed during field surveys or is known to occur within the Study Area based on documented occurrences within the CNDDB or other literature.
- **Potential to Occur** – Habitat (including soil and elevation requirements) for the species occurs within the Study Area based on field assessment and literature research, and the species is known to occur in the vicinity of the Study Area.
- **Low Potential to Occur** – Marginal or limited amounts of habitat occur, or the species is not known to occur in the vicinity of the Study Area based on CNDDB records and other available documentation.
- **Absent** – No suitable habitat (including soils and elevation requirements) or the species is not known to occur in the vicinity of the Study Area based on CNDDB records and other documentation.

4.0 RESULTS

4.1 Site Characteristics and Land Use

The Study Area is located on leveled flat terrain with elevations ranging from 77 to 82 feet above mean sea level. Historically, the site was developed and had several structures and associated parking lots until 2019. The largest structure, which occupied a majority of the site was demolished between 2007-2009. The Study Area currently includes the previously developed area and surrounding ruderal grassland. There are currently no buildings onsite, but the building foundations and paved areas remain. A few scattered trees are found in weedy patches around the perimeter of the Study Area.

4.2 Soils

According to the Web Soil Survey (Natural Resources Conservation Service 2023), two map unit, or soil type, has been mapped within the Study Area (Figure 2):

- 102 – Americanos-Urban Land complex, 0 to 2 percent slopes
- 227 - Urban Land

Map Features

Approximate Project Boundary - 9.77 ac.

4.3 Land Cover Types and Vegetation Communities

Land cover types and vegetation communities found within the Study Area include developed/disturbed, and ruderal grassland. These are described in further detail below.

4.3.1 Developed/Disturbed

The developed/disturbed areas make up a significant portion of the Study Area. These areas have the concrete foundations and asphalt parking areas and road with small patches of weedy vegetation, which were probably the landscaped areas.

4.3.2 Ruderal Grassland

The ruderal grassland is found within the disturbed areas, and along the eastern portion of the Study Area. These weedy areas include wild oats (*Avena* sp.), mustard (*Brassica* sp.), radish (*Raphanus* sp.), filaree (E*rodium* spp.), *yellow star-thistle* (*Centaurea solstitialis*), prickly lettuce (*Lactuca serriola*), vetch (Vicia sp.), cheeseweed (*Malva parvifolia*), cranesbill (*Geranium dissectum*, clover (*Trifolium* sp.), and groundsel (*Senecio vulgare)*. The eastern portion of the Study Area appears to have been mass graded but does not appear to have been developed, based on Google Earth aerial photographs.

4.4 Aquatic Resource Assessment

A preliminary aquatic resources assessment was conducted to identify potential Waters of the U.S./State within the Study Area concurrent with the reconnaissance-level field assessment. No aquatic resources were identified onsite and therefore there are no potential Waters of the U.S./State. Evaluation of Species Identified in the Literature Search

A list of the special-status plant and wildlife species identified in the literature search as potentially occurring within the Study Area is provided in Table 1. This table includes the listing status for each species, a brief habitat description, and a determination on the potential to occur in or near the Study Area. Following the table is a brief description of each species with potential to occur.

Table 1. Evaluation of Special-Status Plant and Wildlife Species for the Project Area

Common Name (*Scientific Name*)	Status			Habitat Description	Observation Period	Potential to Occur On-Site
	ESA	CESA	Other			
Plants						
Valley brodiaea (*Brodiaea rosea* ssp. *vallicola*)	–	–	4.2	Occurs in old alluvial terraces and silt, sandy, or gravelly soils in vernal pools and swales within valley and foothill grassland (35'–1,100').	April–May	Absent. No suitable habitat within the Study Area.

Table 1. Evaluation of Special-Status Plant and Wildlife Species for the Project Area

Common Name (*Scientific Name*)	Status			Habitat Description	Observation Period	Potential to Occur On-Site
	ESA	CESA	Other			
Parry's rough tarplant (*Centromadia parryi* ssp. *rudis*)	–	–	4.2	Alkaline, vernally mesic areas, and seeps in valley and foothill grassland and vernal pools, sometimes found on roadsides (0'–330').	May–October	Absent. No suitable habitat within the Study Area.
Brandegee's clarkia (*Clarkia biloba* ssp. *brandegeeae*)	–	–	4.2	Chaparral, cismontane woodlands, and lower montane coniferous forest often along roadcuts (245'–3,000').	May–July	Absent. No suitable habitat within the Study Area.
Peruvian dodder *(Cuscuta obtusiflora* var. *glandulosa*)	–	–	2B.2	Freshwater marshes and swamps (50'–920').	July–October	Absent. No suitable habitat within the Study Area.
Dwarf downingia (*Downingia pusilla*)	–	–	2B.2	Mesic areas in valley and foothill grassland, and vernal pools. Species has also been found in disturbed areas such as tire ruts and scraped depressions (CDFW 2023) (5'–1,460').	March–May	Absent. No suitable habitat within the Study Area.
Stinkbells (*Fritillaria agrestis*)	–	–	4.2	Clay and sometimes serpentinite soils in chaparral, cismontane woodland, pinyon and juniper woodland, and valley and foothill grassland (35'–5,100').	March–June	Absent. No suitable habitat within the Study Area.
Boggs Lake hedge-hyssop (*Gratiola heterosepala*)	–	CE	1B.2	Marshes, swamps, lake margins, and vernal pools (35'–7,790').	April–August	Absent. No suitable habitat within the Study Area.
Hogwallow starfish (*Hesperevax caulescens*)	–	–	4.2	Sometimes alkaline in mesic areas with clay soil within valley and foothill grassland and	March–June	Absent. No suitable habitat within the Study Area.

Table 1. Evaluation of Special-Status Plant and Wildlife Species for the Project Area

Common Name (*Scientific Name*)	Status			Habitat Description	Observation Period	Potential to Occur On-Site
	ESA	CESA	Other			
				shallow vernal pools (0'–1,655').		
Woolly rose-mallow (*Hibiscus lasiocarpos* var. *occidentalis*)	–	–	1B.2	Marshes and freshwater swamps. Often in riprap on sides of levees (0'–395').	June–September	Absent. No suitable habitat within the Study Area.
Ahart's dwarf rush (*Juncus leiospermus* var. *ahartii*)	–	–	1B.2	Mesic areas in valley and foothill grassland. Species has an affinity for slight disturbance such as farmed fields (USFWS 2005) (100'–750').	March–May	Absent. No suitable habitat within the Study Area.
Alkali-sink goldfields (*Lasthenia chrysantha*)	–	–	1B.1	Alkaline vernal pools (0'–655').	February–April	Absent. No suitable habitat within the Study Area.
Legenere (*Legenere limosa*)	–	–	1B.1	Various seasonally inundated areas including wetlands, wetland swales, marshes, vernal pools, artificial ponds, and floodplains of intermittent drainages (USFWS 2005) (5'–2,885').	April–June	Absent. No suitable habitat within the Study Area.
Heckard's pepper-grass (*Lepidium latipes* var. *heckardii)*	–	–	1B.2	Alkaline flats within valley and foothill grasslands (5'–655').	March–May	Absent. No suitable habitat within the Study Area.
Hoary navarretia (*Navarretia eriocephala*)	–	––	4.3	Vernally mesic areas in cismontane woodland and valley and foothill grassland (345'–1,310').	May–June	Absent. No suitable habitat within the Study Area.
Pincushion navarretia (*Navarretia myersii* ssp. *myersii*)	–	–	1B.1	Often acidic soils in vernal pools (65'–1,085').	April–May	Absent. No suitable habitat within the Study Area.

Table 1. Evaluation of Special-Status Plant and Wildlife Species for the Project Area

Common Name (*Scientific Name*)	Status			Habitat Description	Observation Period	Potential to Occur On-Site
	ESA	CESA	Other			
Slender Orcutt grass (*Orcuttia tenuis*)	FT	CE	1B.1	Vernal pools, often gravelly (115'–5,775').	May–September	Absent. No suitable habitat within the Study Area.
Sacramento Orcutt grass (*Orcuttia viscida*)	FE	CE	1B.1	Vernal pools (100'–330').	April–July	Absent. No suitable habitat within the Study Area.
Sanford's arrowhead (*Sagittaria sanfordii)*	–	–	1B.2	Shallow marshes and freshwater swamps (0'–2,135').	May–October	Absent. No suitable habitat within the Study Area.
Saline clover (*Trifolium hydrophilum*)	–	–	1B.2	Marshes and swamps, mesic and alkaline areas in valley and foothill grassland, and vernal pools (0'–985').	April–June	Absent. No suitable habitat within the Study Area.
Invertebrates						
Conservancy fairy shrimp (*Branchinecta lynchi*)	FE	–	–	Vernal pools/wetlands.	November-April	Absent. No suitable habitat within Study Area.
Vernal pool fairy shrimp (*Branchinecta lynchi*)	FT	–	–	Vernal pools/wetlands.	November-April	Absent. No suitable habitat within Study Area.
Crotch bumble bee *(Bombus crotchii)*	–	CC	–	Primarily nests underground in open grassland and scrub habitats from the California coast east to the Sierra Cascade and south to Mexico.	March - September	Absent. No suitable habitat within Study Area.
Monarch butterfly *(Danaus plexippus)*	FC	–	–	Adult monarchs west of the Rocky Mountains typically overwinter in sheltered wooded groves of Monterey pine, Monterey cypress, and gum eucalyptus along coastal California, then disperse in spring throughout	Any season	Absent. No suitable habitat within Study Area.

Common Name (*Scientific Name*)	Status			Habitat Description	Observation Period	Potential to Occur On-Site
	ESA	CESA	Other			
				California, Nevada, Arizona, and parts of Oregon and Washington. Adults require milkweed and additional nectar sources during the breeding season. Larval caterpillars feed exclusively on milkweed.		
Valley elderberry longhorn beetle (*Desmocerus californicus dimorphus*)	FT	–	–	Elderberry shrubs.	Any season	Absent. No suitable habitat (Elderberry shrubs) within Study Area.
Vernal pool tadpole shrimp (*Lepidurus packardi*)	FE	–	–	Vernal pools/wetlands.	November-April	Absent. No suitable habitat within Study Area.
Fish						
Green sturgeon (Distinct Population Segment, [DPS]) (*Acipenser medirostris* pop. 1)	FT	–	SSC	Anadromous; undammed cold-water rivers having relatively deep pools with large substrates.	N/A	Absent. No suitable habitat within Study Area.
Delta smelt (*Hypomesus transpacificus*)	FT	CE	–	Sacramento-San Joaquin Delta.	N/A	Absent. No suitable habitat within Study Area.
River lamprey (*Lampetra ayresii*)	–	–	SSC	Spawning adults in clear gravel riffles of streams; feeding adults in estuaries and ocean. Ammocoetes in sandy and muddy pools of spawning streams.	N/A	Absent. No suitable habitat within Study Area.
Pacific lamprey (*Lampetra tridentata*)	–	–	SSC	Anadromous; undammed streams rivers, streams, and	N/A	Absent. No suitable habitat within Study Area.

				creeks with gravel spawning substrates.		
Hardhead (*Mylopharodon conocephalus*)	–	–	SSC	Relatively undisturbed streams at low to mid elevations in the Sacramento-San Joaquin and Russian River drainages. In the San Joaquin River, scattered populations found in tributary streams, but only rarely in the valley reaches of the San Joaquin River.	N/A	Absent. No suitable habitat within Study Area.
Steelhead (CA Central Valley Evolutionarily Significant Unit [ESU]) (*Oncorhynchus mykiss*)	FT	–	–	Undammed rivers, streams, creeks	N/A	Absent. No suitable habitat within Study Area.
Chinook salmon (Central Valley fall/late fall-run ESU) (*Oncorhynchus tshawytscha*)	–	–	SSC	Undammed rivers, streams, creeks in the Sacramento and San Joaquin River systems.	N/A	Absent. No suitable habitat within Study Area.
Chinook salmon (Central Valley spring-run ESU) (*Oncorhynchus tshawytscha*)	FT	CT	–	Undammed rivers, streams, creeks in the Sacramento and San Joaquin River systems.	N/A	Absent. No suitable habitat within Study Area.
Chinook salmon (Sacramento River winter-run ESU) *(Oncorhynchus tshawytscha)*	FE	CE	–	Undammed reaches of the mainstem and tributaries to the Sacramento River downstream of Shasta Reservoir.	N/A	Absent. No suitable habitat within Study Area.
Sacramento splittail (*Pogonichthys macrolepidotus*)	–	–	SSC	San Francisco Bay estuary and Central Valley lakes and rivers. Spawns in upstream floodplains	N/A	Absent. No suitable habitat within Study Area.

Table 1. Evaluation of Special-Status Plant and Wildlife Species for the Project Area

				and backwater sloughs.		
Longfin smelt (*Spirinchus thaleichthys*)	FC	CT	SSC	Freshwater and coastal estuaries.	N/A	Absent. No suitable habitat within Study Area.
Amphibians						
California tiger salamander (Central California DPS) (*Ambystoma californiense*)	FT	CT	WL	Vernal pools, wetlands (breeding) and adjacent grassland or oak woodland; needs underground refuge (e.g., ground squirrel and/or gopher burrows). Largely terrestrial as adults.	March-May	Absent. No suitable habitat within Study Area.
Western spadefoot (*Spea hammondii*)	–	–	SSC	California endemic species of vernal pools, swales, wetlands and adjacent grasslands throughout the Central Valley.	March-May	Absent. No suitable habitat within Study Area.
Reptiles						
Northwestern pond turtle (*Actinemys marmorata*)	–	–	SSC	Requires basking sites and upland habitats up to 0.5 km from water for egg laying. Uses ponds, streams, detention basins, and irrigation ditches.	April-September	Absent. No suitable habitat within Study Area.
Blainville's (Coast) horned lizard (*Phrynosoma blainvillii*)	–	–	SSC	Formerly a wide-spread horned lizard found in a wide variety of habitats, often in lower elevation areas with sandy washes and scattered low bushes. Also occurs in Sierra Nevada foothills. Requires open areas	April-October	Absent. No suitable habitat within Study Area.

Table 1. Evaluation of Special-Status Plant and Wildlife Species for the Project Area

Common Name (*Scientific Name*)	Status			Habitat Description	Observation Period	Potential to Occur On-Site
	ESA	CESA	Other			
				for basking, but with bushes or grass clumps for cover, patches of loamy soil or sand for burrowing and an abundance of ants (Stebbins and McGinnis 2012). In the northern Sacramento area, this species appears restricted to the foothills between 1000 to 3000 feet from Cameron Park (El Dorado County) north and west to Grass Valley and Nevada City.		
Giant garter snake (*Thamnophis gigas*)	FT	CT	–	Freshwater ditches, sloughs, and marshes in the Central Valley. Almost extirpated from the southern parts of its range.	April-October	Absent. No suitable habitat within Study Area.
Birds						
Western grebe *(Aechmophorus occidentalis)*	–	–	BCC	Winters on salt or brackish bays, estuaries, sheltered sea coasts, freshwater lakes, and rivers. Nests on freshwater lakes and marshes with open water bordered by emergent vegetation.	Nesting: June-August	Absent. No suitable habitat within Study Area.
Clark's grebe *(Aechmophorus clarkii)*	–	–	BCC	Winters on salt or brackish bays, estuaries, sheltered sea coasts, freshwater lakes, and rivers. Breeds on freshwater to brackish marshes, lakes, reservoirs and ponds, with a preference for large	Nesting: June-August	Absent. No suitable habitat within Study Area.

	ESA	CESA	Other			
				stretches of open water fringed with emergent vegetation.		
Yellow-billed cuckoo (*Coccyzus americanus*)	FT	CE	–	Breeds in California, Arizona, Utah, Colorado, and Wyoming. In California, they nest along the upper Sacramento River and the South Fork Kern River from Isabella Reservoir to Canebrake Ecological Reserve. Other known nesting locations include Feather River (Butte, Yuba, Sutter counties), Prado Flood Control Basin (San Bernardino and Riverside counties), Amargosa River and Owens Valley (Inyo County), Santa Clara River (Los Angeles County), Mojave River and Colorado River (San Bernardino County). Nests in riparian woodland. Winters in South America.	June 15-August 15	Absent. No suitable habitat within Study Area.
Black swift *(Cypseloides niger)*	–	–	BCC, SSC	In California, nests from Cascade-Sierra Nevada region south to Tulare and Mono counties; coastal ranges (Santa Cruz south to San Luis Obispo counties), San Gabriel, San Bernardino, and San Jacinto Mountains. Nests on ledges or shallow caves on steep rock faces,	Nesting: May-September	Absent. No suitable habitat within Study Area.

				usually behind waterfalls. Winter range, unknown, but thought to be northern and western South America, and West Indies.		
Vaux's swift *(Chaetura vauxi)*	–	–	BCC, SSC	In California, breeds along the coastal zone from Del Norte County south to Santa Cruz County; Yosemite National Park, possibly Warner and Whites Mountains and Sequoia National Park Nest in late stage coniferous forests and deciduous forests mixed with coniferous. Winters from central Mexico to South America.	May-August	Absent. No suitable nesting habitat within Study Area.
Greater sandhill crane *(Antigone canadensis tabida)*	–	CT	CFP	Breeds in NE California, Nevada, Oregon, Washington, and BC, Canada; winters from CA to Florida. In winter, they forage in burned grasslands, pastures, and feed on waste grain in a variety of agricultural settings (i.e., corn, wheat, milo, rice, oats, and barley), tilled fields, recently planted fields, alfalfa fields, row crops and burned rice fields.	March-August (breeding); September-March (wintering)	Absent. No suitable habitat within Study Area.
Marbled godwit (*Limosa fedoa*)	–	–	BCC	Nests in Montana, North and South Dakota, Minnesota,	Migrant/ Wintering CA: August-April	Absent. No suitable habitat within Study Area.

				into Canada. Winter range along Pacific Coast from British Columbia south to Central America, with small numbers wintering in interior California. Wintering habitat includes coastal mudflats, meadows, estuaries, sandy beaches, sandflats, and salt ponds.		
Short-billed Dowitcher *(Limnodromus griseus)*	–	–	BCC	Nests in Canada, southern Alaska; winters in coastal California south to South America; wintering habitat includes coastal mudflats and brackish lagoons.	Migrant/ Wintering: late-August-May	Absent. No suitable habitat within Study Area.
California gull (nesting colony) *(Larus californicus)*	–	–	BCC, CDFW WL	Nesting occurs in the Great Basin, Great Plains, Mono Lake, and south San Francisco Bay. Winters along Pacific Coast from southern British Columbia south to Baja California and Mexico. In California, winters along coast and inland (Central Valley, Salton Sea).	Nesting: April-August	Absent. No suitable habitat within Study Area.
Black tern *(Chlidonias niger)*	–	–	BCC, SSC	Breeding range includes northeastern California, Central Valley, Great Plains of U.S. and Canada; winters in Central and South America; nesting habitat includes shallow	Nesting: May-August	Absent. No suitable habitat within Study Area.

				freshwater marsh with emergent vegetation, prairie sloughs, lake margins, river islands, and cultivated rice fields.		
California least tern *(Sternula antillarum browni)*	FE	CE	CFP	Nests along Pacific Coast from San Francisco Bay south the Mexico; nests colonially, on sand or dried mudflats, sand or shell islands, and gravel and sand pits and rarely in agricultural fields, parking lots, airports, and flat/graveled rooftops.	April-August	Absent. No suitable habitat within Study Area.
Double-crested cormorant *(Nannopterum auritum)*	–	–	CDFW WL	Nests near ponds, lakes, artificial impoundments, slow-moving rivers, lagoons, estuaries, and open coastlines and typically forages in shallow water. Non-nesters are found in many coastal and inland waters.	April-August	Absent. No suitable habitat within Study Area.
Least bittern *(Ixobrychus exilis)*	–	–	SSC	Freshwater and brackish marshes with dense, tall aquatic and semiaquatic vegetation intersperse with clumps of woody vegetation and open water, and rarely salt marshes and mangrove swamps.	April-July	Absent. No suitable habitat within Study Area.
Osprey (nesting) (*Pandion haliaetus*)	–	–	CDFW WL	Nesting habitat requires close proximity to	March-September	Absent. No suitable habitat within Study Area.

				accessible fish, open nest site free of mammalian predators, and extended ice-free season. The nest in large trees, snags, cliffs, transmission/communication towers, artificial nest platforms, channel markers/buoys.		
White-tailed kite (nesting) (*Elanus leucurus*)	–	–	CFP	Nesting occurs within trees in low elevation grassland, agricultural, wetland, oak woodland, riparian, savannah, and urban habitats.	March-August	Potential to Occur. Trees onsite and adjacent to the Study Area provide suitable nesting habitat.
Golden eagle (nesting and wintering) (*Aquila chrysaetos*)	–	–	BCC, CFP	Nesting habitat includes mountainous canyon land, rimrock terrain of open desert and grasslands, riparian, oak woodland/savannah, and chaparral. Nesting occurs on cliff ledges, river banks, trees, and human-made structures (e.g., windmills, platforms, and transmission towers). Breeding occurs throughout California, except the immediate coast, Central Valley floor, Salton Sea region, and the Colorado River region, where they can be found during winter.	Nest: (February-August); winter CV (October-February)	Absent. No suitable habitat within Study Area.

Table 1. Evaluation of Special-Status Plant and Wildlife Species for the Project Area

Common Name (*Scientific Name*)	Status			Habitat Description	Observation Period	Potential to Occur On-Site
	ESA	CESA	Other			
Northern harrier (*Circus hudsonius*)	–	–	SSC	Nests on the ground in open wetlands, marshy meadows, wet/lightly grazed pastures, (rarely) freshwater/brackish marshes, tundra, grasslands, prairies, croplands, desert, shrub-steppe, and (rarely) riparian woodland communities.	April-September	Absent. No suitable habitat within Study Area.
Cooper's hawk (nesting) (*Accipiter cooperii*)	–	–	CDFW WL	Nests in trees in riparian woodlands in deciduous, mixed and evergreen forests, as well as urban landscapes	March-July	Potential to Occur. Trees onsite and adjacent to the Study Area provide suitable nesting habitat.
Bald eagle (nesting and wintering) (*Haliaeetus leucocephalus)*	Delisted	CE	CFP, BCC	Typically nests in forested areas near large bodies of water in the northern half of California; nest in trees and rarely on cliffs; wintering habitat includes forest and woodland communities near water bodies (e.g., rivers, lakes), wetlands, flooded agricultural fields, open grasslands.	February – September (nesting); October-March (wintering)	Absent. No suitable habitat within Study Area
Swainson's hawk (nesting) (*Buteo swainsoni*)	–	CT	BCC	Nesting occurs in trees in agricultural, riparian, oak woodland, scrub, and urban landscapes. Forages over grassland, agricultural lands, particularly during disking/harvesting, irrigated pastures	March-August	Absent. There is no suitable nesting or foraging habitat present.

Table 1. Evaluation of Special-Status Plant and Wildlife Species for the Project Area

Common Name (*Scientific Name*)	Status			Habitat Description	Observation Period	Potential to Occur On-Site
	ESA	CESA	Other			
Ferruginous hawk (wintering) (*Buteo regalis*)	–	–	BCC, CDFW WL	Rarely breeds in California (Lassen County); winter range includes grassland and shrubsteppe habitats from Northern California (except northeast and northwest corners) south to Mexica and east to Oklahoma, Nebraska, and Texas.	September-March	Absent. No suitable habitat within Study Area
Burrowing owl (burrow sites) (*Athene cunicularia*)	–	–	BCC, SSC	Nests in burrows or burrow surrogates in open, treeless, areas within grassland, steppe, and desert biomes. Often with other burrowing mammals (e.g., prairie dogs, California ground squirrels). May also use human-made habitat such as agricultural fields, golf courses, cemeteries, roadside, airports, vacant urban lots, and fairgrounds.	February-August	Potential to Occur. Suitable habitat present within the Study Area.
Short-eared owl (*Asio flammeus*)	–	–	BCC, SSC	Nests in large expanses of prairie, coastal grasslands, heathlands, shrub-steppe, tundra, and agricultural areas.	March-July (breeding); August-March (wintering in Central Valley)	Absent. No suitable habitat within Study Area
Nuttall's woodpecker *(Dryobates nuttallii)*	–	–	BCC	Resident from northern California south to Baja California. Nests in tree cavities in oak woodlands and riparian woodlands.	Nesting: April – July.	Potential to Occur. Oak trees onsite represent suitable nesting habitat.
Merlin *(Falco columbarius)*	–	–	CDFW WL	Breeds in Oregon, Washington north into Canada. Winters in southern Canada	September-April (wintering in the Central Valley);	Absent. No suitable habitat within Study Area

Table 1. Evaluation of Special-Status Plant and Wildlife Species for the Project Area

				to South America, including California. Breeds near forest openings, fragmented woodlots, and riparian areas. Wintering habitat includes wide variety, open forests, grasslands, tidal flats, plains, and urban settings.	does not breed in California	
American peregrine falcon *(Falco peregrinus anatum)*	Delisted	Delisted	BCC, CFP	In California, breeds in coastal region, northern California, and Sierra Nevada. Nesting habitat includes cliff ledges and human-made ledges on towers and buildings. Wintering habitat includes areas where there are large concentrations of shorebirds, waterfowl, pigeons or doves.	CA Residents nest in February-June	Absent. No suitable habitat within Study Area
Prairie falcon (*Falco mexicanus*)	–	–	BCC, CDFW WL	Found in open habitat at all elevations up to 3,350 meters (Steenhof 2013). Nests on cliffs and bluffs in arid plains and steppes; In California, nesting throughout state except northwest corner, along immediate coast, and the Central Valley floor. Winters throughout California, in open habitats, such as grasslands in Central Valley.	March-July (breeding); September-February (wintering in Central Valley)	Absent. No suitable habitat within Study Area

Table 1. Evaluation of Special-Status Plant and Wildlife Species for the Project Area

Common Name (*Scientific Name*)	Status			Habitat Description	Observation Period	Potential to Occur On-Site
	ESA	CESA	Other			
Olive-sided flycatcher *(Contopus cooperi)*	–	–	SSC, BCC	Nests in montane and northern coniferous forests, in forest openings, forest edges, semiopen forest stands. In California, nests in coastal forests, Cascade and Sierra Nevada region. Winters in Central to South America.	Nesting: May - August	Absent. No suitable habitat within Study Area
Loggerhead shrike (*Lanius ludovicianus*)	–	–	BCC, SSC	Found throughout California in open country with short vegetation, pastures, old orchards, grasslands, agricultural areas, open woodlands. Not found in heavily forested habitats.	March-July	Absent. No suitable habitat within Study Area
Yellow-billed magpie (nesting) (*Pica nuttalli*)	–	–	BCC	Endemic to California; found in the Central Valley and coast range south of San Francisco Bay and north of Los Angeles County; nesting habitat includes oak savannah with large in large expanses of open ground; also found in urban parklike settings.	April-June	Potential to Occur. Trees onsite provide suitable nesting habitat.
Oak titmouse (*Baeolophus inornatus*)	–	–	BCC	Nests in tree cavities within dry oak or oak-pine woodland and riparian; where oaks are absent, they nest in juniper woodland, open forests (e.g., gray, Jeffrey, Coulter, pinyon pines and Joshua tree).	Nesting: March - July	Potential to Occur. Oak trees onsite represent suitable nesting habitat.

Table 1. Evaluation of Special-Status Plant and Wildlife Species for the Project Area

Common Name (*Scientific Name*)	Status			Habitat Description	Observation Period	Potential to Occur On-Site
	ESA	CESA	Other			
Bank swallow (nesting) (*Riparia riparia*)	–	CT	–	Nests colonially along coasts, rivers, streams, lakes, reservoirs, and wetlands in vertical banks, cliffs, and bluffs in alluvial, friable soils. May also nest in sand, gravel quarries and road cuts. In California, breeding range includes northern and central California.	May-July	Absent. No suitable habitat within Study Area
Purple martin (nesting) (*Progne subis*)	–	–	SSC	In California, breeds along coast range, Cascade-northern Sierra Nevada region and isolated population in Sacramento. Nesting habitat includes montane forests, Pacific lowlands with dead snags; the isolated Sacramento population nests in weep holes under elevated highways/bridges. Winters in South America.	May-Aug	Absent. No suitable habitat within Study Area
Wrentit (*Chamaea fasciata*)	–	–	BCC	Coastal sage scrub, northern coastal scrub, chaparral, dense understory of riparian woodlands, riparian scrub, coyote brush and blackberry thickets, and dense thickets in suburban parks and gardens. Nesting: March-August	March – August (Nesting)	Absent. No suitable habitat within Study Area

Song sparrow "Modesto" (*Melospiza melodia heermanni*)	–	–	BCC, SSC	Resident in central and southwest California, including Central Valley; nests in marsh, scrub habitat	April-June	Absent. No suitable habitat within Study Area
Yellow-breasted chat (*Icteria virens*)	–	–	SSC	In California, breeds in Klamath Mountains, inner Northern Coast Range south to San Francisco Bay, locally distributed from Santa Clara County south to San Diego County Sacramento and San Joaquin valleys, along west slope of Sierra Nevada from the Feather River to Kern River, Mono and Inyo counties. In the west, nesting habitat includes dense riparian and shrubby.	May-August	Absent. No suitable habitat within Study Area
Yellow-headed blackbird (*Xanthocephalus xanthocephalus*)	–	–	SSC	In California, breeds in the Great Basin region, along Colorado River south to Baja California, Salton Sea, Kern, Ventura, Riverside, San Diego and possibly Orange, Lake counties and locally in the Central Valley, Nests are constructed over deep water in emergent vegetation of prairie wetlands, quaking aspen parklands, mountain meadows, forest edges, large lakes.	April-July	Absent. No suitable habitat within Study Area

Table 1. Evaluation of Special-Status Plant and Wildlife Species for the Project Area

Common Name (*Scientific Name*)	Status			Habitat Description	Observation Period	Potential to Occur On-Site
	ESA	CESA	Other			
Tricolored blackbird (nesting colony) (*Agelaius tricolor*)	–	–	BCC, SSC	Breeds locally west of Cascade-Sierra Nevada and southeastern deserts from Humboldt and Shasta counties south to San Bernardino, Riverside and San Diego Counties. Central California, Sierra Nevada foothills and Central Valley, Siskiyou, Modoc and Lassen Counties. Nests colonially in freshwater marsh, blackberry bramble, milk thistle, triticale fields, weedy (mustard, mallow) fields, giant cane, safflower, stinging nettles, tamarisk, riparian scrublands and forests, fiddleneck and fava bean fields.	March-August	Absent. No suitable habitat within Study Area
Bullock's oriole (*Icterus bullockii*)	–	–	BCC	Breeding habitat includes riparian and oak woodlands.	Nesting: March-July	Potential to Occur. Oak trees onsite represent suitable nesting habitat.
Saltmarsh common yellowthroat (*Geothlypis trichas sinuosa*)	–	–	BCC, SSC	Breeds in salt marshes of San Francisco Bay; winters San Francisco south along coast to San Diego County.	Nesting: March-July	Absent. No suitable habitat within Study Area
Yellow warbler (*Setophaga petechia*)	–	–	SSC, BCC	Breeding range includes most of California, except Central Valley (isolated breeding locales on Valley floor, Stanislaus, Colusa, and Butte	May-August	Absent. No suitable habitat within Study Area

	ESA	CESA	Other			
				counties), Sierra Nevada range above tree line, and southeastern deserts. Nesting habitat includes riparian vegetation near streams and meadows. Winters in Mexico south to South America.		
Lawrence's goldfinch (*Spinus lawrencei*)	–	–	BCC	Breeds in Sierra Nevada and inner Coast Range foothills surrounding the Central Valley and the southern Coast Range to Santa Barbara County east through southern California to the Mojave Desert and Colorado Desert into the Peninsular Range. Nests in arid and open woodlands with chaparral or other brushy areas, tall annual weed fields, and a water source (e.g., small stream, pond, lake), and to a lesser extent riparian woodland, coastal scrub, evergreen forests, pinyon-juniper woodland, planted conifers, and ranches or rural residences near weedy fields and water.	Nesting: March-September	Absent. No suitable nesting habitat within the Study Area.
Grasshopper sparrow (*Ammodramus savannarum*)	–	–	SSC	In California, breeding range includes most coastal counties south to Baja California;	May-August	Absent. No suitable nesting habitat within the Study Area.

Table 1. Evaluation of Special-Status Plant and Wildlife Species for the Project Area

Common Name (*Scientific Name*)	Status			Habitat Description	Observation Period	Potential to Occur On-Site
	ESA	CESA	Other			
				western Sacramento Valley and western edge of Sierra Nevada region. Nests in moderately open grasslands and prairies with patchy bare ground. Avoids grasslands with extensive shrub cover; more likely to occupy large tracts of habitat than small fragments; removal of grass cover by grazing often detrimental.		
Belding's savannah sparrow (*Passerculus sandwichensis beldingi*)	–	CE	BCC	Resident coastally from Point Conception south into Baja California; coastal salt marsh.	Year-round resident; nests March-August	Absent. No suitable nesting habitat within the Study Area.
Mammals						
American badger *(Taxidea taxus)*	–	–	SSC	Drier open stages of most shrub, forest, and herbaceous habitats with friable soils.	Year round resident (breeds summer-early fall).	Absent. No suitable habitat within Study Area.
Pallid bat (*Antrozous pallidus*)	–	–	SSC	Crevices in rocky outcrops and cliffs, caves, mines, trees (e.g., basal hollows of redwoods, cavities of oaks, exfoliating pine and oak bark, deciduous trees in riparian areas, and fruit trees in orchards). Also roosts in various human structures such as bridges, barns, porches, bat boxes, and human-occupied as well as vacant buildings (Western	April-September	Potential to Occur. Trees onsite provide potential roosting habitat.

4 CRPR/Plants of Limited Distribution – A Watch List.
0.1 Threat Rank/Seriously threatened in California (over 80% of occurrences threatened/high degree and immediacy of threat)
0.2 Threat Rank/Moderately threatened in California (20-80% occurrences threatened/moderate degree and immediacy of threat)
0.3 Threat Rank/Not very threatened in California (<20% of occurrences threatened/low degree and immediacy of threat or no current threats known)
Delisted Formally Delisted (delisted species are monitored for 5 years).

4.4.1 Plants

A total of 10 special-status plant species were identified as having the potential to occur within the Study Area based on the literature review (Table 3). Upon further analysis and after the reconnaissance site visit, all 10 species were determined to be absent due to the lack of suitable habitat or the Study Area was

outside the known range for the species. No further discussion of these species is provided in this analysis.

4.4.2 Invertebrates

A total of six special-status invertebrate species were identified as having the potential to occur within the Study Area based on the literature review (Table 1). Upon further analysis and after the reconnaissance site visit, all six species were determined to be absent due to the lack of suitable habitat within the Study Area. No further discussion of these species is provided in this analysis.

4.4.3 Fish

Eleven special-status fish species were identified as having the potential to occur within the Study Area based on the literature review (Table 1). Upon further analysis and after the reconnaissance site visit, all 11 species were determined to be absent due to the lack of suitable habitat within the Study Area. No further discussion of these species is provided in this analysis.

4.4.4 Amphibians

Two special-status amphibian species were identified as having the potential to occur within the Study Area based on the literature review (Table 1). Upon further analysis and after the reconnaissance site visit, both species were determined to be absent due to the lack of suitable habitat within the Study Area. No further discussion of these species is provided in this analysis.

4.4.5 Reptiles

Three special-status reptile species were identified as having the potential to occur within the Study Area based on the literature review (Table 1). Upon further analysis and after the reconnaissance site visit, all three species were determined to be absent due to the lack of suitable habitat within the Study Area. No further discussion of these species is provided in this analysis.

4.4.6 Birds

A total of 44 special-status bird species were identified as having the potential to occur within the Study Area based on the literature review (Table 1). Upon further analysis and after the reconnaissance site visit, 37 species were determined to be absent due to lack of suitable habitat. No further discussion of these species is provided in this analysis. Brief descriptions of the remaining seven species that have the potential to occur within the Study Areas are presented below.

4.4.6.1 White-Tailed Kite

White-tailed kite is not listed pursuant to either the California or federal ESAs; however, the species is fully protected pursuant to Section 3511 of the California Fish and Game Code. This species is a common resident in the Central Valley and the entire length of the California coast, and all areas up to the Sierra Nevada foothills and southeastern deserts (Dunk 2020). In northern California, white-tailed kite nesting occurs from March through early August, with nesting activity peaking from March through June. Nesting

occurs in trees within riparian, oak woodland, savannah, and agricultural communities that are near foraging areas such as low elevation grasslands, agricultural, meadows, farmlands, savannahs, and emergent wetlands (Dunk 2020).

There are eight CNDDB occurrences of this species within five miles of the Study Area (CDFW 2023b). The trees onsite and adjacent provide suitable nesting habitat. White-tailed kite has potential to occur.

4.4.6.2 Cooper's Hawk

The Cooper's hawk (*Accipiter cooperii*) is not listed pursuant to either the California or federal Endangered Species Acts. However, it is a CDFW watch list species. Typical nesting and foraging habitats include riparian woodland, dense oak woodland, and other woodlands near water. Cooper's hawk nest throughout California from Siskiyou County to San Diego County and includes the Central Valley (Rosenfield et al. 2020). Breeding occurs during March through July, with a peak from May through July.

There is one CNDDB occurrence of this species within five miles of the Study Area (CDFW 2023b). The trees onsite and adjacent provide suitable nesting habitat. Cooper's hawk has potential to occur.

4.4.6.3 Burrowing Owl

The burrowing owl (*Athene cunicularia*) is not listed pursuant to either the California or federal Endangered Species Acts; however, it is designated as a bird of conservation concern by the USFWS and a species of special concern by the CDFW. Burrowing owls inhabit dry open rolling hills, grasslands, desert floors, and open bare ground with gullies and arroyos. They can also inhabit developed areas such as golf courses, cemeteries, roadsides within cities, airports, vacant lots in residential areas, school campuses, and fairgrounds (Poulin et al. 2020). This species typically uses burrows created by fossorial mammals, most notably the California ground squirrel (*Spermophilus beecheyi*) but may also use man-made structures such as concrete culverts or pipes; concrete, asphalt, or wood debris piles; or openings beneath concrete or asphalt pavement (California Department of Fish and Game [CDFG] 2012). The breeding season typically occurs between February 1 and August 31 (California Burrowing Owl Consortium 1993; CDFG 2012).

There are eight CNDDB occurrences of this species within five miles of the Study Area (CDFW 2023b). No California ground squirrel burrows were found during the site reconnaissance, but several cracks in the old foundations and pavement onsite were observed. While no evidence of burrowing owl presence was found, the site reconnaissance did not constitute a protocol level survey or burrowing owl habitat assessment. The Study Area provides suitable habitat. Burrowing owl has potential to occur.

4.4.6.4 Nuttall's Woodpecker

The Nuttall's woodpecker (*Dryobates nuttallii*) is not listed and protected under either state or federal Endangered Species Acts but is considered a USFWS bird of conservation concern. They are resident from Siskiyou County south to Baja California. Nuttall's woodpeckers nest in tree cavities primarily within oak woodlands, but also can be found in riparian woodlands (Lowther et al. 2020). Breeding occurs during April through July.

There are no CNDDB occurrences of this species within five miles of the Study Area (CDFW 2023b). The oak trees on site provide suitable nesting habitat. Nuttall's woodpecker has potential to occur.

4.4.6.5 Yellow-billed Magpie

The yellow-billed magpie (*Pica nuttalli*) is not listed pursuant to either the California or federal Endangered Species Acts but is considered a USFWS bird of conservation concern. This endemic species is a yearlong resident of the Central Valley and Coast Ranges from San Francisco Bay to Santa Barbara County. Yellow-billed magpies build large, bulky nests in trees in a variety of open woodland habitats, typically near grassland, pastures or cropland. Nest building begins in late-January to mid-February, which may take up to 6-8 weeks to complete, with eggs laid during April-May, and fledging during May-June (Koenig and Reynolds 2020). The young leave the nest about 30 days after hatching (Koenig and Reynolds 2020). Yellow-billed magpies are highly susceptible to West Nile Virus, which may have been the cause of death to thousands of magpies during 2004-2006 (Koenig and Reynolds 2020).

There are no CNDDB occurrences of this species within five miles of the Study Area (CDFW 2023b). The trees onsite and adjacent provide suitable nesting habitat. Yellow-billed magpie has potential to occur.

4.4.6.6 Oak Titmouse

Oak titmouse (*Baeolophus inornatus*) are not listed and protected under either state or federal Endangered Species Acts but are considered a USFWS bird of conservation concern. Oak titmouse breeding range includes southwestern Oregon south through California's Coast, Transverse and Peninsular ranges, western foothills of the Sierra Nevada, into Baja California; they are absent from the humid northwestern coastal region and the San Joaquin Valley (Cicero et al. 2020). They are found in dry oak or oak-pine woodlands but may also use scrub oaks or other brush near woodlands (Cicero et al. 2020). Nesting occurs during March through July.

There are no CNDDB occurrences of this species within five miles of the Study Area (CDFW 2023b). The trees onsite provide suitable nesting habitat. Oak titmouse has potential to occur.

4.4.6.7 Bullock's Oriole

The Bullock's oriole (*Icterus bullockii*) is not listed pursuant to either the California or federal Endangered Species Acts but is currently a species of bird of conservation concern according to the USFWS. In California, Bullock's orioles are found throughout the state except the higher elevations of mountain ranges and the eastern deserts (Small 1994). They are found in riparian and oak woodlands where nests are built in deciduous trees, but may also use orchards, conifers, and eucalyptus trees (Flood et al 2020). Nesting occurs from March through July.

There are no CNDDB occurrences of this species within five miles of the Study Area (CDFW 2023b). The trees onsite provide suitable nesting habitat. Bullock's oriole has potential to occur.

4.4.7 Mammals

One special-status mammal, American badger, was identified as having the potential to occur within the Study Area based on the literature review (Table 1). Upon further analysis and after the reconnaissance site visit, American badger was determined to be absent due to the lack of suitable habitat. No further discussion of this species is provided in this analysis.

4.4.8 Bats

Two special-status bat species were identified as having the potential to occur within the Study Area based on the literature review (Table 1). Upon further analysis and after the reconnaissance site visit, both species were determined to have some potential to occur. Brief descriptions of these species are provided below.

4.4.8.1 Pallid Bat

The pallid bat (*Antrozous pallidus*) is not listed pursuant to either the federal or California ESAs; however, this species is considered an SSC by CDFW. The pallid bat is a large, light-colored bat with long, prominent ears and pink, brown, or grey wing and tail membranes. This species ranges throughout North America from the interior of British Columbia, south to Mexico, and east to Texas. The pallid bat inhabits low elevation (below 6,000 feet) rocky arid deserts and canyonlands, shrub-steppe grasslands, karst formations, and higher elevation coniferous forest (above 7,000 feet). This species roosts alone or in groups in the crevices of rocky outcrops and cliffs, caves, mines, trees, and in various human structures such as bridges, and barns. Pallid bats are feeding generalists that glean a variety of arthropod prey from surfaces as well as capturing insects on the wing. Foraging occurs over grasslands, oak savannahs, ponderosa pine forests, talus slopes, gravel roads, lava flows, fruit orchards, and vineyards. Although this species utilizes echolocation to locate prey, often they use only passive acoustic cues. This species is not thought to migrate long distances between summer and winter sites (WBWG 2023).

There are no CNDDB occurrences of this species within five miles of the Study Area (CDFW 2023b). The trees onsite provide potential roosting habitat. Pallid bat has potential to occur.

4.4.8.2 Western Red Bat

The western red bat (*Lasiurus blossevillii*) is not listed pursuant to either the California or federal Endangered Species Acts; however, this species is considered a species of special concern by CDFW. The western red bat is easily distinguished from other western bat species by its distinctive red coloration. This species is broadly distributed, its range extending from southern British Columbia in Canada through Argentina and Chile in South America, and including much of the western United States. This solitary species day roosts primarily in the foliage of trees or shrubs in edge habitats bordering streams or open fields, in orchards, and occasionally urban areas. They may be associated with intact riparian habitat, especially with willows, cottonwoods, and sycamores. This species may occasionally utilize caves for roosting as well. They feed on a variety of insects, and generally begin to forage one to two hours after

sunset. This species is considered highly migratory, however the timing of migration and the summer ranges of males and females may be different. Winter behavior of this species is poorly understood (WBWG 2023).

There are no CNDDB occurrences of this species within five miles of the Study Area (CDFW 2023b). The trees onsite and adjacent provide marginal roosting habitat. Western red bat has low potential to occur.

4.5 Critical Habitat and Essential Fish Habitat

There is no designated Critical Habitat mapped within the Study Area (USFWS 2023).

4.6 Protected Trees

There are several trees within the Study Area that may be protected by the City of Rancho Cordova Tree Protection Plan. An initial site reconnaissance for trees has been completed. Identified trees within the Study Area included Valley Oak (*Quercus lobata*), walnut (*Juglans hindsii*) and potentially Chinese pistache (*Pistache chinensis*), and Fremont's cottonwood (*Populus fremontii*).

4.7 Riparian Habitats and Sensitive Natural Communities

Northern Claypan Vernal Pool, Northern Hardpan Vernal Pool, Northern Volcanic Mud Flow Vernal Pool, Valley Needlegrass Grassland, Elderberry Savanna, and Great Valley Valley Oak Riparian Forest are sensitive natural communities that were identified during the literature review as occurring in the vicinity of the Study Area (CDFW 2023b; Appendix A). However, no sensitive natural communities or riparian habitats were observed within the Study Area during the field assessment. Therefore, those biological resources will not be discussed further in this analysis.

4.8 Wildlife Movement/Corridors and Nursery Sites

The Study Area does not contain habitat areas or corridors with significant potential for wildlife movement. The ruderal grassland in the Study Area is a relatively small and fragmented and in close proximity to residential developments, the light rail station and subject to regular human presence.

For the purposes of this analysis, nursery sites include but are not limited to concentrations of nest or den sites such as heron rookeries or bat maternity roosts. This data is available through CDFW's Biogeographic Information and Observation System database or as occurrence records in the CNDDB and is supplemented with the results of the field reconnaissance. No nursery sites have been documented within the Study Area (CDFW 2022) and none were observed during the site reconnaissance.

4.9 Wildlife Observations

The Study Area supports a variety of common wildlife species. A detailed list of wildlife species observed in the vicinity of the Study Area during the site visit is included as Appendix C.

5.0 IMPACT ANALYSIS

This section specifically addresses the questions raised by the CEQA - Appendix G Environmental Checklist Form, IV. Biological Resources. This section also identifies the appropriate recommendations to reduce potential impacts of the actions to less than significant. The recommendations are described in detail in Section 7.0.

5.1 Special-Status Species

Would the Project result in effects, either directly or through habitat modifications, to species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the CDFW or USFWS?

The Project could result in impacts to suitable habitat for special-status species within the Study Area. No special-status species are known to occur within the Project Area; however, focused surveys have not been conducted. Impacts by taxon group are presented below.

5.1.1 Impacts to Special-Status Plants

No special-status plants have potential to occur within the Study Area. Therefore, Project activities would not impact special status plants.

5.1.2 Impacts to Special-Status Invertebrates

No special-status invertebrates have potential to occur within the Study Area. Therefore, Project activities would not impact special status invertebrates.

5.1.3 Impacts to Special-Status Fish

No special-status fish have potential to occur within the Study Area. Therefore, Project activities would not impact special status fish.

5.1.4 Impacts to Special-Status Amphibians

No special-status amphibians have potential to occur within the Study Area. Therefore, Project activities would not impact special status amphibians.

5.1.5 Impacts to Special-Status Reptiles

No special-status reptiles have potential to occur within the Study Area. Therefore, Project activities would not impact special status reptiles.

5.1.6 Impacts to Special-Status Birds

There are four special-status bird species with potential to occur in the Study Area. Additionally, the Study Area supports potential nesting habitat for a variety of common birds protected by the MBTA and Fish and Game Code. Removal or disturbance of active nests may have a significant impact under CEQA. Noise from construction activities have potential to impact nesting birds if present within or adjacent to the

construction activities. Implementation of recommendations outlined below would minimize potential effects to special-status birds.

5.1.7 Impacts to Special-Status Bats

There are two special-status bats with a potential to occur in the Study Area. Removal of trees found within the Study Area could result in impacts to roosting bats, if present. Implementation of recommendations outlined below would minimize the potential for effects to special-status bats.

5.2 Riparian Habitat and Sensitive Natural Communities

Would the Project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service?

No sensitive natural communities or riparian habitats were observed within the Study Area during the field assessment. Therefore, the Project is not expected to have a substantial adverse effect on riparian habitat or sensitive natural communities.

5.3 Aquatic Resources, Including Waters of the U.S./State

Would the Project have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

There were no aquatic resources identified or observed during the field assessment. Therefore, the Project is not expected to have adverse effects on aquatic resources, including Waters of the U.S./State.

5.4 Wildlife Movement/Corridors

Would the Project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

The Study Area is a previously disturbed/developed site that is surrounded by development. It does not support signification wildlife use or movement corridors.

As discussed in Section 5.7, the Study Area does not include a known nursery sites and no evidence of a wildlife nursery site was observed during the field reconnaissance. Therefore, the Project is not expected to impact wildlife nursery sites. Potential impacts to individual nesting birds would be reduced by implementation of recommendations described in Section 7.0.

5.5 Local Policies, Ordinances, and Other Plans

Does the Project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

The Project is required to comply with Ch 19.12 of the Rancho Cordova Municipal Code for the preservation and protection of private trees once a certain size is reached. Implementation of recommendations below will reduce potential significant impacts associated with removal of protected trees.

Does the Project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

The Study Area is covered by the Rancho Cordova General Plan. The Natural Resources Element of the General Plan includes goals and policies for protection of natural resources. The Project will not conflict with the City's General Plan.

6.0 RECOMMENDATIONS

The following measures are recommended to avoid or minimize potential impacts to biological resources from the Proposed Project.

6.1 General Recommendations

The following general measure is recommended:

The Project will implement erosion control measures and best management practices to reduce the potential for sediment or pollutant dispersal. Measures may include:

- Fiber rolls used for erosion control will be certified by the California Department of Food and Agriculture as weed free.
- Seed mixtures applied for erosion control will not contain California Invasive Plant Council designated invasive species (http://cal-ipc.org/) and will be composed of native species appropriate for the site.
- Trash generated onsite will be promptly and properly removed from the site.

6.2 Special-Status Species

Recommendations to minimize impacts to special-status species or habitats are summarized below by species group.

6.2.1 Special-Status Birds and Migratory Bird Treaty Act-Protected Birds (Including Nesting Raptors)

The following measures are recommended to minimize potential impacts to nesting birds:

To protect nesting birds, no Project activity shall begin from February 1 through August 31 unless a qualified wildlife biologist completes the following surveys. Separate surveys and avoidance requirements are listed below for nesting birds and raptors.

- If Project construction begins between February 1 through August 31, a qualified biologist will perform a preconstruction nesting bird survey within 7 days prior to construction (or less if recommended by CDFW), within the Project work area for all birds protected under the MBTA, including raptors. If any active nests are observed, these nests shall be designated a sensitive area and protected by an avoidance buffer established by a qualified biologist in coordination with CDFW. The avoidance buffer shall be maintained until a qualified biologist has determined that the young have fledged and are no longer reliant upon the nest, or that the nest is otherwise no longer active.

6.2.2 Special-Status Bats

The following measure is recommended to minimize potential impacts to roosting bats:

- A qualified biologist will conduct a survey for suitable bat roosting habitat within 14 days of construction activities. If no suitable roosting habitat is identified, no further measures are necessary. If suitable roosting habitat is identified and proposed for removal, a qualified biologist will conduct an evening bat emergence survey that may include acoustic monitoring to determine whether or not bats are present. If roosting bats are found, consultation with CDFW prior to initiation of construction activities may be required. If bats are not found during the preconstruction surveys, no further measures are necessary.

6.2.3 Protected Trees

The Project site may support protected trees. The following measures are recommended:

- Certified Arborist Survey;
- A Tree Removal Permit shall be obtained from the City of Rancho Cordova if impacts to protected trees are anticipated.

IPaC

ATTACHMENT 3

U.S. Fish & Wildlife Service

IPaC resource list

This report is an automatically generated list of species and other resources such as critical habitat (collectively referred to as *trust resources*) under the U.S. Fish and Wildlife Service's (USFWS) jurisdiction that are known or expected to be on or near the project area referenced below. The list may also include trust resources that occur outside of the project area, but that could potentially be directly or indirectly affected by activities in the project area. However, determining the likelihood and extent of effects a project may have on trust resources typically requires gathering additional site-specific (e.g., vegetation/species surveys) and project-specific (e.g., magnitude and timing of proposed activities) information.

Below is a summary of the project information you provided and contact information for the USFWS office(s) with jurisdiction in the defined project area. Please read the introduction to each section that follows (Endangered Species, Migratory Birds, USFWS Facilities, and NWI Wetlands) for additional information applicable to the trust resources addressed in that section.

NOT FOR CONSULTATION

Location

NOT FOR CONSULTATION

Endangered species

This resource list is for informational purposes only and does not constitute an analysis of project level impacts.

The primary information used to generate this list is the known or expected range of each species. Additional areas of influence (AOI) for species are also considered. An AOI includes areas outside of the species range if the species could be indirectly affected by activities in that area (e.g., placing a dam upstream of a fish population even if that fish does not occur at the dam site, may indirectly impact the species by reducing or eliminating water flow downstream). Because species can move, and site conditions can change, the species on this list are not guaranteed to be found on or near the project area. To fully determine any potential effects to species, additional site-specific and project-specific information is often required.

Section 7 of the Endangered Species Act **requires** Federal agencies to "request of the Secretary information whether any species which is listed or proposed to be listed may be present in the area of such proposed action" for any project that is conducted, permitted, funded, or licensed by any Federal agency. A letter from the local office and a species list which fulfills this requirement can **only** be obtained by requesting an official species list from either the Regulatory Review section in IPaC (see directions below) or from the local field office directly.

For project evaluations that require USFWS concurrence/review, please return to the IPaC website and request an official species list by doing the following:

1. Draw the project location and click CONTINUE.
2. Click DEFINE PROJECT.
3. Log in (if directed to do so).
4. Provide a name and description for your project.
5. Click REQUEST SPECIES LIST.

Listed species[1] and their critical habitats are managed by the Ecological Services Program of the U.S. Fish and Wildlife Service (USFWS) and the fisheries division of the National Oceanic and Atmospheric Administration (NOAA Fisheries[2]).

Species and critical habitats under the sole responsibility of NOAA Fisheries are **not** shown on this list. Please contact NOAA Fisheries for species under their jurisdiction.

---

1. Species listed under the Endangered Species Act are threatened or endangered; IPaC also shows species that are candidates, or proposed, for listing. See the listing status page for more information. IPaC only shows species that are regulated by USFWS (see FAQ).

NOT FOR CONSULTATION

2. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

The following species are potentially affected by activities in this location:

Amphibians

NAME	STATUS
California Tiger Salamander Ambystoma californiense There is **final** critical habitat for this species. Your location does not overlap the critical habitat. https://ecos.fws.gov/ecp/species/2076	Threatened

Fishes

NAME	STATUS
Delta Smelt Hypomesus transpacificus Wherever found There is **final** critical habitat for this species. Your location does not overlap the critical habitat. https://ecos.fws.gov/ecp/species/321	Threatened

Insects

NAME	STATUS
Monarch Butterfly Danaus plexippus Wherever found No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/9743	Candidate
Valley Elderberry Longhorn Beetle Desmocerus californicus dimorphus Wherever found There is **final** critical habitat for this species. Your location does not overlap the critical habitat. https://ecos.fws.gov/ecp/species/7850	Threatened

Crustaceans

NAME	STATUS

NOT FOR CONSULTATION

NAME	STATUS
Conservancy Fairy Shrimp Branchinecta conservatio Wherever found There is **final** critical habitat for this species. Your location does not overlap the critical habitat. https://ecos.fws.gov/ecp/species/8246	Endangered
Vernal Pool Fairy Shrimp Branchinecta lynchi Wherever found There is **final** critical habitat for this species. Your location does not overlap the critical habitat. https://ecos.fws.gov/ecp/species/498	Threatened
Vernal Pool Tadpole Shrimp Lepidurus packardi Wherever found There is **final** critical habitat for this species. Your location does not overlap the critical habitat. https://ecos.fws.gov/ecp/species/2246	Endangered

Flowering Plants

NAME	STATUS
Sacramento Orcutt Grass Orcuttia viscida Wherever found There is **final** critical habitat for this species. Your location does not overlap the critical habitat. https://ecos.fws.gov/ecp/species/5507	Endangered
Slender Orcutt Grass Orcuttia tenuis Wherever found There is **final** critical habitat for this species. Your location does not overlap the critical habitat. https://ecos.fws.gov/ecp/species/1063	Threatened

Critical habitats

Potential effects to critical habitat(s) in this location must be analyzed along with the endangered species themselves.

There are no critical habitats at this location.

NOT FOR CONSULTATION

Migratory birds

Certain birds are protected under the Migratory Bird Treaty Act[1] and the Bald and Golden Eagle Protection Act[2].

Any person or organization who plans or conducts activities that may result in impacts to migratory birds, eagles, and their habitats should follow appropriate regulations and consider implementing appropriate conservation measures, as described below.

1. The Migratory Birds Treaty Act of 1918.
2. The Bald and Golden Eagle Protection Act of 1940.

Additional information can be found using the following links:

- Birds of Conservation Concern https://www.fws.gov/program/migratory-birds/species
- Measures for avoiding and minimizing impacts to birds https://www.fws.gov/library/collections/avoiding-and-minimizing-incidental-take-migratory-birds
- Nationwide conservation measures for birds https://www.fws.gov/sites/default/files/documents/nationwide-standard-conservation-measures.pdf

The birds listed below are birds of particular concern either because they occur on the USFWS Birds of Conservation Concern (BCC) list or warrant special attention in your project location. To learn more about the levels of concern for birds on your list and how this list is generated, see the FAQ below. This is not a list of every bird you may find in this location, nor a guarantee that every bird on this list will be found in your project area. To see exact locations of where birders and the general public have sighted birds in and around your project area, visit the E-bird data mapping tool (Tip: enter your location, desired date range and a species on your list). For projects that occur off the Atlantic Coast, additional maps and models detailing the relative occurrence and abundance of bird species on your list are available. Links to additional information about Atlantic Coast birds, and other important information about your migratory bird list, including how to properly interpret and use your migratory bird report, can be found below.

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, click on the PROBABILITY OF PRESENCE SUMMARY at the top of your list to see when these birds are most likely to be present and breeding in your project area.

NAME	BREEDING SEASON

NOT FOR CONSULTATION

Bald Eagle Haliaeetus leucocephalus — Breeds Jan 1 to Aug 31
This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.

Belding's Savannah Sparrow Passerculus sandwichensis beldingi — Breeds Apr 1 to Aug 15
This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA
https://ecos.fws.gov/ecp/species/8

Black Swift Cypseloides niger — Breeds Jun 15 to Sep 10
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/8878

Black Tern Chlidonias niger — Breeds May 15 to Aug 20
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/3093

Bullock's Oriole Icterus bullockii — Breeds Mar 21 to Jul 25
This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA

California Gull Larus californicus — Breeds Mar 1 to Jul 31
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

Clark's Grebe Aechmophorus clarkii — Breeds Jun 1 to Aug 31
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

Common Yellowthroat Geothlypis trichas sinuosa — Breeds May 20 to Jul 31
This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA
https://ecos.fws.gov/ecp/species/2084

NOT FOR CONSULTATION

Golden Eagle Aquila chrysaetos — Breeds Jan 1 to Aug 31
This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.
https://ecos.fws.gov/ecp/species/1680

Lawrence's Goldfinch Carduelis lawrencei — Breeds Mar 20 to Sep 20
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9464

Marbled Godwit Limosa fedoa — Breeds elsewhere
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9481

Nuttall's Woodpecker Picoides nuttallii — Breeds Apr 1 to Jul 20
This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA
https://ecos.fws.gov/ecp/species/9410

Oak Titmouse Baeolophus inornatus — Breeds Mar 15 to Jul 15
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9656

Olive-sided Flycatcher Contopus cooperi — Breeds May 20 to Aug 31
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/3914

Short-billed Dowitcher Limnodromus griseus — Breeds elsewhere
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9480

Tricolored Blackbird Agelaius tricolor — Breeds Mar 15 to Aug 10
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/3910

NOT FOR CONSULTATION

Western Grebe aechmophorus occidentalis — Breeds Jun 1 to Aug 31
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/6743

Wrentit Chamaea fasciata — Breeds Mar 15 to Aug 10
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

Yellow-billed Magpie Pica nuttalli — Breeds Apr 1 to Jul 31
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9726

Probability of Presence Summary

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read and understand the FAQ "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (■)

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

How is the probability of presence score calculated? The calculation is done in three steps:

1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.

NOT FOR CONSULTATION

3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

To see a bar's probability of presence score, simply hover your mouse cursor over the bar.

Breeding Season (▪)
Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

Survey Effort (|)
Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

To see a bar's survey effort range, simply hover your mouse cursor over the bar.

No Data (–)
A week is marked as having no data if there were no survey events for that week.

Survey Timeframe
Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

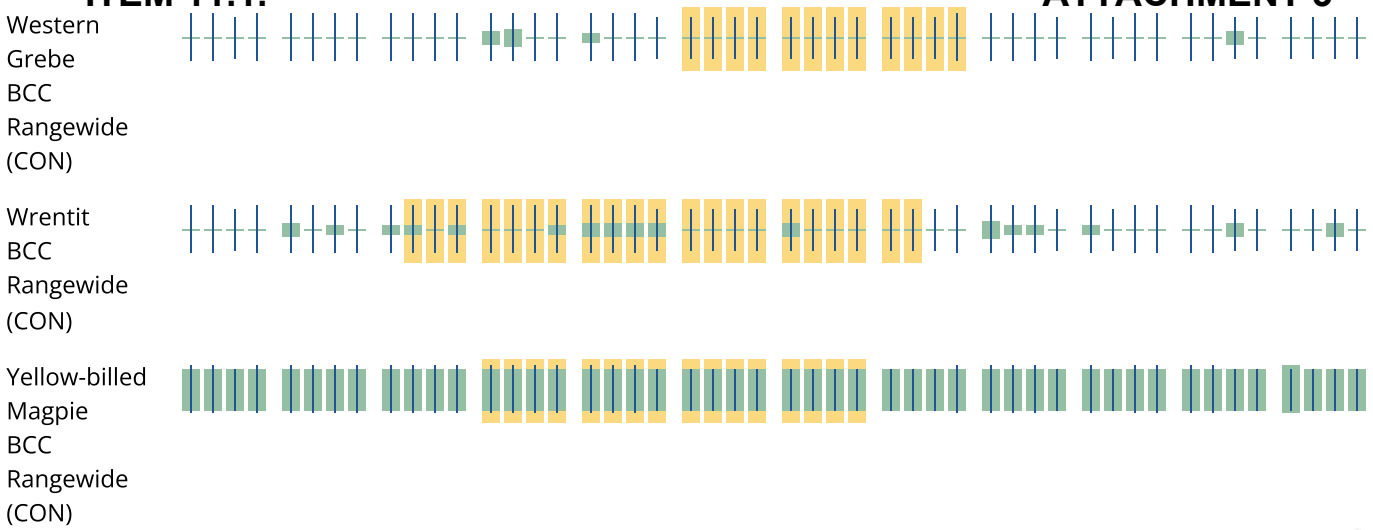
ITEM 11.1. ATTACHMENT 3



Tell me more about conservation measures I can implement to avoid or minimize impacts to migratory birds.

Nationwide Conservation Measures describes measures that can help avoid and minimize impacts to all birds at any location year round. Implementation of these measures is particularly important when birds are most likely to occur in the project area. When birds may be breeding in the area, identifying the locations of any active nests and avoiding their destruction is a very helpful impact minimization measure. To see when birds are most likely to occur and be breeding in your project area, view the Probability of Presence Summary. Additional measures or permits may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

What does IPaC use to generate the list of migratory birds that potentially occur in my specified location?

The Migratory Bird Resource List is comprised of USFWS Birds of Conservation Concern (BCC) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle (Eagle Act requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the Rapid Avian Information Locator (RAIL) Tool.

What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?

The probability of presence graphs associated with your migratory bird list are based on data provided by the Avian Knowledge Network (AKN). This data is derived from a growing collection of survey, banding, and citizen science datasets.

NOT FOR CONSULTATION

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

How do I know if a bird is breeding, wintering or migrating in my area?

To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating or year-round), you may query your location using the RAIL Tool and look at the range maps provided for birds in your area at the bottom of the profiles provided for each bird in your results. If a bird on your migratory bird species list has a breeding season associated with it, if that bird does occur in your project area, there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

What are the levels of concern for migratory birds?

Migratory birds delivered through IPaC fall into the following distinct categories of concern:

1. "BCC Rangewide" birds are Birds of Conservation Concern (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);
2. "BCC - BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
3. "Non-BCC - Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the Eagle Act requirements (for eagles) or (for non-eagles) potential susceptibilities in offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to try to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially eagles and BCC species of rangewide concern. For more information on conservation measures you can implement to help avoid and minimize migratory bird impacts and requirements for eagles, please see the FAQs for these topics.

Details about birds that are potentially affected by offshore projects

For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the Northeast Ocean Data Portal. The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the NOAA NCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf project webpage.

Bird tracking data can also provide additional details about occurrence and habitat use throughout the year, including migration. Models relying on survey data may not include this information. For additional information on marine bird tracking data, see the Diving Bird Study and the nanotag studies or contact Caleb Spiegel or Pam Loring.

What if I have eagles on my list?

If your project has the potential to disturb or kill eagles, you may need to obtain a permit to avoid violating the Eagle Act should such impacts occur.

NOT FOR CONSULTATION

ITEM 11.1. ATTACHMENT 3

Proper Interpretation and Use of Your Migratory Bird Report

The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated, and see options for identifying what other birds may be in your project area, please see the FAQ "What does IPaC use to generate the migratory birds potentially occurring in my specified location". Please be aware this report provides the "probability of presence" of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please also look carefully at the survey effort (indicated by the black vertical bar) and for the existence of the "no data" indicator (a red horizontal bar). A high survey effort is the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort bar or no data bar means a lack of data and, therefore, a lack of certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list helps you know what to look for to confirm presence, and helps guide you in knowing when to implement conservation measures to avoid or minimize potential impacts from your project activities, should presence be confirmed. To learn more about conservation measures, visit the FAQ "Tell me about conservation measures I can implement to avoid or minimize impacts to migratory birds" at the bottom of your migratory bird trust resources page.

NOT FOR CONSULTATION

Facilities

National Wildlife Refuge lands

Any activity proposed on lands managed by the National Wildlife Refuge system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

There are no refuge lands at this location.

Fish hatcheries

There are no fish hatcheries at this location.

Wetlands in the National Wetlands Inventory

(NWI)

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

Wetland information is not available at this time

This can happen when the National Wetlands Inventory (NWI) map service is unavailable, or for very large projects that intersect many wetland areas. Try again, or visit the NWI map to view wetlands at this location.

Data limitations

The Service's objective of mapping wetlands and deepwater habitats is to produce reconnaissance level information on the location, type and size of these resources. The maps are prepared from the analysis of high altitude imagery. Wetlands are identified based on vegetation, visible hydrology and geography. A margin of error is inherent in the use of imagery; thus, detailed on-the-ground inspection of any particular site may result in revision of the wetland boundaries or classification established through image analysis.

The accuracy of image interpretation depends on the quality of the imagery, the experience of the image analysts, the amount and quality of the collateral data and the amount of ground truth verification work conducted. Metadata should be consulted to determine the date of the source imagery used and any mapping problems.

Wetlands or other mapped features may have changed since the date of the imagery or field work. There may be occasional differences in polygon boundaries or classifications between the information depicted on the map and the actual conditions on site.

Data exclusions

Certain wetland habitats are excluded from the National mapping program because of the limitations of aerial imagery as the primary data source used to detect wetlands. These habitats include seagrasses or submerged aquatic vegetation that are found in the intertidal and subtidal zones of estuaries and nearshore coastal waters. Some deepwater reef communities (coral or tuberficid worm reefs) have also been excluded from the inventory. These habitats, because of their depth, go undetected by aerial imagery.

Data precautions

Federal, state, and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, state, or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities involving modifications within or adjacent to wetland areas

NOT FOR CONSULTATION

should seek the advice of appropriate Federal, state, or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities.

Source: EMFAC2021 (v1.0.2) Emissions Inventory
Region Type: County
Region: Sacramento
Calendar Year: 2024
Season: Annual
Vehicle Classification: EMFAC202x Categories
Units: miles/day for CVMT and EVMT, trips/day for Trips, kWh/day for Energy Consumption, tons/day for Emissions, 1000 gallons/day for Fuel Consumption

Source: EMFAC2021 (v1.0.2) Emissions Inventory
Region Type: County
Region: Sacramento
Calendar Year: 2026
Season: Annual
Vehicle Classification: EMFAC202x Categories
Units: miles/day for CVMT and EVMT, trips/day for Trips, kWh/day for Energy Consumption, tons/day for Emissions, 1000 gallons/day for Fuel Consumption

Source: EMFAC2021 (v1.0.2) Emissions Inventory
Region Type: County
Region: Sacramento
Calendar Year: 2028
Season: Annual
Vehicle Classification: EMFAC202x Categories
Units: miles/day for CVMT and EVMT, trips/day for Trips, kWh/day for Energy Consumption, tons/day for Emissions, 1000 gallons/day for Fuel Consumption

Model Output: OFFROAD2021 (v1.0.5) Emissions Inventory
Region Type: County
Region: Sacramento
Calendar Year: 2024
Scenario: All Adopted Rules - Exhaust
Vehicle Classification: OFFROAD2021 Equipment Types
Units: tons/day for Emissions, gallons/year for Fuel, hours/year for Activity, Horsepower-hours/year for Horsepower-hours

Region	Calendar Year	Vehicle Category	Model Year	Horsepower Bi Fuel	HC_tpd	ROG_tpd	TOG_tpd	CO_tpd	NOx_tpd	CO2_tpd	PM10_tpd	PM2.5_tpd	SOx_tpd	NH3_tpd	Fuel Consumption	Total_Activity	Total_Population	Horsepower_Hours_hphy

Model Output: OFFROAD2021 (v1.0.5) Emissions Inventory
Region Type: County
Region: Sacramento
Calendar Year: 2025
Scenario: All Adopted Rules - Exhaust
Vehicle Classification: OFFROAD2021 Equipment Types
Units: tons/day for Emissions, gallons/year for Fuel, hours/year for Activity, Horsepower-hours/year for Horsepower-hours

ITEM 11.1. ATTACHMENT 3

Model Output: OFFROAD2021 (v1.0.5) Emissions Inventory
Region Type: County
Region: Sacramento
Calendar Year: 2026
Scenario: All Adopted Rules - Exhaust
Vehicle Classification: OFFROAD2021 Equipment Types
Units: tons/day for Emissions, gallons/year for Fuel, hours/year for Activity, Horsepower-hours/year for Horsepower-hours

Model Output: OFFROAD2021 (v1.0.5) Emissions Inventory
Region Type: County
Region: Sacramento
Calendar Year: 2027
Scenario: All Adopted Rules - Exhaust
Vehicle Classification: OFFROAD2021 Equipment Types
Units: tons/day for Emissions, gallons/year for Fuel, hours/year for Activity, Horsepower-hours/year for Horsepower-hours

Model Output: OFFROAD2021 (v1.0.5) Emissions Inventory
Region Type: County
Region: Sacramento
Calendar Year: 2028
Scenario: All Adopted Rules - Exhaust
Vehicle Classification: OFFROAD2021 Equipment Types
Units: tons/day for Emissions, gallons/year for Fuel, hours/year for Activity, Horsepower-hours/year for Horsepower-hours

1.0 INTRODUCTION

On behalf of the City of Rancho Cordova (the City) Tetra Tech, Inc. (Tetra Tech) prepared this Cleanup Plan to the Central Valley Regional Water Quality Control Board (RWQCB) for tentatively planned site cleanup activities at the former Lily Company property (now owned by the City), located at 10153 – 10175 Folsom Boulevard, Rancho Cordova, California (the Site) (Figure 1).

This Cleanup Plan was prepared for the purpose of applying for the California Department of Toxic Substances Control (DTSC) Equitable Community Revitalization Grant (ECRG), Site Cleanups category. The City may choose to revise the Cleanup Plan if the City's application for the ECRG is not approved by DTSC.

2.0 BACKGROUND

The cleanup activities proposed in this Cleanup Plan are based on results from previous site investigations and prior site remediation, which are documented in the following reports and summarized in the following subsections.

- *Phase I Environmental Site Assessment, Folsom Mather Center, 10153-10175 (odd) Folsom Boulevard, Rancho Cordova, California (Kleinfelder, 2008).*
- *Initial Findings, 10153 – 10175 Folsom Boulevard, Rancho Cordova, California* (Risk-Based Decisions, Inc., 2008)
- *Remedial Investigation Report for 10153 through 10175 Folsom Blvd, Rancho Cordova, California* (Risk-Based Decisions, Inc., 2010)
- *Installation and Operation of Extraction Well EW-1 at 10153-10175 Folsom Boulevard, Rancho Cordova (Risk-Based Decisions, Inc., 2014)*
- *Second Quarter 2015 Groundwater Monitoring and Remediation Progress Report for 10153 through 10175 Folsom Boulevard, Rancho Cordova, California* (Risk-Based Decisions, July 2015)
- *Groundwater Monitoring and Remediation Progress Report for 10153 through 10175 Folsom Boulevard, Rancho Cordova, California* (Risk-Based Decisions, Inc., July 2019).
- *10153 Folsom Boulevard, Rancho Cordova, CA 95670: Second Phase Soil Gas Sampling Report* (Risk-Based Decisions, Inc., November 2019).
- *Soil Gas Sampling Report 10153 Folsom Boulevard, Rancho Cordova, CA 95670* (Risk-Based Decisions, Inc., August 2020).
- *Additional Soil and Soil Vapor Testing, Former Lily Company Property, 10153-10175 Folsom Boulevard, Rancho Cordova, California* (Tetra Tech, January 2022)

2.1 Site Location and History

The Site is a multi-parcel commercial property, totaling 9.23-acres (APN 076-0020-019, -020 and -021). Figure 1 presents the Site location and parcel boundaries.

TETRA TECH, INC.
3101 Zinfandel Drive, Suite 200, Rancho Cordova, CA 95670
Tel 916.853.1800 Fax 916.853.1860 www.tetratech.com

The Site was developed in the early 1970s and was used as a strip mall. Various commercial businesses have operated at the Site. Businesses remained open at the Site until 2007. In the summer and fall of 2008, the onsite structures were demolished and removed. The Site is currently undeveloped and vacant.

The environmental impact observed at the Site is reportedly related to historical operation of a dry cleaner, Veterans Cleaners, which was located onsite as early as 1971 and operated until 2003. Tetrachloroethylene (PCE) was stored and dispensed from an approximate 45-gallon container by Veterans Cleaners, per records from the Sacramento County Environmental Management Department (SCEMD). PCE was stored in an above ground storage tank and drums near the back of the facility, in proximity to four surface drains. Reportedly, Veterans Cleaners generated chlorinated solvent wastes that were disposed by a third-party waste hauler. No release violations were found for the former dry cleaners.

2.2 Previous Site Investigations

The presence of PCE in the subsurface at the Site was initially identified in 2008 during a Phase II environmental site assessment (ESA) which included environmental sampling of soil, groundwater, and soil gas at the Site. Subsequent site investigations have been conducted and included the following:

- Soil gas sampling to a maximum depth of 46 feet below ground surface (bgs) in 2008
- Soil vapor extraction (SVE) pilot test in 2010
- Remedial investigations (RI) in 2010

After the RI, Site remediation activities included SVE and groundwater extraction, which are summarized in the following subsection.

From 2019 to present, additional soil gas sampling was conducted at the Site, which was triggered by the Site closure process and the discovery of rebounded soil gas concentrations.

The data collected from previous investigations can be found in the documents listed in Section 2.0. The current site conditions, summarized using the most recent site investigation data, are discussed in Section 2.4.

2.3 Previous Remediation Activities

Previous remediation activities at the Site included SVE and groundwater extraction.

The SVE was conducted using five (5) SVE wells (SVE-1a, SVE-1b, SVE-1c, SVE-2, and SVE3) (Figure 2):

- Well SVE-1a is screened from 5 to 15 feet bgs. The radius of influence (ROI) estimated for this well was 40 feet, based on a pilot test in 2010.

- Well SVE-1b is screened from 15 to 35 feet bgs. The ROI estimated for this well was 100 feet.
- Well SVE-1c is screened from 35 to 55 feet bgs. The ROI estimated for this well was 200 feet.
- Well SVE-2 is screened from 5 to 55 feet bgs. The ROI estimated for this well was 110 feet.
- Well SVE-3 is screened from 5 to 55 feet bgs. The ROI estimated for this well was 150 feet.

The SVE operational periods are summarized below:

- A 5-day Pilot test: August 16, 2010 through August 20, 2010
- A 9-day source test: June 27, 2011 to July 5, 2011
- Operations of all five SVE wells from August 2011 – April 2015
- Operation of SVE-1c only from April 2015 – January 2016
- Rebound tests from January 2016 – February 2016
- Operation of SVE-1c and SVE-2 only from February 2016 – August 2016
- Permanent system shutdown on August 22, 2016, per approval from the RWQCB

The SVE system operated under Permit-to-Operate (numbers 22850 and 22851) from the Sacramento Metropolitan Air Quality Management District (SMAQMD). The extracted vapor was treated by granular activated carbon. It was estimated that approximately 7.8 pounds of PCE was removed from the subsurface during the SVE operational periods summarized above.

The groundwater extraction was conducted using a 6-inch extraction well that was installed to a total depth of 75 feet (Figure 2). The extraction well has a 0.020-inch wide slot stainless steel wire wrap screen from 55 to 75 feet and 0.020-inch slot PVC screen from 45 to 55 feet. The extraction well had an estimated ROI of over 150 feet.

The extracted groundwater was piped to a nearby sewer cleanout and conveyed to the Sacramento Regional County Sanitation District for treatment through the sewer line system in the Sacramento area. The concentrations of VOCs (PCE) in groundwater fell below the Sanitation District discharge limits, and therefore was discharged without on-site treatment.

Groundwater extraction was conducted from April 2014 to September 2017. Groundwater was extracted at a flow rate of up to 10 gallons per minute (gpm). Groundwater extraction was subsequently discontinued at the Site after the power supply was damaged by vandalism. It was estimated that 11 million gallons of groundwater was extracted during the operational period and a total of 2.72 pounds of PCE was removed through groundwater extraction.

2.4 Summary of Current Site conditions

TETRA TECH, INC.
3101 Zinfandel Drive, Suite 200, Rancho Cordova, CA 95670
Tel 916.853.1800 Fax 916.853.1860 www.tetratech.com

Soil

Soil sampling was conducted during the following events:

- Phase II ESA in 2008, where shallow soil samples were collected from depths up to 15 feet at locations near the former dry cleaner (Figure 2), and one deep soil sample collected from a depth of 36.5 – 37 feet bgs at a location near the backdoor of the former dry cleaner. The samples were selectively analyzed for total petroleum hydrocarbons (TPHs), volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), and RCRA 8 metals.
- RI in 2010, where composite soil samples were collected from 50 surface soil (immediately below pavement) sampling locations. The composite soil samples were analyzed for pesticides and CAM 17 metals.
- Soil sampling in 2021, where soil samples were collected at 5- and 10- feet bgs along the existing sewer line (Figure 2). The samples were analyzed for VOCs and gasoline range TPH. Composite soil samples were also formed from these soil samples (a 5-foot composite and a 10-foot composite), and the two composite samples were analyzed for VOCs, TPH, SVOCs, pesticides, PCBs, and CAM 17 metals.

The PCE soil data from these events are shown on Figure 2. The data shows during the 2008 Phase II ESA, PCE was detected at four locations with concentrations ranging from 5.0 to 34 microgram per kilogram (µg/kg). During the 2021 soil sampling event, PCE was detected at five locations along the sewer line with concentrations ranging from 1.4 (estimated) to 54 µg/kg. The highest PCE detection locations in 2008 and 2021 are close to each other, located at the northwest corner of the Site.

Based on the available data, the known soil impact historically was within the footprint of the former dry cleaner and near the sewer line section downstream of the former dry cleaner, at the northwest corner of the Site. Recently, soil impact was present at some locations along the sewer line section downstream of the former dry cleaner. The depth of impact was identified to be up to 14 feet bgs. However, only one soil sample was collected at a deeper depth (36.5 – 37 feet bgs). PCE was not detected in this deeper soil sample.

Groundwater

Groundwater sampling was conducted during the following events:

- Phase II ESA in 2008, where a grab groundwater sample was collected at a depth of approximately 56 feet bgs at a location near the former dry cleaner. The sample was analyzed for VOCs and TPH.
- RI in 2010, where grab groundwater samples were collected at depths of approximately 60 to 61 feet bgs at locations near the former dry cleaner but also in the parking lot south of the former strip mall. The samples were analyzed for VOCs and TPH.

TETRA TECH, INC.
3101 Zinfandel Drive, Suite 200, Rancho Cordova, CA 95670
Tel 916.853.1800 Fax 916.853.1860 www.tetratech.com

- During the RI in 2010 and during the remediation progress monitoring period from 2010 to 2019, where groundwater samples were collected from five monitoring wells and one extraction well. The samples were analyzed for VOCs and TPH in earlier years, and only VOCs after 2014.

The PCE groundwater data from these events are shown on Figure 3. For the permanent monitoring wells, only the initial PCE data (in 2010, prior to groundwater extraction) and the latest PCE data (in 2019, latest data after groundwater extraction was discontinued) are shown on Figure 3.

Prior to groundwater extraction, the groundwater impact appeared to be limited to the northwest corner of the Site. The highest PCE concentration detected prior to remediation was 320 microgram per liter (µg/L), at a grab groundwater sampling location near the backdoor of the former dry cleaner, near the sewer line where the PCE concentration in the permanent well at that location was 37 µg/L. At the permanent groundwater monitoring wells, the highest PCE concentration detected prior to remediation was at 52 µg/L, found at a location near the western Site boundary and the sewer line (i.e., at MW-3). After approximately five years of SVE and three years of groundwater extraction, the PCE concentration at MW-3 was at 13.7 µg/L in 2019. PCE concentrations also decreased at the other monitoring wells after Site remediation.

Soil Vapor

Soil vapor sampling was conducted during the following events:

- Phase II ESA in 2008, where shallow soil vapor samples were collected from depths up to 15 feet at locations near the former dry cleaner (Figure 2), and one deep soil vapor sample collected from a depth of 35 feet bgs at a location near the backdoor of the former dry cleaner. The samples were analyzed for VOCs.
- Soil vapor sampling in 2008, where soil vapor samples were collected from depths up to 46 feet bgs. The samples were analyzed for VOCs.
- Soil vapor sampling in 2016, where confirmation soil vapor samples were collected from locations near samples collected during the 2008 event. The samples were collected at depths of 5- and 45-feet bgs and analyzed for VOCs.
- Soil vapor sampling in 2019 (two events), where soil vapor samples were collected near the former dry cleaner area at depths of 5- and 10-feet bgs. The samples were analyzed for VOCs.
- Soil vapor sampling in 2020, where soil vapor samples were collected primarily from the former parking lot area of the former strip mall, south and east of the former dry cleaner. The samples were collected at depths of 5- and 15-feet bgs. The samples were analyzed for VOCs.
- Soil vapor sampling in 2021, where soil vapor samples were collected from the remaining area at the overall Site at depths of 5- and 15-feet bgs. The samples were analyzed for VOCs.

The 2019 – 2021 soil vapor samples were collected after the site remediation work described in Section 2.3 and was triggered by the site closure process. The data from

the first 2019 event suggested that PCE concentrations in soil vapor rebounded after the 2016 confirmation sampling for SVE system shutdown. This finding and the site closure process triggered the subsequent soil vapor sampling events.

The current soil vapor conditions at the Site are reflected by the 2019 – 2021 data. The PCE soil vapor concentrations from 2019-2021 are shown on Figures 2 and 3.

As shown on Figures 2 and 3, the latest soil vapor data show that PCE concentrations in soil vapor exceed the San Francisco Bay RWQCB Environmental Screening Levels (ESLs) for vapor intrusion risk in the former dry cleaner area, primarily the northwest corner of the Site, as well as the former parking lot area just south of the former strip mall.

The elevated soil vapor concentrations in the former dry cleaner area are likely caused by residual PCE in the vadose zone:

- The detections of PCE in the soil in 2021 near the sewer line suggests that there is residual PCE in the soil along the sewer line. Although the 2021 PCE soil concentrations were low, partitioning calculation using the method in Appendix E of the DTSC Vapor Intrusion Guidance (2011) suggests the PCE vapor concentration in equilibrium with the PCE soil concentrations could still be high enough to cause the observed elevated PCE soil vapor concentrations. The locations of the PCE detections in soil correlate well with the locations where elevated PCE soil vapor concentrations were found.
- At the time the SVE system was shut down, the average SVE system influent PCE concentration (third quarter 2016) was 230 $\mu g/m^3$, suggesting there was still residual PCE in the vadose zone.

Compared to the potential impact from the residual PCE in the vadose zone, the elevated soil vapor concentrations detected since 2019 appear less likely a result of the volatilization of residual PCE in the groundwater, due to the concentrations of PCE in groundwater and the depth of the groundwater at the Site (approximately 55 feet bgs).

PCE soil vapor concentrations lower than the ones detected in the former dry cleaner area, but greater than the residential ESL, were found in the northern portion of the former parking lot of the former strip mall. The PCE in this area is likely caused by the migration of the soil vapor plume.

The City intends to redevelop the Site for mixed use, but primarily supporting new residential construction. The recent soil vapor sampling data suggest that in the former dry cleaner area and the former parking lot area, the PCE concentrations exceed the residential ESL for vapor intrusion consideration, which corresponds to a carcinogenic risk of 10^{-6}. As a result, the City intends to conduct additional site remediation to address the residual PCE in the vadose zone, which is believed to be the source of PCE exceedances in the soil vapor.

TETRA TECH, INC.
3101 Zinfandel Drive, Suite 200, Rancho Cordova, CA 95670
Tel 916.853.1800 Fax 916.853.1860 www.tetratech.com

3.0 PLAN FOR ADDITONAL SITE REMEDIATION

Due to the time constraint related to the redevelopment schedule, the additional site remediation the City intends to perform includes soil and sewer line excavation in the former dry cleaner area, and contingency in-situ soil treatment at a deeper depth in the former dry cleaner area and in the former parking lot area (Figure 4).

Former Dry Cleaner and Sewer Line Area

This remediation area is approximately 1.1 acres and includes the northwest corner of the Site where PCE vapor intrusion risk is above 10^{-4}, along with the former dry cleaner footprint and on-site sewer lines. Soil from this area will be excavated to a depth of 15 feet bgs and stockpiled and covered just east and south of the excavation area. The portions of the sewer line outside of the excavation area footprint will also be removed to approximately 2-feet below the base of the sewer (between 6- and 10-feet bgs). The excavation work will be completed by a licensed excavation contractor, with oversight provided by the City of Rancho Cordova or their representative (Tetra Tech). The excavation contractor will employ a competent person, as defined by OSHA, to design a safe excavation, implementing soil sloping or shoring as applicable.

As the anticipated PCE concentrations in the excavated soil are low, based on recent soil sampling along the sewer line, onsite soil treatment may be conducted prior to backfill the excavated soil should the profiling sampling results suggest there is still residual PCE in the stockpiled soil. The onsite treatment will be conducted via adding a dry chemical oxidant (potassium permanganate) to the soil as it's returned to the excavation for backfill and compaction. It is anticipated that a pug mill or equivalent will be used to mix the oxidant into the soil during backfill. The oxidant is intended to treat any residual PCE in soil (once activated by water, Section 3.6). The oxidant dosing will be determined via a bench scale test.

Below 15 feet, the excavation footprint may also be treated by in-situ oxidant injections. The purpose of the injections is to treat any residual PCE that may exist in the vadose zone at a deeper depth. A pre-design investigation (PDI) will be conducted to determine locations and depth intervals of the injections in this area (detailed in Section 3.3). A tentative injection plan based on the currently available information is detailed in Section 3.6.

Former Parking Lot Area

This remediation area includes the approximate 2-acre area outside the planned excavation footprint, that previously exhibited soil vapor PCE concentrations above 15 $\mu g/m^3$ (vapor intrusion risk greater than 10^{-6} for residential use). The PCE in soil vapor observed in this area may be caused by the following:

TETRA TECH, INC.
3101 Zinfandel Drive, Suite 200, Rancho Cordova, CA 95670
Tel 916.853.1800 Fax 916.853.1860 www.tetratech.com

- Soil vapor plume migrated from the former dry cleaner and sewer line area,
- Residual PCE in the groundwater, and/or
- Residual PCE in the vadose zone soil.

Since the soil vapor concentrations in this area are relatively low, and this area is in a cross-gradient direction of the former dry cleaner area, the PCE in the soil vapor in this area is more likely from migration of the soil vapor plume from the former dry cleaner area.

A PDI will be conducted to verify the soil and groundwater conditions in this area. In situ soil treatment in this area is contingent on the PDI findings. If PCE is detected in soil or groundwater in this area, this area may be selectively treated with one of the following options: oxidant injections, SVE, or SVE with air sparging.

For this cleanup plan, it is assumed there is residual PCE in the vadose zone soil in this area, which caused the concentrations of PCE detected in the soil vapor. Under this scenario, in situ oxidant injections will be performed. The tentative injection plan is detailed in Section 3.6.

The following subsections present the details of the cleanup plan.

3.1 Scope of Work

The proposed scope of work for the additional site remediation includes:

- Health and Safety, including preparation of a site-specific health and safety plan (HASP) and a perimeter air monitoring plan.
- Site preparation, including a utility clearance survey; placement of protective measures for any trees that will remain; surface preparation, to include removal of impervious surfaces in the planned excavation area (i.e., asphalt and concrete), and permitting. As the planned soil excavation area and resultant stockpile footprint will exceed 1-acre, the development of a storm water pollution prevention plan (SWPPP) is needed, and best management practices (BMPs) will be installed as per the SWPPP and maintained throughout the remediation activities
- PDI Sampling
- Soil Excavation and Stockpiling
- Stockpile Profiling
- Backfill and Compaction (with mixing of dry potassium permanganate during backfill)
- In Situ Soil Treatment

TETRA TECH, INC.
3101 Zinfandel Drive, Suite 200, Rancho Cordova, CA 95670
Tel 916.853.1800 Fax 916.853.1860 www.tetratech.com

3.2 Health and Safety

3.2.1 Site-Specific Health and Safety Plan

All on-Site work performed by Tetra Tech will be performed under a Site-specific Health and Safety Plan (HASP). A copy of the Tetra Tech HASP is attached as Appendix A. The Tetra Tech HASP was prepared to guide Tetra Tech employees only. Subcontractors operating on-site will also prepare their own HASP. The HASP outlines monitoring protocols and response actions.

3.2.2 Perimeter Air and Dust Monitoring Plan

Perimeter air and dust monitoring will be conducted during the soil disturbance activities such as excavation, stockpile handling, and backfill. The purpose of the perimeter air and dust monitoring is to protect members of the public from being exposed to potentially elevated concentrations of dust and/or contaminants (primarily PCE) while soil is being handled at the Site.

Daily air monitoring will be performed for monitoring of fugitive dust and VOCs. The air monitoring will be conducted at fixed perimeter air monitoring stations using hand-held photoionization detector (PID) instruments, continuous dust monitors, and summa canisters for periodic bulk air samples around the work area perimeter during soil disturbance activities.

The compounds to be monitored at fixed perimeter air monitoring stations are the following:

- PCE
- TCE
- Cis-1,2-DCE
- Concentrations of dust (to be measured as particles less than 10 microns in diameter, referred to as “PM10”)

As a conservative measure, two additional compounds - trans-1,2-DCE and vinyl chloride - will also be analyzed for when bulk air samples are collected. These two chemicals, while not of concern at this Site, are often associated with dry cleaner sites.

Details of the planned air monitoring activities are included in the *Perimeter Air and Dust Monitoring Plan* in Appendix B. The plan includes a description of field monitoring instruments, field monitoring protocols, air sampling procedures, screening levels, and meteorological monitoring. In summary, real-time ambient air monitoring for total VOCs and dust levels will be conducted at four perimeter monitoring locations, at 60-minute intervals each day when soil disturbance activities occur. A daily average dust

TETRA TECH, INC.
3101 Zinfandel Drive, Suite 200, Rancho Cordova, CA 95670
Tel 916.853.1800 Fax 916.853.1860 www.tetratech.com

concentration will also be recorded. In addition, quantitative air samples will be collected using Summa canisters for VOC analysis on three occasions throughout the soil excavation phase – from ground surface to 5-feet bgs (Event 1), from 5- to 10-feet bgs (Event 2), and from 10- to 15-feet bgs (Event 3).

The sample results will be compared to screening levels. Should sample results exceed screening levels then work practices will be modified in response to the exceedance. Such modifications could include additional soil wetting, and/or placement of additional visqueen atop the stockpile.

3.3 Site Preparation

The following site preparation tasks will be completed.

3.3.1 Utility Clearance Survey

Underground Service Alert (USA) will be notified, and the USA ticket will be maintained during the life of the project.

In addition, a licensed utility clearance company will be used to scan the proposed excavation and drilling areas for potential underground utility conflicts, supplemented by a prior geophysical investigation of the area in 2010. Based on the 2010 geophysical investigation report and findings from a recent utility survey for the 2021 soil gas sampling, utilities are known to exist in the proposed soil excavation area. Potholing will likely be conducted by the excavation contractor to determine the location of identified utilities and whether the utilities require abandonment and capping prior soil excavation.

3.3.2 Tree Protection

Trees are present in the northwest portion of the excavation area, and in the open area on the eastern half of the site. The City will be contacted to discuss removal/relocation of the trees that fall within the excavation area, or nearby tree roots that could be impacted by excavation. For trees not in the excavation area, the excavation contractor will erect, at a minimum, orange construction fencing around the drip line of each tree in the vicinity of the work area, prior to beginning soil excavation and stockpiling activities. Excavation equipment traffic and soil stockpiles will remain outside of these fenced areas.

3.3.3 SWPPP Preparation

Per the State Water Resources Control Board, Dischargers whose projects **disturb one (1) or more acres of soil** or whose projects disturb less than one acre but are part of a

larger common plan of development that in total disturbs one or more acres, are required to obtain coverage under the General Permit for Discharges of Storm Water Associated with Construction Activity Construction General Permit Order 2009-0009-DWQ. Construction activity subject to this permit includes clearing, grading and disturbances to the ground such as stockpiling, or excavation, but does not include regular maintenance activities performed to restore the original line, grade, or capacity of the facility. The Construction General Permit requires the development of a Storm Water Pollution Prevention Plan (SWPPP) by a certified Qualified SWPPP Developer (QSD).

As the planned excavation area covers approximately 1-acre, and the resultant soil stockpile area will cover 1 to 2 acres, a SWPPP will be prepared for this project.

3.3.4 Surface Preparation

The existing surface of the planned soil excavation area consists of both vegetated soil and asphalt paved areas. Prior to soil excavation, the asphalt pavement will be removed and stockpiled on-site. Some concrete curbs and old lighting standards may remain, which should be segregated from the asphalt stockpile. The asphalt and concrete will be recycled.

An approximate 500-foot section of guard rail along the north and west sides of the excavation area will also be removed and properly disposed/recycled to facilitate soil excavation work. The west chain link fence section that is currently located inward from La Loma Avenue, at the top of the slope, will also be relocated to the back of the sidewalk along La Loma Avenue.

Silt fencing and/or straw wattles will be placed around the Site work area, primarily the west half of the Site, and perimeter storm drains protected along La Loma and Folsom Boulevard. The east half of the site is not anticipated to be used during this project. A simple rumble plate construction entrance is anticipated for knocking off loose soil from tires, as site vehicles will mainly operate on the asphalt parking lot areas, and no trucks or heavy equipment will be cycling on-and off-site. Any excavation equipment operating in the excavation will be cleaned of soil before leaving the site. A formal tire wash station is not anticipated.

The entire site is surrounded by a chain link fence with three locking gate entrances off Folsom Boulevard and La Loma Avenue. Any holes in the fencing will be repaired prior to excavation work to deter unauthorized site access afterhours.

TETRA TECH, INC.
3101 Zinfandel Drive, Suite 200, Rancho Cordova, CA 95670
Tel 916.853.1800 Fax 916.853.1860 www.tetratech.com

3.3.5 Permitting

Prior to beginning on-site work, applicable permits will be obtained, such as a tree permit, hydrant permit, grading permit, soil boring permit, well destruction permit, as necessary.

3.3.6 Well Abandonment

The existing wells onsite will be properly abandoned after obtaining well destruction permit from the Sacramento County Environmental Management Department.

3.3.7 Geotechnical Soil Evaluation

The selected contractor will perform a geotechnical assessment of the soil in the excavation area. This may include drilling of geotechnical soil borings, or the collection of bulk soil samples for laboratory analysis during excavation. This data will be used to guide backfill and compaction requirements for the excavation, taking into consideration the blending of a dry chemical oxidant into the soil during backfill, and the rebuilding of the slope along the west side of the excavation facing La Loma Avenue.

3.4 Pre-Design Investigation

The purpose of the PDI sampling is to provide current soil and groundwater data in the former dry cleaner and sewer line area and the former parking lot area (approximately three acres in total) (Figure 4). The purpose of the PDI is to supplement soil and groundwater data for the Site, which will be used to refine the in-situ soil treatment planned for the Site (detailed in Section 3.6). The PDI results will lead to an optimized plan for a targeted in-situ soil treatment, leading to cost reduction.

Tetra Tech will drill vertical soil borings to groundwater across the approximate 3-acre area on roughly 50 to100 foot centers, totaling 30 soil borings (Figure 4). Based on cobbly soil conditions between 15 and 25 feet bgs at the site, a sonic drill rig is anticipated for sample collection. A California C-57 licensed driller will be selected for drilling. Soil samples will be collected at 5-foot intervals down to first encountered groundwater (approximately 50-55 feet bgs) using a split-spoon or other appropriate soil coring device. Soil samples will be collected in the same manner as soil samples recently collected along the sewer line in December 2021, utilizing the Terracor field preservation method. The soil samples will be submitted to a California state-certified laboratory for analysis of VOCs by EPA Method 8260B. The samples will be stored in a chilled ice chest under chain of custody protocols prior to delivery to the laboratory.

Upon reaching first encountered groundwater, one grab groundwater sample will be collected from each soil boring. The groundwater sample will be collected through the

TETRA TECH, INC.
3101 Zinfandel Drive, Suite 200, Rancho Cordova, CA 95670
Tel 916.853.1800 Fax 916.853.1860 www.tetratech.com

drill rod using a small diameter stainless steel bailer (decontaminated between samples), new disposable bailer, or via new polyethene tubing fitted with a foot valve (positive displacement method). Each sample will be placed in laboratory-supplied containers appropriate for the selected analysis and submitted to a California state-certified laboratory for analysis of VOCs by EPA Method 8260B. The samples will be stored in a chilled ice chest under chain of custody protocols prior to delivery to the laboratory.

Each soil boring will be abandoned to 5-feet bgs (15-feet bgs in the proposed excavation area) with neat cement grout, placed downhole via a tremie pipe or through the drill rods. The grout placement will be observed by the Sacramento County Environmental Management Department. Excess soil cuttings will be used to backfill each boring from top of grout to ground surface.

All reusable drilling equipment will be decontaminated between each soil boring location and all reusable sampling equipment will be decontaminated between each use. Decontamination will consist of washing the equipment in a water/Liquinox solution, rinsing with clean water, and allowing to air dry. Decontamination liquids will be contained and temporarily stored in 55-gallon drums or other appropriate containers, and later applied to the excavated soil stockpile and allowed to absorb.

Excess soil cuttings will be placed on plastic and later incorporated into the soil excavation stockpile.

Two soil samples, one from the former dry cleaner and sewer line area, and one from the former parking lot area, will be analyzed for soil oxidant demand (SOD) for dosing consideration of the onsite soil treatment (during backfill) and the in-situ soil treatment (oxidant injection).

3.5 Soil Excavation and Stockpiling

The selected contractor will design and implement a safe excavation of the approximate 1.1-acre area to 15-feet bgs (Figure 4), including removal of the entire sewer as shown. The contractor's Competent Person, as defined by OSHA, will indicate an appropriate slope for the excavation and trench sidewalls based on soil competency (i.e., 1:1 or 1.5:1). The excavation work will be completed with standard excavation equipment (i.e., a track-excavator, haul trucks, wheeled loader, water truck). The existing slope facing La Loma Avenue will be taken down as part of the excavation. The existing top of slope facing the existing apartment complex on the north side of the excavation will be left in place, leaving an approximate 4-foot-wide undisturbed area along the site boundary.

TETRA TECH, INC.
3101 Zinfandel Drive, Suite 200, Rancho Cordova, CA 95670
Tel 916.853.1800 Fax 916.853.1860 www.tetratech.com

The City or their representative will provide daily oversight and direct the excavation work. The sewer line will be trench-excavated approximately 4-feet wide to approximately 2-feet below the base of the sewer in the areas that fall outside the 15-ft deep excavation area. Based on the varied sewer depth, this will be between 6-ft and 10-ft bgs. The entire length of the sewer line is approximately 650 linear feet.

The excavated soil will be stockpiled just east and south of the excavation limits on an asphalt-paved area. The soil excavated from along the sewer line will be segregated to allow for separate soil profiling, based on the dimensions above. The excavated soils will be staged on top of plastic sheeting and covered with plastic sheeting at the end of each day. The plastic sheeting will be secured over the stockpile(s) with sandbags and laced down with poly rope, if necessary, to prevent wind from lifting the plastic. The stockpile will be shaped with a loader or small bulldozer to facilitate easier covering and subsequent stockpile sampling. Straw wattles will be placed around the perimeter of the soil stockpile(s) to mitigate potential soil migration.

The total soil excavation volume, including the sewer line, is estimated at 27,000 bank cubic yards. The sewer line portion is estimated at 800 cubic yards. The resultant soil pile, placed across an approximate 1-acre portion of the parking lot, would be approximately 15- to 20-feet tall.

Routine air and dust monitoring will also be performed during soil disturbance work, in accordance with the attached *Perimeter Air and Dust Monitoring Plan* (Appendix B). Any dust will be mitigated with water spray from a water truck.

3.6 Stockpile Profiling

Following completion of the soil excavation, soil samples will be collected from the soil stockpile(s) for profiling purposes to determine VOC concentrations.

Discrete soil samples will be collected in a grid pattern across the soil stockpile from a depth of approximately 5-feet into the stockpile using a hand auger. A sample from 5-feet into the soil pile is expected to be representative as the soil will have been homogenized during excavation, transport and stockpile shaping. Discrete samples will be collected at rate of 12 per the first 5,000 cubic yards plus 1 sample per each additional 1,000 cubic yards from the primary soil stockpile (approximately 34 samples), and at a rate of 1 per 100 cubic yards from the soil removed for along the sewer line; approximately 8 samples, for better resolution in an area known to have low concentrations of PCE in soil. The stockpile sampling frequency is based on the DTSC borrow area stockpile sampling guidance (for import fill), with increased sample frequency along the sewer line.

TETRA TECH, INC.
3101 Zinfandel Drive, Suite 200, Rancho Cordova, CA 95670
Tel 916.853.1800 Fax 916.853.1860 www.tetratech.com

The samples (approximately 42) will be placed in laboratory-supplied glass jars and submitted to a California state-certified laboratory for analysis of VOCs by EPA Method 8260B. The samples will be stored in a chilled ice chest under chain of custody protocols prior to delivery to the laboratory.

The stockpile profiling results will be used to determine whether onsite soil treatment is needed during backfill, or if off-site disposal may be warranted for portions of the stockpile.

3.7 Backfill and Compaction

Since the available soil data suggest low residual concentrations of PCE in soil, it is anticipated that no soil will require off-site disposal. If PCE is detected in the stockpiles, onsite soil treatment will be conducted via mixing in dry potassium permanganate to the stockpiled soil before backfill, where the oxidant will be activated during backfill (when water is applied as part of the backfill process). The oxidant will be mixed into the backfill soil using a pug mill or equivalent as it is placed in the excavation. The tentative dosing is 0.3% by weight and will be refined per the results from the SOD bench scale testing. The stockpiled soil material will be returned to the excavation and compacted per geotechnical requirements. Compaction testing will be performed per geotechnical requirements, and water added to the soil as needed to meet moisture specifications.

Routine air and dust monitoring will also be performed during soil disturbance work, in accordance with the attached *Perimeter Air and Dust Monitoring Plan* (Appendix B). Any dust will be mitigated with water spray from a water truck.

3.8 In-Situ Soil Treatment

Former Dry Cleaner and Sewer Line Area

The purpose of the contingency in-situ soil treatment through oxidant injections is to treat any residual PCE that may exist in the vadose zone at a depth deeper than 15 feet in this area. The tentative injection plan is detailed as follows. This plan will be refined after the PDI.

The vadose zone permanganate injections are planned to be as follows:

- Injections will be at 20-feet centers (assuming a ROI of 10 feet), with a total of 153 locations in this area.
- Injections will be conducted at 15-, 20-, and 25-feet bgs.
- 3% by weight permanganate solution with a volume equaling 25% of the pore volume of the treatment zone will be injected. The injection concentration may be refined after the SOD bench scale testing.

TETRA TECH, INC.
3101 Zinfandel Drive, Suite 200, Rancho Cordova, CA 95670
Tel 916.853.1800 Fax 916.853.1860 www.tetratech.com

The areal and vertical extent of the injections may be refined after the PDI. Currently, it is conservatively assumed the entire 1.1 acre of the former dry cleaner and sewer line area will be injected. The maximum injection depth is planned to be 25 feet bgs. The oxidant is expected to be reacted with the residual PCE and the organics in the soil per the dosing information from the bench scale testing. A 30-feet separation distance to groundwater is planned, so that any potential excess oxidant may react with the 30 feet of soil column below the maximum injection depth and not reach the groundwater.

After injections, each injection boring will be abandoned to 5-feet bgs with neat cement grout, placed downhole via a tremie pipe or through the drill rods. The grout placement will be observed by the Sacramento County Environmental Management Department. No excess soil cuttings are anticipated.

Former Parking Lot Area

If the PDI results suggest there is residual PCE in the vadose zone soil in this area, permanganate injections will be conducted. The injections will be conducted similarly to the plan for the former dry cleaner and sewer line area, except that the injections will be conducted for the top 25 feet of the vadose zone. The tentatively planned injection locations are next to the PDI sampling locations (Figure 4), for a total of 14 locations. The locations may be refined after the PDI.

If the PDI results suggest that there is no residual PCE in the vadose zone soil, and depending on the levels of PCE detections in the groundwater, if any, the in-situ soil treatment in this area will include SVE and/or SVE with air sparging (for groundwater treatment). For this scenario, 10-15 SVE wells will be installed in this area. The wells will be operated as extraction and/or venting wells to improve air flow in the subsurface and accelerate the remediation progress. A trailered SVE system will be rented for operating the SVE wells. An air permit will be obtained prior to the SVE operation. If PCE is detected in the groundwater at a concentration greater than 20 µg/L, air sparging may be conducted in conjunction with the SVE. It is expected 3-6 months are needed to complete this treatment.

4.0 POST-EXCAVATION EFFECTIVENESS SAMPLING

To assess the effectiveness of the soil cleanup, follow-up soil vapor sampling will be completed across the approximate 3-acre area, collecting soil vapor samples from approximately the same 30 pre-excavation profile sample locations. The soil vapor sampling will be initiated approximately 1-month following completion of the remediation work.

The soil vapor samples will be collected using the Waterloo Membrane Sampler (WMS) system, consistent with the RWQCB-approved approach for recent soil gas sampling at the site.

TETRA TECH, INC.
3101 Zinfandel Drive, Suite 200, Rancho Cordova, CA 95670
Tel 916.853.1800 Fax 916.853.1860 www.tetratech.com

WMS devices will be installed at 5 and 15 feet bgs for soil vapor sampling at each location, installed in co-located separate soil borings. The WMS devices will be installed using a direct push technology (DPT) rig operated by TEG northern California, a California C-57 licensed driller who has installed WMS devices at the site for previous soil gas sampling events. Since the samplers will be installed for temporary use and removed after sampling collection, a boring permit is not required per confirmation received from the Sacramento County Environmental Management Department.

The installed WMS devices will be left in place for approximately 48 hours to ensure a reporting limit lower than the residential ESL for PCE, similar as previous sampling events. The soil gas samples will be analyzed by Eurofins Air Toxics using a modified United States Environmental Protection Agency (EPA) Method TO-17. A total of 40 soil gas samples will be analyzed from the 20 sampling locations. Trip blanks will also be collected and analyzed, per laboratory recommendation for WMS devices. After sampling is completed, the samplers will be pulled out of ground with the boreholes grouted with neat cement to 5-feet bgs. The top 5-feet of borehole will be backfilled with native on-site soil.

5.0 REPORTING

A summary report will be prepared at the conclusion of the project work. The report will document the field activities including all field records and summarize sampling results. Laboratory analytical data sheets and chain of custody forms will be included for all samples collected (soil, groundwater, soil vapor). Although not expected, if any soil is disposed off-site as a regulated waste (non-hazardous Class II waste or hazardous Class I waste) then copies of disposal manifests and/or landfill weight tags will be included to document proper disposal and the weight of soil disposed.

6.0 SCHEDULE

The project schedule depends on the status of the ECRG application. Currently DTSC expects to award the grants in June 2022.

The field work described is expected to take approximately 6 months to complete. Prior to the field work, permitting and contracting related work is expected to take 2-3 months. The summary report is expected to be completed 2-3 months after completion of all field work and laboratory testing.

Betty Li Tetra Tech Program Manager	DRAFT	

This certifies that Tetra Tech has inspected the subject site and has assessed the type, risk level, and severity of hazards for the project and has selected appropriate personal protective equipment for site personnel in accordance with Occupational Safety and Health Administration Title 29 of the *Code of Federal Regulations*, Part 1910.132.

Certified by

Roberto Rolon CIH, REM Tetra Tech Health and Safety Director	DRAFT	

HASP-AT-A-GLANCE

This summary sheet is provided as a quick reference only. The full site-specific Health and Safety Plan is integral to the safe performance of project operations and must be applied in its entirety.

EMERGENCY INFORMATION

Site:	Vacant site, 10153 Folsom Boulevard, Rancho Cordova, California
Project Location	10153 Folsom Boulevard
Proposed Start Dates of Activities:	TBD 2022
Scope of Activities:	Perform excavation oversight, conduct perimeter air monitoring, and sample soil stockpiles.
Type/Status of Site:	Currently vacant with remnant paved areas and vegetation consisting of grasses and trees
Chemicals of Potential Concerns (COPC):	Tetrachloroethene (PCE), with lesser concentrations of trichloroethene (TCE) and cis-1,2-Dichloroethene (cis-1,2-DCE)
Route of Exposure:	Inhalation, ingestion, and skin absorption through direct contact.
Physical Hazards:	Slip, trip, and fall hazards; excavation to 15 feet across 1.1-acrea area; lifting; biological hazards; heat stress; noise; and working near excavation equipment.
Levels of Protection:	The standard level of protection for this project is considered Level D and/or Modified Level D. Safety glasses, steel-toe boots, reflective safety vest, nitrile gloves, hearing protection, and leather work gloves.
Engineering and Administrative Controls:	Excavation will not be entered by a Tetra Tech employee except when the excavation is shored or sloped 1:1 and authorized by the General Contractor's on-site OSHA excavation competent person. Heat stress prevention: Canopy for shade, liquids for rehydration, work-rest schedule, buddy system.
Air Monitoring Equipment:	Air monitoring and soil screening will be conducted using PID (ppbRAE), Thermo Scientific pDR dust monitors, and periodic collection of air samples for laboratory analysis of chemicals of concern.
Factors Prompting Monitoring:	Monitoring will be conducted pursuant to the Cleanup Plan and associated Air Monitoring Plan.
PID Action Levels for Worker Breathing Zone:	At or below 5 ppm, stay upwind, let area ventilate and reassess. Above 5 ppm sustained in BZ for 10 minutes: Stop work, move out of source area, let area ventilate, contact corporate H&S Manager for guidance.
Hazard Communication:	Chemical products brought onsite: decon solutions
Nearest Hospital Emergency Room:	*Mather VA Hospital* 10593 Peter A McCuen Blvd Mather, CA 95655 916-843-7000
Nearest Urgent Care:	*Concentra Urgent Care* 10670 White Rock Rd, Suite 100, Rancho Cordova, CA 95670 916-364-1733
Tetra Tech Contacts:	
Project Manager	Keith Hoofard: 916-853-1800 (direct), 916-709-4732 (mobile)
Corporate Health & Safety	Roberto Rolon: 407-448-9553
CORE Incident Intervention:	for non-life-threatening incidents, available 24/7: 1-855-683-9006
Client Contact	Stefan Heisler: City of Rancho Cordova, CA 916-851-8757

Site:	Vacant site, 10153 Folsom Boulevard, Rancho Cordova, California
Subcontractor Contacts:	See Section 2.0
See Section 13.10 for route and map to hospital and Section 13.11 for route and map to clinic.

1.0 INTRODUCTION

Tetra Tech Inc. (Tetra Tech) received a work authorization from the City of Rancho Cordova (City) to perform a soil cleanup at 10153 Folsom Boulevard in Rancho Cordova, California (the Site). The Site previously supported a multi-tenant shopping center, including a dry cleaner. The dry cleaner experienced of release of cleaning solvent (PCE) to the subsurface, impacting the northwest quadrant of the Site. The Site has been the focus of multiple rounds of subsurface investigation (soil, groundwater, soil vapor) as well as remediation efforts (groundwater and soil vapor extraction/treatment) by Others. The Regional Water Quality Control Board (RWQCB) has been the lead regulatory agency. Remediation efforts have been discontinued and the Site was razed several years back, remaining vacant. Residual soil vapor concentrations remain above residential and commercial screening criteria, and residual soil impacts exist along the sanitary sewer that once served the dry cleaner. The purpose of the soil cleanup is to mitigate residual PCE concentrations in subsurface soils to reduce soil vapor concentrations below residential screening criteria.

The cleanup efforts are anticipated to include a combination of pre-excavation soil and groundwater profile sampling (sonic drill rig) followed by soil excavation in the northwest corner of the site to a depth of 15 feet below grade. The entire length of the on-site sanitary sewer line will be over-excavated (6- to 10-feet deep), which extends outside the excavation limits. The excavation will be designed by the selected contractors Competent Person, as defined by OSHA. Excavated soils will be temporarily stockpiled a short distance away and covered with visqueen while awaiting backfill of the soils to the excavation. The excavation limit encompasses an approximate 1.1-acrea area. Some or all existing groundwater and extraction wells (vapor extraction and groundwater) will require abandonment as some are in the proposed excavation area. It is anticipated that each well will be over-drilled and removed using a hollow stem auger drill rig.

Based on the results of the pre-excavation soil and groundwater profile sampling, and the soil stockpile profile sampling, chemical oxidant (potassium permanganate – KMnO4) soil treatment may be conducted. This may include directly mixing crystalline KMno4 into the excavated soil as it is backfilled and/or oxidant injections at select profile boring locations. The oxidant application rate will be based on a bench scale treatability study of the excavated soil and detected PCE concentrations in soil and groundwater. A temporary soil vapor extraction (SVE) system may also be installed and operated for an approximate 2-month duration, based on the results of the pre-excavation soil and groundwater profile sampling. Up to 20 soil vapor extraction wells will be installed and manifolded to an SVE system equipped with granular active carbon (GAC) emissions controls. The SVE system will be permitted by the local air district. An electrical power drop (by the local utility) will be necessary to operate the SVE system.

The site-specific health and safety provisions in this document have been developed for use during drilling and sampling activities, soil excavation, stockpiling, and backfill, and potential oxidant treatments and/or short-term soil vapor extraction. This document addresses items specified under Occupational Safety and Health Administration (OSHA) Title 29 of the *Code of Federal Regulations* (CFR),

Part 1910.120(b), Hazardous Waste Operations (HAZWOPER) 120 and applicable California Occupational Safety and Health requirements.

This health and safety plan (HASP) must be present at the site during the performance of all Site activities and will be available to all onsite personnel who may be exposed to hazardous onsite conditions, including Tetra Tech and subcontractor personnel participating in site operations, and all authorized site visitors, including regulatory agency representatives. All onsite personnel, including Tetra Tech and subcontractor employees and site visitors, must be informed of site emergency response procedures and any potential health and safety hazards associated with onsite activities. Protocols established in this HASP are based on site conditions and health and safety hazards known or anticipated to be present and on available site data. The Tetra Tech Compliance Agreement form in **Appendix A** must be signed by all personnel before they enter the site.

This HASP is supported by the Tetra Tech Health and Safety Manual and safe work practices (SWPs) (**Appendix B**), which were developed to comply with the OSHA Hazardous Waste Operations standard and applicable sections of 29 CFR Part 1910 (General Industry Standards) and Part 1926 (Construction Standards).

This plan must be reviewed and approved by the Tetra Tech health and safety representative (HSR) and the Tetra Tech program and project managers (see the Reviews and Approvals Form after the Contents in this document). Specifications herein are subject to review and revision based on actual conditions encountered in the field during site activities. The HASP will be modified if the scope of work changes or if new information regarding site conditions, hazards, or contaminants of concern becomes available. If deviations are encountered from the field work plan, Tetra Tech and subcontractor personnel will notify the Project Lead and suspend work to assess changes to the work plan and the HASP. Significant revisions to this plan must be approved by the Tetra Tech program and project managers and the Tetra Tech HSR. Authorized modifications to the HASP will be tracked in the Record of Review/Revision [to be inserted into the HASP] and will be communicated to all project personnel.

2.0 PROJECT PERSONNEL AND RESPONSIBILITIES

This section describes responsibilities of project personnel, summarizes requirements for subcontractors and visitors who wish to enter the Site, and discusses HASP enforcement. Personnel assigned to these positions will exercise the primary responsibility of performing all of their work tasks in a manner that is consistent with the Tetra Tech Health and Safety Policy, the health and safety training they have received, this HASP, and in an overall manner that protects their personal safety and health and that of their coworkers. The Field Supervisor will be the primary point of contact for any questions regarding the health and safety procedures and the selected control measures that are to be implemented for activities at the Site.

The following personnel and organizations are associated with planned activities at the site. The organizational structure will be reviewed and updated as necessary during the course of the project.

Name/Title	Responsibility	Telephone No.
Client Representative:		
Stefan Heisler	City of Rancho Cordova Project Lead	(916) 851-8757

TEG NorCal (post-remediation vapor sampling)	Mark Jerpbak	916-853-8010

2.1 PROJECT PERSONNEL

The Tetra Tech project manager, field supervisor, and site safety coordinator (SSC) will be responsible for implementation and enforcement of the provisions of this HASP. Their duties and the expectations for Tetra Tech employees are described in the following sections.

2.1.1 Project Manager

The Tetra Tech project manager (PM) has ultimate responsibility for ensuring implementation of the requirements set forth in this HASP. Some of this responsibility may be achieved through delegation to site-dedicated personnel that report directly to the project manager. The project manager shall regularly confer with site personnel regarding safety and health performance.

2.1.2 Field Supervisor

The Tetra Tech field supervisor (FS) will oversee and direct field activities and has day-to-day responsibility for ensuring HASP implementation. Subcontractor compliance with the HASP shall be monitored by the field supervisor. The field supervisor will report directly to the project manager any health and safety-related issues.

2.1.3 Site Safety Coordinator

A Site Safety Coordinator (SSC) is assigned by the project manager (PM) to provide health and safety oversight for this project. The SSC is responsible for the following:

- Being on site during all work activities to oversee health and safety issues for Tetra Tech employees, subcontractors, and visitors at the site.

- Conducting site-specific training which includes review of the HASP at the project initiation and conducting daily tailgate meetings to discuss planned tasks, identified hazards, and required hazard controls.
- Implementing the site-specific HASP including hazard communication, respiratory protection, personal protective equipment, and other associated safety and health programs.
- Verify that the HASP accurately reflects ALL site hazards and is revised or amended as new tasks are assigned or new hazards are recognized.
- Verifying onsite personnel have all necessary training, medical and respirator clearance, and respirator fit-tests as specified by the HASP.
- Advising the PM and/or client of any field practices or conditions that may endanger the health and safety of field personnel, subcontractors, or visitors.
- Recommending corrective actions for any conditions that may endanger the health and safety of field personnel, subcontractors, or visitors.
- Selecting, inspecting, maintaining, and enforcing proper use, cleaning, and maintenance of protective clothing and equipment.
- Monitoring onsite hazards and conditions (frequent site inspections).
- Maintaining visual or verbal communication with all site workers.
- Stopping work if any worksite condition, practice, or operation causes or presents a hazard that can reasonably be expected to result in immediate death, serious physical harm, or severe damage to the environment.
- Working closely with the PM and HSR to determine appropriate corrective action and/or prompt resolution to all hazards.
- Establishing and maintaining work zones and control points by overseeing control of entry and exit at site access points and recording the names and job assignments of all personnel who enter and exit the site.
- Arranging for required work area, personal or ambient hazard monitoring.
- Ensuring that all monitoring equipment used on site has been properly calibrated and is operated in accordance with manufacturer's recommendations and approved sampling methodologies.
- Creating and maintaining records of employee exposure and monitoring results for all onsite personnel.
- Monitoring workers for signs and symptoms of work-related exposures, such as chemical exposure, heat stress and fatigue.
- Conducting daily field inspections for early recognition of potential site and task hazards.
- Coordinating and supervising emergency response and providing emergency first aid and cardiopulmonary resuscitation (CPR) to team members, if required.
- Reporting all occupational illness, injuries, incidents and near-misses to the HSR and PM immediately after stabilization of the incident and notification of emergency medical providers.

- Assisting in conducting incident investigations and preparing reports of serious near-misses, illnesses, injuries, motor vehicle accidents, or property damage.

2.1.4 Health and Safety Representative

The Tetra Tech health and safety representative (HSR) is responsible for review of the project HASP. The HSR will also act in an advisory capacity to the project manager and site personnel for project-specific health and safety issues. The Tetra Tech project manager will establish a liaison between the City of Rancho Cordova representative and the HSR on matters relating to health and safety. The HSR responsibilities include the following:

- Provide information regarding site contaminants and physical and biological hazards.
- Establish air monitoring and decontamination procedures.
- Assign personal protective equipment based on task and potential hazards.
- Determine emergency action procedures.
- Stipulate training and medical surveillance requirements.
- Provide standard work practices to minimize potential injuries and exposures associated with hazardous waste site work.
- Modify this HASP, where and when necessary.

2.1.5 Tetra Tech Employees

Tetra Tech employees are expected to fully participate in implementing the site HASP by having the necessary training, attending site safety meetings, always wearing designated personal protective equipment (PPE), complying with site safety and health rules, and advising the Tetra Tech SSC of health and safety concerns at the site. Additionally, all Tetra Tech employees have the following rights and responsibilities:

- Tetra Tech employees are expected to and responsible for reporting health and safety hazards they face while performing their work. As such, employee reports of health and safety hazards are viewed as positive interactions and no employee of Tetra Tech will retaliate against any other employee who reports a health and safety hazard.
- Tetra Tech employees have the right to refuse to perform work involving significant safety hazards they feel have not been adequately addressed.
- Every Tetra Tech employee has the right to stop work if he/she feels any worksite condition, practice, or operation causes or presents a hazard that can reasonably be expected to result in immediate death, serious physical harm, or severe damage to the environment. Through observations and communication, all parties involved will then develop, communicate, and implement corrective actions necessary and appropriate to modify the task and to resume work. The stop work event will be reported as a near miss incident.

Note: In some cases, one person may be designated responsibilities for more than one position. For example, the Field Supervisor may also be responsible for the SSC duties. This action will be performed only as credentials, experience, and availability permit.

2.2 SUBCONTRACTORS

Subcontractor personnel participating in project operations will be required to read and comply with all sections of this plan. All subcontractor personnel entering the site must sign the Compliance Agreement form (**Appendix A**). Subcontractor personnel must comply with all applicable 29 CFR 1910.120 training, respirator fit testing, and medical surveillance requirements and other applicable OSHA General Industry and Construction Standards (Part 1926). Subcontractors are responsible for providing PPE required by this plan for their personnel (see Section 7.1, Protective Equipment and Clothing) and are directly responsible for the health and safety of their employees. Subcontractors will prepare a safety plan and/or Job Hazard Analysis for their work assignments which will be submitted to Tetra Tech for review.

2.3 SITE VISITORS

All authorized site visitors will be required to read the HASP and sign the Compliance Agreement form (**Appendix A**). Visitors will be expected to comply with relevant OSHA requirements. Visitors will also be expected to provide their own PPE required by the HASP. Visitors who have not met OSHA training, medical surveillance, and PPE requirements are not permitted to enter work areas where exposure to health and safety hazards is possible.

3.0 SITE BACKGROUND

The Site is a multi-parcel commercial property, totaling 9.23-acres (Figure 1). All former buildings have been razed and the Site sits vacant with the former asphalt paved parking areas intact. A former on-Site dry cleaner (Veterans Cleaners) tenant space was located at 10161 Folsom Boulevard (Parcel -021) and operated from approximately 1970 to 2003. The dry cleaner reportedly utilized a 45 gallon above ground tank to store tetrachloroethane (PCE). Figures showing the footprint boundary of the former dry cleaner, and dry-cleaning equipment layout, were not found.

A release of PCE to the subsurface was first discovered at the Site in 2008 after samples of soil, groundwater and soil vapor were collected from multiple soil borings in the vicinity of the dry cleaner. PCE was detected at concentrations up to:

34 micrograms per kilogram (µg/kg) in soil;

70,000 micrograms per cubic meter (µg/m3) in soil gas; and

140 micrograms per liter (µg/L) in groundwater.

Total petroleum hydrocarbons as gasoline (TPH-gas) was also detected in groundwater at a concentration of 100,000 µg/L in 2008. Subsequent TPH-gas and TPH-diesel concentrations were low to non-detect in groundwater monitoring wells through 2014. Benzene, toluene, ethyl benzene and xylenes (BTEX) compounds also appear to have been non-detect in groundwater through 2019.

Elevated concentrations of lead were also detected in soil above environmental screening levels, along with one soil sample containing TPH-motor oil above the environmental screening level. These detections were not confirmed during later sampling.

Trichloroethene (TCE) and cis-1,2-dichlorethene (cis-1,2-DCE) were originally detected at concentrations above California maximum contaminant levels (MCLs) prior to groundwater remediation, but concentrations decreased to non-detect after remediation (discussed below).

Depth to groundwater at the site ranges from approximately 50 to 55 feet below ground surface (bgs), with a groundwater flow direction ranging from north to northeast.

Since 2008, multiple Site characterization sampling events have been conducted in support of delineating the extent of impacts to soil, soil vapor and groundwater, along with on-site remediation consisting of soil vapor extraction (SVE) and groundwater extraction. The CV-RWQCB has been the lead agency providing oversight of site characterization and remediation.

- An SVE system operated at the site from approximately April 2011 through August 2016, removing approximately 7.8 pounds of PCE. PCE was detected in soil gas up to 70,000 µg/m3 prior to operation of the SVE system, and up to 280 µg/m3 following remediation. The RWQCB concurred that soil vapor had been adequately remediated and the SVE system was

subsequently dismantled. The SVE system was subsequently dismantled with concurrence from the RWQCB.

- A groundwater extraction system also operated at the site from April 2014 through August 2017 (shutdown due to vandalism). Approximately 11 million gallons of groundwater were extracted at approximately 10 gallons per minute and discharged (untreated) to the sanitary sewer from a single extraction well (EW-1). Well EW-1 is a 6-inch diameter extraction well screened from 45 to 75 feet bgs, with a reported radius of influence over 150-feet. PCE was detected in EW-1 at concentration of 150 µg/L prior to startup, decreasing to 11.5 µg/L during second quarter 2017. An estimated 2.7 pounds of PCE was removed by groundwater extraction.

Soil gas and groundwater confirmation samples were most recently collected in the vicinity of the former dry cleaner during three sampling events in 2019 (March, April, and October) and one in July 2020 as part of additional site characterization activities. PCE was detected as follows:

- Up to 3,300 µg/m3 (5-feet bgs) and 1,600 µg/m3 (10 feet bgs) at sample location AVB-10, located along the sanitary sewer line, distant from the rear of the former dry cleaner; and

Up to 18 µg/L in groundwater (EW-1). Upgradient well MW-5 contained PCE at a concentration of 6.77 µg/L. Downgradient well MW-1 was non-detect for PCE. Well MW-5 is located near the sanitary sewer line on La Loma (or the Site sewer lateral, depending on which figures are correct), presumed "downstream" from the former dry cleaner.

Tetra Tech conducted additional on-site soil and soil vapor sampling in December 2021 to evaluate current soil conditions along the sewer line, and to further evaluate soil vapor conditions south and east of the dry cleaner in areas not previously investigated. Low concentrations of PCE were detected in soil at two locations along the sewer line (TTSB5 and TTSB10) in both the 5- and 10-ft soil samples at concentrations ranging from 7.8 to 54 micrograms per kilogram (µg/Kg). Estimated low concentrations of PCE were detected in the 5-ft soil samples at three sewer line locations (TTSB4, TTSB6 and TTSB9) ranging from 1.3 to 4.7 µg/Kg. TCE was also detected at an estimated low concentration of 2.8 µg/Kg in the 5-ft soil sample from TTSB5. Low to estimated low concentrations of petroleum-related compounds (TPH-gas, naphthalene, toluene, trimethylbenzenes, and xylenes) were detected at locations TTSB6 through TTSB9. All soil detections were well below respective Environmental Screening Levels (ESLs) for human health (direct exposure) under both Residential and Commercial land use scenarios.

TPH, VOCs, and PCBs were not detected in the 5-ft or 10-ft composite soil samples from along the sewer line (TTCOMP-5 and TTCOMP-10). Low to estimated low concentrations of the organochlorine pesticides 4,4-DDE and dieldrin were detected in both the 5-ft and 10-ft composites soil samples. Estimated low concentrations of the SVOCs pyrene and fluoranthene were detected in the 5-ft composite soil sample. Low to estimated concentrations of 11 metals (arsenic, barium, beryllium, chromium, cobalt, copper, lead, mercury, nickel, vanadium, and zinc) were detected in both the 5-ft and 10-ft composite soil samples along the sewer line. The various detections of metals appear to represent naturally occurring background concentrations; no anomalous metals concentrations were detected. None of the chemicals detected in the two composite soil samples exceed their respective Title 22 Total

Threshold Limit Concentration (TTLC) values for classification as a hazardous waste (should the soil be excavated and transported off-site for disposal).

PCE was not detected above the laboratory reporting limit of 13 µg/m3 in the 30 soil vapor samples collected at 5-feet in depth. PCE was only detected in soil vapor at 15-feet in depth from two locations at concentrations of 54 µg/m3 (TTVMP7-15) and 14 µg/m3 (TTVMP13-15). Both detections are below the commercial PCE soil vapor ESL value of 67 µg/m3. Only location TTVMP7-15 exceeds the residential PCE soil vapor ESL value of 15 µg/m3 (at 54 µg/m3). PCE degradation compounds were not detected in any of the soil vapor samples. Low concentrations of petroleum-related compounds (xylenes and toluene) were detected in soil vapor at various depths at TTVP1, TTVP4, TTVP6, TTVP7 and TTVP10. The concentrations were well below their ESLs for commercial or residential uses.

4.0 SCOPE OF WORK

This section discusses the activities that are to be performed at the Site. Table 5-1 of this HASP provides information related to each of the tasks associated with the scope of work. The planned activities involved in this effort are presented in detail in the Tetra Tech **Soil Cleanup Plan, 10153 – 10175 Folsom Boulevard, Rancho Cordova, California, dated March 15, 2022.** If tasks other than those described below are to be performed, Table 5-1 and this section will be modified accordingly.

Field operations to be performed by Tetra Tech and subcontractor personnel include:

- Mark Site for USA/Utility Clearance
  - Tetra Tech will mark all proposed drilling locations and soil excavation area and subcontract an on-site utility locator to scan the subsurface for utility conflicts.
- Well Abandonment
  - Eleven existing site wells will be abandoned before beginning soil excavation activities. Tetra Tech will subcontract well abandonment through a CA- licensed well driller, and obtain drilling permits from Sacramento County. Tetra Tech will provide field oversight.
- Pre-excavation Profile Drilling
  - Tetra Tech will subcontract with a CA-licensed well driller to collect soil and groundwater samples from approximately 30 locations in a grid pattern. Soil samples will be collected at 5-foot intervals down to groundwater (approx. 55-feet), where a grab groundwater sample will also be collected. Tetra Tech will place samples in containers appropriate for selected analyses. County drilling permits are required for borings completed withing 20-feet of groundwater.
- Soil excavation, stockpiling, backfill and compaction
  - Tetra Tech or the Client will subcontract with a licensed excavation company to design the soil excavation in the northwest corner of the site, including removal of the section of sanitary sewer that extends outside the excavation limits to the east. The contractor will also coordinate with utility companies to abandon any utilities that enter the excavation arear. The excavation will be designed by an OSHA-competent person. The soil will be stockpiled and covered for subsequent profile sampling. Tetra Tech will provide field oversight.
- Stockpile profile sampling
  - Tetra Tech will collect samples of the stockpiled soil for laboratory analysis.
- Addition of Dry Oxidants to Soil During Backfill
  - Based on the results of the profile sampling, a dry chemical oxidant (KMnO4) may be mixed into the soil during backfill and compaction. The excavation contractor or their subcontractor will perform this work utilizing personal protective equipment (PPE) recommended by the oxidant manufacturer. Tetra Tech will not be directly involved in this task.

- Air and Dust Monitoring
    - During active soil excavation, stockpiling and backfill, Tetra Tech will perform perimeter air and dust monitoring. Monitoring instruments will include a photoionizing detector (PID), real-time dust monitors, and the periodic collection of air samples for laboratory analysis. A portable weather station will be set up to collect regular meteorological data. The details of the air monitoring are presented in the Air Monitoring Plan.
- Post-Backfill Oxidant Injections (optional)
    - Following backfill and compaction to original grade and based on the results of the pre-excavation profile drilling, liquid oxidants (KMnO4) may be injected into select soil borings. Tetra Tech will contract with a licensed CA-well driller to perform this task. Tetra Tech will provide field oversight. Appropriate PPE will be donned for handling the KMnO4, per manufacturer guidance and SDS information.
- Short-Term Soil Vapor Extraction (optional)
    - Following backfill and compaction, and based on pre-excavation profile sampling, short term soil vapor extraction may be completed. Tetra Tech will contract with a licensed CA-well driller to install 15 to 20 soil vapor extraction wells to approximately 35 feet below grade. A subcontractor will supply and setup a temporary SVE system with granular activated carbon emissions control. As there is no power at the site, Tetra Tech will hire a subcontractor to install a power drop and wire the SVE trailer to the power supply. Tetra Tech will operate the SVE system for approximately 2-months, performing routine operations, maintenance, and system monitoring, including collection of compliance air samples. The SVE vendor will recycle or dispose of the spent carbon after system shutdown.
- Post-Cleanup Soil Vapor Sampling
    - To assess the effectiveness of the soil cleanup activities, soil vapor samples will be collected from 30 locations, corresponding to the pre-excavation profile soil borings. The soil vapor sampling will be similar to recent soil vapor sampling events. Waterloo Membrane Samplers (WMS) will be installed at depths of 5-feet and 15-feet below grade. The WMS samplers will be retrieved 48-hours following installation for laboratory analysis. Grout borings with neat cement. Tetra Tech will contract with a CA-licensed well driller to perform this work.

5.0 HAZARD ASSESSMENT AND CONTROL

Field activities and physical features of the site may expose field personnel to a variety of health and safety hazards. This section provides information on potential hazards related to site activities and the nature of hazardous material impacts. Potential chemical, physical, and biological hazards related to site activities and conditions are discussed below.

5.1 CHEMICAL HAZARDS

The chemical contaminants of concern on this site are:

Media	VOCs
Soil	Cis-1,2-DCE PCE TCE
Soil Gas	Cis-1,2-DCE PCE TCE
Groundwater	Cis-1,2-DCE PCE TCE

Specific information on potential chemical hazards at the site is provided in **Table 5-1**, including exposure limits, anticipated exposure routes, and toxic effects. Potential routes of exposure include dermal (skin and eye) contact and absorption, inhalation, and ingestion. Dermal contact and accidental ingestion can occur because of improper decontamination or PPE usage. Inhalation can occur because of airborne contaminants (either vapors or dusts) generated or released during site activities. The chemicals may also contaminate equipment, vehicles, instruments, and personnel.

The Safety Data Sheets (SDS) included in **Appendix C** to this HASP summarize health and safety information for hazardous materials that will be brought to the site, such as treatment chemicals, laboratory reagents, decontamination solutions, and sample preservatives.

TABLE 5-1 CHEMICAL HAZARDS (*list major and toxic COCs*)			
Chemical	Exposure Limits	Routes of Entry	Toxic Effects
Tetrachloroethene (PCE)	PEL = 100 ppm TLV = 25 ppm IDLH = 150 ppm	Inhalation, skin absorption, ingestion, skin and/or eye contact	irritation eyes, skin, nose, throat, respiratory system; nausea; flush face, neck; dizziness, incoordination; headache, drowsiness; skin erythema (skin redness); liver damage; [potential occupational carcinogen]
Trichloroethene (TCE)	PEL = 25 ppm TLV = 10 ppm IDLH = 1,000 ppm	Inhalation, skin absorption, ingestion, skin and/or eye contact	irritation eyes, skin; headache, visual disturbance, lassitude (weakness, exhaustion), dizziness, tremor, drowsiness, nausea, vomiting; dermatitis; cardiac arrhythmias, paresthesia; liver injury; [potential occupational carcinogen]
Cis-1,2-DCE	PEL = 200 ppm TLV = 200 ppm IDLH = 1,000 ppm	inhalation, ingestion, skin and/or eye contact	irritation eyes, respiratory system; central nervous system depression

Notes:
ACGIH American Conference of Governmental Industrial Hygienists
Ca Carcinogen
IDLH Immediately dangerous to life or health (NIOSH)
NL Not listed
OSHA Occupational Safety and Health Administration
PEL Permissible exposure limit (OSHA legal limit)
ppm Part per million
STEL Short Term Exposure Limit
TLV Threshold Limit Value (ACGIH recommended value)

Exposure to the Contaminants of Concern (COC) will be prevented through the implementation of applicable Tetra Tech safe work practices (**Appendix B**) including avoiding contact with media (soils, groundwater, etc.), working from an upwind location, screening with real-time direct-reading instruments, use of PPE, minimizing the generation of dust, proper decontamination, and hand washing prior to conducting hand to mouth activities.

A minimum of two project personnel (the “buddy” system) is required when Level C PPE or higher is required to protect against chemical exposures via inhalation or dermal contact/absorption.

5.2 PHYSICAL HAZARDS

Physical hazards associated with site activities present a potential threat to onsite personnel. The following physical hazards may be present during the performance of site activities:

- Excessive noise (> 85 dBA)
- Slips, trips, and falls
- Traffic and heavy equipment hazards
- Manual lifting/material handling
- Pinch/compression points
- Heat stress
- Underground utilities
- Overhead power lines and structures
- Power and hand tools
- Suspended loads

Site-specific physical hazards include the following:

- Drilling/excavation/trenching activities.
- Installation of a soil vapor extraction system with power drop.
- On-site traffic associated with haul trucks.

Tetra Tech SWPs for protection against these physical hazards are provided in **Appendix B**.

A minimum of two project personnel (the "buddy" system) is required for the following hazardous operations or site conditions:

- Electrical work
- Working over or near water
- Heavy lifting (pumps and hoses)
- Excavation work
- Instances of extreme heat illness risk
- Instances of extreme hypothermia risk
- Confined space entry
- Working at heights/fall hazard

5.3 BIOLOGICAL HAZARDS

The Site is located within the City of Rancho Cordova and has been razed. Native vegetation (weeds) has grown across the former building footprints on the west half of the Site, and through cracks in the asphalt paved areas that remain, with the east half remaining vegetated. Therefore, biological hazards will be limited to urban animals such as rats, raccoons, possums, and feral cats and dogs that may be encountered during field operations. Personnel should look for signs of animal activities (i.e., tracks, foraging areas, etc.) and avoid those areas, where possible. Biting or stinging insects and spiders (e.g., fleas, mosquitos, etc.) may also be a potential concern.

Homeless persons have also been seen on-Site and residing in vehicles parked along La Loma Avenue.

For purposes of this HASP, site personnel are categorized as Class B in the Bloodborne Pathogens Program, which pertain to jobs where required tasks do not, but could involve exposure to blood, bodily fluids, or tissues – for example, in the event first aid or CPR is administered. The implementation of Universal Precautions will minimize the chance of contracting blood borne disease.

The Tetra Tech Safe Work Practice for Biohazards is provided in **Appendix B**.

5.4 TASK HAZARD ANALYSIS SUMMARY

Table 5-2 provides a task hazard analysis matrix of the planned field activities listed in Section 4.0 for quick identification of chemical, physical, and biological hazards that may be encountered as part of site conditions and that are inherent to one or more tasks. **Table 5-3** provides a detailed list of required control measures for each site and task hazard listed in Table 5-2. The table also refers to Tetra Tech Safe Work Practices (SWP) which have been developed to address many common health and safety hazards. The SWPs must be reviewed prior to mobilization for understanding and hazard control planning purposes. The applicable SWPs should also be reviewed as part of the daily tailgate safety meeting to focus on that day's planned work and associated hazards.

TABLE 5-2
TASK HAZARD ANALYSIS MATRIX

	TASKS				
HAZARDS	**USA/Utility Clearance**	**Any Drilling Activities (pre- and post-excavation)**	**Excavation Related Activities (excavation, stockpiling, stockpile sampling, backfilling)**	**Chemical Oxidant Applications (soil mixing or injections)**	**Temporary Soil Vapor Extraction System Installation and Operation**
Exposure to COCs/ airborne dust		X	X	X (oxidant dust)	
Heavy Equipment		X	X	X	X
Vehicle Traffic		X	X	X	X
Excessive Noise		X	X	X	X
Pinch/compression points		X	X	X	
Power/hand tools		X	X	X	
Sun (UV) exposure	X	X	X	X	X
Heat Stress (depending on season)		X	X	X	X
Slips, trips, falls	X	X	X	X	X
Underground utilities		X	X		X
Manual lifting/ material handling		X	X	X	X

TABLE 5-3
HAZARD CONTROL SUMMARY

Potential Hazard	Controls
Exposure to COCs	1. Stand upwind of chemical products (i.e oxidant dust)/COC sources whenever possible. 2. Minimize direct contact and contact time with contaminated media. 3. Do not consume food/drink, apply cosmetics or smoke in work areas. 4. Wear assigned PPE (minimum modified Level D). 5. Use direct-reading monitor (PID) to assess total VOCs at worker breathing zone and at source. Adhere to prescribed action levels. 6. Review chemical hazard information on chemical and physical properties, toxic effects, and exposure limits. 7. Promptly report any encounter of unknown materials, strong odors, free product, and any possible signs or symptoms of chemical exposure.
Heavy Equipment	1. Review SWP 5-7 in Appendix B. 2. Wear ANSI Class 2 or higher reflective safety vest. 3. Maintain line of vision with operator. Use established hand signals. 4. Keep a safe distance (swing radius + boom).
Vehicle Traffic	1. Review TT program DCN 4-4. 2. Wear ANSI Class 2 or higher reflective safety vest. 3. Use cones, flags, barricades, caution tape and signage to define work area and warn oncoming traffic (per Work Zone Plan). 4. Use vehicle with flashers/arrowboard/strobe to warn/direct traffic (not applicable). 5. Engage police escort for high-traffic locations (not applicable).
Excessive Noise (> 85 dBA)	1. Obey posted signage for areas requiring hearing protection. 2. Wear required hearing protection when noisy equipment such as drill rig, jackhammer, cut saw, air compressor, blower, generator, etc. is operating onsite. 3. Use rule of thumb to know when to use hearing protection (if you must raise your voice to be heard at arm's length.
Heat Stress	**1.** Follow SWP 5-15 for heat stress. Follow TT Procedures for Heat Illness Prevention.**!** 2. Pre-hydrate and stay hydrated. Fill out and comply with TT heat Illness Prevention Checklist. Avoid alcohol, salt, and caffeine. Eat more fruit and vegetables. 3. Provide and use shade pursuant to Procedures for Heat Illness Prevention 4. Acclimate slowly. Take rest breaks as needed in shade or air-conditioned space. 5. Wear cotton, light-colored clothing, and cooling garments (dew rags). 6. Schedule work for cooler parts of the day (early AM/late PM).

TABLE 5-3 HAZARD CONTROL SUMMARY	
Potential Hazard	Controls
	7. Check oral temperature and pulse if early signs and symptoms appear (flushed skin, fatigue, dizziness, nausea, headache). 8. Get IMMEDIATE medical attention if heat stroke is suspected.
Slips, trips, falls (STF)	1. Preview work area to identify site hazards and correct promptly. If not possible, place barricades/caution tape and communicate locations to all onsite workers. 2. Wear sturdy safety boots with non-skid sole and good tread for traction. 3. Avoid wet, slick, and icy surfaces. Dry, cover or provide friction surface for safe passage OR use alternate route.
Underground utilities	1. Refer to SWP 5-35. 2. Conduct utility clearance with One Call System (811) for public areas and third-party contractor for private property. 3. Railroads: Before any DIGGING near Client signals, obtain proper clearance and instructions from the Local Signals and Communications Supervisor (not applicable).
Material handling/ manual lifting	1. Review SWP 5-19. 2. Use mechanical lifting device or a lifting aid where needed. 3. Plan the lift. Check route for clearance. 4. Bend at the knees and use leg muscles when lifting. 5. Use the buddy system when lifting heavy (> 35 lbs.) or awkward objects. 6. Do not bend or twist the body while lifting.

6.0 SITE CONTROL

To control the impact and spread of contamination and prevent employee exposures to chemical and physical hazards during site operations, onsite work areas may be divided into an exclusion zone, a decontamination zone, and a support zone. Work and support areas will be established based on necessary security measures, ambient air data, and site-specific conditions.

Access to the exclusion and decontamination zones will be restricted to authorized personnel. Any visitors to these areas must present proper identification and be authorized to be on site. The Tetra Tech SSC will identify work areas that visitors or personnel are authorized to enter and will enforce site control measures.

The following sections describe the exclusion zone, the decontamination zone, and the support zone as well as procedures to be followed in each.

The entire Site is secured by a gated chain link fence; thus no other vehicle or pedestrian traffic will be on-Site.

6.1 WORK ZONES

6.1.1 Exclusion Zone

An Exclusion Zone will be established at each intrusive operation (e.g., drilling, well abandonment, excavation) and waste staging area (soil stockpile). Exclusion zone size and dimensions will vary based on activities. The perimeter of the exclusion zone and an appropriate radius around work task areas will be demarcated by a physical barrier, such as barricade tape or traffic cones, to restrict access. Signs will be posted to inform and direct site personnel and site visitors.

A daily roster with the date of each person's entrance into the exclusion zone; the person's name, signature, and organization; and the time of entry and exit will be kept for all personnel working in the zone. Visitors will not be permitted to enter the exclusion zone without proper qualifications, equipment, and Tetra Tech SSC authorization and escort.

Exclusion zones will remain marked until the SSC has evaluated the restoration effort and has authorized changing the zone status.

6.1.2 Decontamination Zone

This zone will occur at the interface of the Exclusion Zone and the Support Zone and will provide for the transfer of construction materials and equipment, the decontamination of transport vehicles handling contaminated soils prior to entering the Support Zone, and the decontamination of personnel, PPE, and equipment prior to entering the Support Zone. Access to this Zone will be restricted to personnel who meet all HAZWOPER training and medical surveillance requirements and have the required PPE. No food or drink consumption or smoking is permitted in this Zone.

6.1.3 Support Zone

The support zone will consist of any uncontaminated and nonhazardous part of the site and should be situated in an area generally upwind of any exclusion zone whenever possible. The Support Zone for this project will include a staging area where site vehicles can be parked, equipment will be unloaded, and where food and drink containers will be maintained. The support zones will be established in clean areas of the site. Site visitors not meeting training, medical surveillance, and PPE requirements must stay in the support zone.

For this Site, the entire Site is fenced and thus serves as the Exclusion Zone.

6.2 SITE SECURITY AND SITE VISITORS

Tetra Tech will retain control over the active operational areas. The SSC will serve as a focal point for site personnel and will serve as the final line of security for the work areas. All work will cease in the event of unauthorized personnel entering the exclusion zone. Work will remain suspended until the unauthorized visitor can be removed. Local police may be contacted to remove unauthorized persons who refuse to leave the Site. The SSC or designee will serve as the primary enforcement contact for removing unauthorized visitors.

All authorized visitors will generally gain initial access to the site by coordinating with the Tetra Tech project manager. Once onsite, all visitors entering the Site will be required to receive the site-specific training, complete the sign-in form, and will be escorted at all times. All visitors are required to observe the personal protective equipment and site restrictions in effect at the time of their visit.

Authorized site visitors may include:

- Personnel invited to observe or participate in operations by Tetra Tech
- Federal, state and local regulatory personnel (i.e. Environmental Protection Agency [EPA], OSHA, RWQCB)
- Property Owners
- Client representatives
- Other authorized visitors

6.3 COMMUNICATIONS

Successful communication between field teams and personnel in the support zone is essential. The following communication systems will be available during site activities:

- Cellular telephones

The hand signals listed below can be used by site personnel in emergency situations or when verbal communication is difficult.

Signal	Definition
Hands clutching throat	Out of air or cannot breathe
Hands on top of head	Need assistance
Thumbs up	Okay, I am all right, or I understand
Thumbs down	No or negative
Arms waving upright	Send backup support
Gripping partner's wrist	Exit area immediately

7.0 PERSONAL PROTECTIVE EQUIPMENT

The level of personal protection to be used for work tasks at the Site have been selected based on known or anticipated physical hazards; types and concentrations of contaminants that may be encountered on site; and contaminant properties, toxicity, exposure routes, and matrixes.

Modified Level D PPE is the minimum acceptable level required for routine work at the Site, which includes the following items:

- Standard work clothes – long sleeves, long pants, or coveralls
- Chemical-resistant clothing (such as Tyvek® or Saranex® coveralls) (optional)
- Leather work gloves (physical hazards)
- Chemical-resistant gloves: nitrile
- Safety boots with steel toe protection
- Disposable boot covers or chemical-resistant outer boots (optional)
- Safety glasses with side shields or goggles
- Hard hat
- ANSI Class 2 or better high-visibility safety vest
- Hearing protection (ear plugs or muffs with minimum 25 dB noise reduction rating)
- Any addition PPE recommended by the chemical oxidant (KMnO4) manufacturer (i.e. respiratory protection).

Personnel must maintain proficiency in the use and care of PPE that is to be worn. Only PPE that meets the following ANSI standards are to be worn:

- Eye protection – ANSI Z87.1-1989
- Head protection – ANSI Z89.1-1986
- Foot protection – ANSI Z41-1991

8.0 DECONTAMINATION PROCEDURES

Decontamination is the process of removing or neutralizing contaminants on personnel or equipment. When properly conducted, decontamination procedures protect workers from contaminants that may have accumulated on PPE, tools, and other equipment. Proper decontamination also prevents transport of potentially harmful materials to uncontaminated areas. Personnel and equipment decontamination procedures are described in the following sections.

8.1 PERSONNEL DECONTAMINATION

Personnel decontamination at the site will be limited by using disposable PPE whenever possible. Personnel and PPE will be decontaminated with potable water or a mixture of detergent and water. Liquid and solid wastes generated during decontamination will be collected and drummed.

For routine activities, the following decontamination procedures will be followed:

- ***Disposable PPE***: nitrile gloves will be placed in a plastic disposal bag.
- ***Non-Disposable PPE***: leather or other work gloves and boots are to be decontaminated as necessary by washing with a Liquinox® or Alconox® solution and rinsing them with hot water. Remove and retain neoprene boots for reuse, if possible.
- Thoroughly wash the hands and face with water and soap.

Used, disposable PPE will be collected in sealable containers and will be disposed of in accordance with procedures described in the Work Plan (pending characterization, if necessary). Personnel decontamination procedures may be modified as necessary while on site.

8.2 EQUIPMENT DECONTAMINATION

Decontamination of all sampling and field monitoring equipment used during site activities will be required. Equipment decontamination procedures are based on guidelines appropriate for low-level contamination. Additional procedures may be found in EPA SOP No. 2006, titled “Sampling Equipment Decontamination” dated August 11, 1994.

Sampling and field equipment will be decontaminated before and after each use as described below.

- Scrub the equipment with a brush in a bucket containing Liquinox® or Alconox® solution and distilled water.
- Triple-rinse the equipment with distilled water and allow it to air-dry.
- Reassemble the equipment and place it on plastic or aluminum foil in a clean area. If aluminum foil is used, wrap the equipment with the dull side of the aluminum foil toward the equipment.

Other field equipment can be decontaminated with hot water and/or protected from exposure by covering with disposable covers such as plastic to minimize required decontamination activities. Wastewater from equipment decontamination activities will be transferred to the onsite treatment plant for treatment and disposal.

9.0 AIR MONITORING

Real-time direct-reading monitoring instruments will be used to evaluate source areas (i.e., sample locations, wells, excavation areas, etc.), worker breathing zones, and the Site perimeter. A Photoionization Detector (PID) with a 10.6 eV lamp will be used at each source location to detect the presence of any VOCs, as well as real-time perimeter dust monitors. Background levels will be determined and noted prior to recording the level at the monitored points. The background readings will be taken away from any areas of potential contamination. These readings, any influencing conditions (i.e., weather, temperature, humidity) and site location must be documented in the field operations logbook or other site documentation (e.g., sample log sheet).

The instruments will be maintained, and field calibrated by qualified field personnel (SSC). Operational checks and field calibration will be performed on all instruments each day prior to their use according to manufacturer's recommendations (for example, the PID must be field calibrated daily, and an additional field calibration must be performed at the end of each day to determine any significant instrument drift). Periodic operational checks or re-calibration using calibration gas should be performed if elevated readings are noted during the day to ensure there is limited instrument drift. These operational checks and calibration efforts will be performed in a manner that complies with the employee's health and safety training, the manufacturer's recommendations, and with the applicable manufacturer standard operating procedure. All calibration efforts must be documented.

Figure 9-1 is provided for documenting these calibration efforts. This information may instead be recorded in a field operations logbook, provided that the information specified in Figure 9-1 is recorded. This required information includes the following:

- Date calibration was performed
- Individual calibrating the instrument
- Instrument name, model, and serial number
- Any relevant instrument settings and resultant readings (before and after) calibration
- Identification of the calibration standard (lot no., source concentration, supplier)
- Any relevant comments or remarks

Real-time air monitoring frequency will be every 60 minutes after the background level is established and prior to a change in operations that might increase the risk of exposure.

An Air and Dust Monitoring Plan has been prepared for this Site, detailing additional monitoring tasks.

FIGURE 9-1

DOCUMENTATION OF FIELD CALIBRATION

SITE NAME: Vacant Site – Rancho Cordova Civic Center site PROJECT NO.: 117-9040

Date of Calibration	Instrument Name and Model	Instrument I.D. Number	Person Performing Calibration	Instrument Settings		Instrument Readings		Calibration Standard (Lot # _____)	Remarks/ Comments
				Pre-Calibration	Post-Calibration	Pre-Calibration	Post-Calibration	PID: 10 ppm Isobutylene in air	

10.0 CONFINED SPACE ENTRY

It is not anticipated, under the proposed scope of work, that confined space and permit-required confined space activities will be conducted. **Therefore, personnel under the provisions of this HASP are not allowed, under any circumstances, to enter confined spaces**. Entry is defined as breaking the plane of the opening to the confined space with any body part.

Activities will include oversight of excavation and trenching for utilities; resulting trenches may represent confined spaces. Tetra Tech employees will not be entering the trenches or other potential confined spaces. Any sampling of soil from excavations or trenches will performed by sampling soil from backhoe/excavation bucket. The resulting soil excavation sidewalls will be sloped 1:1, resulting in a safe excavation.

However, should future work require confined space entry, Tetra Tech and subcontractor personnel conducting the entry will first receive confined space entry training for the category of confined space(s) to be entered (permit-required or non-permit-required) and for the designated role each employee will play in the entry operation (i.e., attendant, entrant, supervisor, or rescue). Training will be in accordance with the revised OSHA permit-required confined space entry (CSE) standard (29 CFR 1910.146). The purpose of the CSE procedure is to protect employees from potentially hazardous environments and to facilitate immediate rescue in an emergency.

A confined space is defined as an area which has the following characteristics:

- Is large enough and so configured that an employee can bodily enter and perform assigned work.
- Has limited or restricted means for entry or exit (for example, tanks, manholes, sewers, vessels, silos, storage bins, hoppers, vaults, and pits are spaces that may have limited means of entry).
- Is not designed for continuous employee occupancy.

Additionally, a Permit-Required Confined Space must also have one or more of the following characteristics:

- Contains or has a potential to contain a hazardous atmosphere.
- Has an internal configuration such that an entrant could be trapped or asphyxiated by inwardly caving walls or by a floor that slopes downward and tapers to a smaller cross-section.
- Contains any other recognized, serious, safety or health hazard.

11.0 TRAINING AND MEDICAL SURVEILLANCE REQUIREMENTS

11.1 INTRODUCTORY/REFRESHER/SUPERVISORY HAZWOPER AND OSHA TRAINING

All onsite personnel who may be exposed to hazardous conditions, including Tetra Tech and subcontractor personnel and site visitors who will participate in onsite activities, will be required to meet training requirements outlined in 29 CFR 1910.120, "Hazardous Waste Operations and Emergency Response." All general site workers must have completed the 40-hour initial HAZWOPER training Project managers and field supervisors will have received 8-hour HAZWOPER Supervisor training and all site personnel must have current 8-hour HAZWOPER annual refresher training. At least one site person must be current in basic first aid, CPR and bloodborne pathogens (1910.1200). All Tetra Tech site personnel have received the updated hazard communication/GHS training as of the December 1, 2013 OSHA due date.

Additional required client-required training for onsite personnel includes: **None**

Documentation of 40-hour initial HAZWOPER, 8-hour HAZWOPER supervisor, and annual 8-hour HAZWOPER refresher training, as well as site-specific training are maintained by the PM and by the SSC, either on-Site or at the Tetra Tech office. Copies of certificates or other official documentation will be used to fulfill this requirement.

Depending on the work to be performed by a subcontractor, additional OSHA-required health and safety training may include confined space entry operations, excavation safety, and Construction Competent Person (by specialty). The selected excavation contractor will have a Competent Person to design the soil excavation work and perform routine inspections of progress. Tetra Tech subcontractors must provide copies of training certificates for all subcontractor personnel participating in site activities, as requested.

11.2 SITE-SPECIFIC TRAINING

11.2.1 HASP Review

Tetra Tech will provide site-specific training to all Tetra Tech and subcontractor personnel who will perform work at the Site. Site-specific training will also be provided to all authorized site visitors who wish to enter the exclusion zones to perform functions that may or may not be directly related to Site or Tetra Tech operations. All personnel and visitors entering the site will be required to review this HASP and sign the Compliance Agreement Form (HSP-4).

Site-specific training will include:

- Contents of this HASP
- Emergency response procedures (evacuation and assembly points)
- Names of designated personnel responsible for site health and safety
- Site and operation hazards and required controls
- PPE requirements
- Spill response procedures
- Review of the contents of relevant SDSs

11.2.2 Daily Safety Tailgate Meetings

The Tetra Tech SSC will conduct a brief meeting daily to discuss operations planned for that day, which must be attended by all onsite Tetra Tech and subcontractor personnel. The daily safety meeting will address:

- Expected conditions at the site;
- Daily activities;
- Job hazard analysis review;
- Stop-work authority;
- Safety deficiencies previously observed and status of corrective action;
- Any changes in the emergency procedures; and,
- Personnel bee allergies or medical conditions which are important for coworkers to be aware.

The meeting discussions will be documented on the Daily Tailgate Safety Meeting (Form HST-2) (**Appendix A**), which will be signed daily by all Site workers. All safety-critical questions and the SSC responses/directions will be documented on this Form.

11.3 MEDICAL SURVEILLANCE

All Tetra Tech and subcontractor personnel involved in on-Site activities must participate in a medical surveillance program as required by 29 CFR 1910.120(f). Tetra Tech has established an employee medical surveillance program with CORE Occupational Health. Employee HAZWOPER medical clearance and respirator clearance reports are maintained at the Corporate Health and Safety office and by the Tetra Tech Rancho Cordova, California office health & safety coordinator. Subcontractors must provide evidence of current medical clearance for HAZWOPER sites. No additional site-specific medical monitoring is required for activities at this site.

11.4 SITE VISITORS

Site visitors wishing to enter the exclusion zone will be required to produce the necessary information supporting clearance to the site, including information attesting to training and medical surveillance.

12.0 SPILL PREVENTION AND CONTAINMENT PROGRAM

12.1 SCOPE AND APPLICATION

This program applies to the single or aggregate accumulation of bulk storage materials (over 55-gallons). As the classification of certain materials such as Investigation Derived Waste (IDW) is unknown, these materials will be treated as hazardous, pending laboratory certification to the contrary. The types of materials for which this program will apply are as follows:

- IDW such as decontamination fluids, soil cuttings, and purge and well development waters, concrete coring water, etc.
- Resource Storage – Limited fuel and lubricant storage (in equipment and trucks). No bulk storage of fuels will be conducted on-site. Equipment will be serviced and fueled by an off-site vendor as needed.

The spill containment and control will be engaged any time there is a release of the above-identified materials from a containment system or vessel to minimize associated hazards.

12.2 POTENTIAL SPILL AREAS

Potential spill areas will be periodically monitored in an ongoing attempt to prevent and control further potential contamination of the environment. Currently, limited areas are vulnerable to this hazard including:

- Bare soil areas adjacent to the asphalt paved parking areas (i.e. diesel fuel release from heavy equipment)

The primary substances stored or handled onsite with the potential to be released are soil treatment chemicals (oxidants). The potential for these substances to be released is minimal as they will be intentionally mixed into backfill soil or injected into the subsurface as an approved form of soil treatment. A ruptured fuel tank or fuel line on a drill rig or piece excavation equipment is possible, but not expected.

Safety Data Sheets[1] (SDS) for all hazardous substances/materials brought onsite are included in the HASP (**Appendix C**) and should be consulted in case of a spill or release. The two main goals will be to contain and clean up any spills.

It is anticipated that the IDW (pre-excavation soil borings) generated by this scope of work will be placed in the resulting soil stockpile area and profiled. The results of sample analyses will determine disposal and/or oxidant treatment methods when the soil is returned to the excavation.

[1] Formerly Material Safety Data Sheets (MSDSs)

12.3 CONTAINMENT AREAS

To facilitate leak and spill inspection and response, and to minimize potential hazards which may impact the integrity of the storage containers, the staging area for these substances will be structured as follows:

12.3.1 IDW

Currently, all soil generated during the scope of the work will be profiled, treated with oxidant if needed, and returned to the excavation. Any construction related debris (asphalt, concrete, discovered piping) and well abonnement casing/vault boxes will be transported off-site for recycling or disposal.

12.4 MATERIALS HANDLING

To minimize the hazards associated with moving drums and containers (i.e., lifting, pinch and compression points), material handling will be supported in the following manner:

- A drum cart with pneumatic tires will be required if drums are to be moved at the IDW storage area. This cart will be used to relocate drums within the staging and satellite storage location.

Other means of material handling will be evaluated by the SSC based on their ability to minimize or eliminate material handling hazards.

12.5 LEAK AND SPILL DETECTION

To establish an early detection of potential spills or leaks, a periodic walk-around by the personnel staging materials in the work area will be conducted during working hours to visually determine that storage vessels or excavation equipment is not leaking, and that soil piles are appropriated covered and secured. If a leak is detected, or a soil pile is uncovered, the Field Supervisor will be notified, and the Spill Containment/Control Response Plan as specified in **Section 12.8** will be engaged. Inspections will be documented in the project logbook.

12.6 PERSONNEL TRAINING

Personnel will be instructed in the procedures for incipient spill prevention, containment, and collection of hazardous materials in the site-specific training. The Field Supervisor and/or the SSC will serve as the Spill Response Coordinators for this operation, should the need arise. Should an incidental spill occur, these individuals will engage incident response measures. It will be the responsibility of these individuals to insure they have the supplies and equipment specified in Section 12.7 to support this function. Insufficient supplies or resources should be reported to the Field Supervisor.

12.7 SPILL PREVENTION AND CONTAINMENT EQUIPMENT

The following represents the minimum equipment that will always be maintained at the staging areas for the purpose of supporting this Spill Containment/Control Plan.

- Sand, clean fill, vermiculite, or other non-combustible absorbent (Oil-dry)
- Extra drums should the need to transfer material from leaking containers arise.
- Pumps (Gas or Electric as necessary for transferring liquids from leaking containers)/tubing

- Shovels, rakes, and brooms
- Container labels
- Personal Protective Equipment (nitrile outer gloves, splash face shield, impermeable over-boots, rain suit)
- General spill prevention equipment such as a shovel, broom, 55-gallon Department of Transportation (DOT) drum UN 1A2, and absorbent material will be maintained onsite to respond to any spill based on the nature of the task to be performed.

12.8 SPILL CONTAINMENT/CONTROL RESPONSE PLAN

This section describes the procedures the Tetra Tech field personnel will employ upon the detection of a spill or leak.

- Notify the SSO or FOL immediately upon detection of a leak or spill, or uncovered soil stockpile.
- Employ the PPE stored at the staging area. Initiate incidental spill response measures. Take immediate actions to stop the leak or spill by plugging or patching the container or raising the leak to the highest point in the vessel. Spread the absorbent material in the area of the spill, covering it completely.
- Transfer the material to a new vessel; collect and containerize the absorbent material. Label the new container appropriately. Await analyses for treatment and disposal options.
- Re-containerize spills, including 2-inch of top cover (if over soils) impacted by the spill. Await test results for treatment or disposal options.
- If the spill cannot be controlled or contained, initiate emergency alerting procedures for that area to remove non-essential personnel.
- Recover the soil stockpiles as needed during windy conditions.

It is not anticipated that a spill will occur that the field crew cannot handle. Should this occur, notification of the appropriate emergency response agencies will be carried out by the Field Supervisor or SSC in accordance with the procedures specified in Section 13.0.

13.0 EMERGENCY ACTION PLAN

13.1 INTRODUCTION

This section describes emergency response planning procedures to be implemented for the site. This Emergency Action Plan conforms to the requirements of 29 CFR 1910.38(a), as allowed in 29 CFR 1910.120(I)(1)(ii). The following sections discuss pre-emergency planning, personnel roles and lines of authority, emergency recognition and prevention, evacuation routes and procedures, emergency contacts and notifications, hospital route directions, emergency medical treatment procedures, fire or explosion, spills or leaks, emergency equipment and facilities, and reporting.

13.2 PRE-EMERGENCY PLANNING

Initial hazard/risk assessment efforts have identified exposure to physical, chemical, and biological hazards and fire as the most probable emergencies that could be encountered during activities at the Site. To minimize or eliminate the potential for these emergency situations and to reduce the severity of any potential incident, pre-emergency planning activities associated with this project include the following:

- Coordinate with the Site project manager and/or local emergency response personnel to ensure that Tetra Tech emergency actions are compatible with existing emergency response procedures
- Establish and maintain information at the project staging area (e.g., support zone) for easy access in the event of an emergency:
    - Tetra Tech HASP
    - Logbook identifying personnel onsite each day
    - Emergency Contacts List (multiple copies; and posted)
    - Maps to Hospital and Clinic Physician (copies should be placed in each vehicle)
    - Chemical Inventory (used onsite), with Safety Data Sheets (SDSs) (**Appendix C**)

During the project kickoff meeting and daily tailgate safety meetings, all onsite employees will be trained in and reminded of the provisions of this Section, site communication systems, and site evacuation routes. The emergency response provisions will be reviewed on a regular basis by the Tetra Tech SSC and will be revised, if necessary, to ensure that they are adequate and consistent with prevailing site conditions.

13.3 PERSONNEL ROLES AND LINES OF AUTHORITY

The Tetra Tech SSC has primary responsibility for responding to and correcting emergency situations and for taking the appropriate measures to ensure the safety of site personnel and the public. The SSC will coordinate responding to emergencies. Possible actions may include evacuation of personnel from the site area. The SSC is also responsible for ensuring that corrective measures have been implemented, appropriate authorities have been notified, and follow-up reports have been completed.

The SSC will also be responsible for the following:

- Identifying a chain of command for emergency action
- Educating site workers to the hazards and control measures associated with planned activities at the Site, and providing early recognition and prevention where possible
- Periodically perform practice drills as appropriate to ensure site workers are familiar with incidental response measures.
- Provide the necessary equipment to safely accomplish identified tasks.
- Provide first aid kit, emergency eye wash, fire extinguishers and spill kits and place them in strategic locations for quick access.

Individual subcontractors are required to cooperate with the SSC, within the parameters of their scopes of work.

Project personnel are required to report all serious near misses, injuries, illnesses, spills, releases, fires, explosions, equipment or property damage, and motor vehicle accidents to the SSC. The SSC must be notified of any onsite emergencies and is responsible for ensuring that the appropriate emergency procedures described in this section are followed.

13.4 EMERGENCY RECOGNITION AND PREVENTION

Table 5-1 lists potential site chemical hazards, and Table 5-2 provides information on the health and safety hazards associated with the different tasks planned for the site. Onsite personnel will be made familiar with this information and with techniques of hazard recognition through prior health and safety training and site-specific briefings.

13.4.1 Recognition

Many chemical, physical and biological hazards that could lead to emergency scenarios are generally recognizable by visual observation. Thus, hazard identification should include pre-work and periodic 360° walk-around surveys, equipment and tool inspections, and background surveys with direct-reading air monitoring instrumentation.

The field supervisor, SSC, and subcontractor supervisor will be responsible for performing surveys of work areas prior to initiating site operations and periodically while operations are being conducted. Site surveys will be conducted at all work locations prior to the commitment of resources and personnel. This will be done for the purpose of removing or barricading identified physical hazards. Additionally, site surveys will be conducted at least once a week at all resource/staging areas. All site surveys conducted during this effort will be documented in the Project or Field Operations Logbook and survey findings will be discussed with field personnel as part of the tailgate safety meetings. In addition, site personnel will be responsible for reporting hazardous situations. Where potential hazards exist, Tetra Tech will initiate control measures to prevent adverse effects to human health and the environment.

13.4.2 Prevention

Tetra Tech and subcontractor personnel will minimize the potential for emergencies by following the direction and guidance provided within this HASP as well as the SWPs and applicable OSHA regulations as they apply to the tasks to be conducted. Additionally, prevention will be facilitated through employment of offensive and defensive measures in removing or denying access to hazards identified through the site survey activities. Preparation through acquiring and placing emergency equipment in the work areas will also aid in controlling incidents from escalating into an emergency.

The above actions will provide early recognition for potential emergency situations. Should an incident occur, Tetra Tech will take measures in the beginning stages to control these situations. However, if the field supervisor and the SSC determine that an incident has progressed to a serious emergency, Tetra Tech will withdraw and notify the appropriate response agencies listed in **Table 13-1.**

13.5 EVACUATION PROCEDURES AND PLACES OF REFUGE

An evacuation will be initiated whenever specified hazard controls are insufficient to protect the health, safety or welfare of site workers. Specific examples of conditions that may initiate an evacuation include, but are not limited to the following:

- Severe weather conditions
- Fire or explosion
- Monitoring instrumentation readings which indicate levels of contamination that are greater than instituted action levels
- Personnel showing signs or symptoms of potential exposure to site contaminants or natural stresses (e.g., heat stress, hypothermia, or snake bite)
- Injury or illness requiring medical transport and care
- Major spill or release

Field activities at the Site will involve Tetra Tech personnel working within proximity to each other; therefore, hand signals and voice commands will be sufficient to alert site personnel of an emergency. In the event of an emergency, the following procedures will be followed:

- Initiate an evacuation by hand signals or voice commands, immediately stop all activities, and report to designated refuge point. **The Site safe place of refuge will be** identified prior to the commencement of site activities within an identified area as determined by the SSC.
- Describe to the SSC (who will serve as the Incident Coordinator) what has occurred and as many details as possible
- Once all personnel have been evacuated, begin appropriate response procedures to control the situation (incipient response measures for fire, spill, and injury (first aid) and site control and security measures, as necessary.

Evacuation procedures will be discussed prior to the initiation of any site work. Evacuation routes from the site and safe places of refuge are dependent upon the location at which work is being performed and the circumstances under which an evacuation is required. Additionally, site location and meteorological conditions (i.e., wind speed and direction) may dictate evacuation routes. As a result, refuge points will be selected and communicated daily to the workers relative to the site location where work is being performed. Evacuation should always take place in an upwind direction from the site.

Whenever possible, the safe place of refuge will also serve as the telephone communications point for that area. During an evacuation, personnel will remain at the refuge location until directed otherwise by the SSC or the onsite Incident Commander of the Emergency Response Team. The SSC will take a head count at this location to account for and to confirm the location of all site personnel. Emergency response personnel will be immediately notified of any unaccounted personnel.

13.6 DECONTAMINATION PROCEDURES

During an evacuation, decontamination procedures will be performed only if doing so does not further jeopardize the welfare of site workers. However, it is unlikely that an evacuation would occur which would require workers to evacuate the site without first performing decontamination procedures. A supply of clean decon water is available at a metered fire hydrant on Site.

13.7 INITIAL RESPONSE AND EMERGENCY NOTIFICATIONS

The Tetra Tech SSC must survey the situation and avoid taking any action or delay that could endanger anyone's life. Tetra Tech personnel may perform rescue operations from emergency situations and may provide initial medical support for injury/illness requiring only "basic first-aid" level support, and only within the limits of training obtained by site personnel. Basic first-aid is considered treatment that can be rendered by a trained first-aid provider at the injury location and not requiring follow-up treatment or examination by a physician (for example: minor cuts, bruises, stings, scrapes, and burns). Personnel providing medical assistance are also required to be trained in the requirements of OSHA's Bloodborne Pathogen Standard (29 CFR 1910.1030). Medical attention above first-aid level support will require assistance from the designated emergency response agencies.

Basic first aid measures for chemical exposures and non-medical initial responses are summarized below:

Chemical Exposure	***Skin Contact:*** ▪ Remove contaminated clothing. ▪ Wash immediately with water. ▪ Use soap if available. ▪ If irritation persists, seek medical attention. ***Eye Contact:*** ▪ ***Flush eyes with water for 15 minutes.*** ▪ ***If symptoms persist, seek medical attention.*** ***Inhalation:*** ▪ ***Remove person from contaminated atmosphere.*** ▪ ***If necessary, provide CPR. Seek medical attention.*** ▪ ***DO NOT ENTER A CONFINED SPACE TO RESCUE SOMEONE WHO HAS BEEN OVERCOME UNLESS PROPERLY TRAINED/EQUIPPED AND ALL CSE PROTOCOLS ARE FOLLOWED WITH QUALIFIED ATTENDANT ONSITE.*** ***Ingestion:*** ▪ ***NEVER induce vomiting on an unconscious person.*** ▪ ***NEVER induce vomiting when ingestion of acids, alkalis, or petroleum products is suspected.*** ▪ ***Contact the poison control center (see Table 13-1 for telephone number).*** ▪ ***Administer CPR, if necessary. Seek medical attention.*** ***Possible Exposure Symptoms:*** • ***Headache, dizziness, nausea, drowsiness, respiratory tract, skin or eye irritation***
Snake Bite	• Follow the standard notification procedures (call 911). Notify emergency response personnel of the nature of the snake bite. • If possible, take photo of snake. • Have victim remain calm until ambulance team arrives. • Keep the bite location below the heart at all times. • Apply a pressure wrap (for extremities) just above and over the bite area. With a couple wraps of the pressure wrap in place over the bite area, apply a splint, and continue the application of the pressure wrap. The purpose for the splint is to restrict the movement of the extremity. This, along with the pressure wrap, will aid in restricting the toxins from leaving the site of the bite.
Incipient Stage Fire	• A fire that cannot be readily extinguished with one 10-pound fire extinguisher will be considered major and may require evacuation of project and/or site personnel to safe areas. • Only attempt to put out fire if you are trained in the use of the fire extinguisher, have confidence that you can put the fire out, and you have a route of escape from the fire.
Minor Spill or Leak	• Use onsite spill kit to contain/absorb and remove spilled materials. • See details on spill prevention and containment in SWP 5-47.
Major Spill or Leak	• Evacuate the affected area and relocate personnel to an upwind location. • Inform the Tetra Tech SSC, a Tetra Tech office, and a site representative immediately. • Locate the source of the spill or leak, and stop the flow if it is safe to do so. • Begin containment and recovery of spilled or leaked materials. • Notify the client and appropriate local, state, and federal agencies.

Workers who are ill or who have suffered a non-serious injury may be transported by site personnel to nearby medical facilities, provided that such transport does not aggravate or further endanger the welfare of the injured/ill person.

Personnel requiring treatment greater than first aid will constitute an emergency for which the appropriate agency must be notified. If an exposure to hazardous materials has occurred, provide information on the chemical, physical, and toxicological properties of the subject chemical(s) to medical services personnel.

If an emergency cannot be handled using onsite resources, personnel will evacuate to a safe place of refuge and the appropriate emergency response agencies will be notified. It has been determined that most potential emergency situations would be better supported by outside emergency responders. These agencies are located within a reasonable distance from the area of site operations, which ensures adequate emergency response time.

If site personnel cannot control the incident through offensive and defensive measures, the field supervisor (or SSC, if designated) will enact the following emergency notification procedures to secure additional assistance:

- Call 911 or other emergency contacts (Table 13-1) to report the emergency and provide the following information:
    - Location of emergency
    - Type of emergency
    - Number of injured personnel
    - Brief description of what occurred.

Stay on the phone and follow the instructions given by the operator. The operator will then notify and dispatch the proper emergency response agencies.

The Emergency contacts list will also be posted [*insert emergency contact list location*] and be placed in all project vehicles. In case of any emergency (e.g., injury, illness, spill/release, and fire), verbal notification to the Tetra Tech project manager must be provided as soon as possible. If project personnel determine that the situation could either directly or indirectly threaten human health or the environment, the Tetra Tech Project Manager will contact the appropriate emergency response agencies.

The nearest medical facility to the site is the Mather VA Hospital. Maps and directions to these facilities are provided in **Section 13.10** and **Section 13.11**, respectively.

For non-life-threatening incidents (e.g., muscle strains and sprains, and minor lacerations), personnel are encouraged to contact CORE **(888-449-7787**) for guidance on first aid and medical treatment. CORE may direct the affected employee to the Chartis/AIG-authorized medical clinic/physician for further evaluation of a work-related injury or illness. **The authorized doctor offices or clinics have agreed to accept workers compensation patients without an appointment.** Information for the clinic nearest to the Site is provided below:

13.8 EMERGENCY AND PERSONAL PROTECTIVE EQUIPMENT

A first aid kit, a wall-mounted eyewash station or sufficient quantity of eye wash bottles, a spill kit containing absorbent materials and polyethylene sheeting along with an empty drum and shovel to respond to small spills, and a 10-pound ABC-rated fire extinguisher will be maintained onsite at all active work locations and shall be immediately available for use in the event of an emergency. PPE used in daily activities will serve as the primary defense for all chemical and physical/biological hazards encountered. Emergency situations surpassing the level of protection offered by the prescribed PPE will constitute an emergency and require evacuation and notification of the appropriate response agency.

13.9 INCIDENT REPORTING

All emergency situations require follow-up and reporting. After the initial response (e.g., first aid, etc.) to an injury or illness has taken place or emergency responders have been notified, the incidence and details of the incident must be properly reported and documented. Within one (1) hour of occurrence, any occupational injury or illness must be reported to the HSR/Corporate Health & Safety Director at (610) 348-7197. **Appendix A** includes the Tetra Tech Incident Report (Form IR) and the Supplemental Forms A (employee injury or illness), B (property and equipment damage, spills and releases) and C (motor vehicle accidents). All applicable reports must be completed and submitted to the Tetra Tech project manager within 24 hours of an emergency. The project manager will review the report and then forward it to the Tetra Tech HSR for review. The report must include proposed actions to prevent similar incidents from occurring. The HSR must be fully informed of the corrective action process to ensure appropriate and sufficient response measures have been implemented.

TOTAL is Tetra Tech's online incident reporting system which is the preferred means of reporting incidents. Tetra Tech will use TOTAL to directly report health and safety incidents, notify key personnel, and initiate the process for properly investigating and addressing the causes of incidents, including near-miss events. An incident is considered any unplanned event that includes several types of near misses, events where no loss was incurred, or incidents that resulted in injuries or illness, property or equipment damage, chemical spills, fires, or damage to motor vehicles. Incidents must be entered into TOTAL within 24 hours of its occurrence by the PM, field supervisor, or SSC.

TOTAL is accessed from the Tetra Tech Intranet site at https://my.tetratech.com/ or from the following web address: http://totalhs.tetratech.com/.

It should be noted that "near misses" as well as actual injuries and illnesses should be reported. By identifying near miss situations, possible recommendations for preventing a recurrence can be made. Near misses should be reviewed with field personnel during the daily pre-work site briefing.

13.10 EMERGENCY ROUTE TO HOSPITAL

Before performing any site activities, Tetra Tech personnel will conduct a pre-emergency hospital run to familiarize themselves with the route to the local hospital.

Mather VA Hospital: (916) 843-7000

10535 Hospital Way, Mather, CA 95655

2.2 miles/6 minutes

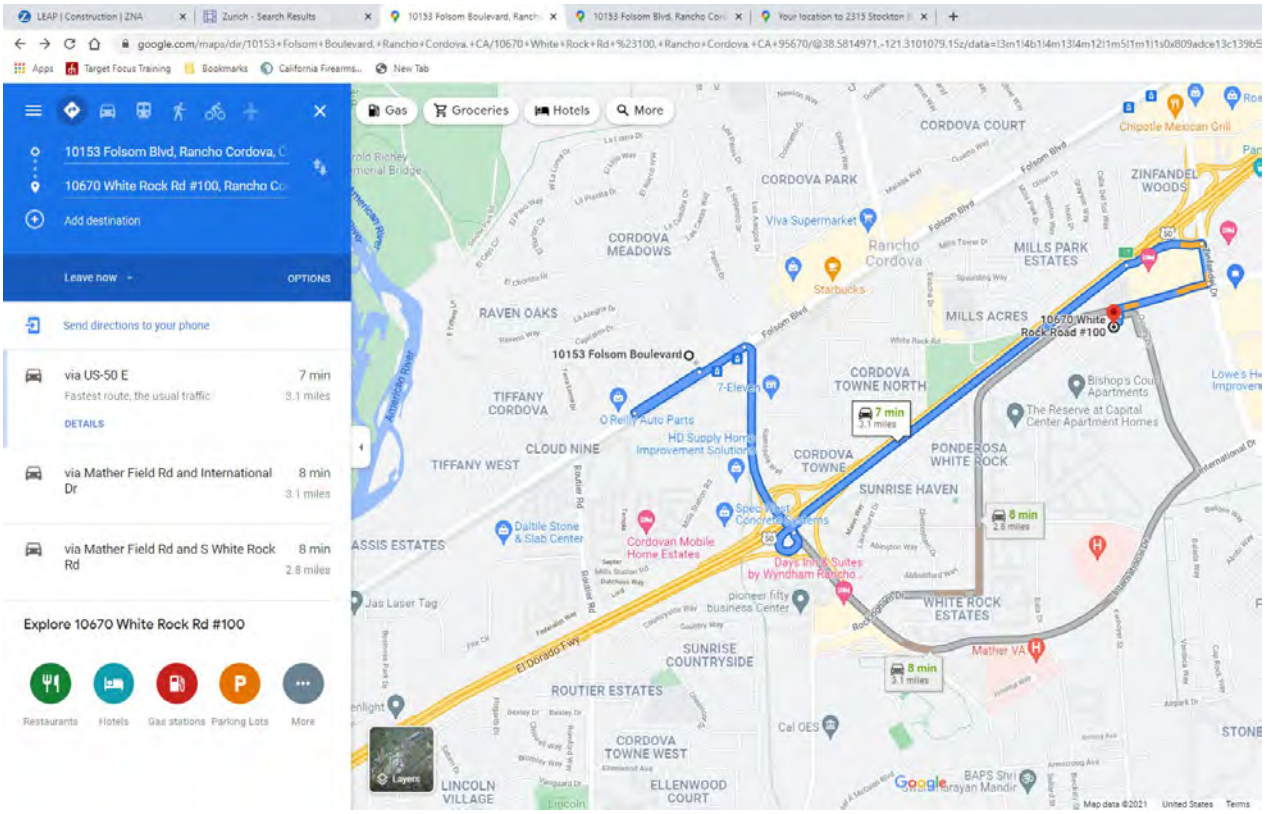
10670 White Rock Rd, Ste 100
Rancho Cordova, CA 95670

3.1 miles/7 minutes



14.0 RECORDKEEPING AND POSTINGS

The Tetra Tech SSC shall ensure the following materials/documents are maintained at the Site and used as required:

- A complete copy of this HASP with all attachments
- Incident Report forms (IR and supplemental forms A, B and C) (Appendix A)
- SDSs for all chemicals brought on site, including decon solutions, fuels, sample preservatives, calibration gases, etc. (Appendix D)
- Follow-up reports
- A full-size OSHA Job Safety and Health Poster (posted onsite for long-term projects > 1 year)
- Emergency Contacts (Table 13-1,) extra copy for posting)

14.1 MATERIALS TO BE POSTED OR ACCESSIBLE ONSITE

The following documentation is to be posted at the site for quick reference purposes:

Chemical Inventory Listing - This list represents all chemicals brought on site, including treatment chemicals, decontamination solutions, sample preservatives, fuels, calibration gases, etc. This list should be posted in a central area. **Will be in Appendix of Health & Safety Plan.**

SDSs - The SDSs should also be in a central area accessible to all site personnel. These documents should match all the listings on the chemical inventory list for all substances employed on site. It is acceptable to have these documents within a central folder and the chemical inventory as the table of contents.

The OSHA Job Safety & Health Protection Poster - This poster, as directed by 29 CFR 1903.2 (a)(1), should be conspicuously posted in places where notices to employees are normally posted. Each SSC shall ensure that this poster is not defaced, altered, or covered by other material.

Emergency Phone Numbers and Directions to the Hospital(s) - This list of numbers and the directions will be maintained at all phone communications points and in each site vehicle.

Hearing Conservation Standard (29 CFR 1910.95) - This standard will be posted anytime hearing protection or other noise abatement procedures are employed.

Placards and Labels - Where chemical inventories have been separated, because of quantities and incompatibilities, these areas will be conspicuously marked using Department of Transportation placards and 2012-updated Hazard Communication/GHS (29 CFR 1910.1200 [f]) labels.

I have read and understand the health and safety plan indicated above and agree to comply with all of its provisions. I understand that I could be prohibited from working on the project for violating any of the safety requirements specified in the plan.

Name	Signature	Employer	Date

DAILY TAILGATE SAFETY MEETING FORM

This form describes the requirements and responsibilities for implementing an incident and injury-free workplace by providing guidance on the daily tailgate safety meeting discussion.

Daily tailgate safety meetings shall be held in a safe location at the start of each work day, shift or task change. The daily tailgate safety meetings shall review the planned work activities for the day, discuss and resolve the risks and mitigations, discuss any health, safety, security and environment (HSSE) concerns and raise the HSSE consciousness of each worker before they start work.

The Field Team Leader (FTL) or Site Safety Officer (SSO) will decide on the location of the daily tailgate safety meetings based on the overall safety of the individuals attending the meeting. Maintaining minimal background noise and establishing more comfortable areas for the meeting location is also preferred. Ultimately, the weather and surrounding environment could be the most limiting factor on the location of the meeting.

For this project, the Project Manager (PM) will:

- Verify that all work activities for this project are consistent with Document Control Number (DCN) 01-05, Health and Safety Management System, as well as any associated practices and permit requirements.
- Carry out all duties specified in the Health and Safety Management System.
- Ensure that all site personnel involved in a work activity are competent and correctly prepared for the work they will perform.
- Verify or delegate the responsibility to verify that the daily toolbox meeting is carried out.

For this project, the FTL will:

- Carry out all duties specified by the PM, as consistent with DCN 01-05.
- Conduct or supervise all work identified and agreed upon in the scope of work.
- Participate in the daily tailgate safety meeting whenever the scope of work requires a permit to work.
- Verify in the daily tailgate safety meeting, the specific roles and responsibilities of the FTL and SSO are clearly understood by all members of the workforce.

For this project, the SSO will:

- Carry out all duties specified by the PM, as consistent with DCN 01-05.
- Be accountable for the safe, responsible and reliable delivery of all work activities.
- Lead or designate an alternative conductor to lead the daily tailgate safety meeting.
- Verify in the daily tailgate safety meeting that workers have a clear understanding of the scope of work, hazards, controls and mitigations of the project.
- Verify in the daily tailgate safety meeting, the specific procedures and policies relevant to the project and are clearly understood by all members of the workforce.

Either the SSO or FTL will facilitate the daily tailgate safety meeting each day. At least one, if not both individuals shall have a thorough understanding of the following:

- Tetra Tech's hazard/risk assessment process
- The site-specific HASP.

TETRA TECH, INC.

DAILY TAILGATE SAFETY MEETING FORM (Continued)

- The contract scope of work.
- The subcontractors on site and their health and safety officer.
- Site requirements of the client.

These meetings prior to starting work shall include, but are not limited to:

- The completion of the daily tailgate safety meeting form.
- A review of relevant Health and Safety Plan (HASP) elements.
    - Reviews of the HASP shall be performed when updated, modified or when deemed necessary by the SSO or FTL.
- A review of all applicable permits.
- Any applicable Hazard Communication (HAZCOM) information review, including MSDSs, and labels.
- A review of 'Stop Work' procedures and responsibilities.
- Address any risks arising from the site walk, including but not limited to, equipment and materials use and location.
- Complete and review a Job Safety Analysis (JSA), appropriate Safe Work Practices (SWP) and applicable Activity Hazard Analysis (AHA) for the tasks to be completed.
- Implement the controls set forth in the JSA, SWP and AHA. Verify that all parties on site have a complete understanding of the work plan and controls that are in place.
- In addition, allocate resources and complete permits.

TETRA TECH, INC.

DAILY TAILGATE SAFETY MEETING FORM (Continued)

Date: _____ Time: _____ Project No.: _____

Client: _____ Site Location: _____

Site activities planned for today: _____

Does each job and task have a valid SWP, AHA, or JSA associated with it? Yes ☐ No ☐

Has everyone signed off on the HASP? Yes ☐ No ☐

Have newly identified risks been controlled and documented? Yes ☐ No ☐

Do not proceed unless the answer to all the above questions is Yes.

Current weather conditions: _____

Safety Topics Discussed
Review of Stop Work Authority
Are there multiple operations on site? Yes ☐ No ☐ If yes, describe.
Does the work activity require a MoC? Yes ☐ No ☐ If yes, has the MoC been authorized by the PM? Yes ☐ No ☐
Permits required? Yes ☐ No ☐ If yes, list permits covered in safety meeting.
Protective clothing and equipment for activities planned for today:
Chemical, physical, and biological hazards identified for activities planned for today:
Equipment hazards identified for activities planned for today:
Review of emergency procedures from HASP (including muster point locations):

TETRA TECH, INC.

DAILY TAILGATE SAFETY MEETING FORM (Continued)

Site-safety discussion topics:
Review anticipated temperature for the day: _____ Could expected temperatures trigger High Heat Procedures: Yes ☐ No ☐ If yes, review High heat procedures.
Discuss the following: • Encouragement to drink plenty of water; • Reminder of the employees right to take a cool down rest period,
Drinking water replentishment schedule.
Identify exact location of work site and identify location of where hospital route map is posted..
Best practices observed: Lessons learned, near misses, other observations: Post-job review: Any "stop work" interventions:

Attendees

By signing in below, I certify that I understand the hazards and risk controls associated with each task I am to perform. I understand the permit requirements applicable to the work being performed and am aware that all tasks must be assessed. I am also aware of my obligation to "stop work." Furthermore, I am physically and mentally fit for duty and am not under the influence of any type of medication, drugs or alcohol that could affect my ability to work safety. I am aware of my responsibility to bring any injury, illness, or other safety issue to the attention of the SSO.

By signing out below, I certify that I am uninjured unless I have already informed the FTL, PM, or SSO.

APPENDIX B
SAFE WORK PRACTICES

SWP 5-1 General Safe Work Practices for Field Work
SWP 5-2 HAZWOPER Field Work
SWP 5-4 Safe Drilling Practices
SWP 5-7 Use of Heavy Equipment
DCN 4-5 Excavation and Trenching
SWP 5-14 Spill and Discharge Control Practices
SWP 5-15 Heat Illness Prevention and Monitoring
SWP 5-17 Biohazard Safety
SWP 5-19 Safe Lifting and Carrying Procedures
SWP 5-26 Prevention of Sun Exposure
SWP 5-35 Underground Utilities
SWP 5-47 Spill Prevention and Clean-up
SWP 5-51 Hand Tools

	TETRA TECH, INC. GENERAL SAFE WORK PRACTICES FOR FIELD WORK	Revision Date: 10/1/2008 Document Control Number: SWP 5-1 Page 1 of 3

To prevent injuries and adverse health effects, the following general safe work practices (SWP) are to be followed when conducting work involving known and unknown site hazards. These SWPs establish a pattern of general precautions and measures for reducing risks associated with field operations not conducted on hazardous waste sites. This list is not inclusive and may be amended as necessary.

- Be familiar with and knowledgeable of and adhere to all instructions in the construction health and safety plan (C-HASP), job safety analysis, job hazard analysis, work permit or other health and safety documentation.
- At a minimum, a safety meeting will be held at the start of each project to discuss the hazards of the site and site work. Additional meetings will be held, as necessary, to address new or continuing safety and health concerns.
- Be aware of the location of the nearest telephone and all emergency telephone numbers.
- Attend a briefing on the anticipated hazards, equipment requirements, SWPs, emergency procedures, and communication methods before going on site.
- Plan and delineate entrance, exit, and emergency escape routes.
- Rehearse unfamiliar operations prior to implementation.
- Use the “buddy system” whenever respiratory protection, fall protection, or other protective equipment is in use. Buddies should establish hand signals or other means of emergency communication in case radios break down or are unavailable.
- In order to assist each other in the event of an emergency, buddies should maintain visual contact with each other and with other on-site team members by remaining in close proximity.
- Do not bring nonessential vehicles and equipment onto the site.
- Immediately report all injuries, illnesses, and unsafe conditions, practices, and equipment to the site safety coordinator (SSC).
- Maintain a portion of the site field logbook as a project safety log. The project safety log will be used to record the names, entry and exit dates, and times on site of all Tetra Tech personnel, subcontractor personnel, and project site visitors; and other information related to safety matters.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

- A portable eyewash station should be located in the support zone if corrosive materials are used or stored on the site.
- Smoking is not allowed on Tetra Tech projects sites, except in designated smoking areas.
- Do not bring matches and lighters in the exclusion zone or contamination reduction zone.
- Observe coworkers for signs of toxic exposure and heat or cold stress.
- Inform coworkers of nonvisual effects of illness if you experience them, such as headaches, dizziness, nausea, or blurred vision.
- Anyone known to be under the influence of drugs or intoxicating substances that impair the employee's ability to safely perform assigned duties shall not be allowed on the job while in that condition.
- Horseplay, scuffling, and other acts that tend to have an adverse influence on the safety or well-being of the employees is prohibited.
- Work shall be well planned to prevent injuries in the handling of materials and when working with equipment.
- No one shall knowingly be permitted or required to work while the employee's ability or alertness is so impaired by fatigue, illness, or other causes that might unnecessarily expose the employee or others to injury.
- Use proper lifting techniques. Heavy objects will be lifted using the large muscles of the leg instead of the smaller muscles of the back.
- Wear appropriate footwear and all other protective equipment required for work.
- Cleanse thoroughly after handling hazardous substances.
- Maintain all tools and equipment in good condition.
- First aid kits shall be located in a prominent location and stocked with basic first aid supplies.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

	TETRA TECH, INC. GENERAL SAFE WORK PRACTICES FOR FIELD WORK	Revision Date: 10/1/2008 Document Control Number: SWP 5-1 Page 3 of 3

Disclaimer: This safe work practice (SWP) is the property of Tetra Tech, Inc. (Tetra Tech). Any reuse of the SWP without Tetra Tech's permission is at the sole risk of the user. The user will hold harmless Tetra Tech for any damages that result from unauthorized reuse of this SWP. Authorized users are responsible for obtaining proper training and qualification from their employer before performing operations described in this SWP.

	TETRA TECH, INC. GENERAL SAFE WORK PRACTICES for HAZARDOUS WASTE SITE ACTIVITIES	Revision Date: 10/1/2008 Document Control Number: SWP 5-2 Page 1 of 3

To prevent injuries and adverse health effects, the following general safe work practices (SWP) are to be followed when conducting work involving known and unknown site hazards on hazardous waste sites. These SWPs establish a pattern of general precautions and measures for reducing risks associated with hazardous site operations. This list is not inclusive and may be amended as necessary.

- Do not eat, drink, chew gum or tobacco, take medication, or smoke in contaminated or potentially contaminated areas or where the possibility for contact with site contamination exists.
- Wash hands and face thoroughly upon leaving a contaminated or suspected contaminated area. If a source of potable water is not available at the work site that can be used for hands-washing, the use of waterless hand cleaning products will be used, followed by actual hand-washing as soon as practicable upon exiting the site. A thorough shower and wash must be conducted as soon as possible if excessive skin contamination occurs.
- Avoid contact with potentially contaminated substances. Do not walk through puddles, pools, mud, or other such areas. Avoid, whenever possible, kneeling on the ground or leaning or sitting on drums, equipment, or the ground. Do not place monitoring equipment on potentially contaminated surfaces.
- Remove beards or facial hair that interferes with a satisfactory qualitative respirator fit test or routine pre-entry positive and negative pressure checks.
- Be familiar with and knowledgeable of and adhere to all instructions in the site-specific health and safety plan (HASP). At a minimum, a safety meeting will be held at the start of each project to discuss the HASP. Additional meetings will be held, as necessary, to address new or continuing safety and health concerns.
- Be aware of the location of the nearest telephone and all emergency telephone numbers.
- Attend a briefing on the anticipated hazards, equipment requirements, SWPs, emergency procedures, and communication methods before going on site.
- Plan and delineate entrance, exit, and emergency escape routes.
- Rehearse unfamiliar operations prior to implementation.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled.
The controlled version of this document can be found on the Tetra Tech Intranet.

- Use the "buddy system" whenever respiratory protection equipment is in use. Buddies should establish hand signals or other means of emergency communication in case radios break down or are unavailable.
- Buddies should maintain visual contact with each other and with other on-site team members by remaining in close proximity in order to assist each other in case of emergency.
- Minimize the number of personnel and equipment in contaminated areas (such as the exclusion zone). Nonessential vehicles and equipment should remain within the support zone.
- Establish appropriate support, contamination reduction, and exclusion zones.
- Establish appropriate decontamination procedures for leaving the site.
- Immediately report all injuries, illnesses, and unsafe conditions, practices, and equipment to the site safety coordinator (SSC).
- Maintain a portion of the site field logbook as a project safety log. The project safety log will be used to record the names, entry and exit dates, and times on site of all Tetra Tech personnel, subcontractor personnel, and project site visitors; air quality and personal exposure monitoring data; and other information related to safety matters. Form SSC-1, Daily Site Log, may be used to record names of on-site personnel.
- A portable eyewash station should be located in the support zone if chemical splashes to eyes are possible.
- Do not bring matches and lighters in the exclusion zone or contamination reduction zone. Flames and open fires are not permitted on site.
- Observe coworkers for signs of toxic exposure and heat or cold stress.
- Inform coworkers of nonvisual effects of illness if you experience them, such as headaches, dizziness, nausea, or blurred vision.

Disclaimer: This safe work practice (SWP) is the property of Tetra Tech, Inc. (Tetra Tech). Any reuse of the SWP without Tetra Tech's permission is at the sole risk of the user. The user will hold harmless Tetra Tech for any damages that result from unauthorized reuse of this SWP. Authorized users are responsible for obtaining proper training and qualification from their employer before performing operations described in this SWP.

The controlled version of this document can be found on the Tetra Tech Intranet.

	TETRA TECH, INC. SAFE DRILLING PRACTICES	Revision Date: 10/1/2008 Document Control Number: SWP 5-4 Page 1 of 3

This document establishes safe work practices (SWP) to follow during drilling operations. These SWPs are based on suggested safety procedures provided in the National Drilling Association's "Drilling Safety Guide." Procedures to follow before, during, and after drilling are listed below.

Before beginning any drill operation, each employee must conform to the following requirements:

- Wear a hard hat, safety glasses or goggles, steel-toed work boots, a shirt and full-length pants when working with or near the drill rig. Shirts must be tucked in at the belt.
- Do not wear loose or frayed clothing, loose long hair, or loose jewelry while working with rotating equipment.
- Do not eat, drink, or smoke near the drill rig.
- Identify all underground utility and buried structure locations before drilling.
- Ensure that drill masts or other projecting devices will be farther than 25 feet in any direction from overhead power lines.
- Ensure that the drill rig and any other machinery used is inspected daily by competent, qualified individuals. The site safety coordinator (SSC) will ensure compliance with this precaution.
- Drill rig operators will be instructed to report any abnormalities, such as equipment failure, oozing liquids, and unusual odors, to their supervisors or the SSC.
- Establish hand-signal communications for use when verbal communication is difficult. One person per work team will be designated to give hand signals to equipment operators.

While the drill rig is operating, employees must:

- Wear appropriate respiratory and personal protective equipment (PPE) when conditions warrant their use.
- Avoid direct contact with known or suspected contaminated surfaces.
- Move tools, materials, cords, hoses, and debris to prevent tripping hazards and contact with moving drill rig parts.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled.
The controlled version of this document can be found on the Tetra Tech Intranet.

- Adequately secure tools, materials, and equipment subject to displacement or falling.
- Store flammable materials away from ignition sources and in approved containers.
- Maintain adequate clearance of the drill rig and mast from overhead transmission lines. The minimum clearance is 25 feet unless special permission is granted by the utility company. Call the local utility company for proper clearance.
- Only qualified and licensed personnel should operate drill rigs.
- Workers should not assume that the drill rig operator is keeping track of the rig's exact location. Workers should never walk directly behind or beside heavy equipment without the operator's knowledge.
- Workers should maintain visual contact with drill rig operators at all times.
- When an operator must maneuver equipment in tight quarters, the presence of a second person is required to ensure adequate clearance. If much backing is required, two ground guides will be used: one in the direction the equipment is moving, and the other in the operator's normal field of vision to relay signals.
- Auger sections and other equipment are extremely heavy. All lifting precautions should be taken before moving heavy equipment. Appropriate equipment, such as chains, hoists, straps, and other equipment, should be used to safely transport heavy equipment too heavy to safely lift.
- Proper personal lifting techniques will be used. Workers should lift using their legs, not their backs.
- Workers will not use equipment they are not familiar with. This precaution applies to heavy as well as light equipment.
- All personnel not essential to work activities will be kept out of the work area.
- Workers will be aware of their footing at all times.
- Workers will remain alert at all times.

After drilling operations are completed, employees should do the following:

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled.
The controlled version of this document can be found on the Tetra Tech Intranet.

- Shut down machinery before repairing or lubricating parts (except parts that must be in motion for lubrication).
- Shut down mechanical equipment prior to and during fueling operations. When refueling or transferring fuel, containers and equipment must be bonded to prevent the buildup of static electricity.
- Keep drill rigs in the exclusion zone until work has been completed. Such equipment should then be decontaminated within the designated decontamination area.
- Engage parking brakes when equipment is not in use.
- Implement an ongoing maintenance program for all tools and equipment. All tools and moving equipment should be inspected regularly to ensure that parts are secured, are intact, and have no cracks or areas of weakness. The equipment must turn smoothly without wobbling and must operate in accordance with manufacturer specifications. Defective items should be promptly repaired or replaced. Maintenance and repair logs will be kept.
- Store tools in clean, secure areas to prevent damage, loss, or theft.

Disclaimer: This safe work practice (SWP) is the property of Tetra Tech, Inc. Any reuse of the SWP without Tetra Tech's permission is at the sole risk of the user. The user will hold harmless Tetra Tech for any damages that result from unauthorized reuse of this SWP. Authorized users are responsible for obtaining proper training and qualification from their employer before performing operations described in this SWP.

	TETRA TECH, INC. HEAVY EQUIPMENT	Revision Date: 02/16/2012
		Document Control Number:
		SWP 5-07
		Page 1 of 24

1.0 PURPOSE

The purpose of this procedure is to identify minimum requirements, and to provide guidance to Tetra Tech Inc. (Tetra Tech) project personnel concerning the management of construction tools and equipment on construction projects.

2.0 SCOPE

This procedure applies to all Tetra Tech projects that include a construction, O&M, and/or UXO component, including remediation construction.

3.0 MINIMUM REQUIREMENTS

3.1 Definitions

3.1.1 Construction Equipment

For the purposes of this procedure, construction equipment shall mean heavy equipment, such as excavators, scrapers, off-road trucks, dozers, road graders, compactors, dredges, and cranes; light equipment, such as skid-steers, forklifts, generators, and light plants; and operating systems such as screens, crushers, conveyors, pugmills, mobile treatment plants, and pumps. Any discussion of construction equipment shall be understood not to include cars, pickup trucks, flatbed trucks, etc. registered for use on public roadways, which shall be called vehicles hereinafter. Also for the purposes of this procedure, construction equipment shall be synonymous with Contractor's Equipment, a term also commonly used in the construction industry to designate the types of equipment described above.

3.1.2 Terms

The terms "should, may, and might" as used in statements in this procedure are intended to denote a discretionary consideration; the terms "shall & must" are intended to impose a mandatory requirement. The terms "is, are, & will" as used in statements in this procedure are intended to denote discretionary or mandatory requirements that are addressed in other department/disciplines' procedures. However, nothing contained herein should be interpreted as to prohibit development and approval of project-specific procedures or plans that take exception to mandatory direction presented in this procedure provided that the appropriate level of approval, (Executive Vice President of Construction, Business Line Executive Vice President, or the Vice President ESQ Services as appropriate) is obtained for deviations from such requirements.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

3.1.3 Tools of the Trade

Specific hand tools and or equipment (e.g., manlifts, trucks, trenchers, and pumps) normally provided by or to workers for the performance of their particular work activity.

3.2 Roles & Responsibilities

3.2.1 Equipment Supervisor

Depending on the project's equipment needs, an individual may be designated as the Equipment Supervisor. Responsibilities of the Equipment Supervisor include:

- Determination of the equipment needs for the project;
- Providing input to the Work Plan concerning equipment;
- Identification of Contract and legal/regulatory requirements for mobilization of equipment on client facilities;
- Submit required certifications, inspection reports, and test reports for equipment;
- Arranging for the mobilization/demobilization of equipment in support of the project's schedule, providing required notices, such as mobilization details and dates, and obtaining Contractual or legally required approvals for mobilization;
- Receipt inspection of equipment arriving at the site, including coordination of any client or third party inspection;
- Coordination with equipment yard personnel or vendors regarding equipment maintenance;
- Ensuring implementation of safe work practices for equipment utilization; and
- Assuring that the return of demobilized equipment is performed in accordance with the terms of the rental/lease/PO agreement and documented correctly, or, for Tetra Tech owned equipment, that the equipment transfer form is completed and coordinated with the Equipment Manager; and
- All other responsibilities as assigned by the Project Manager or Site Supervisor

3.3 Safe Operation Requirements for Tools

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

3.3.1 Manual T-Post Drivers

There shall be no use of manual fence post drivers, such as those typically used to drive T-posts, without prior approval from the Site Safety Coordinator or the Vice President of Construction. Any approval of the use of such a tool shall require the implementation of an Activity Hazard Analysis (AHA) to identify and control the hazards presented by the tool. The AHA shall address appropriate PPE and position for the task in order to avoid injury to the worker.

3.3.2 Tools

The Site Supervisor shall determine the nature and quantity of tools required for the construction effort and shall ensure that adequate tools are provided in support of the schedule.

Tools may be assigned to workers or crews for the duration of their activities and shall be stored in gang boxes or other secured storage areas when not in use.

The Site Supervisor may designate certain tools to be issued from a tool control area on a daily basis. These tools should be signed out at the beginning of the work, returned to the tool control area at the end of the work, and signed back in.

3.3.3 Worker Provided Personal Tools

Workers may be required to provide personal tools of the trade for their particular work. Master mechanics, for example, may be required to provide tools required for repairs and maintenance of construction equipment and vehicles. Requirements for workers to provide their own tools shall be established based on the project requirements and shall be discussed at the Pre-Job Conference to be held in accordance with the requirements of the Labor Relations Guidelines LR-8, Pre-Job Conferences.

Any worker required or offering to provide personal tools shall be required to present a list of personal tools being provided upon reporting to the project site. The Site Supervisor shall inventory the tools against this list for verification that all listed tools have been provided. The list shall then be maintained for use in performing an inventory of the tools when the worker is to leave the site at the end of the worker's assignment and shall be the basis for any claims for loss or damage.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

The Site Supervisor shall ensure that any personal tools brought onto the project site receive a safety inspection. The safety inspection shall include as a minimum, the items addressed in Section 3.3.4 of this procedure.

The Site Supervisor should ensure that secure, lockable facilities are provided for the storage of worker provided personal tools.

The worker shall be responsible for notification of lost or damaged tools immediately on discovery of the loss. The limits of the project's liability (if any) for loss or damage to personal tools provided by the workers should be established at the Pre-Job Conference.

Use of personal tools, other than addressed above, either by manual or by Tetra Tech nonmanual personnel, should not be allowed except as specifically authorized by the Project Manager or Site Supervisor. Project personnel should be notified that Tetra Tech will not be liable for any theft, loss, or damage of unauthorized personal tools on the project site.

3.3.4 Tool Safety Inspection

OSHA 29 CFR Part 1926 Subpart I Tools – Hand and Power provides guidance for tool safety. All tools shall be inspected for the following minimum features by the person using the tool prior to starting the work:

- Proper general condition of tools, electrical cords, and air hoses;
- Presence and serviceability of guards and safety devices;
- Proper electrical grounding or double insulation protection;
- Power tools properly equipped with constant pressure switches;
- Tool retainers installed on pneumatic tools;
- Proper adjustment of the tool; and
- Confirming that the load rating of the tool is sufficient for the work to be performed.

Unsafe tools shall be removed from service and the Site Supervisor advised of the condition for corrective action. An Out of Service tag should be placed on all unsafe or defective tools to prevent their inadvertent use by others. These tools should be physically segregated from the acceptable tools.

ITEM 11.1.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

3.3.5 Environmental Safety and Quality Policy Implementation

Proper selection of construction equipment can impact employee health, consideration should be given to ergonomic design when selecting construction equipment.

Selection of construction equipment and vehicles may have significant impacts on the environment, either adverse or beneficial. Proper selection of the size and type of equipment and vehicles can reduce the adverse impacts from their operation.

Project procurement practices for construction equipment, parts, supplies, lubricants, and fuel shall be consistent with the principles of pollution prevention. For example, consideration should be given to such factors as rent versus buy options, disposable versus reusable filters, recycled versus virgin oils/fluids, recycling versus disposal of spent fluids and used parts, and fuel efficiency and economy of operation.

Spent fluids, filters, and used parts shall be recycled to the extent practical, or otherwise disposed of in accordance with the environmental compliance elements of the Work Plan or EHS plan.

Proper utilization of construction equipment and vehicles can also reduce adverse impacts on the environment. (For example, it is Tetra Tech's policy to not allow unattended equipment and vehicles to be left with motors running. This is not only a safety consideration; it reduces adverse environmental impacts and is generally cost effective due to reduced fuel consumption.)

3.3.6 Insurance

The Project Manager shall ensure that all construction equipment, including Tetra Tech-owned or rental/lease equipment, is covered by appropriate insurance policies for the intended use of the equipment. Property insurance on construction equipment is normally arranged by Tetra Tech if Tetra Tech bears the risk of loss or if Tetra Tech is required to arrange such insurance. However, all rented/leased construction equipment valued in excess of $100,000, and all cranes regardless of their value shall be reported to the Administration and Compliance Department via the 'Insurance Request for Leased Equipment' (Attachement 5, and available in Tetra Links and from procurement) for specific inclusion under the Tetra Tech property insurance policy. The procurement representative should be contacted to ensure that this

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

occurs in each case. Notification is not required for equipment valued under $100,000 except when the construction equipment provider requests a certificate of insurance be provided, or the equipment is a crane.

The Project Manager, usually through the designated procurement representative, should ensure that duplicate insurance coverage is not provided through the equipment provider since this will increase the rental rates. In those cases where the provider requires insurance certificates to verify coverage by Tetra Tech, the procurement representative should be contacted to obtain the appropriate documentation.

A Vehicle Insurance Form (available from the Vehicle Insurance Coordinator, Tetra Links or procurement) shall be processed and sent to the Vehicle Insurance Coordinator for all vehicles (leased, rented, or owned) which are registered and operated off jobsites on public highways.

3.3.7 Receipt and Inspection

All construction equipment shall be subject to a receipt inspection by a competent person and any Contract or otherwise required additional person(s) prior to acceptance at the project site. The inspections and tests shall be in accordance with the manufacturer's recommendations. Most vendors provide a form for notation of any existing damage to the equipment to be filled out on receipt. The equipment should be inspected carefully to determine its condition, including any damage, missing or non-functional equipment. The agreement should be used as a basis to determine that everything required (e.g., the equipment, its condition, manuals, spares, documentation of inspections, and certifications) has been provided. All discrepancies should be noted on the form. A pre-inspection of the equipment prior to transport to the Project site should be considered. Particular attention shall be given to the following items:

- All safety equipment and its condition;
- Operator (when provided) certification for the equipment;
- Posted operating and safety instructions;
- All pollution control devices and their condition;
- Safe entry and egress, with steps, ladders, handholds, and platforms provided as required, including safe access to perform routine checks, maintenance, and refueling operations;
- Leaking fluids, such as hydraulic oil, engine oil, transmission fluid, and coolant;

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

- Deteriorated or cracked hydraulic and coolant hoses which could result in leaks or spills;
- Guard belts, gears, shafts, pulleys, fly wheels and other reciprocating, rotating or moving parts shall be guarded to protect workers from becoming caught on, in or between machinery; and
- Presence of the manufacturer operation and maintenance manual.

Equipment or vehicles with deficient conditions relating to safety or protection of the environment shall not be placed into service until the deficiencies have been corrected and documented.

All construction equipment shall be subject to an operational check prior to acceptance at the project site. The operational check should verify that the equipment has the capability to function as intended or as required through the full range of its intended use.

Receipt of construction equipment shall be documented; with a copy of the receipt inspection report provided to the Equipment Supervisor and to the equipment purchase order file. Documentation should include entries for date and time of receipt, condition of equipment, mileage or engine hours at time of receipt, information on next scheduled maintenance, and a record of operating and maintenance manuals received with the equipment. Photographs or a video record of the equipment on receipt should be taken if conditions are noted that would warrant further documentation.

Construction equipment providers will often include terms and conditions on receipt documentation to be signed when construction equipment is delivered to the project site. **Project personnel requested to sign this receipt documentation shall not sign any delivery forms unless authorized to do so by Legal of the Project Manager. Further, if they are required to sign delivery forms, they shall be instructed to cross out all terms and conditions, on both the front and back of the forms, before signing.** Alternately, the person receiving the construction equipment should enter the following statement in the immediate vicinity of their signature: “In lieu of the terms and conditions set forth on this document, the Original Purchase Order (or appropriate form of agreement) terms and conditions apply to the receipt of this item(s).” These actions are necessary to avoid acceptance of additional or different terms and conditions.

Construction equipment delivered to the project site should be accompanied with operating and maintenance manuals. Cranes and lifting equipment shall include certification of satisfactory completion of annual inspection and have load charts posted in the cab. Additionally, some

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

construction equipment may be supplied with common replacement parts, such as filters and belts, and any specialized tools required for routine operation or maintenance. (i.e. forks, buckets, lift arms, and tool carries) These items should be carefully inventoried upon receipt, and documented on the receipt inspection report. Responsibility for protection and maintenance of the construction equipment shall be verified, and all measures necessary to protect the construction equipment from damage or loss will be instituted in accordance with the agreement, operating, and maintenance manuals or other instructions as appropriate.

Disposition requirements for construction equipment found to not be in accordance with the rental/lease/sale agreement when received shall be confirmed with the vendor immediately.

A sample Equipment/Vehicle Inspection Report is included as Attachment 1 to this procedure.

3.3.8 Protection from Environmental Extremes

Consideration shall be given to the environmental conditions to which the construction equipment will be exposed to during its time at the project site or during transportation. The manufacturer's instructions shall be reviewed and followed to ensure adequate protection from damage due to environmental conditions.

Adequate protection to the construction equipment's cooling system shall be verified by ensuring that the appropriate coolant/antifreeze mixture, as recommended by the manufacturer, has been used.

Appropriate procedures for operating or storing construction equipment, such as water treatment systems, shall be developed in accordance with the manufacturer's instructions. Measures such as draining and venting the system, providing auxiliary heat sources (e.g., heat tape), dry storage, shaft rotation, fluid levels, shall be taken to protect construction equipment subject to damage from environmental conditions.

Manufacturer's instructions concerning periodic operation of construction equipment shall be followed.

A means of ensuring that appropriate protective measures are instituted and performed as required should be implemented through the establishment of site procedures, logs, and/or checklists.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

3.3.9 Equipment Inspections

All construction equipment shall be inspected daily (when in use) for safety and operability, including manufacturer's recommended daily inspections. The inspection form/checklist should note any deficiencies for correction and serve as documentation of the inspection performance. The Equipment Supervisor shall be notified of any deficiency immediately. A Daily Equipment Inspection form, a sample of which is included as Attachment 2 to this procedure, should be filled out at the start of the shift and provided to the Equipment Supervisor. Other supplemental forms which may be used in conjunction with Attachment 2 are the equipment specific "Pre-operation Inspection" and/or "Function Tests" forms, which are normally supplied by the equipment manufacturer. This information is usually found in the equipment's Operation Manual.

Government property control procedures usually require the implementation of a vehicle utilization log for vehicles when used on government projects; other projects should also implement a similar system for logging use of these vehicles. The log should be kept in the vehicle and an entry made for each use, including name of the driver, purpose of the trip, starting mileage, ending mileage, fuel purchased, maintenance performed, and any damage incurred. The log sheets should be transmiTetra Teched as required in the contract documents and the project's documentation plan. Copies of the log sheets will be maintained and filed as discussed in Section 3.3.12 of this procedure.

A separate Daily Equipment Inspection Report should be filled out for each shift if construction equipment is utilized on multiple shifts.

The Equipment Supervisor should use the information on Daily Equipment Inspection forms to schedule any repairs or preventive maintenance required for the equipment. Equipment with missing or defective safety features should not be put in service until repairs have been performed to bring the equipment into compliance with any applicable Tetra Tech H&S Program and/or regulatory requirements.

Implementation of the daily equipment inspections should be the subject of periodic verification inspections performed by the Project Manager, Site Supervisor, and/or the Site Safety Coordinator (SSC). These periodic inspections should include verification that the required maintenance is being performed in a timely manner to ensure that unsafe conditions or impacts to the environment (e.g., spills, releases, and discharges) are not created by delays in correcting deficiencies noted on the Daily Equipment Inspection Forms.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

Rigging equipment, wire rope, nylon or KEVLAR slings and chokers shall be inspected by a competent person prior to use each shift; particular attention shall be paid to the rigging condition and presence of load/certification tags.

Cranes (weight handling equipment) shall be subjected to annual and certification inspections per OSHA guidelines. Mobile and crawler cranes shall be inspected on a monthly basis; a sample checklist form is included as Attachment 3 to this procedure.

Construction equipment to be demobilized shall be given a final inspection, similar to the receipt inspection, to identify and document, by means of written description and pictures, the condition of the equipment as it leaves the project site. Where possible, a concurrent inspection by the vendor is preferred. Additionally, some projects, particularly USACE projects, require a certificate of decontamination prior to the equipment leaving the site.

3.3.10 Operator Qualifications

Tetra Tech employees operating vehicles or construction equipment on public rights of way shall be required to have in their possession a valid driver's license appropriate to the location where the item is being operated and containing the appropriate endorsement for the type of vehicle or construction equipment being operated. A Commercial Driver's License (CDL) may be required for operation of some construction equipment on public rights of way, or as a specific requirement of a client's safety program. In addition, individual states may require specific licenses or certifications for operators of certain equipment, such as forklifts, and hoisting equipment. Additionally, the client's safety program may include license or certification requirements for personnel operating equipment on their property. The contract documents should be reviewed carefully to ensure that any such requirements are incorporated into the project's Work Plan or HASP. The Site Supervisor shall verify that the operator possesses the required license(s). Copies of licenses should be maintained in the on-site project employee file.

Any agreements for the rental or lease of vehicles or equipment should be reviewed for any provider's requirements for licensing or certification of operators to ensure that any such requirements are incorporated into the project's Work Plan or HASP.

Operators shall be required to demonstrate their proficiency in operating the construction equipment to be assigned to them prior to being allowed to work. Crane operators shall have qualifications for the type of crane to be operated.

Operator proficiency may be demonstrated through a performance test such as those

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

developed by the International Union of Operating Engineers, or by equipment manufacturers such as Caterpillar. These performance tests include exercises developed to demonstrate operator proficiency in various aspects of equipment operation, including daily operator inspections, ability to follow directions, ability to understand equipment limitations and operating guidelines, safety, and productivity. Also included are checklists that assist an observer in evaluating all of the various aspects of equipment operation. Attachment 4 is an example of Operator/Driver Observation Checklist.

Where it is not possible or practical to demonstrate operator proficiency through a performance test as described above, there should be a period of observation of the operator during the initial period of performance, whether the operator is a new employee or a current employee who is being assigned to a different type of equipment than previously operated on the project site. This observation may be performed by a knowledgeable member of the management team or a designated craft employee such as a foreman or steward. The above referenced checklists could be used for this observation in lieu of the performance test.

Operators shall be physically fit to perform their duties and may be required to participate in the Tetra Tech Medical Surveillance program.

3.3.11 Refresher Training and Evaluation

Refresher training in relevant topics shall be provided to Crane (as defined by OSHA 1910.180(a) operators, and Powered Industrial Truck (PIT) as defined by OSHA 1910.178(a)(1) operators prior to be allowed to continue operating when:

- The operator has been observed to operate the PIT/Crane in an unsafe manner.
- The operator has been involved in an accident or near-miss incident.
- The operator has received an evaluation that reveals that the operator is not operating the PIT/Crane safely.
- The operator is assigned to operate a different type of PIT/Crane; or
- A condition in the workplace changes in a manner that could affect safe operation of the PIT/Crane.

An evaluation of each PIT/Crane operator's performance shall be conducted at least once every three years.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

Refresher training in relevant topics shall be provided to all other construction equipment operators when:

- The operator has been observed to operate the equipment in an unsafe manner.
- The operator has been involved in an accident or near-miss incident.
- The operator has received an evaluation that reveals that the operator is not operating the equipment safely.
- The operator is assigned to drive a different type of equipment; or
- A condition in the workplace changes in a manner that could affect safe operation of the equipment.

The employer shall certify that each operator has been trained and evaluated. The certification shall include the name of the operator, the type of equipment, the date of the training, the date of the evaluation, and the identity of the person(s) performing the training or evaluation.

3.3.12 Repairs

All construction equipment shall be repaired as necessary and maintained in good working order. Repairs to rented/leased construction equipment shall be in accordance with the terms of the rental/lease agreement. Repairs to rented/leased and Tetra Tech's construction equipment shall be documented and a record of the repairs maintained in the project files. Copies of the repair records are to be forwarded to the equipment yard for Tetra Tech-owned equipment.

Construction equipment with deficiencies noted on the Daily Inspection Report should be repaired promptly. The Equipment Supervisor, with input from the Environmental and Safety Supervisor as appropriate, should evaluate if a piece of equipment or a vehicle should be removed from service until the deficiency is corrected.

Construction equipment that develops a fluid leak such as engine oil, hydraulic oil, transmission fluid, or coolant shall be removed from service until the deficient condition has been corrected.

Construction equipment with missing or inoperable exhaust systems, including spark or flame arrestors, mufflers, and catalytic converters, shall be removed from service until the deficient

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

condition has been corrected.

Tampering with, removal, modification, or otherwise rendering inoperable any pollution control device on construction equipment shall not be allowed except as specifically authorized by the equipment manufacturer or appropriate authority and the Project Manager or Supervisor's concurrence

Only trained, qualified personnel shall be allowed to repair equipment. The project's Work Plan should address repairs to equipment by designating required actions in the event of an equipment failure.

An Authorization for Capital Expenditure or Lease (AFCEL) is to be completed for all major repair work (i.e., $1500.00 and over) performed on Tetra Tech-owned construction equipment in accordance with Accounting/Finance Procedure AF-8, Fixed Assets. (Note that on some construction equipment, the cost of a specific item, a replacement tire for example, may require the processing of an AFCEL due to the item cost.)

Costs for major repairs, as well as repairs for deficiencies, to Tetra Tech-owned construction equipment shall be charged back to the project releasing the equipment if the need for repairs is identified within 30 days of the equipment's release and removal from a project and there are indications that the repairs are needed as the result of lack of maintenance or failure of the releasing project to otherwise keep the equipment in good working order.

No repair shall be undertaken for damage covered by an insurance claim until the damage is reported to the Administration and Compliance Department and the insurer approves the repairs.

3.3.13 Documentation and Record Keeping

A file shall be established and maintained for each operator which contains documentation that the operator has the proper qualifications, licenses/certificates, and training to perform his/her job function. Records may include training identified in the HASP (e.g., OSHA, DOT, Waste Management training), vehicle operator licenses, results of site-administered proficiency testing, and any other special licenses/certificates required by state/local law or the client.

A file shall be established and maintained for each piece of construction equipment, and all records relating to that equipment shall be placed in the file, including the Receipt Inspection Report, annual inspections (for cranes), record of the date the equipment was first placed in

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

service, Daily Equipment Inspection records, maintenance records, repair records, record of the last date that the equipment was in service, demobilization inspection report, and the decontamination certificate, if applicable. For ease of retrieval, all records pertaining to pieces of equipment should be maintained in separate folders for each piece of equipment.

Additional copies of inspection reports and records may be required to be maintained in other project files, such as the procurement files and/or the Environmental Health and Safety files, based on the project's Documentation Plan.

The Equipment Supervisor should ensure that complete and accurate record of equipment utilization, including a list of idle equipment, is provided to the Quality Control Site Manager on a daily basis..

It may be useful to maintain equipment utilization information on a spreadsheet depending on the size of the project. Information such as equipment mobilization date, date of first use, utilization of equipment by rental period (for example, if rental rate is based on hourly usage and is billed on a monthly cycle, there should be an entry for the number of hours the equipment was used in each billing period), scheduled equipment release date, actual release date, and demobilization date. This information may be useful in verification of vendor invoices, in review of production rates, for preparation of requests for change orders or equitable adjustment, or for backup for use in support of (or defense against) claims.

Copies of all maintenance and repair records for Tetra Tech-owned construction equipment shall be forwarded to the Tetra Tech Equipment Manager at the regional equipment yard on a periodic basis. This period should be monthly, and in no circumstances should it exceed quarterly. An Equipment Service Form is available from the Equipment Manager. This form shall be used to report unscheduled and preventative maintenance on Tetra Tech-owned construction equipment.

The Equipment Manager produces a spreadsheet for Tetra Tech-owned construction equipment that is distributed to the projects on a monthly basis. The Equipment Supervisor shall ensure that reports of mileage or meter readings and routine maintenance for all Tetra Tech-owned construction equipment and vehicles assigned to the project are provided to the Equipment Manager for inclusion on the spreadsheet on a monthly basis. A Meter/Mileage Reading Update Form, available from the Equipment Manager, shall be used to report the required information.

The Equipment Supervisor should review the availability date included on the spreadsheet for Tetra Tech-owned equipment and vehicles assigned to the project and inform the Equipment

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

Manager of any required revisions to these dates.

The Equipment Supervisor shall complete an Equipment Transfer Report, available from the Equipment Manager, for all Tetra Tech-owned construction equipment and vehicles to be mobilized to, and demobilized from the project. Copies of the Equipment Transfer Reports shall be provided to the Equipment Manager at the regional equipment yard.

There shall be no equipment disposal action (junk or sale) for Tetra Tech-owned construction equipment or vehicles without prior notification and approval from the Tetra Tech President.

4.0 GUIDANCE

4.1 Additional Considerations

4.1.1 Control of Government Property

Activities involving the use of Government property are to be controlled by specific procedures negotiated with the Client in accordance with the contract's terms and conditions; such procedures shall be consulted where appropriate. Such activities may involve the handling or installation of Government property, whether furnished by the Government to Tetra Tech or acquired by Tetra Tech for use in the performance of work and for which the Government has retained title.

Government property may include construction tools and equipment purchased as a project cost, as well as permanent materials or equipment purchased for incorporation into the work. Project-specific procedures for control of Government property are to address issues relevant to the use, storage, inventory control, maintenance, and/or final disposition of the Government property.

4.1.2 Spill Control and Emergency Response Dedicated Tools and Equipment

The project's Emergency Response Plan, or Emergency Action Plan is to identify dedicated personal protective equipment and emergency response tools and equipment to be available for an emergency response to a spill or discharge of hazardous material.

Dedicated emergency response tools and equipment are to be segregated and identified for use in emergency response situations. The use of dedicated emergency response tools or equipment for any other activity is not to be permitted.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

4.1.3 Inventory Control

An individual should be designated as the Material Control Supervisor and should be responsible for inventory control of all tools issued from the tool control area. A log should be maintained for all tools issued and should record, as a minimum, the identification by name and employee number of the individual signing out the tool, the date and time the tool was signed out, the intended use of the tool (by area or system), an indication of when the tool is to be returned, and the time and date when the tool is returned.
Inventory control of tools assigned to individuals or crews should be performed on a daily basis as the tools are returned to the gang box or storage area. The crew foreman should be responsible for inventory control of tools assigned to the foreman's crew.

The Site Supervisor should immediately be made aware of any missing tools and should take the appropriate action to investigate and/or replace the missing tools.

4.1.4 Disposition of Tools at Project Completion

The Project Manager should make a determination of the disposition of tools remaining at the end of the project. The project may not be reimbursed by the client for the purchase of tools on certain cost reimbursable and lump sum projects. On other projects, a dollar value for individual tools may establish whether or not the client provides any reimbursement. The terms and conditions of the contract should provide direction as to the required disposition of the tools. Tools for which the project has been reimbursed by the client are to be dispositioned in accordance with the client's preferences and the contract terms and conditions.

Tools purchased for the project as a project cost, and which are not to be turned over to the client, should be dispositioned by the Project Manager. Means of disposition may include, but not be limited to, declaring the tools surplus, sale of the tools, or providing the tools to another project. The Project Manager should consult with the appropriate Business Line Executive Vice Presidents, concerning disposition of project tools.

Tetra Tech owned tools (i.e., not purchased as a project cost) should be dispositioned by the Project Manager based on consultation with the appropriate Business Line Executive Vice Presidents. Means of disposition of Tetra Tech-owned tools may include, but not be limited to, declaring the tools surplus, sale of the tools, return of the tools to an equipment yard, or providing the tools to another project.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

4.1.5 Company-Owned Equipment

Tetra Tech utilizes regional equipment yard(s) for the temporary storage and maintenance of Tetra Tech-owned construction equipment and vehicles when not currently assigned to a project. Available Tetra Tech-owned equipment should be considered for support of a project's construction effort based on an analysis of the benefits to the project and/or Tetra Tech. When evaluating Tetra Tech owned equipment the requirements discussed in 4.1.6 below should be considered when making the equipment selection.

4.1.6 Rental/Lease Equipment

Agreements for rental/lease of construction equipment should be coordinated through an authorized procurement representative to ensure that appropriate terms and conditions are included in the agreement. The Scope of Work for the agreement should be developed and reviewed carefully, including review by the Site Supervisor or Equipment Supervisor for inclusion of sufficient detail in order to clearly define the scope of work.

The Equipment Supervisor, or requisitioner if there is no designated Equipment Supervisor, should review the terms and conditions of all rental/lease agreements to determine that the following topics are adequately addressed:

- Receipt and return of the rental or leased equipment and any required accessories;
- Inspection and documentation of receipt and release;
- Provision of documentation required to be submitted, such as Occupational Safety and Health Administration (OSHA) accredited inspection reports, NDE reports, test reports (i.e. load test for cranes), typically annual inspections, and wire rope certification.
- Provision of all safety equipment and accessories, as required, such as fire extinguishers, seat belts, Roll Over Protection Structures (ROPS), Falling Object Protection Structures (FOPS), access steps, handholds, platforms, and anti two-block devices and load moment indicator (cranes);
- Provision of documentation demonstrating operator certification;
- Provision of Certificate of Compliance when required, for instance by NAVFAC P-307 Management of Weight Handling Equipment, Appendix P - Contractor Crane Requirements.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

- Provision and requirements of routine and non-routine maintenance and repairs, including payment for labor, parts, filters, lubricants, and fluids;
- Documentation requirements for the above maintenance and repairs;
- Disposal/recycling requirements for used parts, filters, lubricants, and fluids;
- Items such as point of delivery, costs of delivery and return, rental charges during idle time, notification requirements for demobilization, and point of return;
- Appropriate rental rate provisions for straight time and overtime;
- Responsibility for damage to equipment;
- Insurance;
- Indemnification (if included);
- Payment for replacement of parts subject to normal wear and tear, such as tires, tracks, cuTetra Teching edges, and teeth; and
- Documentation requirements required in support of invoices for basic rental rates and overtime rates, as well as labor, parts, filters, lubricants, and fluids.

Rental agreements should be structured to include normal wear and tear on the equipment in the basic rental rate. In all cases, there should be mutual agreement with the equipment vendor as to the condition of the equipment as it is delivered. This should include items such as the life expectancy of the parts subject to wear and tear, their condition on receipt (i.e., percentage of usable life remaining), and the expected condition on return of the equipment. There should be agreement on minor versus major repairs and on what constitutes normal wear and tear. Mutual agreement is essential to mitigate potential claims from vendors for excessive wear and tear.

4.1.7 Mobilization of Equipment

Mobilization of construction equipment may be a long lead time item and may require client or third party involvement or approvals to gain site access, depending on the required equipment. The Site Supervisor or Equipment Supervisor should determine the lead time required, including Contract submitted and advance notice/approval requirements, and plan for the mobilization of equipment to support the project's schedule.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

- Planning for mobilization of equipment should include a thorough review of Contract requirements for utilization of each equipment and site access requirements.
- Documentation of certification, and OSHA compliant annual inspection, load testing, safety devices (e.g., anti two-block) installed, wire rope certification, and operator's certification for cranes (weight handling equipment) should be reviewed prior to initiating mobilization of cranes.

4.1.8 Equipment Maintenance

The Equipment Supervisor should be responsible for administration of a construction equipment maintenance program for the project. A spreadsheet of all Tetra Tech-owned equipment, titled the Status of All Project Equipment, is maintained by the Construction Department providing notification of the scheduled maintenance requirements for each piece of equipment. Either this spreadsheet, or a project specific spreadsheet, should be maintained and statused on a periodic basis. Specific maintenance requirements may also be contained in specific contract negotiated property procedures or in other Tetra Tech corporate procedures.

As construction equipment is received on site, it should be added to the spreadsheet for tracking of the required maintenance.

A review of the scheduled maintenance should be performed for all construction equipment to be used in the Exclusion Zone to determine the desirability of performing any upcoming scheduled maintenance prior to placing the equipment in service. It may be difficult and expensive to perform the maintenance under the conditions required in the Exclusion Zone, or to decontaminate the construction equipment in order to perform the maintenance under clean conditions. When the maintenance of equipment in the Exclusion Zone is anticipated, the Site Supervisor should ensure that qualified personnel are available with the appropriate medical clearances and certifications to work in the Exclusion Zone.

4.1.9 Construction Equipment Safe Operation Requirements

Standards for safe operation of equipment are contained in the documents identified herein, inclusive and in particular of the requirements for safe operation of lifting and rigging equipment and weight handling equipment. The Contract typically will specify certain documents/codes to be followed for the project.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

- The United States Army Corps of Engineers (USACE) Safety and Health Requirements Manual, EM 385-1-1, Chapters 16, 17, and 18, provide guidance concerning the safe operation of construction equipment.
- Safe operation of earth drilling equipment is addressed in SWP 5-36 Drill Rigs.
- Safe operation of hand and power tools is addressed in OSHA standard 29CFR Part 1926 Subpart I.
- Safe operation of cranes, derricks, hoists, elevators and conveyors is addressed in OSHA standard 29CFR Part 1926 Subpart N.
- Safe operation of motor vehicles, mechanized equipment and marine operations is addressed in 29CFR Part 1926 Subpart O.
- Rollover protective structures and overhead protection is addressed in 29CFR Part 1926 Subpart W.
- The American Society of Mechanical Engineers (ASME) provides guidance in the B30 commiTetra Techee volumes – Safety Standard for Cableways, Cranes, Derricks, Hoists, Hooks, Jacks, and Slings.
- The United States Department of Energy (DOE) provides guidance for safe lifting operations in Technical Standard DOE-STD-1090 – Hoisting and Rigging.
- The United States Navy publication NAVFAC P-307 – Management of Weight Handling Equipment includes requirements for Contractor Cranes (see appendix P). Navy facilities issue Instructions specific to particular facilities such as 'NAVSHIPYDPUGET INSTRUCTION 11262.4A' which provides requirements for weight handling equipment at all Navy facilities within the Puget Sound.

Construction Equipment safety requirements shall be met before any task can be safely and properly performed, including

- Equipment will be used only in the manner in which it was designed.

ITEM 11.1.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

- Vehicles and equipment shall be kept in the appropriate gear or drive range when in motion, specifically when ascending or descending a grade. Freewheeling or coasting is prohibited.
- Steps, handrails and grab irons shall be used and equipment shall be faced when mounting or dismounting equipment. When climbing onto or from equipment a 3-point contact shall be maintained. Steps, handrails and grab rails shall be kept maintained, clean and free from slip, trip and fall hazards. Allow extra time in winter or rainy conditions to clean ice, snow and mud from equipment.
- Operators shall wear seat belts before starting and while in operation if the equipment is supplied with seat belts.
- Eye protection is mandatory if the equipment does not have an enclosed cab.
- Passengers shall not ride on equipment unless the equipment is designed to accommodate passengers.
- Before dismounting, the operator shall secure the equipment from movement by lowering all ground-engaging attachments, if so equipped (i.e., setting the parking brake, placing the transmission in park, disabling the hydraulics and activating any other elements of the equipment per the operator's manual).
- Wheeled equipment, without ground-engaging attachments, shall be chocked immediately following dismount with chock blocks that are adequate for the wheel size and equipment weight.
- Blades, buckets and other materials shall be in contact with the ground before the operator dismounts the equipment.
- Equipment should not be left unattended while the engine is running. If conditions exist that make it necessary for equipment to be left running in an unattended state (i.e., cold weather and certain start-ups), do not allow the general public entrance to the area unless the area can be clearly delineated. If the area cannot be clearly delineated to preclude casual entrance by the general public, unattended equipment shall not be left running.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

- The work site around equipment shall be clear prior to moving equipment. The operator shall be attentive to people and any vehicles that may have entered the area during the walk-around inspection.
- All operations shall be in accordance with manufacturers Standard Operating Procedures (SOPs).
- All ground disturbance operations shall comply with the DCN 4-5 Trenching and Excavation Practices.
- Proper working distances shall be maintained when operating equipment that is near electrical lines, as defined in DCN 5-9 Safe Electrical Work Practices.
- Employees shall not get on or off a vehicle or piece of equipment while it is moving.

4.1.10. General Traffic Requirements

The traffic rules in this section shall be followed, at a minimum, when heavy equipment and haul trucks are operated on project sites. The PM or SSC shall implement new traffic rules as conditions or project changes dictate.

- All applicable local governing authority driving rules shall be followed when driving heavy equipment and haul trucks on public or project sites.
- Operators shall understand and adhere to the site traffic right-of-way rules and work zone configurations.
- Speed limits, dependent on the risk associated with the site, shall be posted for the location and shall always be observed. Violation of speed limits shall result in disciplinary actions, which shall be posted and discussed with the workforce. Appropriate signage shall adequately communicate haul roads and traffic hazards.
- Vehicles and equipment shall follow at a safe distance as determined by road conditions, the specific vehicle and loading. The site shall define a minimum following distance.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

- Passing shall be limited to areas of adequate clearance, visibility and where marked accordingly. Passing may be prohibited completely on some sites or areas.

- Lights should be used to direct equipment at night; work zone lighting shall be sufficient for the work being performed.

- Adequate equipment spotters and ground employees should be deployed in conjunction with the job zone and traffic control plan. Spotters shall be not in the path of equipment travel while equipment is backing into a dump or loading area. Spotters shall wear bright, reflective clothing and be competent in directing and signaling equipment. Spotters and operators shall have a clear understanding of signal protocol for the site. When applicable, equipment will be equipped with a working signal alarm while backing up.

- A communications plan shall be developed by the site to allow the workforce to have communications with operators and spotters. A direct communication technique such as radio communication is preferred. If noise may impede operators to hear radios, then visual alerts (e.g., warning lights) inside the cab that are visible to the operator shall be considered.

4.1.11 Road Construction and Maintenance

For the safest and most efficient worksite, these construction and maintenance rules shall be followed when applicable:

- Elevated haul roads and roads, where risk is high from activities such as building dikes, shall have side berms or barriers that are axle height or greater to accommodate for the largest type of equipment that normally occupies the road. Drainage shall be allowed.

- All curves shall have open sight lines and have as large a radius as practical.

- Haul road/traffic changes shall be communicated to all affected personnel.

- Roadways shall be constructed with a slight crown to facilitate drainage.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

- All roadways, including haul roads, shall be routinely maintained in a safe condition, including the elimination or control of dust, ice or similar hazards. Adequate dust control equipment shall be provided on the job site and shall be utilized to control the hazards.

4.1.12 Demobilization of Equipment

Construction equipment should be demobilized when no longer required for the work. The Executive Vice President of Construction should be provided with a status of Tetra Tech-owned construction equipment and scheduled release dates in order to coordinate availability of equipment with other projects.

The Project Manager or designee should request demobilization instructions from the Executive Vice President of Construction or designee to determine the location to receive Tetra Tech-owned equipment.

Construction equipment leaving the Exclusion Zone of a remediation construction project will be decontaminated in accordance with the requirements of DCN 3-9 Decontamination and the site specific HASP.

Individual state regulations may require cleaning of construction equipment leaving a site, not limited to remediation construction, in order to control the spread of microorganisms contained in the soil. Such requirements are to be identified in the project HASP plans.

Revision Date	Document Authorizer	Revision Details

	TETRA TECH INC. EXCAVATION AND TRENCHING	Revision Date: 10/01/2011 Document Control Number: DCN 4-5 Page 1 of 16

1.0 PURPOSE

This program provides the requirements for activities involving excavations in accordance with 29 CFR 1926, Subpart P - Excavations.

2.0 SCOPE

These requirements are applicable to all Tetra Tech operations.

3.0 MAINTENANCE

The VP, Corporate Health and Safety or designee is responsible for updating this procedure. Approval authority rests with Tetra Tech's Senior VP, Corporate Administration. Suggestions for revision shall be submitted to the Corporate Administration department.

4.0 DEFINITIONS

4.1 Benching

A method of protecting employees from cave-ins by excavating the sides of an excavation to form one or a series of horizontal levels or steps, usually with vertical or near-vertical surfaces between levels.

4.2 Competent Person

A competent person is one who is capable of identifying existing and predictable hazards in the surroundings, or working conditions which are unsanitary, hazardous, or dangerous to employees, and who has authorization to take prompt corrective measures to eliminate them.

4.3 Excavation

Any man-made cut, cavity, trench, or depression in an earth surface, formed by earth removal.

4.4 Hazardous Atmosphere

An atmosphere which by reason of being explosive, flammable, poisonous, corrosive, oxidizing, irritating, oxygen deficient, toxic, or otherwise harmful, may cause death, illness, or injury.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

4.5 Protective Systems

A method of protecting employees from cave-ins, from material that could fall or roll from an excavation face or into an excavation, or from the collapse of adjacent structures. Protective systems include support systems, sloping and benching systems, shield systems, and other systems that provide the necessary protection.

4.6 Sloping

A method of protecting employees from cave-ins by forming sides of an excavation that are inclined away from the excavation so as to prevent cave-ins. The angle of incline required to prevent a cave-in varies with differences in such factors as the soil type, environmental conditions of exposure, and application of surcharge loads.

4.7 Support System

A structure such as underpinning, bracing, or shoring, which provides support to an adjacent structure, underground installation, or the sides of an excavation.

4.8 Trench

A narrow excavation made below the surface of the ground. In general the depth is greater than the width, but the width of a trench measured at the bottom is not greater than 15 feet. If forms or other structures are installed or constructed in an excavation so as to reduce the dimension measured from the forms or structure to the side of the excavation to 15 feet or less, the excavation is also considered to be a trench.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

5.0 DISCUSSION

5.1 Responsibilities

5.1.1 Competent Person

The competent person(s) shall be responsible for:

- Day-to-day oversight of open excavations and trenches
- Conducting soil classifications
- Selection of protective systems
- Conducting daily inspections of open excavations and trenches; and
- Providing the PM and or Supervisor with all required documentation on a daily basis.

5.1.2 Line Management

The Project Manager (PM) shall be responsible for:

- Ensuring compliance with this procedure
- Providing the necessary resources for compliance with this procedure; and
- Designating competent personnel in consultation with the Site Safety Coordinator (SSC)

5.1.3 Site Safety Coordinator Personnel

The SSC shall be responsible for:

- Providing oversight on the implementation of the requirements contained in this procedure
- Conducting periodic reviews of open trenches and excavations
- Consulting with the project manager and competent person on excavation issues; and

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

- Maintaining required records.

5.2 Designation of Competent Personnel

Prior to the start of any excavation work the project manager shall designate a competent person to fulfill the requirements of this procedure.

5.3 General Requirements

The following section provides general requirements governing activities in and around excavation and trenches, as well as the requirements for the selection and use of protective systems.

- Surfaces surrounding open trenches and excavations shall have all surface hazards removed.
- All utilities shall be located and cleared prior to initiating digging. Public or facility utility groups shall be utilized where possible for this purpose. In the absence of either, the SSC shall specify the procedures to be used to clear utilities in consultation with the project manager. When the excavation is open, utilities shall be supported and protected from damage. Clearance and support methods shall be documented on the daily inspection checklist.
- No person may enter a trench or work at the foot of the face of an excavation until a qualified, competent person has inspected the excavation and determined whether sloping or shoring is required to protect against cave-in or subsidence and the appropriate protection has subsequently been installed.
- Trenches and excavations must be assessed by a qualified, competent person, even in the absence of working personnel, whenever heavy equipment will be operating nearby in order to ensure that the trench or excavation will support the weight of the equipment without subsistence or causing the accidental overturning of machinery.
- Access to trenching areas must be controlled and limited to authorized personnel. Prior to entering a trench or excavation, workers must notify the project manager, SSC, and nearby equipment operators whose activities could affect the trench or excavation.
- Trenches and excavations must be inspected regularly (daily at a minimum) to ensure that changes in temperature, precipitation, shallow groundwater, overburden, nearby building

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

weight, vibration, or nearby equipment operation have not caused weakening of the sides, faces, and floors and to ensure that personnel protection is being maintained.

- Where structural ramps are used for egress they shall be installed in accordance with 29 CFR 1926.651(c)(1).
- Stairways, ladders, or ramps shall be provided as means of egress in all trenches 4 feet or more in depth. Travel distance shall be no more than 25 feet between means of exit.
- Ladders if used must be secured from shifting, and must extend at least 3 feet above the top of the trench or excavation.
- Where necessary to prevent falls, crosswalks or walkways will be constructed. Structural ramps, walkway, and cross walks must be designed by a qualified competent person.
- Employees exposed to vehicular traffic shall wear traffic vests.
- No employee shall be permitted under loads being lifted or under loads being unloaded from vehicles.
- When vehicles and machinery are operating adjacent to excavations warning systems such as stop logs or shall be utilized to prevent vehicles from entering the excavation or trench.
- Scaling or barricades shall be used to prevent rock and soils from falling on employees.
- Excavated and loose materials should be kept at least 3 feet from the edge of excavations, but at a minimum 2 feet from the edge of the excavation in accordance with OSHA requirements.
- Walkways or bridges with standard railing shall be provided at points employees are to cross over excavations or trenches.
- Barriers shall be provided to prevent personnel from inadvertently falling into an excavation.
- Comply with any regulatory or contract required permitting and notification processes. For example, in California, a Cal-OSHA excavation permit and notification is required. Clients may classify excavations and trenches as permitted confined spaces, in these cases, DCN 2-5 Confines Space Entry shall be followed. These requirements shall be outlined in the site specific Health and Safety Plan

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

- When subsidence or tension cracks are apparent anywhere in an excavation, all work should be stopped until the problem is corrected.

- The competent person must inspect trenches or excavations after any precipitation event to ensure integrity has been maintained.

- If trenches or excavations are near walkways or roadways, guards or warning barriers must be placed to alert pedestrians and drivers of the presence of the trench or excavation.

- If possible, trenches or excavations should be covered or filled in when unattended. Otherwise, strong barriers must be placed around the trench or excavation and lighting must be provided at night if the trench or excavation is near a walkway or roadway.

- When a hazardous atmosphere could exist, the excavation must be tested for appropriate hazardous substances and oxygen level before personnel entry. Excavation where hazardous atmospheres exist must be treated as a confined space. Entry must follow procedures outlined in "Confined Spaced Entry Program," Document Control No. 2 5.

- Entry is not allowed into excavations where water has accumulated.

5.4 Hazardous Atmospheres

Where atmospheres containing less than 19.5 percent oxygen or other types of hazardous atmospheres may exist the following requirements shall be implemented.

- Atmospheric testing shall be done prior to employees entering excavations 4 feet or greater in depth.

- Testing methods shall be listed on the daily inspection checklist and results documented daily in field logs.

- Control measures such as ventilation and personal protective equipment (PPE) shall be used to control employee exposure to hazardous atmospheres below published exposure limits.

- Ventilation shall be used to control flammable and combustible vapors to below 10 percent of their lower explosive limit.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

- Testing shall be repeated as often as necessary to ensure safe levels of airborne contaminants.
- Emergency equipment shall be provided and attended when the potential for a hazardous atmosphere exists. This equipment shall include but not be limited to emergency breathing apparatus, harnesses, lifelines, and basket stretchers. Required equipment will be listed on the daily inspection checklist and reviewed daily.

5.5 Protection From Water Hazards

When water has collected or is collected in excavations and trenches the following requirements shall be applied.

- Employees shall not work in excavations in which water has, or is, accumulating without the use of additional protection such as special support systems or water removal.
- Water removal shall be monitored by a competent person.
- Barriers such as ditches and dikes shall be used to divert runoff from excavations and trenches.
- Trenches shall be re-inspected prior to re-entry after water accumulation due to heavy rainfall or seepage.

5.6 Stability of Adjacent Structures

When excavating or trenching near an adjacent structure the following practices shall be implemented.

- Support systems such as shoring, bracing, or underpinning shall be provided where the stability of buildings, walls, or other structures is endangered by excavation.
- Excavation bases or footings of foundations shall be prohibited unless support systems are used, the excavation is in stable rock, a professional engineer has determined the structure is sufficiently removed from the site as to not pose a hazard, or the PE determines that the excavation shall not pose a hazard to employees due to the structure.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

- Support systems shall be used when it is necessary to undermine sidewalks, pavements, and appurtenant structures.
- Surcharge load sources and adjacent encumbrances shall be listed with their evaluation date on the daily inspection checklist.

5.7 Daily Inspections

Inspections shall be performed daily on all excavations, adjacent areas, and protective systems before personnel enter the trench. The checklist provided in Attachment A or equivalent shall be used.

5.8 Soil Classification

To perform soil classification, the competent person shall use a thumb test, pocket penetrometer, or shear vane to determine the unconfined compressive strength of the soils being excavated. In soils with properties that change (i.e., one soil type mixed with another within a given area) several tests may be necessary. When different soil types are present the overall classification shall be that of the type with the lowest unconfined compressive strength. Classifications shall result in a soil rating of Stable Rock, Type A, Type B, or Type C in accordance with 29 CFR 1926.652, Appendix A. Soil classifications shall be listed on the daily inspection checklist. The soils analysis checklist provided in Attachment B or equivalent shall be used for soil classifications.

5.9 Sloping and Benching

All sloping and benching shall be done in accordance with 29 CFR 1926.652, Appendix B. Selection of the sloping method and evaluation of surface surcharge loads shall be made by a competent person familiar with the requirements contained therein. Sloping and benching methods and specifications shall be listed on the daily inspection checklist.

5.10 Protective Systems

Protective systems are required on all excavations over 5 feet in depth or in excavations less than 5 feet when examination of the ground by a competent person reveals conditions that may result in cave-ins.

Selection and installation of protective systems shall be done in accordance with 29 CFR 1926.652, Appendices C & D, or manufacturers data for shoring and shielding systems. Selection of a protective system shall be made based upon soil classification and job requirements by a competent person.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

Protective systems and specifications shall be listed on the daily inspection checklist.

5.11 Training

Competent persons shall have an adequate combination of experience and training to classify soil types and select protective systems as outlined in 29 CFR 1926.652. Training and experience pertaining to qualification as a competent person shall be documented and include the following:

- General safety practices related to working in or near open excavations;
- Inspection requirements and techniques;
- Classification of soils in accordance with 29 CFR 1926.652, Appendix A; and
- Uses, limitations, and specifications of protective systems in accordance with 29 CFR 1926.652.

Training records shall be maintained in accordance with DCN 1-4 Recordkeeping and Reporting Requirements..

DAILY EXCAVATION INSPECTION CHECKLIST To be completed by a "Competent Person"

Indicate for each item by circling: Y (Yes), N (No), - Address in Comments, Not Applicable (N/A.)

I. General Inspection of Job Site

A. Surface encumbrances removed or supported Y N N/A
B. Employees protected from loose rock or soil that could pose a hazard by falling or rolling into the excavation Y N N/A
C. Hard hats worn by all employees Y N N/A
D. Spoils, materials, and equipment set back at least 2 feet from the edge of the excavation Y N N/A
E. Barriers provided at all remotely located excavations, wells, pits, shafts, etc. Y N N/A
F. Walkways and bridges over excavations 4 feet or more in depth are equipped with standard guardrails Y N N/A
G. Warning vests or other highly visible clothing provided and worn by all employees exposed to public vehicular traffic Y N N/A
H. Warning system established and utilized when mobile equipment is operated near the edge of the excavation Y N N/A
I. Employees prohibited from working on the faces of sloped or benched excavations above other employees Y N N/A

II. Utilities

A. Utility companies contacted and/or utilities located Y N N/A
B. Exact location of utilities marked when approaching the utilities Y N N/A
C. Underground installations protected, supported or removed when excavation is open Y N N/A

III. Means of Access and Egress

A. Lateral travel to means of egress no greater than 25 feet in excavations 4 feet or more in depth Y N N/A
B. Ladders used in excavations secured and extended 3 feet above the edge of the trench Y N N/A
C. Structural ramps used by employees designed by a competent person Y N N/A
D. Structural ramps used for equipment designed by a registered professional engineer (RPE) Y N N/A
E. Ramps constructed of materials of uniform thickness, cleated together on the bottom, equipped with a no-slip surface Y N N/A
F. Employees protected from cave-ins when entering or exiting the excavation Y N N/A

IV. Wet Conditions

A. Precautions taken to protect employees from the accumulation of water Y N N/A

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

B. Water removal equipment monitored by a competent person Y N N/A
C. Surface water or runoff diverted or controlled to prevent accumulation in the excavation Y N N/A
D. Inspections made after every rainstorm or other hazard increasing occurrence Y N N/A

V. Hazardous Atmospheres

A. Atmosphere within the excavation tested where there is a reasonable possibility of an oxygen deficiency, combustible or other harmful contaminant exposing employees to a hazard Y N N/A
B. Ventilation Y N N/A
C. Testing conducted often to ensure that the atmosphere remains safe Y N N/A
D. Emergency equipment, such as breathing apparatus, safety harness and line, and basket stretcher readily available where hazardous atmospheres could or do exist Y N N/A
E. Safety harness and life line used and individually attended when entering deep confined excavations Y N N/A

VI. Support Systems

A. Materials and/or equipment for support systems selected based on soil analysis, trench depth and expected loads Y N N/A
B. Materials and equipment used for protective systems inspected and in good condition Y N N/A
C. Materials and equipment not in good condition have been removed from service Y N N/A
D. Damaged materials and equipment used for protective systems inspected by a RPE after repairs and before being placed back into service Y N N/A
E. Protective systems installed without exposing employees to the hazards of cave-ins, collapses or from being struck by materials or equipment Y N N/A
F. Members of support system securely fastened to prevent failure Y N N/A
G. Support systems provided to insure stability of adjacent structures, buildings, roadways, sidewalks, walls, etc. Y N N/A
H. Excavations below the level of the base or footing approved by an RPE Y N N/A
I. Removal of support systems progresses from the bottom and members are released slowly as to note any indication of possible failure Y N N/A
J. Backfilling progresses with removal of support system Y N N/A
K. Excavation of material to a level no greater than 2 feet below the bottom of the support system and only if the system is designed to support the loads calculated for the full depth Y N N/A
L. Shield system placed to prevent lateral movement Y N N/A
M. Employees are prohibited from remaining in shield system during vertical movement Y N N/A

VII. Comments

Soil Classification(s)
Excavation depth
Excavation width

Type of protective system used

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

SOILS ANALYSIS CHECKLIST

This checklist must be completed when soil analysis is made to determine the soil type(s) present in the excavation. A separate analysis must be performed on each layer of soil in excavation walls. A separate analysis must also be performed if the excavation (trench) is stretched over a distance where soil type may change.

Site location:

Date:

Time:

Competent Person

Where was the sample taken from?

Excavation:

Depth:

Width:

Length:

VISUAL TEST

Particle type: Fine Grained (cohesive) Course grained (sand or gravel)

Water conditions: Wet Dry Surface water present Submerged

Previously disturbed soils? Yes No

Underground utilities? Yes No

Layered soils? Yes No

Layered soil dipping into excavation? Yes No

Excavation exposed to vibrations: Yes No

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

Crack-like openings or spallings observed? Yes No
Conditions that may create hazardous atmosphere? Yes No

If yes, identify condition and source:

Surface encumbrances: Yes No

Work to be performed near public vehicular traffic? Yes No

Possible confined space exposure? Yes No

MANUAL TEST

Plasticity: Cohesive Non-cohesive

Dry Strength: Granular (crumbles easily) Cohesive (broken with difficulty)

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

NOTE: The following unconfined compressive strength tests should be performed on undisturbed soils.

THUMB TEST (used to estimate unconfined compressive strength of cohesive soil)
Test performed: Yes No

Type A (soil indented by thumb with very great effort)

Type B (soil indented by thumb with some effort)

Type C (soil easily penetrated several inches by thumb with little or no effort).If soil is submerged, seeping water, subjected to surface water, runoff, exposed to wetting.

PENETROMETER OR SHEARVANE (used to estimate unconfined compressive strength of cohesive soils)
Test performed: Yes No

Type A (soil with unconfined compressive strength of 1.5 tsf or greater)

Type B (soil with unconfined compressive strength of 0.5 tsf to 1.5 tsf)

Type C (soil with unconfined compressive strength of 1.5 tsf or less). If soil is submerged, seeping water, subjected to surface water, runoff, exposed to wetting.

WET SHAKING TEST (used to determined percentage of granular and cohesive materials). Compare results to soil textural classification chart to determine soil type. Test performed Yes No

Type A (clay, silty clay, sandy clay, clay loam, and in some cases silty clay, loam and sandy clay loam)
Type B [angular gravel (similar to crushed rock), silt, silt loam, sandy loam, and in some cases, silty clay loam and sandy clay loam
Type C(granular soil including gravel, sand and loamy sand)

% granular

% cohesive

% silt

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

NOTE: Type A – no soil is Type "A" if soil is fissured; subject to vibration; previously disturbed; layered dipping into the excavation on a slope of 4H:1V.

SOIL CLASSIFICATION

Type A

Type B

Type C

SELECTION OF PROTECTIVE SYSTEM

Sloping, Specify angle:

Timber Shoring

Aluminum Hydraulic Shoring

NOTE: Although OSHA will accept the above tests in most cases, some states will not. Check your state safety requirements for trenching regulations.

Revision Date	Document Authorizer Name	Revision Details
10/1/2011	Chris McClain	Update

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

	TETRA TECH, INC. SPILL AND DISCHARGE CONTROL PRACTICES	Revision Date: 10/1/2008 Document Control Number: SWP 5-14 Page 1 of 3

This safe work practice (SWP) provides contingency measures for spills and unintentional discharges from handling and transporting hazardous materials. Spill and discharge control practices should follow specific procedures to ensure the safety of responders and bystanders and to limit environmental impacts.

1.0 GENERAL PROCEDURES

Immediate action should be taken to control and contain any spill following the general guidelines below:

- Unnecessary personnel should be kept away from the spill or discharge.
- The hazardous area should be isolated.
- If the spill or discharge creates a hazardous situation or results in injury or an environmental release, the emergency procedures of the HASP should be implemented. Emergency response telephone numbers, designated contacts, and special reporting procedures are presented in the HASP.
- Personnel should stay on the upwind side of the spill or discharge.
- Entry into a confined space or low area where liquids or vapors may accumulate should be avoided.
- Sources of ignition should be eliminated if the spill or discharge involves combustible materials.
- Drains, manholes, waterways, sewers, and the like should be identified and covered or protected.
- The spill should be controlled or absorbed using appropriate media or devices.
- When the spill or discharge is fully contained and under control, spill or discharge material should be collected.
- Following cleanup, the spill area should be evaluated by collecting soil samples and screening the area with air monitoring instruments.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

2.0 SOLIDS

If the spill or discharge material is solid and nonreactive, the material should be scooped up and placed in a suitable and compatible container until the disposal method has been determined.

3.0 LIQUIDS

If liquid is discharged, the following general procedures apply:

- The point of discharge should be immediately identified and measures taken to eliminate further discharges by uprighting or patching containers, transferring contents, or other appropriate methods.
- Any discharged liquids or sludge should be removed or retrieved.
- Discharged materials should be cleaned up with absorbent materials or devices.
- Spent absorbent material should be placed into storage or disposal containers.

4.0 REPORTING

In some instances, a release may require reporting to government agencies. If a reportable quantity is released (this quantity is stated on the Material Safety Data Sheet) or human health or the environment is threatened, appropriate national, state, and local administering agency personnel should be notified. The timeframe for notification may vary from agency to agency. Notification may be required immediately or within 24 hours, depending on the type, location, and amount of released material. The appropriate agency to report spills to should be determined during HASP development.

All spills and chemical releases must be reported and investigated in accordance with DCN 2-2 Incident Reporting and Investigation Program. Details must be documented on the IR Form and IR – B.

Disclaimer: This safe work practice (SWP) is the property of Tetra Tech, Inc. (Tetra Tech). Any reuse of the SWP without Tetra Tech's permission is at the sole risk of the user. The user will hold harmless Tetra Tech for any

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

damages that result from unauthorized reuse of this SWP. Authorized users are responsible for obtaining proper training and qualification from their employer before performing operations described in this SWP.

Revision Date	Document Authorizer	Revision Details

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

	TETRA TECH, INC. GENERAL SAFE WORK PRACTICE for HEAT STRESS PREVENTION and MONITORING	Revision Date: 10/1/2008 Document Control Number: SWP 5-15 Page 1 of 4

This safe work practice (SWP) describes situations where heat stress is likely to occur and provides procedures for the prevention and treatment of heat-related injuries and illnesses. Wearing personal protective equipment (PPE), especially during warm weather, puts employees at considerable risk of developing heat-related illness. Health effects from heat stress may range from transient heat fatigue or rashes to serious illness or death.

Many factors contribute to heat stress, including PPE, ambient temperature and humidity, workload, and the physical condition of the employee, as well as predisposing medical conditions. However, the primary factors are elevated ambient temperatures in combination with fluid loss. Because heat stress is one of the more common health concerns that may be encountered during field activities, employees must be familiar with the signs, symptoms, and various treatment methods of each form of heat stress. Heat stroke is the most serious heat-related illness—it is a threat to life and has a 20 percent mortality rate. Direct exposure to sun, poor air circulation, poor physical condition, and advanced age directly affect the tendency to heat stroke. Table 1 lists the most serious heat conditions, their causes, signs and symptoms, and treatment.

Training is an important component of heat stress prevention. Employees are instructed to recognize and treat heat-related illnesses during 8-hour health and safety refresher and first aid training courses. When working in hot environments, specific steps should be taken to lessen the chances of heat-related illnesses. These include the following:

- Ensuring that all employees drink plenty of fluids (Gatorade® or its equivalent)
- Ensuring that frequent breaks are scheduled so overheating does not occur
- Revising work schedules, when necessary, to take advantage of the cooler parts of the day (such as working from 5:00 a.m. to 11:00 a.m. and 6:00 p.m. to nightfall).

When PPE must be worn (especially Levels A and B), suggested guidelines relating to ambient temperature and maximum wearing time per excursion are as shown in Table 2.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled.
The controlled version of this document can be found on the Tetra Tech Intranet.

TABLE 1
HEAT STRESS CONDITIONS

Condition	Causes	Signs and Symptoms	Treatment
Heat cramps	Fluid loss and electrolyte imbalance from dehydration	• Painful muscle cramps, especially in legs and abdomen • Faintness • Profuse perspiration	• Move affected worker to cool location • Provide sips of liquid such as Gatorade® • Stretch cramped muscles • Transport affected worker to hospital if condition worsens
Heat Exhaustion	Blood transport to skin to dissipate excessive body heat, resulting in blood pooling in the skin with inadequate return to the heart	• Weak pulse • Rapid and shallow breathing • General weakness • Pale, clammy skin • Profuse perspiration • Dizziness • Unconsciousness	• Move affected worker to cool area • Remove as much clothing as possible • Provide sips of cool liquid or Gatorade® (only if conscious) • Fan the person but do not overcool or chill • Treat for shock • Transport to hospital if condition worsens
Heat Stroke	Life threatening condition from profound disturbance of body's heat-regulating mechanism	• Dry, hot, and flushed skin • Constricted pupils • Early loss of consciousness • Rapid pulse • Deep breathing at first, and then shallow breathing • Muscle twitching leading to convulsions • Body temperature reaching 105 or 106 °F or higher	• Immediately transport victim to medical facility • Move victim to cool area • Remove as much clothing as possible • Reduce body heat promptly by dousing with water or wrapping in wet cloth • Place ice packs under arms, around neck, at ankles, and wherever blood vessels are close to skin surface • Protect patient during convulsions

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled.
The controlled version of this document can be found on the Tetra Tech Intranet.

TABLE 2
SUGGESTED GUIDELINES WHEN WEARING PPE

Ambient Temperature	Maximum PPE Wearing Time per Excursion
Above 90 °F	15 minutes
85 to 90 °F	30 minutes
80 to 85 °F	60 minutes
70 to 80 °F	90 minutes
60 to 70 °F	120 minutes
50 to 60 °F	180 minutes

Source: National Institute for Occupational Safety and Health (NIOSH). 1985. Memorandum Regarding Recommended Personal Protective Equipment Wearing Times at Different Temperatures. From Austin Henschel. To Sheldon Rabinovitz. June 20.

To monitor the level of an employee's heat stress, the following should be measured:

- Heart Rate: Count the radial (wrist) pulse during a 30-second period as early as possible in the rest period; if heart rate exceeds 110 beats per minute at the beginning of the rest period, shorten the next work cycle by one-third and keep the rest period the same.

  If the heart rate still exceeds 110 beats per minute at the next period, shorten the following work cycle by one-third.

- Oral Temperature: Use a clinical thermometer (3 minutes under the tongue) to measure the oral temperature at the end of the work period. If oral temperature exceeds 99.6 °F (37.6 °C), shorten the next work cycle by one-third without changing the rest period. If oral temperature still exceeds 99.6 °F at the beginning of the next rest period, shorten the following work cycle by one-third. Do not permit a worker to wear impermeable PPE when his or her oral temperature exceeds 100.6 °F (38.1 °C).

Disclaimer: This safe work practice (SWP) is the property of Tetra Tech, Inc. (Tetra Tech). Any reuse of the SWP without Tetra Tech's permission is at the sole risk of the user. The user will hold harmless Tetra Tech for any damages that result from unauthorized reuse of this SWP. Authorized users are responsible for obtaining proper training and qualification from their employer before performing operations described in this SWP.

	TETRA TECH, INC. BIOHAZARD SAFETY	Revision Date: 10/1/2008 Document Control Number: SWP 5-17 Page 1 of 7

Biological hazards, or "biohazards," include plants, animals or their products, and parasitic or infectious agents that may present potential risks to worker health. This safe work practice (SWP) discusses procedures for working with biohazards, preventive guidelines, and first-aid procedures for the most common hazards field staff are likely to encounter. This SWP does not address biohazards such as those associated with medical waste. Procedures for working with this type of biohazard should be addressed in the site-specific health and safety plan (HASP), construction health and safety plan (C-HASP), job safety analyses (JSAs), activity hazard analyses (AHAs), or other health and safety project planning documents on a case-by-case basis.

During preparation for site work, the document preparer should consider which plants, animals, and other biological agents may be encountered; assess their potential risk to project personnel; and attach this SWP to the document if necessary. Office health and safety representatives should become familiar with biological hazards indigenous to the geographical area in which most of their office personnel work and assist in evaluating the risks to personnel on projects staffed from their offices. SWPs for insects, snakes, animals, plants, waterborne pathogens (giardia), and hantavirus are provided below.

1.0 INSECTS

SWPs for reducing the chance of insect bites or stings and for treating bites or stings are listed below.

- Workers should keep as much skin area covered as possible by wearing long-sleeved shirts, long pants, and a hat. Pant legs should be tucked into socks or boots and shirts into pants. In addition, workers should wear light colored clothing.
- A proven insect repellent should be used on bare skin and clothing.
- When possible, tall grasses and brush that could harbor ticks should be avoided.
- Several times during the day and at the end of the work day, each worker should perform a check for evidence of imbedded ticks or previous bites. Particular attention should be paid to the scalp, neck, ankles, back of the legs, and waist.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

- When opening well covers, vaults, or other closed items, workers should watch for hornet or wasp nests and black widow or brown recluse spiders. Workers should never reach into spaces with unprotected arms.
- Workers should watch carefully for bees around open soft drinks or food.
- If a worker is stung by a bee, the stinger should be carefully removed, if present. The wound should be washed and a cold pack applied. Allergic reaction should be watched for and is evidenced by extreme swelling, redness, pain, or difficulty breathing.
- If a worker is stung or bit by a spider or scorpion, medical attention should be obtained immediately.

2.0 SNAKES

SWPs for encounters with snakes and for treating snakebites are listed below.

- Workers should avoid walking in areas known to harbor snakes. Workers should be cautious when picking up or moving items that have been on the ground.
- Workers should wear boots made of heavy material that protect the ankles and pants. Heavy work gloves should be worn for picking up items.
- If one snake is encountered, others may be present. Workers should leave the area by retracing their steps.
- If a worker is bitten, the wound should be washed and the injured area immobilized and kept lower than the heart, if possible. Ice or a tourniquet should not be applied to a snake bite. The wound should not be cut. If medical care is more than 30 minutes away from a work site, a snakebite kit should be available on site and workers should know how to use it.

3.0 ANIMALS

SWPs for encounters with animals and for treating associated wounds are listed below.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

- If workers encounter a wild animal, the animal should be observed for unusual behavior such as a nocturnal animal out during the day, drooling, an appearance of partial paralysis, irritability, meanness, or a strangely quiet demeanor.
- Workers should never touch the body of a dead animal because certain diseases could be carried by fleas still on the body.
- Workers should avoid animal droppings (including bird droppings). Pathogens, some of which can become airborne, may still be present in the droppings.
- If a worker is bitten, he or she should get away from the animal to avoid further bites. Workers should not try to stop, hold, or catch the animal.
- If the wound is minor, it should be washed with soap and water. Any bleeding should then be controlled, and an antibiotic ointment and dressing should be applied. All animal bite wounds should be watched for signs of infection.
- If the wound is bleeding seriously, the bleeding should be controlled but the wound should not be cleaned. Medical assistance should be summoned immediately.
- If a rabid animal is suspected, immediate medical attention should be summoned. If possible, workers should try to remember what the rabid animal looked like and the area in which it was last seen. The animal should be reported by calling the local emergency number.

4.0 PLANTS

SWPs for plants are as follows:

- Workers should be aware of the types and appearances of poisonous plants in the work site area. Poison ivy, oak, and sumac are the most frequently encountered plants that can cause reaction from casual contact. If a worker is extremely sensitive to these plants, he or she should avoid the area entirely because airborne drift could be sufficient to cause a reaction. Other plants, such as fireweed, can cause painful, short-term irritation and should be avoided as well. Workers should avoid touching face and eye areas after contact with any suspicious plant.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

- Workers should wear proper clothing if working in or near overgrown areas. Disposable outerwear should be used, if necessary, and workers should not touch the material with bare hands during removal if the outerwear may have contacted poisonous plants.

- If contact with a poisonous plant has occurred, the affected area should be immediately washed thoroughly with soap and water. If a rash or weeping sore has already begun to develop, a paste of baking soda and water should be applied to the area several times a day to reduce discomfort. Lotions such as Calamine or Caladryl should be applied to help soothe the area. If the condition gets worse and affects large areas of the body or the face, a doctor should be consulted.

- Bushy and wooded areas should be thoroughly checked for thorn-bearing trees, brush, and bramble. In some cases, impalement can cause severe pain or infection.

5.0 WATERBORNE PATHOGENS-GIARDIA

Giardia is a waterborne pathogen consisting of a protoplasmic parasite of the mammalian digestive tract. Giardia is present worldwide, with the highest occurrence in areas with poor sanitation. In the United States, most reported cases are in mountainous regions where drinking water is obtained from streams and is unfiltered or untreated.

Giardia is contracted by ingesting water contaminated with giardia cysts in the dormant state. Giardia parasites can only thrive in the digestive tracts of mammals. Dormant giardia organisms enter water through the feces of infected animals or humans. Giardia symptoms include severe diarrhea and upset stomach. Some people are asymptomatic but can transmit the disease to others. Medical treatment of giardia can be difficult and unpleasant; therefore, prevention is critical. Precautions for preventing exposure to giardia are listed below.

- Workers should assume that all fresh water streams are infected with the giardia organism and not drink any untreated water.

- Team members collecting sediment and water samples from streams should wash their hands thoroughly with soap and water after collecting the samples.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

- Giardia parasites are relatively easy to destroy or filter. Water should be treated for drinking or cooking with iodine or another recommended giardia treatment before use.

6.0 HANTAVIRUS

Hantavirus pulmonary syndrome (HPS) is a potentially fatal infection caused by a rodent-borne hantavirus. HPS begins with a brief illness most commonly characterized by fever, muscle pain, headache, coughing, and nausea or vomiting. Other early symptoms include chills, diarrhea, shortness of breath, abdominal pain, and dizziness. In the first identified cases of HPS, this stage of the infection lasted 2 to 5 days before victims were hospitalized. Typically, by the time of hospitalization, victims were found to have tachycardia (a heart rate of greater than 100 beats per minute) and tachypnea (a breathing rate of greater than 20 breaths per minute). Fever was also common. In most cases, death occurred within 2 to 16 days of the onset of symptoms, and victims exhibited pulmonary edema and severe hypotension.

Currently, experts believe that HPS is spread by the deer mouse (*Peromyscus maniculatus*). Though the deer mouse has been found to be the primary host of hantavirus, several other rodent species have also tested positive for the virus. Pinon mice (*Peromyscus truei*), brush mice (*Peromyscus boylii*), and western chipmunks (*Tamia spp.*) are also likely to carry the virus. Also, cases of HPS have been reported in areas of the United States where these particular rodents are not indigenous.

Infected rodents shed the virus in their urine, feces, and saliva. Humans can be exposed to the virus through (1) inhalation of suspended rodent excreta or dust particles containing rodent excreta, (2) introduction of rodent excreta into the eyes or broken skin, and (3) ingestion of food or water contaminated by rodent excreta. HPS has a reported mortality rate of 55 percent. Transmission of hantavirus from infected individuals to healthy persons has not been documented.

Prevention of HPS infection is essential because no known antidote and no specific treatment exists for treating HPS. Therefore, employees should practice risk reduction and control measures. Guidelines for workers in locations that may have rodent infestations or habitats are listed below.

- The best approach for HPS control and prevention is through environmental hygiene practices that deter rodents from colonizing the work environment.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

- Information about the symptoms of HPS and detailed guidance on preventive measures should be provided to all employees assigned to field activities.

- Medical attention should be sought immediately for workers who develop a febrile or respiratory illness within 45 days of the last potential exposure to rodents. Attending physicians should be advised of each worker's potential for occupational exposure to hantavirus. Physicians should contact local health authorities promptly if hantavirus-associated illness is suspected. A blood sample should be obtained from the affected worker and forwarded with the baseline serum sample through the state health department to the Centers for Disease Control and Prevention for hantavirus antibody testing.

- Respiratory protective equipment should be worn when handling rodents, when removing rodents from traps, and when working in areas with evidence of rodent droppings or hair. Respiratory protective equipment should include, at a minimum, a half-face air-purifying respirator (APR) or powered APR equipped with a high-efficiency particulate air (HEPA) filter (P100). Full-face regulators may be needed under some circumstances. Respiratory protective equipment should be used in accordance with Occupational Safety and Health Administration regulations.

- Dermal protection should be worn when handling rodents or traps containing rodents, or if contact with contaminated surfaces could occur. Dermal protection should include rubber or plastic gloves that should be washed and disinfected before removal.

- A trap contaminated with rodent urine or feces or in which a rodent was captured should be disinfected with a commercial disinfectant or a 0.4 percent bleach solution. A dead rodent should be disposed of by placing the carcass in a plastic bag containing enough general-purpose household disinfectant to thoroughly wet the carcass. The bag should be sealed and disposed of by burning or by burying it in a 2- to 3-foot-deep hole. Local and state health departments can also provide appropriate disposal methods.

	TETRA TECH, INC. SAFE LIFTING and CARRYING PRACTICES	Revision Date: 10/1/2008 Document Control Number: 5-19 Page 1 of 2

To prevent injuries and adverse health effects, the following general safe work practices (SWP) are to be followed when lifting and carrying while in an office or field environment. These SWPs establish a pattern of general precautions and measures for reducing risks associated with back injury and trauma associated with improper lifting and carrying of heavy objects. This list is not inclusive and may be amended as necessary.

- First, inspect the area where the load will be lifted, transported, and then deposited. Remove any obstacles that could present a tripping or other hazard.
- Perform a "test lift" by slightly pushing or moving the object to gauge your ability to safely lift/move/deposit the item without injuring yourself. IF YOU ARE NOT CONFIDENT THAT YOU CAN MOVE THE OBJECT WITHOUT INJYURING YOURSELF - THEN EITHER GET A MECHANICAL LIFTING AID OR GET HELP. DO NOT ATTEMPT TO MOVE THE OBJECT YOURSELF.
- Get as close to the object as you can, and bend at the knees (not at the back).
- Assure that can get a firm grasp on the object.
- Keeping the load as close to you body as possible, lift with your legs, and avoid turning or twisting while lifting, carrying, or depositing the load.
- Carry the object in a manner that it does not obstruct your vision and so that you can maintain a clear line of sight of your path of travel and the area where you will set it down.
- Set the object down using the same techniques as you did in lifting it (don't turn or twist, keep it close to your body, use your legs - not your back).

Disclaimer: This safe work practice (SWP) is the property of Tetra Tech, Inc. (Tetra Tech). Any reuse of the SWP without Tetra Tech's permission is at the sole risk of the user. The user will hold harmless Tetra Tech for any damages that result from unauthorized reuse of this SWP. Authorized users are responsible for obtaining proper training and qualification from their employer before performing operations described in this SWP.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

	TETRA TECH, INC. SAFE LIFTING and CARRYING PRACTICES	Revision Date: 10/1/2008 Document Control Number: 5-19 Page 2 of 2

Revision Date	Document Authorizer	Revision Details
10/1/2008	Chris McClain	Update from 1998 format

	TETRA TECH, INC. PREVENTION of SUN EXPOSURE	Revision Date: 10/1/2008 Document Control Number: SWP 5-26 Page 1 of 2

By far, the most common cause of skin cancer is overexposure to the sun. Ninety percent of all skin cancers occur on parts of the body that not usually covered by clothing. People who sunburn easily, and those with fair skin and red or blond hair are more prone to develop skin cancer. The amount of time spent in the sun also affects a person's risk of skin cancer. Premature aging of the skin also occurs with prolonged sun exposure. Tetra Tech encourages personnel to avoid prolonged exposure to the sun, and recommends the following:

- Sunburn can occur during any time of the year. To avoid sunburn, wear hats with wide brims.
- Use sunscreen with a Sun Protective Factor (SPF) rating of 15 or higher.
- To prevent skin cancer:
  - Cover up with a wide brimmed hat and a bandanna for your neck. Wear long-sleeved shirts and pants which the sun cannot penetrate.
  - Use sunscreens to help prevent skin cancer as well as premature aging of your skin. Use a Sun Protective Factor (SPF) rating of 15 or higher.
  - Apply sunscreen at least an hour before going into the sun and again after swimming or perspiring a lot.
  - Do not use indoor sun lamps, tanning salons/parlors, or tanning pills.
- You can still get burned on a cloudy day. Try to stay out of the direct sun at midday, because sun rays are their strongest between 10 a.m. and 3 p.m. Beware of high altitudes - where there is less atmosphere to filter out the ultraviolet rays. Skiers should remember that snow reflects the sun's rays, too.
- Know your skin. Whatever your skin type, do a monthly self-examination of your skin to note any moles, blemishes or birthmarks. Check them once a month and if you notice any changes in size, shape or color, or if a sore does not heal, see your physician without delay.

Disclaimer: This safe work practice (SWP) is the property of Tetra Tech, Inc. (Tetra Tech). Any reuse of the SWP without Tetra Tech's permission is at the sole risk of the user. 	TETRA TECH, INC. UNDERGROUND UTILITIES	Revision Date: 10/01/2011 Document Control Number: SWP 5-35 Page 1 of 23

1.0 PURPOSE

This program provides requirements for identification, location, and avoidance of underground utilities, appurtenances, and structures during intrusive activities. The program also addresses actions to be taken in response to encountering or contacting underground utilities.

2.0 SCOPE

These requirements are applicable to all Tetra Tech operations. The procedures address the requirements and recommendations for identifying and locating, working around, and encountering or contacting underground utilities.

3.0 MAINTENANCE

The Vice President, Corporate Health and Safety or designee is responsible for updating this procedure. Approval authority rests with Tetra Tech's Senior Vice President, Corporate Administration. Suggestions for revision shall be submitted to Corporate Administration department.

4.0 DEFINITIONS

4.1 Aggressive Methods

The use of mechanized equipment such as excavators, backhoes, drill rigs, directional drilling, road saws, etc. Non-Aggressive methods involve the use of manual or non-mechanized methods such as hand-digging with shovels and air/hydro/vacuum methods.

4.2 Buffer Zone

As defined in this procedure, the area around a utility where only non-aggressive excavation methods may be utilized, unless specific conditions are met.

The definition cited above, and the excavation requirements and restrictions associated with it, will vary depending on the particular state regulations. Tetra Tech requires the imposition of a four-foot

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

Buffer Zone on all sides of the utility as measured from the outside edges of the utility, both horizontally and vertically. Since most jurisdictions recognize Buffer Zones which vary somewhere in the range of 18 to 36 inches, this distance must be verified by consulting the applicable state regulations before excavating so that adjustments to surface markings can be made to achieve the required four-foot buffer zone.

Referred to as the "Tolerance Zone", "Safety Zone", or "Approximate Location of Underground Utilities" in some jurisdictions.

Information relative to excavation within the buffer zone is contained in Section 5.2.2.4.

4.3 Competent Person

A Competent Person has the ability to recognize hazards associated with underground utilities and the authority to stop or direct operations to ensure the safety of personnel and conformance with this procedure. The Competent Person has an understanding of this procedure, and the "One-Call" system requirements for the jurisdiction where excavation is occurring. The Competent Person must be capable of notifying One-Call agencies and maintaining and tracking One-Call Locate Numbers. Additionally, they must have knowledge of methods and work practices for utility identification, avoidance, and protection.

4.4 De-Energize

As applicable to a utility, to physically eliminate and/or prevent the presence, transmission, flow, or release of energy or materials which may cause harm to personnel or property.

4.5 Excavation

An operation for the purpose of movement or removal of earth, rock, or the materials in the ground, including but not limited to; digging, blasting, auguring, backfilling, test boring, drilling, pile driving, directional drilling, grading, plowing-in, hammering, pulling-in, jacking-in, trenching, tunneling, structural demolition, milling, scraping, tree and root removal (grubbing), fence or sign post installation. Tetra Tech requires that the designated One-Call agency for the applicable jurisdiction be contacted any time an intrusive activity is planned.

4.6 Jurisdiction

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

The authority having legal jurisdiction relative to regulations and requirements for notification of excavation activities and associated identification and marking. In the United States, the states have jurisdiction, and most consider the regulations applicable when excavation is to be performed in any location, including any public or private way, any company right-of-way or easement, or any public or privately owned land or way.

4.7 Locate

To indicate the existence of a utility by establishing a mark through the use of flags, pins, stakes, paint, or some other customary manner, that approximately determines the location of a line or facility.

4.8 Locate Request

A communication between an entity performing intrusive activities and a utility marking agency (One-Call, etc.).

4.9 Observer

The person assigned to visually monitor and, as needed, signal the operator during mechanized intrusive activity when the activity is occurring within four feet of the outside edge of the buffer zone. This person remains in close communication with the equipment operator(s) and will stop the activity if needed.

4.10 One-Call Agency

An entity that administers a system through which a person can notify owners/operators of underground lines or utilities of the intent to perform intrusive activities in proposed public areas.

4.11 Positive Response

Communication with the entity performing intrusive activities, prior to the activity, to ensure that all contacted (typically via the One-Call agency) owner/operators have located and marked the underground utilities.

4.12 Potholing

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

The practice of exposing an underground facility by safe, non-aggressive excavation methods in order to ascertain the precise horizontal and vertical position and orientation of underground lines or utilities.

4.13 Underground Utility

An underground or submerged conductor, pipe, or structure used in providing electric or communications service (including but not limited to, traffic control loops and similar underground or submerged devices), or an underground or submerged pipe used in carrying, providing, or gathering gas, oil or oil product, sewage, storm drainage, water or other liquid service (including, but not limited to, irrigation systems), and appurtenances thereto. As used in this procedure, utility includes all underground appurtenances and structures.

The following are examples of the types of underground utilities that may be present in a given location:

- Natural gas pipelines
- High voltage electric cables
- Water pipelines
- Fiber optic telecommunications lines
- Steam pipelines
- Gasoline, oil, or other fuels
- Sewer pipelines
- Hazardous Materials
- Underground Storage Tanks (USTs)
- Abandoned underground structures containing hazardous materials, hazardous wastes, and radioactive materials

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

Note: Electrical and pressurized mechanical underground utilities that are not energized shall be considered as applicable to the requirements of this procedure until they are disconnected and removed or protected by a lockout/tagout system approved by Tetra Tech (see Section 5.2.2.6)

4.14 Underground Utility Owner

Any person, utility, municipality, authority, political subdivision or other person or entity who owns, operates, or controls the operation of an underground line/facility.

4.15 White Lining

The practice whereby the entity which intends to perform intrusive activities pre-marks the site with an outline of the area where intrusive activities will occur. This involves the use of white paint, flags, stakes, or a combination thereof to mark the extent of where work is to be performed. The marking may vary depending on what intrusive activities are to be conducted. For example, for general excavation, an area outline of the excavation shall be marked, while for drilling, the individual boreholes shall be marked. Studies have shown that pre-marking is a practice that does prevent utility contact incidents.

5.0 DISCUSSION

5.1 Responsibilities

5.1.1 Competent Person

The Competent Person shall be responsible for:

- Obtaining a copy of, and understanding the applicable regulations for the state of jurisdiction where the excavation activities are to be performed.
- Contacting the appropriate One-Call agency or private locating service, as applicable.
- Recording One-Call locate numbers.
- If necessary, renewing One-Call locate numbers before expiration.
- Ensuring that white-lining of the area to be excavated is performed.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

- Ensuring that a "positive response" has been received from every utility owner/operator identified by the One-Call agency and that they have located their underground utilities and have appropriately marked any potential conflicts with the areas of planned intrusive activities.
- Completion of the Ground Disturbance Permit (Excavation/Utility Locates) or equivalent.
- Reviewing applicable AHAs or other client specific requirements with all project members before work begins.
- Conducting training on communication protocols to be used by the excavation observer and equipment operator.
- Ensuring Implementation of appropriate work practices during intrusive activities (including maintaining the prescribed buffer zone for use of aggressive methods).
- Conducting daily inspections of the excavation area to make sure that all markings are intact.
- Maintaining required records.
- Providing the Project Manager or Site Supervisor with all required documentation on a daily basis.

5.1.2 Observer

Whenever intrusive operations with mechanized equipment are being conducted within four feet of the outside edge of the buffer zone, horizontally and vertically, an observer must be assigned to monitor the activities. The observer is responsible for:

- Observing the operation to ensure that the operator stops operations if utilities are observed.
- Reviewing hand signals and other forms of communication with the operator.
- Properly signaling the operator.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

- Stopping the operation immediately if the observer's attention must be diverted even momentarily.
- Stopping the operation immediately if a hand signal or other directive is not followed. Operations will not resume until the observer and operator mutually agree that the reason(s) for not complying with the directive(s) are/is identified and fully corrected.
- Maintaining required records, such as logbook entries, or other, as requested by line management.

5.1.3 Line Management

The Project Manager (PM) shall be responsible for:

- Ensuring compliance with this procedure.
- Providing the necessary resources for compliance with this procedure.
- Designating Competent Personnel in consultation with the Site Safety Coordinator prior to the start of work.

5.1.4 Site Safety Coordinator

The Site Safety Coordinator (SSC) shall be responsible for:

- Providing oversight on the implementation of the requirements contained in this procedure.
- Consulting with the PM and Competent Person on underground utility issues.

5.2 Procedure

The following sections provide the requirements and recommendations of this procedure, which are intended to prevent injury to personnel, damage to infrastructure, and associated indirect effects associated with encountering or contacting underground utilities during the execution of intrusive work. Underground utilities present multiple potential hazards that must be recognized before and during work which occurs near them, therefore, this procedure is divided into sections addressing underground utility identification and location, working around or near underground utilities, and actions to be taken in the event that underground utilities are encountered or

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

contacted. Hazards that may be presented by underground utilities include explosion and fire, electrocution, toxic exposures, pathogens, and drowning.

5.2.1 Identifying and Locating Underground Utilities

The possibility of the existence of underground utilities must be evaluated as early as possible in the planning phase for any project which involves intrusive activities. The Project Safety Checklist or equivalent should be used for documentation of the identification of this potential hazard and the procedures to be followed to address them. The following sections describe various methods for identifying and locating utilities on a site. Plans should be verified during the readiness review. The Ground Disturbance Permit (Excavations/Utility Locate) or equivalent must be completed before any activities meeting the definition of excavation are conducted. This document is intended to be used as a guide during the process of locating and marking utilities in the area and in the overall process of underground utilities management during the course of the project.

All underground utilities on a site involving excavation, must be located and identified before intrusive activities commence, by one or more of the following entities:

- The Utility Owner
- A Private or Public Utility Locating Service
- An Approved Tetra Tech Competent Person

These options are described in greater detail in the following Sub-Sections:

5.2.1.1 Pre-Planning and the Site Specific Health and Safety Plan

The Site-Specific Health and Safety Plan developed for the project must:

- Identify the location and types of underground utilities that are believed to be present on the site.
- Reference this procedure and describe how it will be implemented on the project.
- Contain an Activity Hazard Analysis in which the hazards associated with underground utilities are identified, as well as the measures used to control them.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

- Contain, as an appendix, a copy of the applicable regulations from the state of jurisdiction where excavation activities are to be performed. These can usually be obtained via the Internet.
- Contain clear and concise procedures to be followed in the event that contact with underground utilities occurs.
- Address underground utilities and potential associated scenarios in the emergency response section.

5.2.1.2 "One-Call" Locating and Marking Services

Every state has utility marking service programs having various names such as "One-Call", "Dig-Safe", "Call-Before-You-Dig", "Dig-Safely", and many others. These services will identify the types and locations of any utility that may exist in an area to be excavated, as long as the property is in the public domain.

The appropriate One-Call service for the jurisdiction where the project is located must be contacted prior to beginning excavation work. The One-Call agency should be given as detailed a description of the property as possible; address, cross street, utility pole numbers, physical description, etc.

Notification to the One-Call service shall allow sufficient lead time for the agency to mark the utilities before excavation begins. The lead times vary, but range from two to ten days, depending on the state of jurisdiction.

A complete listing of One-Call agencies and telephone numbers for all states is available in the "Call-Before-You-Dig Call Center Directory", which can be accessed online.

Once notified, the One-Call agency will provide the contractor with a unique "locate number" or "reference number". This reference number must be kept in the project files by the Competent Person or designee. Additionally, the reference numbers have expiration dates, which may vary depending on the particular One-Call agency. The valid period of the locate number and required renew notification date shall be requested from the One-Call agency.

On a project with multiple contractors, each contractor must request a separate locate number. Under no circumstances will any other contractor or entity be allowed to work under our locate number. Subcontractors to Tetra Tech may excavate under the locate number secured by Tetra

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

Tech, provided that they are excavating within the area which was previously white-lined by Tetra Tech and subsequently marked. However, the One-Call agency must be contacted and notified of this arrangement so that the subcontractor can be recorded as working under the existing locate number. If a Tetra Tech subcontractor will be excavating in an area not white-lined by Tetra Tech, then the Tetra Tech subcontractor must request a new locate.

The area where work is to be performed shall be white-lined by Tetra Tech personnel before the locating service goes to the site.

It is good practice to arrange a pre-excavation meeting at the project site with the personnel performing the utility location and marking. This meeting will facilitate communications, coordinate the marking with actual excavation, and assure identification of high-priority utilities.

The One-Call agency should provide the identities of the utility owners that will be notified of the locate request. This information shall be recorded on the Ground Disturbance Permit maintained in the project files. The contact person and phone number for each utility owner shall also be recorded.

The utility owners should provide a “positive response” relative to the locate request, which can consist of two types of action by the utility owner. The facility owner or operator is required to 1) mark it’s underground utilities with stakes, paint, or flags, or 2) notify the excavator that the utility owner/operator has no underground utilities in the area of the excavation.

The positive responses shall be recorded on the Ground Disturbance Permit and cross-checked with the list of utility owners that the One-Call agency stated that they would notify. If it is discovered that a utility owner has not provided a positive response, then the One-Call agency must be notified.

Excavation shall not be conducted until positive responses have been received from all utility owners identified by the One-Call agency as having underground utilities on the property.

Before beginning excavation, the excavator must verify that the location marked was correct, and the distinct, color-coded markings of all utility owners are present.

Examine the site to check for any visible signs of underground utilities that have not been located and marked such as pedestals, risers, meters, warning signs, manholes, pull boxes, valve boxes,

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

patched asphalt or concrete pavement, areas of subsidence, fresh sod or grass, lack of grass or vegetation, and new trench lines.

The markings placed by the utility owners must be documented by Tetra Tech using a still, digital, or video camera. The photo-documentation shall be maintained with the project files indefinitely.

The markings placed by the utility owners or marking services shall follow the American Public Works Association Uniform Color Code as described in ANSI Standard Z 535.1. This code appears below.

American Public Works Association Uniform Color Code

Red - Electric Power Lines, Cables, Conduit

Orange - Communications, Telephone, Cable TV

Yellow - Gas, Oil, Steam, Petroleum or Gaseous Materials

Green - Sewers and Drains

Blue - Potable Water Systems

Purple - Reclaimed Water, Irrigation, Slurry Lines

Pink - Temporary Survey Markings

White - Proposed Excavation

5.2.1.3 Private Utility Locating and Marking Services

As discussed, One-Call agencies arrange for the identification and marking of underground utilities only on public property, up to the point of contact with private property. In the event that excavation activities are to be conducted on non-public properties, the presence, location, depth, and orientation of all underground utilities within the white-lined area shall be ascertained through records review, including any site plot plans, utility layout plans, and as-built drawings available from the property owner, as well as through interviews with knowledgeable personnel associated with the property. Additionally, the information gathered from these sources shall be verified by physical detection methods (non-aggressive), performance of a geophysical survey, or by procuring

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

the services of a private utility locating and marking service. If any detection methods are to be self-performed, the requirements of 5.2.1.4 must be followed.

The above requirements are also intended to address the potential presence of unknown or undocumented underground utilities, therefore, the area to be excavated must also be evaluated by the PM to determine if the potential for unknown or undocumented underground utilities exist. If the determination is made that the presence of these unknown or undocumented underground utilities is unlikely, then a variance should be requested to eliminate the requirement to identify them.

Variance to this requirement above must be approved by the PM and SSC.

5.2.1.4 Self-Performance of Utility Locating and Marking

The techniques and instruments used to locate and characterize underground utilities can be extremely complicated and difficult to use effectively. Additionally, interpretation of the data generated by this instrumentation can be difficult. The utility marking services described in 5.2.1.1 and 5.2.1.2 are staffed by well-trained, experienced professionals who perform locating activities on a regular basis. For these reasons, it is most desirable that these professional services are used for utility location and marking on projects.

In some instances, such as long-term projects where excavation is a primary task, and the presence of underground utilities is extensive, it may be prudent to self-perform locating and marking activities.

If locating and marking is to be self-performed, all personnel using instrumentation will be trained on the use of the equipment that will be used, and the interpretation of the data.

There are a variety of locating methods which may be utilized for self-performance of utility locating as categorized below:

- Magnetic field-based locators or path tracers
- Buried electronic marker systems (EMS)
- Ground penetration radar-based buried –structure detectors
- Acoustics-based plastic pipe locators

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

- Active probes or beacons for non-metallic pipes
- Magnetic polyethylene pipe

Before self-performing any underground utility locating on a project, approval must be obtained from the Operating Unit Health and Safety Manager.

5.2.2 Working Near or Around Underground Utilities

After the site has been properly evaluated for the presence of underground utilities, intrusive activities may begin. Since there is no perfect way of eliminating the hazards presented by underground utilities, an effort must be made to perform the tasks following the direction and guidance as described by the following best practices that should be implemented during the execution of the project.

5.2.2.1 Work Site Review

Before beginning intrusive activities, a meeting shall be held between all members of the project team. This shall consist of a review of the marked utility locations with the equipment operators, observers, laborers, etc.

5.2.2.2 Preservation of Marks

During excavation, efforts must be made to preserve the markings placed by the utility owners until they are no longer required. If any markings are obliterated, the One-Call agency must be contacted for re-marking. No intrusive activities are to take place if markings are not visible.

5.2.2.3 Excavation Observer

Whenever intrusive operations are being conducted within four feet of the edge of the buffer zone, an observer must be assigned to monitor the activities. The observer will be designated each day, and a review of hand signals and other forms of communication between the observer and operator will be conducted. The directives of the observer will be followed precisely and immediately by those operating equipment.

5.2.2.4 Excavation Within The Buffer Zone

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

Performing intrusive activities within the buffer zone requires careful adherence to proper guidelines and procedures to minimize the risk of contact with underground utilities.

The purpose of the buffer zone is to designate and define an area where careful, prudent, and reasonable excavation practices are to be used to prevent contact with underground utilities. However, there may be occasions where it is necessary to perform aggressive excavation methods in this designated area.

The boundaries of the buffer zone as defined in Section 4.2 will be observed at all times during intrusive activities. Aggressive excavation methods (excavators, backhoes, drill rigs) must be restricted to areas outside of the 4-foot buffer zone unless a special exemption to this requirement is obtained.

Consider whether the objective of the project can be completed without performing intrusive activities in the buffer zone at all. This will greatly reduce the risks presented by performing work in close proximity to underground utilities. If after consideration, the determination is made that intrusive activities in the buffer zone are necessary, then a formal exemption request shall be made to the PESM according to the guidelines below.

A request to utilize aggressive excavation methods in the buffer zone may be made if:

There is no other appropriate and reasonable alternative to using aggressive methods in the buffer zone; and

- The utility has been de-energized (and purged if necessary), verified as de-energized, and locked-out (per Section 5.2.2.6); or
- the depth and orientation of the utility has been adequately and visually determined through the use of non-aggressive methods such as air/hydro/vacuum excavation, potholing, probing, hand-digging, or a combination thereof; and
- for utilities containing electrical energy, the depth of the existing water table is below the location of the utility; and
- application for the exemption has been submitted to the SSC; and
- the exemption has been granted and approved in writing by the SSC.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

The following conditions will apply to this request:

- Aggressive methods may be used in the buffer zone only to the extent allowed by the applicable state or other jurisdictional regulations.
- Appropriate physical protection measures for exposed utilities as described in Section 5.2.2.5 shall be implemented to eliminate the potential for equipment contact with utilities.
- The extent of the project excavation area to be covered by the exemption request must be specified.
- When evaluating the use of aggressive excavation methods in the buffer zone, the SSC will consider the type of utility involved and the associated risk potential.

Based on this evaluation, the SSC may impose further conditions and requirements, which will be detailed in the HASP.

Even if the above exemption conditions are met, the SSC has authority to deny the request, the reasons for which will be provided.

Unless exempted according to the above provisions of this procedure, only non-aggressive methods may be used within the buffer zone. Non-aggressive, or non-mechanized equipment is used in order to prevent mechanical contact with underground utilities which could result in damage to the utility and create the potential for personal injury and property damage. Following are examples of non-aggressive excavation methods:

- Hand-digging
- Non-conductive hand tools must be used when digging within the buffer zone surrounding underground electrical utilities.
- If conductive hand tools must be used near electrical lines, then the SSC shall be consulted to determine additional requirements relative to safe electrical practices, procedures, and equipment.
- Hydro-excavation (water pressure).
- Air excavation (air pressure).

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

- Vacuum extraction (soil excavation/removal).
- Air excavation/vacuum extraction combination.
- Aggressive methods may be used for the removal of pavement over a utility, if allowed by the state regulations.

5.2.2.5 Protection of Underground Utilities

It is very important that consideration be given to the protection of underground utilities when performing adjacent intrusive activities. This is necessary not only to prevent physical damage and associated indirect effects, but also to prevent the potential for injury to employees and the public.

When using aggressive excavation methods within the buffer zone around exposed underground utilities, physical protection may be appropriate. Basically, this involves creation of a physical barrier between the mechanized operation and the utility. The following are some possible types of physical protective measures:

- Heavy timbers, similar to swamp mats.
- Sheets of plywood.
- Blasting mats.
- Once exposed, underground utilities no longer have the support provided by surrounding soil and may need to be physically supported to prevent shifting, bending, separation, or collapse, which could result in damage to the utility, and possibly personnel. Following are suggested support methods:
- Timber shoring underneath the utility.
- Timbers or girders over the top of the excavation fitted with hangers that support the utility.
- Design by a PE for complicated or large applications.
- Utilities must also be protected from objects that may fall into the excavation such as rocks and equipment. This can be accomplished by following these guidelines:

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

- Cast spoils as far away from the excavation as possible. Excavated and loose materials shall be kept two feet from the edge of excavations, as required by OSHA.
- Relocate large rocks, cobbles, and boulders away from the excavation and sloped spoils piles.
- When vehicles and machinery are operating adjacent to excavations, warning systems such as soil berms, stop logs or barricades shall be utilized to prevent vehicles from entering the excavation or trench.
- Scaling or barricades shall be used to prevent rock and soils from falling into the excavation.
- Barriers shall be provided to prevent personnel from inadvertently falling into an excavation.

5.2.2.6 De-Energizing Utilities

Utilities can carry many types of potential energy, including electricity, flowing liquids, liquids under pressure, gasses under pressure, etc. A release, such as may happen if a utility conveyance is compromised, could result in personal injury, property damage, and other indirect effects. If the white lines of the proposed excavation area overlaps or extends into the buffer zone of a known underground utility, then if at all possible, that utility shall be de-energized to physically prevent the transmission, flow, or release of energy. Conversely, if the buffer zone of the known utility lies outside of the white-lined, proposed excavation area, then de-energization is not required.

The owner of the utility shall be contacted to determine the feasibility and methodology of de-energizing the utility. Plenty of lead-time should be provided for this since it may take utility companies weeks to de-energize some utilities.

Depending on the utility and the material being conveyed, isolation points which may be suitable for de-energizing include but are not limited to the following:

- Electrical circuit breakers
- Slide gate

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

- Disconnect switches
- Piping flanges
- Other similar devices

When utilities are de-energized, it must be verified by demonstration. This can be accomplished by testing equipment, switching on a machine or lighting, opening a valve, etc. For any current-carrying electrical equipment, such as cables, electrical panels, etc., successful de-energization must be certified through the use of appropriate electrical testing equipment.

Whenever a utility is de-energized, a means of ensuring that the energy isolation device and equipment cannot be operated until the device is removed must be provided. Typically, this is achieved by utilizing a lockout device, accompanied by a written tag that physically controls the configuration of the energy isolation point. Lockout devices include but are not limited to the following:

- Locks
- Chains
- Valve covers
- Circuit breaker hasps
- Blind flanges
- Slip blinds, and
- Multiple lock hasps

When de-energizing and locking out of utilities is practiced, the provisions of DCN 2-16 Control of Hazardous Energy Lockout/Tagout, shall be followed, as applicable.

In the event that a utility is de-energized, but there is no means of adequately providing a physical locking-out of the utility, then a spotter must be posted at the point of isolation to ensure that the utility is not re-energized. The spotter must be supplied with a communication device such as a site radio.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

5.2.2.7 Damage Discovery

During excavation, utility damage may be discovered which is pre-existing or otherwise not related to a known contact. Disclosure to the utility owner is very important because the possibility of utility failure or endangerment of the surrounding population increases when damage has occurred. The utility may not immediately fail as a result of damage, but the utility owner or operator must be afforded the opportunity to inspect the utility and make a damage assessment and effect repairs if necessary. The following guidance applies:

- Observe and photograph the utility from a safe distance and determine in there is damage. Damage would be all breaks, leaks, nicks, dents, gouges, grooves, or other damages to utility lines, conduits, coatings, or cathodic protection systems.
- The One-Call agency or private location service must be contacted immediately.

5.2.3 Encountering or Contacting Underground Utilities

In the event that encountering or contacting an underground utility occurs, it is imperative that the appropriate actions are taken to minimize damage to the utility, prevent personal injury, and minimize indirect effects.

5.2.3.1 Encountering Underground Utilities

It is possible that underground utilities will be encountered in locations that have previously been "cleared" of having underground utilities by the locating service, or are found outside of the area which has been marked as having underground utilities. In either case, if this occurs, the following applies:

- Intrusive activities must be curtailed
- The One-Call agency or private location service must be contacted immediately
- The PM and PESM must be notified
- No further intrusive activities may be conducted until:
- The One-Call agency/private location service and/or the subject utility owner visit the site;

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

- Identification of the utility owner and the type of material/energy being conveyed by the utility has been made; and
- The orientation and depth of the subject utility has been determined and suitably marked.
- A Tetra Tech Incident Report and Investigation form must be completed per DCN 2-2 Incident Reporting and Investigation Program. The report should be accompanied by photographs clearly showing the marking(s), and the actual location, with a distance gauge to document how far off the mark the utility was encountered.

5.2.3.2 Contacting Underground Utilities

If excavation or other equipment being used for intrusive activities makes contact with an underground utility, the following guidelines apply:

- Intrusive activities must be stopped immediately.
- Observe the utility from a safe distance and determine if there is damage. Damage would be all breaks, leaks, nicks, dents, gouges, grooves, scratched coatings, cathodic protection compromise, material leakage, obvious electrical energy.
- Move all personnel to the evacuation meeting point as described in the SSHP.

EXCEPTION: If an electrical line has been contacted and it is your belief that equipment (such as an excavator) is electrically energized, do not approach the equipment. Order the operator to remain in the equipment until emergency personnel can de-energize the source (unless the equipment is on fire, at which time the operator should jump off of the vehicle and shuffle along the ground to a safe area). Shuffling is required because current flows outward through the soil in a ripple pattern called a power gradient, creating a pattern of high and low potential, Shuffling decreases the chance that these gradients could be bridged, causing current to flow through the body, resulting in electrocution.

- Secure the area to prevent the public from entering.
- Contact emergency responders as specified in the SSHP.
- The One-Call agency or if known, the utility owner must be contacted immediately.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

- The PM and SSC must be notified.
- No further intrusive activities may be conducted until:
- The utility owner inspects the scene and after repairs, verifies that all danger has passed.
- The orientation and depth of the subject utility has been determined and suitably marked.
- Permission from the emergency responders to resume work has been given.

A Tetra Tech Incident Report and Investigation form must be completed per DCN 2-2. The report should be accompanied by photographs clearly showing the marking(s), and the actual location, with a distance gauge to document how far off the mark the utility was encountered.

State and Local regulations must be reviewed to determine if reporting to any additional agencies is required.

5.3 Training

Competent Persons shall have adequate experience and/or training to carry out the requirements of this procedure.

	TETRA TECH, INC. SPILL PREVENTION AND CLEANUP	Revision Date: 01/31/2013 Document Control Number: SWP 5-47 Page 1 of 14

1.0 PURPOSE

Tt employees involved in remediation of spills or hazardous waste releases may be required to handle containers of hazardous waste. Services performed at hazardous and non-hazardous waste sites may also necessitate handling materials such as gasoline and oil for equipment operation, and chemicals for preservation of samples brought onto a site. Tt facilities may also maintain chemicals on-site in the construction materials engineering (CME) and analytical laboratories. These scenarios present the primary potential for spills or container leaks.

This safe work practice (SWP) addresses general guidance for spill prevention and cleanup. Specific guidance for spill response can also be found in site-specific health and safety plans developed for hazardous waste sites, work plans for non-hazardous waste sites, the chemical hygiene plan, and the facility emergency response plan. Spill and discharge control practices should follow specific procedures to ensure the safety of responders and bystanders and to limit environmental impacts.

2.0 SPILL PREVENTION

The best spill response approach is to prevent spills from occurring. In order to achieve this, the following practices should be employed at Tt facilities and client job sites.

- Make sure that all containers are appropriately labeled and that material safety data sheets (MSDS) are available. Before handling operating and analysis materials or hazardous waste, appropriate precautions should be in place to prevent spills and exposure to individuals.

- Store chemicals in appropriate locations. Make sure that incompatible chemicals are not stored in the same area. Refer to Appendix A for a general listing of incompatible chemicals.

- When transporting chemicals, ensure that the containers are properly closed, secured, and labeled. Do not carry more than one container at one time. If this is required, place containers within totes.

- Only keep the necessary quantity of each chemical on hand. For ease of use, keep chemicals in working containers that are appropriately sized for handling.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

- Ensure that chemicals that are no longer needed and expended chemical containers are disposed of according to regulations pertaining to the specific material.

3.0 GENERAL SPILL RESPONSE PROTOCOLS

In the event that a spill does occur, the following general steps should be followed:

- The first concern should be for human health and safety. Tend to injuries immediately, evacuate the area if necessary, and alert appropriate response personnel.
- If the material is flammable or combustible, an attempt should be made to remove all sources of heat or ignition. However, this does NOT mean unplugging machinery; doing so may cause sparks.
- Consult the MSDS before spill cleanup activities to determine the proper PPE and cleanup equipment to be utilized.
- If the material is still spilling or leaking, attempt to stop additional spillage and contain the area to prevent spread of the contamination.
- Cleanup should be conducted according to the proper techniques described in the MSDS, site-specific health and safety plan, and/or emergency response plan.
- Cleanup should only be attempted by properly trained personnel wearing appropriate PPE.
- All waste should be disposed of according to applicable regulations.
- IF THE SPILL IS TOO LARGE – CALL IN APPROPRIATE RESPONSE PERSONNEL. DO NOT ATTEMPT TO MANAGE THE SPILL YOURSELF.

4.0 DETAILED SPILL RESPONSE PROTOCOLS

This section provides more detailed steps to follow in the event of a spill or leak.

4.1 Immediate Actions

In the event of a spill, employees should immediately:

- Check for injured personnel.
- Clear the affected area.
- Contain the spill and isolate it, if it is safe to do so.
- Contact the facility manager, project manager (PM) or site safety coordinator (SSC).

Immediate action should be taken to control and contain any spill following the general guidelines below:

- Unnecessary personnel should be kept away from the spill or discharge.
- The hazardous area should be isolated.
- If the spill or discharge creates a hazardous situation or results in injury or an environmental release, the emergency procedures of the HASP should be implemented. Emergency response telephone numbers, designated contacts, and special reporting procedures are presented in the HASP.
- Personnel should stay on the upwind side of the spill or discharge.
- Entry into a confined space or low area where liquids or vapors may accumulate should be avoided.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

- Sources of ignition should be eliminated if the spill or discharge involves combustible materials.

- Drains, manholes, waterways, sewers, and the like should be identified and covered or protected.

- The spill should be controlled or absorbed using appropriate media or devices.

- When the spill or discharge is fully contained and under control, spill or discharge material should be collected.

- Following cleanup, the spill area should be evaluated by collecting soil samples and screening the area with air monitoring instruments.

4.2 Decontamination of Personnel

If an individual is contaminated while handling or transporting hazardous materials, emergency response personnel must be notified and a spill team activated. The individual must also be decontaminated and receive medical attention. If decontamination procedures would cause further injury, decontamination should not be performed. Instead, use a blanket or other material to contain the contamination during transport, and inform emergency response personnel that the victim has not been decontaminated.

4.3 Risk Assessment

The risk assessment is based upon the hazards posed by the chemicals, the quantity of materials involved, and the location of the spill. A spill response leader should be designated if the spill warrants activation of a spill team (i.e., when a person is injured or contaminated, or a spill is beyond the control of the individual or site personnel). He/she is responsible for all aspects of the response until relieved by a qualified replacement. The spill response leader should determine the level of risk by answering the following questions:

4.3.1 What chemical is involved?

This may be determined by interviewing the person(s) who reported the spill and reviewing associated MSDS. Use knowledge of the work area and visual inspection to make a preliminary identification. This will be verified by direct inspection by the entry team.

4.3.2 How much has spilled?

Information gained when answering the question above should determine the quantity involved. For a continuing leak, attempt to estimate the leak rate. If the quantity cannot be determined, you must assume release of the complete contents of the container.

4.3.3 Where is the incident located?

Take into account the relative area as well as the physical location. For example, determine where the spill is located relative to drains, water bodies, and other potential receptors.

4.4 Development of Spill Cleanup Plan

The spill response leader should develop a spill cleanup plan that includes the following elements:

- Ensure that safety is the number one priority and that all safety issues are addressed prior to beginning spill cleanup.
- Ensure that communication links between the spill response leader, members of the spill response team and emergency response personnel are in place.
- Determine if the risk level associated with the spill allows for internal personnel to conduct the cleanup or if emergency response personnel should be summoned.
- Determine the number of workers needed to safely and effectively perform the cleanup.

- Identify spill response materials and ensure that materials are adequate for the anticipated spills.

- Assign cleanup duties and responsibilities to the spill response team members.

- Inform the appropriate facility manager, project manager, and client contacts.

- Determine the required PPE to be worn by entry and backup spill team members and ensure that it is worn during the activities. Use the site health and safety plan contingency section or the facility emergency response plan to assist in this activity. Typical protective equipment may be Level C or D. In the event that the spill warrants a higher level of protection, Tt personnel should summon emergency response personnel.

- If the spill or discharge material is solid and nonreactive, the material should be scooped up and placed in a suitable and compatible container until the disposal method has been determined.

- If liquid is discharged, the following general procedures apply:

  - The point of discharge should be immediately identified and measures taken to eliminate further discharges by uprighting or patching containers, transferring contents, or other appropriate methods.

  - Any discharged liquids or sludge should be removed or retrieved.

  - Discharged materials should be cleaned up with absorbent materials or devices.

  - Spent absorbent material should be placed into storage or disposal containers.

- Determine proper equipment and spill control media to be used based on the chemical of concern. Typical equipment needed to accomplish spill cleanup may include:

- Seal/plug material
- Absorption socks and booms
- Broom
- Shovel
- Open head 55-gallon drum with liner
- 85-gallon salvage drum

- Control the area so that unnecessary personnel do not enter and situations that may escalate the hazards in the area are eliminated. Ideally, the exclusion zone should be physically barricaded off. At a minimum, barricade tape can be placed.

- An exclusion zone, contamination reduction zone, and a support zone may be needed. Only authorized personnel will be allowed in these areas. Wind direction, plant and surrounding populations, and the properties of the spilled material must be considered in establishing the initial controlled zone. Exclusion zones should be barricaded (or at least taped off with barricade tape) to prevent general public access. The zone can be expanded or contracted as more information is gathered about the spill.

- Determine if the situation requires monitoring of explosive atmosphere, oxygen deficiency, or toxic levels of chemicals. This will also help determine the level of PPE required and conditions that would require the area to be evacuated and emergency response personnel summoned.

4.5 Implementation Spill Cleanup Plan

After the spill response leader has developed a plan to containerize and remove all material contaminated by the spill, the assigned members of the spill team will complete the following steps.

4.5.1 Cleanup, containerize, and decontaminate the area

- Attempt to control the source of the leak if the full contents of a drum or container have not spilled. Perhaps the simplest procedure is to position the drum or container so that the leak is above the liquid level. Alternatively, a drum patch or plug can be applied to the leak. The leaking chemical may also be controlled using absorbent spill berms positioned around the drum or container.
- Contain free-flowing liquids by diking or absorbing.
- Place all spill residues and cleanup equipment in an appropriate container.
- If solvent is used to decontaminate equipment, floors, or walkways, appropriate fire protection should be used.
- Decontaminate and salvage as much equipment as possible.
- Use only a final water wash where it is safe and appropriate to do so.

4.5.2 Analyze the affected area for proper decontamination safety

- Use monitoring and detection equipment, if needed.
- Check equipment for problems.
- Examine walkways, floors, and stairs for obstructions or hazards (i.e. slip/fall exposure from liquid residue).
- Use any resources needed (safety, industrial hygiene, environmental, etc.) to ensure that the area has been decontaminated and is safe to re-enter.

4.5.3 Secure all response equipment

- Restock spill supplies.

- Repair damaged equipment.

4.5.4 Release site resumption of operations

- Notify operating personnel.
- Document spill or release in on-site or facility log.

As soon as the area is safe for reoccupancy, the spill response leader, in conjunction with the site or facility manager, must initiate actions to allow the facility to resume normal operations.

- Use established procedures to announce an "All Clear."
- Properly mark spill residue containers for hazardous waste management.
- Clean and prepare all emergency response materials for immediate use storage.
- Complete all spill response reports as required.

5.0 FINAL TERMINATION OF THE INCIDENT

The project manager (PM) and site safety coordinator (SSC) should conduct a formal review and debriefing of the responders at the conclusion of the project. Corrective actions may need to be implemented if a cause for the spill was determined and can be prevented from happening again.

Final termination of the incident will be complete when the appropriate personnel review all reports and any corrective actions are completed.

6.0 REPORTING

In some instances, a release may require reporting to government agencies. If a reportable quantity is released (this quantity is stated on the Material Safety Data Sheet) or human health or the environment is threatened, appropriate national, state, and local administering agency personnel should be notified. The timeframe for notification may vary from agency to agency.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

Notification may be required immediately or within 24 hours, depending on the type, location, and amount of released material. The appropriate agency to report spills to should be determined during HASP development.

All spills and chemical releases must be reported and investigated in accordance with Tt Program 2.1 Incident Reporting and Investigation. Details must be documented on the Forms IR and IR–B and entered into the Tetra Tech TOTAL system for appropriate incident review and tracking.

INCOMPATIBLE CHEMICALS

When certain hazardous chemicals are stored or mixed together, violent reactions may occur because the chemicals are incompatible (i.e., unsuitable for mixing). Classes of incompatible chemicals should be segregated according to hazard class during storage. Use the following general guidelines for hazard class storage.

- Flammable/combustible liquids and organic acids
- Flammable solids
- Mineral acids
- Caustics
- Oxidizers
- Perchloric acid
- Compressed gases

Separate hazardous chemicals in storage as follows:

- Oxidizing acids are segregated from organic acids, and flammable and combustible materials.

- Acids are separated from inorganic bases.
- Acids are separated from active metals such as sodium, potassium, and magnesium.
- Acids are separated from chemicals that could generate toxic gases upon contact, such as iron sulfide and sodium cyanide.
- Water-reactive chemicals such as calcium oxide are stored in a cool, dry place away from any potential water source.
- Oxidizers are physically segregated from flammable and combustible chemicals or materials.
- Oxidizers are physically segregated from reducing agents such as zinc, alkaline metals, and formic acid.
- Large bottles of corrosives are stored on a low shelf or in specially designed (i.e., UL listed) cabinets. Single-glass bottles of acids and corrosives can also be placed within buckets or other means for both safe handling and as a means of secondary containment in the event of breakage.

Carefully read the label before storing any chemical substance. Use the materials safety data sheets (MSDS) to find special storage information and information on incompatibilities. If you have questions regarding proper storage of chemicals or if a container is not clearly labeled, contact a qualified individual for additional information.

Before mixing, storing, or transporting any chemicals, refer to the following partial list of incompatible chemicals, the chemicals' MSDS, or other reliable reference for further information or to verify compatibility.

List of Incompatible Chemicals

Chemical	Incompatible Chemical(s)
Acetic Acid	Aldehyde, bases, carbonates, hydroxides, metals, oxidizers, peroxides,

Chemical	Incompatible Chemical(s)
	phosphates, xylene
Acetylene	Halogens (chlorine, fluorine, etc.), mercury, potassium, oxidizers, silver
Acetone	Acids, amines, oxidizers, plastics
Alkali and alkaline earth metals	Acids, chromium, ethylene, halogens, hydrogen, mercury, nitrogen, oxidizers, plastics, sodium chloride, sulfur
Ammonia	Acids, aldehydes, amides, halogens, heavy metals, oxidizers, plastics, sulfur
Ammonium nitrate	Acids, alkalis, chloride salts, combustible materials, metals, organic materials, phosphorous, reducing agents, urea
Aniline	Acids, aluminum, dibenzoyl peroxide, oxidizers, plastics
Azides	Acids, heavy metals, oxidizers
Bromine	Acetaldehyde, alcohols, alkalis, amines, combustible materials, ethylene, fluorine, hydrogen, ketones (acetone, carbonyls, etc.), metals, sulfur
Calcium oxide	Acids, ethanol, fluorine, organic materials
Carbon (activated)	Alkali metals, calcium hypochlorite, halogens, oxidizers
Carbon tetrachloride	Benzoyl peroxide, ethylene, fluorine, metals, oxygen, plastics, silanes
Chlorates	Powdered metals, sulfur, finely divided organic or combustible materials
Chromic acid	Acetone, alcohols, alkalis, ammonia, bases
Chromium trioxide	Benzene, combustible materials, hydrocarbons, metals, organic materials, phosphorous, plastics
Chlorine	Alcohols, ammonia, benzene, combustible materials, flammable compounds (hydrazine), hydrocarbons (acetylene, ethylene, etc.), hydrogen peroxide, iodine, metals, nitrogen, oxygen, sodium hydroxide
Chlorine dioxide	Hydrogen, mercury, organic materials, phosphorous, potassium hydroxide, sulfur
Copper	Calcium, hydrocarbons, oxidizers
Hydroperoxide	Reducing agents
Cyanides	Acids, alkaloids, aluminum, iodine, oxidizers, strong bases
Flammable liquids	Ammonium nitrate, chromic acid, hydrogen peroxide, nitric acid, sodium peroxide, halogens
Fluorine	Alcohols, aldehydes, ammonia, combustible materials, halocarbons, halogens, hydrocarbons, ketones, metals, organic acids
Hydrocarbons (e.g. butane, propane benzene, turpentine, etc.)	Acids, bases, oxidizers, plastics
Hydrofluoric acid	Metals, organic materials, plastics, silica (glass), (anhydrous) sodium
Hydrogen peroxide	Acetylaldehyde, acetic acid, acetone, alcohol's carboxylic acid,

Chemical	Incompatible Chemical(s)
	combustible materials, metals, nitric acid, organic compounds, phosphorous, sulfuric acid, sodium, aniline
Hydrogen sulfide	Acetylaldehyde, metals, oxidizers, sodium
Hypochlorites	Acids, activated carbon
Iodine	Acetylaldehyde, acetylene, ammonia, metals, sodium
Mercury	Acetylene, aluminum, amines, ammonia, calcium, fulminic acid, lithium, oxidizers, sodium
Nitrates	Acids, nitrites, metals, sulfur, sulfuric acid
Nitric acid	Acetic acid, acetonitrile, alcohol's, amines, (concentrated) ammonia, aniline, bases, benzene, cumene, formic acid, ketones, metals, organic materials, plastics, sodium, toluene
Oxalic acid	Oxidizers, silver, sodium chlorite
Oxygen	Acetaldehyde, secondary alcohol's, alkalis and alkalines, ammonia, carbon monoxide, combustible materials, ethers, flammable materials, hydrocarbons, metals, phosphorous, polymers
Perchloric acid	Acetic acid, alcohols, aniline, combustible materials, dehydrating agents, ethylbenzene, hydriotic acid, hydrochloric acid, iodides, ketones, organic material, oxidizers, pyridine
Peroxides, organic	Acids (organic or mineral)
Phosphorous (white)	Oxygen (pure and in air), alkalis
Potassium	Acetylene, acids, alcohols, halogens, hydrazine, mercury, oxidizers, selenium, sulfur
Potassium chlorate	Acids, ammonia, combustible materials, fluorine, hydrocarbons, metals, organic materials, sugars
Potassium perchlorate (also see chlorates)	Alcohols, combustible materials, fluorine, hydrazine, metals, organic matter, reducing agents, sulfuric acid
Potassium permanganate	Benzaldehyde, ethylene glycol, glycerol, sulfuric acid
Silver	acetylene, ammonia, oxidizers, ozonides, peroxyformic acid
Sodium	Acids, hydrazine, metals, oxidizers, water
Sodium nitrate	Acetic anhydride, acids, metals, organic matter, peroxyformic acid, reducing agents
Sodium peroxide	Acetic acid, benzene, hydrogen sulfide metals, oxidizers, peroxyformic acid, phosphorous, reducers, sugars, water
Sulfides	Acids
Sulfuric acid	Potassium chlorates, potassium perchlorate, potassium permanganate

	TETRA TECH, INC. SPILL PREVENTION AND CLEANUP	Revision Date: 01/31/2013 Document Control Number: SWP 5-47 Page 14 of 14

Revision Date	Document Authorizer Name	Revision Details

	TETRA TECH, INC. HAND TOOLS	Revision Date: 01/31/2013 Document Control Number: SWP-5-51 Page 1 of 4

1.0 INTRODUCTION

Hand tools are used routinely in many Tetra Tech Operations. In order to prevent accidents associated with their use, our employees must be aware of the dangers associated with the different types of tools and the safety precautions necessary to prevent accidents. The following safe work practices must be followed when using hand tools.

2.0 GENERAL SAFETY RULES

All tools, regardless of ownership, shall be of an approved type and maintained in good and safe condition. Tools not meeting the requirements detailed in this safe work practice are prohibited. Tools are subject to inspection at any time. The supervisor has the authority and responsibility to condemn unserviceable tools, regardless of ownership.

- Defective tools shall be tagged to prevent their use and shall be removed from the job site.
- Employees shall always use the proper tool for the job performed.
- Hammers with metal handles, screwdrivers, knives with metal continuing through the handle and metallic measuring tapes shall not be used on or near energized electrical circuits or equipment.
- Tools shall not be thrown from place to place or from person to person; tools that must be raised or lowered from one elevation to another shall be placed in tool buckets or firmly attached to hand lines.
- Tools shall never be placed unsecured on elevated places.
- Employees using hand and power tools and exposed to the hazard of falling, flying, abrasive, and splashing objects, or exposed to harmful dust, fumes, mists vapors, or gases shall be provided with the designated PPE necessary to project them from the hazard. The designated PPE should be determined on a case by case basis.

3.0 HAND TOOLS

- All impact tools such as chisels, punches, drift pins, etc., that become mushroomed or cracked shall be dressed, repaired, or replaced before further use.
- Chisels, drills, punches, ground rods, and pipes shall be held with suitable holders or tongs (not with the hands) while being struck by another employee.
- Shims shall not be used to make a wrench fit.
- Wrenches with sprung or damaged jaws shall not be used.
- Pipe shall not be used to extend a wrench handle for added leverage unless the wrench was designed for such use.
- Tools shall be used only for the purposes for which they have been approved.
- Tools with sharp edges shall be stored and handled so that they will not cause injury or damage. They shall not be carried in pockets.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

- Wooden handles that are loose, cracked, or splintered shall be replaced. The handle shall not be taped or lashed with wire.
- All cutting tools such as saws, wood chisels, drawknives, or axes shall be kept in suitable guards or in special compartments.
- Tools shall not be left lying around where they may cause a person to trip or stumble.
- When working on or above open grating, a canvas or other suitable covering shall be used to cover the grating to prevent tools or parts from dropping to a lower level where others are present or the danger area shall be barricaded or guarded.
- The insulation on hand tools shall not be depended upon to protect users from shock.

4.0 PORTABLE ELECTRIC TOOLS

- The non-current carrying metal parts of portable electric tools such as drills, saws, and grinders shall be effectively grounded when connected to a power source unless the tool is an approved double-insulated type and the tool is connected to the power supply by means of an isolating transformer or other isolated power supply, such as a 24-volt DC system.
- All powered tools shall be examined prior to use to ensure general serviceability and the presence of all applicable safety devices. The electric cord and electric components shall be given an especially thorough examination.
- Powered tools shall be used only within their capability and shall be operated in accordance with the instructions of the manufacturer.
- All tools shall be kept in good repair and shall be disconnected from the power source while repairs are being made.
- Electrical tools shall not be used where there is a hazard of flammable vapors, gases, or dusts.
- All power tools and cord sets shall be protected by ground fault circuit interrupters (GFCI).
- When using any power source, ensure that GFCI is functional. Otherwise, external GFCI must be used.

5.0 PNEUMATIC TOOLS

- Compressed air and compressed air tools shall be used with caution.
- Pneumatic tools shall never be pointed at another person.
- Pneumatic power tools shall be secured to the hose or whip by some positive means to prevent the tool from becoming accidentally disconnected.
- Safety clips or retainers shall be securely installed and maintained on pneumatic impact (percussion) tools to prevent attachments from being accidentally expelled.
- Compressed air shall not be used for cleaning purposes except when reduced to less than 30 psi and then only with effective chip guarding and personal protective equipment.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

- Compressed air shall not be used to blow dust or dirt from clothing.
- The manufacturer's safe operating pressure for hoses, pipes, valves, filters, and other fittings shall not be exceeded.
- The use of hoses for hoisting or lowering tools shall not be permitted.
- All hoses exceeding ½ inch inside diameter shall have a safety device at the source of supply or branch fine to reduce pressure in case of hose failure or disengagement of a connection.
- Before making adjustments or changing air tools, unless equipped with quick change connectors, the air shall be shut off at the air supply valve ahead of the hose. The hose shall be bled at the tool before breaking the connection.
- Eye, foot and hearing protection devices shall be worn during pneumatic tool use.
- Pneumatic tools shall be operated only by competent persons who have been trained in their use.
- A pneumatic tool used where it may contact exposed live electrical parts shall have a nonconductive hose and an accumulator to collect moisture.
- Employees shall not use any part of their bodies to locate or attempt to stop an air leak.

6.0 POWDER ACTUATED TOOLS

A powder actuated tool must always be treated the same as a loaded firearm. ALWAYS ASSUME THE TOOL IS LOADED. These tools come in both low and high velocity models, and both should have built-in safeguards; however, extreme caution must be used when working with this tool. Powder actuated tools can be used only by employees who have been trained in their operation. The user must have a current operator's card.

The following checklist, which may not be complete for all scenarios, is required at a minimum before each use of a powder actuated tool. (Project Managers are responsible for identifying other site specific requirements.)

- Check the safety for proper operation and make sure the bore is clear.
- Select the proper cartridge for the job to be done; never use a higher charge than is necessary.
- Make sure that the drive part of the tool will not penetrate the mounting surface and fly out the other side. The work area must be backed up by a plank or beam.
- Do not use this tool on hard steel, cast iron, rock, or other extremely hard materials.
- Make sure no one else is in the immediate area; concrete chips, metal spalls or rebounding studs could injure bystanders. Insure protective shield is in place to confine flying fragments or particles when the tool is fired.
- Make sure the tool is at the correct angle to the work surface, and maintain pressure against the surface.
- Always wear proper eye and hearing protection.

The online version of this document supersedes all other versions. Paper copies of this document are uncontrolled. The controlled version of this document can be found on the Tetra Tech Intranet.

- Do not use in an explosive or flammable atmosphere.
- Never point the tool at anyone.
- Do not load until ready for use and never leave a loaded tool unattended.
- If the tool develops a defect during use, it should be tagged and removed from service until it is properly repaired.

7.0 GUARDS

Hazardous moving parts - belts, gears, shafts, pulleys or other reciprocating, rotating or moving parts of equipment must be guarded if such parts are exposed. Guards must be provided as necessary to protect the operator and others from point of operation hazards, in-running nip point hazards, rotating parts, flying chips, and sparks etc. All guards shall meet the requirements set forth by ANSI.

SAFETY GUARDS SHALL NEVER BE REMOVED OR TAMPERED WITH

APPENDIX C
SAFETY DATA SHEETS AND CHEMICAL INVENTORY

Chemical Inventory Listing:

- Liquinox
- Alconox
- Hydrochloric acid (Preservative)
- Isobutylene calibration gas
- Fire extinguisher
- Diesel Fuel
- Gasoline
- Automotive grease
- Chemical Oxidant (RemOX-S ISCO Reagent)

Safety Data Sheet

Effective date: 11 May 2020 **Revision** : 11 May 2020

Trade Name: Liquinox®

1 Identification of the substance/mixture and of the supplier

1.1 GHS Product identifier

Trade Name: Liquinox®
Product number: 1201, 1201-1, 1205, 1215, 1230, 1232, 1232-1, 1255

1.2 Application of the substance / the mixture: Cleaning material/Detergent

1.2.1 Recommended dilution ratio: 1 - 2% in water

1.3 Details of the supplier of the Safety Data Sheet

Manufacturer:

Alconox Inc.
30 Glenn St
White Plains, NY 10603
(914) 948-4040

Supplier:

Emergency telephone number:
ChemTel Inc
North America: 1-888-255-3924
International: +1 813-248-0573

2 Hazards identification

2.1 Classification of the substance or mixture:

In compliance with EC regulation No. 1272, 29CFR1910/1200 and GHS requirements.

Hazard-determining components of labeling:
Alcohol ethoxylate
Sodium alkylbenzene sulfonate
Sodium xylenesulphonate
Lauramine oxide

2.2 Label elements:

Eye damage, category 1.
Skin irritation, category 2.

Product at recommended dilution:

Eye irritation, category 2B

Hazard pictograms:

Signal word: Danger

Hazard statements:
H315 Causes skin irritation.
H318 Causes serious eye damage.

Precautionary statements:
P264 Wash skin thoroughly after handling.
P280 Wear protective gloves/protective clothing/eye protection/face protection.

Safety Data Sheet

Effective date: 11 May 2020 **Revision** : 11 May 2020

Trade Name: Liquinox®

P302+P352 If on skin: Wash with soap and water.
P305+P351+P338 If in eyes: Rinse cautiously with water for several minutes. Remove contact lenses if present and easy to do. Continue rinsing.
P332+P313 If skin irritation occurs: Get medical advice/attention.
P501 Dispose of contents and container as instructed in Section 13.

Hazardous Elements at Use Dilution:

Hazard pictograms:

Signal word: Warning

Hazard statements:
H320 Causes eye irritation

Precautionary statements:
P302+P352 If on skin: Wash with soap and water.
P305+P351+P338 If in eyes: Rinse cautiously with water for several minutes. Remove contact lenses if present and easy to do. Continue rinsing.
P501 Dispose of contents and container as instructed in Section 13

Additional information: None.

Hazard description
Hazards Not Otherwise Classified (HNOC): May cause surfaces to become slippery. Use caution in areas of foot traffic if on floors.

Information concerning particular hazards for humans and environment:
The product has to be labelled due to the calculation procedure of the "General Classification guideline for preparations of the EU" in the latest valid version.

Classification system:
The classification is according to EC regulation No. 1272, 29CFR1910/1200 and GHS, and extended by company and literature data. The classification is in accordance with the latest editions of international substances lists and is supplemented by information from technical literature and by information provided by the company.

3 Composition/information on ingredients

3.1 Chemical characterization: None

3.2 Description: None

3.3 Hazardous components (percentages by weight)

Identification	Chemical Name	Classification	Wt. %
CAS number: 68081-81-2 or 68411-30-3	Sodium Alkylbenzene Sulfonate	Acute Tox. 4; H303 Skin Irrit. 2 ; H315 Eye Dam. 1; H318	10-25
CAS number: 1300-72-7	Sodium Xylenesulphonate	Eye Irrit. 2;H319	2.5-10
CAS number: 84133-50-6	Alcohol Ethoxylate	Skin Irrit. 2 ; H315 Eye Dam. 1; H318	2.5-10
CAS number: 1643-20-5	Lauramine oxide	Skin Irrit. 2 ; H315 Eye Dam. 1; H318	1-2

Safety Data Sheet

Effective date: 11 May 2020 **Revision** : 11 May 2020

Trade Name: Liquinox®

At use dilution:				
	CAS number: 68081-81-2 or 68411-30-3	Sodium Alkylbenzene Sulfonate	Eye Irr. 2B; H319	0.1-0.25

3.4 Additional Information: None.

4 First aid measures

4.1 Description of first aid measures

General information: None.

After inhalation:
Maintain an unobstructed airway.
Loosen clothing as necessary and position individual in a comfortable position.

After skin contact:
Wash affected area with soap and water.
Seek medical attention if symptoms develop or persist.

After eye contact:
Rinse/flush exposed eye(s) gently using water for 15-20 minutes.
Remove contact lens(es) if able to do so during rinsing.
Seek medical attention if irritation persists or if concerned.

After swallowing:
Rinse mouth thoroughly.
Seek medical attention if irritation, discomfort, or vomiting persists.

4.2 Most important symptoms and effects, both acute and delayed

None

4.3 Indication of any immediate medical attention and special treatment needed:

No additional information.

First aid measure at recommended dilution:

General information: None.

After inhalation:
Maintain an unobstructed airway.
Loosen clothing as necessary and position individual in a comfortable position.

After skin contact:
Wash affected area with soap and water.

After eye contact:
Rinse/flush exposed eye(s) gently using water for 15-20 minutes.
Remove contact lens(es) if able to do so during rinsing.

After swallowing:
Rinse mouth thoroughly. Seek medical attention if irritation, discomfort, or vomiting develops.

Safety Data Sheet

Effective date: 11 May 2020 **Revision** : 11 May 2020

Trade Name: Liquinox®

5 Firefighting measures

5.1 Extinguishing media

Suitable extinguishing agents:

Use appropriate fire suppression agents for adjacent combustible materials or sources of ignition.

For safety reasons unsuitable extinguishing agents: None

5.2 Special hazards arising from the substance or mixture:

Thermal decomposition can lead to release of irritating gases and vapors.

5.3 Advice for firefighters

Protective equipment:

Wear protective eye wear, gloves and clothing.
Refer to Section 8.

5.4 Additional information:

Avoid inhaling gases, fumes, dust, mist, vapor and aerosols.
Avoid contact with skin, eyes and clothing.

6 Accidental release measures

6.1 Personal precautions, protective equipment and emergency procedures

Ensure adequate ventilation.
Ensure air handling systems are operational.

6.2 Environmental precautions:

Should not be released into the environment.
Prevent from reaching drains, sewer or waterway.

6.3 Methods and material for containment and cleaning up:

Wear protective eye wear, gloves and clothing.

6.4 Reference to other sections: None

7 Handling and storage

7.1 Precautions for safe handling:

Avoid breathing mist or vapor.
Do not eat, drink, smoke or use personal products when handling chemical substances.

7.2 Conditions for safe storage, including any incompatibilities

Store in a cool, well-ventilated area.

7.3 Specific end use(s):

No additional information.

8 Exposure controls/personal protection

8.1 Control parameters :

25322-68-3, Poly(ethylene oxide), AIHA TWA 10 mg/m3 (<0.15% present in concentrate)

Safety Data Sheet

Effective date: 11 May 2020 **Revision** : 11 May 2020

Trade Name: Liquinox®

8.2 Exposure controls

Appropriate engineering controls:
Emergency eye wash fountains and safety showers should be available in the immediate vicinity of use or handling.

Respiratory protection:
Not needed under normal conditions.

Protection of skin:
Select glove material impermeable and resistant to the substance.

Eye protection:
Safety goggles or glasses, or appropriate eye protection.

General hygienic measures:
Wash hands before breaks and at the end ofwork.
Avoid contact with skin, eyes and clothing.

Exposure Control and Personal Protective Equipment at recommended dilution:

Under normal use and operational conditions, no special personal protective equipment or engineering controls will be necessary. Handle with care.

9 Physical and chemical properties

Appearance (physical state, color):	Pale yellow liquid	**Explosion limit lower**: **Explosion limit upper**:	Not determined or not available. Not determined or not available.
Odor:	Not determined or not available.	**Vapor pressure at 20°C**:	Not determined or not available.
Odor threshold:	Not determined or not available.	**Vapor density**:	Not determined or not available.
pH-value:	8.5 (as is)	**Relative density**:	Not determined or not available.
Melting/Freezing point:	Not determined or not available.	**Solubilities**:	Not determined or not available.
Boiling point/Boiling range:	Not determined or not available.	**Partition coefficient (n-octanol/water)**:	Not determined or not available.
Flash point (closed cup):	Not determined or not available.	**Auto/Self-ignition temperature**:	Not determined or not available.
Evaporation rate:	Not determined or not available.	**Decomposition temperature**:	Not determined or not available.
Flammability (solid, gaseous):	Not flammable	**Viscosity**:	a. Kinematic: Not determined or not available. b. Dynamic: Not determined or not available.
Density at 20°C:	1.08 g/mL		

Safety Data Sheet

Effective date: 11 May 2020 **Revision** : 11 May 2020

Trade Name: Liquinox®

10 Stability and reactivity

10.1 Reactivity: Not determined or not available.
10.2 Chemical stability: Not determined or not available.
10.3 Possibility hazardous reactions: Not determined or not available.
10.4 Conditions to avoid: Not determined or not available.
10.5 Incompatible materials: Not determined or not available.
10.6 Hazardous decomposition products: Not determined or not available.

11 Toxicological information

11.1 Information on toxicological effects:

Acute Toxicity:

Oral:

: LD50 >5000 mg per kg (Rat, Oral) - product.

Chronic Toxicity: No additional information.

Skin corrosion/irritation (raw materials):

Alcohol Ethoxylate: May cause mild to moderate skin irritation.

Sodium Alkylbenzene Sulfonate: Causes skin irritation.

Lauramine oxide: Causes skin irritation.

Serious eye damage/irritation (raw materials):

Sodium Alkylbenzene Sulfonate: Causes serious eye damage.

Alcohol Ethoxylate: Causes moderate to severe eye irritation and conjunctivitis.

Sodium xylenesulphonate: irritating to eyes.

Lauramine oxide: Causes serious eye damage.

Product information at recommended dilution:

Eye irritation may occur upon direct contact with eyes. No specific hazards for skin contact, inhalation, or chronic exposure are expected within normal use parameters.

Respiratory or skin sensitization: No additional information.

Carcinogenicity: No additional information.

IARC (International Agency for Research on Cancer): None of the ingredients are listed.

NTP (National Toxicology Program): None of the ingredients are listed.

Germ cell mutagenicity: No additional information.

Reproductive toxicity: No additional information.

STOT-single and repeated exposure: No additional information.

Additional toxicological information: No additional information.

Safety Data Sheet

Effective date: 11 May 2020 **Revision** : 11 May 2020

Trade Name: Liquinox®

12 Ecological information

12.1 Toxicity:

Sodium Alkylbenzene Sulfonate: Fish, LC50 1.67 mg/l, 96 hours.
Sodium Alkylbenzene Sulfonate: Aquatic invertebrates, EC50 Daphnia 2.9 mg/l, 48 hours. Sodium Alkylbenzene Sulfonate: Aquatic Plants, EC50 Algae 29 mg/l, 96 hours.
Lauramine oxide: Fish, LC50 24.3 mg/l, 96h [Killifish (Cyprinodontidae)]
Lauramine oxide: Aquatic invertebrates, (LC50): 3.6 mg/l 96 hours [Daphnia (Daphnia)].
Lauramine oxide: Aquatic plants, EC50 Algae 0.31 mg/l 72 hours [Algae]
Alcohol Ethoxylate: Aquatic invertebrates, (LC50): 4.01 mg/l 48 hours [Daphnia (daphnia)].

12.2 Persistence and degradability: No additional information.

12.3 Bioaccumulative potential: No additional information.

12.4 Mobility in soil: No additional information.

General notes: No additional information.

12.5 Results of PBT and vPvB assessment:

PBT: No additional information.

vPvB: No additional information.

12.6 Other adverse effects: No additional information.

13 Disposal considerations

13.1 Waste treatment methods (consult local, regional and national authorities for proper disposal)

Relevant Information:

It is the responsibility of the waste generator to properly characterize all waste materials according to applicable regulatory entities. (US 40CFR262.11).

14 Transport information

14.1 UN Number: None
ADR, ADN, DOT, IMDG, IATA

14.2 UN Proper shipping name: None
ADR, ADN, DOT, IMDG, IATA

14.3 Transport hazard classes:
ADR, ADN, DOT, IMDG, IATA

Class: None
Label: None
LTD. QTY: None

US DOT
Limited Quantity Exception: None

3. HAZARDS IDENTIFICATION

EMERGENCY OVERVIEW

Release of this product may produce oxygen-deficient atmospheres (especially in confined spaces or other poorly ventilated environments); individuals in such atmospheres may be asphyxiated. Isobutylene may cause drowsiness and other central nervous system effects in high concentrations; however, due to the low concentration of this gas mixture, this is unlikely to occur.

ROUTE OF ENTRY:

Skin Contact	Skin Absorption	Eye Contact	Inhalation	Ingestion
No	No	No	Yes	No

HEALTH EFFECTS:

Exposure Limits	Irritant	Sensitization	Reproductive Hazard	Mutagen
Yes	No	No	No	No

Carcinogenicity: --NTP: No IARC: No OSHA: No

EYE EFFECTS:
N/A.

SKIN EFFECTS:
N/A.

MATERIAL SAFETY DATA SHEET - CALIBRATION CHECK GAS

PRODUCT NAME: ISOBUTYLENE (1 PPM – 0.9%) IN AIR

INGESTION EFFECTS:
Ingestion unlikely. Gas at room temperature.

INHALATION EFFECTS:
Due to the small size of this cylinder, no unusual health effects from over-exposure are anticipated under normal routine use.

NFPA HAZARD CODES		HMIS HAZARD CODES		RATING SYSTEM
Health:	1	Health:	1	0= No Hazard
Flammability:	0	Flammability:	0	1= Slight Hazard
Reactivity:	0	Reactivity:	0	2= Moderate Hazard
				3= Serious Hazard
				4= Severe Hazard

4. FIRST AID MEASURES

EYES:
N/A

SKIN:
N/A

INGESTION:
Not required

INHALATION:
PROMPT MEDICAL ATTENTION IS MANDATORY IN ALL CASED OF OVEREXPOSURE. RESCUE PERSONNEL SHOULD BE EQUIPPED THE SELF-CONTAINED BREATHING APPARATUS. Victims should be assisted to an uncontaminated area and inhale fresh air. Quick removal from the contaminated area is most important. If breathing has stopped administer artificial resuscitation and supplemental oxygen. Further treatment should be symptomatic and supportive.

5. FIRE-FIGHTING MEASURES

These containers hold gas under pressure, with no liquid phase. If involved in a major fire, they should be sprayed with water to avoid pressure increases, otherwise pressures will rise and ultimately they may distort or burst to release the contents. The gases will not add significantly to the fire, but containers or fragments may be projected considerable distances - thereby hampering fire fighting efforts.

6. ACCIDENTAL RELEASE MEASURES

In terms of weight, these containers hold very little contents, such that any accidental release by puncturing etc. will be of no practical concern.

7. HANDLING AND STORAGE

Suck back of water into the container must be prevented. Do not allow backfeed into the container. Use only properly specified equipment which is suitable for this product, its supply pressure and temperature. Use only in well-ventilated areas. Do not heat cylinder by any means to increase rate of product from the cylinder. Do not allow the temperature where cylinders are stored to exceed 130^{o}F (54^{o}C).

8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Use adequate ventilation for extended use of gas.

MATERIAL SAFETY DATA SHEET - CALIBRATION CHECK GAS

PRODUCT NAME: ISOBUTYLENE (1 PPM – 0.9%) IN AIR

---

9. PHYSICAL AND CHEMICAL PROPERTIES

PARAMETER:	VALUE:
Physical state	: Gas
Evaporation point	: N/A
pH	: N/A
Odor and appearance	: Colorless, odorless gas

---

10. STABILITY AND REACTIVITY

Stable under normal conditions. Expected shelf life 48 months.

---

11. TOXICOLOGICAL INFORMATION

No toxicological damage caused by this product.

---

12. ECOLOGICAL INFORMATION

No ecological damage caused by this product.

---

13. DISPOSAL INFORMATION

Do not discharge into any place where its accumulation could be dangerous. Used containers are acceptable for disposal in the normal waste stream as long as the cylinder is empty and valve removed or cylinder wall is punctured; but GASCO encourages the consumer to return cylinders.

---

14. TRANSPORT INFORMATION

	United States DOT	Canada TDG
PROPER SHIPPING NAME:	Compressed Gas N.O.S. (Isobutylene in Air)	Compressed Gas N.O.S. (Isobutylene in Air)
HAZARD CLASS:	2.2	2.2
IDENTIFICATION NUMBER:	UN1956	UN1956
SHIPPING LABEL:	NONFLAMMABLE GAS	NONFLAMMABLE GAS

---

15. REGULATORY INFORMATION

Isobutylene is listed under the accident prevention provisions of section 112(r) of the Clean Air Act (CAA) with a threshold quantity (TQ) of 10,000 pounds.

---

16. OTHER INFORMATION

This MSDS has been prepared in accordance with the Chemicals (Hazard Information and Packaging for Supply (Amendment) Regulation 1996. The information is based on the best knowledge of GASCO, and its advisors and is given in good faith, but we cannot guarantee its accuracy, reliability or completeness and therefore disclaim any liability for loss or damage arising out of use of this data. Since conditions of use are outside the control of the Company and its advisors we disclaim any liability for loss or damage when the product is used for other purposes than it is intended.

MSDS/S010/248/ August, 2010

MATERIAL SAFETY DATA SHEET

Section 1. Chemical product and company identification

Product Name:	ABC Dry Chemical Fire Extinguishant
Synonym:	Multi-purpose Dry Chemical (CH550, F15, F18)
Manufacturer:	AMEREX CORPORATION
Internet Address:	www.amerex-fire.com
Address:	7595 Gadsden Highway P.O. Box 81 Trussville, AL 35173-0081
Telephone:	(205) 655-3271
Emergency Contacts:	Chemtrec 1(800) 424-9300 or (703) 527–3887
Revised:	February, 2012

Section 2. Hazard identification and emergency overview

Emergency overview: Light yellow, fine solid powder, odorless.

Adverse health effects and symptoms: Irritating to the respiratory system, eyes and skin. Symptoms may include coughing, shortness of breath, and irritation of the lungs, eyes, and skin. Ingestion, although unlikely, may cause cramps, nausea and diarrhea.

Exposure guidelines:

Ingredients	OSHA PEL****	ACGIH TLV	DFG MAK *
Mono-ammonium phosphate	PNOC** Total dust, 15 mg/m^3 Respirable fraction, 5 mg/m^3	PNOC Total dust, 10 mg/m^3 Respirable fraction, 3 mg/m^3	PNOC Total dust, 4 mg/m^3 Respirable fraction, 1.5 mg/m^3
Ammonium sulphate	PNOC Total dust, 15 mg/m^3 Respirable fraction, 5 mg/m^3	PNOC Total dust, 10 mg/m^3 Respirable fraction, 3 mg/m^3	PNOC Total dust, 4 mg/m^3 Respirable fraction, 1.5 mg/m^3
Mica	6 mg/m^3	3 mg/m3	NR
Fullers Earth	PNOC Total dust, 15 mg/m^3 Respirable fraction, 5 mg/m^3	PNOC Total dust, 10 mg/m^3 Respirable fraction, 3 mg/m^3	PNOC Total dust, 4 mg/m^3 Respirable fraction, 1.5 mg/m^3

Silicone oil	NR***	NR	NR
Calcium carbonate	PNOC Total dust, 15 mg/m^3 Respirable fraction, 5 mg/m^3	PNOC Total dust, 10 mg/m^3 Respirable fraction, 3 mg/m^3	-------
Amorphous silica	143 mg/m^3 $\frac{80\ mg/m^3}{\%\ SiO_2}$	10 mg/m^3	4 mg/m^3
Yellow 14 pigment	NR	NR	NR

*German regulatory limits **PNOC = Particulates not otherwise classified (ACGIH) also known as Particulates not otherwise regulated (OSHA) *** NR = Not Regulated. All values are 8 hour time weighted average concentrations. **** Total dust PEL for Washington state= 10mg/ m^3 for PNOC

Hazard symbols: WHMIS (Canadian workplace hazardous materials identification system

D2B Product may irritate eyes, skin, or mucous membranes

Section 3. Composition/information on ingredients

Name/Compound	Weight %	CAS #
Mono-ammonium phosphate and Ammonium sulphate	>94	7722-76-1 7783-20-2
Fullers Earth magnesium aluminum silicate-	<3	8031-18-3
Mica potassium aluminum silicate	1-2	12001-26-2
Silicone oil methyl hydrogen polysiloxane	<1	63148-57-2
Calcium carbonate	<1	1317-65-3
Amorphous silica precipitated synthetic zeolite	<1	112926-00-8
Yellow 14 pigment – di-azo dye	<1	5468-75-7

Section 4. First Aid Measures

Eye Exposure: Irrigate eyes with water and repeat until pain free. Seek medical attention if irritation develops or if vision changes occur.

Skin Exposure: In case of contact, wash with plenty of soap and water. Seek medical attention if irritation develops.

Inhalation: If respiratory irritation or distress occurs remove victim to fresh air. Seek medical attention if irritation persists.

Ingestion: If victim is conscious and alert, give 2-3 glasses of water to drink and do not induce vomiting. Seek immediate medical attention. Do not leave victim unattended. To prevent aspiration of swallowed product, lay victim on side with head lower than waist. If vomiting occurs and the victim is conscious, give water to further dilute the chemical.

Medical conditions possibly aggravated by exposure: Inhalation of product may aggravate existing chronic respiratory problems such as asthma, emphysema, or bronchitis. Skin contact may aggravate existing skin disease. Chronic overexposure may cause pneumoconiosis (~~-~~dusty lung" disease).

Section 5. Fire fighting measures

Extinguishing media: non combustible and non flammable – product is an extinguishing agent.

Unusual fire/explosion hazards: in a fire this material may decompose, releasing oxides of sulfur and carbon (see Section 10).

Insensitive to mechanical impact or static discharge.

HMIS Hazard Ranking:
health = 1, flammability = 0, reactivity = 0, personal protective equipment: ½ mask APR w/HEPA cartridges (see Section 8).

Section 6. Accidental release measures

Clean up released material using vacuum or wet sweep and shovel to minimize generation of dust. Wear appropriate respiratory protection. Bag and drum for disposal. If product is used and/or contaminated, use PPE and containment appropriate to the nature of the mixture. Prevent material from entering waterways.

Section 7. Handling and storage

Avoid skin, eye, or respiratory exposure. Use appropriate PPE when handling or maintaining equipment, and wash thoroughly after handling (see Section 8). Keep product in original container or extinguisher. Contents may be under pressure – inspect for extinguisher rust periodically to insure container integrity. Do not mix with other extinguishing agents.

Section 8. Exposure controls/ personal protection

During the application of this product against fires, exhaust gases and the products of incomplete combustion (PICs) are the principal respiratory hazards. In the manufacture of extinguishers, automated systems and point source ventilation controls sufficiently minimize respiratory exposure. Employers and employees must use their collective judgment in determining occupational settings where the use of a dust mask or air purifying respirator is prudent. The need for respiratory protection is not likely for short-term use in well ventilated areas.

Respiratory protection: use N95 dust mask or air-purifying respirator (APR) with high efficiency particulate air (HEPA) filters.

Eye protection: wear chemical goggles.

Skin protection: use nitrile, latex, or similar gloves and coveralls. Good personal hygiene practices essential, such as avoiding food, tobacco products, or other hand-to-mouth contact when handling. Wash thoroughly after handling.

Section 9. Physical and chemical properties

Appearance: yellow powder, finely divided odorless solid.
Specific gravity: ~ .88 in aerated condition
Solubility: product is coated-not immediately soluble in water
Non –flammable
Flash point: none
Vapor pressure: < 1 mm Hg
pH: approximately 4-5
Boiling point: not applicable
No explosive or oxidizing properties

Section 10. Stability and reactivity

Stability: stable

Incompatibles: strong alkalis (bases), magnesium, strong oxidizers such as calcium hypochlorite (pool chlorine) and isocyanuric acids.

Decomposition products: heat of fire may release carbon monoxide, carbon dioxide, and sulfur dioxide. Oxides of phosphorous and ammonia reported.

Possibility of hazardous reactions: Slight. See incompatibilities above.

Section 11. Toxicological information

Acute toxicity: Mono ammonium phosphate LD_{50} (rat): > 1000mg/kg body weight
Ammonium sulfate LD_{50} (rat): 2840 mg/kg body weight
Target organs in man: respiratory system, eyes, skin. This product is an irritant to epithelial tissue, and may aggravate dermatitis. No information was found indicating the product causes sensitization.

Chronic toxicity: Pneumoconiosis, or ~~-~~dusty lung" disease, may result from chronic exposure to any dust.

Reproductive toxicity: This product's ingredients are not known to have reproductive or teratogenic effects.

Section 12. Ecological information

Ecotoxicity: negative effects unknown. Provides nutrient nitrogen and phosphorus to plant life.

Persistence/ Degradability: degrades rapidly in humid/wet environment.

Bioaccummulation: extent unknown.

Mobility in soil: slow evaporation rate; water soluble, may leach to groundwater.

Section 13. Disposal considerations

This product is not a RCRA characteristically hazardous or listed hazardous waste. Dispose of according to state or local laws, which may be more restrictive than federal laws or regulations. Used product may be altered or contaminated, creating different disposal considerations.

Section 14. Transportation information

This product is not a hazardous material under U.S. Department of Transportation (DOT) 49 CFR 172, and is not regulated by the DOT or Transport Canada –Transportation of Dangerous Goods" regulations.

When shipped in a stored pressure type fire extinguisher, and pressurized with a non-flammable, non-toxic inert expellant gas, the fire extinguisher is considered a hazardous material by the US Department of Transportation and Transport Canada. The proper shipping name shall be FIRE EXTINGUISHER and the UN designation is UN 1044. The DOT hazard class/ division is 2.2. Non-Flammable Gas. Packing Group –N/A.

Section 15. Regulatory information

International Inventory Status:

All ingredients are on the following inventories

Country(ies)	Agency	Status
United States of America	TSCA	Yes
Canada	DSL	Yes
Europe	EINECS/ELINCS	Yes
Australia	AICS	Yes
Japan	MITI	Yes
South Korea	KECL	Yes

European Risk and Safety phrases:

EU Classification:	Harmful.	
R Phrases:	22	Harmful if swallowed.
	36/37/38	Irritating to eyes, respiratory system, and skin.
S Phrases:	26	In case of contact with eyes, rinse immediately with plenty of water and seek medical advice.
	36	Wear suitable protective clothing.

Components:

Mono ammonium phosphate:

EU Classification:	Harmful.	
R Phrases:	22	Harmful if swallowed.
	36/37/38	Irritating to eyes, respiratory system, and skin.
S Phrases:	26	In case of contact with eyes, rinse immediately with plenty of water and seek medical advice.
	36	Wear suitable protective clothing.

Ammonium sulfate:

EU Classification:	Irritant	
R Phrases:	22	Harmful if swallowed.
	36/37/38	Irritating to eyes, respiratory system, and skin.
S Phrases:	26	In case of contact with eyes, rinse immediately with plenty of water and seek medical advice.
	36	Wear suitable protective clothing.

U.S. federal regulatory information:

None of the chemicals in this product are under SARA reporting requirements or have SARA threshold planning quantities (TPQs) or CERCLA reportable quantities (RQs), or are regulated under TSCA 8(d).

State regulatory information:

Chemicals in this product are covered under specific State regulations, as denoted below:

Alaska - Designated Toxic and Hazardous Substances: None
California – Permissible Exposure Limits for Chemical Contaminants: None
Florida – Substance List: Mica Dust, Ammonium Sulfate
Illinois – Toxic Substance List: None
Kansas – Section 302/303 List: None

Massachusetts – Substance List: Mica Dust, Ammonium Sulfate
Minnesota – List of Hazardous Substances: None
Missouri – Employer Information/Toxic Substance List: None
New Jersey – Right to Know Hazardous Substance List: None
North Dakota – List of Hazardous Chemicals, Reportable Quantities: None
Pennsylvania – Hazardous Substance List: None
Rhode Island – Hazardous Substance List: Mica Dust, Ammonium Sulfate
Texas – Hazardous Substance List: No
West Virginia – Hazardous Substance List: None
Wisconsin – Toxic and Hazardous Substances: None

California Proposition 65: No component is listed on the California Proposition 65 list.

Section 16

When shipped in a stored pressure type fire extinguisher, and pressurized with a non-flammable, non-toxic inert expellant gas, the fire extinguisher is considered a hazardous material by the US Department of Transportation and Transport Canada. The proper shipping name shall be FIRE EXTINGUISHER and the UN designation is UN 1044. The DOT hazard class/ division is 2.2 Non-Flammable Gas. Packing Group—N/A

Section 17. Other information

This MSDS conforms to requirements under U.S., U.K., Canadian, Australian, and EU regulations or standards, and conforms to the proposed 2003 ANSI Z400.1 format.

The information herein is given in good faith but no warranty, expressed or implied, is made. Updated by Lindsay R. Hill, CIH.

Material Safety Data Sheet

Hydrochloric Acid

Section 1. Product and Company Identification

Product name : Hydrochloric Acid

Product code : HX0607

Synonym : Muriatic Acid

Material uses : Other non-specified industry: Analytical reagent.

Manufacturer : EMD Chemicals Inc.
P.O. Box 70
480 Democrat Road
Gibbstown, NJ 08027
856-423-6300 Technical Service
Monday - Friday: 8:00 - 5:00 PM

Validation date : **4/5/2006.**

Print date :

In case of emergency : 800-424-9300 CHEMTREC (USA)
613-996-6666 CANUTEC (Canada)
24 Hours/Day: 7 Days/Week

Section 2. Hazards Identification

Physical state : Liquid. (Colorless.)

Odor : Pungent.

OSHA/HCS status : This material is considered hazardous by the OSHA Hazard Communication Standard (29 CFR 1910.1200).

Emergency overview : DANGER!
POISON!
MAY BE FATAL IF INHALED OR SWALLOWED.
CAUSES SEVERE EYE AND SKIN BURNS.
CAUSES SEVERE RESPIRATORY TRACT IRRITATION.
CAUSES DAMAGE TO THE FOLLOWING ORGANS: LUNGS, RESPIRATORY TRACT, SKIN, EYE, LENS OR CORNEA.
Do not ingest. Do not get in eyes or on skin or clothing. Do not breathe vapor or mist. Keep container closed. Use only with adequate ventilation. Wash thoroughly after handling.

Routes of entry : Dermal contact. Eye contact. Inhalation. Ingestion.

Potential acute health effects

Eyes : Severely corrosive to the eyes.

Skin : Severely corrosive to the skin.

Inhalation : Very toxic by inhalation. Severely irritating to the respiratory system.

Ingestion : Very toxic if swallowed. May cause burns to mouth, throat and stomach.

Potential chronic health effects :

Carcinogenic effects : No known significant effects or critical hazards.

Mutagenic effects : No known significant effects or critical hazards.

Teratogenicity / Reproductive toxicity : No known significant effects or critical hazards.

Medical conditions aggravated by over-exposure : Repeated skin exposure can produce local skin destruction or dermatitis. Repeated or prolonged exposure to the substance can produce lung damage. Repeated or prolonged contact with spray or mist may produce chronic eye irritation and severe skin irritation. Repeated or prolonged exposure to the substance can produce target organs damage.

See toxicological information (section 11)

Section 3. Composition/Information on Ingredients

United States

Name	CAS number	% by Weight

Hydrochloric Acid	7647-01-0	100

The 100% indicates this product is a concentrated acid. Assay (HCl) value is approximately 36-38%.

Section 4. First Aid Measures

Eye contact : Get medical attention immediately. Immediately flush eyes with plenty of water for at least 15 minutes, occasionally lifting the upper and lower eyelids. Check for and remove any contact lenses. Chemical burns must be treated promptly by a physician.

Skin contact : Get medical attention immediately. Flush contaminated skin with plenty of water. Continue to rinse for at least 10 minutes. Remove contaminated clothing and shoes. Wash contaminated clothing thoroughly with water before removing or wear gloves. Chemical burns must be treated promptly by a physician. Wash clothing before reuse. Clean shoes thoroughly before reuse.

Inhalation : Get medical attention immediately. Move exposed person to fresh air. If it is suspected that fumes are still present, the rescuer should wear an appropriate mask or self-contained breathing apparatus. Keep person warm and at rest. If not breathing, if breathing is irregular or if respiratory arrest occurs, provide artificial respiration or oxygen by trained personnel. It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation. If unconscious, place in recovery position and get medical attention immediately. Maintain an open airway. Loosen tight clothing such as a collar, tie, belt or waistband.

Ingestion : Get medical attention immediately. Wash out mouth with water. Remove dentures if any. Move exposed person to fresh air. Keep person warm and at rest. If material has been swallowed and the exposed person is conscious, give small quantities of water to drink. Stop if the exposed person feels sick as vomiting may be dangerous. Do not induce vomiting unless directed to do so by medical personnel. If vomiting occurs, the head should be kept low so that vomit does not enter the lungs. Chemical burns must be treated promptly by a physician. Never give anything by mouth to an unconscious person. If unconscious, place in recovery position and get medical attention immediately. Maintain an open airway. Loosen tight clothing such as a collar, tie, belt or waistband.

Protection of first-aiders : No action shall be taken involving any personal risk or without suitable training. If it is suspected that fumes are still present, the rescuer should wear an appropriate mask or self-contained breathing apparatus. It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation. Wash contaminated clothing thoroughly with water before removing or wear gloves.

Section 5. Fire Fighting Measures

Flammability of the product : No specific hazard.

Extinguishing media

Suitable : Use an extinguishing agent suitable for the surrounding fire.

Not suitable : None known.

Special exposure hazards : Not available.

Special protective equipment for fire-fighters : Fire-fighters should wear appropriate protective equipment and self-contained breathing apparatus (SCBA) with a full face-piece operated in positive pressure mode.

Special remarks on fire hazards : Flammable hydrogen gas may be produced on prolonged contact with metals such as aluminum, tin, lead and zinc.

Section 6. Accidental Release Measures

Personal precautions : Immediately contact emergency personnel. Keep unnecessary personnel away. Use suitable protective equipment.

Environmental precautions : Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers.

Methods for cleaning up : If emergency personnel are unavailable, contain spilled material. For small spills, add absorbent (soil may be used in the absence of other suitable materials), scoop up material and place in a sealable, liquid-proof container for disposal. For large spills, dike spilled material or otherwise contain material to ensure runoff does not reach a waterway. Place spilled material in an appropriate container for disposal.

Section 7. Handling and Storage

Handling : Do not ingest. Do not get in eyes or on skin or clothing. Keep container closed. Use

only with adequate ventilation. Do not breathe vapor or mist. Wash thoroughly after handling.

Storage : Keep container tightly closed. Keep container in a cool, well-ventilated area.

Section 8. Exposure Controls/Personal Protection

Product name	Exposure limits
United States	
Hydrochloric Acid	**ACGIH TLV (United States, 2003).** CEIL: 2 ppm **NIOSH REL (United States, 12/2001).** CEIL: 7 mg/m^3 Form: All forms CEIL: 5 ppm Form: All forms **OSHA PEL (United States, 8/1997).** CEIL: 7 mg/m^3 Form: All forms CEIL: 5 ppm Form: All forms **OSHA PEL 1989 (United States, 3/1989).** CEIL: 7 mg/m^3 Form: All forms CEIL: 5 ppm Form: All forms **ACGIH TLV (United States, 1/2005). Notes: Refers to Appendix A -- Carcinogens. ACGIH 2003 Adoption** CEIL: 2 ppm Form: All forms

Consult local authorities for acceptable exposure limits.

Engineering measures : Use only with adequate ventilation. If user operations generate dust, fumes, vapor or mist, use process enclosures, local exhaust ventilation or other engineering controls to keep worker exposure to airborne contaminants below any recommended or statutory limits.

Personal protection

Eyes : Safety eyewear complying with an approved standard should be used when a risk assessment indicates this is necessary to avoid exposure to liquid splashes, mists, gases or dusts.
Recommended: face shield , splash goggles

Skin : Personal protective equipment for the body should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.
Body: Recommended: chemical-resistant protective suit

Respiratory : Use a properly fitted, air-purifying or air-fed respirator complying with an approved standard if a risk assessment indicates this is necessary. Respirator selection must be based on known or anticipated exposure levels, the hazards of the product and the safe working limits of the selected respirator.

Hands : Chemical-resistant, impervious gloves complying with an approved standard should be worn at all times when handling chemical products if a risk assessment indicates this is necessary. Recommended: PVC

Hygiene measures : Wash hands, forearms and face thoroughly after handling chemical products, before eating, smoking and using the lavatory and at the end of the working period. Appropriate techniques should be used to remove potentially contaminated clothing. Wash contaminated clothing before reusing. Ensure that eyewash stations and safety showers are close to the workstation location.

Section 9. Physical and Chemical Properties

Physical state : Liquid. (Colorless.)

Color : Colorless.

Odor : Pungent.

Molecular weight : 36.46 g/mole

Molecular formula : Cl-H

Boiling/condensation point : 110°C (230°F)

Melting/freezing point : -74°C (-101.2°F)

Critical temperature : 51.5°C (124.7°F)

Relative density : 1.2 (Water = 1)

Vapor pressure : 21.3 kPa (160 mm Hg) (at 20°C)

Vapor density : >1 (Air = 1)

Evaporation rate : >1

Solubility : Soluble in water

Section 10. Stability and Reactivity

Stability and reactivity : The product is stable.

Incompatibility with various substances : Reactive or incompatible with the following materials: metals and alkalis.

Hazardous decomposition products : These products are halogenated compounds, hydrogen chloride.

Hazardous polymerization : Will not occur.

Conditions of reactivity : Flammable hydrogen gas may be produced on prolonged contact with metals such as aluminum, tin, lead and zinc.
Explosive in the presence of the following materials or conditions: metals.

Section 11. Toxicological Information

Toxicity data

United States

Product/ingredient name	Test	Result	Route	Species
Hydrochloric Acid	LD50 LC50	900 mg/kg 1108 ppm (1 hour/hours)	Oral Inhalation	Rabbit Mouse

Chronic effects on humans : **CARCINOGENIC EFFECTS**: A4 (Not classifiable for humans or animals.) by ACGIH, 3 (Not classifiable for humans.) by IARC.
Causes damage to the following organs: lungs, upper respiratory tract, skin, eye, lens or cornea.

Other toxic effects on humans : Extremely hazardous in case of skin contact (corrosive), of eye contact (corrosive), of ingestion, of inhalation (lung irritant).
Hazardous in case of inhalation (lung corrosive).

Specific effects

Carcinogenic effects : No known significant effects or critical hazards.

Mutagenic effects : No known significant effects or critical hazards.

Teratogenicity / Reproductive toxicity : No known significant effects or critical hazards.

Sensitization

Ingestion : May cause burns to mouth, throat and stomach.

Inhalation : Severely irritating to the respiratory system.

Eyes : Severely corrosive to the eyes.

Skin : Severely corrosive to the skin.

Section 12. Ecological Information

Environmental precautions : No known significant effects or critical hazards.

Products of degradation : These products are halogenated compounds.

Toxicity of the products of biodegradation : The products of degradation are as toxic as the product itself.

Section 13. Disposal Considerations

Waste disposal : The generation of waste should be avoided or minimized wherever possible. Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers. Disposal of this product, solutions and any by-products should at all times comply with the requirements of environmental protection and waste disposal legislation and any regional local authority requirements.

Disposal should be in accordance with applicable regional, national and local laws and regulations. Local regulations may be more stringent than regional or national requirements.

The information presented below only applies to the material as supplied. The identification based on characteristic(s) or listing may not apply if the material has been used or otherwise contaminated. It is the responsibility of the waste generator to determine the toxicity and physical properties of the material generated to determine the proper waste identification and disposal methods in compliance with applicable regulations.

Refer to Section 7: HANDLING AND STORAGE and Section 8: EXPOSURE CONTROLS/PERSONAL PROTECTION for additional handling information and protection of employees.

Section 14. Transport Information

Regulatory information	UN number	Proper shipping name	Class	PG*	Label	Additional information
DOT Classification	UN1789	HYDROCHLORIC ACID	8	II		Reportable quantity 5000 lbs. (2268 kg)

PG* : Packing group

Section 15. Regulatory Information

United States

HCS Classification : Highly toxic material
Corrosive material
Target organ effects

U.S. Federal regulations : TSCA 8(b) inventory: Listed

SARA 302/304/311/312 extremely hazardous substances: Hydrochloric Acid
SARA 302/304 emergency planning and notification: Hydrochloric Acid
SARA 302/304/311/312 hazardous chemicals: Hydrochloric Acid

Massachusetts RTK: Hydrochloric Acid
New Jersey: Hydrochloric Acid

Canada

WHMIS (Canada) : Class D-1A: Material causing immediate and serious toxic effects (Very toxic).
Class E: Corrosive material

CEPA DSL/CEPA NDSL : CEPA DSL: Hydrochloric Acid

This product has been classified according to the hazard criteria of the CPR and the MSDS contains all the information required by the CPR.

EU regulations

Hazard symbol/symbols :

Risk phrases : R34- Causes burns.
R37- Irritating to respiratory system.

Safety phrases : S1/2- Keep locked up and out of the reach of children.
S26- In case of contact with eyes, rinse immediately with plenty of water and seek medical advice.
S45- In case of accident or if you feel unwell, seek medical advice immediately (show the label where possible).

International regulations

International lists : Australia (NICNAS): Hydrochloric Acid

China: Hydrochloric Acid

Germany water class: Hydrochloric Acid

Japan (METI): Hydrochloric Acid

Korea (TCCL): Hydrochloric Acid

Philippines (RA6969): Hydrochloric Acid

Section 16. Other Information

Label requirements : DANGER!
POISON!
MAY BE FATAL IF INHALED OR SWALLOWED.
CAUSES SEVERE EYE AND SKIN BURNS.
CAUSES SEVERE RESPIRATORY TRACT IRRITATION.
CAUSES DAMAGE TO THE FOLLOWING ORGANS: LUNGS, RESPIRATORY TRACT, SKIN, EYE, LENS OR CORNEA.

National Fire Protection Association (U.S.A.) :

	0	**Flammability**
Health	3	0 **Instability**
		Special

Other special considerations : Section 3 lists this product as 100% which indicates that it is a concentrated acid.

Notice to reader

The statements contained herein are based upon technical data that EMD Chemicals Inc. believes to be reliable, are offered for information purposes only and as a guide to the appropriate precautionary and emergency handling of the material by a properly trained person having the necessary technical skills. Users should consider these data only as a supplement to other information gathered by them and must make independent determinations of suitability and completeness of information from all sources to assure proper use, storage and disposal of these materials and the safety and health of employees and customers and the protection of the environment. EMD CHEMICALS INC. MAKES NO REPRESENTATION OR WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE, WITH RESPECT TO THE INFORMATION HEREIN OR THE PRODUCT TO WHICH THE INFORMATION REFERS.

Lab Chemicals | Biosciences | Life Science Solutions | Corporate | Privacy | Siten
EMD Chemicals is Merck KGaA, Darmstadt, Germany, in the US and Canada.

1. Product and Company Identification

Material name	**UNLEADED GASOLINE**
Version #	03
Issue date	07-28-2011
Revision date	11-13-2012
Supersedes date	09-28-2012
MSDS Number	002
Product use	Motor fuels.
Synonym(s)	Regular/Premium/Midgrade - Unleaded Gasoline, RFG - Reformulated Unleaded Gasoline, Conventional Unleaded Gasoline, Oxygenated Unleaded Gasoline, Non-Oxygenated Unleaded Gasoline, CARB (California Air Resource Board) Unleaded Gasoline, RBOB - Reformulated Blendstock for Oxygenate Blending, CBOB - Conventional Blendstock for Oxygenate Blending, Petrol, Motor Fuel. See section 16 for complete information.
Manufacturer/Supplier	Valero Marketing & Supply Company and Affiliates P.O. Box 696000 San Antonio, TX 78269-6000
General Assistance	210-345-4593
Emergency	24 Hour Emergency 866-565-5220 1-800-424-9300 (CHEMTREC USA)

2. Hazards Identification

Physical state	Liquid.
Appearance	Light straw to red clear liquid with characteristic strong odor of gasoline.
Emergency overview	DANGER! Extremely flammable liquid and vapor - vapor may cause flash fire. Will be easily ignited by heat, spark or flames. Heat may cause the containers to explode. Harmful if inhaled, absorbed through skin, or swallowed. Aspiration may cause lung damage. Irritating to eyes, respiratory system and skin. In high concentrations, vapors and spray mists are narcotic and may cause headache, fatigue, dizziness and nausea. Contains benzene. Cancer hazard - can cause cancer. Mutagen. May cause heritable genetic damage. May cause adverse reproductive effects - such as birth defects, miscarriages, or infertility. Toxic to aquatic organisms, may cause long-term adverse effects in the aquatic environment. Static accumulating flammable materials can become electrostatically charged even in bonded and grounded equipment. Sparks may ignite material and vapor may cause flash fire (or explosion).
OSHA regulatory status	This product is considered hazardous under 29 CFR 1910.1200 (Hazard Communication).
Potential health effects	
Routes of exposure	Inhalation. Ingestion. Skin contact. Eye contact.
Eyes	Contact may irritate or burn eyes. Eye contact may result in corneal injury.
Skin	Harmful if absorbed through skin. Irritating to skin. Frequent or prolonged contact may defat and dry the skin, leading to discomfort and dermatitis.
Inhalation	Harmful if inhaled. Irritating to respiratory system. In high concentrations, vapors and spray mists are narcotic and may cause headache, fatigue, dizziness and nausea. May cause breathing disorders and lung damage. May cause cancer by inhalation. Prolonged inhalation may be harmful.
Ingestion	Harmful if swallowed. Ingestion may result in vomiting; aspiration (breathing) of vomitus into lungs must be avoided as even small quantities may result in aspiration pneumonitis. Irritating to mouth, throat, and stomach.
Target organs	Blood. Eyes. Liver. Respiratory system. Skin. Kidneys. Central nervous system.

Chronic effects	Cancer hazard. Contains material which may have reproductive toxicity, teratogenic or mutagenic effects. Liver injury may occur. Kidney injury may occur. May cause central nervous system disorder (e.g., narcosis involving a loss of coordination, weakness, fatigue, mental confusion and blurred vision) and/or damage. Frequent or prolonged contact may defat and dry the skin, leading to discomfort and dermatitis.
Signs and symptoms	Irritation of nose and throat. Irritation of eyes and mucous membranes. Skin irritation. Unconsciousness. Corneal damage. Narcosis. Cyanosis (blue tissue condition, nails, lips, and/or skin). Decrease in motor functions. Behavioral changes. Edema. Liver enlargement. Jaundice. Conjunctivitis. Proteinuria. Defatting of the skin. Rash.
Potential environmental effects	Toxic to aquatic organisms. Harmful to aquatic life with long lasting effects.

3. Composition / Information on Ingredients

Components	CAS #	Percent
Gasoline	86290-81-5	0-100
Toluene	108-88-3	0-30
Hexane (Other Isomers)	96-14-0	5-25
Xylene (o, m, p isomers)	1330-20-7	0-25
Octane (All isomers)	111-65-9	0-18.5
Ethanol	64-17-5	0-10
1,2,4, Trimethylbenzene	95-63-6	0-6
n-Heptane	142-82-5	1-5
Pentane	109-66-0	1-5
Cumene	98-82-8	0-5
Ethylbenzene	100-41-4	0-5
Benzene	71-43-2	0-4.9
n-Hexane	110-54-3	0-3
Cyclohexane	110-82-7	0-3

4. First Aid Measures

First aid procedures

Eye contact	Immediately flush eyes with plenty of water for at least 15 minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Get medical attention.
Skin contact	Remove contaminated clothing and shoes. Wash off immediately with soap and plenty of water. Get medical attention if irritation develops or persists. Wash clothing separately before reuse. Destroy or thoroughly clean contaminated shoes. If high pressure injection under the skin occurs, always seek medical attention.
Inhalation	Move to fresh air. If breathing is difficult, give oxygen. If not breathing, give artificial respiration. Get medical attention.
Ingestion	Rinse mouth thoroughly. Do not induce vomiting without advice from poison control center. Do not give mouth-to-mouth resuscitation. If vomiting occurs, keep head low so that stomach content does not get into the lungs. Get medical attention immediately.
Notes to physician	In case of shortness of breath, give oxygen. Keep victim warm. Keep victim under observation. Symptoms may be delayed.
General advice	If exposed or concerned: get medical attention/advice. Ensure that medical personnel are aware of the material(s) involved, and take precautions to protect themselves. Show this safety data sheet to the doctor in attendance. Wash contaminated clothing before re-use.

5. Fire Fighting Measures

Flammable properties	Flammable by OSHA criteria. Containers may explode when heated.

Extinguishing media

Suitable extinguishing media	Water spray. Water fog. Foam. Dry chemical powder. Carbon dioxide (CO2).
Unsuitable extinguishing media	Do not use a solid water stream as it may scatter and spread fire.

Protection of firefighters

Specific hazards arising from the chemical	Vapor may cause flash fire. Vapors can flow along surfaces to distant ignition source and flash back. Sensitive to static discharge.
Protective equipment and precautions for firefighters	Wear full protective clothing, including helmet, self-contained positive pressure or pressure demand breathing apparatus, protective clothing and face mask.
Fire fighting equipment/instructions	Wear full protective clothing, including helmet, self-contained positive pressure or pressure demand breathing apparatus, protective clothing and face mask. Withdraw immediately in case of rising sound from venting safety devices or any discoloration of tanks due to fire. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Move containers from fire area if you can do it without risk. In the event of fire, cool tanks with water spray. Cool containers exposed to flames with water until well after the fire is out. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. Vapors may form explosive air mixtures even at room temperature. Prevent buildup of vapors or gases to explosive concentrations. Some of these materials, if spilled, may evaporate leaving a flammable residue. Water runoff can cause environmental damage. Use compatible foam to minimize vapor generation as needed.
Specific methods	In the event of fire and/or explosion do not breathe fumes. Use water spray to cool unopened containers.
Hazardous combustion products	Carbon monoxide. Carbon Dioxide. Sulfur oxides. Nitrogen oxides (NOx). Hydrocarbons.

6. Accidental Release Measures

Personal precautions	Keep unnecessary personnel away. Local authorities should be advised if significant spills cannot be contained. Keep upwind. Keep out of low areas. Ventilate closed spaces before entering. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. See Section 8 of the MSDS for Personal Protective Equipment.
Environmental precautions	Gasoline may contain oxygenated blend products (Ethanol, etc.) that are soluble in water and therefore precautions should be taken to protect surface and groundwater sources from contamination. If facility or operation has an "oil or hazardous substance contingency plan", activate its procedures. Stay upwind and away from spill. Wear appropriate protective equipment including respiratory protection as conditions warrant. Do not enter or stay in area unless monitoring indicates that it is safe to do so. Isolate hazard area and restrict entry to emergency crew. Extremely flammable. Review Firefighting Measures, Section 5, before proceeding with clean up. Keep all sources of ignition (flames, smoking, flares, etc.) and hot surfaces away from release. Contain spill in smallest possible area. Recover as much product as possible (e.g. by vacuuming). Stop leak if it can be done without risk. Use water spray to disperse vapors. Use compatible foam to minimize vapor generation as needed. Spilled material may be absorbed by an appropriate absorbent, and then handled in accordance with environmental regulations. Prevent spilled material from entering sewers, storm drains, other unauthorized treatment or drainage systems and natural waterways. Contact fire authorities and appropriate federal, state and local agencies. If spill of any amount is made into or upon navigable waters, the contiguous zone, or adjoining shorelines, contact the National Response Center at 1-800-424-8802. For highway or railways spills, contact Chemtrec at 1-800-424-9300.
Methods for containment	Eliminate all ignition sources (no smoking, flares, sparks, or flames in immediate area). Stop leak if you can do so without risk. This material is a water pollutant and should be prevented from contaminating soil or from entering sewage and drainage systems and bodies of water. Dike the spilled material, where this is possible. Prevent entry into waterways, sewers, basements or confined areas.
Methods for cleaning up	Use non-sparking tools and explosion-proof equipment. Small Spills: Absorb spill with vermiculite or other inert material, then place in a container for chemical waste. Clean surface thoroughly to remove residual contamination. This material and its container must be disposed of as hazardous waste. Large Spills: Use a non-combustible material like vermiculite, sand or earth to soak up the product and place into a container for later disposal. Prevent product from entering drains. Do not allow material to contaminate ground water system. Should not be released into the environment.
Other information	Clean up in accordance with all applicable regulations.

7. Handling and Storage

Handling

Eliminate sources of ignition. Avoid spark promoters. Ground/bond container and equipment. These alone may be insufficient to remove static electricity.
Wear personal protective equipment. Do not breathe dust/fume/gas/mist/vapors/spray. Avoid contact with eyes, skin, and clothing. Do not taste or swallow. Avoid prolonged exposure. Use only with adequate ventilation. Wash thoroughly after handling. The product is extremely flammable, and explosive vapor/air mixtures may be formed even at normal room temperatures. DO NOT handle, store or open near an open flame, sources of heat or sources of ignition. Protect material from direct sunlight. Take precautionary measures against static discharges. All equipment used when handling the product must be grounded. Use non-sparking tools and explosion-proof equipment. When using, do not eat, drink or smoke. Avoid release to the environment.

Storage

Flammable liquid storage. Do not handle or store near an open flame, heat or other sources of ignition. This material can accumulate static charge which may cause spark and become an ignition source. The pressure in sealed containers can increase under the influence of heat. Keep container tightly closed in a cool, well-ventilated place. Keep away from food, drink and animal feedingstuffs. Keep out of the reach of children.

8. Exposure Controls / Personal Protection

Occupational exposure limits

US. ACGIH Threshold Limit Values

Components	Type	Value
1,2,4, Trimethylbenzene (CAS 95-63-6)	TWA	25 ppm
Benzene (CAS 71-43-2)	STEL	2.5 ppm
	TWA	0.5 ppm
Cumene (CAS 98-82-8)	TWA	50 ppm
Cyclohexane (CAS 110-82-7)	TWA	100 ppm
Ethanol (CAS 64-17-5)	STEL	1000 ppm
Ethylbenzene (CAS 100-41-4)	TWA	20 ppm
Gasoline (CAS 86290-81-5)	STEL	500 ppm
	TWA	300 ppm
Hexane (Other Isomers) (CAS 96-14-0)	STEL	1000 ppm
	TWA	500 ppm
n-Heptane (CAS 142-82-5)	STEL	500 ppm
	TWA	400 ppm
n-Hexane (CAS 110-54-3)	TWA	50 ppm
Octane (All isomers) (CAS 111-65-9)	TWA	300 ppm
Pentane (CAS 109-66-0)	TWA	600 ppm
Toluene (CAS 108-88-3)	TWA	20 ppm
Xylene (o, m, p isomers) (CAS 1330-20-7)	STEL	150 ppm
	TWA	100 ppm

US. OSHA Specifically Regulated Substances (29 CFR 1910.1001-1050)

Components	Type	Value
Benzene (CAS 71-43-2)	STEL	5 ppm
	TWA	1 ppm

US. OSHA Table Z-1 Limits for Air Contaminants (29 CFR 1910.1000)

Engineering controls	Provide adequate general and local exhaust ventilation. Use process enclosures, local exhaust ventilation, or other engineering controls to control airborne levels below recommended exposure limits. Use explosion-proof equipment.
Personal protective equipment	
Eye / face protection	Wear safety glasses. If splash potential exists, wear full face shield or chemical goggles.
Skin protection	Wear chemical-resistant, impervious gloves. Full body suit and boots are recommended when handling large volumes or in emergency situations. Flame retardant protective clothing is recommended.
Respiratory protection	Use a properly fitted, air-purifying or air-fed respirator complying with an approved standard if a risk assessment indicates this is necessary. Respirator selection must be based on known or anticipated exposure levels, the hazards of the product and the safe working limits of the selected respirator. If workplace exposure limits for product or components are exceeded, NIOSH approved equipment should be worn. Proper respirator selection should be determined by adequately trained personnel, based on the contaminants, the degree of potential exposure and published respiratory protection factors. This equipment should be available for nonroutine and emergency use.
General hygiene considerations	Consult supervisor for special handling instructions. Avoid contact with eyes. Avoid contact with skin. Keep away from food and drink. Wash hands before breaks and immediately after handling the product. Provide eyewash station and safety shower. Handle in accordance with good industrial hygiene and safety practice.

9. Physical & Chemical Properties

Appearance	Light straw to red clear liquid with characteristic strong odor of gasoline.
Physical state	Liquid.
Form	Liquid.
Color	Light straw to red clear.
Odor	Characteristic Gasoline Odor (Strong).
Odor threshold	Not available.
pH	Not available.
Vapor pressure	60.8 - 101.3 kPa (20°C)
Vapor density	3 - 4 (Air=1)
Boiling point	80.1 - 440.1 °F (26.7 - 226.7 °C)
Melting point/Freezing point	44 °F (6.67 °C) May start to solidify at this temperature. This is based on data for the following ingredient: Cyclohexane. Weighted average: -91.9 deg C (-133.4 deg F)
Solubility (water)	Very slightly soluble.
Specific gravity	0.66 - 0.75 (Water=1) (60°F)
Flash point	-40 °F (-40 °C) (closed cup)
Flammability limits in air, upper, % by volume	7.1 %
Flammability limits in air, lower, % by volume	1.3 %
Auto-ignition temperature	> 500 °F (> 260 °C)
VOC	100 %
Evaporation rate	10 - 11 BuAc
Other data	
Flash point class	Flammable IA

10. Chemical Stability & Reactivity Information

Chemical stability	Stable under normal temperature conditions and recommended use.
Conditions to avoid	Heat, flames and sparks. Ignition sources. Contact with incompatible materials. Do not pressurize, cut, weld, braze, solder, drill, grind or expose empty containers to heat, flame, sparks, static electricity, or other sources of ignition; they may explode and cause injury or death.
Incompatible materials	Strong oxidizing agents.
Hazardous decomposition products	Carbon oxides. Sulfur oxides. Nitrogen oxides (NOx). Hydrocarbons.
Possibility of hazardous reactions	Hazardous polymerization does not occur.

11. Toxicological Information

Toxicological data

Components	Species	Test Results
1,2,4, Trimethylbenzene (CAS 95-63-6)

n-Heptane (CAS 142-82-5)		
Acute		
Inhalation		
LC50	Rat	103 mg/l, 4 Hours
Octane (All isomers) (CAS 111-65-9)		
Acute		
Inhalation		
LC50	Rat	118 mg/l, 4 Hours
Pentane (CAS 109-66-0)		
Acute		
Inhalation		
LC50	Rat	364 mg/l, 4 Hours

Components	Species	Test Results
Toluene (CAS 108-88-3)		
Acute		
Dermal		
LD50	Rabbit	14.1 ml/kg
Inhalation		
LC50	Rat	49000 mg/m³, 4 Hours
Oral		
LD50	Rat	636 mg/kg
Xylene (o, m, p isomers) (CAS 1330-20-7)		
Acute		
Oral		
LD50	Rat	4300 mg/kg

Sensitization This substance may have a potential for sensitization which may provoke an allergic reaction among sensitive individuals.

Acute effects Harmful if inhaled, absorbed through skin, or swallowed. Harmful: may cause lung damage if swallowed. Irritating to eyes, respiratory system and skin. In high concentrations, vapors and spray mists are narcotic and may cause headache, fatigue, dizziness and nausea.

Local effects

US. ACGIH Threshold Limit Values

Benzene (CAS 71-43-2)	Can be absorbed through the skin.
n-Hexane (CAS 110-54-3)	Can be absorbed through the skin.

Chronic effects Repeated exposure of laboratory animals to high concentrations of gasoline vapors has caused kidney damage and cancer in rats and cancer in mice. Gasoline was evaluated for genetic activity in assays using microbial cells, cultured mammalian cells and rat bone marrow cells. The results were all negative so gasoline was considered nonmutagenic under these conditions. Overexposure to this product or its components has been suggested as a cause of liver abnormalities in laboratory animals and humans. Lifetime studies by the American Petroleum Institute have shown that kidney damage and kidney cancer can occur in male rats after prolonged inhalation exposures at elevated concentrations of total gasoline. Kidneys of mice and female rats were unaffected. The U.S. EPA Risk Assessment Forum has concluded that the male rat kidney tumor results are not relevant for humans. Total gasoline exposure also produced liver tumors in female mice only. The implication of these data for humans has not been determined.

Subchronic effects Subchronic inhalation of benzene by rats produced decreased white blood cell counts, decreased bone marrow cell activity, increased red blood cell activity and cataracts. Blood disorders may occur after prolonged inhalation, prolonged skin contact and/or ingestion. Liver and kidney damage may occur after prolonged and repeated exposure.

Carcinogenicity

ACGIH Carcinogens

Benzene (CAS 71-43-2)	A1 Confirmed human carcinogen.
Ethanol (CAS 64-17-5)	A3 Confirmed animal carcinogen with unknown relevance to humans.
Ethylbenzene (CAS 100-41-4)	A3 Confirmed animal carcinogen with unknown relevance to humans.
Gasoline (CAS 86290-81-5)	A3 Confirmed animal carcinogen with unknown relevance to humans.
Toluene (CAS 108-88-3)	A4 Not classifiable as a human carcinogen.
Xylene (o, m, p isomers) (CAS 1330-20-7)	A4 Not classifiable as a human carcinogen.

IARC Monographs. Overall Evaluation of Carcinogenicity

Benzene (CAS 71-43-2)	1 Carcinogenic to humans.
Cumene (CAS 98-82-8)	2B Possibly carcinogenic to humans.
Ethylbenzene (CAS 100-41-4)	2B Possibly carcinogenic to humans.
Gasoline (CAS 86290-81-5)	2B Possibly carcinogenic to humans.
Toluene (CAS 108-88-3)	3 Not classifiable as to carcinogenicity to humans.
Xylene (o, m, p isomers) (CAS 1330-20-7)	3 Not classifiable as to carcinogenicity to humans.

US NTP Report on Carcinogens: Known carcinogen

Benzene (CAS 71-43-2)	Known To Be Human Carcinogen.

Benzene (CAS 71-43-2) Cancer hazard.

Epidemiology Contains benzene. Human epidemiology studies indicate that prolonged and/or repeated overexposure to benzene may cause damage to the blood-producing system and serious blood disorders, including leukemia. Animal tests suggest that prolonged and/or repeated overexposure to benzene may damage the embryo/fetus. The relevance of these animal studies to humans has not been fully established. Studies have shown a risk of spontaneous abortions in women exposed to high concentrations of organic solvents during pregnancy.

Mutagenicity In in-vitro experiments, neither benzene, toluene nor xylene changed the number of sister-chromatid exchanges (SCEs) or the number of chromosomal aberrations in human lymphocytes. However, toluene and xylene caused a significant cell growth inhibition which was not observed with benzene in the same concentrations. In in-vivo experiments, toluene changed the number of sister-chromatid exchanges (SCEs) in human lymphocytes. Toluene may cause heritable genetic damage.

Neurological effects Chronic exposure to high concentrations of various hydrocarbon blends may lead to polyneuropathy (peripheral nerve damage), characterized by progressive weakness and numbness in the extremities, loss of deep tendon reflexes and reduction of motor nerve conduction velocity. Numerous cases of polyneuritis have been reported following prolonged exposures to a petroleum fraction containing various isomers of heptane as major ingredients. May cause central nervous system disorder (e.g., narcosis involving a loss of coordination, weakness, fatigue) and/or damage.

Reproductive effects Benzene, xylene and toluene have demonstrated animal effects of reproductive toxicity. Animal studies of benzene have shown testicular effects, alterations in reproductive cycles, chromosomal aberrations and embryo/fetotoxicity. Ethanol has demonstrated human effects of reproductive toxicity. May damage fertility or the unborn child. Can cause adverse reproductive effects - such as birth defects, miscarriages, or infertility. Avoid exposure to women during early pregnancy. Avoid contact during pregnancy/while nursing.

Teratogenicity Abusive inhalation of toluene ("glue sniffing") has been reported to be associated with birth defects in the offspring of abusers. Rats exposed to benzene and xylene vapor during pregnancy showed embryo/fetotoxic effects. Ethanol has demonstrated human effects of teratogenicity.

Further information Symptoms may be delayed.

12. Ecological Information

Ecotoxicological data

Components		Species	Test Results
1,2,4, Trimethylbenzene (CAS 95-63-6)			
Aquatic			
Fish	LC50	Fathead minnow (Pimephales promelas)	7.19 - 8.28 mg/l, 96 hours
Benzene (CAS 71-43-2)			
Aquatic			
Crustacea	EC50	Water flea (Daphnia magna)	8.76 - 15.6 mg/l, 48 hours
Fish	LC50	Rainbow trout,donaldson trout (Oncorhynchus mykiss)	5.3 mg/l, 96 hours
Cumene (CAS 98-82-8)			
Aquatic			
Crustacea	EC50	Brine shrimp (Artemia sp.)	3.55 - 11.29 mg/l, 48 hours
Fish	LC50	Rainbow trout,donaldson trout (Oncorhynchus mykiss)	2.7 mg/l, 96 hours
Cyclohexane (CAS 110-82-7)			
Aquatic			
Fish	LC50	Fathead minnow (Pimephales promelas)	3.961 - 5.181 mg/l, 96 hours
Ethanol (CAS 64-17-5)			
Aquatic			
Algae	EC50	Freshwater algae	275 mg/l, 72 Hours
		Marine water algae	1970 mg/l
Fish	LC50	Fathead minnow (Pimephales promelas)	> 100 mg/l, 96 hours
		Freshwater fish	11200 mg/l, 96 Hours

Components		Species	Test Results
Invertebrate	EC50	Freshwater invertebrate	5012 mg/l, 48 Hours
		Marine water invertebrate	857 mg/l, 48 Hours
Ethylbenzene (CAS 100-41-4)			
Aquatic			
Crustacea	EC50	Water flea (Daphnia magna)	1 - 4 mg/l, 48 hours
Fish	LC50	Rainbow trout,donaldson trout (Oncorhynchus mykiss)	4 mg/l, 96 hours
n-Hexane (CAS 110-54-3)			
Aquatic			
Fish	LC50	Fathead minnow (Pimephales promelas)	2.101 - 2.981 mg/l, 96 hours
Toluene (CAS 108-88-3)			
Aquatic			
Crustacea	EC50	Water flea (Daphnia magna)	5.46 - 9.83 mg/l, 48 hours
Fish	LC50	Coho salmon,silver salmon (Oncorhynchus kisutch)	5.5 mg/l, 96 hours
Xylene (o, m, p isomers) (CAS 1330-20-7)			
Aquatic			
Fish	LC50	Rainbow trout,donaldson trout (Oncorhynchus mykiss)	8 mg/l, 96 Hours

Ecotoxicity Contains a substance which causes risk of hazardous effects to the environment.

Environmental effects The product contains a substance which is toxic to aquatic organisms and which may cause long-term adverse effects in the aquatic environment.

Aquatic toxicity Toxic to aquatic organisms. May cause long-term adverse effects in the aquatic environment.

Persistence and degradability Not available.

Bioaccumulation / Accumulation Not available.

Partition coefficient

Ethanol	-0.31
Benzene	2.13
Toluene	2.73
Ethylbenzene	3.15
Xylene (o, m, p isomers)	3.2
Pentane	3.39
Cyclohexane	3.44
Hexane (Other Isomers)	3.6
Cumene	3.66
n-Hexane	3.9
n-Heptane	4.66
Octane (All isomers)	5.18

13. Disposal Considerations

Waste codes D001: Waste Flammable material with a flash point <140 °F
D018: Waste Benzene

Disposal instructions Dispose in accordance with all applicable regulations. Dispose of this material and its container to hazardous or special waste collection point. Incinerate the material under controlled conditions in an approved incinerator. Do not allow this material to drain into sewers/water supplies. Do not contaminate ponds, waterways or ditches with chemical or used container.

14. Transport Information

DOT

Basic shipping requirements:

UN number UN1203

Proper shipping name Gasoline

Hazard class	3
Packing group	II
Additional information:	
Special provisions	139, B33, B101, T8
Packaging exceptions	150
Packaging non bulk	202
Packaging bulk	242

IATA

UN number	UN1203
UN proper shipping name	Gasoline
Transport hazard class(es)	3
Packing group	II
ERG code	3H

IMDG

UN number	UN1203
UN proper shipping name	Gasoline
Transport hazard class(es)	3
Packing group	II
EmS	F-E, S-E

TDG

Proper shipping name	GASOLINE; MOTOR SPIRIT; or PETROL, MARINE POLLUTANT
Hazard class	3
UN number	UN1203
Packing group	II
Marine pollutant	Yes
Special provisions	17

15. Regulatory Information

US federal regulations This product is a "Hazardous Chemical" as defined by the OSHA Hazard Communication Standard, 29 CFR 1910.1200.
All components are on the U.S. EPA TSCA Inventory List.

TSCA Section 12(b) Export Notification (40 CFR 707, Subpt. D)

Not regulated.

Clean Air Act (CAA) Section 112 Hazardous Air Pollutants (HAPs) List

Benzene (CAS 71-43-2)
Cumene (CAS 98-82-8)

Disclaimer

This Material Safety Data Sheet (MSDS) was prepared in accordance with 29 CFR 1910.1200 by Valero Marketing & Supply Co., ("VALERO"). VALERO does not assume any liability arising out of product use by others. The information, recommendations, and suggestions presented in this MSDS are based upon test results and data believed to be reliable. The end user of the product has the responsibility for evaluating the adequacy of the data under the conditions of use, determining the safety, toxicity and suitability of the product under these conditions, and obtaining additional or clarifying information where uncertainty exists. No guarantee expressed or implied is made as to the effects of such use , the results to be obtained, or the safety and toxicity of the product in any specific application. Furthermore, the information herein is not represented as absolutely complete, since it is not practicable to provide all the scientific and study information in the format of this document, plus additional information may be necessary under exceptional conditions of use, or because of applicable laws or government regulations.

Material safety data sheet for SKF automotive wheel bearing grease

1. Chemical product and company identification

Trade name: SKF Automotive wheel bearing grease

Synonyms: Red lithium complex R&O EP-2

Product use: Lubricating grease

Supplier: Chemtool Incorporated
8200 Ridgefield Road
P.O. Box 538
Crystal Lake, IL 60039-0538

2. Composition, information on ingredients

Ingredient name	CAS no.	Weight
Distillates, petroleum, severely hydrotreated heavy naphthenic	64742-52-5	30-50 %
Distillates, petroleum, solvent-dewaxed heavy paraffinic petroleum Distillates	64742-65-0	30-50 %
Residual oils, petroleum, solvent-refined	64742-01-4	10-30 %

Composition comments: Refer to section eight for exposure limits on ingredients.
Chemical ingredients not regulated by OSHA or SARA are treated confidentially.

3. Hazards identification

Emergency overview: Exposure to vapors generated at high temperatures, may cause respiratory irritation. For further information, please refer to section 11.

Acute effects:

Chronic effects:

Sensitization: No known information.

Carcinogenicity: IARC: Not listed. OSHA: Not regulated. NTP: Not listed.

Teratogenicity: No known information.

Health warnings:	**Inhalation.** Heating can generate vapors that may cause respiratory irritation, nausea and headaches. Inhalation hazard at room temperature is unlikely due to the low volatility of this product. **Skin contact.** Repeated or prolonged contact can result in drying of the skin. **Eye contact.** Irritating. **Ingestion.** Can cause stomach ache and vomiting. Main hazard, if ingested, is aspiration into the lungs and subsequent pneumonitis.
Other information:	Route of entry: Inhalation. Skin and/or eye contact. Ingestion.
Medical symptoms:	Medical conditions aggravated by exposure: Not determined

4. First aid measures

Inhalation:	Vapor inhalation under ambient conditions is normally not a problem. If overcome by vapor of hot product, immediately remove from source of exposure. Move the exposed person to fresh air at once. For breathing difficulties oxygen may be necessary. Get medical attention if any discomfort continues.
Eyes:	Rinse the eye with water immediately. Continue to rinse for at least 15 minutes. Contact physician if discomfort continues.
Skin:	Remove contaminated clothing. Wash skin thoroughly with soap and water. Get medical attention if any discomfort continues.
Ingestion:	**Do not induce vomiting!** Get medical attention immediately!

5. Fire fighting measures

Flash point (°C):	> 149 Cd OC (Cleveland open cup).
Flammability limit - lower(%):	N/D
Flammability limit - upper(%):	N/D
Extinguishing media:	Use: Carbon dioxide (CO2). Dry chemicals, sand, dolomite etc. Alcohol resistant foam. Water spray, fog or mist.
Special fire fighting procedures:	Use water to keep fire exposed containers cool and disperse vapors. Water spray may be used to flush spills away from exposures and dilute spills to non-flammable mixtures. Avoid water in straight hose stream; will scatter and spread fire. Keep run-off water out of sewers and water sources. Dike for water control.
Unusual fire & explosion hazards:	Pressure will increase in over heated, closed containers.
Hazardous combustion products:	Acrid smoke/fumes. Oxides of: Carbon. Sulfur.
Protective measures in case of fire:	Self-contained breathing equipment and chemical resistant clothing recommended.

6. Accidental release measures

Personal precautions:	Minimize skin contact.
Precautions to protect the environment:	Keep product out of sewers and watercourses by diking or impounding. Advise authorities if product has entered or may enter sewers, watercourses or extensive land areas. Assure conformity with applicable government regulations.
Spill clean-up procedures:	Keep all sources of ignition and hot metal surfaces away from spill. Avoid contact with eyes or skin. Place leaking containers in well ventilated area. If fire potential exists, blanket spill with foam or use water spray to disperse vapors. Contain spill to minimize contaminated area and facilitate salvage or disposal. To clean up spill, flush area sparingly with water or use absorbant material. Avoid discharge to natural water ways.

7. Handling and storage

Handling precautions:	Keep away from heat, sparks and open flame. Ventilate well, avoid breathing vapors. Use approved respirator if air contamination is above accepted level. Do not reuse container. Keep lid closed when not in use. Do not store or mix with strong oxidizers. Avoid spilling, skin and eye contact. Eye wash and emergency shower must be available at the work place.
Storage precautions:	Store separate from strong acids and oxidizers. Keep away from heat, sparks and open flame.
Storage criteria:	Chemical storage.

8. Exposure controls, personal protection

Component	STD	TWA	STEL	TWA	STEL
Distillates, petroleum, severely hydrotreated heavy naphthenic	OSHA ACGIH	5 mg/m 5 mg/m3	3 N/E 10 mg/m3		
Distillates, petroleum, solvent-dewaxed heavy paraffinic petroleum distillates	OSHA ACGIH	5 mg/m3 5 mg/m3	N/E 10 mg/m3		
Residual oils, petroleum, solvent-refined	OSHA ACGIH	5 mg/m3 5 mg/m3	N/E 10 mg/m3		

Protective equipment

Engineering controls:	Use engineering controls to reduce air contamination to permissible exposure level.
Ventilation:	No specific ventilation requirements noted, but forced ventilation may still be required if air contamination exceeds acceptable level.
Respirators:	No specific recommendation made, but respiratory protection may still be required under exceptional circumstances when excessive air contamination exists.
Protective gloves:	Chemical resistant gloves recommended to prevent prolonged or repeated contact. Use protective gloves made of: Neoprene, nitrile, polyethylene or PVC or latex.
Eye protection:	Wear splash-proof eye goggles to prevent any possibility of eye contact.
Protective clothing:	Wear appropriate clothing to prevent repeated or prolonged skin contact.
Hygienic work practices:	Wash at the end of each work shift and before eating, smoking and using the toilet.

9. Physical and chemical properties

Appearance/physical state:	Grease.		
Color:	Red.		
Odor:	Mild (or faint). Petroleum.		
Solubility description:	Insoluble in water.		
Density:	0.90	**Temperature (°C)**	16
Vapor density (air=1):	> 5		
Vapor pressure:	< 0.01 mmHg	**Temperature (°C)**	20
Evaporation rate:	Nil	**Reference**	BuAc=1
pH-value, conc. solution:	N/A		

10. Stability and reactivity

Stability:	Normally stable.
Conditions to avoid:	Avoid contact with acids and oxidizing substances.
Hazardous polymerization:	Will not occur.
Polymerization description:	Not applicable.
Hazardous decomposition products:	Oxides of: Carbon. Sulfur.

11. Toxicological information

Toxicological information: No experimental toxicological data on the preparation as such is available.

12. Ecological information

Ecological information: There is no ecological data on the product itself.

13. Disposal considerations

Disposal methods: Spilled material, unused contents and empty containers must be disposed of in accordance with local, state and federal regulations.

14. Transport information

DOT hazard class: Not regulated.

Identification no.: N/A

U.S. DOT hazard label: No DOT label requirement noted

Sea transport notes: Not regulated.

Air transport notes: Not regulated.

15. Regulatory information

US Federal regulations:

Component	SARA 302	CERCLA	SARA 313
Distillates, petroleum, severely hydrotreated heavy naphthenic	N/A	N/A	N/A
Distillates, petroleum, solvent-dewaxed heavy paraffinic	N/A	N/A	N/A
Petroleum distillates			
Residual oils, petroleum, solvent-refined	N/A	N/A	N/A

Regulatory status: None.

Clean air act:

SAFETY DATA SHEET

Section 1. Identification

Product name Fuels, diesel

Other means of identification DMA LS, Marine Distillate Fuels, Ultra Low Sulfur No. 2 Diesel Fuel

SDS # SMF2115

Code SMF2115

Relevant identified uses of the substance or mixture and uses advised against

Product use Fuel for marine engines.

Supplier

BP Products North America Inc.
150 West Warrenville Road
Naperville, Illinois 60563-8460
USA

EMERGENCY HEALTH INFORMATION: 1 (800) 447-8735

Outside the US: +1 703-527-3887 (CHEMTREC)

EMERGENCY SPILL INFORMATION: 1 (800) 424-9300 CHEMTREC (USA)

OTHER PRODUCT INFORMATION

1 (866) 4 BP - MSDS
(866-427-6737 Toll Free - North America)
email: bpcares@bp.com

Section 2. Hazards identification

OSHA/HCS status This material is considered hazardous by the OSHA Hazard Communication Standard (29 CFR 1910.1200).

Classification of the substance or mixture

FLAMMABLE LIQUIDS - Category 4
ACUTE TOXICITY (inhalation) - Category 4
SKIN IRRITATION - Category 2
CARCINOGENICITY - Category 2
SPECIFIC TARGET ORGAN TOXICITY (REPEATED EXPOSURE) - Category 2
ASPIRATION HAZARD - Category 1

GHS label elements

Hazard pictograms

Signal word Danger

Hazard statements

Combustible liquid.
Harmful if inhaled.
Causes skin irritation.
Suspected of causing cancer.
May be fatal if swallowed and enters airways.
May cause damage to organs through prolonged or repeated exposure.

Precautionary statements

Section 2. Hazards identification

Prevention
Obtain special instructions before use.
Wear protective gloves and eye protection.
Do not breathe vapor.
Keep away from heat, hot surfaces, sparks, open flames and other ignition sources. No smoking.
Use explosion-proof electrical/ventilating/lighting/material-handling equipment.
Avoid release to the environment.

Response
IF INHALED: Remove victim to fresh air and keep at rest in a position comfortable for breathing.
IF SWALLOWED: Immediately call a POISON CENTER or doctor/physician.
Do NOT induce vomiting.
IF ON SKIN: Wash with plenty of soap and water.
Take off contaminated clothing and wash it before reuse.

Storage
Keep cool.

Disposal
Dispose of contents and container in accordance with all local, regional, national and international regulations.

Hazards not otherwise classified
This material may contain significant quantities of polycyclic aromatic hydrocarbons (PAHs), some of which have been shown by experimental studies to induce skin cancer.
Note: High Pressure Applications
Injections through the skin resulting from contact with the product at high pressure constitute a major medical emergency.
See 'Notes to physician' under First-Aid Measures, Section 4 of this Safety Data Sheet.

Section 3. Composition/information on ingredients

May also contain small quantities of proprietary performance additives.

Substance/mixture Mixture

Ingredient name	CAS number	%
Fuels, diesel, No 2 Contains: naphthalene	68476-34-6 91-20-3	> 99 1 - 3

There are no ingredients present which, within the current knowledge of the supplier and in the concentrations applicable, are classified as hazardous to health or the environment and hence require reporting in this section.

Occupational exposure limits, if available, are listed in Section 8.

Section 4. First aid measures

Description of necessary first aid measures

Eye contact
In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Eyelids should be held away from the eyeball to ensure thorough rinsing. Check for and remove any contact lenses. Get medical attention.

Skin contact
In case of contact, immediately flush skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Wash clothing before reuse. Clean shoes thoroughly before reuse. Get medical attention.

Inhalation
If inhaled, remove to fresh air. If not breathing, if breathing is irregular or if respiratory arrest occurs, provide artificial respiration or oxygen by trained personnel. Get medical attention.

Ingestion
Do not induce vomiting. Never give anything by mouth to an unconscious person. If unconscious, place in recovery position and get medical attention immediately. Aspiration hazard if swallowed. Can enter lungs and cause damage. Get medical attention immediately.

Protection of first-aiders
No action shall be taken involving any personal risk or without suitable training. If it is suspected that fumes are still present, the rescuer should wear an appropriate mask or self-contained breathing apparatus. It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation.

Most important symptoms/effects, acute and delayed

See Section 11 for more detailed information on health effects and symptoms.

Section 4. First aid measures

Indication of immediate medical attention and special treatment needed, if necessary

Notes to physician

Treatment should in general be symptomatic and directed to relieving any effects. Product can be aspirated on swallowing or following regurgitation of stomach contents, and can cause severe and potentially fatal chemical pneumonitis, which will require urgent treatment. Because of the risk of aspiration, induction of vomiting and gastric lavage should be avoided. Gastric lavage should be undertaken only after endotracheal intubation. Monitor for cardiac dysrhythmias.

Note: High Pressure Applications
Injections through the skin resulting from contact with the product at high pressure constitute a major medical emergency. Injuries may not appear serious at first but within a few hours tissue becomes swollen, discolored and extremely painful with extensive subcutaneous necrosis.
Surgical exploration should be undertaken without delay. Thorough and extensive debridement of the wound and underlying tissue is necessary to minimize tissue loss and prevent or limit permanent damage. Note that high pressure may force the product considerable distances along tissue planes.

Specific treatments

No specific treatment.

Section 5. Fire-fighting measures

Extinguishing media

Suitable extinguishing media

In case of fire, use foam, dry chemical or carbon dioxide extinguisher or spray.

Unsuitable extinguishing media

Do not use water jet.

Specific hazards arising from the chemical

Combustible liquid. Fire water contaminated with this material must be contained and prevented from being discharged to any waterway, sewer or drain. In a fire or if heated, a pressure increase will occur and the container may burst, with the risk of a subsequent explosion. Runoff to sewer may create fire or explosion hazard.

Hazardous combustion products

Combustion products may include the following:
carbon oxides (CO, CO_2) (carbon monoxide, carbon dioxide)
other hazardous substances.

Special protective actions for fire-fighters

Promptly isolate the scene by removing all persons from the vicinity of the incident if there is a fire. No action shall be taken involving any personal risk or without suitable training. Move containers from fire area if this can be done without risk. Use water spray to keep fire-exposed containers cool. This material is toxic to aquatic organisms. Fire water contaminated with this material must be contained and prevented from being discharged to any waterway, sewer or drain.

Special protective equipment for fire-fighters

Fire-fighters should wear positive pressure self-contained breathing apparatus (SCBA) and full turnout gear.

Section 6. Accidental release measures

Personal precautions, protective equipment and emergency procedures

For non-emergency personnel

Immediately contact emergency personnel. No action shall be taken involving any personal risk or without suitable training. Evacuate surrounding areas. Keep unnecessary and unprotected personnel from entering. Do not touch or walk through spilled material. No flares, smoking or flames in hazard area. Avoid breathing vapor or mist. Provide adequate ventilation. Put on appropriate personal protective equipment. Floors may be slippery; use care to avoid falling. Eliminate all ignition sources.

For emergency responders

Entry into a confined space or poorly ventilated area contaminated with vapor, mist or fume is extremely hazardous without the correct respiratory protective equipment and a safe system of work. Wear self-contained breathing apparatus. Wear a suitable chemical protective suit. Chemical resistant boots. See also the information in "For non-emergency personnel".

Section 6. Accidental release measures

Environmental precautions

Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers. Inform the relevant authorities if the product has caused environmental pollution (sewers, waterways, soil or air). Water polluting material. May be harmful to the environment if released in large quantities.

Methods and materials for containment and cleaning up

Small spill

Eliminate all ignition sources. Stop leak if without risk. Move containers from spill area. Absorb with an inert material and place in an appropriate waste disposal container. Use spark-proof tools and explosion-proof equipment. Dispose of via a licensed waste disposal contractor. The method and equipment used must be in conformance with appropriate regulations and industry practice on explosive atmospheres.

Large spill

Eliminate all ignition sources. Stop leak if without risk. Move containers from spill area. Approach release from upwind. Prevent entry into sewers, water courses, basements or confined areas. Dike spill area and do not allow product to reach sewage system and surface or ground water. Contain and collect spillage with non-combustible, absorbent material e.g. sand, earth, vermiculite or diatomaceous earth and place in container for disposal according to local regulations. Use spark-proof tools and explosion-proof equipment. Contaminated absorbent material may pose the same hazard as the spilled product. The method and equipment used must be in conformance with appropriate regulations and industry practice on explosive atmospheres. Dispose of via a licensed waste disposal contractor.

Section 7. Handling and storage

Precautions for safe handling

Protective measures

Put on appropriate personal protective equipment (see Section 8). Do not get in eyes or on skin or clothing. Use only with adequate ventilation. Wear appropriate respirator when ventilation is inadequate. Avoid contact of spilled material and runoff with soil and surface waterways. Empty containers retain product residue and can be hazardous. Keep in the original container or an approved alternative made from a compatible material, kept tightly closed when not in use. Do not reuse container. Store and use away from heat, sparks, open flame or any other ignition source. Use explosion-proof electrical (ventilating, lighting and material handling) equipment. Use only non-sparking tools. Do not breathe vapor or mist. Avoid exposure - obtain special instructions before use. Do not handle until all safety precautions have been read and understood. Do not swallow. Aspiration hazard if swallowed. Can enter lungs and cause damage. Never siphon by mouth.

Advice on general occupational hygiene

Eating, drinking and smoking should be prohibited in areas where this material is handled, stored and processed. Wash thoroughly after handling. Remove contaminated clothing and protective equipment before entering eating areas. See also Section 8 for additional information on hygiene measures.

Conditions for safe storage, including any incompatibilities

Store in accordance with local regulations. Store in a segregated and approved area. Store in original container protected from direct sunlight in a dry, cool and well-ventilated area, away from incompatible materials (see Section 10) and food and drink. Store locked up. Eliminate all ignition sources. Separate from oxidizing materials. Keep container tightly closed and sealed until ready for use. Store and use only in equipment/ containers designed for use with this product. Containers that have been opened must be carefully resealed and kept upright to prevent leakage. Do not store in unlabeled containers. Use appropriate containment to avoid environmental contamination.

Light hydrocarbon vapors can build up in the headspace of tanks. These can cause flammability/explosion hazards even at temperatures below the normal flash point (note: flash point must not be regarded as a reliable indicator of the potential flammability of vapor in tank headspaces). Tank headspaces should always be regarded as potentially flammable and care should be taken to avoid static electrical discharge and all ignition sources during filling, ullaging and sampling from storage tanks. Do not enter storage tanks. If entry to vessels is necessary, follow permit to work procedures. Entry to any tanks or other confined space requires a full risk assessment and appropriate control measures to be put in place in conformance with appropriate regulations and industry practice on confined space entry. When the product is pumped (e.g. during filling, discharge or ullaging) and when sampling, there is a risk of static discharge. Ensure

Section 7. Handling and storage

equipment used is properly earthed or bonded to the tank structure. Electrical equipment should not be used unless it is intrinsically safe (i.e. will not produce sparks). Explosive air/vapor mixtures may form at ambient temperature. If product comes into contact with hot surfaces, or leaks occur from pressurized fuel pipes, the vapor or mists generated will create a flammability or explosion hazard. Product contaminated rags, paper or material used to absorb spillages, represent a fire hazard, and should not be allowed to accumulate. Dispose of safely immediately after use.

Section 8. Exposure controls/personal protection

Control parameters

Occupational exposure limits

Ingredient name	Exposure limits
Fuels, diesel, No 2	**ACGIH TLV (United States). Absorbed through skin.** TWA: 100 mg/m³, (measured as total hydrocarbons) 8 hours. Issued/Revised: 1/2007 Form: Inhalable fraction and vapor
naphthalene	**ACGIH TLV (United States). Absorbed through skin.** TWA: 52 mg/m³ 8 hours. Issued/Revised: 5/1996 TWA: 10 ppm 8 hours. Issued/Revised: 5/1996 **OSHA PEL (United States).** TWA: 50 mg/m³ 8 hours. Issued/Revised: 6/1993 TWA: 10 ppm 8 hours. Issued/Revised: 6/1993

While specific OELs for certain components may be shown in this section, other components may be present in any mist, vapor or dust produced. Therefore, the specific OELs may not be applicable to the product as a whole and are provided for guidance only.

Appropriate engineering controls

All activities involving chemicals should be assessed for their risks to health, to ensure exposures are adequately controlled. Personal protective equipment should only be considered after other forms of control measures (e.g. engineering controls) have been suitably evaluated. Personal protective equipment should conform to appropriate standards, be suitable for use, be kept in good condition and properly maintained. Your supplier of personal protective equipment should be consulted for advice on selection and appropriate standards. For further information contact your national organisation for standards.
Provide exhaust ventilation or other engineering controls to keep the relevant airborne concentrations below their respective occupational exposure limits.
The final choice of protective equipment will depend upon a risk assessment. It is important to ensure that all items of personal protective equipment are compatible.

Environmental exposure controls

Emissions from ventilation or work process equipment should be checked to ensure they comply with the requirements of environmental protection legislation. In some cases, fume scrubbers, filters or engineering modifications to the process equipment will be necessary to reduce emissions to acceptable levels.

Individual protection measures

Hygiene measures

Wash hands, forearms and face thoroughly after handling chemical products, before eating, smoking and using the lavatory and at the end of the working period. Appropriate techniques should be used to remove potentially contaminated clothing. Wash contaminated clothing before reusing. Ensure that eyewash stations and safety showers are close to the workstation location.

Eye/face protection

Chemical splash goggles.

Skin protection

Section 8. Exposure controls/personal protection

Hand protection

Wear chemical resistant gloves. Recommended: Nitrile gloves.

Do not re-use gloves. Protective gloves must give suitable protection against mechanical risks (i.e. abrasion, blade cut and puncture). Protective gloves will deteriorate over time due to physical and chemical damage. Inspect and replace gloves on a regular basis. The frequency of replacement will depend upon the circumstances of use.

Consult your supervisor or Standard Operating Procedure (S.O.P) for special handling instructions.

Body protection

Use of protective clothing is good industrial practice. Cotton or polyester/cotton overalls will only provide protection against light superficial contamination that will not soak through to the skin. Overalls should be laundered on a regular basis. When the risk of skin exposure is high (e.g. when cleaning up spillages or if there is a risk of splashing) then chemical resistant aprons and/or impervious chemical suits and boots will be required. Wear suitable protective clothing. Footwear highly resistant to chemicals. When there is a risk of ignition from static electricity, wear anti-static protective clothing. For greatest effectiveness against static electricity, overalls, boots and gloves should all be anti-static. When there is a risk of ignition wear inherently fire resistant protective clothes and gloves. Work clothing / overalls should be laundered on a regular basis. Laundering of contaminated work clothing should only be done by professional cleaners who have been told about the hazards of the contamination. Always keep contaminated work clothing away from uncontaminated work clothing and uncontaminated personal clothes. When the risk of skin exposure is high (from experience this could apply to the following tasks: cleaning work, maintenance and service, filling and transfer, taking samples and cleaning up spillages) then a chemical protective suit and boots will be required. Personal protective equipment for the body should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.

Other skin protection

Appropriate footwear and any additional skin protection measures should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.

Respiratory protection

Use only with adequate ventilation. Do not breathe vapor or mist. If ventilation is inadequate, use a NIOSH certified respirator with an organic vapor cartridge and P95 particulate filter. If operating conditions cause high vapor concentrations or the TLV is exceeded, use supplied-air respirator.

CAUTION: The protection provided by air-purifying respirators is limited. Use a positive pressure air-supplied respirator if there is any potential for an uncontrolled release, if exposure levels are not known, or if concentrations exceed the protection limits of air-purifying respirator.

Use with adequate ventilation.
In case of insufficient ventilation, wear suitable respiratory equipment.
If there is a requirement for the use of a respiratory protective device, but the use of breathing apparatus (independent of ambient atmosphere) is not required, then a suitable filtering device must be worn.
The filter class must be suitable for the maximum contaminant concentration (gas/vapor/aerosol/particulates) that may arise when handling the product.
The correct choice of respiratory protection depends upon the chemicals being handled, the conditions of work and use, and the condition of the respiratory equipment. Safety procedures should be developed for each intended application. Respiratory protection equipment should therefore be chosen in consultation with the supplier/manufacturer and with a full assessment of the working conditions.

Section 9. Physical and chemical properties

Appearance

Physical state Liquid.

Color Yellow. [Light]

Odor Kerosene

Odor threshold Not available.

pH Not available.

Section 9. Physical and chemical properties

Melting point	Not available.
Boiling point	162.78°C (325°F)
Flash point	Closed cup: >60°C (>140°F)
Evaporation rate	Not available.
Flammability (solid, gas)	Not applicable. Based on - Physical state
Lower and upper explosive (flammable) limits	Lower: 0.7% Upper: 5%
Vapor pressure	<0.266 kPa (<2 mm Hg) at 20°C
Vapor density	Not available.
Density	860 kg/m³ (0.86 g/cm³)
Solubility	negligible <0.1%
Partition coefficient: n-octanol/water	Not available.
Auto-ignition temperature	257°C (494.6°F)
Decomposition temperature	Not available.
Viscosity	Dynamic: 0.003 Pa·s (3 cP) at 37.778°C Kinematic: 2 to 11 mm^2/s (2 to 11 cSt) at 40°C

Section 10. Stability and reactivity

Reactivity	No specific test data available for this product. Refer to Conditions to avoid and Incompatible materials for additional information.
Chemical stability	The product is stable.
Possibility of hazardous reactions	Under normal conditions of storage and use, hazardous reactions will not occur. Under normal conditions of storage and use, hazardous polymerization will not occur.
Conditions to avoid	Keep away from heat, sparks and flame. Avoid all possible sources of ignition (spark or flame).
Incompatible materials	Reactive or incompatible with the following materials: oxidizing materials, acids and alkalis. halogenated compounds.
Hazardous decomposition products	Under normal conditions of storage and use, hazardous decomposition products should not be produced.

Section 11. Toxicological information

Information on toxicological effects

Acute toxicity

Product/ingredient name	Test	Species	Result	Exposure	Remarks
Fuels, diesel, No 2	LC50 Inhalation Dusts and mists	Rat	4.1 mg/l	4 hours	Based on Diesel fuel
	LD50 Dermal	Rabbit	>4300 mg/kg	-	Based on No. 2 Heating Oil.
	LD50 Dermal	Rabbit	>4300 mg/kg	-	Based on Diesel fuel
	LD50 Oral	Rat	17900 mg/kg	-	Based on No. 2 Heating Oil.
	LD50 Oral	Rat	7600 mg/kg	-	Based on Diesel

Section 11. Toxicological information

fuel

Conclusion/Summary Not available.

Irritation/Corrosion

Product/ingredient name	Species	Result	Score	Exposure	Observation	Conc.	Remarks
Fuels, diesel, No 2	Rabbit	Skin - Irritation	-	-	-	-	Based on No. 2 Heating Oil.
	Rabbit	Skin - Irritation	-	-	-	-	Based on Diesel fuel
	Rabbit	Eyes - Non-irritating to the eyes.	-	-	-	-	Based on No. 2 Heating Oil.
	Rabbit	Eyes - Non-irritating to the eyes.	-	-	-	-	Based on Diesel fuel

Sensitizer

Product/ingredient name	Route of exposure	Species	Result	Remarks
Fuels, diesel, No 2	skin	Guinea pig	Not sensitizing	Based on No. 2 Heating Oil.
	skin	Guinea pig	Not sensitizing	Based on Diesel fuel

Mutagenicity

Product/ingredient name	Test	Experiment	Result	Remarks
Fuels, diesel, No 2	OECD 471	Experiment: In vitro Subject: Non-mammalian species	Positive	Based on Diesel fuel
	Equivalent to OECD 476	Experiment: In vitro Subject: Mammalian-Animal Cell: Germ	Negative	Based on Heating Oil.
	not guideline	Experiment: In vivo Subject: Unspecified Cell: Somatic	Negative	Based on Heating Oil.

Conclusion/Summary Not classified. Based on available data, the classification criteria are not met.

Carcinogenicity

Product/ingredient name	Species	Route	Exposure	Test	Result	Remarks
Fuels, diesel, No 2	Mouse	Dermal	Positive - Dermal - Unspecified	2 years	-	Based on Heating Oil.

Conclusion/Summary Suspected of causing cancer.

Classification

Product/ingredient name	OSHA	IARC	NTP
naphthalene	-	2B	Reasonably anticipated to be a human carcinogen.

IARC :
2B - Possible carcinogen to human.

NTP :
Possible - Reasonably anticipated to be human carcinogens.

Reproductive toxicity

Section 11. Toxicological information

Product/ingredient name	Maternal toxicity	Fertility	Development toxin	Species	Result	Exposure
Fuels, diesel, No 2	-	-	Negative	Rat	Dermal	20 days
	-	-	Negative	Rat	Dermal	10 days
	-	-	Negative	Rat	Dermal	10 days

Conclusion/Summary Development: Not classified. Based on available data, the classification criteria are not met.
Fertility: Not classified. Based on available data, the classification criteria are not met.
Effects on or via lactation: Not classified. Based on available data, the classification criteria are not met.

Specific target organ toxicity (repeated exposure)

Name	Category	Route of exposure	Target organs
Fuels, diesel, No 2	Category 2	Not determined	Not determined

Aspiration hazard

Name	Result
Fuels, diesel, No 2	ASPIRATION HAZARD - Category 1

Information on the likely routes of exposure Routes of entry anticipated: Oral, Dermal, Inhalation.

Potential acute health effects

Eye contact No known significant effects or critical hazards.

Skin contact Causes skin irritation.

Inhalation Harmful if inhaled.

Ingestion Irritating to mouth, throat and stomach. Aspiration hazard if swallowed -- harmful or fatal if liquid is aspirated into lungs.

Symptoms related to the physical, chemical and toxicological characteristics

Eye contact Adverse symptoms may include the following:
pain or irritation
watering
redness

Skin contact Adverse symptoms may include the following:
irritation
redness

Inhalation Adverse symptoms may include the following:
nausea or vomiting
headache
drowsiness/fatigue
dizziness/vertigo
unconsciousness

Ingestion Adverse symptoms may include the following:
nausea or vomiting

Delayed and immediate effects and also chronic effects from short and long term exposure

Short term exposure

Potential immediate effects Vapor, mists or fumes may contain polycyclic aromatic hydrocarbons some of which are known to produce skin cancer. May be harmful by inhalation if exposure to vapor, mists or fumes resulting from thermal decomposition products occurs. Vapor, mist or fume may irritate the nose, mouth and respiratory tract. Vapor, mist or fume may cause eye irritation. Exposure to vapor, mist or fume may cause stinging, redness and watering of the eyes.

Potential delayed effects As with all such products containing potentially harmful levels of PCAs, prolonged or repeated skin contact may eventually result in dermatitis or more serious irreversible skin disorders including cancer.

Section 11. Toxicological information

Long term exposure

Potential immediate effects	Not available.
Potential delayed effects	Not available.

Potential chronic health effects

General	May cause damage to organs through prolonged or repeated exposure. Vapor, mists or fumes may contain polycyclic aromatic hydrocarbons some of which are known to produce skin cancer.
Carcinogenicity	Suspected of causing cancer. Risk of cancer depends on duration and level of exposure.
Mutagenicity	No known significant effects or critical hazards.
Teratogenicity	No known significant effects or critical hazards.
Developmental effects	No known significant effects or critical hazards.
Fertility effects	No known significant effects or critical hazards.

Numerical measures of toxicity

Acute toxicity estimates

Not available.

Other information	Aspiration of this product into the lungs can cause chemical pneumonia and can be fatal. Aspiration into the lungs can occur while vomiting after ingestion of this product. Do not siphon by mouth.
Additional information	Middle distillate: From skin-painting studies of petroleum distillates of similar composition and distillate range, it has been shown that these types of materials often possess weak carcinogenic activity in laboratory animals. In these tests, the material is painted on the shaved backs of mice twice a week for their lifetime. The material is not washed off between applications. Therefore, there may be a potential risk of skin cancer from prolonged or repeated skin contact with this product in the absence of good personal hygiene. This particular product has not been tested for carcinogenic activity, but we have chosen to be cautious in light of the findings with other distillate streams. Occasional skin contact with this product is not expected to have serious effects, but good personal hygiene should be practiced and repeated skin contact avoided. This product can also be expected to produce skin irritation upon prolonged or repeated skin contact. Personal hygiene measures taken to prevent skin irritation are expected to be adequate to prevent risk of skin cancer. Diesel exhaust particulates have been classified by the National Toxicological Program (NTP) to be a reasonably anticipated human carcinogen. Exposure should be minimized to reduce potential risk. Naphthalene has been reported to cause developmental toxicity in mice after oral exposure to relatively high dose levels, but developmental toxicity was not observed in NTP (National Toxicology Program) sponsored studies in rats and rabbits. Ingestion or inhalation of naphthalene can result in hemolysis and other blood abnormalities, and individuals (and infants) deficient in glucose-6-phosphate dehydrogenase may be especially susceptible to these effects. Inhalation of naphthalene may cause headache and nausea. Airborne exposure can result in eye irritation. Naphthalene exposure has been associated with cataracts in animals and humans.

Not available.

Product/ingredient name	Test	Result	Remarks

Section 12. Ecological information

Fuels, diesel, No 2	OECD 301 F	60 % - Readily - 28 days	Based on Diesel fuel
	OECD 301 F	57.5 % - Not readily - 28 days	Based on Diesel fuel
	Equivalent to EPA OTS 796. 3100	35 % - Not readily - 28 days	Based on Gas Oils (petroleum), solvent refined

Conclusion/Summary Not available.

Bioaccumulative potential

This product is not expected to bioaccumulate through food chains in the environment.

Mobility in soil

Soil/water partition coefficient (K_{OC}) Not available.

Mobility Spillages may penetrate the soil causing ground water contamination. This material may accumulate in sediments.

Other adverse effects No known significant effects or critical hazards.

Other ecological information Spills may form a film on water surfaces causing physical damage to organisms. Oxygen transfer could also be impaired.

Section 13. Disposal considerations

Disposal methods The generation of waste should be avoided or minimized wherever possible. Significant quantities of waste product residues should not be disposed of via the foul sewer but processed in a suitable effluent treatment plant. Dispose of surplus and non-recyclable products via a licensed waste disposal contractor. Disposal of this product, solutions and any by-products should at all times comply with the requirements of environmental protection and waste disposal legislation and any regional local authority requirements. Waste packaging should be recycled. Incineration or landfill should only be considered when recycling is not feasible. This material and its container must be disposed of in a safe way. Care should be taken when handling emptied containers that have not been cleaned or rinsed out. Empty containers or liners may retain some product residues. Vapor from product residues may create a highly flammable or explosive atmosphere inside the container. Do not cut, weld or grind used containers unless they have been cleaned thoroughly internally. Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers.

Packing group	III	III	III	III
Environmental hazards	No.	No.	Yes.	No.
Additional information	Non-bulk packages (less than or equal to 119 gal) of combustible liquids are not regulated as hazardous materials in package sizes less than the product reportable quantity. **Reportable quantity** 3333.3 lbs / 1513.3 kg [464.86 gal / 1759.7 L] Package sizes shipped in quantities less than the product reportable quantity are not subject to the RQ (reportable quantity) transportation requirements.	-	The marine pollutant mark is not required when transported in sizes of ≤5 L or ≤5 kg. **Emergency schedules (EmS)** F-E, S-E	The environmentally hazardous substance mark may appear if required by other transportation regulations.

Special precautions for user Not available.

Transport in bulk according to Annex II of MARPOL 73/78 and the IBC Code

Proper shipping name MARPOL Annex 1 rules apply for bulk shipments by sea.
Category: gas oils, including ship's bunkers

Section 15. Regulatory information

U.S. Federal regulations

United States inventory (TSCA 8b) All components are listed or exempted.

SARA 302/304

Composition/information on ingredients

No products were found.

SARA 311/312

Classification Fire hazard
Immediate (acute) health hazard
Delayed (chronic) health hazard

SARA 313

	Product name	CAS number	Concentration
Form R - Reporting requirements	naphthalene	91-20-3	1 - 3
Supplier notification	naphthalene	91-20-3	1 - 3

SARA 313 notifications must not be detached from the SDS and any copying and redistribution of the SDS shall include copying and redistribution of the notice attached to copies of the SDS subsequently redistributed.

State regulations

Massachusetts The following components are listed: NAPHTHALENE

New Jersey The following components are listed: NAPHTHALENE; MOTH FLAKES

Pennsylvania The following components are listed: NAPHTHALENE

California Prop. 65

WARNING: This product contains a chemical known to the State of California to cause cancer.
naphthalene; ethylbenzene; cumene

WARNING: This product contains a chemical known to the State of California to cause birth defects or other reproductive harm.
toluene

WARNING: This product contains a chemical known to the State of California to cause cancer and birth defects or other reproductive harm.
Benzene

Prop 65 chemicals will result under certain conditions from the use of this material. For example, burning fuels produces combustion products including diesel exhaust, a Prop 65 carcinogen, and carbon monoxide, a Prop 65 reproductive toxin.

Other regulations

Australia inventory (AICS) At least one component is not listed.

Canada inventory All components are listed or exempted.

China inventory (IECSC) All components are listed or exempted.

Japan inventory (ENCS) Not determined.

Korea inventory (KECI) All components are listed or exempted.

Philippines inventory (PICCS) At least one component is not listed.

REACH Status For the REACH status of this product please consult your company contact, as identified in Section 1.

Section 16. Other information

Hazardous Material Information System (U.S.A.)

Health	*	2
Flammability		2
Physical hazards		0
Personal protection		X

Caution: HMIS® ratings are based on a 0-4 rating scale, with 0 representing minimal hazards or risks, and 4 representing significant hazards or risks Although HMIS® ratings are not required on SDSs under 29 CFR 1910. 1200, the preparer may choose to provide them. HMIS® ratings are to be used with a fully implemented HMIS® program. HMIS® is a registered mark of the National Paint & Coatings Association (NPCA). HMIS® materials may be purchased exclusively from J. J. Keller (800) 327-6868.

National Fire Protection Association (U.S.A.)

History

Date of issue/Date of revision	10/07/2014.
Date of previous issue	10/03/2014.
Key to abbreviations	ACGIH = American Conference of Industrial Hygienists ATE = Acute Toxicity Estimate BCF = Bioconcentration Factor CAS Number = Chemical Abstracts Service Registry Number GHS = Globally Harmonized System of Classification and Labelling of Chemicals IATA = International Air Transport Association IBC = Intermediate Bulk Container IMDG = International Maritime Dangerous Goods LogPow = logarithm of the octanol/water partition coefficient MARPOL 73/78 = International Convention for the Prevention of Pollution From Ships, 1973 as modified by the Protocol of 1978. ("Marpol" = marine pollution) OEL = Occupational Exposure Limit SDS = Safety Data Sheet STEL = Short term exposure limit TWA = Time weighted average UN = United Nations UN Number = United Nations Number, a four digit number assigned by the United Nations Committee of Experts on the Transport of Dangerous Goods.

Indicates information that has changed from previously issued version.

Notice to reader

All reasonably practicable steps have been taken to ensure this data sheet and the health, safety and environmental information contained in it is accurate as of the date specified below. No warranty or representation, express or implied is made as to the accuracy or completeness of the data and information in this data sheet.

The data and advice given apply when the product is sold for the stated application or applications. You should not use the product other than for the stated application or applications without seeking advice from BP Group.

It is the user's obligation to evaluate and use this product safely and to comply with all applicable laws and regulations. The BP Group shall not be responsible for any damage or injury resulting from use, other than the stated product use of the material, from any failure to adhere to recommendations, or from any hazards inherent in the nature of the material. Purchasers of the product for supply to a third party for use at work, have a duty to take all necessary steps to ensure that any person handling or using the product is provided with the information in this sheet. Employers have a duty to tell employees and others who may be affected of any hazards described in this sheet and of any precautions that should be taken. You can contact the BP Group to ensure that this document is the most current available. Alteration of this document is strictly prohibited.

1. Identification

Product identifier	**RemOx® S ISCO Reagent**
Other means of identification	Not available.
Recommended use	Remediation of soils and groundwater.
Recommended restrictions	Use in accordance with supplier's recommendations.

Manufacturer / Importer / Supplier / Distributor information

Manufacturer/Supplier	CARUS CORPORATION
Address	315 Fifth Street, Peru, IL 61354, USA
Telephone	815 223-1500 - All other non-emergency inquiries about the product should be directed to the company
E-mail	salesmkt@caruscorporation.com
Website	www.caruscorporation.com
Contact person	Dr. Chithambarathanu Pillai
Emergency Telephone	For Hazardous Materials [or Dangerous Goods] Incidents ONLY (spill, leak, fire, exposure or accident), call CHEMTREC at CHEMTREC®, USA: 001 (800) 424-9300 CHEMTREC®, Mexico (Toll-Free - must be dialed from within country): 01-800-681-9531 CHEMTREC®, Other countries: 001 (703) 527-3887

2. Hazard(s) identification

Physical hazards	Oxidizing solids	Category 2
Health hazards	Acute toxicity, oral	Category 4
	Skin corrosion/irritation	Category 1B
	Specific target organ toxicity, single exposure	Category 1 (Respiratory System)
	Specific target organ toxicity, repeated exposure	Category 1 (Respiratory System, central nervous system)

OSHA defined hazards Not classified.

Label elements

Signal word Danger

Hazard statement May intensify fire; oxidizer. Harmful if swallowed. Causes severe skin burns and eye damage. Causes damage to organs (Respiratory System). Causes damage to organs (Respiratory System, central nervous system) through prolonged or repeated exposure.

Precautionary statement

Prevention Keep away from heat. Take any precaution to avoid mixing with combustibles/ Keep/Store away from clothing//combustible materials. Wash thoroughly after handling. Do not breathe dust. Wear protective gloves/protective clothing/eye protection/face protection. Do not eat, drink or smoke when using this product.

Response In case of fire: Use water for extinction. If swallowed: Rinse mouth. Do NOT induce vomiting. If on skin (or hair): Take off immediately all contaminated clothing. Rinse skin with water/shower. Wash contaminated clothing before reuse. If inhaled: Remove person to fresh air and keep comfortable for breathing. If in eyes: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Immediately call a poison center/doctor.

Storage Store locked up.

Disposal Dispose of contents/container in accordance with local/regional/national/international regulations.

Hazard(s) not otherwise classified (HNOC) Not classified.

Environmental hazards	Hazardous to the aquatic environment, long-term hazard	Category 1

3. Composition/information on ingredients

Substances

Chemical name	Common name and synonyms	CAS number	%
Potassium permanganate		7722-64-7	> 97.5

Composition comments All concentrations are in percent by weight unless ingredient is a gas. Gas concentrations are in percent by volume.

4. First-aid measures

Inhalation Remove victim to fresh air and keep at rest in a position comfortable for breathing. For breathing difficulties, oxygen may be necessary. Get medical attention immediately.

Skin contact Take off immediately all contaminated clothing. Immediately flush skin with plenty of water. Get medical attention immediately. Wash contaminated clothing before reuse.

Contact with skin may leave a brown stain of insoluble manganese dioxide. This can be easily removed by washing with a mixture of equal volume of household vinegar and 3% hydrogen peroxide, followed by washing with soap and water.

Eye contact Immediately flush with plenty of water for up to 15 minutes. Remove any contact lenses and open eyelids wide apart. Continue rinsing. Get medical attention immediately.

Ingestion Immediately rinse mouth and drink plenty of water. Never give anything by mouth to a victim who is unconscious or is having convulsions. Do not induce vomiting. If vomiting occurs, keep head low so that stomach content doesn't get into the lungs. Get medical attention immediately.

Most important symptoms/effects, acute and delayed Contact with this material will cause burns to the skin, eyes and mucous membranes. Permanent eye damage including blindness could result.

Indication of immediate medical attention and special treatment needed Provide general supportive measures and treat symptomatically. In case of shortness of breath, give oxygen. Decomposition products are alkaline. Brown stain is insoluble manganese dioxide.

General information In the case of accident or if you feel unwell, seek medical advice immediately (show the label where possible). Ensure that medical personnel are aware of the material(s) involved, and take precautions to protect themselves.

5. Fire-fighting measures

Suitable extinguishing media Flood with water from a distance, water spray or fog.

Unsuitable extinguishing media The following extinguishing media are ineffective: Dry chemical. Foam. Carbon dioxide (CO2). Halogenated materials.

Specific hazards arising from the chemical May intensify fire; oxidizer. May ignite combustibles (wood, paper, oil, clothing, etc.). Contact with incompatible materials or heat (135 ºC / 275 ºF) could result in violent exothermic chemical reaction. Oxidizing agent, may cause spontaneous ignition of combustible materials. By heating and fire, corrosive vapors/gases may be formed.

Special protective equipment and precautions for firefighters Self-contained breathing apparatus and full protective clothing must be worn in case of fire. Selection of respiratory protection for firefighting: follow the general fire precautions indicated in the workplace.

Fire-fighting equipment/instructions Move container from fire area if it can be done without risk. Cool containers exposed to flames with water until well after the fire is out. Prevent runoff from fire control or dilution from entering streams, sewers, or drinking water supply. Dike fire control water for later disposal. Water runoff can cause environmental damage.

6. Accidental release measures

Personal precautions, protective equipment and emergency procedures Keep unnecessary personnel away. Keep upwind. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Avoid inhalation of vapors and contact with skin and eyes. Wear protective clothing as described in Section 8 of this safety data sheet. Local authorities should be advised if significant spillages cannot be contained.

Methods and materials for containment and cleaning up

Keep combustibles (wood, paper, oil, etc.) away from spilled material. Do not let this be released into the environment. This product is miscible in water. Stop leak if possible without any risk. Dike the spilled material, where this is possible. Clean up spills immediately by sweeping or shoveling up the material. Do not return spilled material to the original container; transfer to a clean metal or plastic drum. To clean up potassium permanganate solutions, follow either of the following two options:

Option # 1: Dilute to approximately 6% with water, and then reduce with sodium thiosulfate, a bisulfite or ferrous salt solution. The bisulfite or ferrous salt may require some dilute sulfuric acid (10% w/w) to promote reduction. Neutralize with sodium carbonate to neutral pH, if acid was used. Decant or filter and deposit sludge in approved landfill. Where permitted, the sludge may be drained into sewer with large quantities of water.

Option # 2: Absorb with inert media like diatomaceous earth or inert floor dry, collect into a drum and dispose of properly. Do not use saw dust or other incompatible media. Disposal of all materials shall be in full and strict compliance with all federal, state, and local regulations pertaining to permanganates.

To clean contaminated floors, flush with abundant quantities of water into sewer, if permitted by federal, state, and local regulations. If not, collect water and treat as described above.

Never return spills in original containers for re-use. For waste disposal, see Section 13 of the MSDS.

Environmental precautions

Do not allow to enter drains, sewers or watercourses. Contact local authorities in case of spillage to drain/aquatic environment.

7. Handling and storage

Precautions for safe handling

Take any precaution to avoid mixing with combustibles. Keep away from clothing and other combustible materials. Do not get this material in your eyes, on your skin, or on your clothing. Do not breathe dust or mist or vapor of the solution. If clothing becomes contaminated, remove and wash off immediately. When using, do not eat, drink or smoke. Good personal hygiene is necessary. Wash hands and contaminated areas with water and soap before leaving the work site. Avoid release to the environment.

Conditions for safe storage, including any incompatibilities

Store locked up. Keep container tightly closed and in a well-ventilated place. Store in a cool, dry place. Store away from incompatible materials (See Section 10). Follow applicable local/national/international recommendations on storage of oxidizers. Store in accordance with NFPA 430 requirements for Class II oxidizers.

Before using, read Material Safety Data Sheet (MSDS) for this product.

8. Exposure controls/personal protection

Occupational exposure limits

US. OSHA Table Z-1 Limits for Air Contaminants (29 CFR 1910.1000)

Components	Type	Value
Potassium permanganate (CAS 7722-64-7)	Ceiling	5 mg/m3

US. ACGIH Threshold Limit Values

Components	Type	Value
Potassium permanganate (CAS 7722-64-7)	TWA	0.2 mg/m3

US NIOSH Pocket Guide to Chemical Hazards: Recommended exposure limit (REL)

Components	Type	Value	Form
Potassium permanganate (CAS 7722-64-7)	TWA	1 mg/m3	Fume.

US NIOSH Pocket Guide to Chemical Hazards: Short Term Exposure Limit (STEL)

Components	Type	Value	Form
Potassium permanganate (CAS 7722-64-7)	STEL	3 mg/m3	Fume.

Biological limit values

No biological exposure limits noted for the ingredient(s).

Exposure guidelines

Follow standard monitoring procedures.

Appropriate engineering controls

Provide adequate general and local exhaust ventilation. An eye wash and safety shower must be available in the immediate work area.

Individual protection measures, such as personal protective equipment

Eye/face protection

Wear safety glasses with side shields (or goggles). Wear face shield if there is risk of splashes.

Skin protection	
Hand protection	Use protective gloves made of: Rubber or plastic. Suitable gloves can be recommended by the glove supplier.
Other	Wear chemical-resistant, impervious gloves.
Respiratory protection	In case of inadequate ventilation or risk of inhalation of dust, use suitable respiratory equipment with particle filter. In the United States of America, if respirators are used, a program should be instituted to assure compliance with OSHA 29 CFR 1910.134. Measurement Element: Manganese (Mn) 10 mg/m3 Any particulate respirator equipped with an N95, R95, or P95 filter (including N95, R95, and P95 filtering facepieces) except quarter-mask respirators. The following filters may also be used: N99, R99, P99, N100, R100 or P100. Any supplied-air respirator. 25 mg/m3 Any supplied-air respirator operated in a continuous-flow mode. Any powered, air-purifying respirator with a high-efficiency particulate filter. 50 mg/m3 Any air-purifying, full-face piece respirator equipped with an N100, R100, or P100 filter. Any supplied-air respirator with a tight-fitting face piece that is operated in a continuous-flow mode. Any powered, air-purifying respirator with a tight-fitting face piece and a high-efficiency particulate filter. Any self-contained breathing apparatus with a full face piece. Any supplied-air respirator with a full face piece. 500 mg/m3 Any supplied-air respirator operated in a pressure-demand or other positive-pressure mode. Emergency or planned entry into unknown concentrations or IDLH conditions - Any self-contained breathing apparatus that has a full face piece and is operated in a pressure-demand or other positive-pressure mode. Escape Any air-purifying, full-face piece respirator equipped with an N100, R100, or P100 filter. Any appropriate escape-type, self-contained breathing apparatus.
Thermal hazards	Wear appropriate thermal protective clothing, when necessary.
General hygiene considerations	When using, do not eat, drink or smoke. Keep from contact with clothing and other combustible materials. Remove and wash contaminated clothing promptly. Wash hands before breaks and immediately after handling the product. Handle in accordance with good industrial hygiene and safety practice.

9. Physical and chemical properties

Appearance	Dark purple solid with metallic luster.
Physical state	Solid.
Form	Solid.
Color	Dark purple.
Odor	Odorless.
Odor threshold	Not available.
pH	Not applicable.
Melting point/freezing point	Starts to decompose with evolution of oxygen (O2) at temperatures above 150 °C. Once initiated, the decomposition is exothermic and self sustaining.
Initial boiling point and boiling range	Not applicable.
Flash point	Not applicable.
Evaporation rate	Not applicable.
Flammability (solid, gas)	Non flammable.
Upper/lower flammability or explosive limits	
Flammability limit - lower (%)	Not applicable.
Flammability limit - upper (%)	Not applicable.
Explosive limit - lower (%)	Not available.
Explosive limit - upper (%)	Not available.

Vapor pressure	Not applicable.
Vapor density	Not applicable.
Relative density	2.7 (20 °C) (Water = 1)
Solubility(ies)	6 % (20 °C) 20 % (65 °C)
Partition coefficient (n-octanol/water)	Not available.
Auto-ignition temperature	Not available.
Decomposition temperature	Not available.
Viscosity	Not applicable.
Other information	
Explosive properties	Not explosive. Can explode in contact with sulfuric acid, peroxides and metal powders.
Molecular weight	158.03
Oxidizing properties	Strong oxidizing agent.

10. Stability and reactivity

Reactivity	The product is non-reactive under normal conditions of use, storage and transport.
Chemical stability	Stable at normal conditions.
Possibility of hazardous reactions	Contact with combustible material may cause fire. Can explode in contact with sulfuric acid, peroxides and metal powders. Starts to decompose with evolution of oxygen (O2) at temperatures above 150 °C. Once initiated, the decomposition is exothermic and self sustaining.
Conditions to avoid	Contact with incompatible materials or heat (135 °C / 275 °F) could result in violent exothermic chemical reaction.
Incompatible materials	Acids. Peroxides. Reducing agents. Combustible material. Metal powders. Contact with hydrochloric acid liberates chlorine gas.
Hazardous decomposition products	By heating and fire, corrosive vapors/gases may be formed.

11. Toxicological information

Information on likely routes of exposure

Ingestion	Harmful if swallowed.
Inhalation	May cause irritation to the respiratory system.
Skin contact	Causes severe skin burns.
Eye contact	Causes serious eye damage.
Symptoms related to the physical, chemical and toxicological characteristics	Contact with this material will cause burns to the skin, eyes and mucous membranes. Permanent eye damage including blindness could result.

Information on toxicological effects

Acute toxicity Harmful if swallowed.

Components	Species	Test Results
Potassium permanganate (CAS 7722-64-7)		
Acute		
Oral		
LD50	Rat	780 mg/kg, 14 days, (Male) 525 mg/kg, 14 days, (Female)

Skin corrosion/irritation	Causes severe skin burns.
Serious eye damage/eye irritation	Causes serious eye damage.
Respiratory sensitization	Not classified.
Skin sensitization	Not classified.
Germ cell mutagenicity	Not classified.
Carcinogenicity	Not classified.
Reproductive toxicity	Not classified.
Specific target organ toxicity - single exposure	Causes damage to organs (respiratory system).

Specific target organ toxicity - repeated exposure	Causes damage to organs (respiratory system, central nervous system) through prolonged or repeated exposure.
Aspiration hazard	Not classified.
Chronic effects	May cause damage to respiratory system. Prolonged exposure, usually over many years, to manganese oxide fume/dust can lead to chronic manganese poisoning, chiefly affecting the central nervous system.
Further information	No other specific acute or chronic health impact noted.

12. Ecological information

Ecotoxicity Very toxic to aquatic life with long lasting effects.

Components		Species	Test Results
Potassium permanganate (CAS 7722-64-7)			
Aquatic			
Fish	LC50	Bluegill (Lepomis macrochirus)	2.7 mg/l, 96 hours, static
			2.3 mg/l, 96 hours, flow through
			2.3 mg/l, 96 hours
			1.8 - 5.6 mg/l
		Carp (Cyprinus carpio)	3.16 - 3.77 mg/l, 96 hours
			2.97 - 3.11 mg/l, 96 hours
		Goldfish (Carassius auratus)	3.3 - 3.93 mg/l, 96 hours, static
		Milkfish, salmon-herring (Chanos chanos)	> 1.4 mg/l, 96 hours
		Rainbow trout (Oncorhynchus mykiss)	1.8 mg/l, 96 hours
			1.08 - 1.38 mg/l, 96 hours
			0.77 - 1.27 mg/l, 96 hours
		Rainbow trout,donaldson trout (Oncorhynchus mykiss)	0.275 - 0.339 mg/l, 96 hours

Persistence and degradability	Expected to be readily converted by oxidizable materials to insoluble manganese oxide.
Bioaccumulative potential	Potential to bioaccumulate is low.
Mobility in soil	Not available.
Mobility in general	The product is water soluble and may spread in water systems.
Other adverse effects	None known.

13. Disposal considerations

Disposal instructions	Dispose of contents/container in accordance with local/regional/national/international regulations.
Local disposal regulations	Dispose in accordance with all applicable regulations.
Hazardous waste code	D001: Ignitable waste The Waste code should be assigned in discussion between the user, the producer and the waste disposal company.
Waste from residues / unused products	Do not allow this material to drain into sewers/water supplies. Dispose in accordance with all applicable regulations.
Contaminated packaging	Since emptied containers may retain product residue, follow label warnings even after container is emptied. Rinse container at least three times to an absence of pink color before disposing. Empty containers should be taken to an approved waste handling site for recycling or disposal.

14. Transport information

DOT

UN number	UN1490
UN proper shipping name	Potassium permanganate
Transport hazard class(es)	5.1
Subsidiary class(es)	-
Packing group	II
Special precautions for user	Read safety instructions, MSDS and emergency procedures before handling.
Labels required	5.1
Special provisions	IB8, IP2, IP4, T3, TP33
Packaging exceptions	152
Packaging non bulk	212
Packaging bulk	240

IATA

UN number	UN1490
UN proper shipping name	Potassium permanganate
Transport hazard class(es)	5.1
Subsidiary class(es)	-
Packaging group	II
Environmental hazards	Yes
Labels required	5.1
ERG Code	5L
Special precautions for user	Read safety instructions, MSDS and emergency procedures before handling.

IMDG

UN number	UN1490
UN proper shipping name	POTASSIUM PERMANGANATE
Transport hazard class(es)	5.1
Subsidiary class(es)	-
Packaging group	II
Environmental hazards	
Marine pollutant	Yes
Labels required	5.1
EmS	F-H, S-Q
Special precautions for user	Read safety instructions, MSDS and emergency procedures before handling.

Transport in bulk according to Annex II of MARPOL 73/78 and the IBC Code This substance/mixture is not intended to be transported in bulk.

15. Regulatory information

US federal regulations

This product is a "Hazardous Chemical" as defined by the OSHA Hazard Communication Standard, 29 CFR 1910.1200.
All components are on the U.S. EPA TSCA Inventory List.

CERCLA/SARA Hazardous Substances - Not applicable.

Drug Enforcement Administration (DEA) (21 CFR 1310.02 (b) 8: List II chemical.

Department of Homeland Security (DHS) Chemical Facility Anti-Terrorism Standards (6 CFR 27, Appendix A): Listed.

TSCA Section 12(b) Export Notification (40 CFR 707, Subpt. D)

Not regulated.

US. OSHA Specifically Regulated Substances (29 CFR 1910.1001-1050)

Not listed.

CERCLA Hazardous Substance List (40 CFR 302.4)

Not listed.

Superfund Amendments and Reauthorization Act of 1986 (SARA)

Hazard categories	Immediate Hazard - Yes Delayed Hazard - Yes Fire Hazard - Yes Pressure Hazard - No Reactivity Hazard - No
SARA 302 Extremely hazardous substance	No
SARA 311/312 Hazardous chemical	Yes

Other federal regulations

APPENDIX D

HEAT ILLNESS PRVENTION PLAN

PROCEDURES FOR HEAT ILLNESS PREVENTION

Employer Name: Tetra Tech

Work Site: 10153 Folsom Blvd., Rancho Cordova, CA

The following designated person or persons (Program Administrator Safety Coordinator / Supervisor/Foreman/Field Supervisor/Crew Leader) have the authority and responsibility for implementing the provisions of this program at this worksite.

Name/Title	Responsibility	Telephone No.
Tetra Tech Personnel:		
Betty Li	Program Manager	(916) 853-1800 (office)
Keith Hoofard	Project Manager/SSC	(916) 709-4732 (cell)
Zack Laforet	Field Supervisor	(603) 801-1624 (cell)
Garrett Kuhl	Field Staff	(650) 804-8412 (cell)
Robert Rolon, CIH	Corporate Health & Safety (HSR)	(407) 448-9553

California Employers with any outdoor places of employment must comply with the Heat Illness Prevention Standard T8 CCR 3395. These procedures have been created to assist the employer in crafting their heat illness prevention procedures, and to reduce the risk of work related heat illnesses among their employees.

These procedures are not intended to supersede or replace the application of any other Title 8 regulation, particularly T8 3203 Injury and Illness Prevention Program (IIPP). Title 8 CCR 3203 requires an employer to establish, implement, and maintain an effective IIPP. The measures listed here may be integrated into the Employer's Injury and Illness Prevention Program.

The employer must also be aware that other standards apply to Heat Illness Prevention such as the requirement to provide for drinking water, first aid and emergency response.

Please note: These procedures provide the minimal steps applicable to most outdoor work settings and are essential to reducing the incidence of heat related illnesses. In working environments with a higher risk for heat illness (e.g., during a heat wave, or other severe working or environmental conditions), Tetra Tech will exercise greater caution and additional protective measures beyond what is listed in this document, as needed to protect their employees.

For additional information on preventing Heat Related Illness, please visit the DOSH website at: http://www.dir.ca.gov/DOSH/DOSH/HeatIllnessInfo.html

HEAT ILLNESS PREVENTION ELEMENTS

The elements reflected within this Heat Illness Prevention guide are those contained in Title 8 of the California Code of Regulations, Section 3395 (T8 CCR 3395) and consist of the following:

- Provision of Water
- Access to Shade
- Procedures for Handling a Heat Wave
- Weather Monitoring and Acclimatization
- Written Procedures
- Training

> PROVISION OF WATER

Water is a key preventive measure to minimize the risk of heat related illnesses.

3395 (c) Employees shall have access to potable drinking water meeting the requirements of Sections 1524, 3363, and 3457, as applicable. Where the supply of water is not plumbed or otherwise continuously supplied, water shall be provided in sufficient quantity at the beginning of the work shift to provide one quart per employee per hour for drinking for the entire shift. Employers may begin the shift with smaller quantities of water if they have effective procedures for replenishment during the shift as needed to allow employees to drink one quart or more per hour. The frequent drinking of water, as described in (e), shall be encouraged.

To ensure access to sufficient quantities of potable drinking water, the following steps will be taken:

- Tetra Tech employee will bring at least 2 quarts per employee at the start of the shift. Each subcontractor's employer will also bring same quantities of water for their employees.
- Supervisor/designated person will monitor water containers every 30 minutes, and employees are encouraged to report to supervisor/designated person low levels or dirty water.
- Water containers will be located as close as practicable to the areas where employees are working (given the working conditions and layout of the worksite), to encourage the frequent drinking of water. If field terrain prevents the water from being placed as close as possible to the workers, bottled water or personal water containers will be made available, so that workers can have drinking water readily accessible.
- When drinking water levels within a container drop below 50%, the water shall be replenished immediately; or water levels should not fall below the point that will allow for adequate water during the time necessary to effect replenishment.
- Disposable/single use drinking cups or bottles will be provided to employees, or provisions will be made to issue employees their own cups or bottles each day.

- Water will be fresh, pure, and suitably cool and provided to employees free of charge. During hot weather, the water must be cooler than the ambient temperature but not so cool as to cause discomfort.
- When employees are working across large areas, water will be placed in multiple locations.
- All water containers will be kept in sanitary condition. Water from non-approved or non-tested water sources (e.g., untested wells) is not acceptable. If hoses or connections are used, they must be governmentally approved for potable drinking water systems, as shown on the manufactures label.

To encourage frequent drinking of potable water, the following steps will be taken:

- Supervisor will provide frequent reminders to employees to drink frequently, and more water breaks will be provided.
- Every morning there will be short tailgate meetings to remind workers about the importance of frequent consumption of water throughout the shift.
- When the temperature equals or exceeds 95 degrees Fahrenheit or during a heat wave, pre-shift meetings will be held before start of work to encourage employees to drink plenty of water, and remind employees of their right to take a cool-down rest when necessary will be conducted. Additionally, the number of water breaks will be increased. Supervisors/foreman will lead by example and workers will be reminded throughout the work shift to drink water.
- Noise making devices, such as air horns, may be used to remind employee's to take their water break.

> ACCESS TO SHADE

Access to rest and shade or other cooling measures are important preventive steps to minimize the risk of heat related illnesses.

3395 (d) Access to shade

(1) Shade shall be present when the temperature exceeds 80 degrees Fahrenheit. When the outdoor temperature in the work area exceeds 80 degrees Fahrenheit, the employer shall have and maintain one or more areas with shade at all times while employees are present that are either open to the air or provided with ventilation or cooling. The amount of shade present shall be at least enough to accommodate the number of employees on recovery or rest periods, so that they can sit in a normal posture fully in the shade without having to be in physical contact with each other. The shade shall be located as close as practicable to the areas where employees are working. Subject to the same specifications, the amount of shade present during meal periods shall be at least enough to accommodate the number of employees on the meal period who remain onsite.

(2) Shade shall be available when the temperature does not exceed 80 degrees Fahrenheit. When the outdoor temperature in the work area does not exceed 80 degrees Fahrenheit employers shall either provide shade as per subsection (d)(1) or provide timely access to shade upon an employee's request.

(3) Employees shall be allowed and encouraged to take a preventative cool-down rest in the shade when they feel the need to do so to protect themselves from overheating. Such access to shade shall be permitted at all times. An individual employee who takes a preventative cool-down rest:

(A) shall be monitored and asked if he or she is experiencing symptoms of heat illness; (B) shall be encouraged to remain in the shade; and (C) shall not be ordered back to work until any signs or symptoms of heat illness have abated, but in no event less than 5 minutes in addition to the time needed to access the shade.

(4) If an employee exhibits signs or reports symptoms of heat illness while taking a preventative cool-down rest or during a preventative cool-down rest period, the employer shall provide appropriate first aid or emergency response according to subsection (f) of this section

To ensure access to shade at all time and to a preventative recovery period, the following steps will be taken:

- Shade structures will be opened and placed as close as practical to the workers, when the temperature equals or exceeds 80 degrees Fahrenheit. When the temperature is below 80 degrees Fahrenheit, access to shade will be provided promptly, when requested by an employee.

Note: The interior of a vehicle may not be used to provide shade unless the vehicle is air-conditioned and the air conditioner is on.

- Enough shade structures will be available at the site, to accommodate all of the employees who are on such a break at any point in time. During meal periods there will be enough shade for all of the employees who choose to remain in the general area of work or in areas designated for recovery and rest periods. (Employers may rotate employees in and out of meal periods, as with recovery and rest periods.)
- Daily, workers will be informed of the location of the shade structures and will be encouraged to take a five minute cool-down rest in the shade. An employee who takes a preventative cool-down rest break will be monitored and asked if he/she is experiencing symptoms of heat illness and in no case will the employee be ordered back to work until signs or symptoms of heat illness have abated. (see also the section on Emergency Response for additional information)
- Shade structures will be relocated to follow along with the crew and they will be placed as close as practical to the employees, so that access to shade is provided at all times. All employees on a recovery, rest break or meal period will have full access to shade so they can sit in a normal posture without having to be in physical contact with each other.
- In situations where it is not safe or feasible to provide access to shade (e.g., during high winds), a note will be made of these unsafe or unfeasible conditions, and of the steps that will be taken to provide shade upon request.

Procedures for Monitoring the Weather

- The Tetra Tech field supervisor will check the weather in advance to determine whether high temperatures or a heat wave is expected. The field supervisor will check readily available internet National Weather Service website (www.nws.noaa.gov/).
- A thermometer will be used at the jobsite to monitor for sudden increases in temperature, and to ensure that once the temperature exceeds 80 degrees F, shade structures will be opened and made available to the workers. In addition, when the temperature equals or exceeds 95 degrees F, additional preventive measures such as the High Heat Procedures will be implemented.

> PROCEDURES FOR HANDLING A HEAT WAVE:

For purposes of this section only, “heat wave” means any day in which the predicted high temperature for the day will be at least 80 degrees Fahrenheit **and** at least ten degrees Fahrenheit higher than the average high daily temperature in the preceding five days.

- During a heat wave or heat spike, the work day will be cut short or rescheduled (example conducted at night or during cooler hours).
- During a heat wave or heat spike, and before starting work, tailgate meetings will be held, to review the company heat illness prevention procedures, the weather forecast and emergency response. In addition, if schedule modifications are not possible, workers will be provided with an increased number of water and rest breaks and will be observed closely for signs and symptoms of heat illness.
- Tetra Tech will ensure effective employee observation/monitoring by implementing one or more of the following to be on the lookout for signs and symptoms of heat illness and to ensure that emergency procedures are initiated when someone displays possible signs or symptoms of heat illness:
    - Supervisor or designee observation of 20 or fewer employees, or
    - Mandatory buddy system, or
    - Regular communication with sole employee such as by radio or cellular phone, or
    - Some other means of observation.

> HIGH HEAT PROCEDURES:

High Heat Procedures are additional preventive measures that this company will use when the temperature equals or exceeds 95 degrees Fahrenheit.

- Effective communication by voice, direct observation (applicable for work crews of 20 or fewer), mandatory buddy system, or electronic means will be maintained, so that employees at the worksite can contact a supervisor when necessary. If the supervisor is unable to be near the workers (to observe them or communicate with them), then an electronic device, such as a cell phone or text messaging device, may be used for this purpose if reception in the area is reliable.
- Frequent communication will be maintained with employees working by themselves or in smaller groups (keep tabs on them via phone or two-way radio), to be on the lookout for possible symptoms of heat illness. The employee(s) will be contacted regularly and as frequently as possible throughout the day, since an employee in distress may not be able to summon help on his or her own.
- Effective communication and direct observation for alertness and/or signs and symptoms of heat illness will be conducted frequently. When the supervisor is not available, a designated alternate responsible person must be assigned, to look for signs and symptoms of heat illness. If a supervisor, designated observer, or any employee reports any signs or symptoms of heat illness in any employee, the supervisor or designated person will take immediate action commensurate with the severity of the illness (see Emergency Response Procedures).
- Employees will be reminded constantly throughout the work shift to drink plenty of water and take preventative cool-down rest break when needed.

> PROCEDURES FOR ACCLIMATIZATION:

Acclimatization is the temporary and gradual physiological change in the body that occurs when the environmentally induced heat load to which the body is accustomed is significantly and suddenly exceeded by sudden environmental changes. In more common terms, the body needs time to adapt when temperatures rise suddenly, and an employee risks heat illness by not taking it easy when a heat wave strikes or when starting a new job that exposes the employee to heat to which the employee's body hasn't yet adjusted.

Inadequate acclimatization can be significantly more perilous in conditions of high heat and physical stress. Employers are responsible for the working conditions of their employees, and they must act effectively when conditions result in sudden exposure to heat their employees are not used to.

- The weather will be monitored daily. The supervisor will be on the lookout for sudden heat wave(s), or increases in temperatures to which employees haven't been exposed to for several weeks or longer. During a heat wave or heat spike, the work day will be cut short (example 12 p.m.), will be rescheduled (example conducted at night or during cooler hours) or if at all possible cease for the day.
- New employees, or those employees who have been newly assigned to a high heat area will be closely observed by the supervisor or designee for the first 14 days. The intensity of the work will be lessened during a two-week break-in period (such as scheduling slower paced, less physically demanding work during the hot parts of the day and the heaviest work activities during the cooler parts of the day (early-morning or evening). Steps taken to lessen the intensity of the workload for new employees will be documented.
- The supervisor, or the designee will be extra-vigilant with new employees and stay alert to the presence of heat related symptoms. New employees will be assigned a "buddy" or experienced coworker to watch each other closely for discomfort or symptoms of heat illness. During a heat wave, all employees will be observed closely (or maintain frequent communication via phone or radio), to be on the lookout for possible symptoms of heat illness. Employees and supervisors will be trained on the importance of acclimatization, how it is developed and how these company procedures address it

> SAMPLE PROCEDURES FOR EMERGENCY RESPONSE:

- Every morning, Tetra Tech employees will be reminded about site addresses and directions to the worksite and emergency procedures (see HASP), to avoid a delay of emergency medical services.
- Supervisors of each company will carry cell phones or other means of communication, to ensure that emergency services can be called, and check that these are functional at the worksite prior to each shift. See HASP for medical emergency facility location and phone numbers.
- When an employee is showing symptoms of possible heat illness, steps will be taken immediately to keep the stricken employee cool and comfortable once emergency service responders have been called (to reduce the progression to more serious illness). Under no

circumstances will the affected employee be left unattended.

- During a heat wave or hot temperatures, workers will be reminded and encouraged to immediately report to their supervisor any signs or symptoms they are experiencing.
- Employees and supervisors training will include every detail of these written emergency procedures.

> WRITTEN PROCEDURES

Written procedures help reduce the risk of heat related illnesses, and ensure that emergency assistance is provided without delay.

3395 (i) Heat Illness Prevention Plan. The employer shall establish, implement, and maintain shall be in writing in both English and the language understood by the majority of the employees and shall be made available at the worksite to employees and to representatives of the Division upon request. The Heat Illness Prevention Plan may be included as part of the employer's Illness and Injury Prevention Program required by 3203, and shall, at a minimum, contain:

(1) Procedures for the provision of water and access to shade.
(2) The high heat procedures referred to in subsection (e).
(3) Emergency Response Procedures in accordance with subsection (f).
(4) Acclimatization methods and procedures in accordance with subsection (g).

> TRAINING

Training is critical to help reduce the risk of heat related illnesses and to assist with obtaining emergency assistance without delay.

3395 (e) (1) Employee training: Training in the following topics shall be provided to all supervisory and non-supervisory employees:

(A) The environmental and personal risk factors for heat illness;

(B) The employer's procedures for complying with the requirements of this standard;

(C) The importance of frequent consumption of small quantities of water, up to 4 cups per hour, when the work environment is hot and employees are likely to be sweating more than usual in the performance of their duties;

(D) The importance of acclimatization;

(E) The different types of heat illness and the common signs and symptoms of heat illness;

(F) The importance to employees of immediately reporting to the employer, directly or through the employee's supervisor, symptoms or signs of heat illness in themselves, or in co-workers;

(G) The employer's procedures for responding to symptoms of possible heat illness, including how emergency medical services will be provided should they become necessary;

(H) The employer's procedures for contacting emergency medical services, and if necessary, for transporting employees to a point where they can be reached by an emergency medical service provider;

(I) The employer's procedures for ensuring that, in the event of an emergency, clear and precise directions to the work site can and will be provided as needed to emergency responders.

Note: T8 CCR 3203(a)(3) requires that communication for employees shall be in a form readily understandable by all affected employees.

(e) (2) Supervisor training: Prior to assignment to supervision of employees working in the heat, training on the following topics shall be provided:

(A) The information required to be provided by section (e) (1) above.

(B) The procedures the supervisor is to follow to implement the applicable provisions in this section.

(C) The procedures the supervisor is to follow when an employee exhibits symptoms consistent with possible heat illness, including emergency response procedures.

To ensure employees are trained and are provided training, the following steps will be taken:

- Tetra Tech and each subcontractor's employees will receive heat illness prevention training from their respective employers prior to working outdoors. Especially all newly hired employees. All workers will read and comply with heat illness prevention brochures attached to this document.
- On hot days, and during a heat wave, supervisors will hold short tailgate meetings to review this important information with all workers.
- All newly hired workers will be assigned a buddy or experienced coworker to ensure that they understood the training and follow the company procedures.
- Supervisors will be trained prior to being assigned to supervise outdoor workers.

> PROCEDURES FOR HANDLING A SICK EMPLOYEE:

Tetra Tech will implement effective emergency response procedures including:

- Ensuring that effective communication by voice, observation, or electronic means is maintained so that employees at the work site can contact a supervisor or emergency medical services when necessary. An electronic device, such as a cell phone or text messaging device, may be used for this purpose only if reception in the area is reliable. If an electronic device will not furnish reliable communication in the work area, the employer will ensure a means of summoning emergency medical services.
- Responding to signs and symptoms of possible heat illness, including but not limited to first aid measures and how emergency medical services will be provided.
- If a supervisor observes, or any employee reports, any signs or symptoms of heat illness in any employee, the supervisor shall take immediate action commensurate with the severity of the illness.
- If the signs or symptoms are indicators of severe heat illness (such as, but not limited to, decreased level of consciousness, staggering, vomiting, disorientation, irrational behavior or convulsions), the employer must implement emergency response procedures.

- An employee exhibiting signs or symptoms of heat illness shall be monitored and shall not be left alone or sent home without being offered onsite first aid and/or being provided with emergency medical services in accordance with the employer's procedures.
- Contacting emergency medical services and, if necessary, transporting

Figure 2 Proposed Perimeter Air Monitoring Locations

1.0 INTRODUCTION

This air and dust monitoring plan addresses methods for monitoring potential fugitive dust and volatile organic compound (VOC) emissions – laden dust around the work area perimeter during soil excavation and trenching activities within the 10153 Folsom Blvd, Rancho Cordova (the "Site"). A description of field monitoring instruments, field monitoring protocols, air sampling procedures, action levels, and meteorological monitoring is presented.

The purpose of the perimeter air and dust monitoring is to protect members of the public from being exposed to elevated concentrations of dust and/or VOC contaminants while soil is being excavated and stockpiled on-site. Residential development is present immediately west and north of the proposed excavation area and overall Site boundary. Commercial development is located southwest and south of the Site. Additional residential development present east of the Site along with a Folsom Lake College building.

The primary VOC chemical of concern (COC) at this site is tetrachloroethene (PCE), with lesser concentrations of trichloroethene (TCE) and cis-1,2-dchlorothene (cis-1,2-DCE) having been detected intermittently in on-site media (soil, groundwater, and soil vapor) since initial investigation work in 2008. Subsequent on-site soil vapor and groundwater extraction activities resulted in reduced concentrations of the three COCs. Concentrations of dust (to be measured as particles less than 10 microns in diameter, referred to as "PM10") and VOCs in ambient air around the work perimeter will be compared to action levels to document that the work being performed is protective of public health. Should monitoring results exceed action levels then work practices will be modified in response to the exceedance. Such modifications could include additional soil wetting to minimize dust and volatilization of VOCs, and/or placement of clean soil over suspected VOC-impacted soil to minimize volatilization of VOCs.

While this plan addresses the potential for exposure by members of the public in proximity of the Site while excavating and loading soil into trucks, it does not address the potential for exposure by Site workers. The potential for exposure by Site workers will be handled separately by the contractors under their respective health and safety plans, as different monitoring procedures and action levels apply to Site workers as opposed to members of the public. Tetra Tech has developed a Site-specific Health and Safety Plan for the on-site Tetra Tech employees.

Figure 1 shows the Site and proposed excavation area. The Site is currently a vacant lot which includes vegetated soil areas, some trees, and remnant asphalt paved parking areas. An inactive sewer line runs through the northwest quadrant of the Site, including through the proposed soil excavation area. Perimeter air monitoring stations are indicated on Figure 2, marking the locations where periodic real-time VOC and dust measurements will be collected. As the active work area will be limited to the west half of the Site, the eastern air monitoring station will be established near the center of the Site, instead of the far eastern fence line.

2.0 SUMMARY OF SOIL EXCAVATION

The soil excavation area is planned for a total depth of 15 feet below ground surface (bgs). The excavation includes removing the sanitary sewer line within the excavation limits as well as the balance of the sewer that extends beyond the excavation footprint. The soil will be removed using a standard excavator and loaded into a transport truck for stockpiling and covering just east of the excavation. The resultant excavation sidewalls will be sloped for safety, according to the Competent Person's determination (e.g., 1:1 slope).

Routine real-time air and dust monitoring will be conducted during all excavation, stockpiling and backfilling activities, with laboratory air samples collected three times during the excavation phase of the work at selected depth intervals.

3.0 PERIMETER AIR AND DUST MONITORING LOCATIONS

Perimeter air and dust monitoring will be performed at four fixed locations outside the work area, as shown on Figure 2. The locations will provide monitoring data close to the adjacent residential area.

Visual evidence of fugitive dust emissions will be assessed by the Tetra Tech field representative. Visual dust emissions will trigger additional soil wetting to suppress fugitive dust from becoming airborne and potentially leaving the Site.

4.0 FIELD MONITORING INSTRUMENTS

Perimeter air monitoring will be performed during soil excavation, stockpiling, and backfill, consisting of: 1) real-time dust monitoring using portable dust monitors; and 2) real-time VOC monitoring using a portable screening level photo-ionizing detector (PID). Ambient 8-hour air samples will also be collected three times during the excavation phase for

laboratory analysis of VOCs. Collection of 8-hour ambient air samples will facilitate achieving low laboratory reporting limits of VOCs in air, lower than the field instruments can reach. The laboratory samples will also report concentrations of specific compounds, whereas the field monitoring provides for a total of all VOCs in air that the instrument can recognize (ionize). Since automobile and equipment exhaust and other external sources can affect field instrument readings, the field monitoring results can contain false-positive readings due to influences from compounds not related to the Site.

A description of the real-time field monitoring instrumentation is presented below.

4.1 Real-Time Dust Monitors

Real-time dust monitoring and data logging will be performed using a Thermo Scientific personal DataRAM (pDR-1000AN) instrument, or equivalent. The pDR-1000AN instrument measures mass concentrations of dust, smoke, mists, and fumes in real time, and can sound an audible alarm whenever the user-defined action level is exceeded. According to product literature, the pDR-1000AN is a light scattering photometer (i.e., nephelometer) incorporating a pulsed, high output, near infrared light emitting diode source, a silicon detector/ hybrid preamplifier, and collimating optics and a source reference feedback PIN silicon detector.

The datalogging option will be enabled on the dust monitor, allowing the pDR-1000AN to automatically tag and time stamp the collected data to be stored for subsequent retrieval, printing or computer graphing.

The unit will be calibrated (zeroed) at the beginning of each day before earthwork commences, and the zeroing documented. The unit is zeroed by drawing in filtered ambient air using a “z-pouch”. The instrument provides continuous readouts of instantaneous and time-averaged dust levels and will provide an average dust level at the end of each monitoring period (workday).

The dust monitors will be rented from a reputable equipment supplier such as EnviroTech, Pine Environmental, or Argus-Hazco.

Results of the real time dust monitoring will be used to document field dust (PM-10) conditions throughout each day of field work while soil excavation is being performed within the Site.

Visible dust emissions will trigger response actions to suppress the dust, including additional wetting of the soil.

4.2 Real-Time VOC Monitor

Real-time VOC monitoring will be performed using a ppbRAE 3000 PID equipped with a 10.6 eV lamp. The ppbRAE 3000 has an extended measuring range of 1 part per billion (ppb) to 10,000 parts per million (ppm) and has humidity compensation.

The unit will be calibrated at the beginning of each day with 10 ppm isobutylene calibration gas and zeroed using either ambient air passed through a carbon filter cartridge or certified zero gas, and the calibration documented.

The PID will be rented from a reputable equipment supplier such as EnviroTech, Pine Environmental, or Argus-Hazco.

5.0 FIELD MONITORING PROTOCOLS

A description of the field monitoring protocols is presented below.

5.1 Real-Time Dust Monitoring

Real-time dust monitoring will be performed at four stations located around the excavation and stockpile area (Figure 2). The dust monitors will be mounted to a fence, support pole or placed on a surface approximately 5-feet above grade. The dust monitors will be operational during periods in which soil is being excavated, stockpiled, and backfilled, and will continuously monitor and log dust concentrations at 1-minute intervals. The daily average dust reading will be recorded at the end of each field day. Dust readings will also be recorded manually on a field sheet throughout every 60-mintues throughout the workday.

Field personnel will periodically check each instrument during the day for proper operation and battery life.

Visual evidence of fugitive dust emissions will be assessed by the Tetra Tech field representative during each day soil is excavated and/or loaded into trucks. Visual dust emissions will trigger additional soil wetting to suppress fugitive dust from becoming airborne and potentially leaving the Site. The real-time dust monitoring data will be used to establish actual dust conditions throughout each day that soil is handled, and to

correlate measured dust sample results with observed periods of visible fugitive dust emissions, if any. If visible fugitive dust is observed, a reading from the nearest dust monitor will be recorded within a few minutes of that observation.

5.2 Real-Time VOC Monitoring

Real-time VOC air monitoring will be conducted by field personnel during periods of active earthwork (excavation, stockpiling, backfill). Field measurements will be collected at the four perimeter monitoring station locations with the ppbRAE 3000 PID at approximate 60-minute intervals during active earthwork. The field readings will be collected at the same four locations as the dust reading stations. Monitoring results will be recorded on a field sheet, noting station, time, and current excavation activities/depths below grade. Real-time VOC air monitoring will also be performed more frequently near the areas of active soil excavation during each field day (direct soil readings) and recorded on the field sheet. Direct soil readings will be collected roughly every 15-minutes until a baseline is established in each excavation depth interval (see below), then every 30- to 60-minutes thereafter. Additional direct soil readings will be collected if site conditions change, or unexpected soil impacts are encountered. A grid will be developed for the excavation area to aid in noting the location where direct soil readings were taken and at what depth.

The real-time monitoring results will be compared to a target total VOC concentration value to assess whether response actions are necessary to suppress VOC emissions. Response actions would include soil wetting.

6.0 AIR SAMPLING PROCEDURES FOR LABORATORY ANALYSIS

To augment real-time dust and VOC field monitoring, work perimeter ambient air samples will be periodically collected for laboratory analysis during excavation and stockpiling of soil. A minimum of three sampling episodes will be performed while excavating down to 15-feet below grade – the first event during the 0-to-5-foot depth interval, the second event during the 5-to-10-foot depth interval, and the third event during the 10-to15-foot depth interval. The perimeter ambient air samples will be collected from the same locations as the dust and VOC field monitoring stations. One ambient background air sample will also be collected during the 8-hour air sampling events. The background sample will be placed near the east site boundary, away and upwind of the active work area. If the prevailing wind direction is west to east (or otherwise) during air sample collection, the background sample will be moved to the upwind side of the site.

Each ambient air sample will be collected in a laboratory-supplied SIM-Certified 6-liter Summa canister, equipped with an 8-hour sample flow regulator. The sample intake will be positioned approximately 5-feet above grade. Prior to initiating sample collection, the canister number, sample ID, and vacuum will be noted for each canister and recorded on a chain of custody form. At the end of the 8-hour sample collection period, the final canister vacuum will be noted, the canisters properly packaged, and delivered to Eurofins Air Toxics laboratory for analysis.

Each air sample will be analyzed for tetrachloroethene (PCE), trichloroethene (TCE) and cis-1,2-DCE, in addition to two additional compounds often detected at dry cleaner sites (trans-1,2-DCE and vinyl chloride) using EPA Method TO-15 (SIM). The data will be reported in micrograms per cubic meter ($\mu g/m^3$). The laboratory reporting limits in $\mu g/m^3$ for each compound, dependent on the final sample volume and assuming a dilution factor of 1, are approximately:

PCE – 0.19

TCE – 0.15

Cis-1,2-DCE - 0.11

Trans-1,2-DCE - 0.55

Vinyl chloride – 0.035

The laboratory results of perimeter ambient air monitoring will be compared to screening levels to assess the significance of the results. Screening levels are presented in Section 9.0. As the air sample results will be received following completion of the soil excavation in the target depth interval, they will serve to document air quality conditions for the record.

7.0 METEOROLOGICAL MONITORING

Prior to the on-set of earthwork activities within the Site, a weather monitoring station will be installed along the Site perimeter to continuously monitor daily wind patterns (speed and direction), as well as other conditions such as temperature and humidly.

Meteorological data will be manually recorded at approximately every 60 minutes. The information will be entered into field notes. Photographs of the monitor display may also be taken to supplement the field notes. The weather station will be operational throughout the time that soil is being excavated and stockpiled.

Results of the meteorological monitoring will allow for determination of factors that could have a bearing on field conditions, such as wind speed and direction. The results will allow for determination of up-wind and down-wind areas during different times of each day, and correlation between perimeter air sample results and wind/temperature conditions. Comparing up-wind perimeter air monitoring results to down-wind air monitoring results will be helpful in evaluating whether ambient air conditions may be affected by Site excavation and soil handling activities.

8.0 REPORTING

Results of the perimeter air and dust monitoring will be presented in a written report to be prepared at the conclusion of the soil cleanup activities.

9.0 AIR MONITORING COMPARISON CRITERIA

Comparison levels for VOCs in ambient air will be the California Region 2 Regional Water Quality Control Board Environmental Screening Levels (ESLs) for cancer hazard endpoint, commercial/industrial air (ESL Table 1A-1, 2019 rev 2). If a cancer endpoint value does not exist, the non-cancer hazard value is used. The commercial/industrial air value is used rather than the residential air value because the commercial/industrial air exposure duration of a workday matches the potential exposure posed by the work activities at the site (8-hour workday). Tetra Tech notes that the commercial/industrial ESLs are predicated on chronic exposure over a 25-year time frame. Conversely, potential exposure posed by the soil excavation would only occur over the duration of the soil excavation activities, which are anticipated to take approximately 2 weeks. Therefore, use of the ESLs is conservative and extremely protective.

Comparison levels for the laboratory analytical results of the air samples from the Site are as follows:

PCE	2.0 µg/m^3
TCE	3.0 µg/m^3
Cis-1,2-DCE	35 µg/m^3 (non-cancer hazard)
Trans-1,2-DCE	350 µg/m^3 (non-cancer hazard)
Vinyl chloride	0.16 µg/m^3

9.1 Real-Time Field Monitoring – PID Action Level

Real-time VOC air monitoring will be periodically performed with a part per billion (ppb) level PID instrument, the ppbRAE 3000 model, or equivalent.

The PID measurements will be compared to an action level of 500 ppbv (0.5 ppmv). The 500 ppbv value has been used at DTSC-lead cleanup sites for VOCs and can be used as a real-time screening value for these VOCs at the Site. Additionally, a 500 ppbv value is considered technically achievable using the PID meter.

In practice, ambient total VOC concentrations may periodically approach 500 ppbv depending on climate conditions, construction equipment exhaust, traffic exhaust, and other possible sources of emissions. The PID meter will be field calibrated daily prior to the start of work, and background readings away from the work area will be collected and recorded daily.

As described in the Tetra Tech Health and Safety Plan, a field PID reading of 5 ppmv (5,000 ppbv) will be used as an action level for worker safety. The action level is based on Cal-OSHA permissible exposure levels (PELs) and includes safety factors. Use of PEL values in evaluating potential exposure to non-workers is not appropriate.

9.2 Dust Monitoring and Action Level

Real-time perimeter air monitoring for dust will be periodically performed with an instrument such as a Thermo Scientific personal DataRAM (pDR-1000AN), or equivalent. The instrument records concentrations of dust (suspended particulate matter) less than 10 microns in size (PM10).

The Sacramento Metropolitan Air Quality Management District's (SMAQMD's) Air Quality Standard for PM10 is 50 µg/m^3 (0.050 mg/m^3), measured as a 24-hour TWA. The 24-hour TWA value is converted to an 8-hour TWA value for use as an action level at the Site since work will only be performed over an 8-hour time-period each day. Review of annual 2021 data for the Sacramento Valley Air Basin (Sacramento-T Street location), obtained from the California Air Resources Board AQMIS website, shows an average background PM10 of 23.3 µg/m^3 in 2021 (average of 12-month daily averages).

The 8-hour TWA value is therefore calculated as follows:

$$\text{8-hour TWA} = \frac{(24\text{hrs} \times \text{PM10 Air Quality Standard}) - (16\text{ hrs} \times \text{PM10 Background})}{8\text{ hrs}}$$

$$= \frac{(24\text{ hrs} \times 50\ \mu g/m^3) - (16\text{ hrs} \times 23.3\ \mu g/m^3)}{8\text{ hrs}}$$

$$= \frac{1{,}200\ \text{hrs-}\mu g/m^3 - 372.8\ \text{hrs-}\mu g/m^3}{8\text{ hrs}}$$

$$= \frac{827.2\ \text{hrs-}\mu g/m^3}{8\text{ hrs}}$$

$$= 103.4\ \mu g/m^3$$

The action level for dust (PM10) at the Site will be 103.4 µg/m^3 as an 8-hour TWA value.

Visible dust emissions will be used on a short-term basis as an indication to modify work practices, such as increasing soil wetting to suppress dust.

Background readings will be collected prior to start of work each day and may also be collected later in the day if readings throughout the day become elevated and potential ambient sources are suspected.

Action/Comparison Level Summary

Perimeter air monitoring action levels for use at the Site are as follows:

Monitoring Method	**Compound**	**Action Level**
Real Time	VOCs	500 ppbv
	Dust (PM10)	103 µg/m^3 (8-hr TWA)
Summa Canisters	PCE	2.0 µg/m^3
	TCE	3.0 µg/m^3
	Cis-1,2-DCE	35 µg/m^3
	Trans-1,2-DCE	350 µg/m^3
	Vinyl Chloride	0.16 µg/m^3

9.3 Comparison Criteria Exceedances

The comparison levels to be used for VOCs are based on screening levels (not cleanup values) published by the RWQCB. Screening levels are appropriate for use as comparison levels because they are conservative and protective of human health. As such, if exceeded, that does not necessarily indicate a human health threat.

If dust or PID action levels are exceeded, then additional water will be applied to the soil to suppress fugitive emissions. Clean soil may also be temporarily added to the surface of soil suspected as being impacted to aid in suppressing emissions. If dust or PID levels cannot be adequately controlled through the application of clean soil or additional water, excavation activities will be halted until a plan can be implemented to maintain concentrations below the action level.

Monitoring real-time dust levels throughout each day at the four fixed monitoring station locations, along with looking for visible emissions, will allow for quick response if needed to add additional water to suppress dust. Real time VOC monitoring at the four station locations will also be used to trigger additional water application if VOC concentrations exceed 500 ppbv.

If laboratory test results from the quantitative VOC monitoring events show one or more compounds detected above screening levels, then the RWQCB will be notified of the exceedance(s). As the laboratory data will be received after the soil excavation work has been completed in the excavation depth interval, the data will be for the record only. The use of real-time dust/VOC monitoring instrumentation remains the most effective method for mitigating emissions while actively handling soil.

Appendix 5.6-2 Site Cleanup Plan Addendum

TETRA TECH

August 30, 2023

Isabella Hagopian
Engineering Geologist, Private Sites Cleanup Unit
Central Valley Regional Water Quality Control Board
11020 Sun Center Drive, Suite 200
Rancho Cordova, CA 95670-6114

Re: ***Site Cleanup Plan Addendum, Former Lily Company Property, 10153 – 10175 Folsom Boulevard, Rancho Cordova, California***

Dear Ms. Hagopian:

On behalf of City of Rancho Cordova (the City), Tetra Tech, Inc. (Tetra Tech) prepared the Site Cleanup Plan Addendum (the Addendum) for the former Lily Company site located at 10153 – 10175 Folsom Boulevard, Rancho Cordova, California (the Site), in accordance with our call on August 10, 2023.

Background

The environmental impact identified at the Site is related to historical operation of a former dry cleaner. The Site has been previously remediated via soil vapor extraction (SVE) from 2010 – 2016 and groundwater extraction from 2014 to 2017. Residual tetrachloroethene (PCE) was identified in soil vapor after the remediation, which appeared to be emanating from residual PCE in soil along a sewer line onsite. The City plans to conduct additional remediation at the Site, and a *Site Cleanup Plan, Former Lily Company Property, 10153 – 10175 Folsom Boulevard, Rancho Cordova, California* (the Cleanup Plan) was subsequently prepared and approved by the Central Valley Regional Water Quality Control Board (the RWQCB) in a RWQCB letter dated March 30, 2022.

In summary, the planned additional remediation detailed in the Cleanup Plan includes additional SVE and soil excavation, stockpiling, and backfill. The stockpiles of the excavated soil will be sampled. Depending on the soil sampling results, dry potassium permanganate may be added to the stockpiled soil prior to backfill and compaction. The dosing of the oxidant will be based on the results of a bench scale test. For the planned oxidant use, the RWQCB's March 30, 2022 letter indicates that "Central Valley Water Board staff may require additional information on the use of the oxidant addition prior to approval".

The City, the RWQCB, and Tetra Tech had a conference call on August 10, 2023 to discuss the RWQCB's note in the approval letter for oxidant use at the Site. Per the call, this addendum is prepared to provide additional information about the planned soil handling at the Site for the stockpiled soil.

Tetra Tech, Inc.

Tel +1.916.853.4500 | tetratech.com

Planned Soil Handling

Soil will be excavated, stockpiled, and sampled in accordance with the approved Cleanup Plan. Since the highest PCE soil concentration found at the Site was 54 microgram per kilogram (µg/kg)[1] it is expected the PCE concentrations in the stockpiled soil would be low. Based on the stockpile soil PCE concentrations, the excavated soil will be handled as follows:

- Soil with PCE concentrations greater than the San Francisco Bay RWQCB Environmental Screening Level (ESL) for residential Soil Direct Exposure Human Health Risk Screening (i.e., 590 µg/kg): the soil in the stockpiles will be disposed offsite.
- Soil with positive PCE detections at concentrations between 60 and 590 µg/kg: the soil in the stockpiles will be aerated via additional mechanic soil mixing (e.g., relocation of stockpiles) or landfarming. Before backfill, dry potassium permanganate will be mixed with the soil at a dosing of 3 - 4% by weight, in accordance with the soil oxidant demand bench scale test results (Attachment A). As discussed in the Cleanup Plan, the oxidant is expected to react with the residual PCE (if any) and natural organics in the soil when in contact and when tap water is applied as part of the backfill and compaction processes.
- Soil with positive PCE detections at concentrations lower than 60 µg/kg: the soil in the stockpiles will be aerated via additional mechanic soil mixing (e.g., relocation of stockpiles) or landfarming.
- Soil without PCE detections: the soil in the stockpiles will be backfilled directly.

Closing

If additional information is needed or you have any question, please feel free to contact Betty Li at (916) 853-4525.

Sincerely,

Tetra Tech

Betty Li, PhD

Senior Environmental Engineer

RE: Report of Findings, $KMnO_4$ Soil Oxidant Demand and Mixing
Client Project ID: 10153 Folsom
PRIMA Project ID: TT-Folsom

Dear Dr. Li:

This letter report describes the results of the soil oxidant demand (SOD) measurement conducted by PRIMA Environmental, Inc on two soil samples from the 10153 Folsom site.

Sample Receipt and Preparation

Two soil samples (10153Folsom-A, 10153Folsom-B) were received on July 5, 2023. $KMnO_4$ SOD was measured for each sample. Prior to testing, each sample was sieved to remove particles greater than 4 mesh then homogenized.

Materials

Potassium Permanganate, $KMnO_4$. ACS reagent grade $KMnO_4$ was used for these tests.

Procedures

For each soil, five reactors containing 20 g soil and 20 mL of $KMnO_4$ solution were prepared, with each reactor containing a different initial concentration of $KMnO_4$ ranging from 512 to 20,800 mg/L $KMnO_4$. Controls containing $KMnO_4$ solution, but no soil were also prepared. The reactors were placed on a shaker table. At 48 hours, the reactors were destructively sampled and the residual $KMnO_4$ was measured via visible spectroscopy by PRIMA. Because all $KMnO_4$ was consumed in all reactors, two additional reactors were set. These reactors contained 10 g soil and 20 mL $KMnO_4$ solution. The reactors were mixed and analyzed as before. The SOD was calculated as follows:

5070 Robert J. Mathews Parkway, Suite 300, El Dorado Hills, CA 95762
Ph (916) 939-7300 • Fax (916) 939-7398
www.primaenvironmental.com

$$SOD = ([Ox]_{init} - [Ox]_t) \times (V/M)$$

where

- SOD is soil oxidant demand, in g (or mg) oxidant/kg soil
- $[Ox]_{init}$ is the initial concentration of oxidant, in g (or mg) oxidant/L
- $[Ox]_t$ is the concentration of oxidant at time, t, in g (or mg) oxidant/L
- V is total volume of the aqueous phase, in L
- M is mass of soil, in kg

Results

The results of the 48-hour $KMnO_4$ SOD test are shown in **Table 1** (attached)**.** The SOD was similar for both samples, ranging from 32,000 to 43,000 mg $KMnO_4$/kg soil, depending upon the initial concentration of $KMnO_4$. These values are considered very high. Higher SOD values with increasing initial concentration of $KMnO_4$ is a common phenomenon.

If you have any questions regarding these results, please give me a call at 916-939-7300. Thank you for the opportunity to be of service.

Sincerely,
PRIMA Environmental, Inc.

Cindy G. Schreier, Ph.D.
President

Appendix 5.6-3 Site Remediation Notice of Exemption

NOTICE OF EXEMPTION

To: ☐ Office of Planning and Research
1400 Tenth Street
Sacramento, CA 95814

☒ County Clerk-Recorder
Sacramento County
600 8th Street
Sacramento, CA 95814

From: City of Rancho Cordova
Public Works Department
2729 Prospect Park Drive
Rancho Cordova, CA 95670

Project Title:	**SEWER LINE REMOVAL AND SOIL EXCAVATION AND BACKFILL**
Project Location:	Northeast corner of Folsom Boulevard and La Loma Drive
Assessor's Parcel Number(s):	076-0020-019, -20, -21, -22
Project Description:	The City of Rancho Cordova proposes to remove an old sewer pipe section from an approximately 1.1-acre excavation area at the Project Location. The soil within the excavation area will be stockpiled onsite, and then backfilled to the excavation area. The site will be restored to its original condition after the excavation and backfill.
Lead Agency:	City of Rancho Cordova
Applicant:	City of Rancho Cordova 2729 Prospect Park Drive Rancho Cordova, CA 95670

Exemption Status:

☐ Ministerial [Section 21080(b); 15268];

☐ Declared Emergency [Section 21080(b)(3); 15269(a)];

☐ Emergency Project [Section 21080(b)(4); 15269(b)(c)];

☒ Minor Alterations to Land [Section 15304(f)

☐ Categorical Exemption [Section 15301(a), Existing Facilities];

☐ Approval of Rates, Tolls, Fares, and Charges [Section 21080(b)(8)(D)];

☐ Statutory Exemption [Section 15273(a)(4)].

REASONS WHY THIS PROJECT IS EXEMPT OR DOES NOT REQUIRE FURTHER ENVIRONMENTAL DOCUMENTATION:

The project is exempt under State CEQA Guidelines Section 15304(f), which states (in part):

> *Class 4 consists of minor public or private alterations in the condition of land, water, and/or vegetation which do not involve removal of healthy, mature, scenic trees except for forestry or agricultural purposes. Examples include, but are not limited to:*
>
> *f) Minor trenching and backfilling where the surface is restored*

The California Environmental Quality Act (Section 21000, et. seq. of the California Public Resources Code, hereafter CEQA) requires analysis of agency approvals of discretionary "projects." A "project," under CEQA, is defined as "the whole of an action, which has a potential for resulting in either a direct physical change in the environment, or a reasonably foreseeable indirect physical change in the environment." The proposed project would remove an old sewer line section within an approximate 1.1-acre area. The soil within the 1.1-acre area

would also be excavated to approximately 15 feet deep and stockpiled onsite for aeration purpose. The aeration would allow volatile organic compounds in the soil vapor to dissipate, if any. The City will conduct soil testing of the stockpiles and, when determined to be clean, the soil will be returned to the excavation site and the former grades will be established. The overall goal of this project is to remove the sewer line and reduce potential contamination to below the minimum regulatory screening levels for residential projects.

The proposed activity is considered a project as defined by CEQA. Pursuant to CEQA Guidelines Section 15304, trenching and backfilling of soil where the ground surface is restored to the original condition is generally exempt except for parcels of land located in an area of statewide, regional, or areawide concern identified in Section 15206(b)(4) and the property does not have significant values for wildlife habitat or other environmental purposes. The property is not located in an area of statewide, regional, or areawide concern identified in Section 15206(b)(4) and the use of the property and adjacent property has not changed since the time of purchase by the City of Rancho Cordova. Therefore, the project is exempt from further CEQA analysis.

1.0 INTRODUCTION

This report documents the results of a Noise Impact Assessment completed for the Mills Crossing Project (Project), which proposes the construction of a community center with a health and wellness center, a parking structure, arts center and theater, a multifamily and single-family housing development, commercial and retail businesses, and community and event centers in Rancho Cordova, California. This assessment was prepared as a comparison of predicted Project noise levels to noise standards promulgated by the City of Rancho Cordova General Plan Noise Element and the City of Rancho Cordova Municipal Code. The purpose of this report is to estimate Project-generated noise levels and to determine the level of impact the Project would have on the environment.

1.1 Project Location and Description

The Project Site is a 9.85-acre property located at the corner of Folsom Boulevard and La Loma Drive in the City of Rancho Cordova, Sacramento County, and encompasses the following Assessor's Parcel Numbers (APNs): 076-0020-019, -20, -21, -22. The Proposed Project Area is roughly bounded by Folsom Boulevard to the south, La Loma Drive to the west, El Caprice Drive to the east, and residential housing to the north fronting Malaga Way and Ashbury Court. Surrounding land uses includes the residential uses to the north, residential uses and Folsom Lake College/Rancho Cordova Civic Center to the east, light industrial uses to the south, and commercial and residential uses to the west. The Mather Field/Mills Train Station is located directly across Folsom Boulevard from the Project Site and can be accessed via a pedestrian crosswalk with stop-traffic control. Additionally, the site is fronted by a Class II bike lane on Folsom Boulevard.

The Project Site is located within the Folsom Boulevard Specific Plan area. The Folsom Boulevard Specific Plan (FBSP or Specific Plan) is the primary planning tool the City uses to guide future development and redevelopment within the Specific Plan area. It seeks to increase the density of both housing and commercial activity; increase pedestrian, bicycle, and transit trips to, from, and through the area; increase the visibility of the corridor as a destination; and change the dynamic and image to that of a high demand, thriving urban area. The site is zoned Residential Mixed-Use – Folsom Boulevard Specific Plan (RMU [FBSP]). The RMU (FBSP) Zoning District is intended to designate property for the development of medium and high-density housing (between 6.1 and 40 dwelling units per acre) that may incorporate office and/or commercial services. While the predominant use of the development is residential, the City encourages the vertical and/or horizontal integration of commercial and/or office uses that are compatible with the residential development.

The Project Site has a City of Rancho Cordova General Plan land use designation of Residential Mixed-Use (FB-RMU).

The Project proposes a mix of land uses as follows:

Community-Commercial Buildings

The community-commercial buildings would include up to 140,000 square feet of uses, and would include the following:

- Health and Wellness
    - Community Health Clinic – up to 30,000 square feet
- Events and Meetings Space
    - Space for meetings, community and cultural events, banquet, and weddings – up to 15,000 square feet
- Arts Center (Subtotal – up to 35,000 square feet)
    - Flex Theater (black/white/green box) – up to 18,000 square feet
    - Flexible Classrooms and Rehearsal Space – up to 6,000 square feet
    - Production/Artist's Studios – up to 4,000 square feet
    - Gallery/Exhibits – up to 4,000 square feet
    - Administrative Space – up to 3,000 square feet
- Community-Commercial Building (Subtotal – up to 52,500 square feet)
    - Commercial Office-Anchor – up to 25,000 square feet
    - Commercial Office-Shared – up to 10,000 square feet
    - Flexible Studios 1 – up to 5,000 square feet
    - Flexible Studios 2 – up to 7,500 square feet
    - Commercial Kitchen – up to 5,000 square feet
- Commercial-Retail (Subtotal – up to 7,500 square feet)
    - Fresh Market, Food and Beverage, Café, Retail – up to 5,000 square feet
    - Café – up to 2,500 square feet

Housing

The Proposed Project would provide up to 120 dwelling units, as follows:

- Between 55-60 Multi-Family Affordable Apartments
- Between 50-60 Zero Lot Line Townhouse-Style Homes for Sale

Public Open Space

The Proposed Project would include up to 2.5 acres of public open space as follows:

- Between 1.3-1.5 acres of Neighborhood and Community Greens
- Between 0.75-1.0-acre of Plaza and Green Space

Parking Structure

The Proposed Project would include a parking structure with between 275-325 parking spaces.

The Project Site would be accessible via Folsom Boulevard to the south and La Loma Drive to the west of the Project Site.

Construction activities would involve the removal of vegetation and paved areas; grading to finished design elevations; excavation to allow construction of building foundations, utilities, roadways, parking areas, sidewalks, and landscaping. Equipment used during construction may include, but is not limited to, crawler tractors, tractors, loaders, backhoes, excavators, graders, scrapers, cranes, forklifts, generator sets, welders, pavers, paving equipment, rollers, and air compressors. It is anticipated that construction of the Project would occur from 2024 through 2029.

2.0 ENVIRONMENTAL NOISE AND GROUNDBORNE VIBRATION ANALYSIS

2.1 Fundamentals of Noise and Environmental Sound

2.1.1 Addition of Decibels

The decibel (dB) scale is logarithmic, not linear, and therefore sound levels cannot be added or subtracted through ordinary arithmetic. Two sound levels 10 dB apart differ in acoustic energy by a factor of 10. When the standard logarithmic decibel is A-weighted (dBA), an increase of 10 dBA is generally perceived as a doubling in loudness. For example, a 70-dBA sound is half as loud as an 80-dBA sound and twice as loud as a 60-dBA sound. When two identical sources are each producing sound of the same loudness, the resulting sound level at a given distance would be three dB higher than one source under the same conditions (Federal Transit Administration [FTA] 2018). For example, a 65-dB source of sound, such as a truck, when joined by another 65 dB source results in a sound amplitude of 68 dB, not 130 dB (i.e., doubling the source strength increases the sound pressure by three dB). Under the decibel scale, three sources of equal loudness together would produce an increase of five dB.

Typical noise levels associated with common noise sources are depicted in Figure 2-1.

Figure 2-1. Common Noise Levels

2023-009 Mills Crossing

2.1.2 Sound Propagation and Attenuation

Noise can be generated by a number of sources, including mobile sources such as automobiles, trucks and airplanes, and stationary sources such as construction sites, machinery, and industrial operations. Sound spreads (propagates) uniformly outward in a spherical pattern, and the sound level decreases (attenuates) at a rate of approximately 6 dB (dBA) for each doubling of distance from a stationary or point source (FHWA 2017). Sound from a line source, such as a highway, propagates outward in a cylindrical pattern, often referred to as cylindrical spreading. Sound levels attenuate at a rate of approximately three dB for each doubling of distance from a line source, such as a roadway, depending on ground surface characteristics (Federal Highway Administration [FHWA] 2017). No excess attenuation is assumed for hard surfaces like a parking lot or a body of water. Soft surfaces, such as soft dirt or grass, can absorb sound, so an excess ground-attenuation value of 1.5 dB per doubling of distance is normally assumed. For line sources, an overall attenuation rate of three dB per doubling of distance is assumed (FHWA 2011).

Noise levels may also be reduced by intervening structures; generally, a single row of detached buildings between the receptor and the noise source reduces the noise level by about five dBA (FHWA 2006), while a solid wall or berm generally reduces noise levels by 10 to 20 dBA (FHWA 2011). However, noise barriers or enclosures specifically designed to reduce site-specific construction noise can provide a sound reduction 35 dBA or greater (Western Electro-Acoustic Laboratory, Inc. 2000). To achieve the most potent noise-reducing effect, a noise enclosure/barrier must physically fit in the available space, must completely break the “line of sight” between the noise source and the receptors, must be free of degrading holes or gaps, and must not be flanked by nearby reflective surfaces. Noise barriers must be sizable enough to cover the entire noise source and extend lengthwise and vertically as far as feasibly possible to be most effective. The limiting factor for a noise barrier is not the component of noise transmitted through the material, but rather the amount of noise flanking around and over the barrier. In general, barriers contribute to decreasing noise levels only when the structure breaks the "line of sight" between the source and the receiver.

The manner in which older homes in California were constructed generally provides a reduction of exterior-to-interior noise levels of about 20 to 25 dBA with closed windows (California Department of Transportation [Caltrans] 2002). The exterior-to-interior reduction of newer residential units is generally 30 dBA or more (Harris Miller, Miller & Hanson Inc. 2006). Generally, in exterior noise environments ranging from 60 dBA Community Noise Equivalent Level (CNEL) to 65 dBA CNEL, interior noise levels can typically be maintained below 45 dBA, a typically residential interior noise standard, with the incorporation of an adequate forced air mechanical ventilation system in each residential building, and standard thermal-pane residential windows/doors with a minimum rating of Sound Transmission Class (STC) 28. (STC is an integer rating of how well a building partition attenuates airborne sound. In the U.S., it is widely used to rate interior partitions, ceilings, floors, doors, windows, and exterior wall configurations.) In exterior noise environments of 65 dBA CNEL or greater, a combination of forced-air mechanical ventilation and sound-rated construction methods is often required to meet the interior noise level limit. Attaining the necessary noise reduction from exterior to interior spaces is readily achievable in noise environments less than 75 dBA CNEL with proper wall construction techniques following California Building Code methods, the selections of proper windows and doors, and the incorporation of forced-air mechanical ventilation systems.

2.1.3 Noise Descriptors

The decibel scale alone does not adequately characterize how humans perceive noise. The dominant frequencies of a sound have a substantial effect on the human response to that sound. Several rating scales have been developed to analyze the adverse effect of community noise on people. Because environmental noise fluctuates over time, these scales consider that the effect of noise on people is largely dependent on the total acoustical energy content of the noise, as well as the time of day when the noise occurs. The noise descriptors most often encountered when dealing with traffic, community, and environmental noise include the average hourly noise level (in L_{eq}) and the average daily noise levels/community noise equivalent level (in L_{dn}/CNEL). The L_{eq} is a measure of ambient noise, while the L_{dn} and CNEL are measures of community noise. Each is applicable to this analysis and defined as follows:

- **Equivalent Noise Level (L_{eq})** is the average acoustic energy content of noise for a stated period of time. Thus, the L_{eq} of a time-varying noise and that of a steady noise are the same if they deliver the same acoustic energy to the ear during exposure. For evaluating community impacts, this rating scale does not vary, regardless of whether the noise occurs during the day or the night.
- **Day-Night Average (L_{dn})** is a 24-hour average L_{eq} with a 10-dBA "weighting" added to noise during the hours of 10:00 pm to 7:00 am to account for noise sensitivity in the nighttime. The logarithmic effect of these additions is that a 60 dBA 24-hour L_{eq} would result in a measurement of 66.4 dBA L_{dn}.
- **Community Noise Equivalent Level (CNEL)** is a 24-hour average L_{eq} with a 5-dBA weighting during the hours of 7:00 pm to 10:00 pm and a 10-dBA weighting added to noise during the hours of 10:00 pm to 7:00 am to account for noise sensitivity in the evening and nighttime, respectively.

Table 2-1 provides a list of other common acoustical descriptors.

Table 2-1. Common Acoustical Descriptors

Descriptor	Definition
Decibel, dB	A unit describing the amplitude of sound, equal to 20 times the logarithm to the base 10 of the ratio of the pressure of the sound measured to the reference pressure. The reference pressure for air is 20.
Sound Pressure Level	Sound pressure is the sound force per unit area, usually expressed in micropascals (or 20 micronewtons per square meter), where 1 pascal is the pressure resulting from a force of 1 newton exerted over an area of 1 square meter. The sound pressure level is expressed in decibels as 20 times the logarithm to the base 10 of the ratio between the pressures exerted by the sound to a reference sound pressure (e.g., 20 micropascals). Sound pressure level is the quantity that is directly measured by a sound level meter.
Frequency, Hz	The number of complete pressure fluctuations per second above and below atmospheric pressure. Normal human hearing is between 20 Hz and 20,000 Hz. Infrasonic sound are below 20 Hz and ultrasonic sounds are above 20,000 Hz.
A-Weighted Sound Level, dBA	The sound pressure level in decibels as measured on a sound level meter using the A weighting filter network. The A-weighting filter de-emphasizes the very low and very high frequency components of the sound in a manner similar to the frequency response of the human ear and correlates well with subjective reactions to noise.
Equivalent Noise Level, L_{eq}	The average acoustic energy content of noise for a stated period of time. Thus, the L_{eq} of a time-varying noise and that of a steady noise are the same if they deliver the same acoustic energy to the ear during exposure. For evaluating community impacts, this rating scale does not vary, regardless of whether the noise occurs during the day or the night.
L_{max}, L_{min}	The maximum and minimum A-weighted noise level during the measurement period.
L_{01}, L_{10}, L_{50}, L_{90}	The A-weighted noise levels that are exceeded 1%, 10%, 50%, and 90% of the time during the measurement period.
Day/Night Noise Level, L_{dn} or DNL	A 24-hour average L_{eq} with a 10 dBA "weighting" added to noise during the hours of 10:00 p.m. to 7:00 a.m. to account for noise sensitivity in the nighttime. The logarithmic effect of these additions is that a 60 dBA 24-hour L_{eq} would result in a measurement of 66.4 dBA L_{dn}.
Community Noise Equivalent Level, CNEL	A 24-hour average L_{eq} with a 5 dBA "weighting" during the hours of 7:00 p.m. to 10:00 p.m. and a 10 dBA "weighting" added to noise during the hours of 10:00 p.m. to 7:00 a.m. to account for noise sensitivity in the evening and nighttime, respectively. The logarithmic effect of these additions is that a 60 dBA 24-hour L_{eq} would result in a measurement of 66.7 dBA CNEL.
Ambient Noise Level	The composite of noise from all sources near and far. The normal or existing level of environmental noise at a given location.
Decibel, dB	A unit describing the amplitude of sound, equal to 20 times the logarithm to the base 10 of the ratio of the pressure of the sound measured to the reference pressure. The reference pressure for air is 20.

The A weighted decibel sound level scale gives greater weight to the frequencies of sound to which the human ear is most sensitive. Because sound levels can vary markedly over a short period of time, a method

for describing either the average character of the sound or the statistical behavior of the variations must be utilized. Most commonly, environmental sounds are described in terms of an average level that has the same acoustical energy as the summation of all the time-varying events.

The scientific instrument used to measure noise is the sound level meter. Sound level meters can accurately measure environmental noise levels to within about ±1 dBA. Various computer models are used to predict environmental noise levels from sources, such as roadways and airports. The accuracy of the predicted models depends on the distance between the receptor and the noise source. Close to the noise source, the models are accurate to within about ±1 to 2 dBA.

2.1.4 Human Response to Noise

The human response to environmental noise is subjective and varies considerably from individual to individual. Noise in the community has often been cited as a health problem, not in terms of actual physiological damage, such as hearing impairment, but in terms of inhibiting general well-being and contributing to undue stress and annoyance. The health effects of noise in the community arise from interference with human activities, including sleep, speech, recreation, and tasks that demand concentration or coordination. Hearing loss can occur at the highest noise intensity levels.

Noise environments and consequences of human activities are usually well represented by median noise levels during the day or night or over a 24-hour period. Environmental noise levels are generally considered low when the CNEL is below 60 dBA, moderate in the 60 to 70 dBA range, and high above 70 dBA. Examples of low daytime levels are isolated, natural settings with noise levels as low as 20 dBA and quiet, suburban, residential streets with noise levels around 40 dBA. Noise levels above 45 dBA at night can disrupt sleep. Examples of moderate-level noise environments are urban residential or semi-commercial areas (typically 55 to 60 dBA) and commercial locations (typically 60 dBA). People may consider louder environments adverse, but most will accept the higher levels associated with noisier urban residential or residential-commercial areas (60 to 75 dBA) or dense urban or industrial areas (65 to 80 dBA). Regarding increases in A-weighted noise levels (dBA), the following relationships should be noted in understanding this analysis:

- Except in carefully controlled laboratory experiments, a change of 1 dBA cannot be perceived by humans.
- Outside of the laboratory, a 3-dBA change is considered a just-perceivable difference.
- A change in level of at least 5 dBA is required before any noticeable change in community response would be expected. An increase of 5 dBA is typically considered substantial.
- A 10-dBA change is subjectively heard as an approximate doubling in loudness and would almost certainly cause an adverse change in community response.

2.1.5 Effects of Noise on People

2.1.5.1 Hearing Loss

While physical damage to the ear from an intense noise impulse is rare, a degradation of auditory acuity can occur even within a community noise environment. Hearing loss occurs mainly due to chronic exposure to excessive noise but may be due to a single event such as an explosion. Natural hearing loss associated with aging may also be accelerated from chronic exposure to loud noise.

The Occupational Safety and Health Administration (OSHA) has a noise exposure standard that is set at the noise threshold where hearing loss may occur from long-term exposures. The maximum allowable level is 90 dBA averaged over eight hours. If the noise is above 90 dBA, the allowable exposure time is correspondingly shorter.

2.1.5.2 Annoyance

Attitude surveys are used for measuring the annoyance felt in a community for noises intruding into homes or affecting outdoor activity areas. In these surveys, it was determined that causes for annoyance include interference with speech, radio and television, house vibrations, and interference with sleep and rest. The L_{dn} as a measure of noise has been found to provide a valid correlation of noise level and the percentage of people annoyed. People have been asked to judge the annoyance caused by aircraft noise and ground transportation noise. There continues to be disagreement about the relative annoyance of these different sources.

2.2 Fundamentals of Environmental Groundborne Vibration

2.2.1 Vibration Sources and Characteristics

Sources of earthborne vibrations include natural phenomena (e.g., earthquakes, volcanic eruptions, sea waves, landslides) or manmade causes (explosions, machinery, traffic, trains, construction equipment, etc.). Vibration sources may be continuous (e.g., factory machinery) or transient (e.g., explosions).

Ground vibration consists of rapidly fluctuating motions or waves with an average motion of zero. Several different methods are typically used to quantify vibration amplitude. One is the peak particle velocity (PPV); another is the root mean square (RMS) velocity. The PPV is defined as the maximum instantaneous positive or negative peak of the vibration wave. The RMS velocity is defined as the average of the squared amplitude of the signal. The PPV and RMS vibration velocity amplitudes are used to evaluate human response to vibration.

PPV is generally accepted as the most appropriate descriptor for evaluating the potential for building damage. For human response, however, an average vibration amplitude is more appropriate because it takes time for the human body to respond to the excitation (the human body responds to an average vibration amplitude, not a peak amplitude). Because the average particle velocity over time is zero, the RMS amplitude is typically used to assess human response. The RMS value is the average of the amplitude squared over time, typically a 1- sec. period (FTA 2018).

Table 2-2 displays the reactions of people and the effects on buildings produced by continuous vibration levels. The annoyance levels shown in the table should be interpreted with care since vibration may be found to be annoying at much lower levels than those listed, depending on the level of activity or the sensitivity of the individual. To sensitive individuals, vibrations approaching the threshold of perception can be annoying. Low-level vibrations frequently cause irritating secondary vibration, such as a slight rattling of windows, doors, or stacked dishes. The rattling sound can give rise to exaggerated vibration complaints, even though there is very little risk of actual structural damage. In high-noise environments, which are more prevalent where groundborne vibration approaches perceptible levels, this rattling phenomenon may also be produced by loud airborne environmental noise causing induced vibration in exterior doors and windows.

Ground vibration can be a concern in instances where buildings shake, and substantial rumblings occur. However, it is unusual for vibration from typical urban sources such as buses and heavy trucks to be perceptible. For instance, heavy-duty trucks generally generate groundborne vibration velocity levels of 0.006 PPV at 50 feet under typical circumstances, which as identified in Table 2-2 is considered very unlikely to cause damage to buildings of any type. Common sources for groundborne vibration are planes, trains, and construction activities such as earth-moving which requires the use of heavy-duty earth moving equipment.

Table 2-2. Human Reaction and Damage to Buildings for Continuous or Frequent Intermittent Vibration Levels

Peak Particle Velocity (inches/second)	Approximate Vibration Velocity Level (VdB)	Human Reaction	Effect on Buildings
0.006–0.019	64–74	Range of threshold of perception	Vibrations unlikely to cause damage of any type
0.08	87	Vibrations readily perceptible	Recommended upper level to which ruins and ancient monuments should be subjected
0.1	92	Level at which continuous vibrations may begin to annoy people, particularly those involved in vibration sensitive activities	Virtually no risk of architectural damage to normal buildings
0.2	94	Vibrations may begin to annoy people in buildings	Threshold at which there is a risk of architectural damage to normal dwellings
0.4–0.6	98–104	Vibrations considered unpleasant by people subjected to continuous vibrations and unacceptable to some people walking on bridges	Architectural damage and possibly minor structural damage

Source: Caltrans 2020b

3.0 EXISTING ENVIRONMENTAL NOISE SETTING

3.1 Noise Sensitive Land Uses

Noise-sensitive land uses are generally considered to include those uses where noise exposure could result in health-related risks to individuals, as well as places where quiet is an essential element of their intended purpose. Residential dwellings are of primary concern because of the potential for increased and prolonged exposure of individuals to both interior and exterior noise levels. Additional land uses such as hospitals, historic sites, cemeteries, and certain recreation areas are considered sensitive to increases in exterior noise levels. Schools, churches, hotels, libraries, and other places where low interior noise levels are essential are also considered noise-sensitive land uses.

The nearest existing noise sensitive receptors to the Project Site are single-family residences approximately 49 feet from the Project's northeastern boundary, fronting El Caprice Drive. Furthermore, there are several residential apartments on Bettencourt Lane and La Loma Drive that are along the Project's Site's north and western boundaries, with the closest location being 56 feet distant.

3.1.1 Existing Ambient Noise Measurements

The Project Site is currently undeveloped land surrounded mainly by residential and commercial land uses. In order to quantify existing ambient noise levels in the Project Area, ECORP Consulting, Inc. conducted three short-term noise measurements (15-minutes) in the surrounding areas and one long-term noise measurement (24 hours) on the Project Site on April 11th, 2023. The 15-minute measurements were taken between 10:54 a.m. and 11:54 a.m. on April 11th and are representative of typical existing noise exposure within and immediately adjacent to the Project Site during the daytime. The long-term measurement was taken from 12:28 p.m. on April 11th to 12:28 p.m. on April 12th. This 24-hour noise measurement is representative of typical existing noise exposure on the Project Site during a typical 24-hour day. The average noise levels of noise measured at each location are listed in Table 3-1.

Table 3-1. Existing (Baseline) Noise Measurements						
Location Number	**Location**	**L_{eq} dBA**	**L_{dn} dBA**	**L_{min} dBA**	**L_{max} dBA**	**Time**
Short Term Measurements						
1	End of cul-de-sac of White Rock Road adjacent to Aspen Grove Mobile Home Park	**54.0**	N/A	50.3	68.2	10:54 a.m. – 11:09 a.m.
2	On La Verta Court adjacent to the Ashbury Court Apartments	**47.9**	N/A	39.7	62.9	11:39 a.m. – 11:54 a.m.
3	On La Loma Drive behind the Project Site adjacent to the Meadows Apartments	**61.8**	N/A	44.9	74.4	11:16 a.m. – 11:31 a.m.
4	North end of Project Site	57.1	**60.9**	38.3	83.2	12:28 p.m. – 12:28 p.m.

Source: Measurements were taken by ECORP with a Larson Davis SoundExpert LxT precision sound level meter, which satisfies the American National Standards Institute for general environmental noise measurement instrumentation. Prior to the measurements, the SoundExpert LxT sound level meter was calibrated according to manufacturer specifications with a Larson Davis CAL200 Class I Calibrator. See Attachment A for noise measurement outputs.

Notes: L_{eq} is the average acoustic energy content of noise for a stated period of time. Thus, the L_{eq} of a time-varying noise and that of a steady noise are the same if they deliver the same acoustic energy to the ear during exposure. L_{min} is the minimum noise level during the measurement period and L_{max} is the maximum noise level during the measurement period.

As shown in Table 3-1, the ambient recorded noise levels range from 47.9 to 61.8 dBA L_{eq} over the course of the three short-term noise measurements taken in the Project vicinity. The ambient noise levels recorded by the long-term measurement indicate that the Project currently experiences a noise level of 60.9 dBA L_{dn}. The most common noise in the Project vicinity is produced by automotive vehicles (e.g., cars, trucks, buses, motorcycles) on Folsom Boulevard, noise from light rail train activity, and noises from residential activity.

3.1.1 Existing Roadway Noise Levels

Existing roadway noise levels were calculated for the roadway segments in the Project vicinity. This task was accomplished using the FHWA Highway Traffic Noise Prediction Model (FHWA-RD-77-108) (see Attachment B) and traffic volumes from the Mills Crossing Local Traffic Analysis (DKS Associates 2023). The model calculates the average noise level at specific locations based on traffic volumes, average speeds, roadway geometry, and site environmental conditions. The average vehicle noise rates (energy rates) used in the FHWA model have been modified to reflect average vehicle noise rates identified for California by Caltrans. The Caltrans data shows that California automobile noise is 0.8 to 1.0 dBA higher than national levels and

that medium and heavy truck noise is 0.3 to 3.0 dBA lower than national levels. The average daily noise levels along these roadway segments are presented in Table 3-2.

Table 3-2. Existing Roadway Noise Levels

Roadway Segment	Surrounding Uses	L_{dn} at 100 feet from Centerline of Roadway
Folsom Boulevard		
West of Mather Field Road	Commercial	**64.1**
East of Mather Field Road	Commercial	**65.7**
Between La Loma Drive and Paseo Drive	Commercial	**64.1**
Routier Road		
South of Folsom Boulevard	Residential	**59.1**
La Loma Drive		
North of Folsom Boulevard	Commercial and Residential	**51.9**
Paseo Drive		
North of Folsom Boulevard	Commercial and Residential	**50.7**
Mather Field Road		
South of Folsom Boulevard	Commercial and Residential	**65.5**

Source: Traffic noise levels were calculated by ECORP using the FHWA roadway noise prediction model in conjunction with the trip generation rate identified by DKS Associates (2023). The most relevant roadway segments were chosen by DKS Associates. Refer to Attachment B for traffic noise modeling assumptions and results.

As shown, the existing traffic-generated noise level on Project-vicinity roadways currently ranges from 50.7 to 65.7 dBA L_{dn} at a distance of 100 feet from the centerline. As previously described, L_{dn} is a 24-hour average L_{eq} with a 10-dBA "weighting" added to noise during the hours of 10:00 pm to 7:00 am to account for noise sensitivity in the nighttime. The logarithmic effect of these additions is that a 60 dBA 24-hour L_{eq} would result in a measurement of 66.4 dBA L_{dn}. It should be noted that the modeled noise levels depicted in Table 3-2 may differ from measured levels in Table 3-1 because the measurements represent noise levels at different locations around the Project Area and are also reported in different noise metrics (e.g., noise measurements are the L_{eq} values and traffic noise levels are reported in L_{dn}).

4.0 REGULATORY FRAMEWORK

4.1 Federal

4.1.1 Occupational Safety and Health Act of 1970

OSHA regulates onsite noise levels and protects workers from occupational noise exposure. To protect hearing, worker noise exposure is limited to 90 decibels with A-weighting (dBA) over an eight-hour work shift (29 Code of Regulations 1910.95). Employers are required to develop a hearing conservation program when employees are exposed to noise levels exceeding 85 dBA. These programs include provision of hearing protection devices and testing employees for hearing loss on a periodic basis.

4.1.2 National Institute of Occupational Safety and Health

A division of the US Department of Health and Human Services, the National Institute for Occupational Safety and Health (NIOSH) has established a construction-related noise level threshold as identified in the Criteria for a Recommended Standard: Occupational Noise Exposure prepared in 1998. NIOSH identifies a noise level threshold based on the duration of exposure to the source. The NIOSH construction-related noise level threshold starts at 85 dBA for more than 8 hours per day; for every 3-dBA increase, the exposure time is cut in half. This reduction results in noise level thresholds of 88 dBA for more than 4 hours per day, 92 dBA for more than 1 hour per day, 96 dBA for more than 30 minutes per day, and up to 100 dBA for more than 15 minutes per day. The intention of these thresholds is to protect people from hearing losses resulting from occupational noise exposure.

4.1.3 Federal Interagency Committee on Noise (FICON)

The FICON thresholds of significance assist in the evaluation of increased traffic noise. The 2000 FICON findings provide guidance as to the significance of changes in ambient noise levels due to transportation noise sources. FICON recommendations are based on studies that relate aircraft and traffic noise levels to the percentage of persons highly annoyed by the noise. FICON's measure of substantial increase for transportation noise exposure is as follows:

- If the existing ambient noise levels at existing and future noise-sensitive land uses (e.g. residential, etc.) are less than 60 dBA L_{dn} and the project creates a readily perceptible 5 dBA L_{dn} or greater noise level increase and the resulting noise level would exceed acceptable exterior noise standards;
  or
- If the existing noise levels range from 60 to 65 dBA L_{dn} and the project creates a barely perceptible 3 dBA L_{dn} or greater noise level increase and the resulting noise level would exceed acceptable exterior noise standards;
  or
- If the existing noise levels already exceed 65 dBA L_{dn} and the project creates a community noise level increase of greater than 1.5 dBA L_{dn}.

4.2 State

4.2.1 State of California General Plan Guidelines

The State of California regulates vehicular and freeway noise affecting classrooms, sets standards for sound transmission and occupational noise control, and identifies noise insulation standards and airport noise/land-use compatibility criteria. The State of California General Plan Guidelines (State of California 2003), published by the Governor's Office of Planning and Research (OPR), also provides guidance for the acceptability of projects within specific CNEL/L_{dn} contours. The guidelines also present adjustment factors that may be used in order to arrive at noise acceptability standards that reflect the noise control goals of the community, the particular community's sensitivity to noise, and the community's assessment of the relative importance of noise pollution.

4.2.2 State Office of Planning and Research Noise Element Guidelines

The State OPR Noise Element Guidelines include recommended exterior and interior noise level standards for local jurisdictions to identify and prevent the creation of incompatible land uses due to noise. The Noise Element Guidelines contain a land use compatibility table that describes the compatibility of various land uses with a range of environmental noise levels in terms of the CNEL.

4.2.3 California Department of Transportation

In 2020, Caltrans published the Transportation and Construction Vibration Manual (Caltrans 2020b). The manual provides general guidance on vibration issues associated with the construction and operation of projects concerning human perception and structural damage. Table 2 presents recommendations for levels of vibration that could result in damage to structures exposed to continuous vibration.

4.3 Local

4.3.1 City of Rancho Cordova General Plan Noise Element

The Noise Element of the General Plan provides policy direction to protect its citizens and community from noise disturbances. By quantifying existing noise sources and identifying noise policies and actions, the City ensures comfortable and safe noise levels throughout the community. The main goals of the document are to improve the noise environment for its residents, employees, visitors, and other persons. The City's existing noise ordinance establishes allowable exterior and interior noise levels for affected land uses. The Noise Element notes that activities that are generally considered to be exempt from the noise standards include construction activities (provided that they occur within the daytime hours of 7:00 a.m. to 6:00 p.m., Monday through Saturday, and 9:00 a.m. to 6:00 p.m. on Sunday), school athletic and entertainment events, activities conducted on public parks and playgrounds, and transportation noise. The General Plan goals and policies applicable to the Proposed Project are listed below.

- **Policy N 1.2:** Ensure that the indoor and outdoor areas of new projects will be located, constructed, and/or shielded from noise sources in compliance with the City's noise standards to the maximum extent feasible [shown below in Table 4-1].

Table 4-1. City of Rancho Cordova Noise Standards		
Land Use Category	**Outdoor Activity Areas L_{dn} [1], dB**	**Interior L_{dn} dB**
Residential	60[3]	45
Transportation Residential[2]	60[3]	40[5]
Transient lodging	60[4]	45
Hospitals, nursing homes	60[3]	45
Theaters, auditoriums, music halls	--	--
Churches, meeting halls	60[3]	--
Office buildings	--	--
Schools, libraries, museums	--	--
Playgrounds, neighborhood parks	70	--

Source: City of Rancho Cordova General Plan Noise Element 2006

Notes:

[1] Where the location of outdoor activity areas is unknown, the exterior noise level standard shall be applied to the property line of the receiving land use. Where it is not practical to mitigate exterior noise levels at patio or balconies of apartment complexes, a common area such as a pool or recreation area may be designated as the outdoor activity area.

[2] Transportation Residential applies to residence that are subject to noise from railroad tracks, aircraft overflights, or similar noise sources which produce clearly identifiable, discrete noise events (e.g., the passing of a single train).

[3] Where it is not possible to reduce noise in outdoor activity areas to 60 dB L_{dn} or less using a practical application of the best-available noise reduction measures, an exterior noise level of up to 65 dB L_{dn} may be allowed provided that available exterior noise level reduction measures have been implemented and interior noise levels are in compliance with this table.

[4] In the case of hotel/motel facilities or other transient lodging, outdoor activity areas such as pool areas may not be included in the project design. In these cases, only the interior noise level criterion will apply.

[5] The intent of this noise standard is to provide increased protection against sleep disturbance for residences located near railroad tracks.

- **Policy N 1.3:** Ensure that proposed non-residential land uses likely to exceed the City's standards do not create noise disturbances in existing noise-sensitive areas.
- **Policy N.1.4**: Mitigate noise created by proposed non-transportation noise sources to comply with the City's noise standards to the maximum extent feasible.
    - **Action N.1.4.1** - Limit construction activity to the hours of 7:00 a.m. to 7:00 p.m. weekdays and 8:00 a.m. to 6:00 p.m. weekends when construction is conducted in proximity to residential uses.
- **Policy N.1.7**: To the extent feasible and appropriate, the City shall require the use of temporary construction noise control measures for public and private project that may include the use of

temporary noise barriers, temporary relocation of noise-sensitive land uses or other appropriate measures.

5.0 IMPACT ASSESSMENT

5.1 Thresholds of Significance

The impact analysis provided below is based on the following California Environmental Quality Act Guidelines Appendix G thresholds of significance. The Project would result in a significant noise-related impact if it would produce:

1) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.

2) Generation of excessive groundborne vibration or groundborne noise levels.

3) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels.

For purposes of this analysis, Project construction noise is compared to the allowable hours of construction mandated by the City as well as the NIOSH standard of 85 dBA for more than 8 hours per day, since construction work for the Proposed Project is anticipated to span a typical workday of 8 hours daily. The City does not regulate vibrations associated with construction or operations. However, a discussion of construction vibration is included for full disclosure purposes. For comparison purposes, Project groundborne vibration is evaluated against the Caltrans (2020b) recommended standard of 0.2 inches per second PPV.

The noise/land use compatibility associated with locating the proposed residences on the Project Site is determined by a comparison of existing noise levels against the City's noise/land use compatibility standard of 60 dBA L_{dn} for Residential and Transportation Residential land uses (shown in Table 4-1). Furthermore, noise generated by the Project's offsite transportation noise is compared to the FICON thresholds of significance in the evaluation of increased traffic noise, and the Caltrans *Technical Noise Supplement to the Traffic Noise Analysis Protocol* (2013) that notes that a doubling of traffic on a roadway is required to result in an increase of 3 dB (outside of the laboratory, a 3-dBA change is considered a just-perceivable difference). Onsite noise generated by Project operations is compared against the City's protective standard of 60 dBA L_{dn} promulgated by the City's General Plan, which establishes exterior and interior noise levels for various land uses.

5.2 Methodology

This analysis of the existing and future noise environments is based on noise-prediction modeling. In order to estimate the worst-case construction noise levels that may occur at the nearest noise-sensitive receptors in the Project vicinity, predicted construction noise levels were calculated utilizing the FHWA's Roadway Construction Noise Model (2006). Groundborne vibration levels associated with construction-related activities for the Project were evaluated utilizing typical groundborne vibration levels associated with construction equipment. Potential groundborne vibration impacts related to structural damage and human

annoyance were evaluated, taking into account the distance from construction activities to nearby structures and typically applied criteria for structural damage and human annoyance.

Transportation-source noise levels associated with the Project were calculated using the FHWA Traffic Noise Prediction Model (FHWA-RD-77-108) with trip generation rates from the Mills Crossing Local Traffic Analysis (DKS Associates 2023). Onsite stationary source noise levels associated with the Project have been calculated with the SoundPLAN 3D noise model, which predicts noise propagation from a noise source based on the location, noise level, and frequency spectra of the noise sources as well as the geometry and reflective properties of the local terrain, buildings and barriers.

5.3 Impact Analysis

5.3.1 Project Construction Noise

Would the Project Result in Short-Term Construction-Generated Noise in Excess of Standards?

Onsite Construction Noise

Construction noise associated with the Proposed Project would be temporary and would vary depending on the nature of the activities being performed. Noise generated would primarily be associated with the operation of off-road equipment for onsite construction activities as well as construction vehicle traffic on area roadways. Construction noise typically occurs intermittently and varies depending on the nature or phase of construction (e.g., land clearing, grading, excavation, building construction, paving). Noise generated by construction equipment, including earth movers, material handlers, and portable generators, can reach high levels. Typical operating cycles for these types of construction equipment may involve one or two minutes of full power operation followed by three to four minutes at lower power settings. Other primary sources of acoustical disturbance would be random incidents, which would last less than one minute (such as dropping large pieces of equipment or the hydraulic movement of machinery lifts). During construction, exterior noise levels could negatively affect sensitive land uses in the vicinity of the construction site.

The nearest existing noise sensitive receptors to the Project Site are several residences on the northern boundary of the Project Site, approximately 49 feet distant at the nearest. As previously mentioned, construction is exempt from the noise standards, provided that the construction occurs between the daytime hours of 7:00 a.m. to 6:00 p.m., Monday through Saturday, and 9:00 a.m. to 6:00 p.m. on Sunday. Outside of the provided time frames where construction is exempt, construction activities are subject to the City's noise standards. Furthermore, City General Plan Noise Element Action N.1.4.1 limits construction activity to the hours of 7:00 a.m. to 7:00 p.m. weekdays and 8:00 a.m. to 6:00 p.m. weekends when construction is conducted in proximity to residential uses. The Project Site is located in proximity to existing residential land uses and is therefore required to adhere to the construction timing limitations established by Noise Element Action N.1.4.1 (7:00 a.m. to 7:00 p.m. weekdays and 8:00 a.m. to 6:00 p.m. weekends). However, in order to be considered exempt from City noise standards Project construction must be limited to the hours of 7:00 a.m. to 6:00 p.m., Monday through Saturday, and 9:00 a.m. to 6:00 p.m. on Sunday.

Outside of the provided time frames where construction is exempt, construction activities are subject to the City's noise standards. As shown in Table 5-1 below, Project construction noise would surpass the City's protective standard of 60 dBA and therefore must be limited to the hours of 7:00 a.m. to 6:00 p.m., Monday through Saturday, and 9:00 a.m. to 6:00 p.m. on Sunday in order to be considered a less than significant impact.

To estimate the worst-case onsite construction noise levels that may occur at the nearest noise-sensitive receptor and in order to evaluate the potential health-related effects (physical damage to the ear, psychological effects) from construction noise, the construction equipment noise levels were calculated using the Roadway Noise Construction Model and compared against the construction-related noise level threshold established in the Criteria for a Recommended Standard: Occupational Noise Exposure prepared in 1998 by National Institute for Occupational Safety and Health (NIOSH). A division of the US Department of Health and Human Services, NIOSH identifies a noise level threshold based on the duration of exposure to the source. The NIOSH construction-related noise level threshold starts at 85 dBA for more than 8 hours per day; for every 3-dBA increase, the exposure time is cut in half. This reduction results in noise level thresholds of 88 dBA for more than 4 hours per day, 92 dBA for more than 1 hour per day, 96 dBA for more than 30 minutes per day, and up to 100 dBA for more than 15 minutes per day. For the purposes of this analysis, the lowest, more conservative threshold of 85 dBA L_{eq} is used as an acceptable threshold for construction noise at the nearby sensitive receptors.

It is acknowledged that the majority of construction equipment is not situated at any one location during construction activities, but rather spread throughout the Project Site and at various distances from sensitive receptors. Therefore, this analysis employs the Federal Transit Administration (FTA) guidance for calculating construction noise, which recommends measuring construction noise produced by all construction equipment from the center of the Project Site (FTA 2018), which in this case is approximately 341 feet from the closest residence on Bettencourt Lane. The anticipated short-term construction noise levels generated for the necessary equipment for each phase of construction are presented in Table 5-1.

Table 5-1. Construction Average (dBA) Noise Levels at Nearest Receptors			
Construction Phase	**Estimated Exterior Construction Noise Level at Nearest Sensitive Receptor (dBA L_{eq})**	**Construction Noise Standards (dBA L_{eq})**	**Exceeds Standards?**
Pavement Excavation	69.8	*85*	**No**
Site Preparation	70.9	*85*	**No**
Grading	70.1	*85*	**No**
Building Construction, Paving and Painting	73.8	*85*	**No**

Source: Construction noise levels were calculated by ECORP Consulting using the FHWA Roadway Noise Construction Model (FHWA 2006). Refer to Attachment C for Model Data Outputs.

Notes: Construction equipment used during construction derived from the California Emissions Estimator Model (CalEEMod) version 2022.1. CalEEMod is designed to calculate air pollutant emissions from construction activity and contains default construction equipment and usage parameters for typical construction projects based on several construction surveys conducted in order to identify such parameters. Consistent with FTA recommendations for calculating construction noise, construction noise was measured from the center of the Project Site (FTA 2018), which is 341 feet from the nearest residence. Construction, paving and painting are assumed to occur simultaneously.

L_{eq} = The equivalent energy noise level, is the average acoustic energy content of noise for a stated period of time. Thus, the L_{eq} of a time-varying noise and that of a steady noise are the same if they deliver the same acoustic energy to the ear during exposure. For evaluating community impacts, this rating scale does not vary, regardless of whether the noise occurs during the day or the night.

As shown in Table 5-1, construction activities would not exceed the 85 dBA NIOSH construction noise threshold during any phase of construction at the nearby noise-sensitive receptors. It is noted that construction noise was modeled on a worst-case basis. It is very unlikely that all pieces of construction equipment would be operating at the same time for the various phases of Project construction as well as at the point closest to residences.

Offsite Construction Worker Traffic Noise

Project construction would result in additional traffic on adjacent roadways over the period that construction occurs. According to the California Emissions Estimator Model, which is used to predict the maximum number of construction related vehicle trips traveling to and from the Project Site, the maximum number of construction related trips traveling to and from the Project Site during a single construction phase would not be expected to exceed 298 trips in total (241 construction worker commute trips and 57 vendor trips). According to Caltrans' *Technical Noise Supplement to the Traffic Noise Analysis Protocol* (2013), doubling of traffic on a roadway is required to result in an increase of 3 dB (outside of the laboratory, a 3-dBA change is considered a just-perceivable difference). During construction, the Project Site would be accessible from Folsom Boulevard. According to analysis done in conjunction with the Project's Traffic Report from DKS Associates (2023), the portion of Folsom Boulevard between Mather Field Road and La Loma Drive, which includes the Project Site, currently accommodates approximately 19,136 average daily trips (ADT). Thus, the Project construction would not result in a doubling of traffic, and therefore its contribution to existing traffic noise would not be perceptible. Additionally, it is noted that construction is temporary, and these trips would cease upon completion of the Project.

5.3.2 Project Operational Noise

Would the Project Result in a Substantial Permanent Increase in Ambient Noise Levels in Excess of City Standards During Operations?

As previously described, noise-sensitive land uses are locations where people reside or where the presence of unwanted sound could adversely affect the use of the land. Residences, schools, hospitals, guest lodging, libraries, and some passive recreation areas would each be considered noise-sensitive and may warrant unique measures for protection from intruding noise. The nearest existing noise sensitive receptors to the Project Site are several residences on the northern boundary of the Project Site, approximately 49 feet away at the nearest.

The Project proposes the construction of a community center with a health and wellness center, a parking structure, arts center and theater, a multifamily and single-family housing development, commercial and retail businesses, and community and event centers. Operational noise sources associated with the Proposed Project include mobile and stationary (i.e., people talking, car door opening and closing, parking garage noise, park activities, the unloading of trucks, typical neighborhood noise, and internal circulation) sources.

Project Land Use Compatibility

The City's General Plan establishes the use of exterior and interior noise standards as seen in Table 4-1 above. The City's noise level standards are applicable to new projects and act as a tool to gauge the compatibility of new land uses relative to existing noise levels. Table 4-1 identifies the exterior noise levels standards for various land uses, including residential, meeting hall, and community park uses such as those proposed by the Project. In the case that the noise levels identified at the Proposed Project Site fall below the protective noise limits presented in the General Plan, the Project is considered compatible with the existing noise environment. As previously stated, the Project is proposing the construction of a community center with a health and wellness center, a parking structure, arts center and theater, a multifamily and single-family housing development, commercial and retail businesses, and community and event centers.

The long-term noise measurement taken by ECORP Consulting Inc. on April 11th to April 12th, 2023, can be used to quantify existing ambient noise levels in the Project Area. The ambient noise levels recorded by the long-term measurement indicate that the Project Site currently experiences a noise level of 60.9 dBA L_{dn}. According to the City's noise level standards table, presented in Table 4-1, this noise level falls above the exterior noise standard for residential and meeting hall land uses (60 dBA). However, as noted in the General Plan, where it is not possible to reduce noise in outdoor activity areas to 60 dBA L_{dn} or less using a practical application of the best-available noise reduction measures, an exterior noise level of up to 65 dBA L_{dn} may be allowed provided that available exterior noise level reduction measures have been implemented and interior noise levels are in compliance with the standards identified in Table 4-1. As such, the Project Site currently experiences an ambient noise level of 60.9 dBA L_{dn}, which is just over the exterior noise standard of 60 dBA L_{dn} for residential and meeting hall land uses, yet below the maximum standard of 65 dBA L_{dn} when the application of the best-available noise reduction measures is implemented.

The maximum standard of 65 dBA L_{dn}, to be applied to Projects that employ the best-available noise reduction measures, is appropriate for the Proposed Project. According to the Project's Site Plans, the Project's design and layout would reduce offsite transportation noise sources at the proposed noise-sensitive residential land uses. Specifically, the community commercial, art center, event center, and health and wellness buildings would be located on the southern portion of the Project Site directly fronting Folsom Boulevard, while the northern portion of the Site, farthest from Folsom Boulevard, would accommodate the residential component. As such, the layout of the Proposed Project's nonresidential buildings would effectively shield the residential receptors from offsite traffic noise occurring on Folsom Boulevard. According to the FHWA (2006), when a receiver is shielded from a noise source with a barrier (such as a building) with some gaps it experiences a 5 dBA noise reduction from the source. Thus, the residents located on the northern portion of the Project Site would have an approximate 5 dBA reduction from the traffic noise on Folsom Boulevard due to the positioning of the other proposed nonresidential buildings on Site. This would result in an exterior ambient noise level of approximately 55.9 dBA L_{dn}, which would be under the City's exterior standard for residences. Thus, the Project Site design of placing the proposed nonresidential buildings between the predominate source of noise in the Project Area, Folsom Boulevard, and the proposed noise-sensitive residential buildings represents the best-available noise reduction measure to reduce noise on the Project Site. Furthermore, the exterior-to-interior reduction of newer residential units is generally 30 dBA or more (Harris Miller, Miller & Hanson Inc. 2006). With this reduction, the exterior to interior noise environment would be reduced so that interior noise levels would be maintained below the City's protective interior standards of 45 dBA. For these reasons, the Project complies with the City's noise/land use compatibility standards.

Operational Offsite Traffic Noise

Future traffic noise levels throughout the Project vicinity for the Proposed Project were modeled based on the traffic volumes identified by DKS Associates (2023) to determine the noise levels along Project vicinity roadways. Table 5-2 shows the calculated offsite roadway noise levels with traffic levels during existing levels and the projected levels of project buildout. The City of Rancho Cordova does not regulate noise from transportation sources and does not have noise standards for such sources. As such, the thresholds recommended by FICON will be used in this analysis.

- If the existing ambient noise levels at existing and future noise-sensitive land uses (e.g. residential, etc.) are less than 60 dBA L_{dn} and the project creates a readily perceptible 5 dBA L_{dn} or greater noise level increase and the resulting noise level would exceed acceptable exterior noise standards;
  or
- If the existing noise levels range from 60 to 65 dBA L_{dn} and the project creates a barely perceptible 3 dBA L_{dn} or greater noise level increase and the resulting noise level would exceed acceptable exterior noise standards;
  or
- If the existing noise levels already exceed 65 dBA L_{dn} and the project creates a community noise level increase of greater than 1.5 dBA L_{dn}.

Table 5-2. Proposed Project Predicted Traffic Noise Levels

Roadway Segment	Surrounding Uses	L_{dn} at 100 feet from Centerline of Roadway		Change	FICON's Standard	Exceed Standard?
		Existing	Existing + Project			
Folsom Boulevard						
West of Mather Field Road	Commercial	64.1	64.5	+0.4	*>3*	**No**
East of Mather Field Road	Commercial	65.7	65.9	+0.2	*>1.5*	**No**
Between La Loma Drive and Paseo Drive	Commercial	64.1	64.5	+0.4	*>3*	**No**
Routier Road						
South of Folsom Boulevard	Commercial & Residential	59.1	59.4	+0.3	*>5*	**No**
La Loma Drive						
North of Folsom Boulevard	Commercial & Residential	51.9	54.7	+2.8	*>5*	**No**
Paseo Drive						
North of Folsom Boulevard	Commercial & Residential	50.7	52.6	+1.9	*>5*	**No**
Mather Field Road						
South of Folsom Boulevard	Commercial & Residential	65.5	65.8	+0.3	*>1.5*	**No**

Source: Traffic noise levels were calculated by ECORP using the FHWA roadway noise prediction model in conjunction with the trip generation rate identified by DKS Associates (2023). The most relevant roadway segments were chosen by DKS Associates. Refer to Attachment B for traffic noise modeling assumptions and results.

As shown in Table 5-2, none of the Project vicinity roadway segments would experience an increase of traffic noise in excess of the FICON standards.

Operational Onsite Stationary Noise

The Project is proposing the construction of a community center with a health and wellness center, a parking structure, arts center and theater, a multifamily and single-family housing development, commercial and retail businesses, and community and event centers. The main stationary operational noise associated with the Project would include internal circulation/ parking lot activity at the commercial buildings (i.e., people

talking, car door opening and closing, and car stereos). Noise associated with residential neighborhoods is quieter than commercial uses and includes activities such as internal circulation, dogs barking, lawnmowers, and other mechanical equipment). Onsite Project operations have been calculated using the SoundPLAN 3D noise model. The modeling scenario includes the features of the Proposed Project, namely the parking lots, community commercial and art center buildings, residential units, and recreational/park plaza. Reference sound power measurements used to inform the 3D noise model representing the parking areas, single-family housing, mixed used developments, and residential parks were previously recorded by ECORP Consulting. The results of the SoundPLAN model can be found in Attachment D.

The City has established noise exterior standards for various land uses, shown in Table 4-1 above. The standard for residential receptors is under 60 dBA. Table 5-3 shows the predicted Project noise levels at nine locations in the Project vicinity, as predicted by SoundPLAN. These locations represent the closest residential and commercial land uses to the Project Site. Additionally, a noise contour graphic (see Figure 5-1) has been prepared to provide a visual depiction of the predicted noise levels in the Project vicinity from Project operations.

Table 5-3. Operational Noise Levels			
Location	**Operational Noise Attributed to Project (dBA)**	**City Exterior Noise Standard (dBA)**	**Exceed Standard?**
#1 Apartments on Bettencourt Lane	40.4 dBA	*60*	**No**
#2 Apartments on La Loma Drive	39.6 dBA	*60*	**No**
#3 Apartments on La Loma Drive	36.0 dBA	*60*	**No**
#4 Auto Repair Shop on La Loma Drive	47.3 dBA	*60*	**No**
#5 Folsom Lake College	39.4 dBA	*60*	**No**
#6 Medical Clinic	47.5 dBA	*60*	**No**
#7 Residence on El Caprice Drive	44.1 dBA	*60*	**No**
#8 Residence on El Caprice Drive	32.6 dBA	*60*	**No**
#9 Residence on El Caprice Drive	33.9 dBA	*60*	**No**

Source: Stationary source noise levels were modeled by ECORP Consulting using SoundPLAN 3D noise model. Refer to Attachment D for noise modeling assumptions and results.

As shown in Table 5-3, the operational noise levels as a result of operational activities on the Project Site would not exceed the City's noise standards (shown in Table 4-1) for the existing residential uses west and south of the Project Site. Furthermore, it is noted that the modeled noise levels identified are a worst-case scenario. All noise producing sources on the Project Site were modeled for noise as if occurring at the same time and at the highest activity level to produce noise levels at the level as those predicted. Not all activities taking place on the Project Site would generate as much noise as predicted.

5.3.3 Project Groundborne Vibration

Would the Project Expose Structures to Substantial Groundborne Vibration During Construction?

Excessive groundborne vibration impacts result from continuously occurring vibration levels. Increases in groundborne vibration levels attributable to the Project would be primarily associated with short-term construction-related activities. Construction on the Project Site would have the potential to result in varying degrees of temporary groundborne vibration, depending on the specific construction equipment used and the operations involved. Ground vibration generated by construction equipment spreads through the ground and diminishes in magnitude with increases in distance.

Construction-related ground vibration is normally associated with impact equipment such as pile drivers, jackhammers, and the operation of some heavy-duty construction equipment, such as dozers and trucks. Vibration decreases rapidly with distance, and it is acknowledged that construction activities would occur throughout the Project Site and would not be concentrated at the point closest to sensitive receptors. Groundborne vibration levels associated with standard construction equipment at 25 feet distant are summarized in Table 5-4.

Table 5-4. Representative Vibration Source Levels for Construction Equipment

Equipment Type	Peak Particle Velocity at 25 Feet (inches per second)
Vibratory Roller	0.210
Impact Pile Driver	0.170
Large Bulldozer	0.089
Caisson Drilling	0.089
Hoe Ram	0.089
Loaded Trucks	0.076
Jackhammer	0.035
Small Bulldozer/Tractor	0.003

Source: FTA 2018; Caltrans 2020b

The City does not have a numeric threshold associated with construction vibrations. However, a discussion of construction vibration is included for full disclosure purposes. For comparison purposes, the Caltrans (2020b) recommended standard of 0.2 inches per second PPV with respect to the prevention of structural damage for older residential buildings is used as a threshold. This is also the level at which vibrations may begin to annoy people in buildings. Consistent with FTA recommendations for calculating vibration generated from construction equipment, construction vibration was measured from the center of the Project Site (FTA 2018). The nearest structure of concern to the construction site are residences located 341 feet from the center of the Site.

Based on the representative vibration levels presented for various construction equipment types in Table 5-4 and the construction vibration assessment methodology published by the FTA (2018), it is possible to estimate the potential Project construction vibration levels. The FTA provides the following equation:

$$[PPV_{equip} = PPV_{ref} \times (25/D)^{1.5}]$$

Table 5-5 presents the expected Project related vibration levels at a distance of 341 feet.

Table 5-5. Onsite Construction Vibration Levels at 341 Feet

Receiver PPV Levels (in/sec)[1]						Peak Vibration	Threshold	Exceed Threshold
Impact Pile Driver	Vibratory Roller	Large Bulldozer, Caisson Drilling, & Hoe Ram	Loaded Trucks	Jack-hammer	Small Bulldozer			
0.003	0.004	0.002	0.001	0.001	0.000	**0.004**	0.2	**No**

Notes: [1]Based on the Vibration Source Levels of Construction Equipment included on Table 5-3 (FTA 2018). Distance to the nearest structure of concern is approximately 341 feet measured from Project Site center.

As shown in Table 5-5, vibration as a result of onsite construction activities on the Project Site would not exceed 0.2 PPV at the nearest structure. Thus, onsite Project construction would not exceed the recommended threshold.

Would the Project Expose Structures to Substantial Groundborne Vibration During Operations?

Project operations would not include the use of any stationary equipment that would result in excessive vibration levels. Therefore, the Project would not result in groundborne vibration impacts during operations.

5.3.4 Excess Airport Noise

Would the Project Expose People Residing or Working in the Project area to Excessive Airport Noise?

The Project Site is located approximately 2.1 miles northwest of the Mather Airport. According to the Sacramento County Department of Airports (2023), the Project Site is not located within the Mather Airport planning noise contours. The Proposed Project would not expose people residing or working on the Project Site to excess airport noise levels.

Table 3-1 Differences between the Proposed Project vs. Revised Site Plan 54

1. Introduction

1.1 INTRODUCTION

This Final Environmental Impact Report (FEIR) has been prepared in accordance with the California Environmental Quality Act (CEQA), as amended (Public Resources Code Sections 21000 et seq.), and CEQA Guidelines (California Code of Regulations Sections 15000 et seq.).

According to the CEQA Guidelines, Section 15132, the FEIR shall consist of:

(a) The Draft Environmental Impact Report (DEIR) or a revision of the DEIR;

(b) Comments and recommendations received on the DEIR either verbatim or in summary;

(c) A list of persons, organizations, and public agencies commenting on the DEIR;

(d) The responses of the lead agency to significant environmental points raised in the review and consultation process; and

(e) Any other information added by the lead agency.

This document contains responses to comments received on the DEIR for the Mills Crossing Project during the 45-day public review period, which began June 7, 2024, and closed July 22, 2024. This document has been prepared in accordance with CEQA and the CEQA Guidelines, and represents the independent judgment of the lead agency. This document and the circulated DEIR comprise the FEIR, pursuant to CEQA Guidelines, Section 15132.

1.2 FORMAT OF THE FEIR

Section 1, Introduction. This section describes the CEQA requirements and contents of this FEIR.

Section 2, Response to Comments. This section provides a list of agencies and interested persons that commented on the DEIR; copies of comment letters received during the public review period, and the lead agency's responses to written comments. To facilitate review of the responses, each comment letter has been reproduced and assigned an alphanumeric designator (A through E for letters received from agencies and organizations, and 1 and 2 for letters received from residents). Individual comments have been numbered for each letter, and the letter is followed by responses with references to the corresponding comment number.

In accordance with CEQA, Public Resources Code Section 21092.5, copies of the lead agency's written responses to public agencies will be forwarded to those agencies at least 10 days prior to certifying the EIR. The responses will be forwarded with copies of this FEIR, as permitted by CEQA, and will conform to the legal standards established for response to comments on DEIRs.

Section 3, Corrections, Clarifications, and Additions to the DEIR

Section 3.1, Introduction

This section provides an introduction to the suggested DEIR revisions that follow.

Section 3.2, Revision to the DEIR in Response to Comments

This section consolidates revisions to the DEIR and outlines differences between the proposed project and the revised site plan, along with other items requiring updating, clarification, and/or correction, based on comments received by agencies and interested persons, as described in Section 2.

Section 3.3, Revisions to the Project Description

The project description in Chapter 3 of the DEIR has been updated to incorporate changes from the revised entitlement package received on September 13, 2024. Changes made to the DEIR are identified in strikeout text (e.g., ~~strikeout~~) to indicate deletions and in underlined text (e.g., <u>underline</u>) to signify additions.

Section 3.4, Differences in the Proposed Project vs. Revised Site Plan

Since the issuance of the DEIR, modifications have been made to the proposed project's planning and design. These modifications have been evaluated to assess whether additional analysis is necessary for the FEIR. The DEIR remains sufficient for evaluating the new revised site plan (see Figure 3-4, *Conceptual Site Plan (NEW)*), as it reflects a more conservative development. The DEIR analysis accounts for a larger and more intensive development than the revised project, meaning the new modifications fall within the scope of the original environmental analysis.

As discussed in greater detail in Section 3.4, *Differences in the Proposed Project vs. Revised Site Plan*, the City of Rancho Cordova staff has reviewed these changes and determined that none of the changes constitute significant new information requiring recirculation of the DEIR for further public comment under CEQA Guidelines Section 15088.5. None of the new material indicates that the project will cause a significant new environmental impact not previously disclosed in the DEIR, or that there will be a substantial increase in the severity of a previously identified impact that cannot be mitigated. Additionally, none of the material suggests any other circumstances that would necessitate recirculation, as outlined in CEQA Guidelines Section 15088.5.

1.3 CEQA REQUIREMENTS REGARDING COMMENTS

CEQA Guidelines Section 15204 outlines parameters for persons and public agencies reviewing and commenting on the sufficiency of DEIRs.

Section 15204 of the State CEQA Guidelines states, in pertinent part:

> (a) In reviewing draft EIRs, persons and public agencies should focus on the sufficiency of the document in identifying and analyzing the possible impacts on the environment and ways in which the significant effects of the project might be avoided or mitigated. Comments are most helpful when they suggest additional specific alternatives or mitigation measures that would provide better ways to avoid or mitigate the significant environmental effects. At the same time, reviewers should be aware that the

adequacy of an EIR is determined in terms of what is reasonably feasible, in light of factors such as the magnitude of the project at issue, the severity of its likely environmental impacts, and the geographic scope of the project. CEQA does not require a lead agency to conduct every test or perform all research, study, and experimentation recommended or demanded by commentors. When responding to comments, lead agencies need only respond to significant environmental issues and do not need to provide all information requested by reviewers, as long as a good faith effort at full disclosure is made in the EIR.

…

(c) Reviewers should explain the basis for their comments, and should submit data or references offering facts, reasonable assumptions based on facts, or expert opinion supported by facts in support of the comments. Pursuant to Section 15064, an effect shall not be considered significant in the absence of substantial evidence.

(d) Reviewing agencies or organizations should include with their comments the name of a contact person who would be available for later consultation if necessary. Each responsible agency and trustee agency shall focus its comments on environmental information germane to that agency's statutory responsibility.

(e) This section shall not be used to restrict the ability of reviewers to comment on the general adequacy of a document or of the lead agency to reject comments not focused as recommended by this section.

(f) Prior to the close of the public review period for an EIR or mitigated negative declaration, a responsible or trustee agency which has identified significant effects on the environment may submit to the lead agency proposed mitigation measures which would address those significant effects. Any such measures shall be limited to impacts affecting those resources which are subject to the statutory authority of that agency. If mitigation measures are submitted, the responsible or trustee agency shall either submit to the lead agency complete and detailed performance objectives for the mitigation measures, or shall refer the lead agency to appropriate, readily available guidelines or reference documents which meet the same purpose.

1. Introduction

This page intentionally left blank.

2. Response to Comments

Section 15088 of the CEQA Guidelines requires the lead agency (City of Rancho Cordova) to evaluate comments on environmental issues received from public agencies and interested parties who reviewed the DEIR and prepare written responses.

Regarding evaluation and responses to public comments, Section 15088 of the State CEQA Guidelines states:

> (a) The lead agency shall evaluate comments on environmental issues received from persons who reviewed the draft EIR and shall prepare a written response. The lead agency shall respond to comments raising significant environmental issues received during the noticed comment period and any extensions and may respond to late comments.
>
> (b) The lead agency shall provide a written proposed response, either in a printed copy or in an electronic format, to a public agency on comments made by that public agency at least 10 days prior to certifying an environmental impact report.
>
> (c) The written response shall describe the disposition of significant environmental issues raised (e.g., revisions to the proposed project to mitigate anticipated impacts or objections). In particular, the major environmental issues raised when the lead agency's position is at variance with recommendations and objections raised in the comments must be addressed in detail giving reasons why specific comments and suggestions were not accepted. There must be good faith, reasoned analysis in response. Conclusory statements unsupported by factual information will not suffice. The level of detail contained in the response, however, may correspond to the level of detail provided in the comment (i.e., responses to general comments may be general). A general response may be appropriate when a comment does not contain or specifically refer to readily available information, or does not explain the relevance of evidence submitted with the comment.
>
> (d) The response to comments may take the form of a revision to the draft EIR or may be a separate section in the final EIR. Where the response to comments makes important changes in the information contained in the text of the draft EIR, the lead agency should either:
>
> (1) Revise the text in the body of the EIR, or
>
> (2) Include marginal notes showing that the information is revised in the response to comments.

This section includes all written comments received on the DEIR during the 45-day public review period, discussed in Section 1, and the City of Rancho Cordova's responses to each comment. Brackets delineating the individual comments and an alphanumeric identifier have been added to the right margin of the letter. Responses to each comment identified are on the page(s) following each comment letter. Where sections of the DEIR are excerpted in this document, changes to the DEIR text are shown in <u>underlined text</u> for additions and ~~strikeouts~~ for deletions.

2. Response to Comments

The following is a list of agencies, organizations, and individuals that submitted comments on the DEIR during the public review period.

RE: DRAFT ENVIRONMENTAL IMPACT REPORT FOR THE MILLS CROSSING PROJECT, DATED JUNE 7, 2024, STATE CLEARINGHOUSE NUMBER 2023010102

Dear Stefan Heisler,

The Department of Toxic Substances Control (DTSC) received a Draft Environmental Impact Report (DEIR) for the Mills Crossing Project (Project). The City of Rancho Cordova is proposing a 9.85-acre mixed use Project located at the corner of Folsom Boulevard and La Loma Drive in Rancho Cordova. The Project will include approximately 140,000 square feet of community-commercial space, up to 120 housing units including multi-family affordable apartments and zero lot line townhouse-style homes, up to 2.5 acres of public open space, and a parking structure with up to 325 parking stalls. Adoption of the Project contemplates approval of the following city entitlements: certification of the EIR; amendment of the City of Rancho Cordova General Plan and Specific Plan; a zoning amendment; a tentative subdivision map; and a Major Design Review approval. DTSC recommends and requests consideration of the following comments:

A-1

1. DTSC recommends that all imported soil and fill material should be tested to ensure any contaminants of concern are within DTSC's and U.S. Environmental Protection Agency Regional Screen Levels for the intended land use. To minimize the possibility of introducing contaminated soil and fill material there should be documentation of the origins of the soil or fill material and, if applicable, sampling be conducted to ensure that the imported soil and fill material meets screening levels outlined in the Preliminary Endangerment Assessment Guidance Manual for the intended land use. The soil sampling should include analysis based on the source of the fill and knowledge of the prior land use. Additional information can be found by visiting DTSC's Human and Ecological Risk Office (HERO) webpage. A-2
2. The City of Rancho Cordova coordinate with the Regional Water Quality Control Board (RWQCB) as the Veterans Martinizing Cleaners once occupied a portion of the proposed Project area. The RWQCB will oversee the cleanup if it is necessary as they manage the Lily Company site. A-3

DTSC appreciates the opportunity to comment on the DEIR for the Mills Crossing Project. Thank you for your assistance in protecting California's people and environment from the harmful effects of toxic substances. If you have any questions or would like any clarification on DTSC's comments, please respond to this letter or via email for additional guidance.

Sincerely,

Dave Kereazis

A. Response to Comments from Department of Toxic Substances Control (DTSC), dated July 10, 2024.

A-1 *The comment confirms that DTSC received the DEIR, summarizes the proposed project, including a General Plan and Specific Plan amendment, and provides a list of recommendations for the City to consider.*

The City of Rancho Cordova thanks DTSC for their comments on the DEIR. The proposed project does not require an amendment to the General Plan. As outlined in Section 3.4, *Intended Uses of the DEIR*, the necessary approvals for the project include a zoning and Specific Plan amendment, not a General Plan amendment. The project's proposed zoning aligns with the Folsom Boulevard Specific Plan's FB-RMU designation, as discussed in Section 5.7, *Land Use and Planning*. Therefore, only a zoning and Specific Plan amendment is needed, which is detailed in the DEIR in Chapter 3, *Project Description*, and in Section 5.7. Revisions to the DEIR based on this clarification are provided in FEIR Section 3.2, *Revisions to the DEIR in Response to Comments*. These revisions, which clarify that the proposed project would not require a General Plan amendment, constitute minor clarifications to the DEIR and do not alter the findings or result in material changes to the project's environmental analysis.

A-2 *DTSC recommends testing imported soil and fill material to ensure contaminants of concern are within DTSC and U.S. Environmental Protection Agency Regional Screening Levels for the intended land use. The DTSC suggests that to prevent soil and fill materials contamination, documentation of the soil or fill material's origins and, if applicable, sampling should be conducted to ensure imported soil and fill material meet the screening levels in the Preliminary Endangerment Assessment Guidance Manual for the intended land use. DTSC suggests basing soil sampling analysis on the source of the fill and prior land use.*

DTSC's comment recommends testing all imported soil and fill material to ensure contaminants of concern are within established environmental safety levels. Based on the information in Appendix 5.6-1, Site Cleanup Plan, through Appendix 5.6-3, Site Remediation Notice of Exemption. of the DEIR, the site cleanup processes outlined focus on the treatment and management of soil that has been excavated or stockpiled from the project site. The site cleanup plan does not involve the import of additional soil from external sources. DTSC advises that soil samples be analyzed according to screening levels outlined in the Preliminary Endangerment Assessment Guidance Manual written by the Environmental Protection Agency and DTSC. The Preliminary Endangerment Assessment Guidance Manual permits the use of certain human-health-risk-based environmental screening levels (ESL) developed by the San Francisco Bay Regional Water Quality Control Board (RWQCB) as acceptable screening thresholds. These ESLs are used in the site cleanup plan and will continue to be used for evaluating soil at the project site (e.g., Appendix 5.6-1, pp. 6, 16–17; Appendix 5.6-1, Appendix A, Health and Safety Plan, pp. 9–10, of the DEIR). Specifically, pages 1 and 2 of Appendix 5.6-2 of the DEIR

outline the City's methodology for sampling and treating soil fill to ensure contaminant-of-concern levels remain below the San Francisco Bay RWQCB ESLs.

As discussed on pages 5.6-8 to 5.6-16 of Section 5.6, *Hazards and Hazardous Materials*, of the DEIR, Mitigation Measure HAZ-1 incorporates DTSC's comprehensive testing and documentation requirements for ensuring imported soil and fill material comply with ESLs. Mitigation Measure HAZ-1 addresses DTSC's recommendation by mandating that, before issuing construction permits, the project applicant implement all recommendations from the site cleanup plan and its addendum prepared by Tetra Tech (see, e.g., Appendix 5.6-1 and Appendix 5.6-2 of the DEIR). The site cleanup plan bases sampling frequency for import fill on DTSC sampling guidance (see Appendix 5.6-1, pp. 14-15, of the DEIR). Post-cleanup effectiveness sampling will be conducted to ensure contaminant-of-concern levels do not exceed screening levels for the intended use (see, e.g., DEIR Appendix 5.6-1, pp. 16–17; and DEIR Appendix 5.6-1, Appendix A, Health and Safety Plan, pp. 11–12, of the DEIR). As discussed on page 17 of Appendix 5.6-1, a summary report will detail field activities and sampling results and include laboratory data sheets and chain of custody forms.

For these reasons, Mitigation Measure HAZ-1 in the DEIR would adequately address impacts to hazardous materials in the project; therefore, no changes are required.

A-3 *DTSC requests that the City coordinate with the Regional Water Quality Control Board (RWQCB) regarding the proposed project,* a portion of *which* was *previously occupied by Veterans Martinizing Cleaners. DTSC states that the RWQCB will oversee any required cleanup activities* because *they currently manage the Lily Company site. The DTSC appreciates the opportunity to comment on the DEIR for the Mills Crossing Project.*

The City's coordination with the Central Valley RWQCB is detailed in the site cleanup plan and its addendum prepared by Tetra Tech (see Appendix 5.6-1 and Appendix 5.6-2 of the DEIR). The Central Valley RWQCB has been the agency overseeing site characterization and remediation, which dates back to 2008 (see, e.g., Appendix 5.6-1, Appendix A, Health and Safety Plan, p. 8, of the DEIR). The project site has been owned by the City of Rancho Cordova since 2018, and the Central Valley RWQCB is a responsible agency for the project (DEIR, pp. 3-1, 3-12.)

As required by Mitigation Measure HAZ-1, the City will implement the site cleanup plan, which the Central Valley RWQCB approved in a letter dated March 30, 2022 (DEIR, pp. 5.6-14–5.6-16; Appendix 5.6-2, pp. 1–2). Implementation of Mitigation Measure HAZ-1 and the site cleanup plan necessarily involve coordination with the Central Valley RWQCB. For example, the City Engineer will transmit testing results from the project site to the RWQCB for review and concurrence before issuing construction permits (DEIR, pp. 5-16–5-17). Additionally, the air and dust monitoring plan requires notifying the Central Valley RWQCB when compounds exceed screening levels (see Appendix 5.6-1,

Appendix B, Perimeter Air and Dust Monitoring Plan, p. 10, of the DEIR). This coordination is further discussed in a letter from the City to the Central Valley RWQCB on pages 1 and 2 of Appendix 5.6-2 of the DEIR.

For these reasons, Mitigation Measure HAZ-1 in the DEIR would adequately address impacts to hazardous materials in the project; therefore, no changes are required.

CULTURAL RESOURCES

July 15, 2024

City of Rancho Cordova

RE: Mather Veterans Village Phase 4 Project

Dear Stefan Heisler,

Thank you for your letter dated June 11, 2024 in regard to the above mentioned project. Based on the information provided, the Shingle Springs Band Of Miwok Indians is not aware of any known cultural resources on this site. However, SSR would like to have continued consultation through updates, as the project progresses. This will foster a greater communication between the Tribe and your agency. B-1

SSR would also like to request any and all completed record searches and or surveys that were done in or around the project area up to and including environmental, archaeological and cultural reports. B-2 If during the progress of the project new information or human remains are found, we would like to be able to go over our process with you to protect such important and sacred artifacts (especially near rivers and streams). B-3

If such finds are made, please contact Kara Perry, Director of Site Protection, at (530) 488-4049 or kperry@ssband.org.
Thank you for providing us with this notice and opportunity to comment.

Sincerely,

Kara Perry
Director of Site Protection

B. Response to Comments from Shingle Springs Band of Miwok Indians, dated July 15, 2024.

B-1 *The Shingle Springs Band of Miwok Indians confirms receipt of the City's letter inviting Tribal consultation, expresses that the Tribe is unaware of known cultural resources on the Project site, and requests consultation in the form of continued updates and communication with the Tribe as the project progresses.*

The City of Rancho Cordova appreciates the Shingle Springs Band of Miwok Indians' response and will ensure that the Shingle Springs Rancheria is kept informed as the project advances. The tribal consultation process with the Shingle Springs Band of Miwok Indians is described in Section 5.13.4.1 in Chapter 5.13 of the DEIR. Tribal consultation is ongoing, but no additional communications have been sent or received since the DEIR comment letter was submitted. This response will be sent to the Shingle Springs Tribe once the FEIR is finalized.

B-2 *The Tribe requests any and all completed record searches and surveys that were done in or around the project site such as environmental, archaeological, and cultural reports.*

The DEIR includes Appendix 5.3-1, Archaeological Resources Inventory, of the DEIR, which provides information on cultural and archaeological resources. On December 9, 2024, the City sent the completed Appendix 5.3-1, Archaeological Resource Inventory Report, to the Shingle Springs Band of Miwok Indians and Wilton Rancheria for their review. On December 10, 2024, the Shingle Springs Band of Miwok Indians confirmed receipt of the report. On December 10, 2024, the Wilton Rancheria responded, stating that they would review the report and contact the City if they had any questions.

B-3 *The Tribe requests that the City contact the Tribe if new information or human remains are found during project development, particularly near rivers and streams, to* give *the Tribe* an *opportunity to review* its *sacred artifact protection processes with the City.*

The City will notify the Tribe if significant new information or human remains are found during project development. The City welcomes comments on the Tribe's sacred artifact protection processes. The mitigation measures related to tribal cultural resource protection as part of this project are detailed in Section 5.13, *Tribal Cultural Resources*, of the DEIR. Relevant mitigation measures can also be found in Section 5.3, *Cultural Resources*. If human remains are discovered, work shall halt in that area and the procedures required by Mitigation Measures CUL-2 and TCR-2, described below, shall be followed, pursuant to requirements of California Health and Safety Code Section 7050.5 and California Public Resources Code Section 5097.98.

Pursuant to Mitigation Measure CUL-2 in Section 5.3, *Cultural Resources*, of the DEIR, if Native American human remains are found, then the Sacramento County Coroner will notify the Native American Heritage Commission, which will designate a Native American Most Likely Descendant for the project. In addition, Mitigation Measure TCR-2, in

Section 5.13, *Tribal Cultural Resources*, of the DEIR states that if any tribal cultural resources are discovered during excavation or construction, work must stop within 100 feet of the find, and a qualified tribal monitor or consultant will be consulted to assess whether the resource requires further study and to recommend measures to protect it.

LETTER C– Cordova Recreation and Park District (3 pages)

Regarding: **Mills Crossing Civic Center**
Draft Environmental Impact Report (DSEIR)

Review Documents: **Mills Crossing Draft Environmental Impact Report**

Public Comment Opportunity: **June 7 – July 22, 2024**

Reviewed by: Cordova Recreation and Park District
Laura Taylor, CRPD Park Planning and Development Manager

Cordova Recreation and Park District (CRPD) is responding to the City of Rancho Cordova's public notice of the availability of the Draft Environmental Impact Report for the Mills Crossing Civic Center project.

PROJECT DESCRIPTION

The proposed 10-acre Mills Crossing development is located in the Transit Oriented District Overlay Zone of Mather Field/Mills Light Rail Station on the south side of Folsom Boulevard. Concept 2 of the project will include 130,700 square feet of commercial space, a parking structure for 325 vehicles, 2.5 acres of public open space and up to 120 housing units. The current master plan exhibit shows 48 townhome lots and a four-story apartment building. According to the housing program, the apartment building will include a minimum of 55 units. The final number of residential units within Mills Crossing is not yet known. C-1

The proposed project falls under Quimby parkland requirements for projects with 50 or more lots.

In several sections the DEIR discusses this project's impact to local park and recreation facilities under the jurisdiction of Cordova Recreation and Park District. This letter provides a review of mentions in the report related to CRPD parkland. C-1

REVIEW OF EXECUTIVE SUMMARY

It lists 13 "Areas of Controversy" on Page 1-6, section 1.8 "Areas of Controversy". Bullet 11 lists "Project's contribution of parkland" as one point of controversy that was raised by public comment in the responses to the Notice of Preparation.

On page 1-16, Table 1-1 Summary of Environmental Impacts, Mitigation Measures and Levels of Significance After Mitigation, section 5.12 Recreation:

- Impact 5.12-1: has determined that while the proposed project would increase the use of existing neighborhood and regional parks and other facilities, such that substantial physical deterioration of the facilities would occur or be accelerated, the impact is "less than significant" and "no mitigation measures are required." C-2

- Impact 5.12-2: has determined that while the project implementation would require the construction of expansion of recreational facilities which might have an adverse physical impact on the environment, the impact is "less than significant" and "no mitigation measures are required."

Page 2-3, Table 1-1 Notice of Preparation Comments, Cordova Recreation and Park District – provides a summary of CRPD's comments submitted February 2, 2023. The Table states that CRPD's comments are addressed in Section 5.12 Recreation starting on page 5.12-1.

REVIEW OF SECTION 5.12 RECREATION

5.12.1.2 Existing Conditions

This section provides a calculation for the amount of parkland acres per 1,000 residents in the City of Rancho Cordova. This calculation should not be considered the total amount of Quimby parkland available for City residents. It is more accurate to state in the fifth sentence of paragraph one, "CRPD's standard for dedication of **Quimby** parkland is 5 acres per 1,000 residents....." A Quimby parkland calculation for the City of Rancho Cordova should include the larger linear park corridors in the Villages of Zinfandel development (approximately 63 acres) and the existing CRPD Center property (73 acres) located at 11551 Douglas Road in Rancho Cordova. The Center property is in transition to park and recreation uses. C-3

5.12.4.Environmental Impacts, 5.12-1 and 5.12-2. Impact Analysis: The analysis for both impacts is determined to be "less than significant". CRPD concurs with this analysis. The analysis for both mentions the requirement to comply with the City's General Plan and City Municipal Code Chapter 22.40. Compliance with the City's General Plan and City Municipal Code will result in adequate resources (land and/or fees) to offset the impact of this project on local park and recreation facilities. C-4

5.12.5 Cumulative Impacts states the review of all development proposals to ensure adherence to Chapter 22.40 would provide sufficient resources for design, construction and maintenance of new parks and associated facilities needed to accommodate future growth in the city. Proposed project's contribution to this impact would be less than cumulatively considerable.

C-5

CRPD concurs that no Mitigation Measures are required because City Municipal Code Chapter 22.40 ensures adequate resources for park resources to address the increased population.

CRPD will continue to follow the progress of Rancho Cordova's new Civic Center project with great interest.

Respectfully,

Laura L. Taylor

C. Response to Comments Cordova Recreation and Park District, dated July 18, 2024.

C-1 *The Cordova Recreation and Park District (CRPD) summarizes the project description and states that the project falls under the Quimby* p*arkland requirements for projects with 50 or more lots. The CRPD states the DEIR details how the project will impact local park and recreation facilities that fall under the CRPD's jurisdiction.*

The City of Rancho Cordova appreciates CRPD's insights. Please review responses to specific comments in Responses C-2 through C-5.

C-2 *CRPD notes that the project's contribution to parkland was noted as an area of controversy in DEIR Section 1.8. CRPD notes that Impacts 5.12-1 and 5.12-2 were determined to be less than significant and would require no mitigation measures. CRPD notes that Table 1-1, Notice of Preparation of Comments, states that CRPD's February 2, 2023, comments are addressed in Section 5.12, Recreation.*

The comment incorrectly summarizes the impact thresholds. The first column of Table 1-1 provides the significance threshold for each environmental impact and does not represent the City's conclusion.

Regarding Impact 5.12-1, the comment states that the City has determined the proposed project would increase use of existing recreational facilities, such that substantial physical deterioration of the facilities would occur or be accelerated. As discussed on page 5.12-8, the City determined that "[[i]mplementation of the General Plan policies and the City's Municipal Code, discussed above, would ensure that the proposed project's generation of new residents would not cause or accelerate substantial physical deterioration of any parkland facilities"

Regarding Impact 5.12-2, the comment states that the City has determined project implementation would require construction or expansion of recreational facilities that might have an adverse physical impact on the environment. As discussed on page 5.12-8 of the DEIR, the City determined that "[a]lthough the proposed project would require the construction or expansion of recreation facilities, the proposed project would comply with the City's Municipal Code and goals in the General Plan; therefore no adverse physical effect would occur."

This comment does not raise significant environmental issues or describe any inadequacies of the DEIR, and no changes to the DEIR are necessary.

C-3 *CRPD notes* that, in *Section 5.12.1.2, Existing Conditions,* of *the Recreation Chapter*, *the calculation for parkland used should not be considered the total amount of Quimby parkland available but rather state that CRPD's standard for the dedication of Quimby parkland is 5 acres per 1,000 residents.*

In response to this comment, the fifth sentence of paragraph one of Section 5.12.1.2 has been revised to make the suggested change to 5 acres per 1,000 residents. This revision reflects a minor update or clarification to the content of the DEIR and thus does not

represent material changes or revisions that modify the findings. (See Section 3.2, *DEIR Revisions in Response to Written Comments*).

In addition, the CRPD explains that Quimby parkland calculation for the City should include the larger linear park corridors in the Villages of Zinfandel development (approximately 63 acres) and the existing CRPD Center property (73 acres). CRPD notes that the Center property is in transition to provide park and recreational uses.

See Section 3.2, *DEIR Revisions in Response to Written Comments*, which adds the linear park corridors in the Villages of Zinfandel development to the Quimby parkland calculations. This revision reflects a minor update of the existing Quimby parkland numbers but does not modify the findings. The center properties noted by CRPD are park projects proposed or still underway. The calculations in the DEIR are conservative, meaning the project is designed to meet applicable standards without taking into consideration parkland that has not yet been finalized; therefore, no changes are required regarding this comment.

C-4 *CRPD concurs with the analysis for Impacts 5.12-1 and 5.12-2 and the determination that both impacts are less than significant. CRPD agrees that the City's General Plan policies and Municipal Code Chapter 22.40 will offset the project's impact on local park and recreation facilities.*

This comment is noted for the record and will be forwarded to the decision-makers for review and consideration. As this comment does not raise significant environmental issues or describe any inadequacies of the DEIR, no changes to the DEIR are necessary.

C-5 *The CRPD summarizes the DEIR's analysis of Cumulative Impact 5.12.5, and agrees that no mitigation measure is needed because the City's Municipal Code Chapter 22.40 ensures adequate resources for park and recreational infrastructure to offset project impacts. CRPD will continue to follow the progress of the project with great interest.*

This comment is noted for the record and will be forwarded to the project decision makers for review and consideration. As this comment does not raise significant environmental issues or describe any inadequacies of the DEIR, no changes to the DEIR are necessary.

Rancho Cordova, California 95670

Subject: **NOTICE OF AVAILABILITY (NOA) FOR AN ENVIRONMENTAL IMPACT REPORT (EIR) FOR THE MILLS CROSSING PROJECT**
APN: **076-0020-019, -020, -021, & -022**
File No: **SCH# 2023010102**

Dear Mr. Heisler,

The Sacramento Area Sewer District (SacSewer) has reviewed the subject document and has the following comments.

The City of Rancho Cordova is proposing a 9.85-acre mixed-use project (the Mills Crossing Project) located at the corner of Folsom Boulevard and La Loma Drive in the City of Rancho Cordova. The property is zoned Residential Mixed Use (RMU) within the Folsom Blvd Specific Plan (FBSP) designation of the General Plan. The project will include approximately 140,000 square feet of community-commercial buildings, up to 120 housing units including multi-family affordable apartments and zero lot line townhouse-style homes, up to 2.5 acres of public open space, and a parking structure with up to 325 parking stalls. The community-commercial component will include health and wellness, community serving commercial, and arts center with black box theater and flex studios, a community event hall, and retail. Adoption of the project contemplates approval of the following City entitlements: certification of the EIR; amendment of the City of Rancho Cordova General Plan and Specific Plan; zoning amendment; tentative subdivision map; and a Major Design Review approval. Future City entitlement approvals may include, but are not limited to, the following: a Development Agreement

D-1

Note: Effective January 1, 2024, the Sacramento Regional County Sanitation District and the Sacramento Area Sewer District merged into one district called the Sacramento Area Sewer District, or SacSewer for short.

SacSewer provides local sewer service to the proposed project site via its collection system and conveys sewage from the collection system to the EchoWater Resource Recovery Facility for treatment, resource recovery, and disposal.

Board of Directors
Representing:
County of Sacramento | City of Citrus Heights
City of Elk Grove | City of Folsom
City of Rancho Cordova | City of Sacramento
City of West Sacramento | County of Yolo

Christoph Dobson
General Manager/District Engineer
Rosemary Clark
Director of Collection System Operations
Sonny Lunde
Director of EchoWater Operations
Mike Huot
Director of Policy & Planning
Matthew Doyle
Director of Internal Services
Masiku Tepa Banda
Director of Finance
Nicole Coleman
Director of Communications

SacSewer is not a land-use authority and plans and designs its sewer systems using information from land-use authorities. SacSewer bases the projects identified within its planning documents on growth projections provided by these land-use authorities. D-1

To receive sewer service, the project proponent must complete Sewer Master Plans that include connection points and phasing information to assess the existing capacity of the collection systems to determine if the current facilities can convey the additional flows generated by the Project.

For SacSewer to more fully evaluate the subject project's impact on the system, a sewer study will be needed. This study shall demonstrate the permanent connection(s) to SacSewer system. The sewer study shall demonstrate the quantity of discharge along with appropriate pipe sizes and related appurtenances from this subject and other upstream areas and shall be done in accordance with SacSewers' most recent "Minimum Sewer Study Requirements". The study shall be done on a no "Shed-Shift" basis unless approved by SacSewer in advance and in compliance with the SacSewer's Standards and Specifications. This study may be refined by supplemental studies as the scope and details of the subject project become more defined. If the proposed density exceeds what was planned in SacSewer's Master Plan, the downstream system capacity may be constrained. SacSewer will model the effects on the downstream system when the sewer study is submitted. D-2

Customers receiving service from SacSewer are responsible for rates and fees outlined within the latest SacSewer ordinance. Fees for connecting to the sewer system recover the capital investment of sewer and treatment facilities that serve new customers. SacSewer does not guarantee sewer service or system capacity to the property until the property obtains proper permits to connect to the system and pays all facility impact (capacity) fees. The SacSewer ordinances are on the SacSewer website at https://www.sacsewer.com/ordinances/. D-3

If you have any questions regarding these comments, please call me at (916) 875-9810, Steve Kiyama at (916) 876-6657, or Douglas Kennedy at (916) 875-4563.

Sincerely,

Chika Oya

Chika Oya
SacSewer Development Services

2. Response to Comments

This page intentionally left blank.

D. Response to Comments from the Sacramento Area Sewer District, dated July 19, 2024.

D-1 *The Sacramento Area Sewer District (SacSewer) summarizes the proposed project's project description. SacSewer provides local sewer service to a proposed project site through its collection system, which then transports sewage to the EchoWater Resource Recovery Facility for treatment, recovery, and disposal. SacSewer plans and designs its sewer systems based on growth projections from land-use authorities.*

See Response A-1 regarding the project description, which does not require an amendment to the General Plan. The City of Rancho Cordova appreciates SacSewer's comments on the DEIR. This comment is noted for the record and will be forwarded to the project's decision makers for review and consideration. As this comment does not raise significant environmental issues or describe any inadequacies of the DEIR, no changes to the DEIR are necessary.

D-2 *SacSewer states that to receive sewer service, the project proponent must complete Sewer Master Plans, including connection points and phasing information, to assess the existing capacity of collection systems and determine if the current facilities can convey the additional flows generated by the project. In addition, SacSewer requests a sewer study to evaluate the project's impact more fully on the sewer system. SacSewer requests that the study demonstrate the permanent connections to the SacSewer system, the quantity of discharge, appropriate pipe sizes, and related appurtenances. SacSewer requires that the sewer study be done in compliance with its most recent "Minimum Sewer Study Requirements" and its Standards and Specifications. SacSewer cautions that, "[i]f the proposed density exceeds what was planned in SacSewer's Master Plan, the downstream system capacity may be constrained."*

As requested by the comment, the City will complete a Sewer Master Plan that includes the required information. The proposed project would need to comply with Section 15.04.070, Permits, of the City's Municipal Code, which states that public sewers cannot be used without obtaining the permits required by this section; therefore, the proposed project would need to go through the City's Municipal Code before connection to a public sewer such as SacSewer. Completion of the Sewer Master Plan is a procedural step to finalize the detailed connection and phasing information, but it will not alter the capacity conclusions already supported by the DEIR and the General Plan EIR. Revisions to the DEIR based on this regulation are provided in Section 3.2, *Revisions to the DEIR in Response to Comments*, of the FEIR. This update is a minor clarification to the DEIR and does not alter the findings or result in material changes to the project's environmental analysis.

As discussed in the DEIR under Impact 5.14-1, the existing infrastructure is sufficient to serve the proposed project. The analysis in the DEIR is based on current data and projections for regional growth, which were factored into the capacity planning for the Sacramento Regional Wastewater Treatment Plant (SRWTP). The SRWTP currently has a permitted capacity of 181 million gallons per day (mgd) for average dry weather flow and 392 mgd for average wet weather flows, which are adequate to support the proposed development. Importantly, the projected growth under the proposed project was included

in the City's regional growth estimates and planning assumptions, which were incorporated into the 2006 General Plan EIR. Therefore, impacts to wastewater treatment facilities, including the SRWTP, have already been accounted for and anticipated in that earlier analysis. Given that the planned growth and its associated wastewater flows were considered in the General Plan EIR and that current infrastructure is projected to accommodate the additional demand, the DEIR's analysis remains accurate and reliable for determining that the proposed project will not exceed the wastewater treatment plant's capacity.

D-3 *SacSewer states that customers receiving service from SacSewer are responsible for the rates and fees in the latest SacSewer ordinance. These fees recover the capital investment of sewer and treatment facilities serving new customers. SacSewer does not guarantee sewer service or system capacity until proper permits are obtained and facility impact fees are paid.*

Future development would be required to comply with all applicable regulations, including those of SacSewer.

Revisions to the DEIR based on this clarification are provided in Section 3.2, *Revisions to the DEIR in Response to Comment*s, of the FEIR. This update is a minor clarification to the DEIR and does not alter the findings or result in material changes to the project's environmental analysis. As this comment does not raise significant environmental issues or describe any inadequacies of the DEIR, no changes to the DEIR are necessary.

LETTER E – Sacramento Metropolitan Air Quality Management District (1 page)

From: Roberto Ramirez <RRamirez@airquality.org>

Subject: Re: Mills Crossing Notice of Availability of Draft Environmental Impact Report

On second thought, that Folsom Blvd entrance might have a traffic calming effect. I like the idea of that.

> The City of Rancho Cordova has prepared a draft environmental impact report (DEIR) for the Mills Crossing Project in compliance with the California Environmental Quality Act (CEQA) (Public Resources Code Section 21000 et seq.) and the State CEQA Guidelines (14 California Code of Regulations Section 15000 et seq.).

Description of the Project: The City of Rancho Cordova is proposing a 9.85-acre mixed-use project (the Mills Crossing Project) located ~~on~~ located at the corner of Folsom Boulevard and La Loma Drive in the City of Rancho Cordova. The property is zoned Residential Mixed Use (RMU) within the Folsom Blvd Specific Plan (FBSP) designation of the General Plan. The project will include approximately 140,000 square feet of community-commercial buildings, up to 120 housing units including multi-family affordable apartments and zero lot line townhouse-style homes, up to 2.5 acres of public open space, and a parking structure with up to 325 parking stalls. The community-commercial component will include health and wellness, community serving commercial, and arts center with black box theater and flex studios, a community event hall, and retail. Adoption of the project contemplates approval of the following City entitlements: certification of the EIR; amendment of the City of Rancho Cordova General Plan and Specific Plan; zoning amendment; tentative subdivision map; and a Major Design Review approval. Future City entitlement approvals may include, but are not limited to, the following: a Development Agreement.

Project Location: The Project is located at 10153-10179 Folsom Blvd (APNs: 076-0020-019, -020, -021, & -022)

Cortese-Listed Sites: Section 15087(c)(6) of the CEQA Guidelines requires that this notice disclose whether the project site is listed on the lists enumerated under Government Code Section 65962.5 (Cortese List). As noted in Chapter 3, Project Description, of the DEIR, there is one remedial site on the northwest corner of the project site of a former dry-cleaning site which operated from 1971 to 2003. The site was found to have elevated levels of tetrachloroethylene (PCE) in groundwater. Remediation efforts, including soil vapor extraction and groundwater extraction, were conducted from 2010 to 2017; however, residual PCE in soil vapor still exceeds safe levels. The City plans further remediation, including soil and sewer line excavation in the former dry cleaner area and in-situ soil treatment in the former parking lot area. Chapter 5.6, Hazards, and Hazardous Materials, of the DEIR outlines additional details regarding hazards and hazardous materials at the site.

Significant Environmental Impacts of the Project: The DEIR evaluates three land use development alternatives at an equal level of detail. Analysis of environmental impacts associated with the project identified potentially significant or significant impacts in the following issue areas: air quality, biological resources, cultural resources, greenhouse gas emissions, hazards and hazardous materials, tribal cultural resources. Mitigation measures would reduce all potentially significant impacts to a less than significant level.

Public Review Period: The DEIR is available for review during a 45-day comment period that begins on June 7, 2024, and ends on July 22, 2024. A public hearing on the DEIR will be held on August 28, 2024, from 5:30-7 pm at the Rancho Cordova City Hall located at 2729 Prospect Park Drive, Rancho Cordova, CA 95670. This public hearing will be open to the public and all interested persons are invited to attend and provide testimony on the DEIR. The hearing will begin with a project overview and summary of the DEIR. Written and verbal comments on the DEIR will be accepted during the meeting. The Planning Commission will preside over the meeting; however, it will not take any action on the DEIR or project. Staff will note general themes of verbal comments made and will address them in the Final EIR. Members of the public are encouraged to submit written comments to ensure that their specific comments are represented in the project record and addressed in the Final EIR.

Copies of the DEIR can be reviewed at the following locations:

City of Rancho Cordova Planning Department

2729 Prospect Park Drive

Rancho Cordova, CA 95670

Rancho Cordova Public Library

9845 Folsom Boulevard

Rancho Cordova, CA 95827

The Draft EIR is also available on the City's website at: Mills Crossing | City of Rancho Cordova

Written comments on the DEIR must be postmarked no later than July 22, 2024, and should be sent to the following address:

Stefan Heisler

City of Rancho Cordova

Planning Department

2729 Prospect Park Drive

Rancho Cordova, CA 95670

1. Response to Comments from Karl Haas, dated June 7, 2024.

1-1 *The commenter requests the removal of parking in the grove* and the addition of *a playground with an interactive water feature, electrical vehicle charging, and bicycle parking.*

See Section 3.3, *Revisions to the Project Description*, which changes the project description and includes a bioretention basin, electrical vehicle charging stations, and bicycle parking. As this comment does not raise significant environmental issues or describe any inadequacies of the DEIR, no changes to the DEIR are necessary.

1-2 *The commenter likes the idea of an entrance on Folsom Boulevard, which might result in a traffic-calming effect.*

Automobile delay, as described by level of service (LOS) or other measurements of vehicular capacity or traffic congestion, is no longer considered a significant impact under CEQA. However, the project's compliance with General Plan Circulation Element Policies related to traffic are discussed on pages 8-9 to 8-10 of the DEIR.

This comment is noted for the record and will be forwarded to the project's decision makers for review and consideration. As this comment does not raise significant environmental issues or describe any inadequacies of the DEIR, no changes to the DEIR are necessary.

2. Response to Comments

Thanks Megan,

He is the owner(?) of 5 Star Auto Sales on Folsom Blvd on the next block west from Mills Crossing. He was excited to hear about the development and asked when it would be completed. He's looking forward to the additional improvement it will bring to the neighborhood and positive economic impacts.

Sincerely,

Stefan

Subject: VM - Mills Crossing

Stefan:

Could you call this gentlemen back? He left a VM and was curious about Mills Crossing: Yes, hello, how are you doing? My name is Larry. Please give me a call back at [redacted]. I'm curious about the project that you guys are developing over here on Folsom Boulevard in La Loma. Please call me back at [redacted]. Thank you. Have a nice day.

Thanks,

Megan

2. Response to Comments from Larry (no last name provided), dated June 7, 2024.

2-1 *The commenter expressed their excitement about the Mills Crossing development and asked when the project would be completed. The commenter is looking forward to the additional improvements and positive economic impacts it would bring to the neighborhood.*

This comment is noted for the record and will be forwarded to the project's decision makers for review and consideration. As this comment does not raise significant environmental issues or describe any inadequacies of the DEIR, no changes to the DEIR are necessary.

2. Response to Comments

This page intentionally left blank.

3. Corrections, Clarifications, and Additions to the DEIR

3.1 INTRODUCTION

This section contains revisions to the DEIR based on (1) additional or revised information or clarifications generated in response to information or concerns raised by a specific comment, or independently by the City; (2) applicable updated information that was not available at the time of DEIR publication; and/or (3) typographical errors. Changes made to the DEIR are identified here in ~~strikeout text~~ to indicate deletions and in underlined text to signify additions.

These corrections, clarifications, and additions to the DEIR are provided to clarify and amplify the DEIR. The revisions incorporate material and updates added to the EIR text as part of the FEIR. None of this new material constitutes "significant new information" requiring recirculation as defined in Section 15088.5(a) of the State CEQA Guidelines. Specifically, the following criteria are not met:

1. A new significant environmental impact would result from the project or from a new mitigation measure proposed to be implemented.

2. A substantial increase in the severity of an environmental impact would result unless mitigation measures are adopted that reduce the impact to a level of insignificance.

3. A feasible project alternative or mitigation measure considerably different from others previously analyzed would clearly lessen the significant environmental impacts of the project, but the project's proponents decline to adopt it.

4. The draft EIR was so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded.

The revised site plan would change the parking structure to three surface parking lots. The revised site plan would include up to approximately 140,000 square feet of nonresidential uses, which is the same amount of nonresidential building space analyzed in the DEIR. The open space for the revised site plan would be approximately 28,400 square feet and would be publicly accessible. Currently, the project is occupied by paved areas with patches of vegetation. No parks or recreation facilities exist on the project site.

3.2 REVISIONS TO THE DEIR IN RESPONSE TO COMMENTS

The text on page 3-12, Chapter 3, Project Description, under the heading "Intended Uses of the DEIR," has been revised in response to Comment A-1 from Department of Toxic Substances Control, dated July 10, 2024.

3.4 INTENDED USES OF THE DEIR

This Draft EIR (EIR) is a project EIR that examines the environmental impacts of the proposed project. This DEIR also addresses various actions by the City and others to adopt and implement the proposed project. This DEIR intends to evaluate the environmental impacts of the proposed project, thereby enabling the City of Rancho Cordova, other responsible agencies, and interested parties to make informed decisions with respect to the requested entitlements. The anticipated approvals required for this project are:

Lead Agency	Action
City of Rancho Cordova City Council	Development Agreement Specific Plan Zoning Amendment Zoning Amendment Tentative Subdivision Map Site Plan Approval Development Agreement Major Design Review Building Permit Certify EIR and Adopt Mitigation Monitoring and Reporting Program
Responsible Agencies	**Action**
Central Valley Regional Water Quality Control Board	Issuance of National Pollutant Discharge Elimination System (NPDES) Permit Issuance of Construction Permit

The text on page 5.12-3, Section 5.12, Recreation, under the heading "Existing Conditions," has been revised in response to Comment C-3 from Cordova Recreation and Park District, dated July 29, 2024.

5.12.1.2 EXISTING CONDITIONS

The CRPD has the primary responsibility for providing and maintaining recreation facilities and services. Table 5.12-1, CRPD's Parks and Recreation Facilities, shows the locations, acreages, and amenities of these facilities. As shown in Table 5.12-1, there are a total of 33~~2~~ park and recreational facilities with a total of 358.5~~ 295.5~~ acres (CRPD 2012, 2023b). CRPD also anticipates future park development of Exploration Park, Goldrush Park, Gantline 208/Arista Del Sol Community Park, Hummingbird Park, W. H. Williamson Park, Federspiel Park Walkway Improvement, and Rosemont Community Park Sports Courts (CRPD 2023c). CRPD is currently working on a districtwide Optimized Parks, Facilities and Recreation Plan that provides guidance over the next 10 years and began public review in fall of 2022 (CRPD 2023a). CRPD's standard for dedication of Quimby parkland is 5 acres per 1,000 residents within the city to be devoted to neighborhood and community parks. Table 5.12-1 shows there are currently 358.5 ~~295.5~~ acres of available recreation facilities. According to the Department of Finance's estimates, the current population in Rancho Cordova is 80,359 (DOF 2023). Based

on existing population and parkland, the City needs approximately 401.8 acres of parkland to accommodate its current population.

Table 5.12-2 CRPD's Parks and Recreation Facilities

	Facility Name	Acres	Location	Amenities
31	White Rock Community Park	14	10488 White Rock Rd. Rancho Cordova, CA 95670	2 basketball courts, 2 BBQs, multiuse fields, open grass area, pavilion, 4 picnic areas, playground, rental available, restrooms, soccer field, tennis court
32	White Rock Splash Park	0.53	10488 White Rock Rd. Rancho Cordova, CA 95670	drinking fountain, open grass area, parking lot, 2 picnic areas, restrooms, showers, spray park, 2 water slides
33	Linear park corridors Villages of Zinfandel development	63	Villages Of Zinfandel Rancho Cordova, CA 95670	linear park corridors
Total		~~295.5~~ 358.5		

Sources: CRPD 2012, 2023b.

The text on page 5.14-5, Section 5.14, Utilities and Service System, under Impact 5.14-1, has been revised in response to Comment D-2 from Sacramento Area Sewer District, dated July 19, 2024.

The wastewater generated by the project would be less than 0.01 percent of a 10 mgd flow capacity. This flow represents an even smaller fraction of the 181 mgd capacity of the SRWTP. Therefore, existing utility infrastructure, including the interceptor sewer line on Folsom Boulevard and the SRWTP would have sufficient capacity to accommodate the wastewater flows that the project is estimated to generate.

The proposed project would need to comply with Section 15.04.070, Permits, of the City's Municipal Code, which states that public sewers cannot be used without obtaining the permits required by this section; therefore, the proposed project would need to go through the City's Municipal Code before connection to a public sewer such as SacSewer.

Level of Significance Before Mitigation: Impact 5.14-1 would be less than significant.

Mitigation Measures

No mitigation measures are required.

Level of Significance After Mitigation: Impact 5.14-1 would be less than significant.

The text on page 5.14-2, Section 5.14, Utilities and Service System, under the heading "Local Regulations," has been revised in response to Comment D-3 from Sacramento Area Sewer District, dated July 19, 2024.

Local Regulations

SacSewer Ordinances

Collection Ordinance

The Collection Ordinance defines uniform requirements for the design, construction, and use of the sewage collection system. It establishes provisions for the enforcement of these requirements and sets penalties for non-compliance. The ordinance clarifies the responsibilities for the maintenance of the sewer collection system. It also establishes the rates and fees for users of SacSewer's facilities to cover the costs of system operation and maintenance.

Treatment and Resource Recovery Ordinance

The Treatment and Resource Recovery Ordinance establishes requirements for the use of SacSewer's sewage treatment and resource recovery system, ensuring compliance with environmental and health standards. It outlines enforcement provisions, including penalties for violations, and sets rates and fees for users to cover the costs of treatment, resource recovery, and system maintenance.

Sacramento Regional Wastewater Treatment Plant 2020 Master Plan

SRWTP's 2020 Master Plan provides a phased program of recommended wastewater treatment facilities and management programs to accommodate planned growth and to meet existing and anticipated regulatory requirements through the year 2020. The master plan addresses both public health and environmental protection issues while providing reliable service at affordable rates for Regional San customers. The key goals of the master plan are to provide sufficient capacity to meet growth projections and an orderly expansion of SRWTP facilities, comply with applicable water quality standards, and provide for the most cost-effective facilities and programs from a watershed perspective, as described in Chapter 2, Master Planning Goals, Objectives, Planning Assumptions, and Regulatory Requirements, of the 2020 Master Plan (Regional San 2008).

3.3 REVISIONS TO THE PROJECT DESCRIPTION

The following text and figures have been revised to reflect the updated entitlement package received on September 13, 2024. Only Chapter 3, *Project Description*, of the DEIR is being updated to align with the new entitlement; the rest of the DEIR should reference this revised project description for accurate information on the Mills Crossing project, such as the project site boundary, project size, project features, and proposed project land uses.

3.1.1 Project Location

The ~~9.85~~ 10.34-acre project site encompasses the following Assessor's Parcel Numbers (APNs): 076-0020-019, -20, -21, -22, 076-0213-013. The project site is located at the corner of Folsom Boulevard and La Loma Drive in the City of Rancho Cordova, Sacramento County. The City of Rancho Cordova is surrounded by unincorporated Sacramento County to the north, south, east, and west (see Figure 3-1, *Regional Location*).

3.1.2 Project Site History

The project site includes a former dry-cleaning site that operated from 1971 through 2003 located on the northwest portion of the project site (See Figure 5.6-1, Project Remediation Map in Chapter 5.6, *Hazards and Hazardous Materials*). The project site was found to have elevated levels of tetrachloroethylene (also known as perchloroethylene or "PCE") found in groundwater. The project site was previously remediated via a soil vapor extraction system from 2010 to 2016 and one groundwater extraction well from 2014 to 2017 (Appendix 5.6-1). The City of Rancho Cordova bought the property in 2018 and is working on addressing residual PCE in soil vapor that still exceeds screening levels (SWRCB 2024). The 2021 soil vapor data show that PCE concentrations in soil vapor exceed the San Francisco Bay Regional Water Quality Control Board's Environmental Screening Levels (ESLs) for vapor concentrations in the former dry cleaner area located on the northwest portion of the project site. The PCE concentrations exceeded the residential ESL for vapor intrusion consideration, which corresponds to a carcinogenic risk of 10-6. The City plans to perform additional site remediation including soil and sewer line excavation in the former dry cleaner area and contingency in-situ soil treatment at a deeper depth in the former parking lot area.[1] Section 5.6 provides additional details about potential hazards and hazardous materials at the project site.

3.1.3 Existing and Surrounding Uses

The project site is currently vacant. The project site was previously developed as a commercial shopping center, but all the previous buildings have since been demolished, leaving only the parking lot remaining. A few scattered trees are found in weedy patches within and around the perimeter of the project site. The project site also has a sloping incline located on the northwest portion of the project site on La Loma Drive. The project site is surrounded by residential uses to the north, residential uses and Folsom Lake College/Rancho Cordova to the east, light industrial uses to the south, and commercial and residential uses to the west. Figure 3-2, *Aerial*

[1] The proposed remediation activities have been exempt under State CEQA Guidelines Section 15304(f). This remediation work is not part of the proposed project because it needs to be completed whether or not the proposed project goes forward. Also, the remediation work and should be completed before any approval of the proposed project and prior to construction from the proposed project.

Photograph (NEW), shows the project site in its local context. Section 4.0, Environmental Setting, includes a more detailed description of the existing environmental setting.

3.1.4 Existing Zoning and Land Use Designations

The project site is zoned Residential Mixed-Use – Folsom Boulevard Specific Plan (RMU [FBSP]). The RMU (FBSP) Zoning District is intended to designate property for the development of medium and high-density housing (between 6.1 and 40 dwelling units per acre) that may incorporate office and/or commercial services. While the predominant use of the development is residential, the City encourages the vertical and/or horizontal integration of commercial and/or office uses that are compatible with the residential development.

The project site has a land use designation of Residential Mixed-Use (FB-RMU).

3.2 STATEMENT OF OBJECTIVES

Objectives for the Mills Crossing Project will aid decision makers in their review of the project and associated environmental impacts:

1. Provide for a mix of uses onsite by developing residential, commercial, and recreational uses on infill and underutilized parcels near the Mather Field/Mills Station.
2. Increase the City's housing stock by providing a range of housing density types, including affordable housing.
3. Increase employment opportunities in the City.
4. Improve the jobs-housing balance in the City of Rancho Cordova and provide new housing close to jobs and services.
5. Promote healthy living and physical activity by providing open space areas and opportunities to utilize alternative transportation options available proximate to the site, including the Mather Field/Mills Station.

3.3 PROJECT CHARACTERISTICS

"Project," as defined by the CEQA Guidelines, means:

> ... the whole of an action, which has a potential for resulting in either a direct physical change in the environment, or a reasonably foreseeable indirect physical change in the environment, and that is any of the following: (1)…enactment and amendment of zoning ordinances, and the adoption and amendment of local General Plans or elements thereof pursuant to Government Code Sections 65100–65700. (14 Cal. Code of Reg. § 15378[a])

Figure 3-2 Aerial Photograph (NEW)

~~Figure 3-2 Aerial Photograph~~

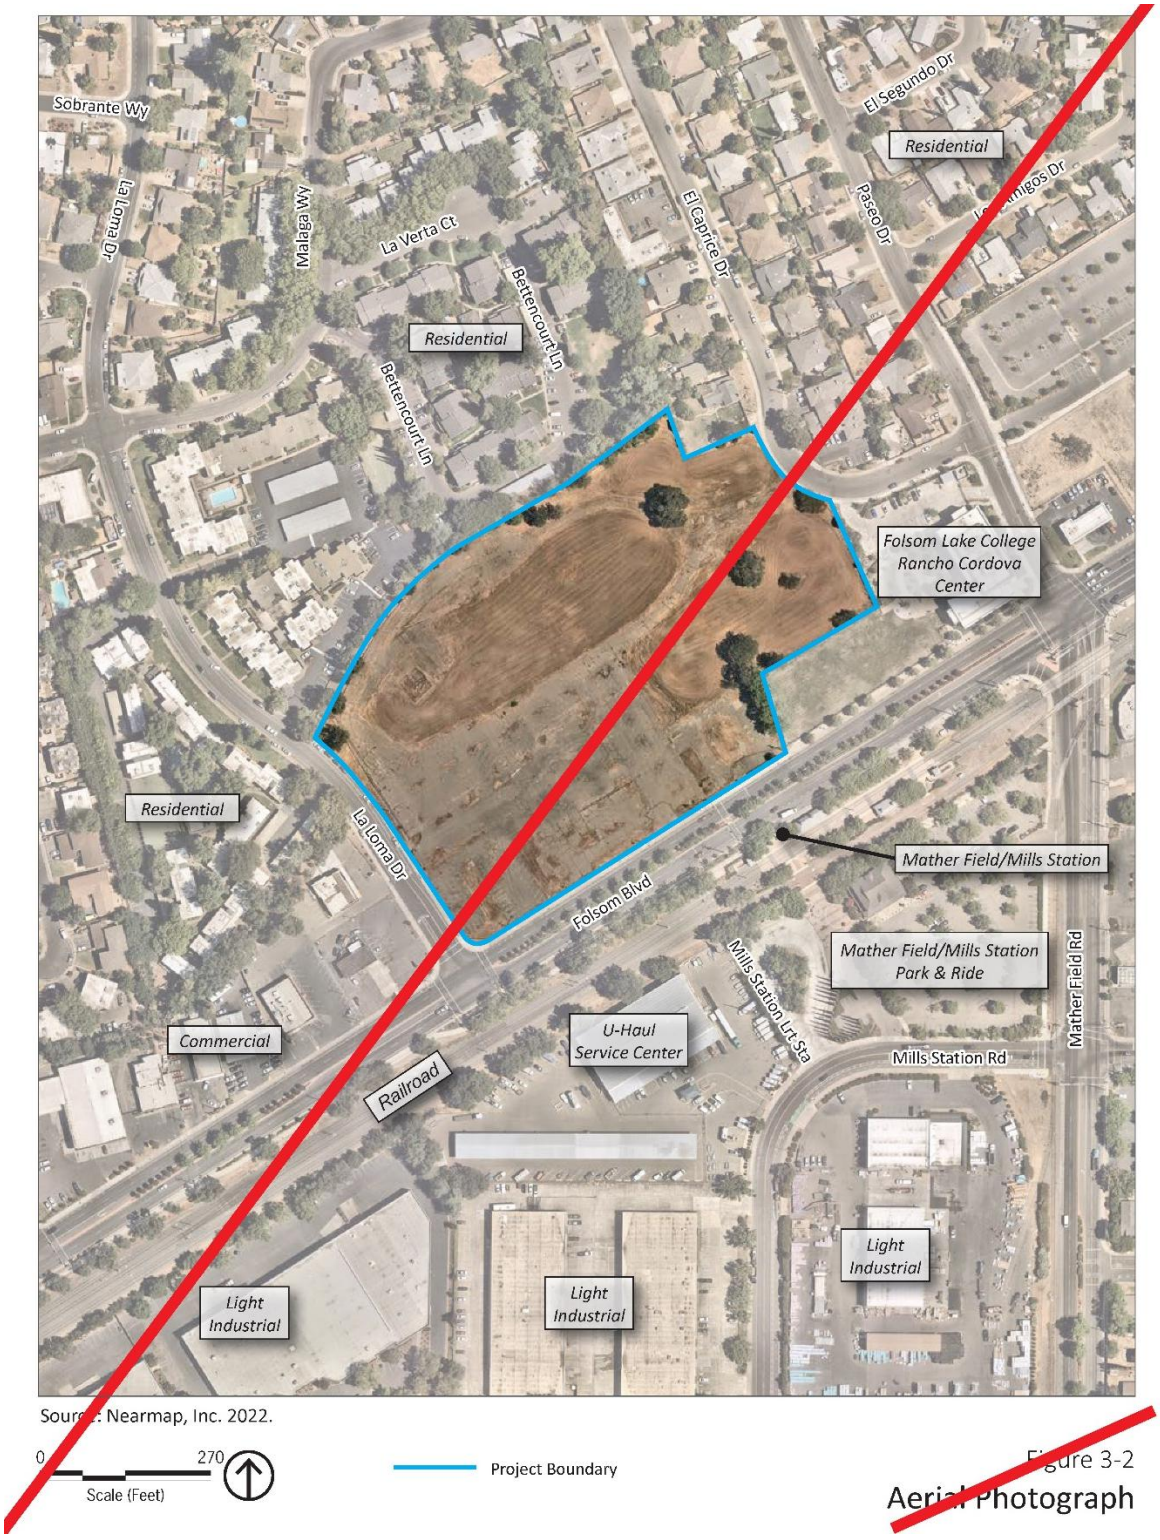

Figure 3-2
Aerial Photograph

3.3.1 Description of the City's General Plan Environmental Impact Report

The Environmental Impact Report for the City of Rancho Cordova General Plan ("2006 EIR") was approved by the Rancho Cordova City Council on June 26, 2006. The 2006 EIR was proposed to replace the General Plan which the City adopted from Sacramento County upon incorporation in July 2003. As indicated in the 2006 EIR, the project site is located in the Folsom Boulevard Planning Area, and a Specific Plan was prepared for this Planning Area after the adoption of the 2006 General Plan.

As indicated above, the project site is zoned RMU (FBSP) which allows between 6.1 and 40 dwelling units per acre. As such, the project site could allow between 24~~61~~ units and 161 ~~394~~units. As the project site is within the Mather Mills Opportunity Site, additional development standards are provided, which indicate that there is no minimum or maximum floor area ratio (FAR) for the project site.

3.3.2 Description of the Proposed Project

The proposed project would include community-commercial buildings, housing, public open space, and parking lots ~~structure~~. The project would be constructed in phases. Phase 1 would include the construction of non-residential development (buildings 1, 2, and 3); surface parking lots 1, 2, and 3; open space; and other site improvements. The proposed housing would be constructed in future phases as funding becomes available. In addition, future phases could include revisions to on-site parking (up to a maximum of 325 spaces) and additional non-residential building space on Parcel 5. Figure 3-3, *Proposed Parcel Plan (NEW)*, shows the proposed parcel plan, and Figure 3-4~~3~~, *Conceptual Site Plan (NEW)*, shows the layout of the proposed uses on the project site. In order to accommodate the proposed uses listed below, the necessary entitlements include:

- A Specific Plan Amendment to rezone portions of the Mills Crossing project site area from a Residential Mixed-Use (RMU) zone to a Commercial Mixed-Use (CMU), Medium Density Residential (MDR), and High-Density Residential (HDR) zone. ~~As shown in~~ Figure 3-5~~4~~, Zoning Option 1, ~~and 3-5, Zoning Option 2, to view~~ shows the ~~potential new~~ updated configuration for the Mills Crossing Project site. Figure 3-5~~4~~ shows 2.96 acres MDR, 4.79 acres CMU, and 1.09 acres HDR~~, and Figure 3-5 shows 3.05 acres MDR, 4.79 acres CMU, and 1.0 acres HDR~~. The remaining RMU areas will be dedicated as a public right of way. (See Section 3.3.3, Project Site Rezone Designation, for more information on the individual zones)
- A Tentative Subdivision Map to create ~~between five and nine~~ seven new parcels for the proposed uses. (See Figure 3-3.)
- Major Design Review for new construction

Phase 1

Parcel 1

~~**Community-Commercial Buildings**~~

- Building 1: Community Commercial Health and Wellness
  - ~~Community Health Clinic—up to 30,000 square feet~~

- ~~The community-commercial buildings would include~~ Up to 60,000 square feet of uses~~, and would include the following~~
- Medical and office building
- Located on 0.7 acres

Parcel 4

- Parking Lot 1
  - Area: 0.9 acres
  - Total parking spaces: 98
  - 5 ADA-compliant spaces
  - 5 electric vehicle charging stalls

Parcel 2

- Located on 1.12 acres
- Landscape features: Mix of turf and general planting mix
- Building 2: Community Arts Center ~~(Subtotal—~~
  - Up to 45,000 ~~35,000~~ square feet~~)~~
  - ~~Flex~~ Theater and Arts Building ~~(black/white/green box)—up to 18,000 square feet~~
- Plaza
  - Approximately 20,000 square feet
  - 11 short-term bike racks (22 bicycle capacity)
  - 9 long-term bike storage
  - 1 bike repair work stand
  - 19 plaza seating
  - 35 modular tables and 4 chairs per table
  - 2 waste and recycling receptacles
  - 3 electrical power outlets
  - Drinking fountain

Parcel 3

- Located on 0.65 acres
- Building 3: Flex Community Commercial Retail ~~Classrooms and Rehearsal Space—up to 6,000 square feet~~
  - Up to 20,000 square feet
  - Events and Meetings Space
  - Space for meetings, community and cultural events, banquet, and weddings~~—up to 15,000square feet~~

- ~~Production/Artist's Studios—up to 4,000 square feet~~
- ~~Gallery/Exhibits—up to 4,000 square feet~~
- ~~Administrative Space—up to 3,000 square feet~~

- ~~Commercial Office-Anchor—up to 25,000 square feet~~
- ~~Commercial Office-Shared—up to 10,000 square feet~~
- ~~Flexible Studios 1—up to 5,000 square feet~~
- ~~Flexible Studios 2—up to 7,500 square feet~~
- ~~Commercial Kitchen—up to 5,000 square feet~~
- Commercial-Retail ~~(Subtotal—up to 7,500 square feet)~~
  - Fresh Market, Food and Beverage, Café, Retail~~—up to 5,000~~
  - ~~Café—up to 2,500 square feet~~

Parcel 5

- Located on 1.4 acres
- Landscape Features: Mix of turf, bio-retention mix, and general planting mix
- Parking Lot 2
  - Area: 0.9 acres
  - Total parking spaces: 38
    - 2 ADA-compliant
    - 2 electric vehicle stalls
- Project Green
  - Area: 8,400 square feet
  - 10 project green seating
  - 2 waste and recycling receptacles
  - 2 electrical power outlets
  - Bioretention basins

Public Open Space

The proposed project would include ~~up to 2.5 acres of~~ public open space as follows:

- ~~Between 1.3 and 1.5 acres of Neighborhood and Community Greens~~
- ~~Between 0.75 and 1.0 acre~~ Approximately 20,000 square feet of Plaza and approximately 8,400 square feet of Project Green ~~Space~~

Parking Lots ~~Structure~~

The proposed project would include ~~a~~ three surface parking lots ~~structure~~ with a maximum of ~~between 275 and~~ 325 parking spaces. As noted above, parking lots 1 and 2 are on parcels 4 and 5, respectively. Parking lot 3 is on 0.49 acres in the southeast corner of the project site, as shown on Figure 3-4, *Conceptual Site Plan (NEW)*. Parking lot 3 would consist of 41 stalls, including 7 compact stalls, 3 ADA stalls, and 2 EV-only stalls. The area proposed to be parking lot 3 is owned by Folsom Lake College and would be leased to the City of Rancho Cordova for the proposed project.

Internal Circulation and Access

Figure 3-~~43~~, *Conceptual Site Plan (NEW)*, shows the conceptual internal roadways and access points into and out of the project site. The project site would be accessible via Folsom Boulevard to the south, La Loma Drive to the west, and El Caprice east of the project site.

Future Phases

Parcel 4

Future phases on Parcel 4 could include enhancements to the on-site parking configuration to add additional spaces (maximum of 325 parking spaces) as the need and funding becomes available.

Parcel 5

Future phases could include the construction of a non-residential building on Parcel 5 (up to 15,000 square feet). Funding, planning, and design details are not yet available for this building, but it is anticipated to be within the total building square footage analyzed in the DEIR.

Parcel 6 and Parcel 7

Future Housing

Future housing would be located on parcel 6, which is 2.94 acres, and parcel 7, which is 1.09 acres. The proposed project would provide up to 120 dwelling units, as follows:

- Parcel 6 would provide between 40 and 60 dwelling units
- Parcel 7 would provide between 55 and 60 dwelling units
- Between 55 and 60 Multifamily Affordable Apartments
- Between 50 and 60 Zero Lot Line Townhouse-Style Homes for Sale

3.3.4 Construction and Operation

Construction

Construction activities would involve the removal of vegetation and paved areas; grading to finished design elevations; excavation to allow construction of building foundations, utilities, roadways, parking areas, sidewalks, and landscaping. Equipment used during construction may include, but is not limited to, crawler tractors, tractors, loaders, backhoes, excavators, graders, scrapers, cranes, forklifts, generator sets, welders, pavers, paving equipment, rollers, and air compressors. It is anticipated that construction of the project would occur from 2024 through 2029.

Operation

The proposed project would result in up to 120 dwelling units which, assuming 2.68 persons per household as included in the General Plan EIR, would result in approximately 322 residents. The project would include up to 140,000 square feet of non-residential ~~community-commercial~~ uses. The open space proposed for the project site (up to 28,400 square feet ~~2.5 acres~~) would be publicly accessible

3.4 PROPOSED PROJECT VS. REVISED SITE PLAN

Since the public circulation of the DEIR on June 7, 2024, and because of the subsequent planning and entitlement process, site refinements were made as the project team completed full financial projections, focused on final project elements, and incorporated value engineering adjustments. As detailed in Section 3.3, *Revisions to the Project Description*, the new Figure 3-3, *Proposed Parcel Plan (NEW)*, and revised Figure 3-4, *Conceptual Site Plan (NEW)*, of this FEIR reflect the updated entitlement package received on December 19, 2024. These refinements are reflected in the revised project description (see Section 3.3).

Figure 3-4 of this FEIR includes Building 1, Community Commercial Health and Wellness; Building 2, Community Arts Center; Building 3, Flex Community; three surface parking lots; public open space; and two parcels dedicated to future housing. Figure 3-3, *Conceptual Site Plan*, in the DEIR, shows four nonresidential buildings, a parking structure, and a residential area in the northern portion of the project site. The project contemplates the immediate development of the nonresidential portion, with residential development to occur later. The EIR has fully analyzed the impacts of both the near-term nonresidential development and the long-term residential development. Figure 3-4 of the FEIR also extends the project boundary to include the proposed parking lot 3 on the southeast corner of the project site and adjacent to Folsom Lake College. The revised site plan would extend the project size by 0.49 acres, from 9.85 acres to 10.34 acres. The addition of parking lot 3 would also create a new driveway south of the project site along Folsom Boulevard.

The updated December 2024 entitlement alters the project originally described in the DEIR. However, the analysis in the DEIR, supplemented by the analysis added in this FEIR, account for the full buildout of the original project (multiple phases), which is for a larger and more intensive development than the revised project. For example, the revised project removes a parking structure and decreases the total non-residential square footage. While the revised project would extend the project boundaries to include parking lot 3, which was not part of the original site plan, this does not result in significant impacts that were not already addressed in the DEIR. Therefore, the original environmental analysis in the DEIR is still applicable to the revised project. As

such, the analysis in the DEIR, as supplemented by the analysis herein, will serve as the environmental analysis for future phases of development, as described in Section 3.3.2 of this FEIR. No additional project-level environmental review would be required for future phases if the subsequent development is consistent with the analysis in the DEIR and this FEIR.

The differences between the revised site plan and the proposed project are detailed in Table 3-1.

The changes identified do not alter the substantive conclusions of the DEIR concerning any of the significant impacts of the project and do not necessitate a recirculation of the DEIR, as analyzed in Section 3.5, *Recirculation*.

Table 3-1 Differences between the Proposed Project vs. Revised Site Plan

Proposed Project	Revised Site Plan	Analysis
Figure 3-3, *Conceptual Site Plan*, of the DEIR shows a proposed road from El Caprice Drive crossing to the west of the project site connecting to La Loma Drive.	Figure 3-4, *Conceptual Site Plan (NEW)*, of the FEIR, the proposed road would shift north, closer to the existing residential area	See Section 3.5.2 of this FEIR, *Noise Analysis*, and Section 3.5.3, *Air Quality/Greenhouse Gas/Energy Analysis*, for a discussion and analysis of noise and air quality impacts discussed below with the shift of the road closer to an existing residential area.
Figure 3-3, *Conceptual Site Plan*, of the DEIR shows a parking structure of three levels located in the southwest portion of the site. The project description, on page 3-6 of the DEIR, states that the parking structure would include between 275 and 325 parking spaces.	Figure 3-4, *Conceptual Site Plan (NEW)*, of the FEIR shows three surface parking lots within the project boundary. Parking lot 1 would provide a total of 98 parking spaces with 41 spaces under solar shade canopies. Parking lot 2 would provide 38 parking spaces and Parking lot 3 would provide 41 parking spaces.	See Section 3.5.3 of this FEIR, *Air Quality/Greenhouse Gas/Energy Analysis*,, for a discussion and analysis of the parking structure change to parking lots.
Figure 3-2, *Aerial Photograph*, through Figure 3-4, *Zoning Option 1*, of the DEIR shows a smaller project boundary.	Figure 3-2, *Aerial Photograph (NEW)*, through Figure 3-5, *Zoning Option 1*, are revised to include an extended project boundary to include the proposed parking lot 3.	See Section 3.5.2, *Noise Analysis*, and Section 3.5.3, *Air Quality/Greenhouse Gas/Energy Analysis*, of this FEIR, for a discussion and analysis of the noise and air quality impacts related to the project boundary extension. Additionally, see the discussion in Section 3.5 for an explanation as to why recirculation is not required, despite the project boundary extension.
The project description, on page 3-6 of the DEIR, states that the Community-Commercial use would be 140,000 square feet, which included: - Health and Wellness - Events and Meeting Space - Arts Center - Community-Commercial Building - Commercial-Retail	Figure 3-4, *Conceptual Site Plan (NEW)*, provides 140,000 square feet of nonresidential use, including: - Building 1– Community Commercial Health and Wellness - Building 2 – Community Arts Center - Building 3 – Flex Community - Future phases could include constructing a nonresidential building on Parcel 5, approximately 15,00 square feet.	The square footage of nonresidential development would not change; therefore, no further analysis is necessary.
The project description on page 3-6 of the DEIR states that the project would provide up to 2.5 acres of public open space, including:	Figure 3-4, *Conceptual Site Plan (NEW)*, includes a 20,000-square-foot, or 0.46-acre, Plaza and 8,400 square feet, or 0.2-acre, Project Green.	As noted in Impact 5.12-1 of the DEIR, the proposed project would need to comply with the City's General Plan policies requiring compliance with the City's parkland and open space standards and the City's Municipal

Proposed Project	Revised Site Plan	Analysis
- Between 1.3 and 1.5 acres of Neighborhood and Community Green - Between 0.75 and 1.0 acre of Plaza and Green Space		Code, Chapter 22.40, Park and Recreation Dedication Fees. While the revised site plan eliminates between 1.3 and 1.5 acres of Neighborhood and Community Green, the revised plan still proposes a Plaza and Project Green. The project would still comply with the these regulations. Therefore, the analysis of impacts determined in the DEIR would also apply to the revised site plan.

3.5 RECIRCULATION CRITERIA

As discussed below, the proposed revisions to the project, including the project boundary extension, do not meet any of the criteria outlined in the CEQA recirculation standards, specified under CEQA Guidelines Section 15088.5, and therefore a recirculation of the DEIR is not warranted.

3.5.1 New Significant Environmental Impact or New Mitigation Measure

The recirculation standard requires that the DEIR be recirculated if significant new information is added in the form of a new significant environmental impact resulting from the project or from a new mitigation measure proposed to be implemented. The revisions to the site plan would not result in any new significant environmental impacts or require new mitigation measures.

The DEIR analyzed similar developments compared to the revised site plan (housing units and nonresidential buildings) and concluded that the project would result in less-than-significant impacts with the implementation of mitigation. The DEIR did not include the proposed parking lot 3 site, as identified in Figure 3-4, which extends the original project boundary from the DEIR. However, this site was previously developed and is not zoned for a unique land use. Moreover, the proposed usage (parking lot) does not represent an unusual development type in the city, and the application of both the mitigation measures in the DEIR and applicable City standards for construction and operation ensure that there would be no new significant environmental impacts beyond those analyzed in the DEIR and that no new mitigation measures would be required.

Parking lot 3 is supportive of the rest of the proposed project and does not include structures or uses beyond parking. As such, the environmental analysis is focused on the physical construction of the parking lot rather than the occupational uses evaluated in the DEIR for the rest of the project. The addition of the third parking lot would not lead to any new noise, air quality, greenhouse gas, or energy impacts beyond what was already addressed in the DEIR (refer to Section 3.5.6, Noise Analysis, and Section 3.5.7, Air Quality/Greenhouse Gas/Energy Analysis, of this FEIR). This is because the DEIR evaluated a project similar to the updated December 2024 entitlement proposal. In addition, no new significant environmental impacts to biological resources would result from the proposed changes, and no new mitigation measures would be required. Parking lot 3 is adjacent to the original project boundaries and has a similar topography and vegetation type as shown in Figure 3-2. Accordingly, the biological study from the DEIR (Appendix 5.2-1) remains applicable to the revised site, including the proposed parking lot 3, including the observations in Appendix 5.1-1 for the potential of trees adjacent to the project site to provide habitat for nesting birds. As such, the same biological mitigation

measures for bird nesting (mitigation measure BIO-1) and bat roosting (mitigation measure BIO-2) will apply because the City is the lead agency for the construction of parking 3 and will oversee compliance with the mitigation measures as part of the mitigation monitoring and reporting program (MMRP).

No new significant environmental impacts to tribal and cultural resources would result from the proposed changes, and no new mitigation measures would be required beyond those analyzed and applied in Section 5.3, *Cultural Resources*, and Section 5.13, *Tribal Cultural Resources*, of the DEIR. The tribal and cultural resources mitigation measures would also be applied to the new site regarding ground-disturbing activities and monitoring in the event tribal cultural resources are discovered during construction. The cultural study in the DEIR (Appendix 5.3-1) examined records within a 0.5-mile radius of the original project site to identify any previously documented precontact or historic archaeological sites, architectural resources, or traditional cultural properties. This study area includes the additional parking lot 3 site. The revised project boundaries would not include any of the sites listed in Table 5.13-1, *Previously Recorded Archaeological Resources within a 0.5 Mile Radius of the Project Site*, of the DEIR. The mitigation measures for the inadvertent discovery of cultural resources (CUL-1 and CUL-2) and tribal cultural resources (TCR-1 and TCR-2) will apply to parking lot 3 because the City is the lead agency for the construction of the parking lot and will ensure compliance through the implementation of the MMRP that covers the entire project, as revised in this FEIR. As a result, the findings of less-than-significant impacts after the application of mitigation measures to tribal and cultural resources identified in the DEIR are also applicable to the revised plan. No new mitigation measures are required.

No new significant environmental impacts are anticipated to result from the proposed parking lot 3 regarding hazards and hazardous materials, nor new mitigation measures needed, beyond those anticipated and applied in Section 5.6 of the DEIR. According to hazardous material databases (EviroStor and GeoTracker), and as shown in Figure 5.6-1, *Project Site Remediation Map*, in the DEIR, no hazardous materials are present in the proposed parking lot 3 sites. The only hazardous materials present are on the northwest portion of the site, and Section 5.6 of the DEIR already analyzed and applied mitigation measure HAZ-1 to the northwest area. The construction and operation of the proposed parking lot 3 would involve minimal, if any, transport, use, or disposal of hazardous materials, and are therefore not anticipated to create a significant hazard to the public or the environment, pursuant to Impact 5.6-1. No reasonably foreseeable upset or accident conditions involving the release of hazardous materials into the environment exist on the proposed parking lot 3 site. Therefore, no such materials are present on that portion of the project site, and no emissions or handling of hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school is anticipated beyond that already analyzed pursuant to Impacts 5.6-2, 5.6-3, or 5.6-4. Moreover, parking lot 3 would not cause new impacts pursuant to Impact 5.6-5 because it would be subject to the same zoning designation's height limit of 65 feet and would therefore not conflict with a land use compatibility plan. The proposed parking lot 3 would also not create new significant environmental impacts pursuant to Impacts 5.6-6 or 5.6-7 because it would not impair or physically interfere with the implementation of an adopted emergency response or evacuation plan and would not be sited within a Very High Fire Hazard Severity Zone, respectively. Accordingly, no new significant environmental impacts are anticipated, and no new mitigation measures are needed regarding hazards and hazardous materials.

No new significant environmental impacts to utilities and service system resources would result from the proposed changes, and no new mitigation measures would be required beyond those analyzed and applied in

Section 5.14 of the DEIR. The revised site plan introduces a new impervious surface in the proposed parking lot 3, potentially impacting stormwater runoff. However, as shown on Figure 5.14-1, *Storm Drainage Infrastructure*, of the DEIR, runoff from the site is directed into existing drop inlets on surrounding streets. From there, stormwater flows through drainage laterals on La Loma Drive and Folsom Boulevard, ultimately connecting to drainage mains along these roads. Runoff from the revised site would continue to be managed by this existing stormwater infrastructure. Any new stormwater infrastructure required would need to meet the standards set by the Stormwater Quality Design Manual for the Sacramento Region, ensuring that hydromodification control and low-impact development measures are implemented to manage runoff. Additionally, the project would adhere to local regulations outlined in the DEIR, including Chapter 15.12 of the Municipal Code, which governs discharges into the stormwater system, and Chapter 15.95, which requires new developments to contribute to funding improvements to the City's stormwater infrastructure. As such, no new significant impacts or mitigation measures pursuant to Impact 5.14-5 are necessary for the revised project.

The proposed parking lot 3 site would also result in a new driveway along Folsom Boulevard. This roadway would be constructed in compliance with the City's roadway design and improvement standards as stated in the City's Municipal Code, Chapter 22.110, Design and Improvement Standards. Since the revised project would have similar impacts to the originally proposed project and all mitigation measures would apply, there are no new environmental impacts or mitigation measures associated with the revised project.

Therefore, the revised project does not meet the standard for recirculation based on the introduction of a new significant impact resulting from the revised project or from new mitigation measures proposed to be implemented, pursuant to CEQA Guidelines Section 15088.5(a)(1).

3.5.2 Substantial Increase in the Severity of an Environmental Impact

Recirculation is required if the revised project results in a substantial increase in the severity of an environmental impact that cannot be mitigated to a less-than-significant level without new mitigation measures. The DEIR determined that the following impacts require mitigation measures to reduce impacts to less than significant: air quality, biological resources, cultural resources, greenhouse gas emissions, hazards and hazardous materials, and tribal cultural resources. While the project description has changed to include parking lot 3, the DEIR already analyzed the construction and operational impacts of similar elements in the original project description. Parking lot 3 will use conventional construction techniques and is similar to surface parking lots 1 and 2, as shown in the revised project. As such, no substantially more severe environmental impacts are anticipated. Moreover, mitigation measures that will address construction impacts such as dust and erosion (such as Mitigation Measure AQ-1) will continue to apply, as will all City regulations for surface parking, included in the municipal code and adopted engineering standards. The mitigation measures applied in the DEIR would apply to the revised project, including the proposed parking lot 3, and there are no substantially more severe environmental impacts that cannot be mitigated to a less-than-significant level without the adoption of new mitigation measures. Therefore, recirculation pursuant to CEQA Guidelines Section 15088.5(a)(2) is not required.

3.5.3 A Feasible Alternative or Mitigation Measure Not Adopted

If a feasible alternative or mitigation measure considerably different from those previously analyzed that would lessen the significant environmental impacts of the project is introduced and then declined, recirculation is required. However, the revisions to the project, as detailed in Section 3.3 of the FEIR, do not introduce any alternatives or mitigation measures that are substantially different from those previously considered in the DEIR. The revised site plan does not propose a new alternative to reduce impacts but reflects refinements to the layout, including changing parking structures to parking lots, extending the project boundary, proposing different building arrangements, and proposing different circulation layouts. These changes do not introduce a new or more feasible alternative that would lessen environmental impacts. Therefore, the recirculation standard pursuant to CEQA Guidelines Section 15088.5(a)(3) based on the rejection of a feasible alternative or mitigation measure is not applicable.

3.5.4 Inadequacy of the Draft EIR

Recirculation is also required if the DEIR is found to be so inadequate or conclusory that it precludes meaningful public review and comment. However, the DEIR was comprehensive and provided adequate opportunities for public review. The DEIR thoroughly addressed potential environmental impacts and provided a clear analysis of the project's effects. Furthermore, the DEIR's assessment included potential impacts from a more intensive project scenario with a large parking structure. Although the revised site plan extends the project boundary to include proposed parking lot 3, the impacts and mitigation measures determined in the DEIR would also apply to this new site. The revisions in the FEIR have not substantially altered the scope or nature of the project. Therefore, the DEIR was not inadequate, and meaningful public review and comment were not precluded. As a result, recirculation pursuant to CEQA Guidelines Section 15088.5(a)(4) is also not required.

In conclusion, the revisions to the project, as outlined in the FEIR and summarized in Section 3.3, do not trigger the need for recirculation of the DEIR under any of the four criteria outlined in CEQA Guidelines Section 15088.5(a). The revised site plan does not introduce new significant environmental impacts, does not substantially increase the severity of existing impacts, does not propose any new feasible alternatives or mitigation measures that would lessen impacts, and does not represent an inadequacy in the DEIR that would prevent meaningful public review. Therefore, the DEIR remains sufficient for evaluating the revised project, and no recirculation is required.

3.6 AESTHETIC/LIGHT ANALYSIS

As shown in Figure 3-4 in the FEIR, the revised site plan would include a photovoltaic canopy over parking spaces in parking lot 1. As indicated in Section 8.1 of the DEIR, development in the city would increase the amount of daytime glare and nighttime lighting due to intensification. However, with the implementation of lighting standards and General Plan policies, impacts would be less than significant. The proposed project would need to comply with the City's local regulations regarding light. As mentioned in Section 23.725.030, Permit Required, of the City's Municipal Code, outdoor lighting fixtures for new multifamily residential, commercial, industrial, mixed-use, and public/quasi-public uses require design review approval. This approval is granted alongside land use and development permits. Although the project site is vacant and the proposed

project would increase light and glare in the area, the DEIR accounted for this increase by referencing local regulations that would reduce impacts. Therefore, analysis in the DEIR would be adequate for the revised site plan. Therefore, the impacts would be less than significant, and the proposed project would not result in new or substantially more severe significant impacts.

3.7 NOISE ANALYSIS

Figure 5.9-1, *SoundPlan Noise Contour for Mills Crossing*, on page 5.9-19 of the DEIR, reflects project noise from a parking structure, two Flex Community Centers, a Flex Theater and Studios, a Wellness Center, and a café. Furthermore, Figure 5.9-1 places the Wellness Center on the southeast side of the project site, in an area designated for a road connection to the parking lot (Los Rios) via Street F. However, the site plan shows Street E connected between Street B and El Caprice Drive in the northeastern portion of the project site.

The revised site plan (Figure 3-4, *Conceptual Site Plan (NEW)*) would not result in noise impacts beyond those addressed in the DEIR. As shown in Figure 5.9-1, of the DEIR, the projected noise levels for the proposed project are significantly below the City's Exterior Noise Standard of 60 A-weighted decibels (dBA). The noise modeling prepared for the DEIR (Appendix 5.9-1, *Noise Impact Assessment*, in the DEIR), was done conservatively. The noise modeling took into account the planned parking garage at the southwest corner using reference measurements from an existing garage but did not factor in the noise attenuation typically provided by the garage structure. Noise attenuation refers to the reduction or dampening of sound as it travels through or is absorbed by materials or structures. Parking structures have greater noise attenuation than surface parking lots due to the walls and roof of the structure, which absorb and contain much of the noise. However, the noise modeling in the DEIR did not take this noise attenuation into account for the proposed project. As noted in Appendix 5.9-1 of the DEIR, no additional attenuation is assumed for hard surfaces such as a parking lot. Therefore, the noise modeling and analysis in the DEIR remain applicable to the revised site plan since the DEIR analysis did not include noise attenuation that a parking structure would provide.

In addition, the other four area noise sources in the model were based on reference measurements from various environments, including single-family and multifamily neighborhoods, playgrounds, and commercial parking lots. This approach ensures a conservative assessment incorporating a wide range of potential noise sources that may vary in intensity and impact. This approach accounts for the broadest possible spectrum of noise levels, including both lower and higher noise-producing scenarios. While the revised site plan may alter the noise dynamics from those modeled, the noise expert who prepared the analysis for the DEIR concluded that these four noise sources would not extend significantly into the northwest area where residential areas currently exist (see Appendix A, *Mills Crossing Parking Update: Noise*, of this FEIR). Therefore, it can be assumed that the minor adjustments to building locations proposed under the revised site plan would be unlikely to alter the noise level projections substantially or exceed the City's noise standards.

As shown on Figure 5.9-1 of the DEIR, for the residential area on El Caprice Drive, operational noise levels would be between 32.6 to 44.1 dBA. The standard for residential receptors is under 60 dBA. Therefore, the proposed project as analyzed in the DEIR would not exceed the City's noise standard. The revised site plan, as depicted on Figure 3-4 of this FEIR, relocates Road E to connect with El Caprice Drive, moving the proposed road closer to a corner lot adjacent to existing residential areas. This adjustment would replace the housing

initially planned for the northeast area with a road, thereby moving the noise source closer to an existing home. Although the revised plan removes the residential buildings planned in the northeast that originally served as noise buffers (see Figure 3-4, *Conceptual Site Plan (NEW)*, in the FEIR), the revised site plan does not increase the amount of traffic associated with the proposed project, and the noise expert that prepared the noise analysis for the DEIR states that the relocated road would not increase the predicted noise level enough to exceed the City's threshold (see Appendix A of this FEIR). The revised site plan would also include the additional proposed parking lot 3, which would be south of future housing (see Figure 3-4, *Conceptual Site Plan (NEW)*, in this FEIR). The proposed, future residential buildings would serve as a buffer for the noise from the proposed parking lot 3 to the surrounding area. Therefore, no significant environmental effects would occur. This would not substantially increase the severity of the less-than-significant noise impact determined in Impact 5.9-2 of the DEIR. No new mitigation measures would be required.

3.8 AIR QUALITY/GREENHOUSE GAS/ENERGY ANALYSIS

The change from a parking structure in the proposed project to the three surface parking lots in the revised site plan would not introduce new greenhouse gas emissions impacts not already addressed in the DEIR. The change would result in lower criteria air pollutant and greenhouse gas emissions due to reduced construction material use, decreased maintenance needs, and lower electricity consumption.

The DEIR identified potentially significant impacts from a cumulative increase in criteria pollutants during construction and included Mitigation Measure AQ-1, which requires the implementation of Sacramento Metropolitan Air Quality Management District's basic and enhanced construction emission-control practices to reduce fugitive dust. This mitigation measure would also be applied to the revised site plan, including the proposed parking lot 3. Please refer to Appendix B, *Mills Crossing Parking Update: Impact on Emissions*, in this FEIR, for a detailed analysis and additional information provided by ECORP Consulting, Inc.

Agreed. The original model accounts for a lot of 'busy-ness' up there. The new Site Plan appears to show that this would go away. An while those buildings, which create buffers in the original model, would also go away, that single roadway essentially accommodating internal circulation is not going to jump the predicted noise by 15 decibels, as would be needed to surpass the threshold.

Subject: RE: Mills Crossing Noise

Hi Mark,

These site plan changes are exactly why we model these things so conservatively. For instance, we modeled the originally planned parking garage at the southwest corner using reference measurements taken inside an existing garage yet didn't account for any noise attenuation of an actual garage structure in the modeling (parking garages typically have huge gaps in the walls, but they still have walls). The other 4 area noise sources placed in the model are based on reference measurements from single family neighborhoods (which include internal traffic), multi-family neighborhoods (which include internal traffic), playgrounds, and commercial parking lots. Modeling all these sources can be considered a bit redundant, but conservative so that's why we do it. Lastly, while the changes in the site plan may change the noise dynamic from that modeled, the sources wouldn't extend so far up to the northwest. So while there aren't those buildings buffering the existing land uses there's also not the area sources flanking them.

I totally agree that there is no need to remodel.

Subject: Mills Crossing Noise

The City has asked if the revised site plan would result in new noise impacts not evaluated in the EIR. We've looked at this and think the answer is no. The projected numbers are already well below the 60 dBA threshold and moving a few buildings around probably won't change them substantially. Further, buildings in the area to the north (single family housing) was 'assumed' in the EIR, but this revised site plan doesn't include buildings, so re-modeling probably wouldn't make any sense. The only piece that gives us pause is the relocation of Road E on the east connecting to El Caprice Drive. In the EIR it's a fair distance from the existing home that fronts El Caprice and the revised site plan would make it a corner lot. Even here though, perhaps the 44.1 dBA projection across El Caprice Drive would simply move north but still remain below the threshold. However, we thought it worth asking your opinion as THE expert. The first graphic is from the EIR…Figure 5.9-1. The second is from their revised site plan.

Appendix B Mills Crossing Parking Update: Impact on Emissions

July 2024

Mark Teague
Placeworks, Inc., Managing Principal, Environmental Services
101 Parkshore Drive, Suite 112
Folsom, California 95630

Subject: Mills Crossing Parking Configuration Update and its Effect on Project Emissions Generation

It is ECORP Consulting's (ECORP) understanding that the originally proposed parking structure associated with the Mills Crossing Project in Rancho Cordova, California is now being proposed as a surface parking lot. This change in land use will result in the generation of less criteria air pollutant and greenhouse gas (GHG) emissions.

It is noted that the construction of a surface parking lot will require the use of less building materials and the use of less construction equipment compared to construction of a parking structure, resulting in the generation of less criteria air pollutant and GHG emissions. Once constructed, a surface parking lot will require less maintenance in the form of architectural coatings/paint, a source of the criteria air pollutant, reactive organic gas (ROG). Additionally, a surface parking lot will consume less electricity, an indirect source of GHG emissions, compared with a parking structure as a parking structure would include elevators and more lighting. For these reasons, the development of a surface parking lot at the Mills Crossing Project Site will result in generation of less emissions than the development of a parking structure.

If you have any questions, please call me at (530) 717-7600 or email me at smyers@ecorpconsulting.com.

Sincerely,
ECORP Consulting, Inc.

CITY OF RANCHO CORDOVA

RESOLUTION NO. XX-2025

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF RANCHO CORDOVA, STATE OF CALIFORNIA, APPROVING A TENTATIVE SUBDIVISION MAP AND A MAJOR DESIGN REVIEW FOR THE MILLS CROSSING PROJECT – PROJECT NO. PLND-0524-0098

WHEREAS, the City of Rancho Cordova filed an application for a Tentative Subdivision Map and Major Design Review approval for Mills Crossing ("Project"); and

WHEREAS, the Project includes the subdivision of 9.85 acres to develop community-commercial buildings, public open space, and surface parking. The project includes three buildings designed for multiple uses, including office space, community flex space, health services, event space, and a flexible theater. The Project is located at 10153 Folsom Boulevard, between La Loma Drive and Paseo Drive/Mather Field Road. The project site is within the Mather Mills Opportunity Area, which is identified in the Folsom Boulevard Specific Plan (FBSP) as a priority location for compact, urban, and pedestrian-oriented development.

WHEREAS, the City Council is the appropriate authority to hear and take action on this project; and

WHEREAS, on April 21, 2025, the City Council held a properly noticed public hearing at which it received a report from City Staff regarding the Mills Crossing project and oral and written testimony from the public, and deliberated on the item; and

WHEREAS, the public hearing was noticed in accordance with the requirements set forth in Government Code section 65090 and 65091

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF RANCHO CORDOVA HEREBY RESOLVES AS FOLLOWS:

1. In accordance with Government Code section 66473.5, the proposed Tentative Subdivision Map (Exhibit A) with attached Conditions of Approval (Exhibit B) attached hereto is consistent with the applicable General and Specific Plan objectives, policies, land uses and programs. Section 66474 of the Government Code requires a City to deny approval of a tentative map if any of the findings are found to be true. In the case of the proposed map, none of the required findings were found to be true. The following evidence supports the map request:

    A. **Finding:** That the proposed map is not consistent with applicable general and specific plans as specified in Section 65451.

    Evidence: The proposed Tentative Subdivision Map aligns with the Mills Crossing Specific Plan Amendment and the Rancho Cordova General Plan by supporting a mixed-use, high-density, and medium-density residential development along Folsom Boulevard. The subdivision layout, consisting of seven parcels, promotes connectivity, walkability, and transit access, consistent with the City's vision for a vibrant, pedestrian-friendly corridor. The lot configuration, infrastructure improvements, and density conform to the Commercial Mixed-Use (CMU), High-Density Residential (HDR), and Medium-

Density Residential (MDR) designations, ensuring compatibility with surrounding development.

B. **Finding:** That the design or improvement of the proposed subdivision is not consistent with applicable general and specific plans.

Evidence: The proposed Tentative Subdivision Map is consistent with the Mills Crossing Specific Plan Amendment and the General Plan. The subdivision layout supports a mix of uses by integrating residential and commercial components, aligning with the City's vision for a walkable, mixed-use development. The map ensures appropriate access, circulation, and infrastructure improvements while maintaining connectivity to surrounding roadways and adjacent properties. The proposed density and land use distribution remain consistent with the goals of the General Plan, facilitating efficient land use and supporting economic and housing objectives.

C. **Finding:** That the site is not physically suitable for the type of development.

Evidence: The site is physically suitable for the proposed subdivision within the Mills Crossing project. The subdivision will create a mix of residential and commercial parcels designed to support a walkable, mixed-use environment. The site is accessible from existing roadways, and the proposed infrastructure improvements will ensure adequate utility service, drainage, and circulation. The project also incorporates landscaping and open space features to enhance the site’s functionality and integration with the surrounding area.

D. **Finding:** That the site is not physically suitable for the proposed density of development.

Evidence: The site is physically suitable for the proposed density within the Mills Crossing project. The subdivision aligns with the proposed General Plan and Specific Plan designations, supporting a mix of commercial and residential uses. The proposed density is appropriate given the site's location along Folsom Boulevard, access to transit, and existing infrastructure. Improvements, as shown on the Tentative Subdivision Map, will ensure adequate circulation, utilities, and site functionality.

E. **Finding:** That the design of the subdivision or the proposed improvements are likely to cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat.

Evidence: An Environmental Impact Report (EIR) was prepared for the Mills Crossing project where the construction of commercial buildings, residential uses, and the protection of natural resources were addressed in accordance with the requirements of the California Environmental Quality Act (CEQA). The EIR contains a description of the Project, description of the environmental setting, identification of project impacts, and mitigation measures for impacts found to be potentially significant, as well as an analysis of project alternatives, growth-inducing impacts, and cumulative impacts. According to the EIR and Biological Resources Assessment prepared for the project, the project site is a previously disturbed/developed site and there are no sensitive natural communities or

riparian habitats within the project site. The EIR identifies issues determined to have no impacts or less-than-significant impacts, provides analysis of potentially significant impacts, and identifies mitigation to reduce potentially significant impacts, including measures to conduct surveys for nesting birds and bats prior to construction. The EIR concluded that all potential impacts can be reduced to less-than-significant levels with implementation of mitigation. Consequently, there would be no significant and unavoidable environmental impacts as a result of the project, and no Statement of Overriding Considerations is required. The proposed project is consistent with the project analyzed in the Environmental Impact Report, and would not cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat.

F. **Finding:** That the design of the subdivision or the type of improvements is not likely to cause serious public health problems.

Evidence: The proposed subdivision has been designed to comply with all applicable health and safety standards. The project includes necessary infrastructure improvements to support safe circulation, utilities, and stormwater management. Environmental review has been conducted to address potential hazards, and mitigation measures have been incorporated to minimize impacts. No serious public health problems are anticipated as a result of the subdivision's approval.

G. **Finding:** That the design of the subdivision or the type of improvements will conflict with easements, acquired by the public at large, for access through or use of property within the proposed subdivision. In this connection, the legislative body may approve a map if it finds that alternate easements, for access or for use, will be provided, and that these will be substantially equivalent to ones previously acquired by the public.

Evidence: The proposed subdivision design complies with City of Rancho Cordova ordinances and standards and does not conflict with existing public easements or necessary access through the project site. All required easements have been accounted for, and the proposed street network includes public streets to maintain appropriate access.

2. Approval of the Major Design Review, subject to the Design Review Package (Exhibit A) and the Conditions of Approval (Exhibit B) must provide sufficient evidence for the Findings required by Zoning Code Section 23.141.070 and Chapter 3, Section D of the Folsom Boulevard Specific Plan for "Exceptions". Findings and supportive evidence are shown below:

A. **Finding:** The proposed project is consistent with the objectives of the General Plan, complies with applicable zoning regulations, Specific Plan provisions, and special planning area provisions, and is consistent with the applicable Rancho Cordova Design Guidelines.

Evidence: The Mills Crossing project is designated as Commercial Mixed Use (CMU), High-Density Residential (HDR), and Medium-Density Residential (MDR) under the Folsom Boulevard Specific Plan. These designations support a mix of residential and commercial uses, aligning with the project's intent to create a

vibrant, multi-use development. The project's design incorporates a blend of commercial spaces, high-density residential, and medium-density residential units, ensuring compatibility with the surrounding area and consistency with the City's zoning and design guidelines. The layout, building orientation, and architectural style adhere to the City's and the Folsom Boulevard Specific Plan's Design Guidelines, promoting pedestrian connectivity, high-quality building materials, and cohesive site planning

B. **Finding:** The proposed architecture, site design, and landscape are suitable for the purposes of the building and the site and will enhance the character of the neighborhood and community.

Evidence: The proposed design for the Mills Crossing project focuses on the three commercial buildings, plaza areas, and project green space. The design incorporates modern architecture that aligns with the City's vision for mixed-use development, with the commercial buildings designed to serve both the functional and aesthetic needs of the site. The plaza areas are intended to provide accessible spaces for community interaction, while the green spaces are designed to enhance the overall environment with sustainable landscaping, including shade trees and pedestrian walkways. The project aims to promote connectivity, complementing future residential development. The integration of these elements will create a cohesive environment that enhances the character of the neighborhood and supports the surrounding community

C. **Finding:** The architecture, including the character, scale, and quality of the design, relationship with the site and other buildings, building materials, screening of exterior appurtenances, exterior lighting and signing, and similar elements establishes a clear design concept and is compatible with the character of existing or anticipated buildings on adjoining and nearby properties.

Evidence: The architecture of the Mills Crossing project incorporates a cohesive design with consistent materials, such as cement plaster and metal panels, across the three community commercial buildings. These buildings feature large windows, varying massing, and public art murals that enhance the site's visual appeal and align with the Folsom Boulevard Specific Plan. The design promotes connectivity through plazas and pedestrian-friendly spaces, ensuring compatibility with surrounding developments, including single-family homes and future uses. The project's scale, massing, and architectural features are designed to blend with the surrounding area while supporting the intended community-focused use

D. **Finding:** The proposed project will not create conflicts with vehicular, bicycle, or pedestrian transportation modes of circulation.

Evidence: The project is designed to provide clear access for all transportation modes, with vehicular, bicycle, and pedestrian connections throughout the site. The circulation plan aligns with the Folsom Boulevard Specific Plan and the City's transportation infrastructure. Traffic impacts were reviewed as part of the environmental analysis and are consistent with existing plans.

E. **Finding:** The proposed project qualifies for an Exception by meeting at least four of the six conditions required for granting of an Exception as defined in Chapter 3, Section D of the Folsom Boulevard Specific Plan.

Evidence: The Mills Crossing project qualifies for an Exception by meeting conditions 1 through 4 required for granting of an Exception as defined in Chapter 3, Section D of the Folsom Boulevard Specific Plan.

F. **Finding:** The City Council has determined that the proposed project has adhered to the vision of the Folsom Boulevard Specific Plan to the fullest extent practicable.

Evidence: The project has been designed in alignment with the goals and principles of the Folsom Boulevard Specific Plan, including mixed-use development, community engagement, and the integration of commercial, residential, and recreational spaces. The proposed buildings and layout reflect the intent of the plan, promoting connectivity, community vibrancy, and compatibility with surrounding areas. Adjustments were made to ensure compliance with the specific plan while balancing site constraints and the needs of the project.

G. **Finding:** The applicant has provided substantial evidence that the conditions for the Exception will be met following construction and operation of the project. Further, the applicant has agreed to conditions of approval guaranteeing these requirements will be met or exceeded throughout the life of the project.

Evidence: The project is city-sponsored and includes provisions for regular maintenance, monitoring, and adjustments as needed to ensure compliance with applicable standards. Conditions of approval have been incorporated into the project to ensure that these requirements are met throughout the life of the development. These conditions will be enforced through ongoing project review and oversight.

H. **Finding:** Granting the Exception will not adversely affect the interests of the public or the interests of the residents and property owners in the vicinity of the premises in question, and shall not establish a precedent for other project requests.

Evidence: The proposed exceptions have been thoroughly reviewed to ensure that they will not negatively impact surrounding properties or the broader community. The requested exceptions are specific to the unique conditions of the Mills Crossing project and do not undermine the goals of the General Plan or other applicable regulations. Additionally, the exceptions are not expected to set a precedent for future projects, as they address specific site conditions that do not apply broadly across other developments. The project has been designed to be compatible with neighboring properties and will not result in adverse effects on public or private interests.

I. **Finding:** Granting the Exception will not endanger the public health and safety.

Evidence: The exception has been reviewed to ensure it will not pose any risks to public health or safety. The project complies with all relevant safety standards and regulations, and necessary measures are in place to mitigate potential impacts.

The City Council approves the attached Tentative Subdivision Map and Major Design Review (Exhibit A) for the Mills Crossing project with attached conditions of approval (Exhibit B) as attached.

This Resolution shall become effective upon the effective date of City Council Ordinance No. XX-2025 adopting the Mills Crossing Specific Plan Amendment.

PASSED AND ADOPTED by the City Council of the City of Rancho Cordova this 2nd day of June 2025, by the following vote:

ADA CONSTRUCTION SUPPORT FACILITIES

ACCESSIBLE CONSTRUCTION SUPPORT FACILITIES

11B-201.4 CONSTRUCTION SUPPORT FACILITIES. These requirements shall apply to temporary or permanent construction support facilities for uses and activities not directly associated with the actual processes of construction, including but not limited to offices, meeting rooms, plan rooms, other administrative or support functions. When provided, toilet and bathing facilities serving construction support facilities shall comply with 11B-213. When toilet and bathing facilities serving construction support facilities are provided by portable units, at least one of each type shall be accessible and connected to the construction support facilities it serves by an accessible route.

EXCEPTION: During construction an accessible route shall not be required between site arrival points or the boundary of the area of construction and the entrance to the construction support facilities if the only means of access between them is a vehicular way not providing pedestrian access.

CONSTRUCTION NOTES

1. ALL CONSTRUCTION & MATERIALS SHALL BE AS SPECIFIED & IN ACCORDANCE WITH ALL APPLICABLE CODES, ORDINANCES, LAWS, PERMITS & THE CONTRACT DOCUMENTS.
2. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE ACCURATE PLACEMENT OF ALL NEW CONSTRUCTION ON THE SITE.
3. THE CONTRACTOR IS RESPONSIBLE FOR ALL EXG SURVEY MONUMENTS WHICH MAY BE DISTURBED THROUGH CONSTRUCTION ACTIVITIES DEEMED NECESSARY FOR PRESERVATION BY THE CIVIL ENGINEER. IF SUCH MONUMENTS WERE DISTURBED, THE APPLICANT SHALL HAVE A LICENSED LAND SURVEYOR QUALIFIED CIVIL ENGINEER REESTABLISH ANY SUCH MONUMENTATION DAMAGED OR DESTROYED DURING THE CONSTRUCTION OF THE PROJECT & SUBMIT "PRELIMINARY CORNER RECORDS" TO THE CIVIL ENGINEER AFTER REPLACEMENT. AFTER APPROVAL BY THE CIVIL ENGINEER, THE APPLICANT SHALL FILE THE CORNER RECORDS WITH THE COUNTY SURVEYOR. PRIOR TO THE EXONERATION OF ANY SECURITY, EVIDENCE OF SUCH FILING SHALL BE FURNISHED TO THE CIVIL ENGINEER.
4. THE CONTRACTOR IS RESPONSIBLE TO INSURE THAT TRUCK ROUTES SHALL BE STEERED AWAY FROM RESIDENTIAL AREAS.
5. THE CONTRACTOR SHALL ENSURE THAT TRUCKS HAULING DIRT ON PUBLIC ROADS TO & FROM THE SITE SHALL BE COVERED OR WILL MAINTAIN A 6" DIFFERENTIAL BETWEEN THE MAX HGT OF ANY HAULED MATERIAL & THE TOP OF THE HAUL TRAILER. HAUL TRUCK DRIVERS SHALL WATER THE LOAD PRIOR TO LEAVING THE SITE TO PREVENT SOIL LOSS DURING TRANSPORT.
6. THE CONTRACTOR SHALL ENSURE THAT GRADED SURFACES USED FOR OFF ROAD PARKING, MATERIALS LAY-DOWN, OR AWAITING FUTURE CONSTRUCTION SHALL BE STABILIZED FOR DUST CONTROL AS NEEDED. FREQUENTLY ACCESSED UNPAVED AREAS SHALL BE PAVED AS EARLY AS POSSIBLE TO MINIMIZE DIRT TRACKOUT TO PUBLIC RIGHTS-OF-WAY.
7. THE CONSTRACTOR SHALL COORDINATE ANY LANE CLOSURES OR DETOURS WITH THE CITY/COUNTY, FLAG PERSONS & APPROPRIATE TRAFFIC CONTROL DEVICES SHALL BE USED AS NEEDED TO MINIMIZE CONSTRUCTION ACTIVITY INTERFERENCE WITH OFF-SITE-TRAFFIC.
8. THE CONTRACTOR SHALL VERIFY ALL DIMENSIONS & SITE CONDITIONS BEFORE STARTING WORK. SHOULD A DISCREPANCY APPEAR IN THE CONTRACT DOCUMENTS OR BETWEEN THE CONTRACT DOCUMENTS & EXISTING CONDITIONS, NOTIFY THE ARCHITECT AT ONCE FOR INSTRUCTION ON HOW TO PROCEED.
9. SHOULD A CONFLICT OCCUR BETWEEN DWGS & SPECIFICATIONS, THE MORE COSTLY CONDITION SHALL TAKE PRECEDENCE, UNLESS A WRITTEN DECISION FROM THE ARCHITECT HAS BEEN OBTAINED WHICH DESCRIBES A CLARIFICATION OR ALTERNATE METHOD AND/OR MATERIALS.
10. THE CONTRACTOR SHALL CONFINE HIS OPERATION ON THE SITE TO AREAS PERMITTED BY OWNER.
11. THE JOBSITE SHALL BE MAINTAINED IN A CLEAN, ORDERLY CONDITION FREE OF DEBRIS & LITTER & SHALL NOT BE UNREASONABLY ENCUMBERED WITH ANY MATERIALS OR EQUIPMENT. EACH SUBCONTRACTOR IMMEDIATELY UPON COMPLETION OF EACH PHASE OF HIS WORK SHALL REMOVE ALL TRASH & DEBRIS AS A RESULT OF HIS OPERATION.
12. ALL MATERIAL STORED ON THE SITE SHALL BE PROPERLY STACKED & PROTECTED TO PREVENT DAMAGE & DETERIORATION. FAILURE TO PROTECT MATERIALS MAY BE CAUSE FOR REJECTION OF WORK.
13. THE CONTRACTOR SHALL DO ALL CUTTING, FITTING, AND/OR PATCHING OF HIS WORK THAT MAY BE REQ TO MAKE ITS SEVERAL PARTS FIT TOGETHER PROPERLY & SHALL NOT ENDANGER ANY OTHER WORK BY CUTTING, EXCAVATING, OR OTHERWISE ALTERING THE TOTAL WORK OR ANY PART OF IT. ALL PATCHING, REPAIRING AND REPLACING OF MATERIALS AND SURFACES, CUT OR DAMAGED IN EXECUTION OF WORK, SHALL BE DONE WITH APPLICABLE MATERIALS SO THAT SURFACES REPLACED WILL, UPON COMPLETION, MATCH SURROUNDING SIMILAR SURFACES.
14. STRUCTURAL OBSERVATION WILL BE PERFORMED BY THE STRUCTURAL ENGINEER. WHEN REQ, A STATEMENT IN WRITING SHALL BE GIVEN TO THE BUILDING OFFICIAL, STATING THAT THE SITE VISITS HAVE BEEN MADE & WHETHER OR NOT ANY OBSERVED DEFICIENCIES HAVE BEEN CORRECTED TO CONFORM TO THE APPROVED PLANS & SPECIFICATIONS.
15. SUBMITTAL DOCUMENTS FOR DEFERRED SUBMITAL ITEMS SHALL BE SUBMITTED TO THE ARCHITECT OR ENGINEER OF RECORD, WHO SHALL REVIEW THEM & RETURN THEM TO THE CONTRACTOR (WITH A NOTIFICATION INDICATING THAT THE DEFERRED SUBMITTAL DOCUMENTS HAVE BEEN REVIEWED & THAT THEY HAVE BEEN FOUND TO BE IN GENERAL CONFORMANCE WITH THE DESIGN OF THE BUILDING) FOR PLAN CHECK APPROVAL. THE DEFERRED SUBMITTAL ITEMS SHALL NOT BE INSTALLED UNTIL THEIR DESIGN & SUBMITTAL DOCUMENTS HAVE BEEN APPROVED BY THE AUTHORITY HAVING JURISDICTION.
16. PROVIDE ALL ACCESS PANELS AS REQ BY GOVERNING CODES TO ALL CONCEALED SPACES, VOIDS, ATTICS, ETC. VERIFY TYPE REQ WITH ARCHITECT PRIOR TO INSTALLATION.
17. NO PORTION OF WORK REQ A SHOP DWG OR SAMPLE SUBMISSION SHALL BE COMMENCED UNTIL THE SUBMISSION HAS BEEN REVIEWED BY THE ARCHITECT. ALL SUCH PORTIONS OF THE WORK SHALL BE IN ACCORDANCE WITH CORRECTED SHOP DWGS. AND SAMPLES.
18. DIMENSIONS:
    A. ALL DIMS SHALL TAKE PRECEDENCE OVER SCALE.
    B. ALL DIMS ARE TO FACE OF STUD / CONCRETE / MASONRY UNO
    C. CLG HGT DIMS ARE FROM FACE OF SLAB TO FACE OF FIN CLG MATERIAL UNO
19. DO NOT SCALE DRAWINGS
20. PROVIDE ALL NECESSARY BLOCKING, BACKING, & FRAMING FOR LIGHT FIXTURES, ELECTRIC UNITS, AC EQUIP, RECESSED ITEMS, AND ALL OTHER ITEMS AS REQ.
21. WHERE LARGER STUDS OR FURRING ARE REQ TO COVER PIPING AND CONDUITS, THE LARGER STUD SIZE OR FURRING SHALL EXTEND THE FULL SURFACE OF THE WALL WIDTH AND LENGTH WHERE THE FURRING OCCURS, UNO.
22. ALL DOORS SHALL BE OPERABLE FROM THE INSIDE W/O THE USE OF A KEY OR SPECIAL KNOWLEDGE OF EFFORT. EXIT SIGNS SHALL BE PROVIDED AT ALL EXITS AS REQ BY THE APPLICABLE CODES. ALL DOOR SWINGS SERVING AN OCCUPANT LOAD OF 50 OR GREATER SHALL SWING IN THE DIRECTION OF TRAVEL.
23. ALL GLASS AND GLAZING SHALL COMPLY WITH THE APPLICABLE CODES.
24. WALL AND CLG MATERIALS SHALL NOT EXCEED THE FLAME SPREAD CLASSIFICATIONS IN THE APPLICABLE CODES.
25. SURVEYORS CERTIFICATE REQ PRIOR TO FINAL COMPLETION.
26. THE CONTRACTOR SHALL COMPLY WITH THE APPLICABLE CODES FOR FIRE SAFETY DURING CONSTRUCTION AND DEMOLITION.

FIRE AND LIFE SAFETY NOTES

1. FIRE SPRINKLER SYSTEMS & INSTALLATION SHALL CONFORM W/ THE APPLICABLE STANDARDS AND CODES.
2. FIRE SPRINKLER SYSTEMS TO BE TIED INTO THE ALARM SYSTEM PER THE APPLICABLE CODES.
3. AUTOMATIC SPRINKLER SYSTEM(S) SHALL BE SUPERVISED BY AN APPROVED CENTRAL OR REMOTE STATION SERVICE, AND/OR SHALL BE PROVIDED W/ A LOCAL ALARM WHICH WILL GIVE AN AUDIBLE SIGNAL.
4. FIRE SPRINKLER SYSTEM(S) & ALL CONTROL VALVES SHALL BE SUPERVISED BY A U.L. LISTED CENTRAL ALARM STATION OR PER THE APPLICABLE CODES.
5. FIRE HYDRANT & FIRE SPRINKLER SYSTEM(S) SHALL BE FLUSHED THOROUGHLY BEFORE CONNECTION IS MADE TO EXISTING SYSTEM STUBOUTS & WITNESSED BY THE PROJECT INSPECTOR.
6. A HYDROSTATIC TEST (200 PSI PRESSURE FOR 2 HRS. OR @ 50 PSI IN EXCESS OF THE MIN. STATIC PRESSURE WHEN IT IS IN EXCESS OF 150 PSI) SHALL BE WITNESSED BY THE PROJECT INSPECTOR PRIOR TO COVERING PIPING JOINTS.
7. A 3' CLR SPACE SHALL BE MAINTAINED AROUND THE CIRCUMFERENCE OF FIRE HYDRANTS EXCEPT AS OTHERWISE REQ OR APPROVED PER THE APPLICABLE CODES.
8. THRUST BLOCKS SHALL BE PROVIDED WHEREVER PIPE CHANGES DIRECTION.
9. ALL PIPE SHALL BE UL LISTED FOR FIRE SERVICE SYSTEMS, CLASS 200 MIN.
10. FIRE DEPARTMENT CONNECTIONS SHALL BE LOCATED W/I 100' FROM A PUBLIC FIRE HYDRANT PER THE APPLICABLE STANDARDS AND CODES.
11. FIRE SPRINKLER RISER SHALL BE LOCATED WITHIN 5 FT OF THE EXT WALL (OR AS REQ BY THE AHJ) AND TERMINATE 6" ABV FF
12. AN ALL-WEATHER FIRE ACCESS ROAD SHALL BE IN PLACE BEFORE ANY COMBUSTIBLE MATERIALS ARE PLACED ON THE SITE OR AS REQ BY THE AHJ.
13. STORAGE, DISPENSING, OR USE OF ANY FLAMMABLE & COMBUSTIBLE LIQUIDS, FLAMMABLE & COMPRESSED GASES & OTHER HAZARDOUS MATERIALS SHALL COMPLY W/ THE APPLICABLE CODES.
14. EXIT SIGNS SHALL BE POSTED OVER EXIT DOORS & DIRECTIONAL EXIT SIGNS SHALL BE LOCATED TO DIRECT PERSONS TOWARD EXIT DOORS.
15. EXIT SIGNS SHALL BE SELF-LUMINOUS TYPE OR ELECTRONICALLY ILLUMINATED & ENERGIZED FROM SEPARATE CIRCUITS, ONE OF WHICH SHALL BE FROM STORAGE BATTERIES OR AN ON-SITE GENERATOR, FOR A DURATION OF 90 MINUTES PER THE APPLICABLE CODES.
16. EXIT DOORS SHALL BE OPENABLE FROM THE INSIDE WITHOUT THE USE OF A KEY OR ANY SPECIAL KNOWLEDGE OR EFFORT.
17. ACCESS GATE(S) SHALL BE OPENABLE W/ FIRE DEPT MASTER KEY FROM THE EXTERIOR.
18. CURBS ALONG FIRE LANES SHALL BE PAINTED SAFETY RED & MARKED "FIRE LANE NO PARKING" W/ 3" WHITE LETTERS ON THE TOP OF CURBING EVERY 30' AS INDICATED ON THE APPROVED DRAWINGS.
19. APPROVED NUMBERS OR ADDRESSES SHALL BE PROVIDED FOR ALL NEW & EXG BLDGS IN SUCH A POSITION AS TO BE PLAINLY VISIBLE & LEGIBLE FROM THE STREET OR ROAD FRONTING THE PROPERTY PER THE APPLICABLE CODES.
20. PROVIDE PERMANENT OR TEMPORARY STANDPIPES WHILE BUILDING IS UNDER CONSTRUCTION PER THE APPLICABLE CODES.
21. PROVIDE FIRE EXTINGUISHERS PER THE REQ THE APPLICABLE STANDARDS AND CODES.

VICINITY MAP

PROPOSED SITE
MILLS CROSSING

ADDRESS:
10179 Folsom Blvd, Rancho Cordova, CA 95670

500 FT RADIUS

TRUE NORTH PROJECT NORTH

PROJECT SCOPE

The scope of work includes construction of a new commercial core and shell building (35,450 SF), a new performing arts center (27,336 SF), a new community events center (13,077 SF) and associated site improvements.

LIMIT OF WORK

THE INTENT OF THE LIMIT OF WORK LINE IS TO DESCRIBE IN GENERAL THE AREAS AFFECTED BY PROJECT CONSTRUCTION. IT IS NOT INTENDED TO BE AN EXACT INDICATION OR EDGE OF THE CONSTRUCTION AREA. THE CONTRACTOR SHOULD VISIT THE SITE AND BECOME FAMILIAR WITH EXISTING CONDITIONS AND THEIR RELATIONSHIP TO THE WORK PROPOSED IN THE CONTRACT DOCUMENTS. ALL ITEMS NECESSARY FOR THE PROPER EXECUTION AND COMPLETION OF THE WORK SHALL BE INCLUDED. THE CONTRACT DOCUMENTS ARE COMPLEMENTARY AND WHAT IS REQUIRED BY ONE SHALL BE BINDING AS IF REQUIRED BY ALL TO THE EXTENT THAT IT IS REASONABLY INFERABLE FROM THEM AS BEING NECESSARY TO PRODUCE THE INTENDED RESULTS.

DEFERRED APPROVALS

THE DEFERRED SUBMITTAL ITEMS SHALL NOT BE INSTALLED UNTIL THE DEFERRED SUBMITTAL DOCUMENTS HAVE BEEN REVIEWED AND APPROVED BY THE BUILDING OFFICIAL.

THE FOLLOWING WILL BE DEFERRED SUBMITTALS FOR THIS PROJECT:

*ELEVATOR GUIDE RAIL SUPPORTS
*ERRC SYSTEM
*STEEL STAIRS
*EXTERNAL VIBRATION ISOLATORS AT MECHANICAL EQUIPMENT
*PHOTOVOLTAIC SYSTEM, INCLUDING SUPPORT / MOUNTING
*MECHANICAL PIPING & SEISMIC BRACING
*MECHANICAL DUCTING SEISMIC BRACING
*HVAC EQUIPMENT SEISMIC & ANCHORAGE
*MECHANICAL DUCTS RISER SUPPORTS

PROPOSED USE SUMMARY

BUILDING 1:
OFFICE 17,000 SF
COMMUNITY CLINIC 17,000 SF

BUILDING 2:
THEATER 6,500 SF
FLEXIBLE STUDIO SPACE 3,300 SF

BUILDING 3:
FLEXIBLE COMMUNITY CENTER 6,500 SF
COMMUNITY SUPPORT SPACE 2,000 SF

CODE ANALYSIS - BLDG 3

BUILDING USES: FOOD PREP KITCHEN, MEETING SPACE

CONSTRUCTION CLASSIFICATION (CBC 602): TYPE II-B
OCCUPANCY CLASSIFICATION (CBC 302 & 508.3): A-2, A-3, B & S-2 (NON-SEPARATED OCCUPANCIES - MOST RESTRICTIVE OCCUPANCY USED)

FIRE PROTECTION: SPRINKLERED

ACCESSORY OCCUPANCY (CBC 508.2): NONE
INCIDENTAL USES (CBC 509):

ALLOWABLE BUILDING HEIGHT (CBC 504 & TABLE 504.3): 75' - 0" (WITH AREA INCREASE)
ALLOWABLE NUMBER OF STORIES (CBC 504 & TABLE 504.4): 3 STORIES (WITH AREA INCREASE)

ALLOWABLE AREA PER STORY (CBC 506.2.4 & TABLE 506.2): 26,500 SF (WITHOUT HEIGHT INCREASE)
ALLOWABLE BUILDING AREA (CBC 506.2.3 & TABLE 506.2): 93,000 SF

ACTUAL BUILDING HEIGHT: 47'-0" - OK
ACTUAL NUMBER OF STORIES: 1 STORIES - OK

FIRST FLOOR AREA*: 9,661 SF (CONDTIONED AREA) + 4446 SF (OVERHANGS) < 46,500 SF - OK**

OVERALL BUILDING AREA*: 14,107 SF < 25,500 SF - OK
OVERALL BUILDING AREA (SUM): 25,500 SF

** BUILDING AREAS INCLUDE HORIZONTAL PROJECTIONS OF THE ROOF OR FLOOR ABOVE BUT EXCLUDE VENT SHAFTS AND COURTS. (CBC 202)*

FIRE-RESISTANCE RATING REQ. FOR BLDG ELEMENTS (CBC TABLE 601):
STRUCTURAL FRAME: 1 HOUR
EXTERIOR BEARING WALLS: 1 HOUR
INTERIOR BEARING WALLS: 1 HOUR
EXTERIOR NONBEARING WALLS: REFER TO RATING REQ. BELOW
INTERIOR NONBEARING WALLS: 0 HOUR
FLOOR CONSTRUCTION: 1 HOUR
ROOF CONSTRUCTION: 1 HOUR **

***FIRE PROTECTION OF MEMBERS OTHER THAN THE PRIMARY STRUCTURAL FRAME SHALL NOT BE REQUIRED, INCLUDING PROTECTION OF THE ROOF FRAMING AND DECKING WHERE EVERY PART OF CONSTRUCTION IS 20 FEET OR MORE ABOVE ANY FLOOR IMMEDIATELY BELOW (CBC 601 EXCEPTION B)*

FIRE-RESISTANCE RATING REQ. FOR EXTERIOR WALLS (CBC TABLE 602)
1-HR PROTECTED: < 30'-0"
NO PROTECTION REQUIRED: ≥ 30'-0"

MAXIMUM FLOOR AREA ALLOWANCES PER OCCUPANT (CBC TABLE 1004.5):

1:5 NET = ASSEMBLY W/OUT FIXED SEATS (CONCENTRATED-STANDING)
1:7 NET = ASSEMBLY W/OUT FIXED SEATS (CONCENTRATED-CHAIRS)
1:15 NET = ASSEMBLY W/OUT FIXED SEATS (UNCONCENTRATED)
1:20 NET = EDUCATIONAL: CLASSROOM AREA
1:50 GROSS = EXERCISE ROOMS
1:50 GROSS = LOCKER ROOMS
1:150 GROSS = BUSINESS AREA
1:300 GROSS = STORAGE AREAS, MECHANICAL EQUIPMENT ROOM

OCCUPANT LOAD PER FLOOR:
LEVEL 1: 768 OCCUPANTS
OF EXITS REQUIRED = 3
OF EXITS PROVIDED = 7

MEANS OF EGRESS SIZING (CBC 1005):

GENERAL NOTES

1. REFER TO SPECIFICATIONS FOR ADDITIONAL INFORMATION.
2. PROVIE BELOW GRADE WATERPROFFING AT ALL BUILDING AND SITE RETAINING WALLS.
3. GLAZING (1) WITHIN 24" OF EITHER SIDE OF ANY DOOR; (2) GREATER THAN 9 SQ.FT. IN AREA WITH BOTTOM EDGE LESS THAN 18" ABOVE (AND HORIZONTALLY WITHIN 36") OF A WALKING SURFACE SHALL BE SAFETY GLAZED (I.E. TEMPERED) CBC 2406).
4. SAFETY GLAZING LISED IN THE HAZARDOUS LOCATIONS INDICATED SHALL BE TESTED IN ACCORDANCE WITH CPSC CFR PART 1201 AND SHALL BE IDENTIFIED BY A MANUFACTURER'S DESIGNATION SPECIFYING WHO APPLIED THE DESIGNATION, THE MANUFACTURER'S OR INSTALLER AND THE SAFETY GLAZING STANDARD WITH WHICH IT COMPLIES. (CBC 2406.2, CSC 2406.3).
5. FOR ROOF ELEVATIONS, SEE ROOF EDGE OF SLAB PLAN.
6. PROVIDE CONTINUOUS FIRESTOPPING AT ALL REATED WALL PENETRATIONS AND AT TOP AND BASE OF RATED WALLS. INSTALLATION SHALL CONFORM TO UL ASSEMBLIES.
7. WALL REATING SHALL CONTINUE AROUND BEAM PENETRATIONS.
8. PROVIDE FIRSTOPPING INSULATION BETWEEN EDGE OF DECK AND PERIMETER BUILDING ENVELOPE ASSEMBLY.
9. EXTERIOR WALL ASSEMBLY TO BE MIN R-21.
10. ROOF ASSEMBLY TO BE MIN R-30.

PAVING AND EDGE DETAILS

L5.10

IRRIGATION NOTES

1. ALL LOCAL MUNICIPAL AND STATE LAWS, RULES AND REGULATIONS GOVERNING OR RELATING TO ANY PORTION OF THIS WORK ARE HEREBY INCORPORATED INTO AND MADE A PART OF THESE SPECIFICATIONS AND THEIR PROVISIONS SHALL BE CARRIED OUT BY THE CONTRACTOR.
2. THE CONTRACTOR SHALL VERIFY THE LOCATIONS OF ALL EXISTING UTILITIES, STRUCTURES AND SERVICES BEFORE COMMENCING WORK. THE LOCATIONS OF UTILITIES, STRUCTURES AND SERVICES SHOWN IN THESE PLANS ARE APPROXIMATE ONLY. ANY DISCREPANCIES BETWEEN THESE PLANS AND ACTUAL FIELD CONDITIONS SHALL BE REPORTED TO THE OWNER'S REPRESENTATIVE.
3. THE CONTRACTOR SHALL OBTAIN THE PERTINENT ENGINEERING OR ARCHITECTURAL PLANS BEFORE BEGINNING WORK.
4. THE CONTRACTOR SHALL OBTAIN ALL NECESSARY PERMITS REQUIRED TO PERFORM THE WORK INDICATED HEREIN BEFORE BEGINNING WORK.
5. THIS DESIGN IS DIAGRAMMATIC. ALL EQUIPMENT SHOWN IN PAVED AREAS IS FOR DESIGN CLARITY ONLY AND IS TO BE INSTALLED WITHIN PLANTING AREAS.
6. THE CONTRACTOR SHALL NOT WILLFULLY INSTALL ANY EQUIPMENT AS SHOWN ON THE PLANS WHEN IT IS OBVIOUS IN THE FIELD THAT UNKNOWN CONDITIONS EXIST THAT WERE NOT EVIDENT AT THE TIME THESE PLANS WERE PREPARED. ANY SUCH CONDITIONS SHALL BE BROUGHT TO THE ATTENTION OF THE OWNER'S REPRESENTATIVE PRIOR TO ANY WORK OR THE IRRIGATION CONTRACTOR SHALL ASSUME ALL RESPONSIBILITY FOR ANY FIELD CHANGES DEEMED NECESSARY BY THE OWNER.
7. INSTALL ALL EQUIPMENT AS SHOWN IN THE DETAILS AND SPECIFICATIONS. CONTRACTOR SHALL BE RESPONSIBLE TO COMPLY WITH LOCAL CITY, COUNTY AND STATE REQUIREMENTS FOR BOTH EQUIPMENT AND INSTALLATION.
8. ACTUAL LOCATION FOR THE INSTALLATION OF THE BACKFLOW PREVENTER AND THE AUTOMATIC CONTROLLER IS TO BE DETERMINED IN THE FIELD BY THE OWNER'S AUTHORIZED REPRESENTATIVE.
9. CONTRACTOR IS TO PROVIDE AN ADDITIONAL PILOT WIRE FROM CONTROLLER ALONG ENTIRETY OF MAIN LINE TO THE LAST RCV ON EACH AND EVERY LEG OF MAIN LINE. LABEL SPARE WIRES AT BOTH ENDS.
10. ALL PIPE UNDER PAVED AREAS TO BE INSTALLED IN SLEEVING TWICE THE DIAMETER OF THE PIPE CARRIED. SEE LEGEND FOR TYPE. ALL WIRE UNDER PAVED AREAS TO BE INSTALLED IN A SCH. 40 SLEEVE THE SIZE REQUIRED TO EASILY PULL WIRE THROUGH. ALL SLEEVES TO BE INSTALLED WITH A MINIMUM DEPTH AS SHOWN ON THE SLEEVING DETAILS. SLEEVES TO EXTEND AT LEAST 12" PAST THE EDGE OF THE PAVING.
11. ALL QUICK COUPLER AND REMOTE CONTROL VALVES TO BE INSTALLED IN SHRUB OR GROUND COVER AREAS WHERE POSSIBLE. ALL QUICK COUPLER AND REMOTE CONTROL VALVES TO BE INSTALLED AS SHOWN ON THE INSTALLATION DETAILS. INSTALL ALL QUICK COUPLER AND REMOTE CONTROL VALVES WITHIN 18" OF HARDSCAPE.
12. ALL HEADS ARE TO BE INSTALLED WITH THE NOZZLE, SCREEN AND ARCS SHOWN ON THE PLANS. ALL HEADS ARE TO BE ADJUSTED TO PREVENT OVERSPRAY ONTO BUILDINGS, WALLS, FENCES AND HARDSCAPE. THIS INCLUDES, BUT NOT LIMITED TO, ADJUSTMENT OF DIFFUSER PIN OR ADJUSTMENT SCREW, REPLACEMENT OF PRESSURE COMPENSATING SCREENS, REPLACEMENT OF NOZZLES WITH MORE APPROPRIATE RADIUS UNITS AND THE REPLACEMENT OF NOZZLES WITH ADJUSTABLE ARC UNITS.
13. CONTRACTOR SHALL INSTALL ADDITIONAL CHECK VALVES TO HEADS AND LATERALS AS REQUIRED TO PREVENT LOW HEAD DRAINAGE.
14. THE CONTRACTOR SHALL USE PROPER GROUNDING TECHNIQUES FOR GROUNDING THE CONTROLLER AND RELATED EQUIPMENT PER MANUFACTURERS SPECIFICATIONS. SWEENEY AND ASSOCIATES RECOMMENDS MEASURING FOR PROPER GROUND AT LEAST ONCE ANNUALLY, AND NECESSARY ADJUSTMENTS MADE TO COMPLY WITH MANUFACTURER SPECIFICATIONS.
15. THE CONTRACTOR IS REQUIRED TO CONTACT DIGALERT OR 811 A MINIMUM OF TWO (2) DAYS PRIOR TO THE START OF ANY EXCAVATIONS ON THE PROJECT AND SPECIFICALLY PRIOR TO THE INSTALLATION OF ANY GROUNDING RODS. DIAL 811 OR LOG ONTO WWW.DIGALERT.ORG TO START A PROJECT TICKET. DIGALERT AND 811 IS A FREE SERVICE PROVIDED TO THE PROJECT. FAILURE TO CONTACT AND HAVE THE EXISTING UTILITIES IDENTIFIED, LOCATED AND MARKED SHALL MAKE THE CONTRACTOR SOLELY RESPONSIBLE FOR ANY AND ALL DAMAGES.

PRELIMINARY WATER EFFICIENT LANDSCAPE WORKSHEET

This worksheet is filled out by the project applicant and it is a required element of the Landscape Documentation Package

Project Name: Mills Crossing

Project Address: 10179 Folsom Blvd, Rancho Cordova, CA 95670

sweeney + associates — IRRIGATION DESIGN AND CONSULTING

Reference Evapotranspiration (ETo) 51.9 In./Yr. **Residential Project?** No

Hydrozone # / Planting Description[a]	Plant Factor	Irrigation Method[b]	Irrigation Efficiency (IE)[c]	ETAF (PF / IE)	Landscape Area (Sq. Ft.)	ETAF x Area	Estimated Total Water Use (ETWU)[d]
Regular Landscape Areas							
1. Low Water Use Plantings	0.20	Drip	0.81	0.25	28,083	7,021	225,914
2. Moderate Water Use Plantings	0.40	Overhead	0.75	0.27	7,733	2,088	67,185
3. High Water Use Turf	0.70	Overhead	0.75	0.54	4,170	2,252	72,458
4. Low Water Use Trees	0.20	Bubb	0.81	0.94	15,396	14,472	465,688
5. Medium Water Use Trees	0.40	Bubb	0.81	0.25	10,125	2,531	81,451
				0.50	1,625	813	26,145
				Totals:	67,132	29,176	
					Estimated Total Water Use (ETWU) Total:		938,840
					Maximum Applied Water Allowance (MAWA)*:		972,078

[a] **Hydrozone # / Planting Description** — *E.g. 1.) Front Lawn; 2.) Low Water Use Plantings; 3.) Medium Water Use Plantings*

[b] **Irrigation Method** — *Overhead Spray of Drip*

[c] **Irrigation Efficiency** — *0.75 for Spray; 0.81 for Drip*

[d] ***ETWU (Annual Gallons Required)*** = *ETo x 0.62 x ETAF x Area*

Where 0.62 is a conversion factor that converts acre-inches/acre/year to gallons/square foot/year.

* ***MAWA (Annual Gallons Allowed)*** = *ETo x 0.62 x [(ETAF x LA) + ((1 - ETAF) x SLA)]*

Where 0.62 is a conversion factor that converts acre-inches/acre/year to gallons/square foot/year, LA is the total landscape area in square feet, SLA is the total special landscape area in square feet, and ETAF is 0.55 for residential projects and 0.45 for non-residential projects.

Evapotranspiration Adjustment Factor (ETAF) Calculations

This non-residential project complies with the WELO and its average ETAF is less than **0.45**

Regular Landscape Areas	
Total ETAF x Area	29,176
Total Area	67,132
Average ETAF	**0.43**

All Landscape Areas	
Total ETAF x Area	29,176
Total Area	67,132
Average ETAF	**0.43**

I AGREE TO COMPLY WITH THE REQUIREMENTS OF THE WATER EFFICIENT LANDSCAPE ORDINANCE AND SUBMIT A COMPLETE LANDSCAPE DOCUMENTATION PACKAGE

SIGNATURE: _____ DATE: 02-06-25

I HAVE COMPLIED WITH THE CRITERIA OF THE IRRIGATION GUIDELINES AND APPLIED THEM ACCORDINGLY FOR THE EFFICIENT USE OF WATER IN THE IRRIGATION DESIGN PLAN

				RAIN BIRD	RD-12-S-P30-F 12" POP-UP SHRUB HEAD WITH 10 SERIES HE-VAN ADJUSTABLE ARC NOZZLE	.45, .59, .89, 1.78	30	10 FT	1.98 IN./HR.	A
				RAIN BIRD	RD-12-S-P30-F 12" POP-UP SHRUB HEAD WITH 12 SERIES HE-VAN ADJUSTABLE ARC NOZZLE	.59, .79, 1.18, 2.37	30	12 FT	1.83 IN./HR.	A
				RAIN BIRD	RD-12-S-P30-F 12" POP-UP SHRUB HEAD WITH 15 SERIES HE-VAN ADJUSTABLE ARC NOZZLE	.93, 1.23, 1.85, 3.70	30	15 FT	1.83 IN./HR.	A
				RAIN BIRD	RD-06-S-P30-F 6" POP-UP BUBBLER HEAD WITH A HUNTER MSBN-50Q STREAM BUBBLER NOZZLE EACH SYMBOL REPRESENTS TWO (2) BUBBLER TO PROVIDE A TOTAL OF TWO (2) BUBBLERS PER TREE. PLACE THE BUBBLER HEADS SIX (6) INCHES FROM THE ROOT BALL OF THE TREE AND ON OPPOSITE SIDES OF TREE. ADJUST BUBBLER STREAMS TO WET THE ROOT BALL AND ADJACENT AMENDED SOIL WITHOUT HITTING THE TRUNK OF THE TREE.	.50 (1.00 TOTAL)	30	1.5 FT	1.50 IN./HR.	A,B
NO SYMBOL				RAIN BIRD	SPRINKLER HEADS WITH 1/2" NPT INLETS SHALL BE INSTALLED WITH A SA-125050 POLY SWING JOINT AS PART OF THE ASSEMBLY					A
				RAIN BIRD	5006-PL-(PC)-SAM-R 6" POP-UP TURF ROTOR WITH MPR-25 NOZZLES (RED)	1.00, 1.38, 1.98, 3.82	45	25 FT	0.70 IN./HR.	C
				RAIN BIRD	5006-PL-(PC)-SAM-R 6" POP-UP TURF ROTOR WITH MPR-30 NOZZLES (GREEN)	1.40, 1.85, 2.96, 5.78	45	30 FT	0.70 IN./HR.	C
				RAIN BIRD	5006-PL-(PC)-SAM-R 6" POP-UP TURF ROTOR WITH MPR-35 NOZZLES (BEIGE)	1.92, 2.46, 3.81, 7.58	45	35 FT	0.70 IN./HR.	C
				RAIN BIRD	5012-PL-(PC)-SAM-R 12" POP-UP SHRUB ROTOR WITH MPR-25 NOZZLES (RED)	1.00, 1.38, 1.98, 3.82	45	25 FT	0.70 IN./HR.	C
				RAIN BIRD	5012-PL-(PC)-SAM-R 12" POP-UP SHRUB ROTOR WITH MPR-30 NOZZLES (GREEN)	1.40, 1.85, 2.96, 5.78	45	30 FT	0.70 IN./HR.	C
				RAIN BIRD	5012-PL-(PC)-SAM-R 12" POP-UP SHRUB ROTOR WITH MPR-35 NOZZLES (BEIGE)	1.92, 2.46, 3.81, 7.58	45	35 FT	0.70 IN./HR.	C
NO SYMBOL				RAIN BIRD	MPR-25/30/35 NOZZLES ARE NOT SUPPLIED AS STANDARD NOZZLES WITH THE RAIN BIRD 5000 SERIES ROTOR HEADS. THE CONTRACTOR MUST ORDER THESE NOZZLES SEPARATELY AS AN ADDITIONAL COMPONENT FOR THE ROTOR HEADS. ONLY THE COLOR CODED MPR SERIES NOZZLES SHALL BE ACCEPTABLE IN THE ROTOR HEADS.					C
NO SYMBOL				RAIN BIRD	SPRINKLER HEADS WITH 3/4" NPT INLETS SHALL BE INSTALLED WITH A TSJ-12075 PVC SWING JOINT AS PART OF THE ASSEMBLY					C
				NETAFIM	SUB-SURFACE DRIP TUBING AS DESCRIBED BELOW: TLHCVXRS-12 SUBSURFACE DRIP TUBING (BROWN EXTERIOR COLOR WITH A COPPER OXIDE STRIPE) WITH 0.53 GPH, PRESSURE COMPENSATING EMITTERS INTERNALLY INSTALLED IN THE DRIP TUBING AT 12" O.C. SPACING. DRIP TUBING SHALL BE EQUIPPED WITH A CONTINUOUS EXTERIOR CUPRON STRIPE, COPPER OXIDE INFUSED EMITTERS AND A PHYSICAL BARRIER TO PREVENT ROOT INTRUSION INTO THE DRIP EMITTER. DRIP EMITTERS SHALL BE CONTINUOUS FLUSHING TYPE AND EQUIPPED WITH A CHECK VALVE AND ANTI-SIPHON FEATURE. DRIP TUBING SHALL BE INSTALLED 4" BELOW THE FINISHED SOIL GRADE (NOT COUNTING MULCH) AND IN PARALLEL ROWS A MAXIMUM OF 16" ON CENTER. THE PERIMETER ROW OF DRIP TUBING SHALL BE INSTALLED A MAXIMUM OF 4" FROM THE EDGE OF ANY HARDSCAPE OR TURF EDGE. ALL SUBSEQUENT INTERIOR ROWS SHALL BE ADJUSTED TO PROVIDE AN EVEN SPACING ACROSS THE PLANTER WITHOUT EXCEEDING 16" MAXIMUM SPACING. INSTALL 9" PVC COATED GALVANIZED TUBING STAKES A MAXIMUM OF FIVE (5) FEET ON CENTER ALONG THE LENGTH OF THE TUBING. TUBING STAKES SHALL BE MODEL #GDTS140900 AS MANUFACTURED BY GPH IRRIGATION PRODUCTS (866) 582-9684. THE LINES SHOWN ON THE PLANS REPRESENT THE APPROXIMATE DIRECTION AND SPACING OF THE DRIP TUBING ROWS, SEE SPACING REQUIREMENTS ABOVE AND IN DETAILS.	0.53 GPH / EMITTER	30	N/A	0.70 IN./HR.	D,E,F
NO SYMBOL				NETAFIM	CONNECTION BETWEEN HCVXR DRIP TUBING AND PVC SUPPLY AND DISCHARGE HEADERS SHALL BE MADE USING TL DRIP LINE BARBED FITTINGS, SCH. 40 PVC THREADED FITTINGS, SCH. 80 NIPPLES AND FLEXIBLE NIPPLES. WHEN THE CONNECTION IS AT THE END RUN OF THE TUBING USE A 1/2" SCH. 40 PVC THREADED 90° ELBOW, A 1/2" X LENGTH AS REQUIRED SCH. 80 PVC THREADED NIPPLE, A 1/2" X 6" MIPT X FIPT FLEXIBLE NIPPLE, AND A TL050MA 17mm BARB X 1/2" MIPT ADAPTER FITTING. WHEN THE CONNECTION IS IN THE MIDDLE OF THE TUBING RUN USE A 1/2" SCH. 40 PVC THREADED TEE FITTING, A 1/2" X LENGTH AS REQUIRED SCH. 80 PVC THREADED NIPPLE, A 1/2" X 6" MIPT X FIPT FLEXIBLE NIPPLE, AND TWO (2) TL050MA 17mm BARB X 1/2" MIPT ADAPTERS. ALL END RUNS OF TUBING SHALL BE CONNECTED WITH A PVC DISCHARGE HEADER. FLEXIBLE NIPPLES SHALL BE MODEL #GFN050600 AS MANUFACTURED BY GPH IRRIGATION PRODUCTS (866) 582-9684.					D,E,F
NO SYMBOL				NETAFIM	TL SERIES 17mm BARBED FITTINGS FOR CONNECTIONS BETWEEN DRIP TUBING (TUBING-TO-TUBING ONLY). NO HEATING OF TUBING SHALL BE ALLOWED.					D,E,F
				AS APPROVED	PVC SUPPLY AND DISCHARGE HEADERS SHALL BE PVC LATERAL LINE PIPE (AS SHOWN BELOW), 1" MINIMUM SIZE WITH SCH. 40 PVC FITTINGS.					D,E,F
				GPH IRRIGATION/ HUNTER	GDFN DRIP FLUSH / INDICATOR NOZZLE, ORANGE IN COLOR, INSTALLED ONTO A HUNTER ECO-ID-12 12" POP-UP INDICATOR HEAD. THE FLUSH NOZZLE SHALL BE USED FOR MANUAL OPERATION OF THE DRIP SYSTEM.					E,G
				P.O.C.	2" POTABLE (DOMESTIC) DEDICATED IRRIGATION WATER METER WITH 2" SERVICE LINE. VERIFY SIZE, LOCATION AND PRESSURE IN FIELD.					N/A
				WILKINS	975XLS, 2" R/P BACK FLOW PREVENTION DEVICE WITH WYE STRAINER, INSTALL WITH BRASS NIPPLES, UNIONS AND FITTINGS, SIZED PER DEVICE					H
NO SYMBOL				WILKINS	500XL-HLR 2" BRONZE, HIGH LOW RANGE (10-125 PSI) PRESSURE REGULATOR, WITH SINGLE UNION FIPT X FIPT CONNECTIONS, INSTALL PRESSURE REGULATOR ON THE DOWNSTREAM SIDE OF THE BACK FLOW DEVICE. SET WATER PRESSURE TO 10 PSI ABOVE DESIGN PRESSURE SHOWN ON POC NOTES.					H
NO SYMBOL				V.I.T.	STRONG BOX SBBC-45SS "SMOOTH TOUCH" STAINLESS STEEL BACK FLOW DEVICE ENCLOSURE					H
				SUPERIOR	3200-200 2" NORMALLY CLOSED, BRASS MASTER CONTROL VALVE. WIRE MCV TO THE CONTROLLER USING A SEPARATE PILOT AND GROUND WIRE, ROUTE INSIDE A 1" SCH. 40 PVC (GRAY) ELECTRICAL CONDUIT. INSTALL INSIDE A STANDARD RECTANGULAR VALVE BOX.					I
				HUNTER	FCT-200, 2" FLOW SENSOR, WIRE TO CONTROLLER USING TWO (2) #14UF AWG WIRES INSIDE A 1" SCH. 40 PVC (GRAY) ELECTRICAL CONDUIT. INSTALL PER MANUFACTURER'S RECOMMENDATIONS AND INSIDE A STANDARD RECTANGULAR VALVE BOX.					J
				LASCO	VXX101N-SC XX" SLO-CLOSE SCH. 80 PVC, TRUE-UNION BALL VALVE WITH SOLVENT WELD SOCKET CONNECTIONS, LINE SIZE PER MAINLINE. INSTALL INSIDE A 10" ROUND VALVE BOX.					K
				RAIN BIRD	HQ-44-LRC 1" QUICK COUPLER VALVE WITH LOCKING VINYL COVER AND A LASCO G13S-218 SWING JOINT. INSTALL INSIDE A 10" ROUND VALVE BOX.					L
				HUNTER	ICV-XX1G-FS-AS-ADJ PRESSURE REGULATING, PLASTIC REMOTE CONTROL VALVE (RCV), SIZE AS SHOWN (1" AND 1 1/2" SIZES), SET PRS-D PRESSURE REGULATOR TO PROVIDE THE OPERATING PRESSURE OF THE SPRINKLER / BUBBLER HEAD AT THE HIGHEST OR FARTHEST HEAD ON THE CONTROL VALVE ZONE (MEASURE PSI AT HEAD). INSTALL THE RCV INSIDE A STANDARD RECTANGULAR VALVE BOX.					M
				HUNTER	ICV-XX1G-FS PLASTIC DRIP REMOTE CONTROL VALVE, SIZE AS SHOWN (1" AND 1 1/2" SIZES). INSTALL A DISC FILTER AND AN INLINE PRESSURE REGULATOR ON THE DOWNSTREAM SIDE OF EACH DRIP REMOTE CONTROL VALVE (DRCV). FOR 1" DRCV'S INSTALL A RAIN BIRD LCRBY-100D DISC FILTER AND A SENNINGER 1" PMR-40-MF PRESSURE REGULATOR. FOR 1 1/2" DRCV'S INSTALL A RAIN BIRD LCRBY-150D DISC FILTER AND A SENNINGER 1 1/4" PMR-40-HF PRESSURE REGULATOR. USE A 1 1/2" SCH. 40 PVC THREADED COUPLING, A 1 1/2" X 1 1/4" PVC THREADED REDUCER BUSHING, AND A 1 1/4" X 2" SCH. 80 PVC NIPPLE AS REQUIRED TO CONNECT THE 1 1/4" REGULATOR TO THE DOWNSTREAM SIDE OF THE 1 1/2" FILTER. INSTALL THE DRCV ASSEMBLY INSIDE A JUMBO RECTANGULAR VALVE BOX.					N
				HUNTER	A2C-1200-P 12 STATION ACC2 CONTROLLER WITH SEVEN (7) A2M-600 6-STATION EXPANSION MODULES AND A A2C-LAN MODULE TO CREATE AN 54 STATION LAN INTERNET READY CONTROLLER. INSTALL CONTROLLER INSIDE A STAINLESS STEEL ENCLOSURE, SEE BELOW FOR TYPE. CONTRACTOR TO SUBSCRIBE TO HYDROWISE INTERNET BASED CENTRAL CONTROL AND WEATHER DATA DOWNLOAD SERVICES. THE CONTRACTOR TO REGISTER THE CONTROLLER SOFTWARE AND FULLY PROGRAM THE CONTROLLER FOR AUTOMATIC PROGRAM ADJUSTMENT. THE CONTRACTOR SHALL PROVIDE PROOF OF REGISTRATION AND PROGRAMMING TO THE OWNER.					O
NO SYMBOL				V.I.T.	SB-16SS STRONGBOX STAINLESS STEEL TOP-ENTRY CONTROLLER ENCLOSURE WITH CSA SUB-ASSEMBLY, PT-TRAY16-HUNICC2 ADAPTER, RGVRSS AND QP-16 "QUICK PAD".					O
NO SYMBOL				PAIGE ELECTRIC	THE CONTROLLER SHALL BE GROUNDED USING A #182000 5/8" X 8 FOOT COPPER CLAD GROUND ROD, A #182005 CAST BRONZE ROD CLAMP AND THE REQUIRED LENGTH OF #6AWG BARE, SINGLE STRAND COPPER GROUND WIRE. INSTALL INSIDE A 10" ROUND VALVE BOX.					P
				HUNTER	RAIN-CLIK WIRED RAIN SENSOR, MOUNT ON EXTERIOR WALL IN AN EXPOSED AREA, WIRE TO THE CONTROLLER.					O
				N/A	120 VOLT ELECTRICAL POWER FOR CONTROLLER, PROVIDED BY ELECTRICIAN, VERIFY ACTUAL LOCATION IN FIELD					N/A
				AS APPROVED	PVC PIPE 3/4" - 2" SCH. 40, SOLVENT WELD WITH SCH. 40 PVC FITTINGS, AS LATERAL LINES INSTALLED 12" BELOW FINISHED GRADE					Q
				AS APPROVED	PVC PIPE 2" - 3" CL. 315, SOLVENT WELD WITH SCH. 80 PVC FITTINGS, AS MAINLINES INSTALLED 18" BELOW FINISHED GRADE					Q,S
				AS APPROVED	PVC PIPE SCH. 40 AS SLEEVING, TWICE THE DIAMETER OF PIPE OR WIRE BUNDLE CARRIED (2" MINIMUM SIZE) INSTALL ALL PIPE AND WIRE UNDER PAVING, HARDSCAPE, ETC. (OR AS DIRECTED BY OWNER'S AUTHORIZED REPRESENTATIVE) INSIDE SLEEVES. SLEEVES UNDER PEDESTRIAN PAVING SHALL BE INSTALLED 24" BELOW FINISHED GRADE. SLEEVES UNDER VEHICULAR PAVING SHALL BE INSTALLED 36" BELOW FINISHED GRADE.					R
NO SYMBOL				LASCO	ALL FITTINGS USED WITH SOLVENT WELD MAINLINE PIPE SHALL BE SCH. 80 PVC FITTINGS, GRAY IN COLOR, AND SIZED TO MATCH THE MAINLINE PIPE. ALL FITTINGS USED WITH SOLVENT WELD LATERAL LINE PIPE SHALL BE SCH. 40 PVC, WHITE IN COLOR, AND SIZED TO MATCH THE LATERAL LINE PIPE. ALL THREADED PVC NIPPLES SHALL BE SCH. 80 PVC PIPE, DARK GRAY IN COLOR, WITH MOLDED THREADS.					N/A
NO SYMBOL				WELD-ON	ALL SOLVENT WELD CONNECTIONS FOR BOTH MAINLINE AND LATERAL LINE SHALL BE MADE USING THE TWO-STEP PROCESS OF PRIMER AND SOLVENT CEMENT. PRIMER SHALL BE P-68 LOW VOC "PURPLE PRIMER". SOLVENT CEMENT SHALL BE 705 LOW VOC, GRAY COLORED "MEDIUM BODIED" CEMENT. USE DAUBERS SIZED AT LEAST ONE-HALF THE SIZE OF THE LARGEST PIPE BEING JOINED. ALL SOLVENT CEMENTED JOINTS SHALL BE MADE PER THE PIPE AND FITTING MANUFACTURER'S RECOMMENDATIONS.					N/A
NO SYMBOL				AS APPROVED	ALL SOLVENT WELD MAINLINES ABOVE 2" IN SIZE SHALL HAVE CONCRETE THRUST BLOCKING INSTALLED AT ALL DIRECTIONAL CHANGES INCLUDING ELBOWS (45° AND 90°) AND TEES. MAINLINE PIPES UNDER 2" SIZE AND ALL LATERAL LINES DO NOT REQUIRE THRUST BLOCKING.					S
NO SYMBOL				AS APPROVED	1" SCH. 40 PVC, GRAY ELECTRICAL CONDUIT FOR FLOW SENSOR / MASTER VALVE WIRES. PROVIDE PULL BOX AT A MAXIMUM OF 200 FEET ON CENTER FOR A 3 FOOT WIRE LOOP OR ANY SPLICES. INSTALL INSIDE A STANDARD RECTANGULAR VALVE BOX.					N/A
NO SYMBOL				PAIGE ELECTRIC	P7079D POLYETHYLENE INSULATED, SOLID COPPER CONDUCTOR IRRIGATION CONTROL WIRE #14UF AWG DIRECT BURIAL (U.L. APPROVED). PILOT WIRES SHALL BE RED IN COLOR, COMMON GROUND WIRE SHALL BE WHITE IN COLOR, SPARE WIRES SHALL BE YELLOW IN COLOR. THE CONTRACTOR SHALL ROUTE TWO (2) SPARE CONTROL WIRES (YELLOW) FROM THE CONTROLLER ALONG THE MAINLINE IN ALL DIRECTIONS AWAY FROM THE CONTROLLER. LOOP SPARE WIRES UP AND INTO EACH VALVE BOX ALONG THE MAINLINE, PROVIDING A 3 FOOT MINIMUM LOOP.					Q,R,T
NO SYMBOL				GPH IRRIGATION	GDBRY6 DIRECT BURIAL, 100% SILICONE GEL, WATER-PROOF WIRE CONNECTORS FOR USE ON ALL WIRE SPLICES AND CONNECTIONS					T
NO SYMBOL				NDS (K.B.I.)	KSC-XXX-S SWING CHECK VALVE, LATERAL LINE SIZE, INSTALL ONE (1) ON THE DOWNSTREAM SIDE OF EACH RCV WHEN THE RCV IS LOWER THAN THE SPRINKLERS, BUBBLERS OR DRIP EMITTERS. INSTALL WITHIN SPRINKLER / BUBBLER / DRIP ZONES AS REQUIRED TO PREVENT LOW HEAD DRAINAGE.					N/A
NO SYMBOL				NDS (K.B.I.)	KC-XXX-S SPRING CHECK VALVE, LATERAL LINE SIZE, INSTALL ONE (1) ON THE DOWNSTREAM SIDE OF EACH RCV WHEN THE RCV IS HIGHER THAN THE SPRINKLERS, BUBBLERS OR DRIP EMITTERS. INSTALL WITHIN SPRINKLER / BUBBLER / DRIP ZONES AS REQUIRED TO PREVENT LOW HEAD DRAINAGE.					N/A
NO SYMBOL				RAIN BIRD	ALL VALVE BOXES SHALL BE VB SERIES, PLASTIC TYPE WITH OVERLAPPING LIDS. VALVE BOX BODIES SHALL BE BLACK IN COLOR. LIDS FOR BOXES IN TURF AREAS SHALL BE GREEN. LIDS FOR VALVE BOXES IN SHRUB AREAS SHALL BE BLACK. ALL BOXES SHALL BE SECURED WITH A RAIN BIRD VB-LOCK-H HEXAGON HEAD BOLT, WASHER AND CLIP. BOXES SHALL BE AS SHOWN BELOW:					U

DESCRIPTION	TURF AREAS (GREEN LIDS)	SHRUB AREAS (BLACK BOXES AND LIDS)
10" ROUND BOXES	VB-10RND	VB-10RNDB (BOX) AND VB-10RNDBKL (LID)
STANDARD RECTANGULAR BOXES	VB-STD	VB-STDB (BOX) AND VB-STDBKL (LID)
JUMBO RECTANGULAR BOXES	VB-JMB	VB-JMBB (BOX) AND VB-JMBBKL (LID)

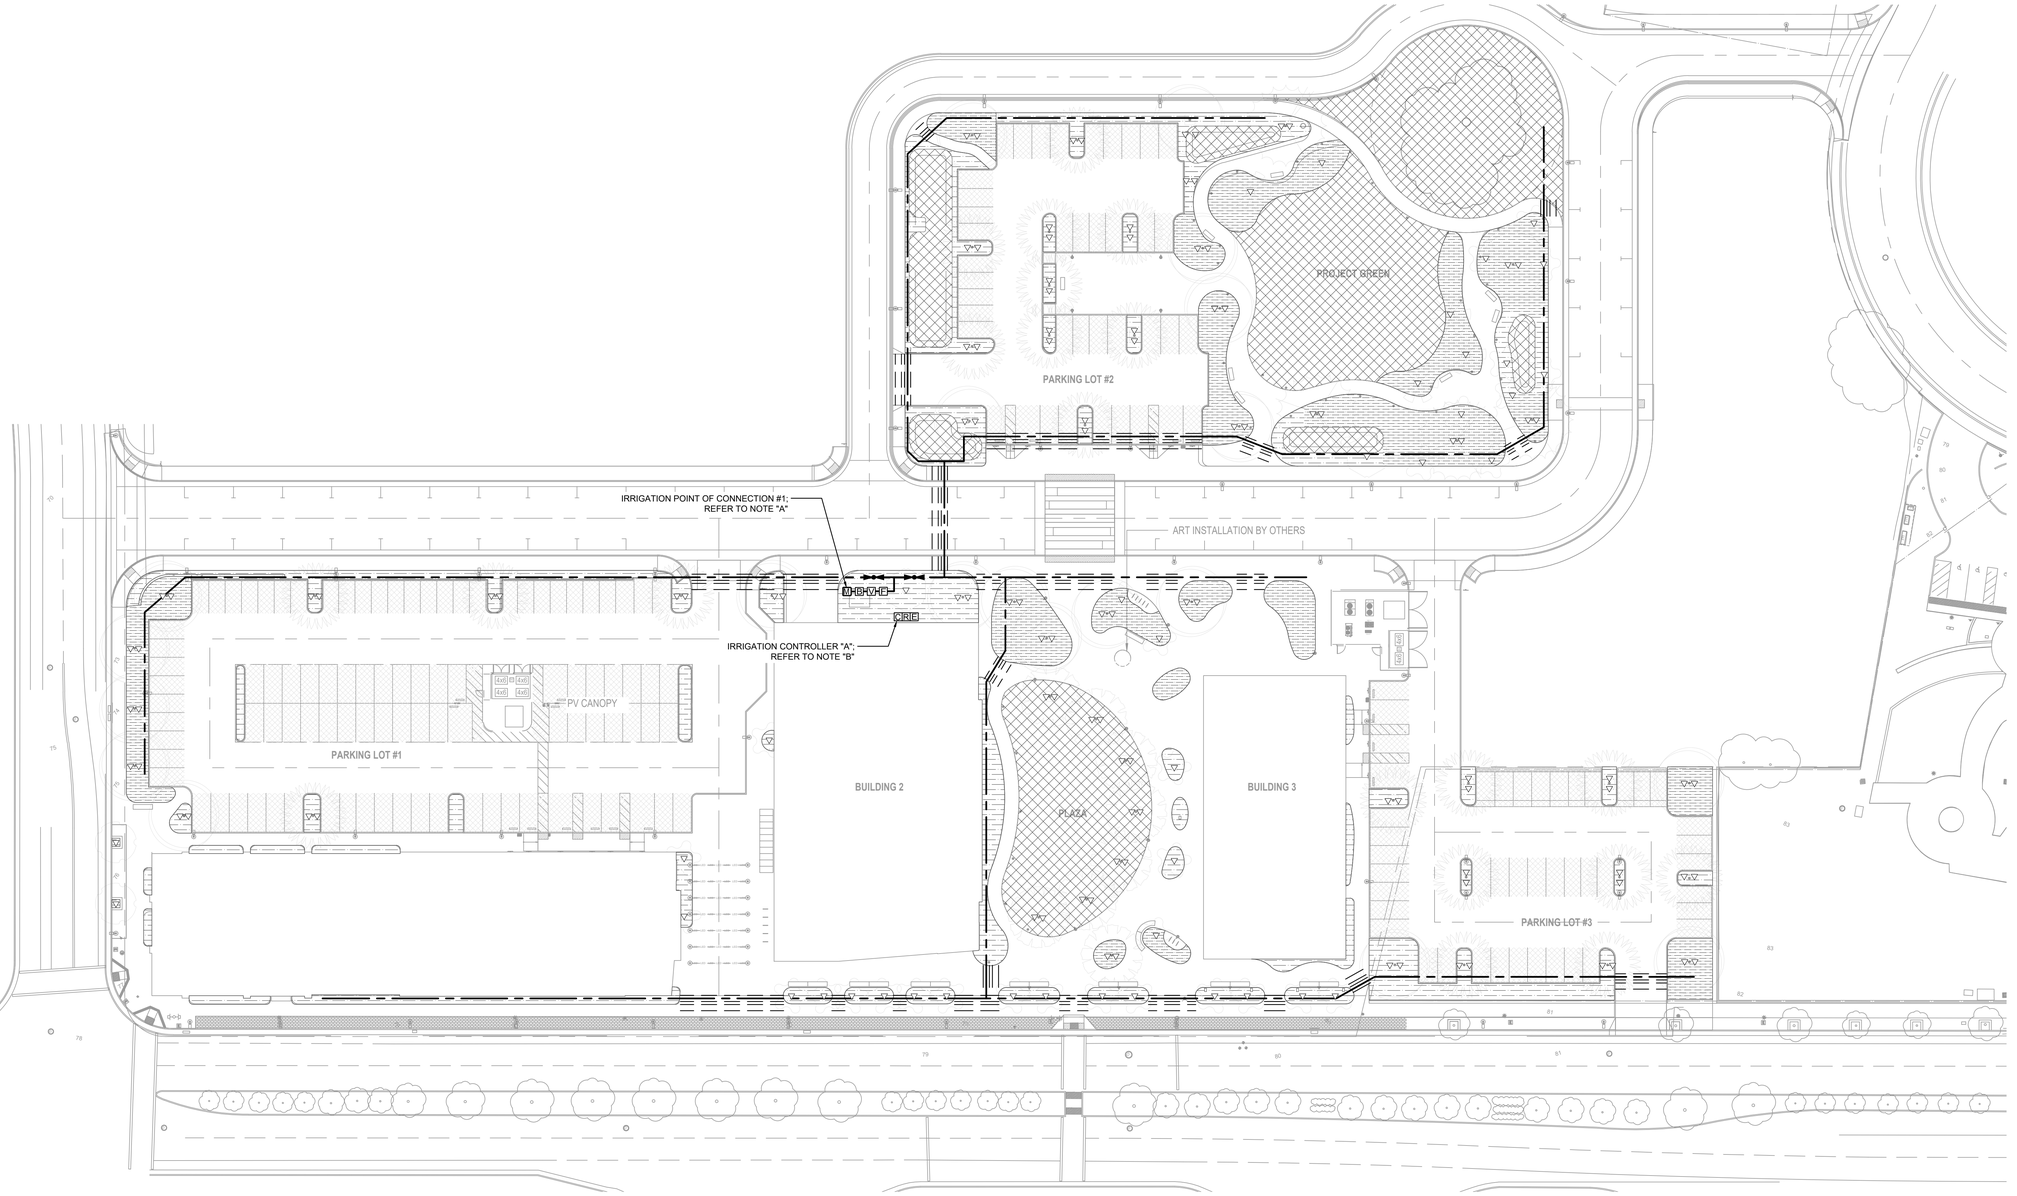
IRRIGATION LEGEND & NOTES

L6.00



NOTE A:
POINT OF CONNECTION (POC) #1 SHALL BE A 2" DOMESTIC WATER METER WITH A 2" SERVICE LINE. THE CONTRACTOR SHALL VERIFY THE ACTUAL LOCATION, WATER TYPE, METER SIZE AND WATER PRESSURE IN THE FIELD PRIOR TO STARTING WORK. MEASUREMENT OF THE STATIC (NO WATER MOVING) WATER PRESSURE IS ACCEPTABLE FOR POTABLE WATER SYSTEMS WHERE NO PUMP HAS BEEN INDICATED ON THESE PLANS. WHEN USING RECYCLED WATER, OR ON POTABLE WATER SYSTEMS REQUIRING A PUMP, ONLY THE MEASUREMENT OF DYNAMIC (WATER MOVING THROUGH THE METER) WATER PRESSURE, SHALL BE ACCEPTABLE. THE DYNAMIC WATER PRESSURE SHALL BE MEASURED AT THE MAXIMUM SYSTEM DEMAND AS INDICATED BELOW. IF ANY OF THE POC INFORMATION SHOWN ON THESE DRAWING IS FOUND TO BE DIFFERENT THAN THE ACTUAL POC INFORMATION GATHERED IN THE FIELD, IMMEDIATELY NOTIFY THE LANDSCAPE ARCHITECT AND IRRIGATION CONSULTANT. SHOULD THE CONTRACTOR FAIL TO VERIFY THE POC INFORMATION AS SHOWN HEREIN, ANY CHANGES REQUIRED BY LOW PRESSURE OR VOLUME SHALL BE THE SOLE RESPONSIBILITY OF THE CONTRACTOR.

WATER PRESSURE AT POC:	N/A	PSI (STATIC / DYNAMIC)
DESIGN WATER PRESSURE:	N/A	PSI
MAXIMUM SYSTEM DEMAND:	N/A	GPM
PRESSURE BOOST REQUIRED:	N/A	PSI
RESIDUAL WATER PRESSURE:	N/A	PSI

NOTE B:
CONTROLLER "A" SHALL BE OF THE BRAND, MODEL AND STATION SIZE AS INDICATED ON THE IRRIGATION MATERIALS LEGEND. THE CONTROLLER SHALL BE INSTALLED IN THE APPROXIMATE LOCATION SHOWN. THE CONTRACTOR SHALL COORDINATE THE REQUIRED ELECTRICAL POWER SUPPLY AT THIS LOCATION WITH THE OWNER'S AUTHORIZED REPRESENTATIVE. FINAL LOCATION OF CONTROLLER AND ELECTRICAL POINT OF CONNECTION SHALL BE CONFIRMED WITH OWNER'S AUTHORIZED REPRESENTATIVE PRIOR TO STARTING WORK.

NOTE C:
THESE PLANS ARE DIAGRAMMATIC, THE MAINLINE AND RELATED IRRIGATION EQUIPMENT IS SHOWN WITHIN THE PAVING FOR CLARITY ONLY. THE ACTUAL LOCATION OF MAINLINE AND RELATED IRRIGATION EQUIPMENT SHALL BE WITHIN PLANTER AND A MINIMUM OF 18" OFF ADJACENT HARDSCAPE AND OTHER OBSTACLES, TYPICAL.

NOTE D:
CONTRACTOR SHALL ADJUST ALL HEADS AS REQUIRED TO ACCOMMODATE ANY VERTICAL OBSTRUCTIONS THAT MAY OCCUR IN THE LANDSCAPE, INCLUDING BUT NOT LIMITED TO LIGHT POLES, FIRE HYDRANTS, TREES, ETC. WHEN A SLIGHT RELOCATION OF THE HEAD IS NOT SUFFICIENT TO CLEAR THE OBSTACLE, OR IF IT NEGATIVELY AFFECTS THE COVERAGE, AN ADDITIONAL HEAD SHALL BE INSTALLED TO PLACE ONE HEAD ON EITHER SIDE OF THE OBSTACLE. THE NOZZLES OF THESE TWO HEADS SHALL HAVE ARC PATTERNS THAT ADD UP TO THE ORIGINAL ARC PATTERN OF THE HEAD INDICATED ON THE PLANS. THE CONTRACTOR SHALL VERIFY ALL HEAD LAYOUT WITH OWNER'S AUTHORIZED REPRESENTATIVE PRIOR TO STARTING WORK.

NOTE E:
THESE PLANS ARE DIAGRAMMATIC, TREE BUBBLERS AND LATERAL LINES ARE SHOWN WITHIN THE PAVING FOR CLARITY ONLY, THE ACTUAL LOCATIONS SHALL BE WITHIN THE PLANTER. THE TREE BUBBLERS SHALL BE ALIGNED WITH TREES AS SHOWN ON THE PLANTING PLANS, AND AS DIRECTED BY OWNER'S AUTHORIZED REPRESENTATIVE. THE CONTRACTOR SHALL CONFIRM ALL LAYOUT IN FIELD WITH OWNER'S AUTHORIZED REPRESENTATIVE PRIOR TO STARTING WORK.

NOTE F:
PRIOR TO START OF CONSTRUCTION THE CONTRACTOR SHALL SUBMIT TO THE OWNER AND LANDSCAPE ARCHITECT A SCALED SHOP DRAWING INDICATING THE PROPOSED LOCATIONS FOR THE IRRIGATION EQUIPMENT LISTED BELOW. THE SHOP DRAWING SHALL BE PREPARED TO THE SATISFACTION OF THE OWNER AND LANDSCAPE ARCHITECT. SHOP DRAWINGS MUST INCLUDE THE PROPOSED LOCATIONS FOR THE FOLLOWING ITEMS:

1. POINT OF CONNECTION (INCLUDING WATER POC, BACK FLOW DEVICES, MASTER CONTROL VALVES, FLOW SENSORS, ETC.)
2. ISOLATION VALVES
3. AUTOMATIC CONTROL VALVES (INDICATE STATION NUMBER)
4. QUICK COUPLING VALVES
5. IRRIGATION CONTROLLER(S)
6. RELATED EQUIPMENT (AS MAY BE DIRECTED).

EACH PIECE OF AFOREMENTIONED EQUIPMENT SHALL HAVE IT'S PROPOSED INSTALLED LOCATION SHOWN ON THE SHOP DRAWINGS. THE SYMBOL FOR EACH PRODUCT SHALL BE A SCALED REPRESENTATION OF THE FOOTPRINT OF THE EQUIPMENT OR THE VALVE BOX IN WHICH THE EQUIPMENT IS INSTALLED. CONTRACTOR SHALL INSTALL ALL VALVE BOXES AND RELATED EQUIPMENT PER THE OWNER APPROVED SHOP DRAWINGS. ONCE THE SHOP DRAWING LOCATIONS ARE APPROVED, THE LANDSCAPE ARCHITECT OR OWNER'S AUTHORIZED REPRESENTATIVE WILL ALLOW NO ADJUSTMENTS TO THE APPROVED VALVE BOX PLACEMENT WITHOUT PRIOR WRITTEN ACCEPTANCE. ANY IRRIGATION EQUIPMENT INSTALLED WITHOUT PRIOR APPROVAL WITH SHOP DRAWINGS WILL BE SUBJECT TO RELOCATION BASED ON DIRECTION BY THE LANDSCAPE ARCHITECT AT THE CONTRACTOR'S EXPENSE.

BIO-RETENTION MIX

BIO-RETENTION MIX SCIENTIFIC NAME	COMMON NAME	TYPE	SIZE	WUCOLS	MATURE HEIGHT	MATURE WIDTH
PERENNIALS						
Achillea millefolium	Yarrow	Perennial	1 gallon	LOW	1-3 ft	6-18 inches
Eriophyllum lanatum	Wooly sunflower	Perennial	1 gallon	LOW	1-3 ft	2 ft
Asclepias fascicularis	Narrow-leaf milkweed	Perennial	1 gallon	LOW	2-3 ft	12 inches
Fragaria chiloensis	Beach strawberry	Perennial groundcover	1 gallon	MOD	1-4 inches	2-3 ft
Iris macrosiphon	Foothill iris	Perennial	1 gallon	MOD	1-2 ft	12 inches
Sisyrinchium bellum	Blue-eyed grass	Perennial	1 gallon	LOW	1-2 ft	3 inches
GRASSES + RUSHES						
Carex praegracilis	Clustered field sedge	Grass	5 gallon	MOD	2-4 ft	spreading
Calamagrostis foliosa	Feather reed grass	Grass	5 gallon	MOD	1-2 ft	2 ft
Calamagrostis nutkaensis	Pacific reed grass	Grass	5 gallon	MOD	3 ft	3 ft
Festuca rubra	Red fescue	Grass	5 gallon	MOD	1-3 ft	spreading
Festuca 'Siskiyou Blue'	Siskiyou Blue Fescue	Grass	5 gallon	MOD	1-2 ft	1-2 ft
Muhlenbergia lindheimeri	Lindheimeri muhly	Grass	5 gallon	LOW	3-5 ft	3-4 ft
Festuca mairei	Maire's fescue	Grass	5 gallon	LOW	2-3 ft	2-3 ft
Juncus patens	Common rush	Grass	5 gallon	MOD	1-3 ft	3 ft
SHRUBS						
Arctostaphylos 'Emerald Carpet'	Emerald carpet manzanita	Shrub, Groundcover	5 gallon	MOD	6-12 inches	3-5 ft
Calycanthus occidentalis	Spicebush	Shrub	15 gallon	LOW	3-13 ft	3-12 ft

TREE MITIGATION TABLES

Mills Crossing: Tree Removal and Mitigation Table
Reference: Arborist and Tree Protection Report, Lori Murphy (11.05.2024)

Tree #	Species	DSH (in.)	Protected (Y/N)	Condition	Tree to be removed? (Y/N)	Mitigation requirement (in.)
1	Crabapple	6	N			n/a
2	Valley Oak	3	N			n/a
3	Chinese pistache	16	Y	Fair	Y	**16**
4	Chinese pistache	18	Y	Fair	Y	**18**
5	Chinese pistache	13.5	Y	Fair	Y	**13.5**
6	Chinese pistache	16.5	Y	Good	Y	**16.5**
7	Chinese pistache	16	Y	Fair	Y	**16**
8	Valley Oak	20.5	Y	Fair	Y	**20.5**
9	Valley Oak	17	Y	Fair	Y	**17**
10	Valley Oak	35	Y	Fair	Y	**35**
18	Siberian elm	18	Y	Fair	Y	**18**
19	Elm spp.	8	N	Fair		n/a
20	Blue Oak	45.5	Y	Fair	N	n/a
TOTAL:						**170.5**

Tree Planting Plan: Mitigation provided

Quantity	Box Size	Mitigation Equivalent (in.)	Total (in.)
33	36"	3	99
7	48"	4	28
54	60"	5	270
TOTAL:			**397**

Conclusion: Proposed Tree Planting Plan meets mitigation requirements for tree removal proposed

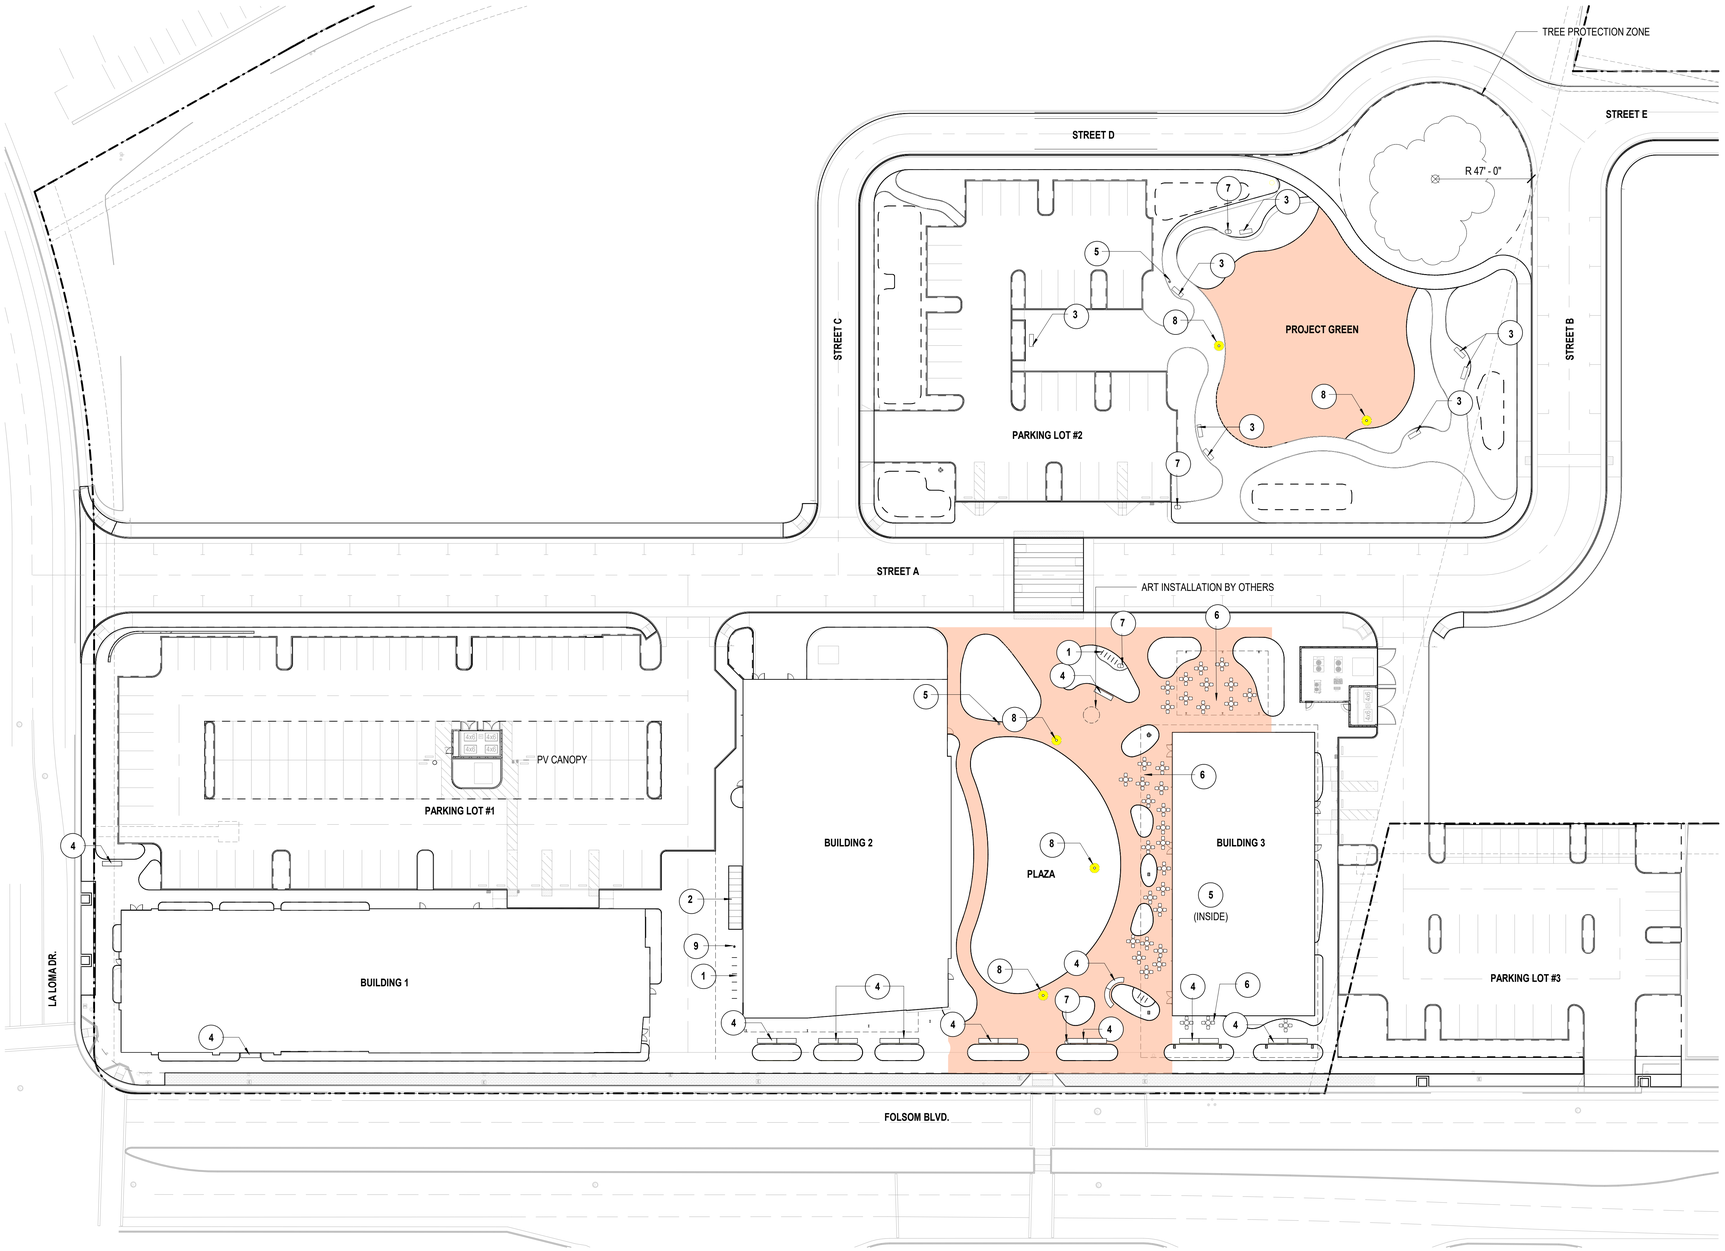
PLANTING PLAN

L7.10



PEDESTRIAN PLAN 1
1" = 30'-0"

PEDESTRIAN ORIENTED OPEN SPACE AREAS

PLAZA: ~20,000 SQ. FT.

PROJECT GREEN: ~8,400 SQ. FT.

1 SHORT TERM BIKE STORAGE (minimum 10 percent of all required motorized vehicle parking)
REQUIRED: 11 RACKS / 22 BIKES
PROVIDED: 14 RACKS/ 28 BIKES

2 LONG TERM BIKE STORAGE (minimum 5 percent of all required motorized vehicle parking)
REQUIRED / PROVIDED: 9 LOCKERS / BIKES

TOTAL PROVIDED BIKE PARKING: 37 BIKES
TOTAL COVERED BIKE PARKING: 15 BIKES (9 LONG TERM, 6 SHORT TERM)

3 PROJECT GREEN SEATING
PROVIDED: 8 (80 LINEAR FEET)

4 PLAZA SEATING
PROVIDED: 19 (190 LINEAR FEET)

5 DRINKING FOUNTAIN
PROVIDED: 3

6 MODULAR TABLE AND CHAIR (4 CHAIRS PER TABLE)
PROVIDED: 35 (210 LINEAR FEET)

7 WASTE AND RECYCLING RECEPTACLES
PROVIDED: 4

8 ELECTRICAL POWER OUTLETS : IN FLUSH LOCKABLE BOXES OR ATTACHED TO LIGHT POLES
PROVIDED: 5

9 BIKE REPAIR WORK STAND
PROVIDED: 1

LIGHTING FIXTURE CUTSHEETS

E9.10

CXF5 PIMA

Pendant

Specifications

Housing

In a round shape, this housing is constructed of low copper die-cast aluminum and 0.090" thick spun aluminum. All non-ferrous fasteners prevent corrosion and ensure longer life.

Access-mechanism

The hinged lens frame is cast aluminum with a stainless steel spring latch for tool-less access

Mounting

T: Top arm mount

Light engine

LEDgine is composed of five main components: **Heat Sink, Lens, LED lamp, Optical System, and Driver.** Electrical components are RoHS compliant.

LED module

LED type Lumileds LUXEON T.Composed of high-performance white LEDs. Color temperature as per ANSI/NEMA bin Neutral White, 4000 Kelvin nominal (3985K +/- 275K or 3710K to 4260K) or Warm White, 3000 Kelvin nominal (3045K +/- 175K or 2870K to 3220K), CRI 70 Min. 75 Typical.

Heat sink

Made of cast aluminum optimizing the LEDs efficiency and life. Product does not use any cooling device with moving parts (only passive cooling device).

Finish

Color in accordance with the AAMA 2603 standard. Application of polyester powder coat paint (4 mils/100 microns) with ± 1 mils / 24 microns of tolerance. The Thermosetting resins provides a discoloration resistant finish in accordance with the ASTM D2244 standard, as well as luster retention in keeping with the ASTM D523 standard and humidity proof in accordance with the ASTM D2247 standard. The surface treatment achieves a minimum of 2000 hours for salt spray resistant finish in accordance with testing performed and per ASTM B117 standard.

Optical system

Composed of high performance UV stabilized optical grade polymer refractor lenses to achieve desired distribution optimized to get maximum spacing, target lumens and a superior lighting uniformity. System is rated IP66. Performance shall be tested per LM-63, LM-79 and TM-15 (IESNA) certifying its photometric performance. Type 2, 3, 3W, 4 and Type 5 Street side indicated. House side shield optional (can be field installed) 2H: Type 2 with House Side Shield, 3H: Type 3 short with house side shield, 3WH: Type 3 Wide with House side shield.

Driver

Driver comes standard with dimming compatible 0-10V. High power factor of 95%. Electronic driver, operating range 50/60 Hz. Auto adjusting universal voltage input from 120 to 277 VAC rated for both application line to line or line to neutral. Class I, THD of 20% max. Maximum ambient operating temperature from 40ºF (4ºC) to 130ºF (55ºC). Certified in compliance to UL1310 cULus requirement (dry and damp location). Assembled on a unitized removable tray with Tyco quick disconnect plug resisting to 221ºF (105ºC). The current supplying the LEDs will be reduced by the driver if the driver experiences internal overheating as a protection to the LEDs and the electrical components. Output is protected from short circuits, voltage overload and current overload. Automatic recovery after correction. Standard built in driver sure protection of 2.5kV (min).

DA: 4 Hrs 25% Reduction
DB: 4 Hrs 50% Reduction
DC: 4 Hrs 75% Reduction
DD: 6 Hrs 25% Reduction
DE: 6 Hrs 50% Reduction
DF: 6 Hrs 75% Reduction
DG: 8 Hrs 25% Reduction
DH: 8 Hrs 50% Reduction
DJ: 8 Hrs 75% Reduction
DALI: Pre-set driver compatible with the the DALI logarithmic control system.

FAWS: Field Adjustable Wattage Selector, pre-set to the highest position, can be easily switched in the field to the required position. This reduces total luminaire wattage consumption and reduces the light level - see the FAWS multiplier chart for more details. **Note:** It is not recommended to use FAWS with other dimming or controls; if you do, set the switch to position 10 (maximum output) to enable the other dimming or controls. Switching FAWS to any position other than 10 will disable the other dimming or controls.

SRD: Sensor Ready Driver including SR communication (used for dimming and other functionalities), 24V auxiliary supply and a logical signal input (LSI) connected to the top NEMA twist lock receptacle.

SRD1: Sensor Ready Driver including SR communication (used for dimming and other functionalities) but with 24V auxiliary supply and a logical signal input (LSI) not connected to the top NEMA twist lock.

Surge protection

Surge protector tested in accordance with ANSI/IEEE C62.45 per ANSI/IEEE C62.41.2 Scenario I Category C High Exposure 10kV/10kA waveforms for Line Ground, Line Neutral and Neutral Ground, and in accordance with U.S. DOE (Department of Energy) MSSLC (Municipal Solid State Street Lighting Consortium) model specification for LED roadway luminaires electrical immunity requirements for High Test Level 10kV / 10kA.

Wiring

Gauge 18 wires. Top mount option come with quick disconnects. Arm mount options provide a 6" Minimum exceeding from luminaire.

Hardware

All non-ferrous fasteners prevent corrosion and ensure longer life.

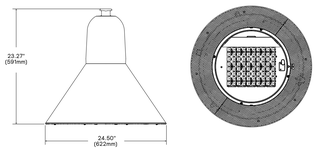
1. System input wattage may vary based on input voltage, by up to +/- 10% , and based on manufacturer forward voltage, by up to +/- 8%.
2. Lumen values based on photometric tests performed in compliance with IESNA LM-79.
Note: Some data may be scaled based on tests of similar, but not identical, luminaires.

CXF5 PIMA

Pendant

Dimensions

Width 24-1/2" diameter
Height 23-3/8"
EPA 1.52 sq. ft
Weight (maximum) 44 lbs (19.96 kg)



Predicted Lumen Depreciation Data

Predicted performance derived from LED manufacturer's data and engineering design estimates, based on IESNA LM-80 methodology. Actual experience may vary due to field application conditions.$L_{70}$is the predicted time when LED performance depreciates to 70% of initial lumen output. Calculated per IESNA TM21-11. Published L_{70} hours limited to 6 times actual LED test hours.

Ambient Temperature °C	Driver mA	Calculated L_{70} Hours	L_{70} per TM-21	Lumen Maintenance % at 60,000 hrs
25°C	700 mA	>100,000 hours	>60,000 hours	>87%

Note: Typical value accuracy +/- 5%

HADCO by Signify

Urban

PIMA

CXF5 Pendant

The Hadco Pima pendant family offers a simple modern take on the traditional pendant lantern, providing style and elegance to downtownareas, commercial developments, parks and residential communities. These pendants use the latest LED technology which maximizes energy savings and provides uniform and comfortable light.

Product info

Environmental Product Specification
This product is compliant with the requirements contained in the European Directives, RoHS Directive 2011/65 and 2015/863. This product is designed so that 100% of the product can be disassembled and reused.

Information
Electrical: System Wattage: 19W or 37W LED Wattage: 17 W or 35 W Delivered lumens: 1,824 - 3,696 Efficacy: 96.0 lm/W - 99.9 lm/W Certifications: cULus, Wet Location Protection class IP65 IK class 09 BUG Rating: B1-U0-G1; B1-U1-G1; B1-U0-G2; B1-U1-G2 Controllability: 0-10V Dimming Min.-Max. Ambient Temp: -40°C to +55°C Color Rendering: Ra≥80 Wind Load EPA: 0.6 sq ft

Mounting
Post top: T-Taper-SIN-2.4IN mounts directly on top of Taper (SIN-2.4IN) poles; T-CRA-SIN-3IN mounts directly on top of dual round aluminum (CRA-SIN-3IN) poles.

Finish
Natural painted aluminum, powder coated.

Materials
Lower diffuser: Injection molded opal acrylic. Lower glass: Plate of clear polycarbonate. Upper diffuser: Injection molded opal acrylic. Housing: Die cast aluminum. Base: Die cast aluminum.

Sizes and weight
Width x Height x Length (in.) | 15.4 x 3.9 x 22.3 Max 17.1 lbs

Compliance
cULus, Wet location.

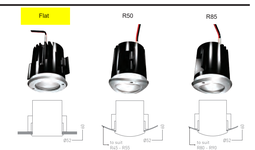
KLIK LEDpod™ XL50 Patented



Description

Minimalist point source LED fixture with multiple outputs for use in hollow metal structures such as guard rails, awnings, canopies and custom luminaires. Please note these fixtures are not for use in hand rail.

Housing

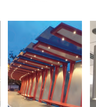
Clear anodized aluminum body as standard. Color-match anodized as an option, consult factory.

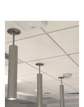
Aluminum body has a fine 25-micron finish and is hard-coat anodized, thus preventing galvanic corrosion.

Mounting

Unique concealed internal mounting wings hold the fixture in place, deployed via unobtrusive screw holes with patent-pending anti-tamper screws.
- Tube Size:
  - -XL50 Flat: RHS min 2.75" height, Max. wall .3125"
  - -XL50R50: Ø 3" - 5", Max. wall .3125"
  - -XL50R85: Ø 6" - 8", Max. wall .3125"
  - -*Other sizes available upon request*
- Cut Out: 48mm (1.90")
- Weight: 0.43 LBS

Commack Library Photo by Ola Wilk/ Wilk Marketing Communications





Electrical/LED Driver

- Input Voltage: 24 VDC
- Operating Temp: -40 to 120° F
- Efficiency: Up to 120 lm/W
- Driver: Must use class 2 driver
  - Primary Driver: 110 - 277 VAC UL Listed Constant Voltage
  - Secondary Driver: Constant Current (provided with fixture)
- Control: DALI, 0-10V, DMX
  - DMX control typically for dimming only; Contact factory for addressable and RGBW options
- Enclosure: Minimum NEMA2 for indoor, NEMA 3R for outdoor
- Wire connectors provided; factory wire-harness available, consult factory

*Please note, all KLIK fixtures are now dimmable as standard
**Must purchase Driver and Enclosure through KLIK to hold warranty

M Series Commercial

Project: | Type:
Product Code: | Date:

V091224

4" Round Downlight

Versatile Solution for all spaces providing high quality lighting ranging from 750lm all the way up to 3500lm

Expedited Install with our easily adjustable universal housing and bar hanger systems allowing for application in most ceiling types

Enhanced Serviceability is achieved through interchangeable modules, optics, and trims, all of which allow for ease of maintenance and implementation of design changes below the ceiling plane

Seamless Integration with several control systems allowing two-channel control dimming options down as low as 0.1%

INSTALLATION

Ceiling Thickness
New Construction: ½" up to 2"
Remodel: ¼" up to 1 ¼"
Extension Collar: ⅛" to 3"

Ceiling Material
Drywall, Millwork

TRIMS

Aperture
4"

Shape
Round

Style
Standard, Hyperbolic, Pinhole, Wall Wash, Flangeless, Decorative, Vandal Proof/IP65

Finish
White, Black, Bronze, Clear Diffuse, Warm Diffuse

LIGHT OUTPUT & DISTRIBUTION

Module
Downlight

Lumens (Power)
750 lm (9.5W), 1000 lm (12.5W), 1250 lm (14.3W), 1500 lm (14.3W), 2000 lm (24.5W), 2500 lm (27.5W), 3000 lm (34.0W), 3500 lm (40.5W)

Color Quality
93 CRI, 2-step SDCM

Color Temperature
2700K | 3000K | 3500K | 4000K | Warm Dim (3000-1800K) | Tunable White (4000–1800K) | Tunable White (6500–2700K)

Beam Spread
15° Narrow Spot | 60° Wide Flood | 25° Spot | 90°+ General | 40° Flood

POWER & CONTROLS

Input Voltage
120/277V

Dimming
0-10V (1%), Lutron Athena Wireless Node (1%), DALI-2 (0.1%) (Coming Soon)

RATINGS & CERTIFICATIONS

Housing
RoHS Compliant

Module and Trim
Wet Location/IP65 Rated Configurations Available (Standard trims and covered areas only)
NSF Listed (White and black finish only)
IK10 Rated Option Available (Vandal Proof trim)

Warranty
5 year limited warranty; 50,000 hours

© 2024 DMF Lighting. All Rights Reserved. Specifications subject to change without notice. See website for U.S. and international patent information.

JUPITER

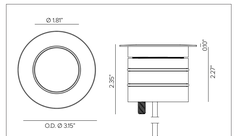
Professional Compact Inground LED Fixture

JUPITER Shown in brushed natural finish.



CONCEPT

Small scale compact recessed ingrade LED fixture.

MECHANICAL CHARACTERISTICS

Housing	3.15"Dia. X 2.27"H
Materials	Milled anodized aluminum marine grade cataphoresis* body with Passive cooling system. AISI316L stainless steel trim ring with beveled edge and with extra clear glass lens.
Finish	Brushed Natural, Bronze PVD*, Black PVD*
Power Connection	*Physical Vapor Deposition. Pre-cabled with 2ft direct burial 18ga 2 conductor cable for connection to remote power supply.
Mounting	Semi-flush recessed ingrade / surface wall mounting installation sleeve required, see available options.
Weight	1lbs
Protection	IP68* / IP69K
Impact	IK10
Load	Resistant to static loads up to 4.496lbs in flush mounted cement and pavement installations.

CERTIFICATIONS

cULus Class 2 Wet Location Listed E479873.
Tested in accordance with LM-79-08.
Compliant for California installations.
RoHS3 EU 215/863

WARRANTY

5 year limited warranty
* Fixture body complete with marine grade cataphoresis suitable for use in marine grade environments. Stainless steel trim will need to be maintained and cleaned regularly to avoid mineral deposits. Not to be in direct contact with salt or corrosive agents for extended periods of time.
* Temporary immersion up to 24 hours at a max depth of 2 meters. Installation of fixture requires proper drainage to prevent any standing water. Should not be used for permanent submersion.

SUSTAINABILITY

Luminaire designed for disposal/recycling at end-of-life. Replaceable LED light source and control gear by a Targetti technician.

ELECTRICAL CHARACTERISTICS

Power Supply	Remote Class 2 120V-277V AC power supply required, see available options.
Wattage	7W
Voltage	24V DC

SOURCE

High efficiency LED Chip on Board.

TM30	CCT (Nominal)	CRI	Rf	Rg	SDCM
	2700K	90	92	99	2
	3000K	90	92	101	2
	3500K	90	90	98	2
	4000K	90	90	98	2

OPTIC

Precision optic system with PMMA lenses for the SP, FL and WFL versions with a light cut system integrated into the front glass.

Beam	SP 21°	FL 39°	WFL 53°
Delivered Lumens	**2700K**	509lm	526lm	503lm
Data represents max output version only, may vary with the addition of fixture variations.	**3000K**	533lm	550lm	526lm
	4000K	548lm	567lm	542lm

For 3500K lumen values use multiplier of 1.02 from 3000K

Efficacy	93lm/W max. Refer to photometric graphs for specific values.
Lifetime	L80/B10 >100,000hrs at max Tq +25°C
Photobiological Classification	Low risk safety RG1

M Series Cylinder

4" Surface Mount

PRODUCT SUMMARY

LED: Cree® LED, Bridgelux

DELIVERED LUMENS: 750 lm (9.5W), 1000 lm (12.5W), 1250 lm (14.3W), 1500 lm (16.5W), 2000 lm (24.5W), 2500 lm (27.5W), 3000 lm (34W)

EFFICACY: 79 lm/W, 80 lm/W, 87lm/W, 91 lm/W, 82 lm/W, 91 lm/W, 88 lm/W

COLOR QUALITY: 93+ CRI, 2-step SDCM

CCT: 2700K, 3000K, 3500K, 4000K, Warm Dim (3000K-1800K), Tunable White (4000K-1800K), Tunable White (6500K-2700K)

DIMMING: Down to 1% for TRIAC/ELV at 120V, 1% for 0-10V at 120/277V, 0.1% DALI-2

INPUT VOLTAGE: 120/277V, 50/60Hz

MAX INPUT CURRENT (120V): 0.085 amps (750 lm), 0.110 amps (1000 lm), 0.125 amps (1250 lm), 0.145 amps (1500 lm), 0.205 amps (2000 lm), 0.235 amps (2500 lm), 0.290 amps (3000 lm)

MAX INPUT CURRENT (277V): 0.045 amps (750 lm), 0.055 amps (1000 lm), 0.060 amps (1250 lm), 0.070 amps (1500 lm), 0.100 amps (2000 lm), 0.110 amps (2500 lm), 0.135 amps (3000 lm)

POWER FACTOR: Greater than 0.9

TOTAL HARMONIC DISTORTION: Less than 20%

AMBIENT OPERATING TEMPERATURE: -20°C to 40°C

EMERGENCY LIGHTING: Optional installer mounted Remote Inverter or Emergency LED Driver for lighting up to 90 minutes in event of power failure

PHOTOMETRIC TESTING: Tested in accordance to IESNA LM-79-2008

LISTINGS: ENERGY STAR® qualified*, California Title 24 2019 - 2022 JA8-E Compliant, UL Listed for Wet Location (option), IP65 rated (option), UL Certified US-CA, Declare, NSF/ANSI-2 Splash Zone Safe**, Dark Sky Compliant (option), DALI-2 Compliant

LIFETIME: 50,000 hours at 70% lumen maintenance

CYLINDER: Extruded aluminum; 4" (small), 8" (medium), 12" (large)

FINISH: White, Black, Bronze, Brushed Aluminum, Custom Color

MOUNT: Installs in most 3" octagonal, 4" octagonal, 3" round, 4" round and 4" square boxes.

JUNCTION BOX COVERS: Allows up to 4 solid metal conduit branches. Compatible with 4" octagonal and 4" square boxes.

WARRANTY: 5 year limited warranty

** Refer to ENERGY STAR Certified light fixtures database*
*** This product is evaluated in accordance to NSF/ANSI 2 for Splash Zones having designated trim finishes*

M Series Cylinder

Project:	Type:
Product Code:	Date:

V102523

4" Surface Mount

- Integrated Drivers allow for down to 0.1% dimming options within the pendant and no need to locate anything above the canopy
- Customize your cylinder with over one million configurations, allowing for easy maintenance and on-site modifications
- Attaches directly to a surface or recessed mounted junction box, ideal for areas with limited ceiling height & plenum space restrictions
- Die-cast aluminum trims with no visible hardware for a sleek, symmetrical design

KEPLERO MINI HIGH EFFICACY

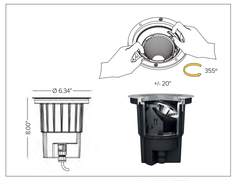
Professional Inground LED Fixture

KEPLERO® Mini HE with brushed natural trim and clear lens



Marine · Ability Driver · 100 Drive Over · Cool Touch · IP69K · IP68 · cULus Listed

CONCEPT

Compact high performance inground for even illumination with maximum efficiency.

MECHANICAL CHARACTERISTICS

Housing	8"H x 6.34"Dia. Housing.
Materials	Anodized marine grade cataphoresis* die-cast aluminum heat sink body with PVC installation sleeve. AISI316L stainless steel trim ring with beveled edge with extra clear glass lens.
Finish	Brushed Natural · Bronze PVD* · Black PVD* *Physical Vapor Deposition.
Power Connection	Provided with 4ft 5x20W 16-6 cable and DSMT anti-wicking quick disconnect to direct burial brass ingrade j-box (required, sold separately).
Functionality	Adjustable +/-20° on the vertical axis and rotated 355° on the horizontal axis with friction locking mechanism.
Mounting	Flush, semi-flush or raised tube mountings. Installation sleeve for flush or semi-flush mountings includes optional stainless steel 'L' brackets for additional mounting support. Fixture equipped with fastening holes and stainless steel screws for attachment into installation sleeve assembly.
Weight	2.43lbs
Protection	IP68* / IP69K
Impact	IK10
Load	Resistant to static loads up to 4,496lbs in flush mounted cement and pavement installations.

CERTIFICATIONS

cULus Wet Location Listed.
Tested in accordance with LM-79-08.
Compliant for California installations.
IEC 62471
RoHS3 EU 215/863

SUSTAINABILITY

Luminaire designed for disposal/recycling at end-of-life. Replaceable LED light source and control gear by a Targetti technician.

ELECTRICAL CHARACTERISTICS

Power Supply	Integral 4/1 smart driver (Non-Dimmable / 0-10V / Reverse Phase / Forward Phase).
Wattage	14W
Voltage	Universal Voltage 120-277V AC 50/60Hz

SOURCE

High efficiency LED Chip on Board.

Project Name: _____ Location: _____

Specifier: _____ Rep Agency: _____

Fixture Type: _____ Product Code: _____

KLIK MISTIK™ 023 Rectangle

DESCRIPTION

A sleek, surface-mounted minimalist LED sconce that is discreet and easy to install. Suitable for a wide range of exterior and interior surfaces, including railing stanchions, posts, walls, awnings, canopies, and trellises. Offered in both asymmetric and symmetric designs with various lens options available.

HOUSING

The product features an IP65 and IK10 rated brushed 316 stainless steel body, designed with options for either a flat or curved mounting plate, ideal for variety of round posts or surfaces. It is also available in a range of powder-coated colors.

MOUNTING

Brushed 316 stainless steel mounting plate with either a flat or curved mounting surface plate.

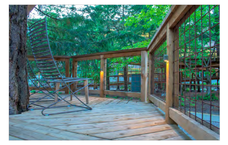
- Allow 3/8" in post for power entry
- Can suit the following round post diameter sizes:
  Ø1.50" [38mm]
  Ø1.66" [42mm]
  Ø1.90" [48mm]

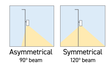
ELECTRICAL/LED DRIVER

- Input Voltage: 24 VDC
- Primary Driver: KLIK provided Class II, 110 - 277 VAC UL Listed Constant Voltage
- Secondary Driver: 350 - 700mA Constant Current (provided with fixture)
- Control: 0-10V, DMX [not individually addressable]
- Enclosures: [see details below]
- Wire connectors provided; factory pre-wire available, consult factory

LISTINGS

- ETL listed, UL 1598/CSA 22.2; CE
- cETL
- IP65 [wet location]
- *All IP rated luminaires tested to AS60529-2004 Degrees of protection provided by enclosures (IP Code)*
- IK08 or IK10 Impact Resistant
- Class 2 Device
- International Dark Sky Certified
  [Color temperature must be Amber or <3000K]





ETL listed
UL 1598/CSA 22.2; CE

Weatherproof Rating: IP65
Wet location rated

Impact resistance: IK10

Wildlife friendly

LED Operating Temp: -40°F ~ 160°F

3G Vibration per MIL-STD-810G

BABA Compliant [Add Prefix 'BA-' to fixture code]

International Dark Sky Association Certified Amber ≤ 3000K

* All IP rated luminaires tested to AS60529-2004 Degrees of protection provided by enclosures (IP Code)

Wall luminaire - Light emission on one side

BEGA

Application
This LED wall luminaire has light output in one direction. It is ideal for upward or downward lighting effects for interior and exterior locations. Arranged individually or in groups, this is a great design element for a host of lighting applications.

Materials
Clear safety glass with white ceramic coating
Marine grade, copper free (≤ 0.3% copper content) A360.0 aluminum alloy
High temperature silicone gasket
Mechanically captive stainless steel fasteners
Silicone applied robotically to casting, plasma treated for increased adhesion

NRTL listed to North American Standards, suitable for wet locations
Protection class IP 64

Weight: 3.1 lbs.

Electrical

Operating voltage	120-277VAC
Minimum start temperature	-30° C
LED module wattage	5.8 W
System wattage	8.0 W
Controllability	0-10V dimmable
Color rendering index	Ra > 90
Luminaire lumens	366 lm
LED service life (L70)	60000 hrs

LED color temperature
☐ 4000K (K4)
☐ 3500K (K35)
☐ 3000K (K3)
☐ 2700K (K27)

BEGA can supply you with suitable LED replacement modules for up to 20 years after the purchase of LED luminaires - see website for details

Finish
All BEGA standard finishes are matte, textured powder coat with minimum 3 mil thickness. BEGA Unzure® finish, a fluoropolymer technology, provides superior fade protection in Black, Bronze, and Silver. BEGA standard White is a super durable polyester powder. Optionally available RAL and custom color finishes provided in either polyester powder or liquid paint.

Available colors

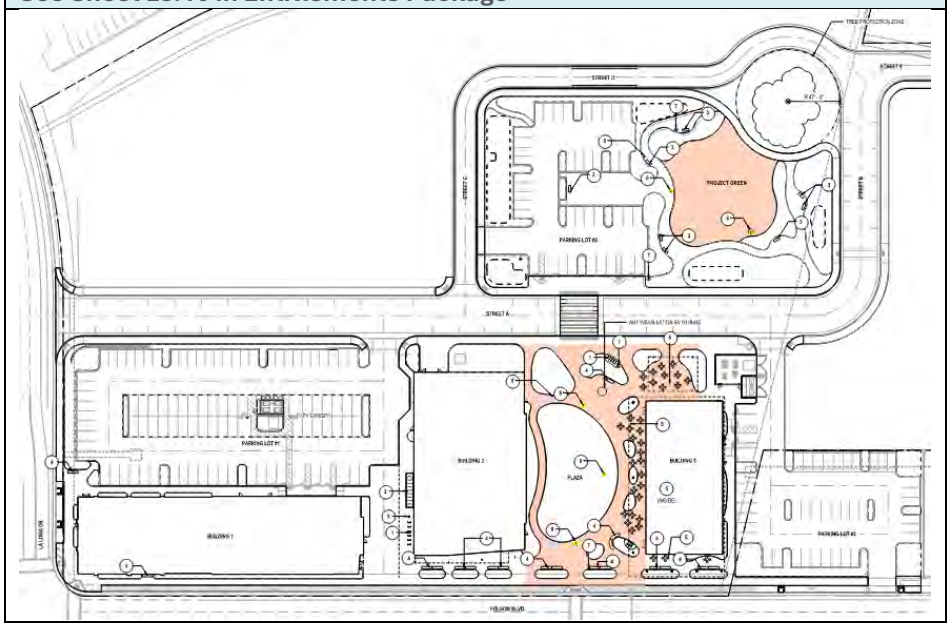
Mills Crossing

RE: Pedestrian Plan Exceptions Request

Mills Crossing is a City-owned, City-operated project that has been programmed and designed with years of input and feedback from the community, City staff, and City Council. The Mills Crossing Pedestrian Plan submitted as part of this entitlements package reflects the design intent for the public spaces established by City Council and takes into account operational input from City staff who will be responsible for maintaining the Project as healthy, clean, efficient, and safe public spaces.

FIGURE 1. MILLS CROSSING PEDESTRIAN PLAN
See Sheet L8.10 in Entitlements Package



Mills Crossing provides two pedestrian oriented spaces: (1) a 20,000 SF plaza and (2) an 8,400 SF project green as illustrated above. The pedestrian plan in some cases deviates from City code and this memo outlines the justification for these exceptions. At a high level, the open space and related pedestrian plan as part of Mills Crossing has been designed with the following guiding principles:

TABLE 1. MILLS CROSSING OPEN SPACE DESIGN PRINCIPLES		
1	**Design Intent per City Council Feedback and Approval**	Per Council guidance and community input, the public spaces are meant to promote a flexible array of gatherings, play, and events serving the public. As one of the City's few true transit-oriented site that calls for a greater degree of density than is typical throughout the City, the relatively compact open spaces are meant to provide an open air feel with ample greenery, lawns, and pathways that can be flexibly programmed for both small and large events (e.g., farmers markets, summer outdoor film series, daytime food and beverage oriented festivals, etc.) and community play and/or relaxation (e.g., blankets on lawns) unobstructed by permanent obstacles.

TABLE 1. MILLS CROSSING OPEN SPACE DESIGN PRINCIPLES		
2	**Promoting Healthy, Safe Public Interactions**	The Mills Crossing open spaces emphasize public health and safety in design, discouraging inappropriate uses of public space
3	**Operational Efficiency**	The open space must be operationally efficient, provided pedestrian amenities in reasonable quantities without creating overly costly, complex, and unessential features that would put a burden on City staff and departments that must maintain the open space to the highest standards of cleanliness and safety.

Table 2 below provides an explanation of the pedestrian plan elements provided and their quantities and also provides commentary and justification for exceptions to the Pedestrian Plan.

Table 2. Explanation of Pedestrian Plan Elements with Justifications for Exceptions

Pedestrian Plan Feature	Amount Provided	Justification
Bike Parking	37 bikes	Meets City code
Project Green – Permanent Seating	8 (80 linear feet)	The code calls for 280 linear feet of seating in this area. That amount of seating violates all three open space design principles in Table 1 above, and would dominate and provide unnecessary permanent obstructions within the amount of open space provided, essentially eliminating the utility of the green space for a place for gathering, events, and play. In our professional experience, the 8 benches provided contribute adequate and convenient seating distributed throughout the project green.
Plaza – Permanent Seating	19 (190 linear feet)	The code calls for 667 linear feet of seating in the plaza area. For the same reasons above, we believe this amount of seating would negatively impact the utility of the open space. The 19 permanent seating options shown in the plan clearly provide adequate and convenient seating while keeping with the open space design guidelines at Mills Crossing.
Plaza – Modular Tables & Chairs	35 Tables, 4 chairs/table (210 linear feet)	The code calls for 667 linear feet of seating in the plaza area. For the same reasons above, we believe this amount of seating would negatively impact the utility of the open space. The modular seating options shown in the plan clearly provide adequate and convenient seating while keeping with the open space design guidelines at Mills Crossing.
Drinking Fountain	3	Meets City code Please note: Planning staff indicated that a drinking foundation should by placed by Building 1, however through further

Pedestrian Plan Feature	Amount Provided	Justification
		discussion with Planning it was agreed that the Project Green was the preferred location for the 3rd drinking fountain.
Waste and Recycling Receptables	4	The code calls for a total of 16 trash receptables. City staff of the Mills Crossing planning team voiced concerns (and developer/design team agree) that this number of trash receptables would create unnecessary operational burdens for maintenance staff. From our professional experience, we have provided a reasonable 4 receptables in convenient locations in the plaza and project green.
Electrical Power Outlets	5	The code calls for a total of 28 electrical power outlets. City staff of the Mills Crossing planning team voiced concerned (and developer/design team agree) that this number of electrical power outlets is unnecessary and could pose safety concerns. From our professional experience in designing similar open spaces, we have provided 5 in reasonable and convenient locations in the plaza and project green that will serve the needs of the public spaces and the activities promoted by the City.

Mills Crossing

RE: Parking Lot 3 – Setback Exceptions

Mills Crossing is a City-owned, City-operated project that has been programmed and designed with years of input and feedback from the community, City staff, and City Council. The Mills Crossing Site Plan submitted as part of this entitlements package reflects the design intent for the public spaces established by City Council and takes into account operational input from City staff who will be responsible for maintaining the Project as healthy, clean, efficient, and safe public spaces.

Proposed Parking Lot 3 located on Folsom Lake College property will be developed as part of the Mills Crossing College as part of an agreement between the City of Rancho Cordova and Folsom Lake College. The parking lot abuts proposed parcels 3 & 7. Per the Folsom Boulevard Specific Plan, a 10'-0" setback is required at the rear property line abutting parcel 7; no side setbacks are required. Per Section 23.719.090 (C) (8), parking areas including spaces, and aisles shall not occupy the required setbacks. The project will require an exception to allow parking within the 10'-0" setback. This exception is critical to ensuring the project parking requirements are met.

	Conditions of Approval	Category	Timing/ Implementation	Enforcement/ Monitoring
On-Going Conditions				
1.	The approved entitlement is for a Specific Plan Amendment, Tentative Map, and Major Design Review Permit for Mills Crossing located at 10153 Folsom Boulevard (APN: 076-0020-019, 020, 021, & 022). The project shall be constructed and implemented consistently with the Project Plans (Exhibit A) as described in the City Council staff report dated April 21, 2025, and attached Project Plans (Exhibit A) with conditions herein (Exhibit B), for project number PLND-0524-0098.	Project Description	On-Going	Planning
2.	Applicant(s) agree to defend, indemnify and hold harmless with Counsel selected by the City of Rancho Cordova ("City") and its agents, officers, consultants, and employees ("City's Agents") from any and all claims, actions, suits, or proceedings against the City or the City's Agents to attack, set aside, void, or annul an approval by the City, or the City's Agents concerning the project (collectively "Claim"). The City shall promptly notify the Applicant of any Claim and the City shall cooperate fully in the defense. Nothing in this paragraph obligates the City to defend any Claim and the City is not required to pay or perform any settlement arising from any such Claim not defended by the City, unless the settlement is approved in writing by the City.	General	On-Going	Planning
3.	Any future alteration to the buildings, change in use, intensification of the site, or modification to the parking and landscaped area must be reviewed by the City to ensure compliance with all local, state, and federal	General	On-Going	Planning

	Conditions of Approval	Category	Timing/ Implementation	Enforcement/ Monitoring
	regulations. Minor modifications that are found to be in substantial conformance with the approved plans such as colors, plant materials, or minor lot line adjustments, may be approved administratively. Major modifications shall be approved by the applicable decision-making body.			
4.	Applicant shall not carry a negative account balance with the City for the processing of the project. If a negative account balance occurs, it will be the Applicant's responsibility to pay the balance due, in order to avoid delays in the processing of future permits or recordation of maps. Please email the Finance Department at billings@cityofranchocordova.org for the status of your account with the City.	General	On-Going	Planning
5.	The Major Design Review permit approval is valid for a period of three (3) years from the date of City Council approval unless an extension is granted by the Community Development Director or the Development Agreement expiration date.	Expiration	On-Going	Planning
6.	The applicant shall comply with the Mills Crossing Final EIR Mitigation Monitoring Reporting Plan (MMRP).	Environmental	On-Going	Planning
7.	Signage is not approved with this permit. All signage shall comply with the City of Rancho Cordova Zoning Code.	Signage	On-Going	Planning
8.	Noise, odor, and vibration sources associated with construction, repair, remodeling, demolition, paving and/or grading of any real property must adhere to the	Noise, Odor, & Vibration	On-Going	Code Enforcement /Building/

	Conditions of Approval	Category	Timing/ Implementation	Enforcement/ Monitoring
	development standards outlined within the City's Noise Element, RCMC 6.68 and RCMC 16.18.1407(F) and the Chapter 23.737 of City's Zoning Code.			Planning
9.	The removal and replanting of landscape not listed on the approved plan set must be consistent with RCMC 23.716.080 through 23.716.090 and reviewed by the Planning Division prior to the removal. All landscape care, maintenance, and tree pruning must adhere to RCMC 23.716.100 through 23.716.110.	Landscaping	On-Going	Planning
10.	The Project shall comply with all applicable requirements of the Mather/Mills Opportunity Site, Folsom Boulevard Specific Plan, and City Zoning Code. This includes all applicable conditions of approval, mitigation measures, and financial obligations included in the FBSP and related project approval documents, as appropriate.	General	On-Going	Planning
11.	The buildings and project site must be properly maintained, ensuring they remain free of fading, debris, or any other conditions that detract from their appearance. If deterioration occurs, affected materials or paint shall be promptly repaired or replaced with those of equivalent quality and in accordance with the original approval. All debris must be removed promptly.	Maintenance	On-Going	Planning
12.	Long-term bicycle parking shall be available for rent and shall have clearly defined rental periods with specified time limits for each space. Outdoor bicycle lockers where the user can apply a personal lock and retain control indefinitely are prohibited as part of this approval.	Bicycle Parking	On-Going	Planning

	Conditions of Approval	Category	Timing/ Implementation	Enforcement/ Monitoring
13.	Applicant shall be responsible for all damage to City streets associated with construction of the project and shall repair any damage as soon as possible.	Damage	On-Going	Public Works
14.	The applicant must call SacSewer to schedule an inspection of the public cleanout before backfilling. Call (916) 876-7526 for a public cleanout inspection.	Sewer	On-Going	SASD
15.	The Entitlement Submittal for the Commercial Mixed-Use (CMU) portions of the Mills Crossing Project for Major Design Review, Specific Plan Amendment and Tentative Subdivision Map parcels 1, 2, 3, 4 and 5 does not include residential units. Therefore, Quimby (CRPD) parkland dedication in-lieu fee requirements do not apply for these parcels. However, in the future if the development proposal(s) for the CMU parcels substantially changes from the currently proposed Mills Crossing project for parcels 1, 2, 3, 4 and/or 5, then Quimby (CRPD) parkland in-lieu fee requirements will be assessed according to the dedication amounts as required in City of Rancho Cordova Municipal code Chapter 23.313.040 and Chapter 22.40.035.	Parks	On-Going (Prior to approval of subsequent development applications)	CRPD/Planning
16.	The Entitlement Submittal for the Commercial Mixed-Use portions of the Mills Crossing Project for Major Design Review, Specific Plan Amendment and Tentative Subdivision Map parcels 1, 2, 3, 4 and 5 does not include residential units. Therefore, Quimby (CRPD) park impact fees do not apply for these parcels. However, in the future if the development proposal(s) for the CMU parcels substantially changes from the currently proposed Mills Crossing project for parcels 1, 2, 3, 4 and/or 5, then Quimby (CRPD) park	Parks	On-Going (Prior to approval of subsequent development applications or building permits)	CRPD/Planning

	Conditions of Approval	Category	Timing/ Implementation	Enforcement/ Monitoring
	impact fee requirements will be assessed according to CRPD's 2014 Park Impact Fee Nexus Study or current Nexus Study adopted by CRPD's Board of Directors. The park impact fee amount shall be adjusted annually for inflation in accordance with the Nexus Study to the current year the building permit is issued.			
17.	Pursuant to Cordova Recreation and Park District's Ordinance Number 06/07-01, Applicant/future applicant shall complete and submit CRPD's Development Review application and deposit to CRPD for all reasonable costs incurred by CRPD associated with and necessary for the development and implementation of Quimby (CRPD) park(s) and recreational amenities approved by CRPD for Quimby credit to be constructed within the Project to service the residents of the Project; to negotiate and prepare any Agreements required between the Applicant/future applicant and CRPD to implement the Project, preparation of any environmental documents that may be required pursuant to the California Environmental Quality Act; to take all steps necessary to form a financing district to finance the cost of continuing maintenance of the CRPD park and recreational improvements constructed within the Project and/or to annex the Project to an existing financing district and for CRPD's participation in the design, inspection and acceptance of CRPD Park Sites to be dedicated to the District. Applicant/future applicant shall provide a deposit in the amount provided by a CRPD estimate at the time the Development Review application is submitted to CRPD. From time to time, Applicant/future applicant shall make additional advances/reimbursements to the District as set forth in	Parks	On-Going (Prior to approval of discretionary or non-discretionary planning reviews for projects proposed on parcels 6 and 7 of the Tentative Map)	CRPD/Planning

	Conditions of Approval	Category	Timing/ Implementation	Enforcement/ Monitoring
	the Funding Agreement.			
18.	Public lower laterals must not be smaller than the upper laterals, sized according the California Plumbing Code requirements.	Sewer	On-Going	SASD
19.	SacSewer prohibits gates that prevent access within sewer easements unless the District standards for accessibility through gates are met.	Sewer	On-Going	SASD
20.	Any use of SacSewer sewer easements, which is not compatible or interferes with the construction, reconstruction, operation, maintenance, or repair of SacSewer sanitary sewer(s), must not be allowed. Each proposed use must be reviewed and approved in writing by the District Engineer prior to the use of the easement by the Grantor. This includes landscaping.	Sewer	On-Going	SASD
21.	Construction of a grease trap or a sand oil separator may be required. The applicant must verify with the applicable jurisdiction's building department.	Sewer	On-Going	SASD
22.	If the proposed trash enclosure will contain a drain to the sewer, it must be covered.	Sewer	On-Going	SASD
23.	The Sacramento Municipal Utility District (SMUD) has provided the following Conditions of Approval for this project: 1. SMUD has existing overhead 12kV facilities along El Caprice Dr and Folsom Blvd, and on site that will need to remain. The Applicant shall be responsible for maintaining all CalOSHA and State of California Public Utilities Commission General Order No. 95	Utilities	On-Going	SMUD

Conditions of Approval	Category	Timing/ Implementation	Enforcement/ Monitoring
safety clearances during construction and upon building completion. If the required clearances cannot be maintained, the Applicant shall be responsible for the cost of relocation. 2. SMUD has existing underground 12kV facilities on the project site that will need to remain. The Applicant shall be responsible for maintaining all CalOSHA and State of California Public Utilities Commission General Order No. 128 safety clearances during construction and upon building completion. If the required clearances cannot be maintained, the Applicant shall be responsible for the cost of relocation. 3. Structural setbacks less than 14-feet shall require the Applicant to conduct a pre-engineering meeting with all utilities to ensure property clearances are maintained. 4. Any necessary future SMUD facilities located on the Applicant's property shall require a dedicated SMUD easement. This will be determined prior to SMUD performing work on the Applicant's property. 5. In the event the Applicant requires the relocation or removal of existing SMUD facilities on or adjacent to the subject property, the Applicant shall coordinate with SMUD. The Applicant shall be responsible for the cost of relocation or removal. 6. SMUD reserves the right to use any portion of its easements on or adjacent to the subject property that it reasonably needs and shall not be responsible for any damages to the developed property within said easement that unreasonably interferes with those needs.			

Conditions of Approval	Category	Timing/ Implementation	Enforcement/ Monitoring
7. The Applicant shall not place any building foundations within 5-feet of any SMUD trench to maintain adequate trench integrity. The Applicant shall verify specific clearance requirements for other utilities (e.g., Gas, Telephone, etc.). 8. In the event the City requires an Irrevocable Offer of Dedication (IOD) for future roadway improvements, the Applicant shall dedicate a 12.5-foot public utility easement (PUE) for overhead and/or underground facilities and appurtenances adjacent to the City's IOD. 9. The Applicant shall comply with SMUD siting requirements (e.g., panel size/location, clearances from SMUD equipment, transformer location, service conductors). Information regarding SMUD siting requirements can be found at: https://www.smud.org/en/Business-Solutions-and-Rebates/Design-and-Construction-Services 10. The Applicant shall provide separate SMUD service points to each parcel to the satisfaction of SMUD. 11. The Applicant shall locate, verify, and provide a drawing to SMUD identifying all electrical utility infrastructure for the existing structures. If necessary, any existing onsite electrical infrastructure that serves existing structures shall be relocated to the satisfaction of SMUD. 12. The Applicant shall dedicate a 12.5-foot public utility easement for overhead and/or underground facilities and appurtenances adjacent to all public street rights-of-ways. 13. The Applicant shall dedicate any private drive,			

	Conditions of Approval	Category	Timing/ Implementation	Enforcement/ Monitoring
	ingress and egress easement, (and 10-feet adjacent thereto) as a public utility easement for (overhead and) underground facilities and appurtenances. All access roads shall meet minimum SMUD requirements for access roads. 14. The Applicant shall dedicate and provide all-weather vehicular access for service vehicles that are up to 26,000 pounds. At a minimum: (a) the drivable surface shall be 20-feet wide; and (b) all SMUD underground equipment and appurtenances shall be within 15-feet from the drivable surface. 15. Applicant will include phasing of development and order of planned construction upon submitting a new service application to SMUD for project phase(s) and/or road improvement backbone project(s).			
Prior to Submittal of Improvement Plans				
24.	For this project, SacSewer requires a Level 3 sewer study prior to the submittal of improvement plans for plan check to SacSewer. The sewer study shall demonstrate the quantity of discharge and any "flow through sewage" along with appropriate pipe sizes and related appurtenances from this subject and other upstream areas and shall be done in accordance with SacSewers' most recent "Minimum Sewer Study Requirements". The study shall be done on a no "Shed-Shift" basis unless approved by SacSewer in advance and in compliance with SacSewer Design Standards.	Sewer	Prior to Submittal of Improvement Plans	SASD

	Conditions of Approval	Category	Timing/ Implementation	Enforcement/ Monitoring
25.	All onsite sewer plans and offsite sewer plans must be submitted separately to SacSewer for review and approval.	Sewer	Prior to Submittal of Improvement Plans	SASD
Prior to Approval of Improvement Plans				
26.	Any vegetation damaged or destroyed by construction activities shall be replaced with like or comparable plant materials, and if damage occurs off-site, the replacement plants shall be approved by the property owner and the Planning Division, prior to occupancy approval in accordance with RCMC 23.716.080.	Landscaping	Prior to Approval of Improvement Plans	Planning
27.	**Drainage Study:** Applicant shall prepare and submit a project specific drainage study that includes but is not limited to: a pre- and post-project drainage analysis of the project impacts, identification of offsite project impacts or required offsite improvements, and identification of proposed connections to the City's Storm Drainage System with adequate supporting calculations. The drainage study shall conform to the requirements of the Sacramento City/County Drainage Manual (Volume 2), County of Sacramento Improvement Standards (Section 9), and all other applicable City standards.	Drainage	Prior to Approval of Improvement Plans	Public Works
28.	**Stormwater Quality- Post Construction** The improvement plans shall incorporate all applicable post construction stormwater quality measures; including source control, treatment control, low impact development, and full capture trash control measures into the site improvement plans in conformance with	Stormwater	Prior to Approval of Improvement Plans	Public Works

	Conditions of Approval	Category	Timing/ Implementation	Enforcement/ Monitoring
	the most recent version of the *Stormwater Quality Design Manual for the Sacramento Region*. In addition, a maintenance covenant is required for all proposed post construction stormwater quality measures, as detailed in Appendix B of the *Stormwater Quality Design Manual for the Sacramento Region.*			
29.	**Stormwater Quality– During Construction:** SWPPP – the applicant shall prepare a Storm Water Pollution Prevention Plan (SWPPP) to be executed through all phases of grading and project construction. The SWPPP shall incorporate Best Management Practices (BMPs) to ensure that potential water quality impacts during construction phases are minimized. These measures shall be consistent with the City's Improvement Standards and Land Grading and Erosion Control Ordinance. **Advisory Condition: Construction General Permit** The project applicant shall file a Notice of Intent (NOI) to obtain coverage under the *National Pollutant Discharge Elimination System (NPDES) General Permit For Storm Water Discharges Associated With Construction And Land Disturbance Activities* (Construction General Permit). Permits are issued by the State Water Resources Control Board.	Stormwater	Prior to Approval of Improvement Plans	Public Works
30.	The SWPPP for the site shall include a contingency plan for the implementation of a process to remove fine clay sediments prior to discharge to the City of Rancho Cordova's storm drain system and/or Waters of the State (e.g., creeks, rivers) to the satisfaction of the City of Rancho Cordova. A polymer treatment system or comparable process shall be incorporated in	Stormwater	Prior to Approval of Improvement Plans	Public Works

	Conditions of Approval	Category	Timing/ Implementation	Enforcement/ Monitoring
	the erosion and sediment control plan as part of the improvement plans submittal. This system shall be implemented by qualified professionals with training and proven experience in this field.			
31.	**Drainage System Design**: The applicant shall submit and obtain City approval of plans and specifications for the construction of public drainage improvements and all grading. The proposed drainage system shall be designed to accommodate runoff from the ultimate development and shall meet the City of Rancho Cordova's Improvement Standards, Construction Specifications, and Floodplain Management Ordinances in effect at the time of improvement plans approval.	Drainage	Prior to Approval of Improvement Plans	Public Works
32.	**100-year Detention:** The project is required to provide on-site detention of the 100-year flows because of constraints with the downstream system capacity and existing flooding risk. Hydraulic modeling shall be completed to demonstrate that runoff volumes in the post-project condition do not exceed the pre-project condition. Storage for the 100-year flows can be achieved using one large regional facility, or smaller distributed facilities. If mitigation for proposed privately-owned parcels will be included in a regional facility located in a public parcel, in lieu mitigation funding from the private parcels will be required.	Stormwater	Prior to Approval of Improvement Plans	Public Works
33.	All development within the City must comply with the City of Rancho Cordova's Floodplain Management Ordinance. All new structures shall be protected from the 100-year (1 percent) flood event. Certified pad	Flooding	Prior to Approval of Improvement Plans	Public Works

	Conditions of Approval	Category	Timing/ Implementation	Enforcement/ Monitoring
	elevations (certified by a registered Civil Engineer or licensed Land Surveyor) shall be set at least one and two tenths foot (1.2') above all sources of 100-year flooding.The overland release path must be shown on the improvement plans and the hydraulic computation must be provided to estimate the flow depths along the overland release paths.			
34.	Provide a permanent concrete stamp, or other permanently applied message to the satisfaction of the City not including paint, which reads “No Dumping-Flows to Creek” or other approved message at each storm drain inlet.	Dumping	Prior to Approval of Improvement Plans	Public Works
35.	All storm drain facilities within private lots shall be privately maintained and shall be clearly labeled as “private” in the improvement plans.	Storm Drain	Prior to Approval of Improvement Plans	Public Works
36.	**Fees:** Pay the drainage impact fees to the satisfaction of the City of Rancho Cordova’s Public Works Department.	Impact Fees	Prior to Approval of Improvement Plans	Public Works
37.	In cases where the roadway cross-sections are phased, extend all utilities beyond edge of pavement for future roadway build out.	Utilities	Prior to Approval of Improvement Plans	Public Works
38.	All landscape strips, medians, etc. that contain trees shall be designed to include continuous root barriers. Trees shall be appropriately sized for their proposed planters.	Landscaping	Prior to Approval of Improvement Plans	Public Works
39.	All landscape corridor walls shall be designed of masonry construction using graffiti resistant materials. Wall design and materials, including any portion of the	Landscaping	Prior to Approval of Improvement Plans	Public Works

	Conditions of Approval	Category	Timing/ Implementation	Enforcement/ Monitoring
	wall retaining soil shall include materials to prevent wall stains from seepage and shall be subject to City's approval and design standards.			
40.	The Quimby (CRPD) park site(s) shall be rough graded to a uniform elevation so there are no resulting excessive amounts of fill or depressions in accordance with the latest edition of the Park Site Criteria of the Cordova Recreation and Park District Design and Construction Standards Manual and pursuant to the improvement plans and specifications approved by the District. Rough grade to provide a uniformly graded site with no more than a two-foot grade change adjacent to the edges of the site.	Parks	Prior to approval of grading plans that include a Quimby (CRPD) park parcel	CRPD/Public Works
41.	Applicant/future applicant shall provide adequate drainage facilities to the boundary of the Quimby (CRPD) park site(s) at a depth sufficient to accept all drainage requirements for the improved park site(s). The District and the City shall jointly review and approve the drainage plans for the street frontages and utilities adjacent to the Quimby park site(s).	Parks	Prior to Approval of Improvement Plans	CRPD/Public Works
42.	All subdivision utilities (i.e. Water, Sewer, Storm Drain, Public Utilities, etc.) shall be brought into the Quimby (CRPD) park site(s) by the Applicant/future applicant at a location coordinated with the District and approved by the District's designated representative. The District and the City shall jointly review and approve the improvement plans for the street frontages and utilities adjacent to the park site. The District shall give written approval for all locations of utility service points of connection on all land to be dedicated or maintained by the District prior to the	Parks	Prior to Approval of Improvement Plans	CRPD/Public Works

	Conditions of Approval	Category	Timing/ Implementation	Enforcement/ Monitoring
	approval of infrastructure construction documents.			
43.	When the Quimby (CRPD) park site abuts a land use other than a public street frontage or a school, the Applicant/future applicant shall construct a 6-foot high masonry wall or other approved fencing material along the common property line. The wall/fence shall be 6 feet high as measured above the grade of the abutting land use and shall not be constructed on the park site, but on the adjoining property.	Parks	Prior to Approval of Improvement Plans	CRPD/Public Works
44.	The Applicant/future applicant shall install signage on all Quimby (CRPD) park sites notifying the surrounding residential units of future park construction and identifying the park size, type, potential amenities and anticipated construction schedule. Signage details shall be included on the subdivision improvement plans. The District will have final approval of the sign design. The sign shall be maintained in good condition until the park construction is complete.	Parks	Prior to Approval of Improvement Plans	CRPD/Public Works
45.	Show on the plan how Fire Lanes will be marked. Fire Lane identification shall be provided along the required fire access roadway. Fire Lane identification shall be in accordance with the Sacramento Metro Fire Districts Fire Prevention Standard #3 and the California Vehicle Code. Vehicle parking is prohibited on any street less than 28 feet in width. Vehicle parking is permitted on both sides of streets 36 feet or more in width. Roadway widths shall be measured between the gutter-line or edge of pavement on opposite sides of the road. Identification of fire apparatus access roadways may be required on private roads.	Fire Lanes	Prior to Approval of Improvement Plans	Sac Metro Fire

	Conditions of Approval	Category	Timing/ Implementation	Enforcement/ Monitoring
46.	Provide a note on the plan that reads, "Fire access roadways shall be built to bear a minimum of 80,000 pounds and meet the Sacramento County Public Works Standards for roadways. A report, prepared by a registered geotechnical engineer, verifying the ability of the road to bear the required minimum weight, shall be submitted with any plan indicating construction of roadway. Verification of constructed roadway shall be provided by a registered geotechnical engineer prior to final of the project.	Fire Access	Prior to Approval of Improvement Plans	Sac Metro Fire
47.	Show the location of the required fire hydrants for this project on the improvement plans. Approved fire hydrants capable of providing the required fire flow for the protection of any and all structures shall be located along the fire apparatus access roadway. The required fire hydrants shall be installed and operational prior to any construction or on-site storage of combustible materials. The minimum required fire flow for the protection of commercial developments is 1,500 gallons per minute (gpm) at a pressure of 20 pounds per square inch (psi) for a two-hour duration.	Fire Hydrants	Prior to Approval of Improvement Plans	Sac Metro Fire
48.	Installation of a public cleanout is required at the right-of-way. These improvements must be shown on the plans.	Sewer	Prior to Approval of Improvement Plans	SASD
49.	The minimum size for public sewer mainlines is 8-inch diameter. Public sewer must be located within the right-of-way or a sewer easement. These improvements must be shown on the plans.	Sewer	Prior to Approval of Improvement Plans	SASD
50.	Abandonment of SacSewer assets per SacSewer	Sewer	Prior to Approval of	SASD

	Conditions of Approval	Category	Timing/ Implementation	Enforcement/ Monitoring
	Standards Section 302.9 is required. The abandonment must be shown on the plans.		Improvement Plans	
51.	To obtain sewer service, construction of SacSewer sewer infrastructure will be required. Current SacSewer Standards and Specifications apply to any offsite or onsite public sewer construction or modification. These improvements must be shown on the plans. Field modifications to new or existing precast manhole bases are not allowed. SacSewer will require a lower lateral stub from the proposed manhole base to provide sewer service for the resultant future Parcel.	Sewer	Prior to Approval of Improvement Plans	SASD
52.	The proposed onsite sewer crossing parcel boundaries is prohibited.	Sewer	Prior to Approval of Improvement Plans	SASD
53.	SacSewer requires each building on each lot with a sewage source to have a separate connection to SacSewer's sewer system. If there is more than one building in any single parcel and the parcel is not proposed for split, then each building on that parcel must have a separate connection to a private onsite sewer line upstream of any connection to the SacSewer sewer. These improvements must be shown in the plans.	Sewer	Prior to Approval of Improvement Plans	SASD
54.	SacSewer Design Standards and Specifications require minimum 6-inch lower laterals for commercial and industrial buildings.	Sewer	Prior to Approval of Improvement Plans	SASD
55.	Sewer easements will be required to service this parcel. All public sewer easements will be dedicated to SacSewer in a form approved by the District Engineer. All public sewer easements will be at least 20 feet in	Sewer	Prior to Approval of Improvement Plans	SASD

	Conditions of Approval	Category	Timing/ Implementation	Enforcement/ Monitoring
	width and will require continuous access for installation and maintenance. SacSewer will only provide maintenance in public rights-of-way and SacSewer dedicated sewer easements. No awning or overhang may encroach on the easement area. At minimum, an all-weather access road must be provided to all manholes.			
56.	Permanent structures, walls, signs and footings will not be permitted within the existing SacSewer easement area.	Sewer	Prior to Approval of Improvement Plans	SASD
57.	All manholes not within public right of way or sewer easement must be accessible with an all-weather access roads.	Sewer	Prior to Approval of Improvement Plans	SASD
58.	The alignment of all main lines and structures must provide a minimum of 1-foot vertical clearance and 5 feet horizontal clearance from all other utilities and improvements. Sewer is to be located at a minimum of 10 feet (measured horizontally) from any structure or footing. Show public sanitary sewer and water supply facilities in accordance with the Health and Safety Code.	Sewer	Prior to Approval of Improvement Plans	SASD
59.	If any proposed garbage enclosure will contain a drain to the sewer, the enclosure must have a roof.	Sewer	Prior to Approval of Improvement Plans	SASD
60.	Any landscaping within easement areas is limited to lawn or similar groundcovers, or plant species that are not environmentally protected and whose mature growth does not exceed five feet in height. When planting, place a root barrier system, such as trifluralin	Sewer	Prior to Approval of Improvement Plans	SASD

	Conditions of Approval	Category	Timing/ Implementation	Enforcement/ Monitoring
	fabric, between the main lines or laterals and any trees or shrubs planted within the easement area.			
61.	The proposed density is greater than what was planned in SacSewer's Master Plan. SacSewer will be modeling the proposed density in the hydraulic model to determine if the downstream system is capacity constrained. If the results require upsizing the sewer system, this must be shown on the plans.	Sewer	Prior to Approval of Improvement Plans	SASD
Prior to Issuance of Building Permit				
62.	A building permit is required for the proposed project. The Applicant shall coordinate with the Building and Safety Division to obtain a building permit and meet all building code standards.	Building Permit	Prior to Issuance of Building Permits	Planning/Building
63.	Final building plans shall include an overall parking plan. The overall parking plan shall comply with RCMC Chapter 23.719 or adjustment criteria.	Parking	Prior to Issuance of Building Permits	Planning/ Building
64.	The applicant shall work with City staff to ensure that there are ample electrical outlets to serve future outdoor events.	Site Amenities	Prior to Issuance of Building Permits	Planning/Public Works
65.	The Project shall provide an accurate photometric plan showing foot-candle readings every 10 feet within the property and 10 feet beyond the property lines with the building permit submittal and shall also meet the following applicable requirements for Outdoor Lighting:	Outdoor Lighting	Prior to Issuance of Building Permits	Planning

Conditions of Approval	Category	Timing/ Implementation	Enforcement/ Monitoring
• **Nuisance Prevention:** All outdoor lighting shall be designed, located, installed, directed downward or toward structures, shielded, and maintained in order to prevent glare, light trespass, and light pollution. • **Maintenance:** Fixtures and lighting shall be maintained in good working order and in a manner that serves the original design intent. • **Shielding:** All outdoor lighting shall be constructed with full shielding and/or recessed to reduce light trespass to adjoining properties. Each fixture shall be directed downward and away from adjoining properties and public rights-of-way, so that no light fixture directly illuminates an area outside of the site. • **Levels of Illumination:** Parking lots, driveways, trash enclosures/areas, public phones, and group mailboxes shall be illuminated with a minimum maintained one foot-candle of light and an average not to exceed four foot-candles of light. • **Levels of Illumination:** Pedestrian walkways shall be illuminated with a minimum maintained one-half foot-candle of light and an average not to exceed two foot-candles of light. • **Levels of Illumination:** Entryways and exterior doors of non-residential structures shall be illuminated during the hours of darkness, with a minimum maintained one foot-candle of light, measured within a five-foot radius on each side of the door at ground level. • **Energy-Efficient Fixtures Required:** Outdoor lighting shall utilize energy-efficient (high pressure sodium, metal halide, low pressure			

	Conditions of Approval	Category	Timing/ Implementation	Enforcement/ Monitoring
	sodium, hard-wired compact fluorescent, or other lighting technology that is of equal or greater efficiency) fixtures and lamps. All new outdoor lighting fixtures shall be energy-efficient with a rated average bulb life of not less than 10,000 hours.			
66.	All trash enclosures and refuse areas shall comply with zoning code and all service provider standards regarding amount, design, and access based upon the project's estimated need and waste pickup schedules. Trash enclosures should try to incorporate the same architectural treatments, materials and colors as the main building in order to properly screen them from view. All enclosures shall be locked when not in use.	Architectural	Prior to Issuance of Building Permits	Planning/ Building
67.	Utility areas, electrical, and gas meters shall be architecturally screened from view.	Architectural	Prior to Issuance of Building Permits	Planning/ Building/ Public Works
68.	Rooftop equipment (HVAC, meters, refrigeration equipment, plumbing lines, ductwork and transformers), shall not extend above the building parapet and shall be screened from view on all sides with materials architecturally compatible with the main structure. Screening details shall be shown on the Building Plans and submitted for review and approval by the Planning Division, prior to the issuance of Building Permits and installed prior to occupancy approval.	Architectural	Prior to Issuance of Building Permits	Planning
69.	Construction plans must include all windows and final architectural element details to be reviewed and approved by the Planning Division. This includes all building fixtures, exterior lighting, walkway lighting,	Architectural	Prior to Issuance of Building Permits	Planning

	Conditions of Approval	Category	Timing/ Implementation	Enforcement/ Monitoring
	parking lot lighting, and streetlights on the Site, Utility, Landscape, and Building Plans, prior to the issuance of any permits. The height and style of fixtures shall be shown. Energy-saving fixtures shall be used and noted on the plans and all illumination shall be installed in a manner that is glare shielded and directed away from adjacent properties and rights-of-way.			
70.	A detailed pedestrian plan must be reviewed and approved by the Community Development Director prior to issuance of building permits. This plan shall show all pedestrian areas and include square footage of all areas, seating types and amounts, amenities (i.e. fountains, signs, art), pathway material and color, designated circulation space versus congregational space, and other features vital to the function of the pedestrian space. Specifically, this plan shall provide design details for gathering spaces adjacent to the commercial pads and will be consistent with the standards outlined in Zoning Code 23.722 for pedestrian-orientated spaces.	Pedestrian Spaces	Prior to Issuance of Building Permits	Planning
71.	Bicycle Parking (short and long term) shall be installed in accordance with the approved plans. All parking shall be located near main entrances and not impede onsite automobile and pedestrian access. The final design and location will be reviewed and approved by the Planning Division.	Bicycle Parking	Prior to Issuance of Building Permits	Planning
72.	A reciprocal parking access agreement shall be finalized and recorded between the City of Rancho Cordova and Folsom Lake College for the use of Parking Lot 3 for the Mills Crossing project.	Parking	Prior to Issuance of Building Permits	Planning

	Conditions of Approval	Category	Timing/ Implementation	Enforcement/ Monitoring
73.	Additional reciprocal parking access agreements shall be recorded between the City of Rancho Cordova and surrounding properties for supplemental parking for the Mills Crossing project.	Parking	Prior to Issuance of Building Permits	Planning
74.	A final landscape plan shall be submitted to the Planning Division in conjunction with improvement plan and or building permit submittal and approved by the Planning Division and Public Works Department prior to issuance of permits and/or any installation of landscape materials RCMC 23.716.020. The final landscape planting and irrigation plan shall be prepared by a registered licensed landscape architect and include the following items per RCMC 22.180.060: • Planting plan to scale that indicate slope • Irrigation Plan • Soils Test • Water Use Calculations • Irrigation Schedule • Permeability test for LID facilities' locations Soil media specifications (LID features)	Landscaping	Prior to Issuance of Building Permits	Planning/Public Works
75.	Applicant shall complete improvement plans to the satisfaction of the Public Works Department. Improvement plans shall include, but shall not be limited to: • All onsite civil improvements • Civil plan shall include an ADA access plan. • All facilities, including but not limited to, sidewalk, driveways, etc. shall be upgraded to meet current ADA requirements and City Standards. Remove and replace all existing sidewalk, curb, and gutter on La Loma Drive and Folsom Blvd. Widen limits of La Loma Drive sidewalk south of proposed	Improvement Plans	Prior to Issuance of Building Permits	Public Works

	Conditions of Approval	Category	Timing/ Implementation	Enforcement/ Monitoring
	Stree A to 7-feet • Remove and relocate guy wire and utility pole adjacent to pedestrian crossing on Folsom Blvd. • Remove abandoned driveways on frontage of La Loma Dr. and Folsom Blvd. and replace with curb, gutter, and sidewalk. • Utility laterals • Public improvement plans shall clearly delineate all transitions to existing improvements • Provide curbs, gutters, and sidewalk for Streets A, B, C, D, and E, with exception of sidewalks for Parcel 6 and Parcel 7, to be deferred until Parcel 6 and Parcel 7 are proposed for development. • All improvements to be designed and constructed to the satisfaction of the Public Works Department. • Street Lighting shall conform to all City improvement standards, and necessary easements shall be granted to accommodate those standards. • Underground overhead utilities at eastern property line bordering Los Rios Community College. Prior to approval of the improvement plans an undergrounding plan (include as part of package going to Council) shall be provided for Public Works review and approval. The plan shall include, but is not limited to, all facilities to be removed and any additional facilities required in order to accommodate the undergrounding • Widen pedestrian crosswalk on Folsom Blvd, beginning from light rail. • Slurry seal limits of development impacted by utility cuts in pavement (Residential - Type 1 Slurry, Arterials – Type 2)			

	Conditions of Approval	Category	Timing/ Implementation	Enforcement/ Monitoring
	Compete installation of all improvements shown on the improvement plan to satisfaction of the City prior to occupancy			
76.	Secure City of Rancho Cordova Public Works Department approval of final grading plans, as required by City Ordinance	Grading Plans	Prior to Issuance of Building Permits	Public Works
77.	Prior to issuance of the first building permit within a TM phase: All streets and improvements shown on the TM phasing plan, all streets necessary for access to the proposed homes, associated improvements included in the approved improvement plans, and other infrastructure as necessary for adequate public access and use shall be substantially complete to the satisfaction of the Public Works Department. Prior to first occupancy all streets and improvements shown on the TM phasing plan shall be fully constructed and completed to the satisfaction of the City Engineer. At the discretion of the Public Works Department, the final lift of asphalt only (e.g. upper approximately 1.5 inches of asphalt) may be deferred to prior to the first occupancy. The structural section shall be designed to accommodate construction traffic and loads until such time that the finish lift of asphalt concrete is installed.	Infrastructure	Prior to Issuance of First Building Permit within a TM Phase	Public Works
78.	Property Owner/Applicant shall participate in or provide a funding mechanism for maintenance services for the fair share of existing and all new public improvements associated with the project including, but not limited to, streets, bridges/culverts, traffic signals, traffic signs, striping and legends, ITS operations, street lights and safety lights, and public frontage and median landscape improvements. This	Public Improvements	Prior to Issuance of Building Permits	Public Works

	Conditions of Approval	Category	Timing/ Implementation	Enforcement/ Monitoring
	may be accomplished through annexation to the City's Communities Facilities District No. 2008-1 (Street Lighting and Road Maintenance). All costs associated with the annexation shall be borne by the Property Owner/Applicant through payment of the annexation costs of the CFD annexation in the amount of $5,000 per annexation. Contact Dalia Fadl at (916) 851-8718 with regard to the process to satisfy this condition of approval.			
79.	The Applicant/future applicant shall pay a Quimby (CRPD) park development impact fee per Single Family dwelling unit and an equivalency amount for other dwelling unit types. Quimby (CRPD) park impact fee requirements will be assessed according to CRPD's 2014 Park Impact Fee Nexus Study or current Nexus Study adopted by CRPD's Board of Directors. The park impact fee amount shall be adjusted annually for inflation in accordance with the Nexus Study to the current year the building permit is issued.	Parks	Prior to Issuance of Building Permits	CRPD/Community Development
80.	Show the design for a fire access roadway of not less than 20-feet of unobstructed width, 13-feet, 6-inches of vertical clearance, and turning radii of 25 feet inside and 50 feet outside dimension on the improvement plans. The access roadway shall extend to within 150 feet of all portions of the exterior walls of the first story of any proposed building. The use of turf-block or grass-crete or similar alternate road surfaces is not approved for installation in fire apparatus access roadways.	Fire Access	Prior to Issuance of Building Permits	Sac Metro Fire
81.	Show the design for a minimum of 2 remote fire access roadways. Remote fire access roadways shall	Fire Access	Prior to Issuance of Building Permits	Sac Metro Fire

	Conditions of Approval	Category	Timing/ Implementation	Enforcement/ Monitoring
	be spaced a distance apart equal to not less than one-half of the maximum diagonal dimension of the property or areas to be served. A minimum of 2 remote access roadways shall be provided for in any of the following conditions: a. A single building in excess of 62,000 sq. ft. b. Multiple buildings within a single parcel where the total combined square footage is in excess of 62,000 sq. ft. c. Developments of one-and two-family dwellings in excess of 39 dwelling units. d. Multi-family dwellings in excess of 39 units.			
82.	Show the design for aerial apparatus access for buildings 30 feet or greater. Aerial apparatus access shall be a minimum 26-feet in width, located 14 to 33-feet from the building as determined by building height, and located on two intersecting sides of the building (as determined by the Fire Code official).	Aerial Access	Prior to Issuance of Building Permits	Sac Metro Fire
83.	Show the design for an approved fire apparatus turnaround. The fire apparatus turnaround shall conform to Sacramento Metro Fire Districts, Fire Prevention Standard #3. The fire access turn-around shall be located within 50 feet of the end of the access roadway.	Fire Turnaround	Prior to Issuance of Building Permits	Sac Metro Fire
84.	The owner must contact Permit Services Unit at PermitServices@sacsewer.com or by phone at (916) 876-6100 to determine if SacSewer impact Fees are due. Fees are to be paid prior to the issuance of building permits.	Sewer	Prior to Issuance of Building Permits	SASD

	Conditions of Approval	Category	Timing/ Implementation	Enforcement/ Monitoring
Prior to Final Inspection				
85.	Vents, gutters, downspouts, flashing, electrical conduits, etc., shall be painted to match the color of the adjacent surface, unless otherwise approved by the Planning Division.	Architectural	Prior to Final Inspection	Planning
86.	Final murals and art installations, as identified by placeholders in the project plans (Exhibit A), shall be completed in accordance with the City's final art installation plan, as determined by City staff.	Art	Prior to Final Inspection	Planning
87.	During and upon completion of the installation of the landscaping for the project, the project landscape architect/designer shall certify that the installed landscape complies with the approved plans. Certification shall be accomplished by completion of site visits at key installation milestones. Key milestones at a minimum shall include: rough grade, soil amendment verification, Plant material inspection, irrigation coverage test underdrain installation (as applicable) and final installation. Certification shall include signed site observation reports, photographs and documentation verifying implementation of soil report recommendations. Failure to submit complete and accurate documentation to the Planning Department will delay final approval/occupancy of the project.	Landscaping	Prior to Final Building Inspection of the First Unit	Public Works
88.	Install public onsite and offsite improvements per the approved Public Works plans and to the satisfaction of the Public Works Department. Improvement plans shall include, but shall not be limited to, all streets,	Site Improvements	Prior to Final Building Inspection of the First Unit	Public Works

	Conditions of Approval	Category	Timing/ Implementation	Enforcement/ Monitoring
	water, sewer, storm drain, lighting, signage and striping, and other associated facilities for all streets and other public areas depicted on the tentative map or tentative map phase. Design datum shall be NAD-83.			
89.	Upon completion of the installation of the landscaping, the designer shall certify that the landscape complies with all city water conserving landscape requirements. Certification shall be accomplished by completion of a certificate of compliance on a form approved by the director of the city public works department. Failure to submit a complete and accurate certificate of compliance will delay final approval of the project and/or discontinue water service per RCMC 22.180.090. Upon receipt of the certificate of compliance and site inspection from City staff, the landscaping performance bond will be released.	Landscaping	Prior to Final Building Inspection	Public Works
90.	Record drawings of grading and improvement plans (1 full size and 1 half size hard copy), as well as a compact disc containing said plans in AutoCAD and pdf format, and a GIS shape file, or equivalent to the satisfaction of the City Engineer shall be submitted and approved by the Public Works Department.	Record Drawings	Prior to Final Building Inspection	Public Works
91.	Applicant/Owner shall repair and replace all right-of-way damages caused by the construction of the building to the satisfaction of the Public Works Department. Damages include, but are not limited to: pavement, sidewalks, curbs, and gutters.	Damage	Prior to Final Inspection/Occupancy	Public Works
92.	Approved numbers or addresses shall be placed on all new or existing buildings in such a position as to be	Addressing	Prior to Final Inspection	Sac Metro Fire

	Conditions of Approval	Category	Timing/ Implementation	Enforcement/ Monitoring
	easily read from the street or road fronting the property. The minimum size of the numbers shall not be less than six (6) inches and shall be mounted immediately adjacent to a light source and shall also contrast with their background.			
Prior to Recordation of the Final Map				
93.	The Tentative Parcel Map approval is valid for three years from the date of City Council approval, unless an extension of time is subsequently approved per Government Code Section 66452.6(e), unless extended by the terms of a Development Agreement.	Tentative Map	Three years, commencing with the date of approval.	Planning/ Public Works
94.	**Updated language June 2018** Property Owner/Applicant shall participate in or provide a funding mechanism for maintenance services for the project's stormwater drainage and flood protection system. This may be accomplished through annexation to the City's Stormwater Utility Fee District, ***SWUII,*** or other financial mechanism as may be proposed and provided by the Property Owner for the same purpose of providing a funding mechanism to fund the operation and maintenance of the Project's stormwater drainage and flood protection system. Costs associated with the annexation shall be borne by the Property Owner/Applicant through payment of the annexation costs in the amount of $7,000 per annexation. Contact Dalia Fadl at (916) 851-8718 with regard to the process to satisfy this condition of approval.	Stormwater	The annexation shall occur prior to the recordation of any final map. The annual fee commences when a building permit is issued.	Public Works

	Conditions of Approval	Category	Timing/ Implementation	Enforcement/ Monitoring
95.	A note shall be placed on the final map stating that "Reciprocal access and parking between parcels shown hereon shall be granted/reserved prior to the sale and/or reconveyance of said parcels" related to the use of Parcel 3 and Los Rios Folsom Lake Community College property.	Reciprocal Access	Prior to Recordation of Final Map	Public Works
96.	Dedicate public utility easements, for the installation and maintenance of water, gas, sewer, drainage facilities, traffic control devices and dry utilities as shown on the tentative map.	Utilities Dedication	Prior to Recordation of Final Map	Public Works
97.	Future residential development proposals for Tentative Map parcels 6 and 7 will be evaluated for required Quimby parkland dedication requirements based on the dedication amounts as required in City of Rancho Cordova Municipal code Chapter 23.313.040 and Chapter 22.40.035. The Applicant/future applicant shall provide the CRPD-approved Quimby Parkland as real land or Quimby in-lieu fees or a combination of both as mutually agreed upon between the City of Rancho Cordova and CRPD during the entitlement approval process. If real land is dedicated, dedicate land through an irrevocable deed of dedication in accordance with the final map, Development Agreement between the City and the Applicant/future applicant and the Park Development Agreement between the Park District and the Applicant/future applicant.	Parks	Pay Quimby in-lieu fees directly to CRPD prior to recordation of the first Final Small Lot Map(s) for Tentative Map parcels 6 and 7. If parcel 6 or 7 is not further subdivided, then Quimby in-lieu fees will be paid prior to issuance of the first building permit on the parcel. Dedicate real land through an irrevocable deed of dedication within 30 days of filing the Small Lot Final Map with the park in it	CRPD/ Public Works/ Planning
98.	If there is Quimby Parkland to be dedicated to CRPD in the project, the Applicant/future applicant shall enter into a Park Development Agreement (Park DA) with	Parks	Prior to recordation of the first Small Lot Final Map on parcels 6 and 7 of the approved	CRPD/Public Works

	Conditions of Approval	Category	Timing/ Implementation	Enforcement/ Monitoring
	the Cordova Recreation and Park District (the District). All costs to prepare the Park DA shall be borne by the Applicant/future applicant. The Park DA shall include, but not be limited to, all of the following; A. The Applicant's/future applicant's obligation to dedicate land or the payment of in lieu fees or both for Quimby (CRPD) park purposes; B. The Applicant's/future applicant's obligation to construct all necessary street frontage improvements abutting the dedicated park site(s) including, but not limited to, vertical curb, gutter, sidewalk, gutter, street paving, utilities (water, sewer, electrical, storm drain, phone, gas) and street lights; C. All property to be transferred to the District shall be free and clear of any past or future taxes or assessments, any liens or encumbrances. Any structures, walls, fences, wells, or storage tanks must be removed in accordance with all applicable laws and regulations prior to acceptance of any grant deeds or easements; D. The design and improvement of all CRPD parks within the project. All plans and specifications shall be prepared by a licensed landscape architect with all subconsultants found to be mutually acceptable to the District and the Applicant/future applicant. E. The timing of construction of all CRPD parks; F. The credits and reimbursement to which		Tentative Map or, if parcel 6 or 7 is not further subdivided, then prior to issuance of the first building permit on the parcel	

	Conditions of Approval	Category	Timing/ Implementation	Enforcement/ Monitoring
	the landowner/applicant is entitled in connection with the construction of such CRPD park improvements. G. A funding mechanism for the on-going maintenance of CRPD park landscaping and associated facilities. All costs of forming the maintenance mechanism or annexation into an existing maintenance mechanism shall be borne by the Applicant/future applicant; H. A landscape architect of record shall be retained by the Applicant/future applicant, at the Applicant's/future applicant's expense, throughout the construction process to review the construction as it occurs and attend construction meetings on a weekly basis; I. The landscape architect of record shall be required to authorize all changes to the approved improvement plans in coordination with the District. J. The landscape architect of record and all appropriate subconsultants shall provide as-constructed plans and certify that the project has been constructed per the approved plans, as amended.			
99.	If Quimby parkland is dedicated in this project, the Applicant/future applicant shall work with District to annex the real property within the Project to Cordova Recreation & Park District's Community Facilities District No. 2018-01 ("CFD") formed under the provisions of the Mello-Roos Community Facilities Act of 1982 (Government Code Section 53311, et seq.) for	Parks	Prior to recordation of the first Final Map on parcels 6 and/or 7 of the Tentative Map	CRPD/Public Works

	Conditions of Approval	Category	Timing/ Implementation	Enforcement/ Monitoring
	the purpose of funding developments' fair share of the cost of maintaining the neighborhood parks, adjacent street frontage Improvements, and the Community Parks utilized by the project residents. All costs associated with annexation into the CFD shall be borne by the Property Owner/Applicant.			
100.	The District shall provide, and the Applicant/future applicant shall deliver to City Public Works a certificate from the Cordova Recreation and Parks District stating that all fees as required by the District have been paid and a Park Development Agreement (if required) has been executed.	Parks	Prior to recordation of any phase of any Final Map for parcels 6 and 7 of the Tentative Map or if parcel 6 or 7 is not further subdivided, then prior to issuance of the first building permit on the parcel	CRPD/Public Works
101.	All real property to be transferred to the Cordova Recreation and Park District for Quimby park purposes, shall be appropriately zoned for parks.	Parks	Prior to recordation of a map division on parcels 6 and/or 7 of the Tentative Map that contains the Quimby parkland parcel(s)	CRPD/ Public Works/ Planning
102.	If the proposed project will provide Quimby (CRPD) parkland dedication, the Applicant/future applicant shall record a Covenant for Active Park Uses notifying all future property owners that a future public park(s) is located within the proposed subdivision, and that the public park may include recreational and sport facilities (such as basketball courts, playground equipment and picnic shelters) that may generate vehicular and pedestrian traffic and noise impacts during various times, including but not limited to evening and nighttime hours and that the public park may include nighttime sports lighting that may generate lighting impacts during evening and nighttime hours.	Parks	Prior to recordation of amap division on parcels 6 and/or 7 of the Tentative map that contains the Quimby (CRPD) parkland parcel(s)	CRPD/Public Works

CITY OF RANCHO CORDOVA

ORDINANCE NO. XX-2025

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF RANCHO CORDOVA, STATE OF CALIFORNIA, AMENDING THE FOLSOM BOULEVARD SPECIFIC PLAN CHAPTER 5 OPPORTUNITY SITES

THE CITY COUNCIL OF THE CITY OF RANCHO CORDOVA DOES ORDAIN AS FOLLOWS:

Section 1. Purpose and Declarations.

WHEREAS, the Folsom Boulevard Specific Plan provides the goals, policies, development standards, and design guidelines of future development in the Folsom Boulevard Specific Plan area; and

WHEREAS, the Mather Mills Opportunity Area is identified in the Folsom Boulevard Specific Plan (FBSP) as a priority location for compact, urban, and pedestrian-oriented development; and

WHEREAS, the Mills Crossing ("Project") is located within the Mather Mills Opportunity Site and includes subdivision of 9.85 acres to develop community-commercial buildings, public open space, and surface parking. The project includes three buildings designed for multiple uses, including office space, community flex space, health services, event space, and a flexible theater. The Project is located at 10153 Folsom Boulevard, between La Loma Drive and Paseo Drive/Mather Field Road; and

WHEREAS, the Ordinance would amend Chapter 5 "Opportunity Sites" rezone a portion of the Mather Mills Opportunity Site from Residential Mixed-Use (FB-RMU) to High Density Residential (FB-HDR), Medium Density Residential (FB-MDR), and Commercial Mixed-Use (FB-CMU) for the Project; and

WHEREAS, on April 21, 2025, the City Council held a properly noticed public hearing for this Ordinance and considered all oral and written testimony; and

WHEREAS, the public hearing was noticed in accordance with the requirements set forth in Government Code section 65090 and 65091.

NOW THERFORE, **THE CITY COUNCIL OF THE CITY OF RANCHO CORDOVA DOES ORDAIN AS FOLLOWS:**

Section 2: Findings. This Ordinance is adopted pursuant to the following findings:

A. **CEQA Compliance** In compliance with the California Environmental Quality Act ("CEQA"), on April 21, 2025, by Resolution, the City certified the Mills Crossing Project EIR (State Clearinghouse #2023010102), adopted environmental findings pursuant to CEQA guidelines Section 15091, and adopted a mitigation monitoring program for the Mills Crossing project.

B. **Finding:** The proposed Specific Plan is consistent with the goals, policies, and objectives of the General Plan, development agreement, or other implementation instrument.

Evidence: The Mills Crossing Specific Plan Amendment remains consistent with the General Plan by ensuring that the proposed land use changes from Residential Mixed-Use (RMU) to Commercial Mixed-Use (CMU), High-Density Residential (HDR), and Medium-Density Residential (MDR continue to align with the City's vision for Folsom Boulevard as a mixed-use corridor. The amendment continues to uphold the General Plan's emphasis on transit-oriented development by retaining a mix of land uses that support walkability, access to public transportation, and economic investment. The shift to CMU continues to promote commercial and residential integration. The introduction of HDR and MDR is consistent with the General Plan's housing goals, ensuring a range of housing options that contribute to housing supply, affordability, and density near transit. Additionally, the proposed changes will utilize infrastructure and public services, to maintain alignment with the City's sustainable growth objectives. The amendment preserves key General Plan policies related to economic development, urban design, and community connectivity, ensuring that Mills Crossing remains a catalyst for revitalization and long-term investment along Folsom Boulevard.

C. Finding: The proposed Specific Plan will not adversely affect surrounding properties.

Evidence: The Specific Plan Amendment will not adversely affect surrounding properties as it maintains a mix of uses that are compatible with existing and planned development along Folsom Boulevard. The amendment aligns with the City's land use goals while ensuring an appropriate interface with adjacent properties. The proposed land uses support walkability and transit accessibility, and the project includes buffering, landscaping, and site design measures to minimize potential impacts. Compliance with zoning, infrastructure requirements, and development standards will further ensure that the project functions within the surrounding area without adverse effects.

Section 3. Amendments to the Folsom Boulevard Specific Plan

The City Council hereby adopts the amendments to the Folsom Boulevard Specific Plan, as shown and incorporated in Exhibit A to this Ordinance.

Section 4. Severability

If any provision of this Ordinance or the application thereof to any person or circumstance, is held invalid, the remainder of the Ordinance, including the application of such part or provision to other persons or circumstances shall not be affected thereby and shall continue in full force and effect. To this end, provisions of this Ordinance are severable. The City Council hereby declares that it would have passed each section, subsection, subdivision, paragraph, sentence, clause or phrase hereof irrespective of the fact that any one or more sections, subsections, subdivisions, paragraphs, sentences, clauses, or phrases be held unconstitutional, invalid or unenforceable.

Section 5. Effective Date

Within fifteen (15) days after adoption, a Summary of this Ordinance shall be published once in the Grapevine Independent, or the Sacramento Bee, a newspaper of general circulation printed

and published in Sacramento County and circulated in the City of Rancho Cordova, in accordance with Government Code Section 36933. This Ordinance shall take effect and be enforced thirty (30) days after its adoption.

PASSED AND ADOPTED by the City Council of the City of Rancho Cordova on the ___ day of _____ 2025 by the following vote:

AYES:

NOES:

ABSENT:

ABSTAIN:

_____
Siri Pulipati, Mayor

ATTEST:

_____
Stacy Leitner, CMC
City Clerk

City of Rancho Cordova

Folsom Boulevard Specific Plan Amendment

Note to Reader: Only those sections and/or subsections listed within this document are being amended. Unless otherwise indicated, all sections and subsections prior to and after the amended section and/or subsection shall remain, unchanged.

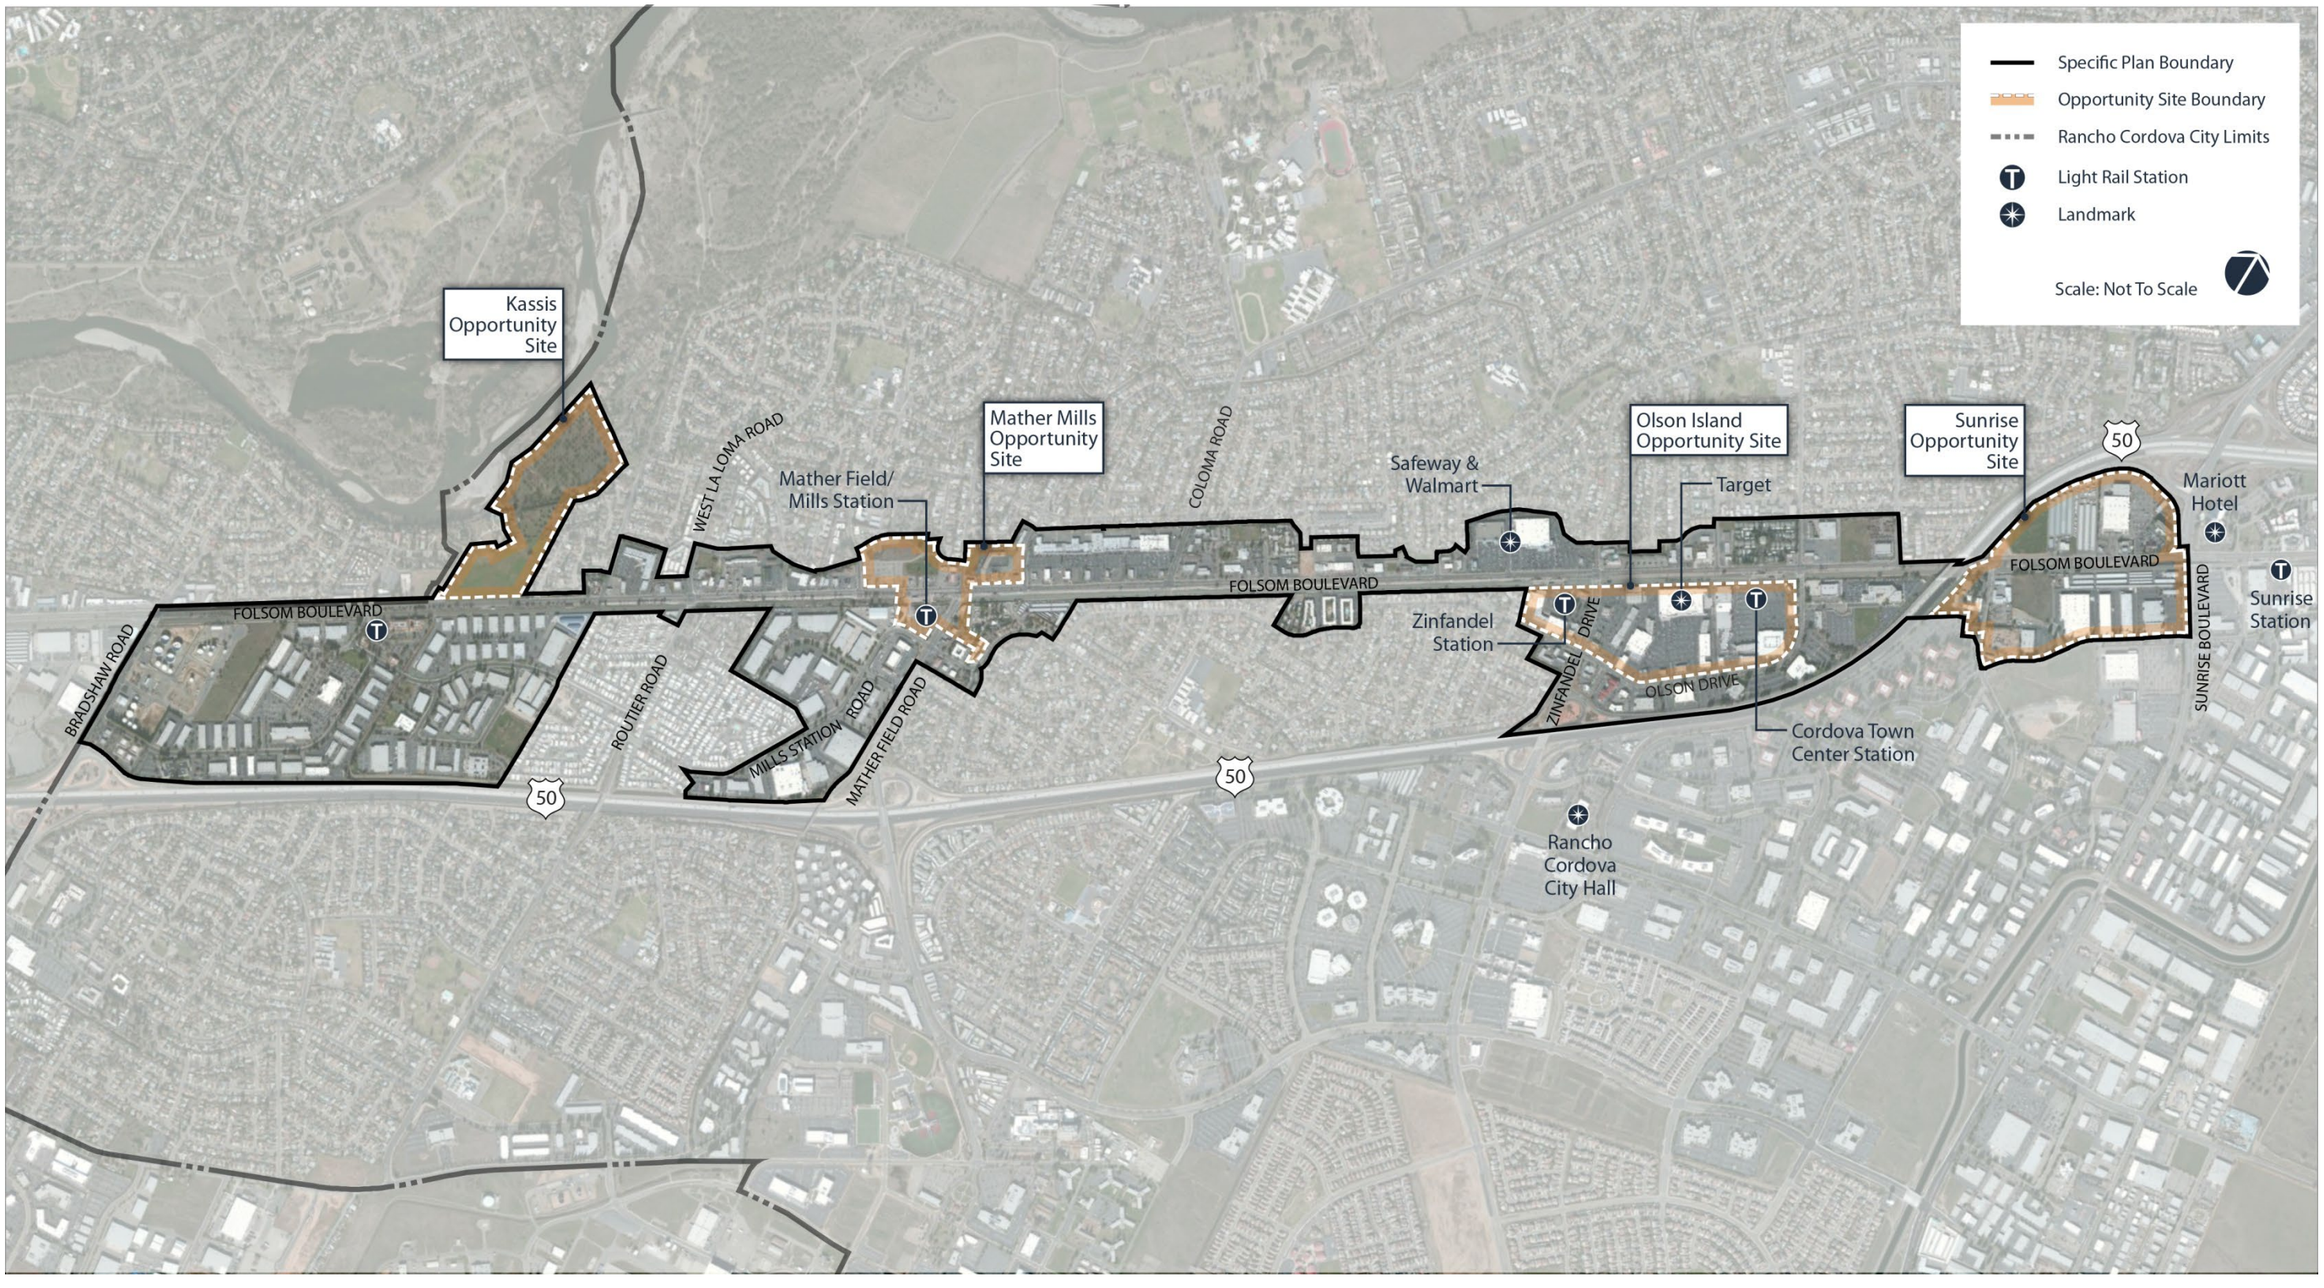
A. Introduction

As described in Chapter 2, the land use framework establishes an organizing structure for where and how growth within the plan area will occur. The land use framework identifies four sites with the greatest opportunity for new development and redevelopment. This chapter describes those areas as being vibrant destinations and hubs of activity along Folsom Boulevard. The opportunity sites designate locations where the City will concentrate resources (e.g., economic development incentives, public investment, facilities, outreach, coordination) and community assets (e.g., public gathering places, events, activities) with the goal of catalyzing significant private investment in these areas. The four opportunity sites are shown in Figure 5-1 and include:

1) Kassis Opportunity Site
2) Mather Mills Opportunity Site
3) Olson Island Opportunity Site
4) Sunrise Opportunity Site

Each opportunity site shown in Figure 5-1 has a distinct character and unique mix of uses. This chapter describes and illustrates each opportunity site with text and a collection of inspired idea images to communicate the vision and desires for each site. To achieve the desired development and design character unique to each opportunity site, an additional set of customized development standards is established in this chapter for each of the four sites. These special standards supplement those standards for the land use districts identified in Chapter 4 (Development Standards) and apply only to major new development. If there are differences in the additional development standards for any opportunity site of this chapter and corresponding standards in Chapter 4 (Table 4-1) for each district, the additional development standards identified in this chapter prevail.

Figure 5-1 Opportunity Sites



This page is intentionally left blank.

B. Kassis Opportunity Site

1. Description

The Kassis property is designated Folsom Boulevard Residential Mixed Use in recognition of its suitability for residential development and its setting within a predominantly residential district. The site does have potential for employment oriented uses (both retail/commercial and office) that resulted in the flexible mixed use designation.

The total area of the Kassis property exceeds 42 acres, although a small portion of the property is excluded from the Folsom Boulevard Specific Plan. The area excluded does not fall along existing property lines. In the future, the boundary of the Specific Plan and open space may need to be adjusted to be consistent with the parcel map. This site is surrounded on three sides by residentially zoned lands (RD-20 and RD-5 to the west, RD-5 to the east and RD-2 to the north) and bordered by Folsom Boulevard on the south. A project with a substantial residential component would be complimentary to the surrounding existing uses.

Based upon the property size (it is among a very few parcels on Folsom Boulevard with a significant area of undeveloped land) and its proximity to the planned Horn Road Light Rail Station, this property was designated within the City's General Plan Housing Element to include at least 10 acres of High Density Residential.

Beyond the residential development potential for this site, a retail/commercial or office component could compliment neighboring residents by providing nearby retail and employment opportunities while taking advantage of direct access to Folsom Boulevard and close proximity to the future Light Rail Station.

The Kassis Opportunity Site will be characterized by a suburban and primarily residential environment with limited nonresidential development along Folsom Boulevard. The site will feature a large residential component, including apartments, condominiums, townhouses, and compact single-family homes. At least 10 acres of the site will be developed at a minimum of 24 dwelling units per acre to meet the city's housing requirements. To the extent feasible, new residential streets and sidewalks will connect to the existing streets and cul-de-sacs as well as to the American River Parkway. Architectural features such as balconies, porches, and stoops will animate the interface between buildings and the sidewalk. Primarily neighborhood-serving retail shops and services, restaurants, sports and recreational uses, medical clinics, and/or offices will front the corridor, but not in a conventional strip form. Instead, nonresidential buildings will locate close to the street frontage (existing and future streets) to define, connect, and activate the sidewalk. Courtyards, community gardens, and central greens will provide opportunities for residents to congregate and socialize.

2. Site Location Map

Central green

4. Additional Development Standards for Kassis Opportunity Site

Additional development standards are established for major new development projects within the Kassis Opportunity Site. These additional standards address the unique potential of the location, implement relevant goals, policies, and provisions of the General Plan, and ensure consistency with other City-adopted plans. Specifically, additional development standards for this site include housing density, building orientation, public gathering places, parking, access, and site furnishings and wayfinding to implement or ensure consistency with the following plans:

- General Plan Land Use, Housing, and Urban Design elements
- Citywide Design Guidelines

These standards supplement the development standards for the underlying land use. Properties within the Kassis Opportunity Site are designated FB-RMU (residential mixed-use) to reflect the predominant surrounding residential land use and the future Horn Road light rail station. Where the development standards in Table 5-1 deviate from the development standards in Table 4-1, the standards in Table 5-1 apply.

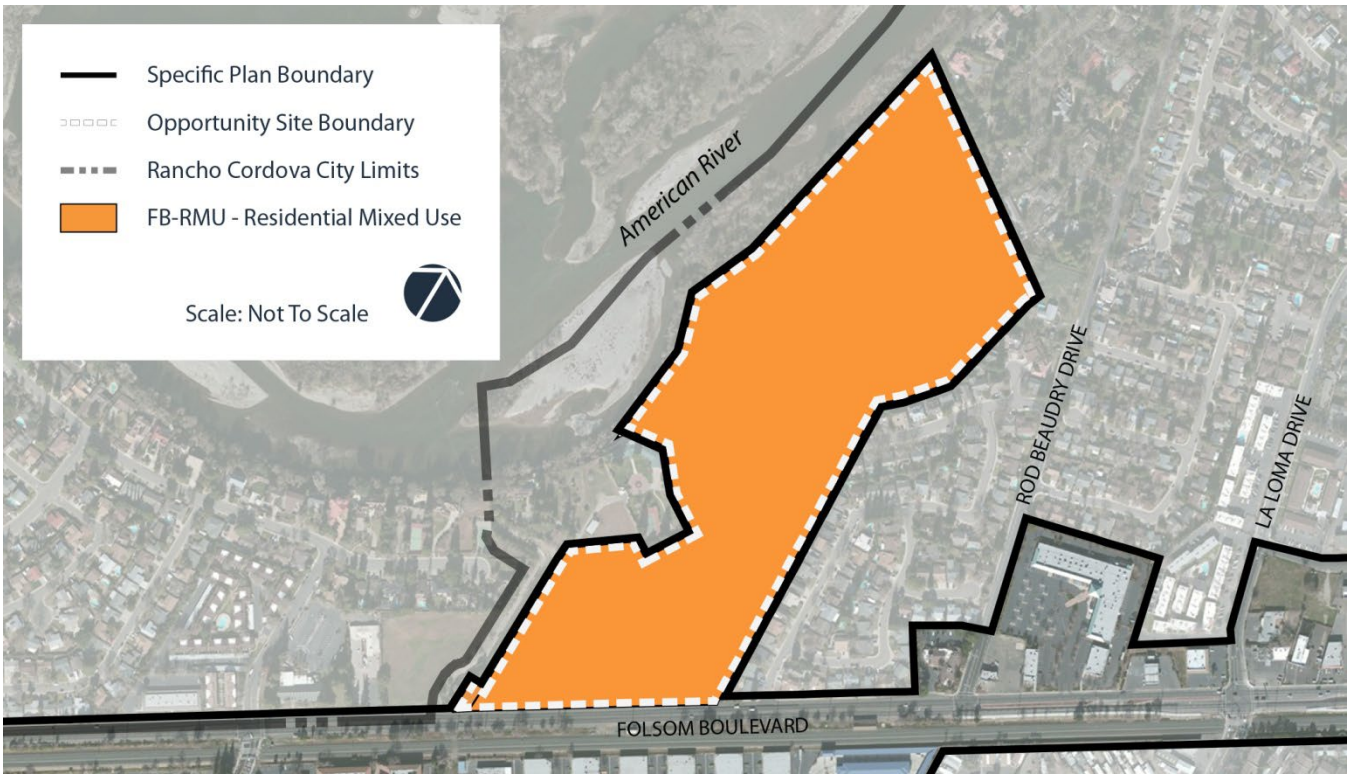

Table 5-1 Kassis Opportunity Site: Additional Development Standards

Standard	Site-wide (FB-RMU)
Density	6.1–40 du/acre At least 10 acres shall be developed at a minimum of 24 du/acre.
Building Orientation	All nonresidential primary building entrances must face a public street or public gathering place.
Public Gathering Places	All major projects shall contribute some form of public gathering place (or portion thereof) as shown in Table 5-5.
Parking	For residential developments with over 20 residential units, commercial, and mixed-use developments, private surface parking lots are not permitted in the front setback. Locate on-site parking to the rear, side, or internal to the block and provide access to parking through alleys and driveways.
Access	To the greatest extent feasible, connect new development, via streets, sidewalks, and pathways, to existing cul-de-sacs and local streets and to the American River Parkway.
Site Furnishings & Wayfinding	For integrated developments, the City encourages uniform site furnishings and wayfinding improvements throughout the project.

C. Mather Mills Opportunity Site

1. Description

The Mather Mills Opportunity Site includes numerous parcels located in close proximity to the Mather Mills Light Rail Station. Proposed land use designations within this Site include Residential, Commercial and Office/Industrial Mixed Use districts. Located adjacent to the Mather Mills Station and at the intersection of Mather Field Road and Folsom Boulevard, this Site presents unique opportunities for future development. These geographic attributes were likely a significant factor in the decision to locate the planned Los Rios Community College Campus at Folsom Boulevard and Paseo Drive.

The majority of development potential within this Site is located on the north side of Folsom Boulevard, both to the west and to the east of Paseo Drive. West of Paseo Drive includes approximately 12 acres proposed as Commercial Mixed Use (FB-CMU) and Residential Mixed Use (FB-RMU). This area will contain the future Los Rios Community College campus (land designated as FB-CMU). The balance of this area is designated FB-RMU in recognition of the wide range of development potential presented by the site. As with other sites within the FBSP that are designated FB-RMU or Medium Density Residential (FB-MDR), the size of this site provides special opportunities to accommodate a well-designed high density residential project. While this site also presents opportunities for commercial development, existing uses along the northern boundary of the site are residential. It is anticipated that higher density residential development along the northern boundary of this site will provide an effective transition between existing residential and future commercial uses.

While the FB-RMU designation requires that a minimum of 50 percent of finished floor area of development on the site must be residential, the FB-RMU designation also allows a substantial non-residential component that will compliment both the on-site residential and the adjacent college campus. The City recognizes that the timing of various types of development can be unpredictable and has therefore modified requirements for the timing of development. Under previous regulations the residential component would have been required to be constructed before the commercial component could begin construction. This requirement has been modified to allow commercial development to proceed in an FB-RMU site as long as it can be demonstrated that the site retains available capacity to meet the FB- RMU residential requirements.

Lands within this Opportunity Site located to the east of Paseo Drive have been designated FB-CMU in recognition of several factors, including: the Los Rios Community College District has acquired a portion of these lands and will be developing parking required for the college along the northern boundary of this area; there are several existing and active commercial uses located in this area; and, the parcelization and fragmented ownership in this area will make developing a larger and well integrated project challenging.

The Mather Mills Opportunity Site will be characterized by a compact, urban, and walkable environment. This site possesses two key assets that will shape new development within this area: the Mather Mills Light Rail Station and the future Los Rios Community College. This opportunity site is envisioned to support transit-oriented uses, such as a mix of educational, residential, retail, and service activities, both vertically and horizontally. Higher-density residential uses, including two- to four-story condominiums, townhomes, and student apartments, will locate here to provide housing in close proximity to the light rail station and the college. Small-scale retail and commercial services, such as bookstores, cafés, restaurants, pubs, entertainment venues, personal services, and office supply and reproduction services, will support the needs of residents and college students. Uses adjacent to the college will be designed to have a positive interface with the college. A safe and convenient pedestrian and bicycle network will connect destinations within the opportunity site. A variety of public spaces, such as outdoor dining and plazas, will invite residents, workers, and students to gather and participate in a vibrant community life. Social events will be organized in these public places, such as farmers markets and food truck fairs, to activate these spaces on weekends and evenings.

2. Site Location Map

3. Inspired Ideas Imagery for Mather Mills Opportunity Site

The following images represent the preferred land uses, development patterns, and public gathering places for the Mather Mills Opportunity Site. These images are intended to guide and inspire private developers to create active urban places within this opportunity site.

Outdoor dining/café seating

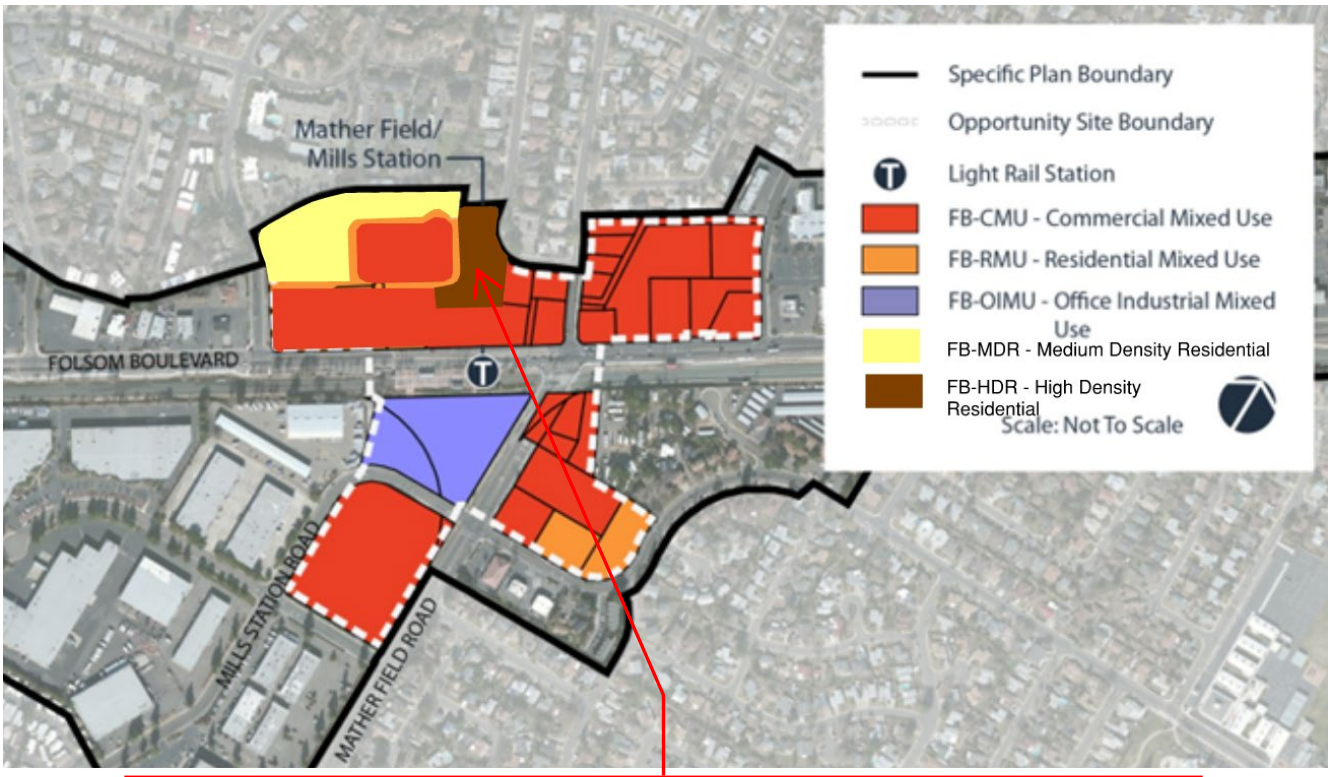
Plaza

4. Additional Development Standards for Mather Mills Opportunity Site

Additional development standards are established for major new development projects within the Mather Mills Opportunity Site. These standards address the unique attributes of the location, implement relevant goals, policies, and provisions of the General Plan, and ensure consistency with other City-adopted plans. Specifically, housing density, floor area ratio, building setbacks and height, pedestrian shelter, bicycle amenities, building orientation, drive-through design, public gathering places, parking, and site furnishings and wayfinding have been included to implement or ensure consistency with the following plans:

- General Plan Land Use, Housing, and Urban Design elements, including special provisions for transit-oriented development
- Citywide Design Guidelines

Properties within the Mather Mills Opportunity Site are designated FB-RMU (residential mixed-use), FB-HDR (high density residential), FB-MDR (medium density residential), FB-CMU (commercial mixed-use), or FB-OIMU (office industrial mixed-use), to be compatible with existing surrounding uses while maximizing future potential uses. In addition, any properties (or portions thereof) located within a quarter mile of the light rail stop may develop consistent with the citywide TOD Overlay District standards in the Zoning Code. Where the development standards in Table 5-2 deviate from the development standards in Table 4-1, the standards in Table 5-2 apply to qualifying major projects. For FB-MDR and FB-HDR zoning designations within the Mather Mills Opportunity Site, please refer to the MDR and HDR development standards outlined in Table 4-1.



Imagery to be more accurately updated once Specific Plan Amendment is approved. Refer to the end of this document for detailed rezoning exhibits.

Table 5-2 Mather Mills Opportunity Site: Additional Development Standards

Standard	FB-RMU	FB-CMU	FB-OIMU
Density	6.1–40 du/acre	10–40 du/acre	n/a
Floor Area Ratio	No minimum No maximum	0.3 minimum No maximum	0.25 minimum No maximum
Front Setback Standards	Along the north side of Folsom Boulevard and along Paseo Drive, there is no minimum front setback. The maximum shall be no more than 10 feet, except where there is outdoor dining, a plaza, a building entry, or a courtyard between the building and the street. Exceptions can be granted for building façades with garage access.		
Primary Building Height	65 feet /4 stories maximum[1]	No maximum[2]	65 feet/4 stories maximum
Awnings/ Canopies	Awnings, canopies, recesses, or similar pedestrian shelters shall be provided along at least 30% of the building's ground-floor level along the frontage with primary building entrance and where the building abuts a plaza or other public gathering space.		
Bicycle Amenities	Establish common area bicycle facilities to encourage students to use alternative forms of transportation. For example, provide additional bike racks and lockers or other secured bicycle parking areas, shower facilities, and a bike repair kiosk.		
Building Orientation	For properties fronting along Folsom Boulevard, primary building entrances shall be oriented to a public street, a private street designed as an on-site main street, or a public gathering place.		
Public Gathering Places	All major projects shall contribute some form of public gathering place (or portion thereof) as shown in Table 5-5.		
Parking Access & Location	For nonresidential or mixed-use developments, private surface parking lots are not permitted in the required front setback area. Additionally, parking shall not be located between the street and the building façade with the primary entrance. Rather, on-site parking shall be located to the rear, side, or internal to the block and provide access to parking through alleys and driveways. Finally, parking areas on corner lots shall not be located adjacent to intersections.		
Parking Ratio	The number of vehicle parking spaces provided shall not exceed 150% of the minimum parking ratio.		
Site Furnishings & Wayfinding	For integrated developments, the City encourages uniform site furnishings and wayfinding improvements throughout the project.		

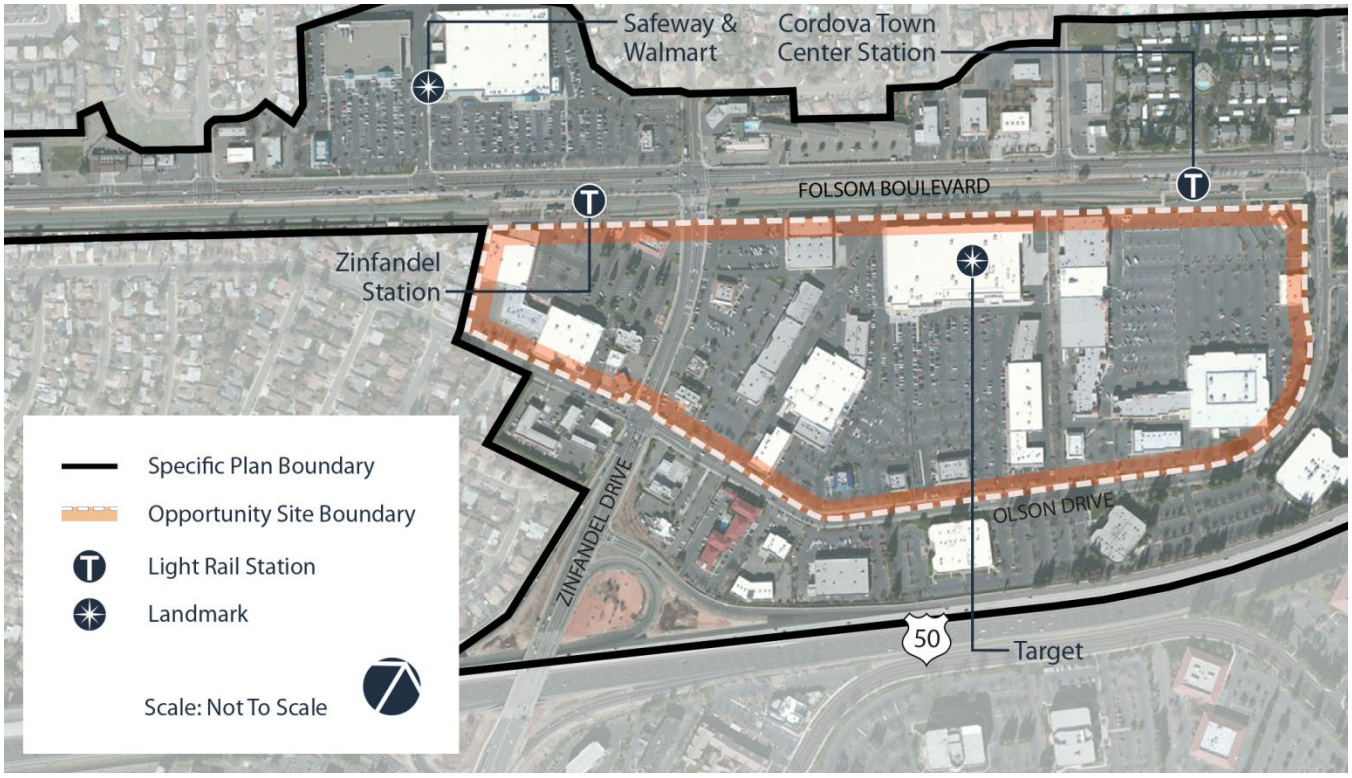
1. *No maximum height or number of stories for vertical mixed-use integration where residential use is located above nonresidential. Note #2 below also applies. Defer to TOD Overlay if applicable.*
2. *While there is no height maximum, the regulations of the Federal Aviation Administration (FAA) limit the height of structures to between 150 and 350 feet based on location. See the Safety Element of the General Plan for more information. FAA approval is required for all structures over 150 feet in height. Defer to TOD Overlay if applicable.*

D. Olson Island Opportunity Site

1. Description

Olson Island is currently a retail commercial center serving the community and the region. It is a shopping destination where people come and have an extended stay to shop, eat, drink, and socialize. This area is envisioned to mature into an environment designed so that visitors can park once and then walk to a variety of different businesses and public gathering places. Access and circulation to and throughout the site needs to be improved with limited access driveways that resemble urban main streets, and better pedestrian access to and from the transit stop and throughout the entire commercial hub. A mix of new and expanded retail, office, and entertainment uses are encouraged, with both horizontal and vertical integration. The area will continue to be home to a wide range of large national retailers and small independent businesses. A future international marketplace will capitalize on the synergy of established uses that reflect the diversity of the community (for example, KP International Market). Small-scale civic uses such as a satellite library or community center could strengthen this area as a hub of activity for the entire city. Vibrant public seating or gathering spaces and a variety of social activities could bring residents, workers, and visitors to this central gathering place in the city.

2. Site Location Map



3. Inspired Ideas Imagery for Olson Island Opportunity Site

4. Additional Development Standards for Olson Island Opportunity Site

Additional development standards are established for major projects within the Olson Island Opportunity Site. These additional development standards address unique site opportunities, implement relevant goals, policies, and provisions of the General Plan, and ensure consistency with other City-adopted plans. Specifically, building height, housing density, floor area ratio, building setbacks, pedestrian shelter, bicycle amenities, drive-through design, on-site main street, public gathering places, site furnishings, pedestrian circulation, wayfinding, and traffic calming have been listed to implement or ensure consistency with the following plans:

- General Plan Land Use, Housing, and Urban Design elements, including special provisions for the downtown and transit-oriented development
- Citywide Design Guidelines
- Main Street Standards

These standards supplement the development standards for the underlying land use districts and apply to all properties within this opportunity site. All properties within the Olson Island Opportunity Site are designated FB-CMU (commercial mixed-use) to reflect its historic and future commercial use. In addition, any properties (or portions thereof) located within a quarter mile of the light rail stop may develop consistent with the citywide TOD Overlay District standards in the Zoning Code. Where the development standards in Table 5-3 deviate from the development standards in Table 4-1, the standards in Table 5-3 apply to qualifying major projects.

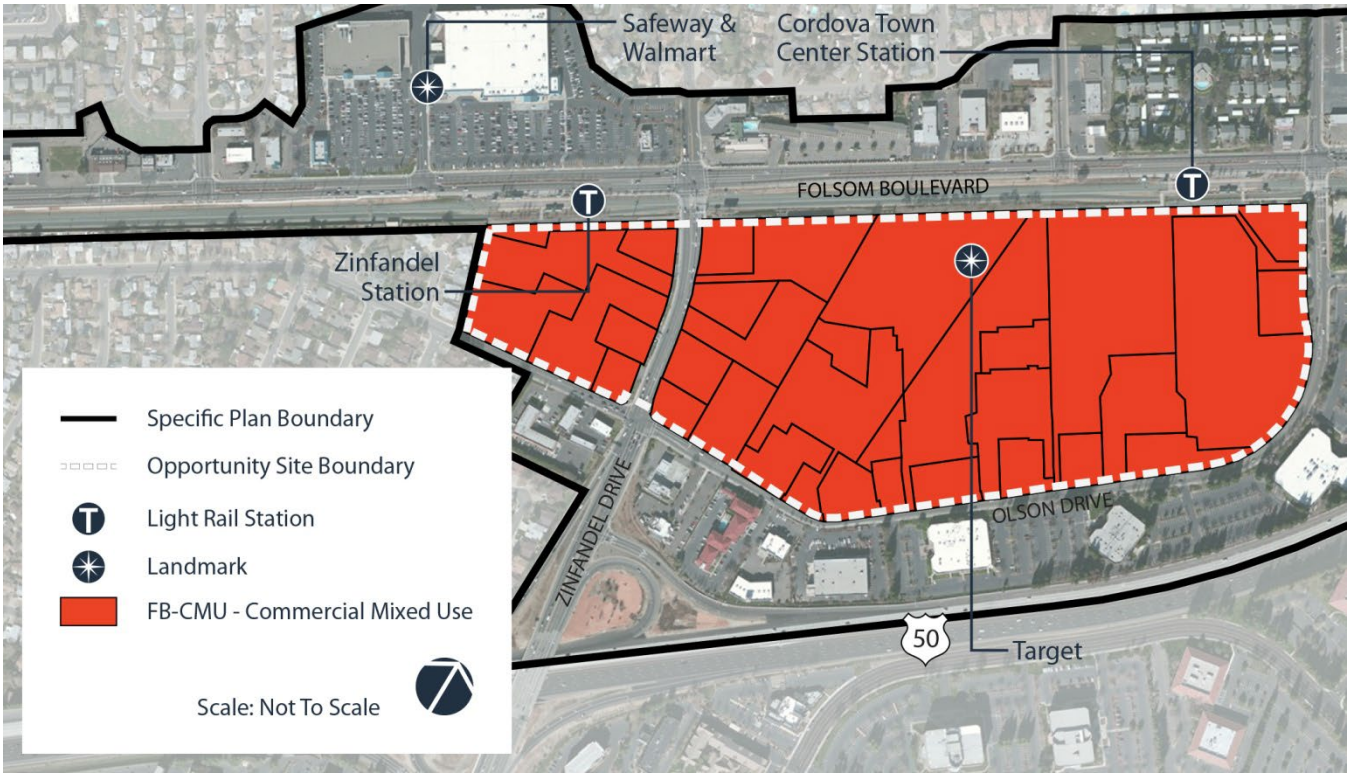

Table 5-3 Olson Island Opportunity Site: Additional Development Standards

Standard	Site-wide (FB-CMU)
Building Height	No maximum
Density	10–40 du/acre
Floor Area Ratio	0.25 minimum No maximum
Front and Street Side Setback Standards	New buildings on property abutting Olson Drive and Zinfandel Drive have no minimum front setback requirement and a maximum front setback requirement of 20 feet. Improvements and expansions to existing buildings, and new buildings that don't abut Olson or Zinfandel drives, will have no minimum or maximum setback requirements.
Drive-Through Design	Drive-Through Aisles. The minimum standards for drive-through aisles are as follows: Drive-through aisles shall have a minimum 11-foot interior radius at curves and a minimum 12-foot width. Drive-up windows and remote tellers shall provide at least 180 feet of stacking space for each facility, as measured from the service window or unit to the entry point into the drive-up lane. Non-food and/or non-beverage businesses may reduce the stacking space to a minimum of 60 feet. Each drive-through entrance/exit shall be at least 50 feet from an intersection of public rights-of-way, measured at the closest intersecting curbs, and at least 25 feet from the curb cut on an adjacent property. Exceptions may be granted by the designated approving authority when drive-though pull-out spaces are provided. Each entrance to an aisle and the direction of traffic flow shall be clearly designated by signs and pavement markings. Each drive-through aisle shall be separated from the circulation routes necessary for ingress or egress from the property or from access to a parking space. Landscaping of the Drive-Through Aisle. Landscaping shall be as follows: A 5-foot-wide planter shall be provided between the drive-through aisle and the parking area that includes shade trees consistent with those used in the parking area. An average 3-foot-tall planter with low shrubs that screens the drive-through aisles from the abutting public right-of-way shall be used to minimize the visual impact of readerboard signs and directional signs. At no time shall this landscape barrier be pruned in a manner that allows the vehicle headlights from the drive-through lane to be visible from abutting street rights-of-way. Plantings should also be designed to discourage potential safety issues. Pedestrian Access and Crossings. Pedestrian access shall be provided from each abutting street to the primary entrance with a continuous 4-foot-wide sidewalk or delineated walkway. Pedestrian walkways should not intersect the drive-through drive aisles, but where they do, the walkways shall have clear visibility and shall be delineated by textured and colored paving.

Standard	Site-wide (FB-CMU)
On-Site Main Street	The Olson Island Opportunity Site will include a project-wide on-site main street to improve circulation throughout the opportunity site. See illustration below. The on-site main street shall be located to create a walkable environment by fronting buildings along the street and internal circulation routes and shall be designed as follows: • Narrow travel lane • Limited driveway curb cuts • Wide sidewalks • Optional on-street parking • Buildings close to street frontage • Building frontages detailed with architectural elements
Public Gathering Places	All major projects shall contribute some form of public gathering place (or portion thereof) as shown in Table 5-5.
Site Furnishings & Wayfinding	For integrated developments, the City encourages uniform site furnishings and wayfinding improvements throughout the project.
Traffic Calming	New development shall take into consideration traffic calming improvements (e.g., controlled turning movements, speed reduction measures) to maximize safety.

E. Sunrise Opportunity Site

1. Description

The Sunrise Opportunity Site is characterized by two distinct areas, one north of Folsom Boulevard and one south of the boulevard. The area to the north, referred to as the "north subarea," will be home to a future convention center and supporting uses, such as hotels, restaurants, and meeting spaces. This area also allows retail and office uses that support a convention center. The north subarea is a prime location for a performing arts and entertainment center/complex. Multistory buildings are encouraged in this area. A walkable and bikable campus-like setting will host a variety of public gathering places for visitors to eat, relax, and socialize. This area is intended to implement the General Plan Convention Overlay Area and will be a special place in the city that is entertaining, vibrant, and inviting to tourists, visitors, and residents alike. The area to the south, referred to as the "south subarea," will expand on the current concentration of building supply, construction, furnishing, and materials businesses with the intention of becoming a building trade center with interior design showrooms and outdoor demonstration gardens. This area also has potential for a trades building or "make it" business as a collaborative retail and/or work space for the concentration for building materials businesses in the area. Other office and industrial uses will continue to thrive in this area. The south subarea will be more auto-oriented in nature with larger roads, developments, and parking and loading areas.

2. Site Location Map

Restaurants with outdoor dining	Offices over retail service and cafe	Plaza

b) Sunrise South Subarea

Interior design showroom	Building supply, construction & materials	Specialized building supplier
Light industrial	Office building	Employee break area

4. Additional Development Standards for Sunrise Opportunity Site

Additional development standards are established for major new development projects within the Sunrise Opportunity Site. These standards address unique locational opportunities and implement relevant goals, policies, and provisions of the General Plan, while ensuring consistency with other City-adopted plans. Specifically, including housing density, floor area ratio, building height, public gathering places, site furnishings, and wayfinding will help to implement or ensure consistency with the following plans:

- General Plan Land Use, Housing, and Urban Design elements, including special provisions for the convention district overlay
- Citywide Design Guidelines

Properties within the Sunrise Opportunity Site are designated FB-CMU (commercial mixed-use) or FB-OIMU (office industrial mixed-use) to reflect both existing and neighboring uses. Land use designations are shown on the map below. Where the development standards in Table 5-4 deviate from the development standards in Table 4-1, the standards in Table 5-4 apply.

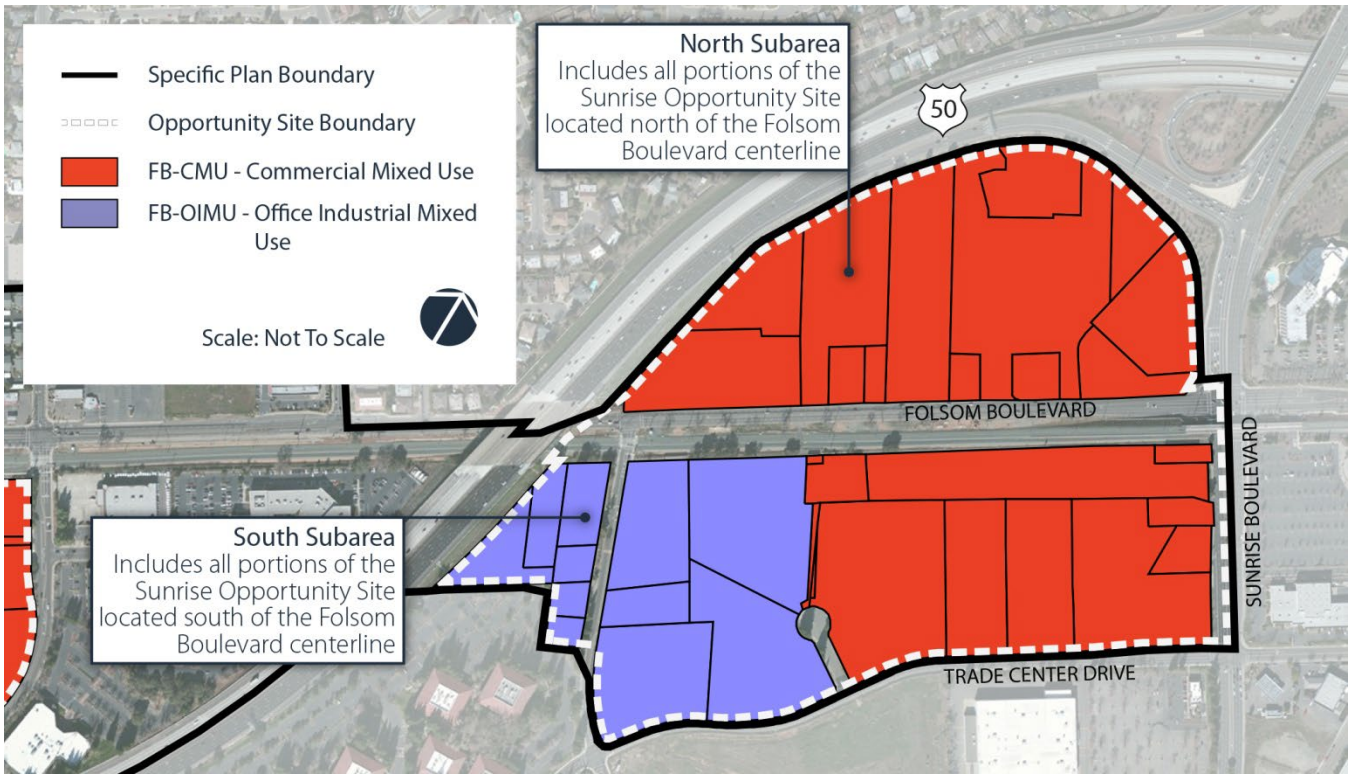

Table 5-4 Sunrise Opportunity Site: Additional Development Standards

Standard	FB-OIMU –North Subarea	FB-OIMU – South Subarea	FB-CMU – South Subarea
Density	n/a	n/a	10–40 du/acre
Floor Area Ratio	0.25 minimum No maximum	No minimum No maximum	0.2 minimum No maximum
Primary Building Height	No maximum	65 feet	65 feet
Public Gathering Places	All major projects shall contribute some form of public gathering place (or portion thereof) as shown in Table 5-5.		
Site Furnishings & Wayfinding	For integrated developments, the City encourages uniform site furnishings and wayfinding improvements throughout the project.

PROPOSED
ZONING PLAN

City of Rancho Cordova

Folsom Boulevard Specific Plan Amendment

Track Changes

Note to Reader: Only those sections and/or subsections listed within this document are being amended. Unless otherwise indicated, all sections and subsections prior to and after the amended section and/or subsection shall remain, unchanged.

OPPORTUNITY SITES

A. Introduction

As described in Chapter 2, the land use framework establishes an organizing structure for where and how growth within the plan area will occur. The land use framework identifies four sites with the greatest opportunity for new development and redevelopment. This chapter describes those areas as being vibrant destinations and hubs of activity along Folsom Boulevard. The opportunity sites designate locations where the City will concentrate resources (e.g., economic development incentives, public investment, facilities, outreach, coordination) and community assets (e.g., public gathering places, events, activities) with the goal of catalyzing significant private investment in these areas. The four opportunity sites are shown in Figure 5-1 and include:

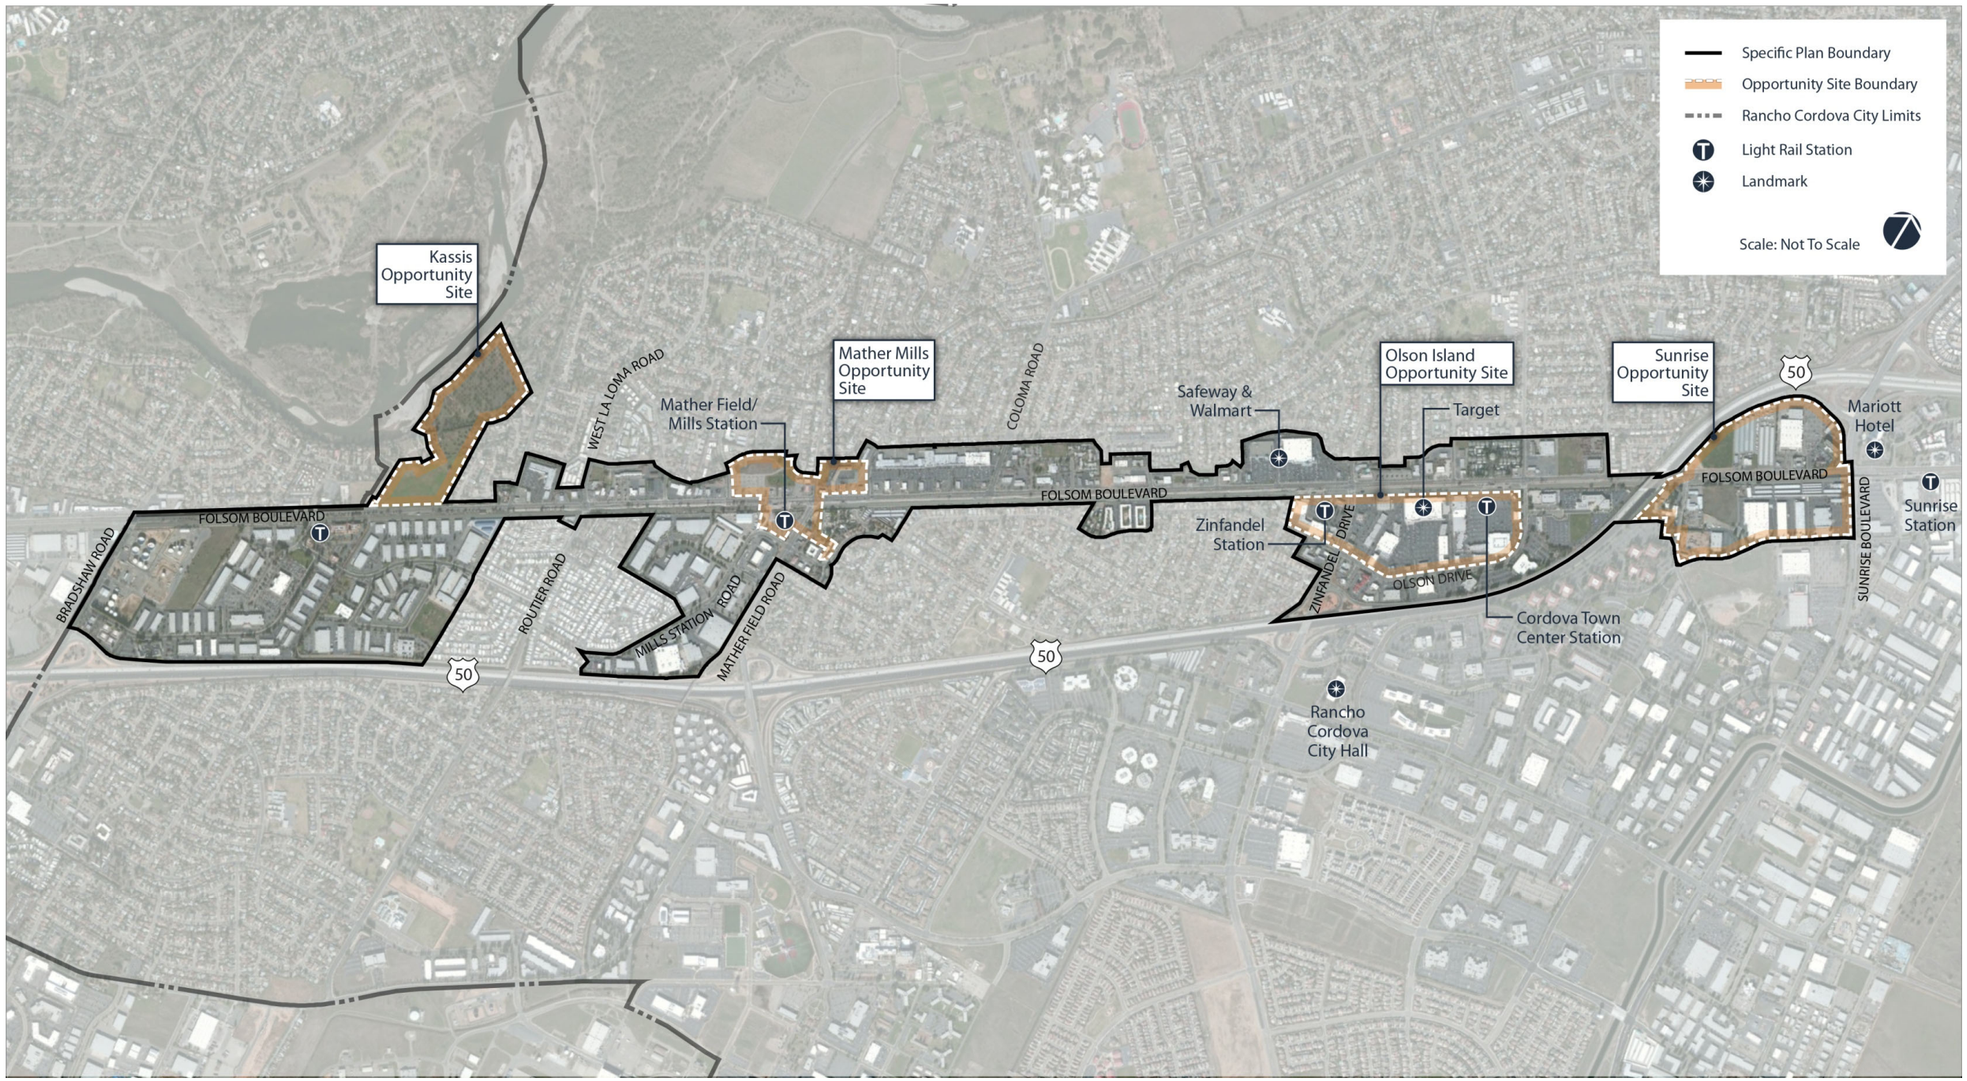
1) Kassis Opportunity Site
2) Mather Mills Opportunity Site
3) Olson Island Opportunity Site
4) Sunrise Opportunity Site

Chapter 5

Opportunity Sites

Each opportunity site shown in Figure 5-1 has a distinct character and unique mix of uses. This chapter describes and illustrates each opportunity site with text and a collection of inspired idea images to communicate the vision and desires for each site. To achieve the desired development and design character unique to each opportunity site, an additional set of customized development standards is established in this chapter for each of the four sites. These special standards supplement those standards for the land use districts identified in Chapter 4 (Development Standards) and apply only to major new development. If there are differences in the additional development standards for any opportunity site of this chapter and corresponding standards in Chapter 4 (Table 4-1) for each district, the additional development standards identified in this chapter prevail.

Figure 5-1 Opportunity Sites



Chapter 5

Opportunity Sites

This page is intentionally left blank.

B. Kassis Opportunity Site

1. Description

The Kassis property is designated Folsom Boulevard Residential Mixed Use in recognition of its suitability for residential development and its setting within a predominantly residential district. The site does have potential for employment oriented uses (both retail/commercial and office) that resulted in the flexible mixed use designation.

The total area of the Kassis property exceeds 42 acres, although a small portion of the property is excluded from the Folsom Boulevard Specific Plan. The area excluded does not fall along existing property lines. In the future, the boundary of the Specific Plan and open space may need to be adjusted to be consistent with the parcel map. This site is surrounded on three sides by residentially zoned lands (RD-20 and RD-5 to the west, RD-5 to the east and RD-2 to the north) and bordered by Folsom Boulevard on the south. A project with a substantial residential component would be complimentary to the surrounding existing uses.

Based upon the property size (it is among a very few parcels on Folsom Boulevard with a significant area of undeveloped land) and its proximity to the planned Horn Road Light Rail Station, this property was designated within the City's General Plan Housing Element to include at least 10 acres of High Density Residential.

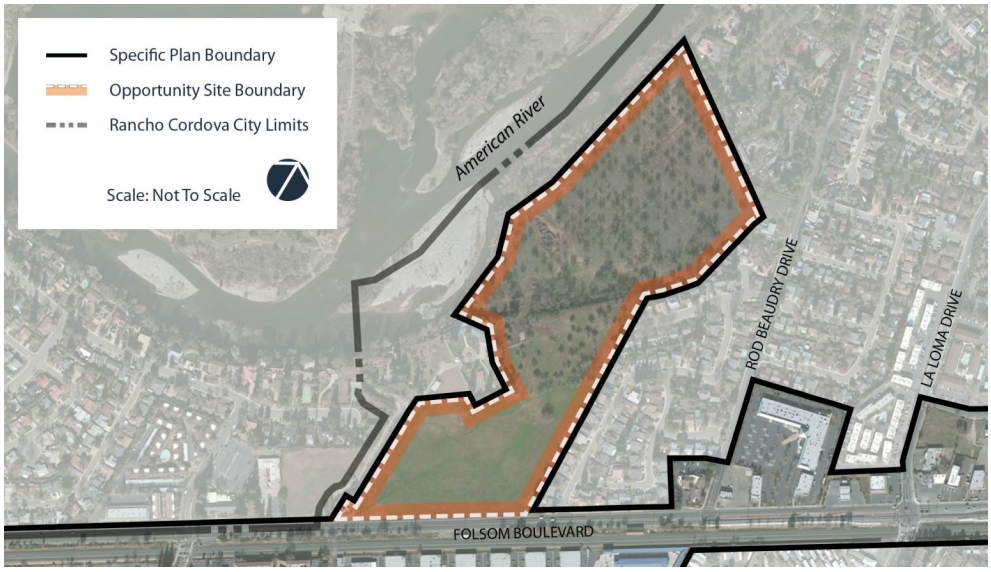
Beyond the residential development potential for this site, a retail/commercial or office component could compliment neighboring residents by providing nearby retail and employment opportunities while taking advantage of direct access to Folsom Boulevard and close proximity to the future Light Rail Station.

The Kassis Opportunity Site will be characterized by a suburban and primarily residential environment with limited nonresidential development along Folsom Boulevard. The site will feature a large residential component, including apartments, condominiums, townhouses, and compact single-family homes. At least 10 acres of the site will be developed at a minimum of 24 dwelling units per acre to meet the city's housing requirements. To the extent feasible, new residential streets and sidewalks will connect to the existing streets and cul-de-sacs as well as to the American River Parkway. Architectural features such as balconies, porches, and stoops will animate the interface between buildings and the sidewalk. Primarily neighborhood-serving retail shops and services, restaurants, sports and recreational uses, medical clinics, and/or offices will front the corridor, but not in a conventional strip form. Instead, nonresidential buildings will locate close to the street frontage (existing and future streets) to define, connect, and activate the sidewalk. Courtyards, community gardens, and central greens will provide opportunities for residents to congregate and socialize.

Chapter 5

Opportunity Sites

2. Site Location Map



3. Inspired Ideas Imagery for Kassis Opportunity Site

Townhomes

Apartments

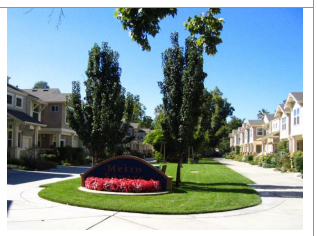
Offices over shops

Office/medical

Offices over restaurant or retail

Courtyard

Community garden



Central green

4. Additional Development Standards for Kassis Opportunity Site

Additional development standards are established for major new development projects within the Kassis Opportunity Site. These additional standards address the unique potential of the location, implement relevant goals, policies, and provisions of the General Plan, and ensure consistency with other City-adopted plans. Specifically, additional development standards for this site include housing density, building orientation, public gathering places, parking, access, and site furnishings and wayfinding to implement or ensure consistency with the following plans:

- General Plan Land Use, Housing, and Urban Design elements
- Citywide Design Guidelines

These standards supplement the development standards for the underlying land use. Properties within the Kassis Opportunity Site are designated FB-RMU (residential mixed-use) to reflect the predominant surrounding residential land use and the future Horn Road light rail station. Where the development standards in Table 5-1 deviate from the development standards in Table 4-1, the standards in Table 5-1 apply.

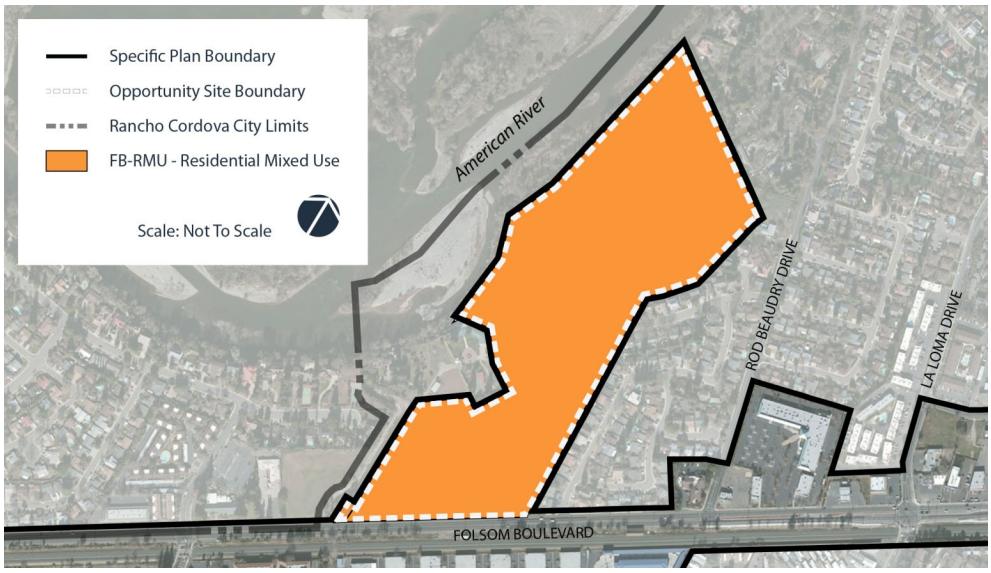


Table 5-1 Kassis Opportunity Site: Additional Development Standards

Standard	Site-wide (FB-RMU)
Density	6.1–40 du/acre At least 10 acres shall be developed at a minimum of 24 du/acre.
Building Orientation	All nonresidential primary building entrances must face a public street or public gathering place.
Public Gathering Places	All major projects shall contribute some form of public gathering place (or portion thereof) as shown in Table 5-5.
Parking	For residential developments with over 20 residential units, commercial, and mixed-use developments, private surface parking lots are not permitted in the front setback. Locate on-site parking to the rear, side, or internal to the block and provide access to parking through alleys and driveways.
Access	To the greatest extent feasible, connect new development, via streets, sidewalks, and pathways, to existing cul-de-sacs and local streets and to the American River Parkway.
Site Furnishings & Wayfinding	For integrated developments, the City encourages uniform site furnishings and wayfinding improvements throughout the project.

Chapter 5
Opportunity Sites

C. Mather Mills Opportunity Site

1. Description

The Mather Mills Opportunity Site includes numerous parcels located in close proximity to the Mather Mills Light Rail Station. Proposed land use designations within this Site include Residential, Commercial and Office/Industrial Mixed Use districts. Located adjacent to the Mather Mills Station and at the intersection of Mather Field Road and Folsom Boulevard, this Site presents unique opportunities for future development. These geographic attributes were likely a significant factor in the decision to locate the planned Los Rios Community College Campus at Folsom Boulevard and Paseo Drive.

The majority of development potential within this Site is located on the north side of Folsom Boulevard, both to the west and to the east of Paseo Drive. West of Paseo Drive includes approximately 12 acres proposed as Commercial Mixed Use (FB-CMU) and Residential Mixed Use (FB-RMU). This area will contain the future Los Rios Community College campus (land designated as FB-CMU). The balance of this area is designated FB-RMU in recognition of the wide range of development potential presented by the site. As with other sites within the FBSP that are designated FB-RMU or Medium Density Residential (FB-MDR), the size of this site provides special opportunities to accommodate a well-designed high density residential project. While this site also presents opportunities for commercial development, existing uses along the northern boundary of the site are residential. It is anticipated that higher density residential development along the northern boundary of this site will provide an effective transition between existing residential and future commercial uses.

While the FB-RMU designation requires that a minimum of 50 percent of finished floor area of development on the site must be residential, the FB-RMU designation also allows a substantial non-residential component that will compliment both the on-site residential and the adjacent college campus. The City recognizes that the timing of various types of development can be unpredictable and has therefore modified requirements for the timing of development. Under previous regulations the residential component would have been required to be constructed before the commercial component could begin construction. This requirement has been modified to allow commercial development to proceed in an FB-RMU site as long as it can be demonstrated that the site retains available capacity to meet the FB- RMU residential requirements.

Lands within this Opportunity Site located to the east of Paseo Drive have been designated FB-CMU in recognition of several factors, including: the Los Rios Community College District has acquired a portion of these lands and will be developing parking required for the college along the northern boundary of this area; there are several existing and active commercial uses located in this area; and, the parcelization and fragmented ownership in this area will make developing a larger and well integrated project challenging.

Chapter

Opportunity Site

The Mather Mills Opportunity Site will be characterized by a compact, urban, and walkable environment. This site possesses two key assets that will shape new development within this area: the Mather Mills Light Rail Station and the future Los Rios Community College. This opportunity site is envisioned to support transit-oriented uses, such as a mix of educational, residential, retail, and service activities, both vertically and horizontally. Higher-density residential uses, including two- to four-story condominiums, townhomes, and student apartments, will locate here to provide housing in close proximity to the light rail station and the college. Small-scale retail and commercial services, such as bookstores, cafés, restaurants, pubs, entertainment venues, personal services, and office supply and reproduction services, will support the needs of residents and college students. Uses adjacent to the college will be designed to have a positive interface with the college. A safe and convenient pedestrian and bicycle network will connect destinations within the opportunity site. A variety of public spaces, such as outdoor dining and plazas, will invite residents, workers, and students to gather and participate in a vibrant community life. Social events will be organized in these public places, such as farmers markets and food truck fairs, to activate these spaces on weekends and evenings.

2. Site Location Map

3. Inspired Ideas Imagery for Mather Mills Opportunity Site

The following images represent the preferred land uses, development patterns, and public gathering places for the Mather Mills Opportunity Site. These images are intended to guide and inspire private developers to create active urban places within this opportunity site.

Campus services

Restaurant

Student-serving uses, such as a bike hub and repair shop

Events, such as food truck fairs

Events, such as a farmers market

Public gathering spaces with seating

Outdoor dining/café seating

Plaza

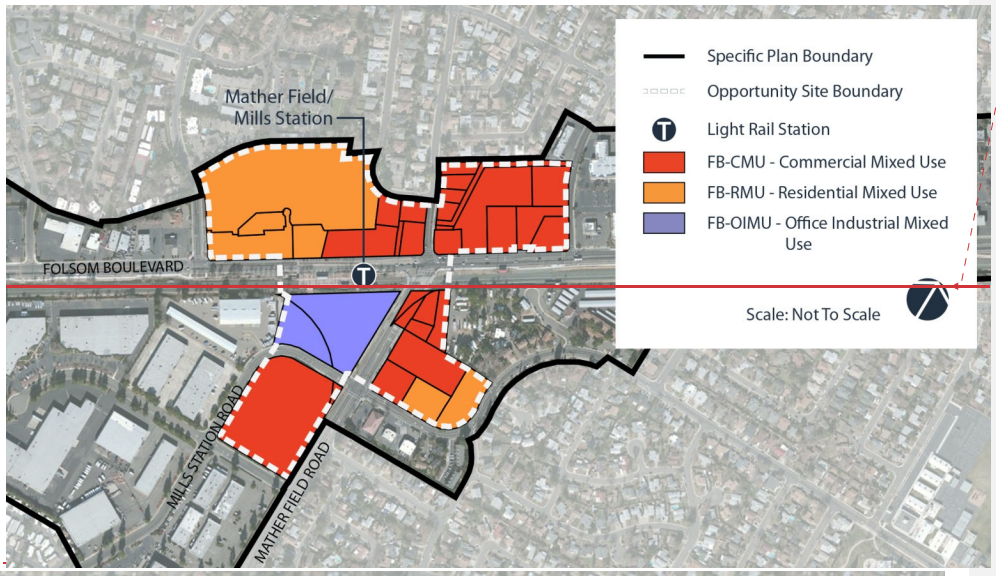
4. Additional Development Standards for Mather Mills Opportunity Site

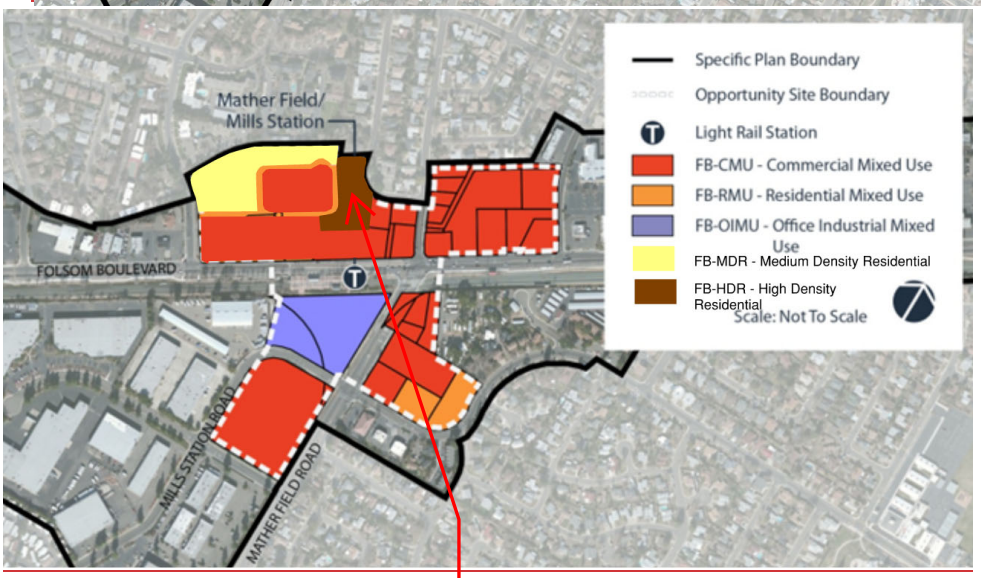
Additional development standards are established for major new development projects within the Mather Mills Opportunity Site. These standards address the unique attributes of the location, implement relevant goals, policies, and provisions of the General Plan, and ensure consistency with other City-adopted plans. Specifically, housing density, floor area ratio, building setbacks and height, pedestrian shelter, bicycle amenities, building orientation, drive-through design, public gathering places, parking, and site furnishings and wayfinding have been included to implement or ensure consistency with the following plans:

- General Plan Land Use, Housing, and Urban Design elements, including special provisions for transit-oriented development
- Citywide Design Guidelines

Properties within the Mather Mills Opportunity Site are designated FB-RMU (residential mixed-use), FB-HDR (high density residential), FB-MDR (medium density residential), FB-CMU (commercial mixed-use), or FB-OIMU (office industrial mixed-use), to be compatible with existing surrounding uses while maximizing future potential uses. In addition, any properties (or portions thereof) located within a quarter mile of the light rail stop may develop consistent with the citywide TOD Overlay District standards in the Zoning Code. Where the development standards in Table 5-2 deviate from the development standards in Table 4-1, the standards in Table 5-2 apply to qualifying major projects. For FB-MDR and FB-HDR zoning designations within the Mather Mills Opportunity Site, please refer to the MDR and HDR development standards outlined in Table 4-1.

Formatted: Centered, Indent: First line: 0.25"





Imagery to be more accurately updated once Specific Plan Amendment is approved. Refer to the end of this document for detailed rezoning exhibits.

Table 5-2 Mather Mills Opportunity Site: Additional Development Standards

Standard	FB-RMU	FB-CMU	FB-OIMU
Density	6.1–40 du/acre	10–40 du/acre	n/a
Floor Area Ratio	No minimum No maximum	0.3 minimum No maximum	0.25 minimum No maximum
Front Setback Standards	Along the north side of Folsom Boulevard and along Paseo Drive, there is no minimum front setback. The maximum shall be no more than 10 feet, except where there is outdoor dining, a plaza, a building entry, or a courtyard between the building and the street. Exceptions can be granted for building façades with garage access.		
Primary Building Height	65 feet /4 stories maximum[1]	No maximum[2]	65 feet/4 stories maximum
Awnings/ Canopies	Awnings, canopies, recesses, or similar pedestrian shelters shall be provided along at least 30% of the building's ground-floor level along the frontage with primary building entrance and where the building abuts a plaza or other public gathering space.		
Bicycle Amenities	Establish common area bicycle facilities to encourage students to use alternative forms of transportation. For example, provide additional bike racks and lockers or other secured bicycle parking areas, shower facilities, and a bike repair kiosk.		
Building Orientation	For properties fronting along Folsom Boulevard, primary building entrances shall be oriented to a public street, a private street designed as an on-site main street, or a public gathering place.		
Public Gathering Places	All major projects shall contribute some form of public gathering place (or portion thereof) as shown in Table 5-5.		
Parking Access & Location	For nonresidential or mixed-use developments, private surface parking lots are not permitted in the required front setback area. Additionally, parking shall not be located between the street and the building façade with the primary entrance. Rather, on-site parking shall be located to the rear, side, or internal to the block and provide access to parking through alleys and driveways. Finally, parking areas on corner lots shall not be located adjacent to intersections.		
Parking Ratio	The number of vehicle parking spaces provided shall not exceed 150% of the minimum parking ratio.		
Site Furnishings & Wayfinding	For integrated developments, the City encourages uniform site furnishings and wayfinding improvements throughout the project.		

1. *No maximum height or number of stories for vertical mixed-use integration where residential use is located above nonresidential. Note #2 below also applies. Defer to TOD Overlay if applicable.*
2. *While there is no height maximum, the regulations of the Federal Aviation Administration (FAA) limit the height of structures to between 150 and 350 feet based on location. See the Safety Element of the General Plan for more information. FAA approval is required for all structures over 150 feet in height. Defer to TOD Overlay if applicable.*

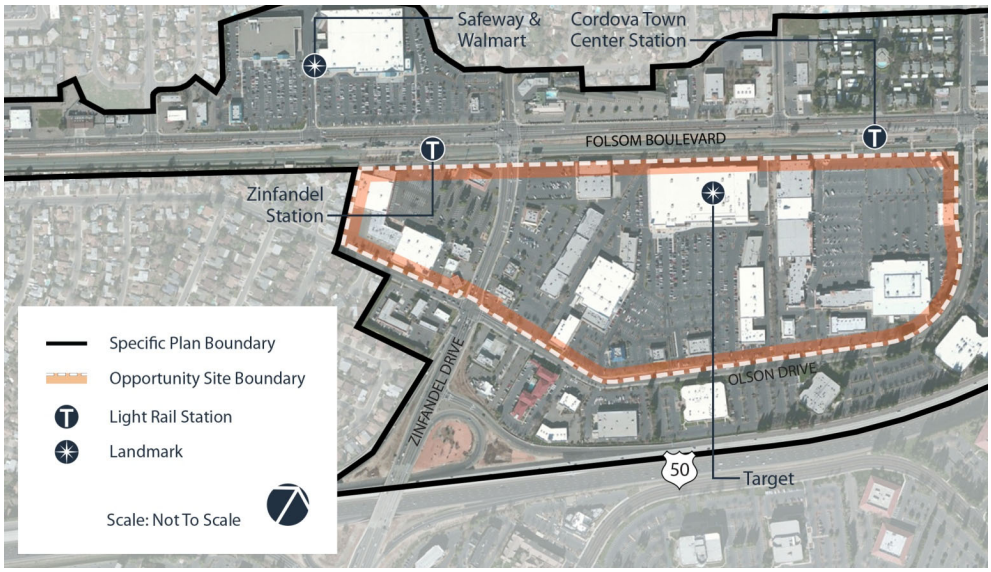
Chapter 5
Opportunity Sites

D. Olson Island Opportunity Site

1. Description

Olson Island is currently a retail commercial center serving the community and the region. It is a shopping destination where people come and have an extended stay to shop, eat, drink, and socialize. This area is envisioned to mature into an environment designed so that visitors can park once and then walk to a variety of different businesses and public gathering places. Access and circulation to and throughout the site needs to be improved with limited access driveways that resemble urban main streets, and better pedestrian access to and from the transit stop and throughout the entire commercial hub. A mix of new and expanded retail, office, and entertainment uses are encouraged, with both horizontal and vertical integration. The area will continue to be home to a wide range of large national retailers and small independent businesses. A future international marketplace will capitalize on the synergy of established uses that reflect the diversity of the community (for example, KP International Market). Small-scale civic uses such as a satellite library or community center could strengthen this area as a hub of activity for the entire city. Vibrant public seating or gathering spaces and a variety of social activities could bring residents, workers, and visitors to this central gathering place in the city.

2. Site Location Map



3. Inspired Ideas Imagery for Olson Island Opportunity Site

The following images represent the preferred land uses, development patterns, and public gathering places for the Olson Island Opportunity Site. These images are intended to guide and inspire private developers to create successful commercial projects and a variety of active public spaces.

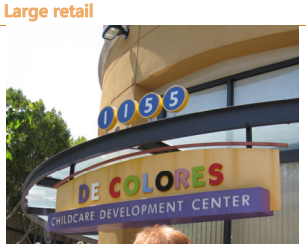
Large retail

Restaurants & outdoor dining

Large retail

Offices over shops and restaurants

On-site main street



Small civic/institutional use

International marketplace

International marketplace

International marketplace

Plaza

Outdoor dining/café seating

Paseo

4. Additional Development Standards for Olson Island Opportunity Site

Additional development standards are established for major projects within the Olson Island Opportunity Site. These additional development standards address unique site opportunities, implement relevant goals, policies, and provisions of the General Plan, and ensure consistency with other City-adopted plans. Specifically, building height, housing density, floor area ratio, building setbacks, pedestrian shelter, bicycle amenities, drive-through design, on-site main street, public gathering places, site furnishings, pedestrian circulation, wayfinding, and traffic calming have been listed to implement or ensure consistency with the following plans:

- General Plan Land Use, Housing, and Urban Design elements, including special provisions for the downtown and transit-oriented development
- Citywide Design Guidelines
- Main Street Standards

These standards supplement the development standards for the underlying land use districts and apply to all properties within this opportunity site. All properties within the Olson Island Opportunity Site are designated FB-CMU (commercial mixed-use) to reflect its historic and future commercial use. In addition, any properties (or portions thereof) located within a quarter mile of the light rail stop may develop consistent with the citywide TOD Overlay District standards in the Zoning Code. Where the development standards in Table 5-3 deviate from the development standards in Table 4-1, the standards in Table 5-3 apply to qualifying major projects.

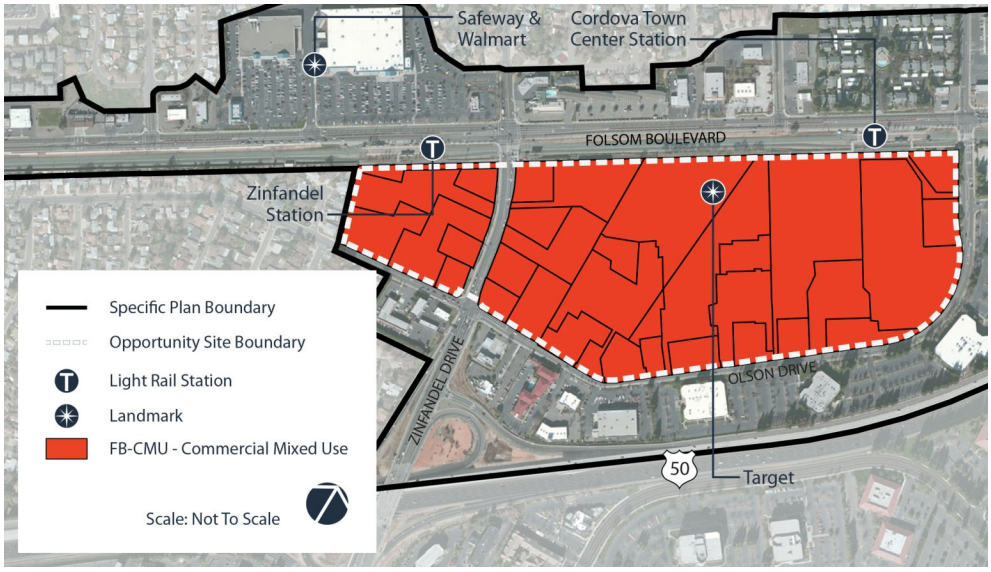


Table 5-3 Olson Island Opportunity Site: Additional Development Standards

Standard	Site-wide (FB-CMU)
Building Height	No maximum
Density	10–40 du/acre
Floor Area Ratio	0.25 minimum No maximum
Front and Street Side Setback Standards	New buildings on property abutting Olson Drive and Zinfandel Drive have no minimum front setback requirement and a maximum front setback requirement of 20 feet. Improvements and expansions to existing buildings, and new buildings that don't abut Olson or Zinfandel drives, will have no minimum or maximum setback requirements.
Drive-Through Design	Drive-Through Aisles. The minimum standards for drive-through aisles are as follows: Drive-through aisles shall have a minimum 11-foot interior radius at curves and a minimum 12-foot width. Drive-up windows and remote tellers shall provide at least 180 feet of stacking space for each facility, as measured from the service window or unit to the entry point into the drive-up lane. Non-food and/or non-beverage businesses may reduce the stacking space to a minimum of 60 feet. Each drive-through entrance/exit shall be at least 50 feet from an intersection of public rights-of-way, measured at the closest intersecting curbs, and at least 25 feet from the curb cut on an adjacent property. Exceptions may be granted by the designated approving authority when drive-though pull-out spaces are provided. Each entrance to an aisle and the direction of traffic flow shall be clearly designated by signs and pavement markings. Each drive-through aisle shall be separated from the circulation routes necessary for ingress or egress from the property or from access to a parking space. Landscaping of the Drive-Through Aisle. Landscaping shall be as follows: A 5-foot-wide planter shall be provided between the drive-through aisle and the parking area that includes shade trees consistent with those used in the parking area. An average 3-foot-tall planter with low shrubs that screens the drive-through aisles from the abutting public right-of-way shall be used to minimize the visual impact of readerboard signs and directional signs. At no time shall this landscape barrier be pruned in a manner that allows the vehicle headlights from the drive-through lane to be visible from abutting street rights-of-way. Plantings should also be designed to discourage potential safety issues. Pedestrian Access and Crossings. Pedestrian access shall be provided from each abutting street to the primary entrance with a continuous 4-foot-wide sidewalk or delineated walkway. Pedestrian walkways should not intersect the drive-through drive aisles, but where they do, the walkways shall have clear visibility and shall be delineated by textured and colored paving.

Standard	Site-wide (FB-CMU)
On-Site Main Street	The Olson Island Opportunity Site will include a project-wide on-site main street to improve circulation throughout the opportunity site. See illustration below. The on-site main street shall be located to create a walkable environment by fronting buildings along the street and internal circulation routes and shall be designed as follows: • Narrow travel lane • Limited driveway curb cuts • Wide sidewalks • Optional on-street parking • Buildings close to street frontage • Building frontages detailed with architectural elements Public Gathering Places	All major projects shall contribute some form of public gathering place (or portion thereof) as shown in Table 5-5.
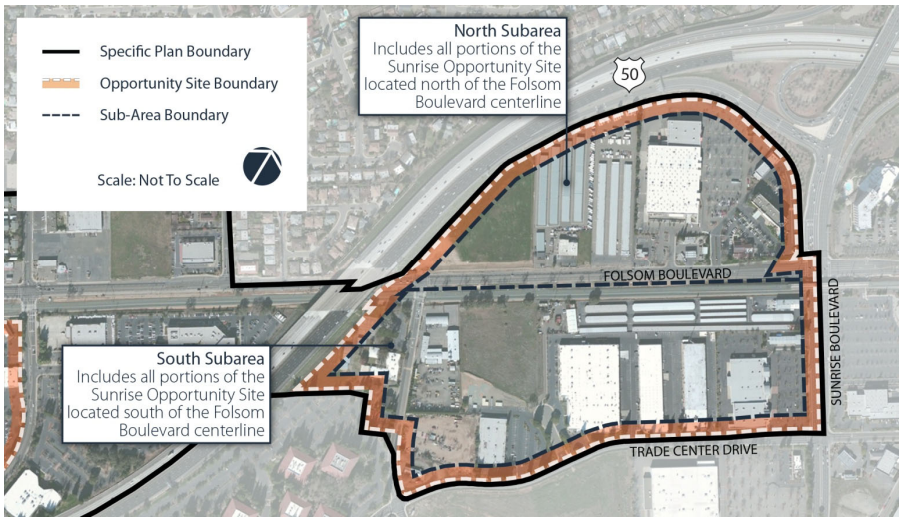
Site Furnishings & Wayfinding	For integrated developments, the City encourages uniform site furnishings and wayfinding improvements throughout the project.
Traffic Calming	New development shall take into consideration traffic calming improvements (e.g., controlled turning movements, speed reduction measures) to maximize safety.

E. Sunrise Opportunity Site

1. Description

The Sunrise Opportunity Site is characterized by two distinct areas, one north of Folsom Boulevard and one south of the boulevard. The area to the north, referred to as the "north subarea," will be home to a future convention center and supporting uses, such as hotels, restaurants, and meeting spaces. This area also allows retail and office uses that support a convention center. The north subarea is a prime location for a performing arts and entertainment center/complex. Multistory buildings are encouraged in this area. A walkable and bikable campus-like setting will host a variety of public gathering places for visitors to eat, relax, and socialize. This area is intended to implement the General Plan Convention Overlay Area and will be a special place in the city that is entertaining, vibrant, and inviting to tourists, visitors, and residents alike. The area to the south, referred to as the "south subarea," will expand on the current concentration of building supply, construction, furnishing, and materials businesses with the intention of becoming a building trade center with interior design showrooms and outdoor demonstration gardens. This area also has potential for a trades building or "make it" business as a collaborative retail and/or work space for the concentration for building materials businesses in the area. Other office and industrial uses will continue to thrive in this area. The south subarea will be more auto-oriented in nature with larger roads, developments, and parking and loading areas.

2. Site Location Map



3. Inspired Ideas Imagery for Sunrise Opportunity Site

The following images represent the preferred land uses, development patterns, and public gathering places for the Sunrise Opportunity Site. These images are intended to guide and inspire private developers to vibrant destination places within the opportunity site.

Building supply, construction & materials

Specialized building supplier

Light industrial

Office building

Employee break area

4. Additional Development Standards for Sunrise Opportunity Site

Additional development standards are established for major new development projects within the Sunrise Opportunity Site. These standards address unique locational opportunities and implement relevant goals, policies, and provisions of the General Plan, while ensuring consistency with other City-adopted plans. Specifically, including housing density, floor area ratio, building height, public gathering places, site furnishings, and wayfinding will help to implement or ensure consistency with the following plans:

- General Plan Land Use, Housing, and Urban Design elements, including special provisions for the convention district overlay
- Citywide Design Guidelines

Properties within the Sunrise Opportunity Site are designated FB-CMU (commercial mixed-use) or FB-OIMU (office industrial mixed-use) to reflect both existing and neighboring uses. Land use designations are shown on the map below. Where the development standards in Table 5-4 deviate from the development standards in Table 4-1, the standards in Table 5-4 apply.

Chapter 5

Opportunity Sites

Mills Crossing

Specific Plan Amendment, Tentative Subdivision Map, and Major Design Review; Project No. PLND-0524-0098

Chance Finley-Ross, Associate Planner

June 2, 2025

RANCHO CORDOVA CALIFORNIA

CityofRanchoCordova.org

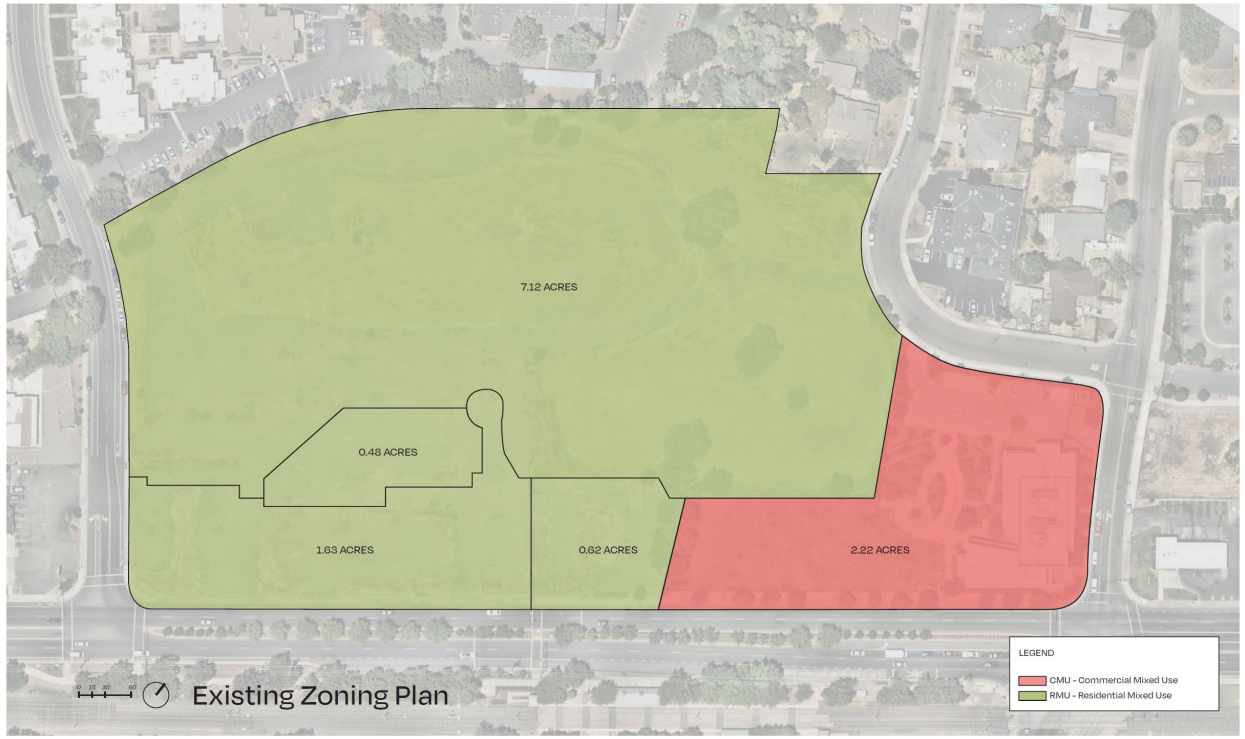
Goals for this Agenda Item

- Present the item and provide staff recommendation for entitlement as follows:
  - Certification of the Environmental Impact Report (EIR) and adoption the Mitigation Monitoring and Reporting Program and CEQA Findings
  - Introduction and waiving of the first reading of the Ordinance adopting the Specific Plan Amendment
  - Approval of the Tentative Subdivision Map and Major Design Review

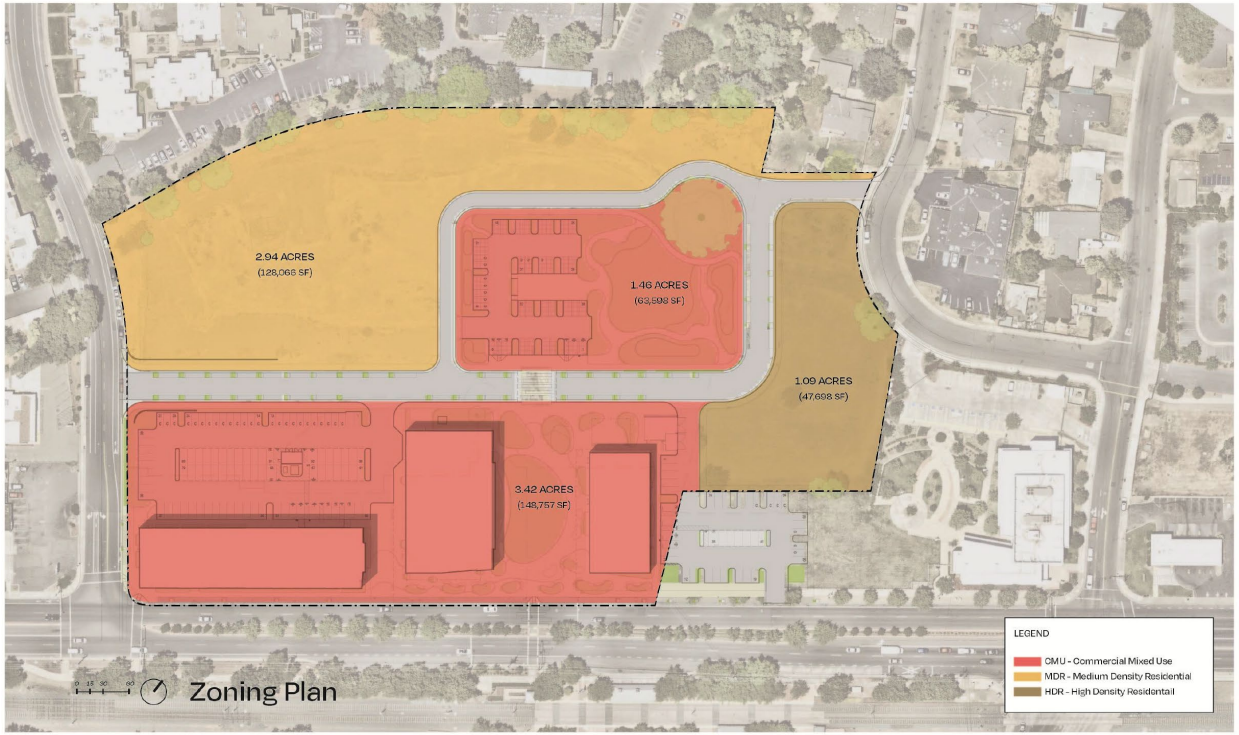
- Project Phasing, Implementation and Funding commitments will be in future Project discussions

Specific Plan Amendment

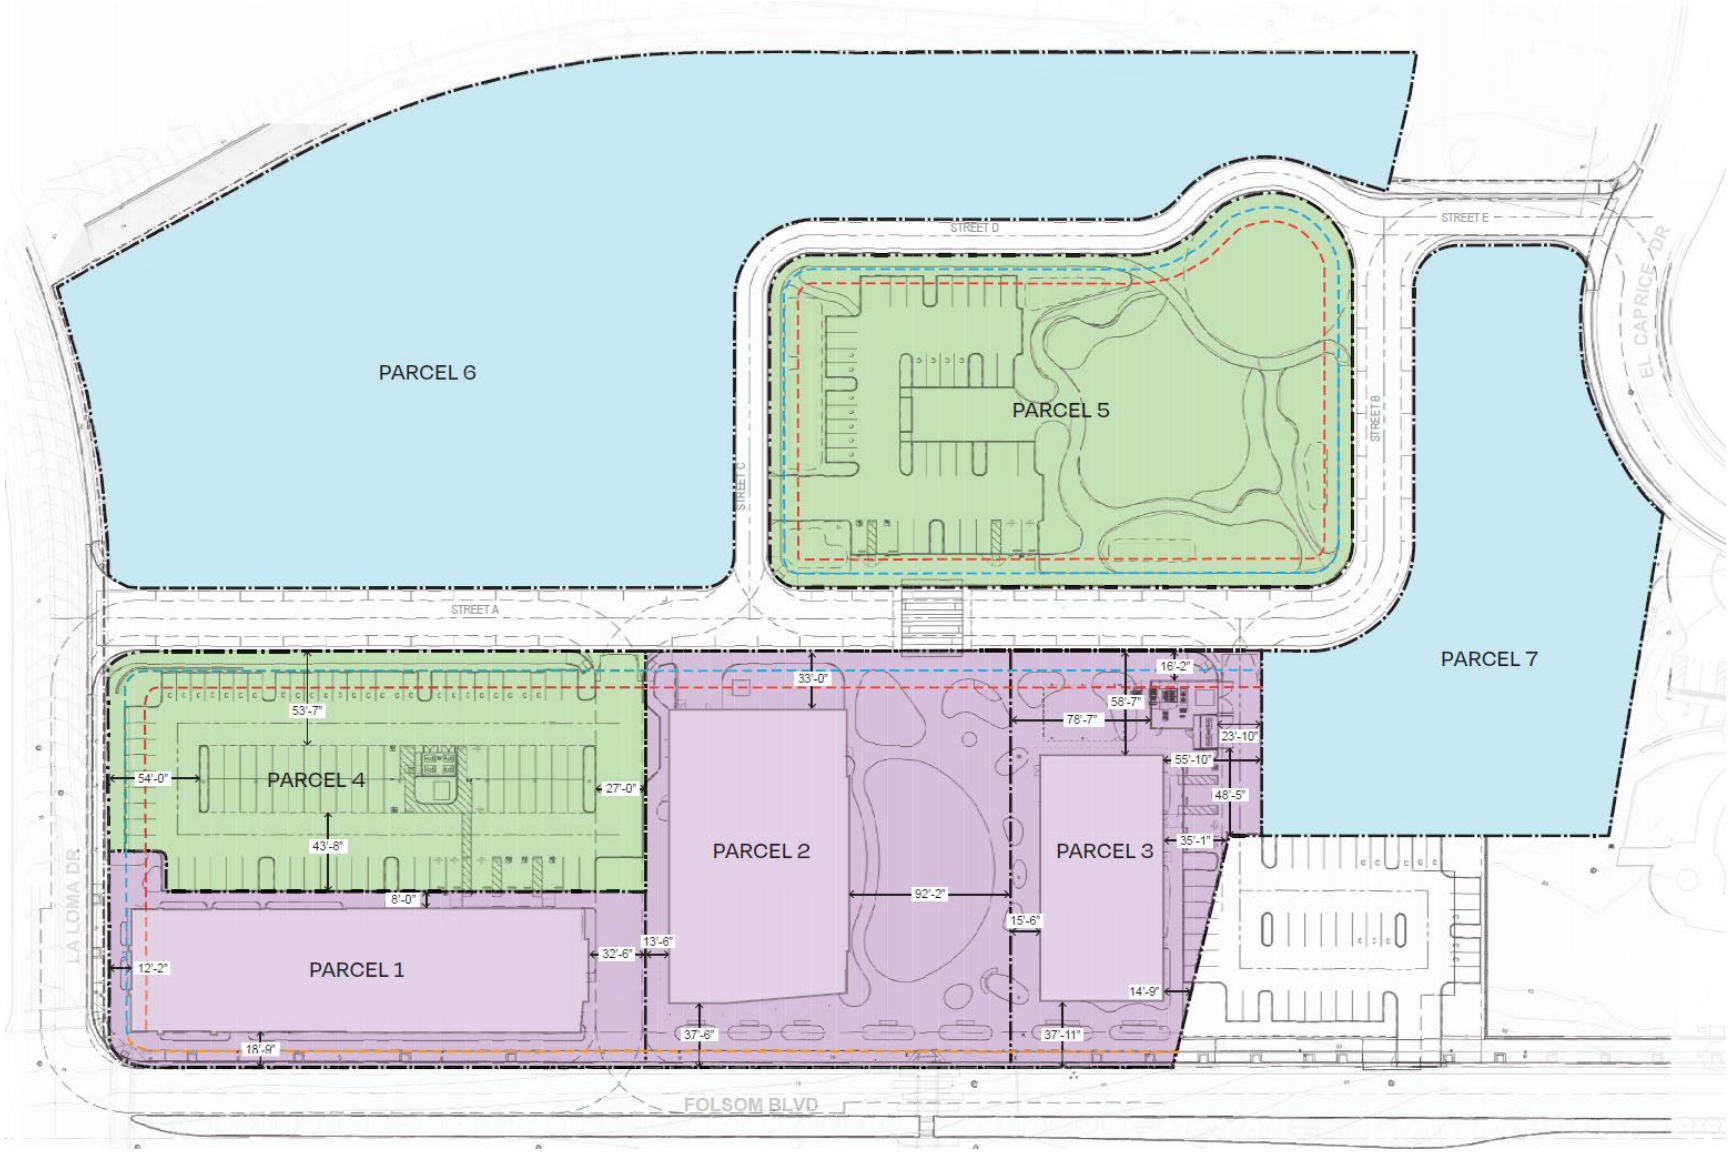
Existing Zoning



Proposed Zoning



Tentative Subdivision Map



CEQA – Environmental Impact Report (EIR)

- The City issued a Notice of Preparation (NOP) for a Draft EIR on January 6, 2023, and held a public scoping meeting on January 19, 2023. The Draft EIR was released on June 7, 2024, with public comments accepted until July 22, 2024
- Seven comment letters were received and the Final EIR determined no new information required recirculation under CEQA
- The EIR identified impacts to air quality, biological and cultural resources, tribal cultural resources, hazards, and greenhouse gases
- Mitigation measures are included in the Mitigation Monitoring and Reporting Program (MMRP) and identify strategies that reduce all potential impacts to a less-than-significant level.

Major Design Review

PROPOSED ENTITLEMENT: THREE BUILDINGS

Building #	1: Mixed Office & Health Services	2: Community Arts Center	3: Community Events Space with Small Cafe
Size	36,000 SF	27,500 SF	9,600 SF
Programming / Occupancy	Office and Health Services	Black Box Theater Rehearsal Space Classrooms Exhibit Space Flex Studios Concessions Pre-function/Lobby Theater Support Roof Top Deck	Event Hall for 250-300 attendees Catering Kitchen Support/Office Storage Restrooms Leased Café/Food

SITE INFRASTRUCTURE & OPEN SPACE

Size	2.5 acres *(combined)*
Programming / Occupancy	Main Plaza
	Project Green w wellness loop and mini-plaza
	Central Festival Street can be closed for street fairs
	Parking Lots
	Streets & Infrastructure

Results of Entitlement

If the City Council approves the entitlements:

- The EIR will be certified, analyzing the impacts of a mixed-use project up to 130,700 square feet of community commercial and including up to 120 units of housing. A future project of lesser intensity would not need additional CEQA analysis. The EIR could also be amended if needed for a future project.
- The Tentative Parcel Map would be approved and recorded, creating new parcels and dedicating public right-of-way.
- The Specific Plan Amendment changing the zoning on the parcels would be executed.
- Design Review of the buildings presented is good for 3-years with three one-year extensions.

This is a Key Project milestone that preserves the value of the outreach and planning completed to date and provides a foundation for refining project phasing.

Proposed uses allow flexibility for the site and ongoing conversations with Project partners.

Recommendation

Staff recommends that the City Council:

1. Adopt a Resolution Certifying the Mills Crossing Environmental Impact Report and adopting the Mitigation Monitoring and Reporting Program and CEQA Findings; and
2. Introduce and waive the first reading of an Ordinance adopting the Specific Plan Amendment with associated exhibit and track changes, subject to the findings contained in the Ordinance; and
3. Adopt a Resolution approving a Tentative Subdivision Map and a Major Design Review with associated exhibits, subject to the findings contained in the Resolution

Future Discussions

- June 16, 2025: Second Reading for the Ordinance
- Summer 2025: Staff will prepare a future discussion item to focus on:
  - Project Partnerships & Operations
  - Project Implementation & Phasing
  - Project Funding & Grants

THANK YOU
